H. & S. Bank.—Shares were unsaleable till 20th instant, when a limited business was done at 25 % *dis.* and Exch. 72½, and the rate subsequently fell to 27 % dis. and Exch. 72⅞, at which the market closes with buyers.

S. S. N. Co.—Pressure to sell—in the absence of all demand—but brought quotations down to Tls. 73 cash, and Tls. 74½ for 30th June, at which there are sellers.

Fire Insurance.—A small business has been done in *Hongkongs* at $480, and in *Chinas* at $133½ for 30th instant. A considerable business was done in *Victorias*, on 16th and 17th instant, at $125 and Exch. 72⅜, chiefly for Hongkong, and the rate has since advanced to $129.

Marine Insurance.—*Yangtszes* have fallen to Tls. 575, and *China & Japan* shares have advanced to Tls. 80. *Chinese Insurance* shares have been placed at $187.

Shanghai Gas Shares have fallen to Tls. 139.

Chinese Imperial Loan.—Business has been done at £99, 10s., at which there are buyers.

Weather.—Some rain fell on Tuesday; but the weather has been generally fine and warm. The thermometer has ranged from 45 to 82. To-day, the wind has worked round to the North, and is colder.

PASSENGERS.

Departed.—Per P. & O. str. *Khiva*, for Southampton—Mrs. Drummond and four children, Miss Macpherson, The Rev. Mr. Gretton, Mrs. Gretton. For Venice—Messrs. F. Nevill May and A. N. Brown. Per str. *Dragon*, for Foochow—Messrs. M. Riaskoff, A. Rodosenoff, N. Lebedeff, N. Kolmogonofi, Maligan and F. E. Heyden. Per P.M. str. *Costa Rica*, for Nagasaki—Mr. and Mrs. Chapman. For Hiogo—Mr. and Mrs. Coryell, Messrs. J. J. Heemskerk, W. Goetze, J. F. Goodfellow, C. T. Macvicar, H. Noetzli, F. M. Lemarchand, J. I. Miller, A. Milsom, and Dr. E. Henderson. For Yokohama—Mrs. Birtwhistle, Mrs. L. B. Hooff, Mrs. W. Bryan, Mrs. F. A. Goddard, Messrs. D. V. King, Bowitt, Arnold, G. W. Hardman, C. Petrey, D. Fitzhenry and W. White. Per M. B. S. Co. str. *Niigata Maru*, for Nagasaki—Messrs. W. A. Burr, G. W. Haden, Louis Montagne. Steerage—Three Japanese; six Chinese. For Hiogo—One Chinese. For Yokohama—One Chinese; one Japanese.

Arrived.—Per M. B. S. Co. str. *Niigata Maru*—Messrs. D. Ross, J. Hardy, W. Harker; one Chinese. Steerage—Mr. J. White; five Chinese. Per str. *Ningpo*, from Hongkong—80 Chinese. Per str. *Dragon*, from Foochow—Mr. and Mrs. Lemaire, Mr. and Mrs. Chapman, Messrs. Yuill, Shepherd, Smith and Schultz; 57 Chinese. Per str. *Hankow*, from Chinkiang—Mr. and Mrs. Duff, and Mr. Stronach. Per P.M. str. *Costa Rica*, from Yokohama—Mrs. S. M. Bryan, Mrs. L. B. Hooff, Messrs. N. J. Silas, H. Magniac and servant. From Kobe—Col. Bassel, Messrs. De-Witt Arnold, H. Lamb, J. F. Sutton and servant. From Nagasaki—Messrs. A. Burman, A. C. Gibson; three Europeans, 27 Chinese in steerage. Per str. *Glenfalloch*, from London—Mr. Law. Per str. *Fire Queen*, from Hankow—Mr. J. H. Anderson. Per str. *Fyen*, from Aden—Messrs. Sonne and Colding. Per str. *Foochow*—140 Chinese. Per str. *Chihli*—Mr. and Mrs. Pirkis. Per str. *Fychow*—Mr. N. A. Nefidieff. Per str. *Hankow*, from Hongkong—Messrs. Huffam, Pinckvoss, Bradley Keller, Satorius, and Capt. Moalle. Per str. *Chinkiang*—Mr. Buchheister; 120 Chinese. Per Am. ship *Messenger*—Messrs. R. Chase and E. H. Nicoll. Per P.M. str. *Oregonian*, from Yokohama—Mr. and Mrs. Holdsworth, Mrs. C. R. Harris, Messrs. Boyce, R. H. Percival and servant, H. Hartinau and servant, C. A. Gibon and J. M. Smith. From Hiogo—Mr. and Mrs. Walter infant and servant; one Chinese in steerage. From Nagasaki—Messrs. W. G. Herdman and servant, G. J. Wood, H. Magniac, four Japanese officers; nine Chinese and four Japanese in steerage. Per M. B. S. Co. str. *Takasago Maru*—Mrs. and Miss Ekstraud, infant and servant, Mrs. Mooney, Miss Marshall, Miss Deville, Miss Drulin, Messrs. C. W. Lawrence, Wigton, Hjousbery, Schoffer, Mugard; one European and 12 Chinese in steerage.

Leaving.—Per M. M. str. *Meikong*, for Hongkong—Mr. and Mrs. Pirkis, Messrs. H. Magniac and C. C. Blakeslee. For Naples—Colonel Cooke. For Marseilles—Mr. and Mrs. Benke, daughter and servant, Capt. Richard Gibbon, Capt. Toms, Messrs. O. Sichel, P. Sichel, Leo Juvet, W. E. King and J. E. Cardwell.

TERMS FOR ADVERTISING.—Ten Lines and under, *One Tael*; each additional line *One Mace*. One-half of these charges for repetitions. Contracts may be made for 3 months, or longer, *payable in advance*.

STANDARD LIFE ASSURANCE COMPANY.

Established 1825.

THE undersigned begs to notify that the Board of Directors at this place have power to pass proposals for Assurance, on the Lives of Persons residing at any Port of China or Japan.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, MAY 1, 1875.

FEI YEN-LI, Literary Chancellor of Honan, discusses in the Peking *Gazette* of April 13th, the comparative merits of the two systems of purchase and competition in a manner which might be instructive to Lord Cardwell himself. In fact, Fei Yen-li is an officer who would not have disgraced the Government of Mr Gladstone, being eminently competent of the means to adopt how not to do a thing, and equally competent to reduce those means to writing. "There is a time for everything," an antiquated sage has informed us, and Fei Ta-jên now enlightens us further, that there is room for an argument in favour of everything, The memorial is like the late Minister's great speech on the claim of the King

of Bonny to Scotland (only we forgot' that exists only in burlesque); arguments are produced on every possible side of the question; and then the author, himself shocked with their diversity and nearly balanced weight, subsides when his own judgment would naturally be anticipated. According to Fei, the success of a government depends on the fitness of its officers—a dictum with which possibly Mr Beales himself might be found to agree. But there are ways more than one by which appointments may be made. There is the method of literary examination pure and simple, and there is the method of purchase pure and simple; and there are all manner of mixtures of those two, as well as appointments by favour. According to Fei Ta-jên, they are all very good. The qualities which lead to success at the literary examinations will in all probability stand a man in good stead when he is in office; again, experience points out that the officers who have purchased rank don't seem to be very much inferior to their lettered brethren. Altogether, if eighty or ninety per cent. are literary graduates, and ten to twenty purchasing officers, Fei thinks no great harm can be done. Fei being himself a literary graduate, we are of course called on to admire the breadth of mind and openness of character which has led him to make this exception in behalf of his unlettered compeers. Having, however, decided that the selection of persons for official appointments is a matter of paramount importance, but that the manner in which it is to be done is one of comparatively little moment, Fei throws out a scheme for nomination, subject to subsequent examination, not very unlike in part many propositions of similar nature put forward in more civilized countries. He would not abolish the purchase of the lower ranks of office, but when it came to the purchaser's turn to enter on actual service, he would not have him appointed thereto by the Provincial Governments. He should be required to go to Peking, hand in his application to the Board of Civil Office, and undergo an examination before the heads of that department as to his literary attainments. As the matter stands at present, the purchaser of office can go on till he gets his name on the top of the list for actual promotion. The Government at Peking names him for appointment in a certain province. He is possibly unknown there, and put into the wrong place for his talents to be made the best use of for the public service; or perhaps he is known to be utterly incapable, but, having been appointed from Peking, there is no help for it. Only the most incapable can be removed from their posts; the rest, the men who are "skilled with their tongue, and adepts in the art of making themselves useful, continue as an incubus on the official lists." We think we have heard the same complaints elsewhere. Fei Ta-jên adds that positions involving the collection of revenue, the movement of troops, and the administration of justice, cannot effectually be administered by persons without literary training; and those who attempt it are pretty certain to be dependent on the assistance of others. Without differing much from his dictum, there is little in the Chinese literary curriculum to favour the acquisition of knowledge in any of the three branches. Fei Ta-jên adds another more practical argument against the system of purchase as carried out in China, but the full force of which he fails to see. It affords a direct temptation to increase the amount of unchecked peculation on the part of officials, which is steadily ruining the empire. The man in low office peculates to purchase a higher, and the man in high office, to repay himself, gets appointed to low office those who display the greatest readiness to contribute to his needs. Like an article in the *Saturday Review*, the whole winds up in the most inconclusive way. The writer has had a good deal to say, and says it well; but, evidently thinking more of how to say it than of what to do with it when said, he leaves his reader more undecided than ever. Nevertheless, like his literary contemporaries of the *Saturday*, he is quite willing to expose himself to the sneers of those unalive to the questions of the day, rather than put forward a mass of mere empty verbiage. Fei's abilities are evidently thrown away. Downing Street under Mr Gladstone, or Southampton Street, Strand, would afford fitter opportunities for their display than the Literary Chancellorship of a Chinese Province.

Summary of News.

The French mail of the 12th March, arrived on the 29th, by the M. M. steamer *Sindh*.

We have news at last of the *Gwalior*. She had to anchor 240 miles South-west of Hongkong, and a steamer was despatched to bring in the mails. She arrived at Hongkong yesterday afternoon, and her mails are coming on here by an extra steamer, which was to leave for Shanghai this morning.

A mail leaves to-morrow for Europe by the P. & O. steamer *Orissa*.

The following Reuter's telegrams have been received:—

In reply to a question in the House of Commons, Mr. Disraeli stated that it would be advisable to wait further advices with the regard to the Yunnan outrage. Her Majesty's Government had reason to believe that the Chinese Government complied with Mr. Wade's demand, but in the absence of detailed information deprecates further present discussion.—

The Viceroy's Proclamation deposing the Gaekwar of Baroda has appeared.

A Boat arrived in Hongkong from the mail steamer *Gwalior*, at anchor 240 miles from Hongkong, on the coast of Hainan. Her machinery is totally disabled.

In the House of Commons, a motion by Dr. Kenealy, for the appointment of a Royal Commission of Enquiry into the circumstances of the Tichborne Trial, was rejected by 433 against one after a protracted debate.

The Gaekwar of Baroda has been sent to Madras.

A meeting of shareholders in the Gas Company was held on Tuesday. The accounts showed a net profit of Tls. 23,120. A dividend has been declared at the rate of 11 per cent. A new gas-holder which is in course of erection constitutes a present drain upon the funds, as its cost is being met out of income; hence the reduction of 1 per cent from the usual rate of dividend. A slight increase has taken place in the quantity of gas consumed. Sir, E. Hornby and Messrs. Purdon, Hogg and Hitch were re-elected directors.—The fee to the Chairman for attending Directors' meetings was raised to Tls. 20; that to the other directors remaining at Tls. 10 as before.

The adjourned meeting of shareholders in the Shanghai and Hongkew Wharf Company was held on Thursday, to receive amended proposals with reference to the amalgamation of Hunt's and Heards' wharves with the Hongkew wharf. After two amendments had been rejected, the original motion for the amalgamation was carried, subject to the alteration of certain articles of the deed of settlement of the Hongkew Wharf Company, to be submitted to and approved by another meeting, of which thirty days' notice must be given.

An extraordinary meeting of members of the Shanghai Race Club was held on Thursday, Mr. C. J. King in the chair. The meeting was called in accordance with a resolution passed at the annual meeting, to take into consideration the correspondence between the Club and the Recreation Fund Trustees. The following resolution, proposed by the Chairman and seconded by Mr. F. D. Hitch, was carried unanimously:—"That the Secretary of the Shanghai Race Club shall address the chairman of the Trustees of the Recreation Fund, to the effect that the members of the Shanghai Race Club respectfully decline the proposals contained in his letter to Mr. John Dent, of the 18th of August, 1874; as the club is desirous of reserving its independent action in the purchase of the privately held shares in the Race Course, as well as to retain the control of the Race Course and the Grand Stand enclosures, in the hands of the appointed officers."

The Shanghai Taotai has issued a Circular to the native merchants here, very much in the sense of the Customs' Taotai's late effort at Tientsin ; and we are told that it has been similarly met--by a threat to close business unless it is withdrawn. But for this we cannot vouch.

A case of considerable local interest has been heard at the Supreme Court. The parties were Butterfield & Swire *v.* Little & Co. The plaintiffs claimed a sum of about £60, as the difference between the amount of freight paid by them to the defendants in July last, for teas shipped on board the S. S. *Pleiades*, and what the freight would have amounted to at rates paid subsequently by other parties for teas shipped by the same steamer ; alleging that it is a custom of universal practice in Shanghai to make a return of such difference to the shipper, in case cargo is subsequently taken at a rate lower than that first fixed. The defendants denied the existence of any such established custom. At the close of the first day's proceedings, the Court intimated that the evidence adduced in support of alleged custom did not satisfy it, and the Plaintiffs decided, after consideration, to submit to a nonsuit.

The Chief Judge has given an important decision, in regard to the proceedings of lekin runners in the Settlement, on a re-hearing of the case Walker *v.* Malcolm which was tried before the Magistrate on the 5th April. Sir Edmund Hornby holds that the treaty, while giving free right to the Chinese to deal with opium as they choose, on its passage into the interior, does not give them a right to levy any tax beyond the import duty while it is still in the "port"; and, while not defining the port, implies that it has certainly not left the port while it is in the town of Shanghai. We argued to this effect in writing on the subject in the *N.-C. Herald* of the 25th February last, and are glad to find our opinion confirmed. The purport of the Chief Judge's decision is of course that the action of the opium runners is illegal, and should be opposed by the Foreign Representatives.

We are informed that the opium taken from Walker's coolies on the 18th ulto., and which gave rise to the recent cases in Court, has been recovered from the Chinese by H. B. M. Consul, and placed at Walker's disposal.

The steamer *Ocean* has been arrested at the suit of the owners of the *Fusing*, for the sum of Tls. 200,000, at which the latter have laid a claim for damages sustained by the collision. We hear that there has been a good deal of difficulty as to the form in which this claim should be raised. The Chinese claimed that it should be tried before the Consul and Taotai under Art. XVII of the Treaty of Tientsin, and the Chief Judge's ruling in the collision case appealed from Foochow (*v. N.-C. Herald*, Feb. 18, 1875) would uphold them in so doing. But the difficulty then arose that the Consular, or Mixed, Court so constituted is said to have no power of arresting the steamer. The C. M. S. N. Co. appear to have ultimately resolved on trying the case before the Supreme Court. The Chinese take immense interest in the case, from the fact that a number of mandarins were drowned by the accident ; and are said to be seriously inclined to treat the accident as a set-off against the murder of Mr. Margary in Yunnan ! averring that damages may be as reasonably claimed for the (accidental) death of so many mandarins, as for the (wilful) murder of a British official !

The yacht race on Saturday was competed for by only two yachts—the *Lillie* and *Wave*, and was won by the latter. The *Lillie* broke down. A second race on Thursday was won by the *Phantom*, three out of four yachts that started, having come to grief.

Shooting in the preliminary Rifle competitions come off on Tuesday. A report of proceedings will be found on another page.

A torch-light procession of the Fire Brigade was held on Tuesday night, and came off successfully.

We hear that there is a flower show in the Chinese city, in a portion of the Tea Gardens. Yesterday was the first day, and many of our readers will probably like to visit the place. The show will be open to-day and Sunday. Our readers may perhaps remember an account we wrote of a similar exhibition, about this time last year.

It is disappointing to learn from Reuter's telegram that the Government are still awaiting further information, in regard to the Yunnan case. We had hoped that sufficiently full details would long since reached them by telegrams from Calcutta, to enable them to see their way clearly. That they may elect to wait for a detailed report before taking into their own hands measures to punish offenders, we can understand. But they must know enough to be able to tell Parliament what investigatory steps are to be taken ; or are they awaiting the result of Colonel Browne's conference with Mr. Wade? The delay in the arrival of the *Gwalior* is doubly unfortunate, as he and Mr. Allen are on board.

We are indebted to Dr. Lamprey, of the 67th Regiment, for a much fuller narrative than has yet been published, of the attack on Colonel Browne's expedition, and the circumstances of Mr. Margary's assassination. The narrative was to be published, a few days after it was despatched to us, in the regimental paper of the 67th—*Our Chronicle*, and a copy is very courteously sent to us in advance, with the knowledge that it would have exceptional interest in Shanghai. Old residents will well remember the regiment when it was quartered here, after the campaign in the North and during the Taeping rebellion, and we are of course indebted to the recollection of its stay here, for the present paper. The 67th, being stationed at Thayetmyo, were in the way of getting early information of the expedition.

The account which has reached us from Burmah, of the attack on Colonel Browne's party, removes any possible surmise that it had the character of a riot. The whole affair was clearly premeditated, and comes home more closely than ever to the Governor of Momein. As we had learned before, Mr. Margary had gone on ahead of his party to try to overcome some opposition which was shown. He seems to have been persuaded that he had done so, and sent back word to Colonel Browne to that effect. We learn from the *Rangoon Gazette* that this messenger returned to Mr. Margary after delivering his message, and was one of those killed. A groom only seems to have escaped ; and it is from him, we presume, that the information comes that Margary was speared while mounting his horse in response to the tsaubwah's invitation to visit some hot springs in the neighborhood. The narrative we publish below says his head was carried to Momein and exposed on the walls of that city.—In the meantime, Col. Browne's party, deceived by the deception practised on Margary, was advancing into the trap. He also rode on ahead, and was politely received ; while the attacking party were gathering round. It soon became evident however that treachery was intended, and the timely arrival of his escort appears to have been his salvation. They commenced a retreat, were at once attacked, and a brisk fight ensued during which a leader of the assailants, wearing a Chinese Military Mandarin's uniform, was shot.

A serious attack has been made on some foreign sportsmen in the neighborhood of Quinsan. Particulars will be found on another page.

Admiral Ryder reviewed a large body of seamen and marines from the British men-of-war in harbour, on the Race Course, Wednesday morning.

M. Godeaux, Consul-General for France, has left for Europe by the *Meikong*, on furlough. He is replaced temporarily by M. Lemaire, until the arrival of Count de Chappedelaine who left Europe for Shanghai on the 11th instant.

We hear that the Russian Admiral intends to visit Nanking shortly, in the *Vsanick;* and afterwards to go on to Hankow with the *Ascold*.

It is understood that Admiral Ryder intends going up to Hankow shortly with the *Vigilant* and *Modeste*. We hope that he will go on to Ichang. It will do the Chinese good to see the British flag some distance up the Yangtze.

We hear that the steamer *Hankow*, which is to go to Hankow to load teas, will run through to Port Said without stopping. She will carry 4,000 tons of tea and sufficient coal to last her on the through passage.

The Viceroy of Nanking is expected here, to inspect the Arsenal. A number of soldiers, intended we believe as his guard, were encamped on the bank of the Soochow creek on Sunday, and made themselves a nuisance by crowding into the gardens of foreign bungalows there.

Our readers will remember Mr. Soulié's enterprising journey across Siberia, from St. Petersburgh to Peking, and the performances given in Shanghai by his troupe. We are sorry to hear that his stay in Japan has not been a profitable one, and that the troupe he brought with him through such an adventurous journey is greatly reduced. Nothing daunted, however, he purposes returning to Europe by

the same overland route, with a troupe of Japanese and Chinese acrobats.

We have received a volume of Returns of Trade at the Treaty ports in China, for the year 1874. It containa an abstract of Trade and Customs Revenue Statistics from 1864 to 1874.

We have received a pamphlet entitled "Notes on Chinese Mediæval Travellers to the West," by E. Bretschneider, M.D. Physician to the Russian Legation at Peking. These notes first appeared in the *Chinese Missionary Recorder*, and have been reviewed by us from time to time as they appeared in that magazine. They have a curious interest, and we are glad to have them in a compact form.

Dr. Williams has issued a circular to the Protestant missionaries in China, inviting their attention to Rule X of the Regulations for the Philadelphia Exhibition, and suggesting that they should interest themselves under it. Department X under this Rule is for "objects illustrating efforts for the improvement of the physical, intellectual, and moral condition of man;" and is sub-divided again into separate groups, of which one, headed "Religious organisations and systems," is an appropriate place for a missionary collection. Mr. Drew has suggested that a collection be made of everything which will form a full representation of the benevolent work done in China by Protestant missionaries since the arrival of Robert Morrison at Canton in 1807; and Dr. Williams thinks such an exhibition would be full of attraction and instruction to the people of the United States. The collection would of course comprise books written or translated by missionaries; statistics of number of missionaries engaged now and from the beginning; number of churches, of communicants, missionary schools, hospitals, &c., &c. The proposal is a new one, and no doubt a collection of 70 years work would make a formidable display. Dr. Williams sugests that the missionaries at the several stations should hold meetings, apportion the work of collecting, and appoint some one to correspond with a General Committee which has been formed at Shanghai.

A Chinaman committed suicide by cutting his throat with a chopper, on Wednesday, in the suburbs of the French Concession.

We regret to hear of another death by drowning in the Hwangpoo. On Friday evening the steamer *Yung Ning* arrived from Hankow, and was being berthed alongside the C.M.S.N. Co.'s Wharf, when Mr. W. H. Stanley, the chief officer, who was on the pontoon superintending the mooring of the vessel, walked over the end in the darkness, and before any assistance could be rendered him was sucked under by the strong ebb tide then running, and drowned. Mr. Stanley was an old resident in Shanghai, and was much respected, both by his shipmates and employers. This death would have been prevented had there been any protection round the pontoons, and we trust that measures will be at once taken to erect guards. We may remark, further, that we cannot remember having ever seen either a life buoy or a drag about any of the Shanghai wharves. We are told that, in this instance, if there had been a life line at hand, Mr. Stanley's life could probably have been saved, as he was seen for a few seconds vainly endeavouring to hold on to the smooth surface of the pontoon; but before a line could be brought from the steamer he had disappeared.

The body of a Chinaman was found on Saturday last, lying on the Pootung shore. The body had been some time in the water and was much cut about the head. It is supposed to be that of the sampan man missing from a boat found by the Police on the river, unoccupied, a short time ago. The body, which was almost past identification, has been handed over to the Lifeboat Association.

Looking through some old Municipal reports, we have come across one on Water Works, addressed to the Chairman of the Council in 1872. Three schemes are there brought forward by the Municpal Engineer—the Lung-hwa, Feng-wan-shan, and Yangtzepoo, and we note that the Works Committee remark on the latter as the most feasible. Their idea seems, therefore, to have been to accord with that of the present Water Works Company, who are carrying on operations in the neighborhood recommended. The Lung-hwa company, which promises to issue a prospectus bye-and-bye, chooses the first-named scheme, under the impression no doubt that the City—which its works will first reach—will prove a valuable client. There seems to be a lull, however, in the promotion of this scheme. Two months ago, we were to have a public meeting immediately. Two months later, we seem to be no nearer it.

Li Hung-chang seems to be specially active in military preparations at TIENTSIN. Besides massing troops and erecting numerous forts, he is said to be about erecting a line of telegraph between the chief forts—we presume those of Sinching, Taku and Peitang. He has also imported from Europe a number of torpedoes, which, with their charges, are now stored at the Taku forts. These tremendous preparations at Taku remind us of the Taeping complaint at Quinsan. The rebels had strongly fortified the approach from Soonkiong, but Gordon meanly took them in the rear. Perhaps Li Hung-chang may some day realise the same sensation.—The German Minister and the Inspector General of Customs have arrived at Tientsin, where they are expected to make a short stay.—We fancy our correspondent has arrived at a right conclusion, though from a somewhat mistaken premiss, in blaming so severely as he has done the appointment of Sung Pao-hwa to the Yunnan Commission. Sung Pao-hwa is not a member of the Commission; nor will he take a part in the business of enquiry. He is only going as escort to the delegates sent by Mr. Wade. Even for this office, however, we do not hesitate to say that he is an unsuitable person. The escort of a man so small in rank is directly calculated to lower the importance of the mission in the eyes of the Chinese; and our effort should be to give it every importance that circumstance can invest it with. The appointment should be insisted on, of a special commissioner ranking at least as high as a Taotai, and nominated by the Tsung li-yamen instead of by the Viceroy of Chihli. It is all very well to recognise Li Hung-chang as Commissioner of Foreign Affairs in matters of routine; but he should be allowed no independent say in such a matter as this. The official appointed to escort the foreign delegates should be appointed directly by the Government, so that the officials and people along the route may know his mission emanates from the Court itself.

A special meeting of land renters was held at CHINKIANG on the 24th April, to discuss the question of repairing the Bund. A Professional survey had been had, and it appeared that the river was eating in seriously into the bank. Mr. Kingsmill advised sinking vessels loaded with stone for a distance of 800 feet along the foreshore, as a foundation for the necessary works. The Chinese authorities wish the Foreign Community to share the expense of the necessary works. The latter decline. Temporary repairs to the Concession Bund will be made at the discretion of the Council.—Messrs. Spencer & Wolff write from Chinkeang on the 28th April:—We have again to report a most unsatisfactory week; business in Cotton Goods has been almost entirely suspended; and, although we have advices from Shanghai of an improved tone existing there, our market remains dull and inanimate. In Iron, Sandalwood, Sugar, Opium, etc., a like depression has been felt, and very few sales are recorded.

The HANKOW Chamber of Commerce report of the 26th April says:—There has been a fairly active market for Grey Cottons during the past three weeks, but no improvement in the demand for Fancy Goods and Woollens. Best Shanghai Cotton has declined to Tls. 10.60 per picul. Stock 14,000 bales, or 24,00 piculs.

The only news in NAGASAKI papers brought by the *Golden Age* relates to the movements of men-of-war. The Russian steamers *Yaponietz* and *Sobols* have left for Vladivostock, and another one is expected to arrive from that port. The French ships *Montcalm* and *Volta* had arrived from Kagosima.—Nagasaki seems to be possessed of a remarkable taste for literature. It would seem that so small a community could hardly support more than one newspaper; but Nagasaki always has two. And lately a third publication has been started there, called "The China and Japan Temperance Record." The Record, which is published monthly, is specially intended to further the cause of Temperance, and the contents are strictly in accordance with the title.

Two employés of the Comptoir d'Escompte in YOKOHAMA concerted a very large robbery from the bank, and had so far carried out their plan as to charter a schooner to convey them and their plunder away. They were discovered, and the greater portion of the money was recovered. They committed suicide on detection. Particulars of the tragedy, taken from the *Japan Gazette*, will be found on another page.

Summaries of FOOCHOW, HONGKONG and HIOGO news will be found on another page.

Editorial Selections.

MR. HART'S MEMO. ON THE FUTURE OF SHANGHAI.

HAVING met Mr. Hart's prophecy of our early extinction, so far as it is founded on threatened changes in our rivers, we may venture a word on his proposition that Shanghai has developed an abnormal prosperity and that Chinkeang is destined to be the commercial entrepôt of the future. His arguments on this point, also, are so mixed up with his wrong idea about river channels, that it is hard to separate the two. Still, distinct reasons are given why Shanghai must come to commercial as well as physical grief, and it may be well to examine them. Mr. Hart states twenty years as the limit of our possible existence. "In twenty years time, Chinkeang will have taken the place of Shanghai as a semi-terminus and transhipment port, but its foreign community will naturally [illegible] one, (political) possibilities aside." Here are two contingencies involved: the extinction of Shanghai in favor of Chinkeang, and a general decadence of foreign interests. These results, it appears, are to be brought about by two agencies, of which the Suez Canal is the major. 1° Steamers coming out through the Suez Canal are to make London and Hankow their termini, and so decrease our local trade that even the P. & O. will be obliged eventually to move on. 2° Chinese steamers will exclude foreign ships from the coasting trade, and will vie with us on the sea. "In ten or twenty years time," this competition "will have swept the foreign flag from the coasting trade of China, and displayed the Chinese colours in the London and Liverpool Docks." Apart from any question of physical changes, these seem to be the causes which are to ruin Shanghai, and transfer the shreds of its (foreign) trade to Chinkeang. What "political possibilities" have suggested themselves to Mr. Hart as capable of influencing the result, we try in vain to guess. To an ordinary mind, another war to regain our prestige and re-establish the position which diplomacy is carefully losing, might seem the most likely prospect. But Mr. Hart's note about the despatch of three Foochow gunboats to London would seem to anticipate a state of abject terror from their visit, leading to a general exodus of Englishmen with apologies for intrusion. These however are contingencies which do not enter into the argument. Changes in the natural course of events appear to be presently relied on.

First, then, as to the question of river traffic: has Mr. Hart so forgotten the early history of Shanghai, as to be unaware that sailing ships used to go to Hankow for teas long before the Suez Canal was opened? We can give him a list of nine—the *Highflyer*, *Guinevere*, *Coulnakyle*, *Eliza Shaw*, *Gossamer*, *Min*, *Sir Lancelot*, *Lauderdale*, and *Napoleon III*, which went up in 1867—against eleven steamers in 1874. They were not quite so large as the steamers which now make a yearly effort to swamp the London market at the earliest possible date; but they suffice to show that the practice is no new one, and that Shanghai has incurred for the last ten years, without perceptible hurt, the competition which is to swamp her within the next decade. If Mr. Hart insists that the increase in size of the steamers over the old sailing-vessels is itself an argument in favour of his prophecy,—as implying that a greater quantity of tea is now shipped direct than in former days—we reply that the teas shipped from Hankow are shipped largely upon orders from Shanghai, or by merchants actually resident in Shanghai. Their credits and drafts are negociated here; and so long as trade is thus directed and controlled from Shanghai, and yields its returns to Shanghai, the mere fact that more or less produce does or does not pass through the port on its way seaward, is of slight importance. And the competition of sea-going with river steamers stops here. There is no direct import trade to the river ports, such as we might expect to find growing if Shanghai were destined to be supplanted. Even the sea-going steamers which are destined for Hankow, drop their cotton goods at Shanghai as a natural entrepôt, before proceeding on their Yangtsze voyage.—We see no reason, therefore, to suppose that Shanghai is likely to subside because steamers go to Hankow to load tea; nor do we see the most remote tendency on the part of silk to go to Chinkeang. Silk merchants might follow such a change as Mr. Hart indicates. Given a large developement of Chinkeang at the expense of Shanghai, silk merchants might be led to try the new market; but they are not likely to wilfully inaugurate the change, so we must find some reason why Chinkeang should develope and Shanghai deteriorate, before that change is likely to ensue. We can find absolutely none, beyond the arbitrary one of the closure of Shanghai by physical causes; and we have shown that that contingency is so remote as to be not worth discussing. Chinkeang has a favourable position at the mouth of the Grand Canal, and that position will always insure it a considerable trade; but it is a local trade, incidental to a local position. The position of Shanghai, nearer to the seaboard, gives it an immense advantage as an entrepôt. For there is a coastwise as well as riverine traffic to be accommodated; and the situation of Shanghai, with a view to both contingencies, is perfect. The entrepôt could be no nearer the sea; and it could be no further from the sea without subjecting trade to increased expense through a longer river transit. Why should goods destined eventually to find their way to Japan or Tientsin, go 150 miles further up the Yangtze, to come those 150 miles back again, and incur twice over the risks incidental to river navigation by deep draught sea-going vessels? But the proposition is so extravagant, when fairly viewed, that we are almost ashamed to prolong our argument. As a matter of fact, Shanghai has become the entrepôt for Central and North China; and, so far from losing its position, the tendency of trade has been more and more to centralise here. Ningpo has virtually died out as an independent port, and is content to draw daily supplies from Shanghai as a depôt. The riverine ports have been thoroughly eclipsed. Establishments were started there, at the first opening of the Yangtsze, on a scale that seemed to contemplate possible rivalry with Shanghai; but one after another has been closed, and Shanghai remains the entrepôt from which they draw their weekly supplies. The efforts made to import goods directly from England to Chefoo and Tientsin have been abandoned. These ports likewise are fed from Shanghai; and the establishment of regular steam communication with Nagasaki, Hiogo and Yokohama, is tending to constitute Shanghai an entrepôt even for Japan. Has Mr. Hart ever heard of the Mutlah scheme?—an endeavour to divert the course of trade from the Hooghly to another river, and from Calcutta to another entrepôt? The Mutlah river runs a little south of the Hooghly, is shorter, and less dangerous. A town was created upon it under Lord Canning's rule, not fifty miles—we forget the exact distance—from Calcutta; a railway was made connecting it with Calcutta, the river was buoyed, pilots were trained, wharves were erected; every preparation was made for the trade which would inevitably accept the invitation tendered. But the Mutlah town is grass-grown, and the Mutlah river is nearly as deserted as before. Trade declined to leave its old channel and its old entrepôt, though a more convenient route was offered it. Australia affords a similar instance. The trade of Victoria has chosen to seat itself at Melbourne, which is situated some miles up the river Yarra Yarra. The river is narrow and shallow, and navigable only by very small craft; large ships generally anchor off a place called Williamstown, situated on the open bay a little to the West of the river's mouth. Some years ago, it seemed natural to certain people that the seat of trade should be moved bodily to Williamstown; land was accordingly bought; houses were built, and every effort was made to carry the theory into practice. The failure was complete. Melbourne remains the commercial as well as political capital of Victoria, and Williamstown is to it what Gravesend is to the City of London. We commend these facts to Mr. Hart, as instances how hard it is to divert an established trade; and we see less

reason why that of Shanghai should go to Chinkeang, than that of Calcutta to Mutlah. In the latter case, the new course offered was shorter and easier; in the present, the journey is longer and more dangerous.

INDIA AND CHINA.

It is instructive to residents in China, to compare once and a while the failures and successes of British government in India, as in many respects there are analogies between the two countries. Mr Markham's "Statement," exhibiting the moral and material progress of the British Empire in India, reviewed in the *Academy* of 27th February, is one of those works which gives us an insight into what has been doing in that great dependency. The spirit which actuated Trajan and the better-minded of the Roman emperors is not very different from that of the British rulers of India. Both attempted to set up, as the rule of government, entire justice, and to promote the happiness of the subjects who came under their rule, as well morally as materially. The great works undertaken by England in India will stand comparison with those of the Romans in their Asiatic possessions, and it is to be hoped that the influence of the modern empire will remain even more permanent than that of her ancient prototype. As the reviewer says—the keystone to the subject is finance. "England could not afford to govern India, if the latter did not pay its own expenses; and the real difficulty of the problem to be solved by her rulers is to curtail philanthropic expenditure within due bounds, and not to purchase material improvements at the cost of a deficiency in the yearly budget, or the odious alternative of the necessary imposition of taxes foreign to the spirit of the people." As in China, the mainstay of Imperial revenue is a land-tax, or rather rent, bringing in £21,000,000 per annum. Opium brings in some £9,000,000 more; £6,000,000 are levied on salt. Customs, excise and stamps make up the difference. No taxes exist on internal trade, the development of which is anxiously encouraged by the Government, and the only foreign tax introduced, the Income tax, has, in deference to the wishes of large sections of the more influential classes, British and Native, been taken off. Theoretically the tax is fair enough, but the experiment seems to prove that the Government had not yet obtained that confidence which would enable them to levy the tax in an unoppressive and equitable manner. Nations in an inferior state of civilisation steadily resist all attempts at direct taxation, because that confidence in their government which can only be gained when it is learned that the interest of governors and governed can be identical, does not yet exist. It took many years in England itself to reconcile the taxpayers to direct taxation, and the feeling of dissatisfaction is not even yet extinct. Still, although to reimpose the tax may not at present be expedient, it may be well to keep it before the eyes of the natives, as one with many good points to recommend it so soon as the requisite confidence on their part shall be acquired. Intellectually, Great Britain has made great strides in raising the capabilities of the subject races. It is undeniable that the effect is in many cases grotesque. The Indian mind is supple rather than retentive. It readily receives an impress from without, even before it has fully comprehended the reason or condition which has led to that impress being communicated. We have not, here, to look so far as India for a somewhat similar condition of affairs. More than any Asiatic nation, the Japanese are desirous of rendering themselves a civilized people. They possess many of the necessary qualifications, and have set themselves seriously and conscientiously to the work. Still, even their greatest admirers cannot deny that, amidst much that is sterling, there exists a vast amount which is simply superficial and often descends even to the ridiculous.

The labours of Great Britain will, however, probably be longest preserved in the public works with which she has overspread the land. It is curious, therefore, to note how the results have tallied with the predictions of those who observed their first beginnings. The most important of these works have been railways or works connected with irrigation. Many of those experienced in Indian ways boldly asserted that irrigation works were what was mainly required, while railways were unsuited to the wants of the country and the feelings of the people. The opinions of these men were worthy of consideration; they were not spoken idly or without knowledge. Curiously enough, the exact reverse has been the issue of the works undertaken. The large sums spent on irrigation have resulted in too many cases in positive loss, while the railways, constructed as they were at too often extravagant outlay, and after paying guaranteed interest, at present cost the government less than $1\frac{1}{2}$ per cent. on the original cost, while this charge is itself yearly diminishing. On the other land, the soils of India differ materially, and serious mistakes have been made in introducing irrigation works where they were positively deleterious. It is not always where there is least rainfall that irrigation is most needed. The coast of Madras is adduced as an example, where with an annual rainfall of from 50 to 60 inches a-year, irrigation is absolutely necessary, because what is called in India dry cultivation is, owing to the poorness of the soil, impossible. In the central districts of the same presidency, with a rainfall of only 30 inches, the rich soil of the plains only requires an occasional shower to produce plentiful crops. Here the farmers have been accustomed for centuries to grow, in rotation, crops to which in Northern China we are no strangers—millet, pulse, hemp, cotton and oil seeds. Irrigation is here worse than useless. It would only force the farmer to exchange his more wholesome and profitable crops for the culture of rice, one of the least profitable, if not the very least profitable of cereals. Of irrigation schemes, the great works undertaken at Orissa, Midnapur and Kurmol have, from causes such as the above, turned out complete failures. Besides these causes which have rendered so many of the irrigation schemes practical failures, there are others at work to produce the same result. It was hoped that canals would afford a ready means of communication during the year, and that even in the face of failure of the irrigation project, the industrial uses of the canals would repay their cost. Experience has proved this hope also fallacious. "Except in the rainy tracts in Bengal, and along the western coast, all attempts to keep canals open throughout the year have proved illusory, and a vast scheme for making the Godavery river navigable, after ten years persevering efforts and an enormous expenditure," has been finally abandoned as impracticable. Fortunately for China, she does not labour under many of the peculiar difficulties of India. Possessing a rich soil for the most part, and an abundant supply of rivers, few portions are actually sterile. What she does want is increased means of internal communication. Where canals are practicable, there is little fear of a want of water. Where from natural causes impracticable, the empire is as a whole admirably adapted for the construction of railways. England has honestly set herself in India to improve the condition of her people. China has persistently made it a policy to throw obstacles in their way. It is better sometimes to have failed in a good cause, then never to have attempted it, and not only England but China may well take example from the failures as well as the successes of British government in Asia.

LEEKIN SQUEEZES IN THE SETTLEMENT.

The decision of the Chief Judge in the case of "Walker *v.* Malcolm" will, we believe, give general satisfaction. We do not imagine that any charge will be made against us of writing in favour of opium or the opium trade—still less of the wretched system of opium-running by men of straw, which gave rise to the action. We, therefore, feel that we can express the more clearly the views which we have always held as to the inadvisability of the course lately pursued by the Municipal Council, with respect to levies within the Settlements. On more than one occasion lately, have we had to comment on the

unsatisfactory rôle played by the Police in the matter of local exactions. The latter have, in point of fact, been placed at the disposal of the native guilds, irresponsible bodies themselves, and in many cases, as experience proves, quite ready to take advantage of any relaxation on the part of the representatives of Foreign powers. Without official position themselves, they are made use of by the native officials when any encroachment is desired, and this very disponibility it is which has made them ready and potent weapons. To such a degree had this been carried in the days of our early intercourse with China that, as a matter of absolute necessity, a clause forbidding the interference with Foreign trade of such establishments, was inserted in the first treaty made with China for the regulation of maritime commerce—a treaty still in full force, and in fact the authority to which the Foreign Settlements at Shanghai owe their existence. As a matter of fact, the plaintiff, in conducting opium through the Settlement, was committing no illegal act. And we can conceive no more hurtful position than that taken up by Mr. Drummond on behalf of the Municipal Council, for the defence. The opium had paid its import duty according to treaty, and so far was free. Whether the act in which the plaintiff was engaged was consonant with or contrary to what jurists call *bonos mores*, is beside the question. So far as the Municipal Council or their employés knew of the law, the plaintiff was engaged in a perfectly legal action. While so engaged, eleven persons, claiming to be servants of a Chinese guild, attack him in the open street. The Chinese servants of the plaintiff are taken to the Mixed Court, while the opium, about the ownership of which there is a difference of opinion between plaintiff and the Chinese, is also handed over to Chinese custody. Now, with the Chief Judge, we must dismiss all sentimental views about this matter; and this we are the better able to do that, although these cases have mainly occurred with regard to opium, it being the most valuable commodity, there is really far more than opium concerned. And the decision of the Chief Judge tends to the exclusion from the Settlement of all tax gatherers of whatever sort.

We would ask any man charged with the preservation of order and discipline, how he could expect to keep good order, if beyond his own commands his men were to be at the disposal of outside and irresponsible individuals. With a very much better organised system than that of the Chinese, we would have good reason to dread the results. Knowing as we do the composition and management of such bodies as Chinese guilds, we can realise the inconvenience to Municipal government of the presence of their emissaries within the Settlements. Who were the eleven men who, in the open street, laid violent hands on the plaintiff's attendant Chinese? The Municipal Council only know that they gave tickets to some employés of the Opium Guild. What security has the Council that these same men will not molest, and do not molest persons pursuing in the street what is their ordinary avocation? None whatever. The police are ordered not to interfere with them, or rather are allowed to assist them, without any more proof of the legality of their proceedings than that offered by the possession of a ticket from the Opium Guild. But, as we have said, opium is only one commodity; a similar system of extortion prevails with regard to other goods, and is certainly not restrained, if it is not encouraged. Piece Goods are nearly as effectively watched as opium, but the amounts in question being small as compared with the exactions on the more valuable article, it does not pay to take the same precautions. Both, however, stand on the same footing, and we are glad to see the Chief Judge laying down the dictum that such charges within the limits of the port are decidedly contrary to treaty. Free dealing, even in opium, is clearly permitted within those limits; other foreign imports can claim a still further exemption. There can be little doubt as to what may reasonably be denominated the limits of the port; and we trust that the Council, having now the decision of the Chief Judge to back them, will before long draw up such rules as may prevent, for the future, these exactions within the limits of its jurisdiction.

THE FRENCH IN TONQUIN.

The *China Mail* gives some further news of French proceedings in Tonquin. Two ships of war had left for the Annamese capital, with a French official on board who was empowered to make final arrangements, and to fix the date of the opening of Tonquin to Foreign trade. He was expected back in Saigon on the 20th April, and it was assumed that he would bring news that the event would be fixed for some day in June next. It had been the intention of the French Admiral to visit Hué in person, but the King put so many obstacles in the way, that the idea was abandoned until the Court of Hué could be persuaded to be less obstructive. The difficulties raised, remind us very much of our early intercourse with China, and towards which we seem to be gradually drifting back. One objection was that the treaty forbade the ascent of the river as far as Hué by men-of-war, and that, consequently, the Admiral must travel overland from Touron to the capital;—just as the Chinese caused Lord Macartney to travel overland to Peking, and more recently opposed by force Sir Frederick Bruce's attempt to go up the Peiho. The Annamese also desired to be excused from firing any salutes. When the *Antilope* left on her second trip, her commander was instructed to inform the Hué authorities that all these objections must be withdrawn, or the treaty would be annulled; and, says the *Mail*, it is highly probable that the Annamese yielded. If so, Tonquin will, within the next eight or ten weeks, be opened to trade. The *China Mail* also publishes a very curious letter, derived ostensibly from a Chinese source, regarding some recent proceedings of the French in Tonquin which it is very difficult to comprehend. We shall try to make what we can of it. When Lieutenant Garnier was at Hannoi, certain malcontents came and offered their services,—"Laes" the letter calls them, we presume Laotians, or the primitive inhabitants of the district. When the French found it advisable to retire, the Laotians were left to their own devices, and the Government pressed them so much that they rose in actual rebellion. They tried to get French assistance, but only succeeded in obtaining a promise of French neutrality. The French, however, were desirous of renewing relations with Annam, and succeeded in getting a treaty signed in the beginning of last year. As an inducement apparently to the Hué Government to carry out its stipulations, they seem to have turned round on their old allies the Laotians. Possibly the fact is that, the latter having made themselves masters of two provinces on the French frontier, there was a prospect of affairs becoming unsettled with a rebellion raging next door. At all events, the letter states that the French interfered, and nearly exterminated the "Laes." Hereon, another disturbing element, which too often manages to crop up in the negotiations of the French with Eastern nations, came to the front. We find M. Calomer, a missionary bishop, negotiating between the French General and the Laotians, with the object of placing the latter under the protection of the French flag, in order to preserve them from the attacks of the Hué Government. Once more the counsels of the latter prevailed, and the French again desert the Laotians and send assistance to the Annamese. Hereupon, naturally, results a cry from the Laotians. They had twice been made tools of by the French, and promised assistance against their natural enemies the intrusive Annamites, and twice they had been deserted at their hour of need. Now, it is only necessary to add that the charge is entirely *ex parte*. The French Commandant's version of the matter is, doubtless, something very different, and would show that there was little if any of the ill-faith practised which is attributed to the French. Still the latter ought to have learned by this time that edged tools are dangerous. We cannot help sympathising with M. Calomer's attempt to screen the Laes from the persecution overhanging them; but a minister of the Gospel is seldom in a more unsuitable

position than when playing diplomatist; and it seems tolerably evident that in this case the French were led into an engagement which they found impracticable, and in withdrawing from which they incurred dislike if not discredit. The simplest solution would be the annexation of the entire country. Such close relations with a semi-barbaric Court, as the position of the French in Cochin China involves, are simply impracticable. We find the same difficulty every day in Burma, which is the more settled country of the two. And we cannot but think the extension of both English and French rule to the frontiers of Yunnan would be the simplest and best solution.

Outports.

TIENTSIN.

In the Peking *Gazette* of the 8th April, there is an announcement that Wân-seang, the celebrated Chinese statesman, had memorialized the Throne, praying the Regents to allow him to retire from his public duties on account of continued ill-health. And further on, in the same *Gazette*, we find an Imperial Rescript on the subject of the memorial; commanding that Wân-seang, on account of his continued ill-health, shall be released from the duties of his rank as Major-General of the Manchow White Banner; and that he will not be required to attend to the transaction of business connected with the Board of Works, and the office of the Foreign-trained Legion at Peking; but that he will still be retained in his positions as a Privy Councillor, a Minister of State in the Cabinet, and a member of the Tsung-li yamên. In the *Gazette* of the following day, the 9th April, it is announced that Wân-seang had presented a special memorial to the Regents, thanking them for the favor of exempting him from certain duties.

In the *Gazette* of the 8th April it is announced that the Chinese official winter hats will be exchanged on the 21st April, (to-morrow), for the official summer hats.

In the *Gazette* of the 15th April it is announced that Ting Jih-chang (known to foreigners, I think, as Ting Foo-tai) formerly holding the post of Governor of Keangsoo, had arrived at the metropolis, and presented his respects to the Throne. And further on, in the same *Gazette*, it is stated that the Ministers of State and Ting Jih-chang had been summoned to appear for the transaction of business in the cabinet.

In the *Gazette* of the 15th April, it is announced that the Emperor would, at 6.30, arrive at the Kwan-tih Temple to offer up his prayers. This announcement, I fancy, does away with the rumors lately current in Peking and in this city, that His Majesty was at that time laid up with the measles.

There was a meeting of the stewards of the Race Committee held at 4 p.m. on the 16th instant, for the purpose of drawing up the Programme of our approaching Spring Races, which will come off on the 13th, 14th and 15th day of May. I may state generally that the prospects for a satisfactory meeting are very favorable.

At 2 P.M. on the 19th instant, the annual meeting of the landrenters of the British settlement here was held at H.B.M. Consulate; Mr. Mongan, Her Majesty's Consul, as usual on the occasion, presiding. Mr. Mongan opened proceedings by calling upon Mr. E. A. Solomon, the Chairman of the Municipal Council, to lay his statement before the meeting. Mr. Soloman thereupon addressed the landrenters, by first referring, in a general way, to the labors of the Council during the past year; and afterwards to the satisfactory condition of the funds on the closing of the year, as the statement of accounts which had been laid before the landrenters testified. He concluded by laying before the landrenters an estimate of the probable expenditure, which will be likely incurred by the new Council for the twelve months ending the 31st March 1876. The accounts for the previous year were then, with complete unanimity, passed by the meeting; as also the estimates of probable expenditure for the following year. Mr Solomon after that read letters which had been lately addressed to him by members of the community, regarding the purchasing of a fire engine; the annoyance suffered by certain residents in the settlement by the firing of salutes from vessels of war lying in proximity to their dwellings; and the blocking up of the thoroughfare by goods placed on the bund, arising from the negligence of the police not preserving an open space. These matters were accordingly all fully discussed and arranged. The business of the past year being then brought to an end, voting papers were handed to the Landrenters by Her Majesty's Consul, that they might proceed to ballot for a new Council; and the subsequent examination of them, after being filled up, shewed that Messrs. Cordes, Forbes, Moore, Hatch and Meadows were duly elected Councillors for the next twelve months. Her Majesty's Consul after that brought to the notice of the Landrenters three local matters, which imperatively demanded rectification. This, the new Council promised they would promptly carry out. The thanks of the meeting were then unanimously given to Mr. Solomon, the chairman of the late Council, for the able manner in which he had discharged his duties as the representative of the Council while in office. The business of the meeting concluded by a vote of thanks to Mr. Mongan, Her Majesty's Consul, for presiding over it on the occasion.

20th April.

I cannot see anything in the Peking *Gazettes* which have lately come to hand, of interest in particular for the Foreign world; nor have I otherwise heard of any news of political interest worthy of being reported to you on this occasion, for your readers information. In the way of diplomatic news, I am, however, able, in the first place, to mention that Herr von Brandt, the German Envoy, arrived here from Peking, two days ago. He subsequently called on Li Hung-chang, the Imperial Commissioner for Foreign Affairs; and yesterday, the Commissioner returned the call at the German Consulate. I am told that Herr von Brandt will stay here a week, and then return to Peking. During the evening of the 20th inst., Mr Robert Hart, Inspector-General of Customs, arrived here from Peking, and is staying at the residence of the Commissioner of Customs. Since his arrival, he has visited Li Hung-chang. It is stated that he will remain here for some days to transact business with that official.

General Raaslöff, the Danish Envoy, arrived here this forenoon, in the S. S. N. Co.'s steamer *Shantung*. Immediately after the steamer had been moored alongside the wharf, he landed and proceeded to the Russian Consulate, where he took up his residence with Consul Waeber.

The weather continues very stormy, blowing gales from all quarters of the compass.

22nd April.

We have received Peking *Gazettes* up to the 21st inst. I cannot find any news in the batch having any particular interest for Foreigners, beyond the facts that His Majesty the Emperor would, on the 20th inst., visit the Kwan-tih and Yung-sze temples, to offer up prayers, which proves that he is in the enjoyment of such good health that he can go abroad in a sedan; and that Maou-chang-tse, one of the chiefs of the Tsung-li-yamên, had obtained an extension of some more days leave of absence. As this high functionary is not famed for entertaining any amiable feelings towards Foreigners, and as he is likewise distinguished for almost never opening his mouth at the conferences between Foreign officials and members of the Tsung-li-yamên, it is scarcely possible for us to imagine that his prolonged absence will be regretted by the Foreign officials. The Peking Races will come off on the 26th and 27th inst., and yesterday morning three of our sporting men started for Peking, to ride at the races, where we trust they will keep up the fame of the Tientsin turf. In the way of diplomacy, I have to mention that H. E. General Raaslöff, the Danish Minister, called upon the Governor-General yesterday forenoon; and that he and his suite took their departure, on horse-back, for the capital at one o'clock this afternoon, hoping to reach it late in the forenoon of the 26th inst., in time to see the first day's Races.

Herr von Brandt, the German Minister, still continues to remain at Tientsin, at the German Consulate; and it is said that his Excellency will not at present proceed to the South of China, but will in a day or two return to Peking.

The weather continues very tempestuous, no matter whether the daily wind comes from the south or the north, the east or the west. The thermometer, this morning, stood at 43° Fahrenheit, consequently fires in the rooms are still the order of the day.

PURITAN.

24th April.

FOOCHOW.

The *Herald* says it is reported on native authority that the money sent up country for the purchase of first crop teas, is considerably in excess of the sum forwarded for the same purpose at the corresponding period last year.—The Secretary of the Danish Legation, Lieutenant Schultz, left for the North on the 13th inst. The object of his visit to Foochow was to confer with the Provincial Authorities in reference to the Great Northern Telegraph Company's claims; and we are glad to hear that the existing difficulties are in a fair way towards a settlement. The Provincial Government never had, to use a common figure of speech, a leg to stand upon; they are therefore wise in giving up the contest, even at the eleventh hour. —Matters in Formosa have assumed a quieter aspect, although the native authorities at this Port continue to send detachments of troops across to Taiwanfoo.—A disturbance broke out at the South Camp on the morning of the 17th instant. The tumult originated, we are informed, with some Northern soldiers who attacked, with stones and mud, the foreign drilled troops under Mr. J. P. MacMahon. The officers on both sides successfully prevented the use of fire arms; and finally, fresh troops arriving on the ground, the Northern men were moved off and locked up in a neighbouring Joss-house—to ruminate, in sadness, over their breach of discipline. —The *Herald* of the 15th mentions a rumour that one of the Arsenal gunboats had been lost at sea; but does not confirm it in the following number.—A new gunboat of about 600 tons measurement is rapidly approaching completion at the Arsenal. Her construction is taking place entirely under native supervision.

FORMOSA.

It is not perhaps generally known that, whilst the Japanese were on shore in the South of the Island, last summer, the

Chinese authorities threw a garrison into Suaou bay on the East coast.

Since the departure of the Japanese forces, the Chinese General charged with the administratian of East coast affairs, has been busy pushing a road along the coast from Suaou to the Southward, and by last accounts, his head-quarters were established not far from Chockeday, for which position see Admiralty charts. Until quite lately, the aborigines have remained passive, but it is now reported that they have closed in on the rear of the Chinese working parties and are harrassing them considerably.

The General will probably retire on Suaou again, until he can mature plans for dislodging the aborigines and driving them across the first line of mountains. This will prove no easy task, as the undergrowth, in which the savages are perfectly at home, is difficult to penetrate, and attempts at firing it, owing to constant downfalls of rain, are not succeessful.

The Keelung coal-fields are now being surveyed by a mining engineer, Mr. Tyzack, whose services were engaged in England for the Fuhkien authorities. The idea is, I believe, if the engineer's report proves favourable, to introduce machinery, with a view to procuring better fuel for the use of the Foochow arsenal, the Chinese men-of-war, &c. Machinery once introduced, the importance of Keelung will rapidly increase, and we may hope to see good China steam-coal on the treaty port markets generally.

10th April.

CANTON.

The yearly literary examination at Canton has already begun, and the candidates of Namhoi and Poonyü districts were to pass their final examination yesterday.—All the Mandarins shaved their heads on the 18th inst., the hundred days' mourning expiring two days after. With the shaving of the head, the Viceroy ordered the assumption of summer attire. —A destructive fire took place in Nam Sing Lee, Canton, on the night of the 16th inst. It originated in a matshed builder's shop, the inmates of which were having a party, and while perhaps under the influence of drink, the shop was set on fire by a light being accidentally thrown on to the inflammable bamboo matting. As was to be expected, the conflagration spread with great rapidity, and in spite of the exertions of the fire brigades, it was not subdued till the neighbouring houses were burnt down. The sparks from the burning matting were carried across a stream and set fire to the houses on the opposite shore, destroying some six buildings.—*China Mail.*

HONGKONG.

We reprint from the *China Mail,* Minutes of an emergent meeting of shareholders in the China Traders' Insurance Co., supplied to it by the Secretary of the Company.—The *China Mail* learns that the wreck of the P. M. S. S. *Japan* lies at such a depth that all attempts to salve it have proved futile; the divers sent down came up in both instances insensible.—The schooner *Scotland* however is still in possession of the wreck, near which she remains anchored, when not obliged by bad weather to seek shelter. The wreck lies in about 19 fathoms water, 16½ miles S E. by E. ½ E. of Breaker Point, in Lat. 22° 46′ N. and Long. 116° 46′ E. A large iron buoy has been placed over the wreck, which by the way may be noted by ship captains. The charterers of the *Scotland* say that, though they were not fortunate in the selection of their divers, others will take their place in a few days, and that there is no idea of giving up the enterprise.—The same paper says the British steamer *Viking* stranded on the Bombay shoal at 2.30 a.m. on the 14th instant, when going from 10 to 11 knots. She remained there about 56 hours, getting clear on Friday, the 16th, at 11 a.m. She jettisoned nearly 1,000 tons of cargo, to get off, consisting of Manchester goods, rattans, pepper, sugar, ebony, &c., the said cargo being picked up by Chinese junks which were lying in the smooth water off the reef, almost before reaching the water. The vessel is now alongside the Hongkong Pier discharging and pumping; she will dock at Aberdeen to-morrow. —The officers of H. M. S. *Audacious* performed the pieces "He's a Lunatic" and "A Thumping Legacy" with great success at the City Hall, on the 17th inst.—Mr. H. David Bailey has resumed charge of the U.S. Consulate at Hongkong.—M. Plichon will act as Consul for France during the absence of Mr. Sienkiewicz.—The total revenue of the Colony for 1874 was $854,799.91, and the expenditure amounted to $921,479.54, showing an excess of expenditure over revenue of $66,679.63. The increased expenditure was incurred on public works and buildings.—From the annual report of the Colonial Surgeon, published by the *Daily Press,* it is satisfactory to find that the health of the Police and Military is much improved. There has been less sickness during the past year among the former than in 1873, and the deaths in hospital have been 8, as compared with 11 in 1873. There have also been fewer deaths among the troops. A new civil hospital is much needed, and Dr. Ayres is pleased to announce that a site has been secured for it, and the plans have arrived from England. The number of admissions to this hospital has decreased somewhat. Considerable damage was done to the Old Civil Hospital during the late destructive typhoon. The health of the prisoners in Victoria Gaol has been fairly good, only one death occurring during the year. The Contagious Diseases Ordinance has worked well in the colony. During the past year the European and American women have been brought under it. The general health of the colony has been fairly good, the death rate not having increased appreciably.—The Canton Viceroy's family, who came overland from the North, arrived safely at Canton on the 13th inst.—The mandarin of Kowloong, Colonel Pang, ordered some time ago a quantity of mitrailleuses from Prussia, through a German firm, and these have recently arrived from Europe. A trial made at Kowloong, gave great satisfaction. It is supposed that the mitrailleuses are intended for use in the operations at Kashgar.—The German bark *Aldabaran,* wrecked in the typhoon of September last, has cleared for Canton to be broken up, as since she was raised she is found to be past repairing.—About 200 Chinese coolies arrived yesterday in the Canton Steamer *en route* for San Francisco. Their baggage was of equal size and similar description, shewing that they had been fitted out by a company.—A rock, distant about 120 feet from the Praya wall and a little to the Eastward of the Wanchi police station, is being blown up by the Naval Authorities; also some rocks near the shore and off Messrs Landstein & Co.'s godowns.

MACAO.

We learn from the *Jornal de Macao* that a Hakau boat and its crew have been arrested by the Portuguese gunboat *Tejo* for having, on Saturday the 3rd instant, overhauled a deep laden junk, when entering the harbour, and taken her as a prize to the Customs Station. Mr. Costa Cabral, the commander of the *Tejo* upbraided the English employés at the Customs Station when they went on board the gunboat to ask for the release of the captured boat and its crew. The Harbour Master, by order of H. E. the Governor, went on the same day to the Customs Station to demand the release of the junk, but not meeting there anybody to deliver his message to, he returned and informed the Governor, who immediately forwarded a despatch to the Viceroy of Canton. This despatch, however, could not be presented to the Viceroy as there is no Portuguese Consul is Canton, through whose medium such documents must pass according to official etiquette. The Portuguese, it appears, are in a terrible state of excitement, and a collision with the Customs mercenaries will happen sooner or later. The same paper says that, on Friday last, a steam launch belonging to the Customs Station, on attempting to overhaul a trading junk in the Portuguese waters, was fired upon by the latter, wounding mortally a mandarin on board the launch, who was taken to the hospital of St. Raphael, where he died an hour afterwards. —We hear that an Agricultural Company, under the auspices of the Government, is now being formed in Macao to work up the resources of Timor. A line of steam communication, receiving a handsome subsidy from the Exchequer, is to be established; all information that may interest all concerned has been given by a committee of investigation, and everything augurs a complete success. Timor is, politically, a province of Macao, which subsidises from its governor down to the last soldier. Timor is situated in Lat. 10.9 S. and Long. 123.6 E., is an island in the Indian Ocean, and measures 250 miles long by 50. The Dutch took possession of part of it from Portuguese in 1613, and the British occupied the island in 1811, but soon afterwards were obliged to quit it in consequence of great mortality among the troops. Ponies, swine, poultry, and buffaloes (which are only killed for the sake of their hides and horns) are found in great abundance. Bees' wax, sandalwood, sapanwood, hemp of the finest quality, coffee, Indian corn, and all kinds of spices may be had in large quantities for a mere trifle. The climate is temperate, but the miasma emanating from the several ponds of stagnant water, makes it deadly to Europeans, especially those that are addicted to spirits.—*Hongkong Times.*

HIOGO.

Sir Harry Parkes has been visiting Hiogo and Osaka. The Osaka correspondent of the *News* writes:—I wonder how His Excellency would fancy sojourning here for six months of the year, supposing that His Majesty *should* take it into his head, as it has lately been more than once rumoured that he will, to come and live here turn and turn about with Yedo?"—It is also said that Sir Harry intends visiting Nagasaki. We wish he could see his way to come on to Shanghai, and help decide on the measures to be taken for punishing the Yunnan outrage.—The following address of H. M. The Mikado to the Japanese Nation has been published in the native newspapers:—

On ascending the Imperial Throne, I assembled the nobles and high officials of my realm and took oath before the gods to maintain the five principles, to govern in harmony with public opinion, and to protect the rights of my people

Assisted by the sacred memory of the glorious line of my holy ancestors, and by the union of my subjects, I have attained a large measure of peace and tranquility.

So short, however, has been the space of time which has elapsed since the consummation of the late Revolution, that many essential reforms still remain to be effected in the administration of the Empire.

It is my desire not to restrict myself to the maintenance of the five principles which I swore to preserve, but to go still further and enlarge the circle of domestic reforms

With this view, I now establish the *Genro-in,* to enact laws for the Empire; and the *Dai shi-in,* to consolidate the judicial authority of the

Court. Thus, by assembling representatives from various provinces of the Empire, the public mind may best be known and the public interest best consulted, and in this manner the wisest system of adminstration will be determined.

I hope by these means to secure the hapiness of my subjects and my own. And while they must necessarily abandon many of their former customs, yet must they not on the other hand yield too impulsively to a rash desire tor reform.

I desire to make you acquainted with my wishes and to obtain your hearty co-operation in giving them effect.

Notification No. 59 from the Prime Minister, dated April 14th, abolishes the *Sa in* and *Yu in*, and announces the establishment of *Genro-in* and *Daishin in* (? Upper and Lower Houses), and that the *Shikiburio* will henceforth be attached to the *Naimusho*.

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

April 1st.—Chih-ho, Civil Governor of Fêng-t'ien Fu, memorializes, reporting the decease of the Military Governor, Tu-hing-ah, which took place on the 9th March. On the previous day he had sent off a memorial, asking for sick leave, and had handed over the key of his seal of office to Chih-ho. During his recent illness, his mind has been entirely concentrated on his duties, and especially occupied with the disturbances prevailing in the province. Not a single word has escaped him on affairs of a merely personal interest. The only member of his family with him at Moukden is his third son, who proposes to proceed with the remains of his father to the family home in the Amoor region. Chih-ho adds that his compassion has been powerfully moved on finding that the Military Governor has died in very straitened circumstances.

April 2nd.—The Captain-General of the Bordered Yellow Mongolian Banner memorializes, requesting sanction to the adoption of an heir to a captain in the corps in question, who has died without issue.

April 3rd.—(Court Circular.) The Prince of Ch'un and his colleagues received instructions on their departure for the Eastern Mausolea.

The Grand Secretariat presented the memorial of the great State Assembly (on matters referred for deliberation.)

She-tsêng received instructions on his departure in charge of the "golden coffin" of the Imperial concubine, Show P'in—of the seraglio of Hien Fêng.

The Governor-General and Governor of Fuhkien memorialize on the appointment of a Magistrate for the district of Fêng-shan in Formosa. The former incumbent, Yen Ch'êng i, is a man of great prudence and integrity, but somewhat wanting in breadth of mind, and it has been requested by the Taotai of T'ai-wan, in consequence of failure on the Magistrate's part to deal suitably with foreign affairs, that he be exchanged with some other magistrate on the mainland. It is accordingly proposed that his late post at Fêng-shan be filled by the present Magistrate of the Wu-p'ing district, named Têng Kia-shêng, aged 43, a native of Nanking. Yen Ch'êng, who is to exchange with him, is a native of Hunan, aged 36, a Kü jên graduate, who was appointed to the Fêng-shan district in 1869, and removed from it in the following year (since which time he has probably been seeking the re-employment now to be given him.)

April 4—(1) A decree of the two Empresses, directing the Imperial Board of Astronomers to select an auspicious day for turning the first sod at the site upon which the mausoleum of the late Emperor is to be constructed. Notice is thereupon to be given to the Prince of Ch'un and his colleagues, the Directors of the Works.

(2) The Governor General of Sze-ch'wan reports that on the expiration of his two-months of sick congé he has resumed the active discharge of his duty, although still suffering under his old complaint. He feels bound not to think only of his own welfare, particularly at the present juncture, when the roads of the province are covered with the discharged irregulars who have been disbanded of late in Kweichow, and when trouble may be looked for on the part of local banditti and roving "braves," at the particular season when agriculture has no employment to offer and food is scarce.

(3) In a supplementary memorial the same official forwards a report by the colonel who had been sent to Sü chow Fu (on the upper Yangt-ze, near the border of Yünnan), to quell the disturbances caused by a body of braves who had mutinied for their pay. He has disbanded 800 of their number and retained 1,200 with their colours. He has further disbanded a force of 500 irregulars who were stationed on the frontier. The colonel in question has been further authorized to enrol a body of 300 men as body-guards, for the more effective maintenance of his authority. On the application of another military commander, who has reported that his men were becoming impatient of their long service, and were asking for their pay and discharge, 600 Hunan irregulars have been further disbanded. Since the Governor-General has held office in Szech'wan, he adds, he has disbanded no less than 50,000 men, and the great extent of territory for which he is answerable, together with the lawlessness encouraged by the proximity of frontier tribes, makes stringent precaution continually necessary.

April 5th—(1) A decree in reply to a memorial by the Governor of Shun-t'ien Fu, requesting an extension of the time during which the charitable relief agencies may be kept open. A further period of two months is granted, and an allowance of 200 piculs of millet is ordered to be supplied, together with Taels 400 out of the octroi revenue of the Ts'ung-wên (Ha-ta) Gate.

(2) The Governor of Shantung memorializes representing that a district magistrate, lately deceased, named Liu Ying-lin, was a defaulter to the extent of Taels 5,040 under different headings in the revenue for which he was accountable. His family have given no heed to repeated demands for the payment of this debt, and it is requested that he be posthumously stripped of his rank, and his late residence, both at his Magistracy and his native place, be searched and all discoverable property escheated.—A rescript sanctioning this course has already appeared.

April 6th.—(1) A decree, referring to the bounty sanctioned by the usage of his Majesty's predecessors, in the way of remissions of taxation, and commanding the Board of Revenue to examine and report on the measures of relief and exemption that should be granted, in honour of his Majesty's accession, and in fulfilment of his loving desire for the welfare of his people.

(2) A decree. Li Hung-chang memorializes requesting that the Taotai of Tientsin be commanded to repair to his post without delay. Let Li Chao-t'ang, the Customs' Taotai of Tientsin, who has now returned to Kwantung (his native province), be directed by the Governor-General and Governor to proceed without delay by sea to Tientsin, for the due discharge of his official duties.

(3) The Governor of Yünnan memorializes reporting the proceedings taken respecting the murder of a civilian official. On the 18th November last, a report was received by him from the Colonel of the Wei-yüan 威遠廳 military division, to the effect that on the 8th of that month it had been reported to him by a servant of Wang Sze-ki 汪嗣吉 sub-Prefect of the Wei-yüan department (in the Prefecture of Pu'-urh, in the extreme south of Yünnan), that his master had been murdered on the 28th Oct., by a band of malefactors who broke into the building where he was lodging, at a place called Pao Mu Tsing, and in addition to despatching the sub-Prefect, wounded several of his retainers and carried off all his money and effects. As they retired from the place they were pursued by the sergeant of the post, with the force under his command, but they forced a passage to the mountains, killing one of the soldiers of the pursuing force. On receipt of this report, the Governor had to observe that many years have elapsed since the department of Wei-yüan was recovered from rebel possession, and that no remnants of the insurgents were any longer in existence there, so that a searching enquiry into the causes which could have led to so serious an affair as this, was urgently needful. The locality being nearly 2,000 *li* (650 miles) from the provincial capital, however, time did not permit of sending a special commissioner for this purpose; and instructions were consequently despatched posthaste to the Taotai of the southern circuit and the Brigadier commanding at P'u-urh, with other officials, to proceed with a military force at once to the spot, and institute enquiry and action in the matter. A brevet Brigadier-General and a Lieutenant-Colonel were at the same time sent from the provincial capital to coöperate with them. The place were the murder took place was one of the localities containing salt-wells, situated among the mountains 120 *li* from the departmental town, and was provided with a *kungso* or lodging-station for the convenience of officials when travelling or residing at the spot. Wang Sze-ki had taken up his abode there from the moment of his entry upon the appointment of sub-Prefect, and had occupied himself with supervision of the Salt-boiling works. On an inquest being held, his body was found covered with wounds, fourteen in number. The efforts of the authorities resulted in the capture of five of the perpetrators of the crime, together with some of the stolen property. The prisoners arrived at the provincial capital under military guard on the 21st January 1875, and were placed on trial before the Judicial Commissioner. By the facts elicited it was proved that the murdered sub-Prefect, from the time when in November, 1872, he arrived in his department, had resided solely at the Salt-wells instead of in the departmental city. In September 1874 he sent his family to the provincial capital in charge of two of his underlings, named Chow Lao-shih and Liu Ch'ang-tai. When half way on their journey, the party were robbed of their money and valuables, and compelled to return. The sub-Prefect, suspecting the two underlings of complicity with the thieves, flogged and discharged them, and in the month of October Liu Ch'ang-tai died from the effects of the beating he had undergone. Chow Lao-shih hereupon sought out a sworn brother of the deceased, with certain others, told them his grievance, and informed them moreover that Wang Sze-ki must have a large amount of government money in his keeping, as he had not for a length of time made any remittances of the proceeds of the salt tax. A band was organised by whom the murder and robbery were subsequently perpetrated. On reaching the hills, the confederates, eighteen all told, divided the booty they had obtained, to wit, seven hundred taels in silver, opium, clothing, and female ornaments. One member of the band had not been able to join them in time for the act, and his share of the plunder, viz., Taels 50 in silver and 50 taels' weight of opium, with a couple of jackets, was sent

to him by one of the confederates, and duly accepted by him. The prisoners have been summarily executed according to law The deceased sub-Prefect is severely blamed both for his unauthorised residence away from his own city, and for the severity of the punishment inflicted on his underlings. The Governor states that a report had already reached him of the sub-Prefect's absence from his proper residence, his object being to profit by the administration of the salt-works, and he was on the point of ordering an enquiry into his conduct when this affair occurred.

April 7th—(1) The Court of Censorate memorializes forwarding the appeal presented by Kiang Mow-ch'un and other notables and taxpayers of the department of P'ei Chow 沛州 in Sze-ch'wan, complaining of rapacity on the part of the local Magistrate and his connivance at oppression practised by his subordinates. The representation made is as follows:—Thirty or forty years ago it was settled, on a petition of the taxpayers to the Governor General, that with regard to the assessed land-tax of the department, amounting to a total of Tls. 5,000 and odd, the amount collected should be Tls. 1.3.6. for each Tael of regulation levy, the additional 3 *mace* 6 *candareens* to include all charges for [illegible] adjustment of weight and standard, packing, and conveyance. Under the head of tea-grower's tax a further amount of eight or ten candareens was assessed in addition to each Tael of land tax. Matters were conducted on this basis for some years without charge, but during the reign of Hien Fêng some slight additions were made to the amount of levy. In 1868 the rate of exchange of silver stood at 1,600 *cash* per Tael. The Magistrate then in office demanded, however, 11,290 *cash* per Tael of tax-levy. Before he had collected much more than one-fifth of the year's assessment, his successor arrived to take office, and this Magistrate re-established a sub-office for the tax levy, and put on a further sum of 3,000 *cash* per Tael, introducing besides a new item of 1,000 *cash* per Tael under the head of Government courier assessment. In the autumn of the following year he issued a notification stating that an additional levy of the second half-year's tax-levy must be made, in conformity with superior orders calling for funds to supply the wants of other provinces, and a sum of ten times the amount of the regulation payment was exacted, beside the 1,000 *cash* per Tael for the courier service. In reality, however, there is no post-road in connection with the department, and no such charge had been known in previous years. A further catalogue of grievances is alleged, winding up with the statement that in the last seven years the amount of illegal taxation which has gone into the pockets of five successive incumbents of the Magistracy is between 150,000 and 160,000 Taels. The present incumbent is denounced as having exacted forced contributions over and above the amount of tax-levy, and as having been influenced by the local salt monopolist to allow the price of salt to be largely augmented. In order to guard his interests, the monopolist has raised a force of five hundred or six hundred vagabonds, who are scattered among the villages on the look-out for contraband dealers; and local banditti have taken advantage of this to plant themselves at every cross-road and commit depredations, it being impossible to distinguish who are brigands and who the watchers of the salt monopoly. The present Magistrate, moreover, having married his son to the assistant Magistrate's brother's daughter, has allowed the assistant Magistrate the unlawful privilege of sitting judicially for the decision of civil causes, the result being that judgment is sold to the highest bidder. The complainants have petitioned the Governor General, but, although His Excellency's instructions in reply were all that could be looked for in the way of authoritative stringency, the Magistrate has not paid the slightest attention to them. As a last resource, the appeal is brought to Peking.—A rescript has already appeared in the usual terms, remitting the subject for enquiry in the Province.

(2) The Governor of Chehkiang memorializes reporting the despatch of the first detachment of the vessels conveying the quota of the provincial grain tribute to Tientsin. The amount of white and ordinary rice to be sent north in the present year, from the Hangchow, Kia-hing, and Hu-chow prefectures, on account of the collection of 1874, is 4[illegible]0,000 and odd piculs. The provincial Rice Comptroller has proceeded to Shanghai to superintend the shipment there, which is to be accomplished in three divisions. The first of these has now been completed, amounting to 164,500 piculs, of which 50,250 piculs have been taken by the C. M. S. N. Company, and the remainder has been shipped by 50 native junks, which began their voyage from Shanghai on the 2nd February.

April 8th.—(1) A Decree. Wên-siang memorializes reporting that his health still remains unrestored, and entreating permission to vacate his offices. We grant him permission to vacate his post as captain-general of the Bordered White Manchu Banner, and sanction his withdrawal from supervision of the Board of Works and the division of Musketeers, in token of our sympathising regard. Let him still continue to occupy his office as Grand Secretary and his membership of the Grand Council and the Yamên of Foreign Affairs, resuming the active discharge of his functions when his complaint shall have been in some degree alleviated

The remainder of this day's *Gazette* is occupied with an unimportant appeal rehearing case from An-hwei.

April 9th.—(1) A Decree. Shên Pao-chêng and his colleagues memorialize Us requesting posthumous rewards for a major who has fallen in action, and likewise that sanction be given for the erection of a memorial temple. Wang K'ai-tsün, a major of the Wên-chow division, who had greatly distinguished himself in his operations against banditti in Formosa, is reported to Us as having proceeded at the head of a body of troops, in the first moon of this year, to apprehend the savages of the Lion Head tribe, and We learn with profound commiseration that, having fallen into an ambuscade, he perished in the fight. Let posthumous rewards of a distinguished character be conferred upon him, on the scale appropriate to the rank of colonel, and let, as a special act of grace, a title of canonisation be conferred upon him, and a memorial temple be erected in his honour in the south of Formosa. Let the names of the two officers and ninety-three men who fell at the same time be likewise handed over to the Board, for the award of distinguished honours, and let them be admitted also to a place in the temple, for sacrificial honours, as a comfort to the manes of the faithful dead.

(2) Let Peh-yen-na-mo-hu Prince of the K'ortchin Mongols) be transferred to the captain-generalship of the Bordered White Manchu Banner (vacated by Wên-siang, see *Gazette* of 8th instant); and let Lung-k'in (the Prince of Su) succeed to the captain-generalship of the Bordered Blue *Han Kün* Banner.

(3) Li Hung-chang, Governor-General of Chihli, memorializes reporting that since the beginning of February two falls of snow have taken place in the province, and that on the 12th March rain fell to the depth of one or two inches (*ts'un*), greatly to the benefit of the wheat crop, and affording much satisfaction to the people. Works were begun on the 10th March on the embankment of the Yellow River in the south of province, where repairs were needed, and owing to the large concourse of labourers, a detachment of troops has been ordered to the spot, to guard against disturbances. As the river is open at Tientsin, and foreign vessels and the grain junks are beginning to arrive, the Governor-General proceeds on the 22nd March to take up his residence there.

April 10th.—(1) A decree, in reply to a memorial by the Court of Censorate, forwarding the petition lodged by a member of the imperial lineage named Eu shao, with reference to the death of his uncle, the former Military Governor of Ili, who perished with his entire family, and of whose deprivation of rank he appears to have complained. It is stated that on the attack upon Ili being made, in 1865, by the Mahommedan rebels, the late Military Governor, Ch'ang-ts'ing 常清, who had been stripped of his rank but left at Ili to carry out certain duties, mounted the walls with the Military Governor then in the city, accompanied by his staff, and contributed stoutly to the defence of the place. When the city was at length taken, Ch'ang-ts'ing still maintained the struggle from street to street, until he fell fighting, his entire family perished at the same time in the cause of their country. Their fate is most deeply to be deplored. Let Ch'ang-ts'ing receive posthumous honours on the scale appropriate to the fourth rank; and let honorary memorials be established on behalf of his stepmother Ch'êng-she, his son Tên-jun, his daughters (four in number), and his concubines Wang-she and Yüeh-she. Let the proper Board take note.

(2) The acting-Resident in Tibet, Hi-k'ai, memorializes at great length with reference to sundry judicial proceedings in connection with a case which is shewn to have been pending for the last two years, but the details of which are not set forth. Several Chinese officials, civil and military, are reported as having been in league together to falsify the evidence taken at a trial, and to have used illegal forms of torture, such as burning the flesh of a prisoner with a slow match, to extort confession. The offence charged in this case appears to have been "illicit communication with people beyond the border" (Nepalese?). A tumult in the yamên of the late resident Ch'êng-ki (who died on the 14th August last) is also incidentally refered to. The acting-Resident, having little experience as a judicial officer, submits for decision at Peking the sentences to be passed on the delinquent officials.

April 11th—(1) A decree in reply to a memorial by the Governor of Honan, directly that stringent proceedings be taken for the recovery of Tls. 20,800 due on account of sundry items of revenue collection by a deceased district Magistrate. Search is to be made for property that may have belonged to him at the places where he has successively held office, and at his home in Shantung. All property discovered is to be sequestrated.

April 12th.—(Court Circular). Ch'êng-twan presented his respects on his return from offering sacrifices at the Mausolea of the Ming dynasty.

(1) A decree in reply to a memorial by the Governor of Shensi, who appears to have complained of exactions perpetrated by the persons in charge of parties of lamas and tributary chieftains from the Tibetan frontier, when passing through the Province on the way to Peking. It is observed in reply that fixed regulations are in existence for the measure of supplies to be furnished on such occasion and the means of transport to be provided, and no exactions in excess of these allowances can be tolerated. The Governor-General of Szech'wan is to see in future that the

packages conveyed by parties of the description referred to correspond in weight and number with the statement furnished by the President in Tibet, and to notify the provincial governments along the line of journey with reference to the number of mules and drivers required. The authorities of Shensi, Shansi, and Chihli will furnish proper escort; and the same rule is to be observed for the return journey.

(2) The Governor of Honan memorializes, reporting the decease, on the 21st March, of K'iao Sung-nien, Governor-General of the Yellow River. A eulogium of the deceased official's character and devotion to his duty in the stations he has successively filled, is set forth in the customary terms.

(3) The same Governor reports the rehearing of an appeal case referred back from Peking by a decree dated August 1873, on the complaint of a man named Sun T'ung-hwei, who accused one Liang-k'o and others of the murder of his uncle Sun Sze-ch'êng. The deceased was married to a sister of Liang-k'o, and a kinsman of his, named Sun Sze-kieh, was accustomed to manage the family affairs for him during his absence from home on business. A quarrel arose in June 1873 owing to a suspicion on the part of deceased that illicit intercourse was being carried on between Sun Sze-kieh and his wife, but after an altercation in which blows were exchanged, the parties were separated and relations were established as before. Sun Sze-ch'êng is found to have been attacked with sunstroke shortly afterwards, on an intensely hot day, in consequence of which he died; and the present complaint originated in unfounded suspicions on the appellant's part. The appellant, however, is subject to fits of insanity, and on this ground he is absolved from punishment for bringing a false charge.

April 13th.—The Literary Chancellor of the Province of Honan, Fei Yen-li, memorializes in virtue of the decree of the two Empresses calling for advice, which was officially communicated to him on the 16th February by the Governor of the province. He feels bound, accordingly, to state the views his position has led him to form with reference to the public service; and he proceeds to submit that whilst selection of the agents of Government (用人) and the exercise of the highest functions of administration (行政) are duties the importance of which are equal, yet, inasmuch as the success of Government is dependent upon the quality of its agents' capabilities, if he were called upon to assign a place to either, he should give precedence to the selection of persons for official employment as the paramount consideration. In the endeavour to obtain able public servants, what is needful is to exercise due care at the outset of their admission. Although the state, in making choice of scholars by means of the competitive examinations, cannot depend on invariably obtaining talent of practical utility, yet, in the majority of cases, minds that can appreciate what is right and adapt themselves to active functions, fitting their possessors for the discharge of great and onerous duties, are yielded from this source The access to the public service furnished by means of contributions (purchase of rank) is, on the other hand, essentially an exceptional expedient. Where eighty or ninety in the hundred are derived from the regular course of entry, with but ten or twenty admitted by the purchase lists, no great detriment need accrue to the character of the civil service. In the six Boards, for instance, the secretaries of various classes should be drawn from among the graduates at the highest competitive examinations; and the Taotais, Prefects, and Magistrates in the provinces are all placed in direct authority over the people. Of late years, however, such appointments are filled in a multitude of cases from the purchase lists. Representations have been continually made on the subject by officials both at the capital and in the provinces, in reply to which Imperial commands have been given requiring the persons thus employed to be subjected to examinations, with the object of purifying the state of the service. The memorialist would observe, however, that examination before admission is preferable to examination after the purchase of rank has been completed; and he proposes that the following system of discrimination be henceforward adopted. Whenever individuals, whether of lettered pretensions but without degree of any kind, or having obtained by purchase an honorary degree of the lowest order, wish to obtain by purchase any of the positions above-named, they should not be allowed to effect the transaction at any provincial sale-of-titles office, but should be required to proceed to Peking and to hand in their application to the Board of Civil Office. They should then be orally examined by the chiefs of the Board, and tested both in replies to questions and in composition, stringent precautions being taken against false personation. Only such as should manifest adequate literary capabilities should be allowed to purchase rank. By this means not only would those be gathered in whom the examination system has passed by, but proper regard would also be had for the requirements of official station. It should further be prescribed that all persons at present holding appointments by purchase in any of the Boards or the provinces should be subjected to the ordeal of a test examination. As circumstances are at present, candidates for substantive appointments in the provinces who have got themselves named to certain posts, it may be, on the "80 per cent." or "40 per cent." tariff of purchase, having presented themselves in the province to which they are named, may be perfectly well-known to the high authorities as unfit for the positions to which they lay claim; and yet, as they have their appointments from Peking, it is impossible not to send them to their posts. Such among individuals of this class as in the course of time come to be removed from their posts or it may be impeached for misconduct, are only the most absolutely incapable and unfit. As for the rest, the men who are skilled with their tongues and adepts in the art of making themselves useful, continue as an incubus on the official lists. That in positions requiring so much experience as the discharge of duties involving the collection of revenue, the movement of troops, and the administration of justice, persons wholly without literary training should be compelled to rely on the assistance of others, is quite self-evident In former times, persons who purchased rank or office at least came forward with large sums for the transaction; but at the present day, advancement is obtained for "military service" and by "recommendations," beside which the agents employed in the military commissariat or the *li-kin* tax-offices do not scruple to embezzle the public funds in order to provide themselves with means for purchasing office. Once in place, they are followed by eager crowds of relatives and friends, often wholly devoid of the elements of education; and so it comes about that the benefits of the purchase system to the State are purely illusory. The memorialist winds up by repeating that he does not assert every candidate who has gained his honours by the literary examinations to be invariably qualified for practical service, nor that the subsidiary avenues to employment in no cases admit useful public servants; but he insists that a test examination should in all cases precede admission into the public service. Impressed with these views, he is ready to expose himself to the sneers of those who are not alive to the questions of the day, rather than to commit the fault of putting forward a mere string of empty verbiage.—A rescript was published on the 28th March, directing the proper Board to examine, and report upon the above memorial.

April 14th.—(1) A decree in reply to a memorial from the Military Governor of the Amoor, who has reported that on the 20th February an attack was made on the jail at Hu-lan T'ing (on the north bank of the river Sungari, Lat. 46° N., Long. 127° E.), by a band of 30 or 40 brigands, who carried off a number of the criminals confined there. In the rising of the prisoners some of the jailers lost their lives. The deputy magistrate in charge of the jail is stripped of his office, and is to be placed on trial and punished according to law; and other civil and military officials responsible are similarly deprived of their rank. A prisoner who was retaken has been executed. The remainder are to be recaptured without fail.

(2) The Vice-President of the Board of Punishments at Moukden memorializes reporting the serious misconduct of a member of the imperial lineage, named Fu-ming, residing at Moukden under banishment for an offence committed at Peking. He had lodged a complaint against the owner of a rice shop on the score of alleged non-payment of a debt, which was denied; and when summoned before the district magistrate for a hearing, he employed a number of men to seize and tie up the police runner who served the summons, and who, beside being cruelly beaten, was tortured by having his hairs pulled out. The offending *tsungshih* has been committed to prison, and it is requested that a commission be named to try him for his acts of violence.

Public Meetings.

SHANGHAI GAS COMPANY.

The annual meeting of shareholders was held on the 27th April. Present—J. G. Purdon, Esq., in the chair. Messrs. F. D. Hitch, J. C. Coutts, H. S. Morris, E Holdsworth, F. G. White, J. MacGregor, E J. Hogg, R. Thorburn, W. H. Dalgliesh, Ewen Cameron, A. Nachtrieb, J. P. Bisset, H. Scott Fitz, and G. J. Yeo, Secretary, representing 454 votes.

The notice calling the meeting was read

On the proposal of the Chairman, seconded by Mr. Hitch, the minutes of the last meeting were taken as read.

The Chairman then called attention to the Report and Accounts. He did not know that there was much to add to what was there said. The report was full, too full perhaps for those who do not like dry detail; but the Directors were anxious to give all the information they could. The continued prosperity of the Company was gratifying. Of course the ratio of increase could not be expected to be so great in the case of an old as of a new Company; but that there was an increase at all is satisfactory, especially in these times of retrenchment. The working of the Company was all that could be desired. The Directors had taken a great deal of personal trouble, and had carefully watched the outgoings. The accounts were in good order. The Directors had enjoined care on the auditor, and he says books could not be better kept. Unless any one had any remarks to offer, he would now propose

That the Directors' and Engineer's reports and accounts for the year 1874 be approved and passed.

Seconded by Mr. Bisset, and carried unanimously.

Report.

The Directors regret that, owing to the late illness of the Secretary, the annual accounts were not presented a month earlier, as was

intended, but they have now much pleasure in submitting them, and trust they will be found satisfactory to the Shareholders.

The nett profits for the year are Tls. 23,120.76, being a slight increase over last year; out of which two semi-annual dividends have been paid, amounting to Tls. 16,500.

Although the last half-yearly dividend was only 5 per cent., instead of 6 per cent. as formerly, it will be seen that this was more a matter of precaution than from any inability to declare the larger amount out of the profits of the year; the consumption of Gas not increasing in the same ratio as in former years, the Directors preferred to apply the sum thus saved towards more quickly liquidating the loan for the new Gas Holder, than to carry out fully their anticipation expressed in the last annual report, of not having to interfere with the usual dividends; and they believe the shareholders will be of opinion that this was a wise policy.

To increase the quality of the Gas, the Directors have caused more Australian Cannel Coal to be used than formerly; and although this is a very expensive Coal, they consider the money well applied.

Photometric tests are regularly taken at the works of the illuminating power of the Gas, and during the past year the average has been equal to 14.2 sperm candles. The Engineer will be happy at any time to show this testing to any shareholder who may wish to see it.

At the request of the Municipal Council, the Company made a reduction of 12 cents per Public Lamp per month, and this year to meet another request of the Council, the Directors have made an arrangement by which the Lamps are lighted earlier in the evenings of the Winter months, and put out earlier in the Summer; and although there is an apparent saving of some hours in the year in the time the Lamps are burning, yet, as the hours taken off are in the early mornings, when the pressure of Gas is not so great in the Settlement; and the hours added are in the early part of the evening, when the pressure is greatest, the arrangement is not quite so favourable to the Gas Company as the former one was.

Application was made to the Council for a modification of the fines imposed on the Company for lights out during the night. At present, for all Lamps found not burning during any time of the night, no matter from what cause, a deduction of $2.65 per 1,000 cubic feet of gas is made, and it is established by investigation of the Company's servants that many of the Lamps are put out through malicious practices; the Company, therefore, not only get fined, but lose the gas which is allowed to escape. The Council, however, refused to make any alteration.

The amount of Coal used, state of the Works, Plants, etc., including the new Gas Holder, and other statistics interesting to the Shareholders, are given in the Engineer's annexed report.

The Directors retire in terms of the Deed of Settlement, but are eligible for re-election.

Mr. O. Brandt offers himself for re-election as Auditor.

Summary of Engineer's Fortnightly Reports.

During the past year 309$^{16}/_{20}$ Tons of Coal have been carbonized, giving a production of 27,330,400 cubic feet of Gas.

A slight increase only of 69,000 cubic feet in the consumption of Gas has taken place, this being a very small per centage as compared with former years.

The loss of Gas by leakage during the year is 10.06 %, against 13.56 % of last year.

The sale of Coke has been very satisfactory, but the demand for Tar has been very small, and this commodity is so rapidly increasing that in a few months more storeage room will be necessary.

The Buildings, Machinery, and Plant generally are in good repair.—144 yards of 14-inch main have been laid in the Nanking Road in the place of some 8-inch pipes, the latter being utilized in the works.—235 yards of old 6 and 7-inch mains in the Nanking Road have been removed, and 9-inch mains substituted. 210 yards of 7-inch main have been laid in the Garden Bridge Road and a portion of the Hongkew Road, and 164 yards of 3-inch, 168 yards of 2½ and 2-inch mains have been laid in the Bubbling Well Road, and other parts of the settlement requiring these extensions.

The New Gas-holder, of 70,000 cubic feet capacity, which the Contractors expected to have completed by the end of November, has been delayed through bad weather during the excavations, and detention of materials from England, but the work is now progressing and will be shortly completed.

PROFIT AND LOSS ACCOUNT for the year ending 31st December, 1874.

Mr. HOLDSWORTH next proposed, and Mr. CAMERON seconded

That Sir E. Hornby, Messrs. J. G. Purdon, E. J. Hogg, and F. D. Hitch be appointed Directors for the current year, with power to add to their number.—Carried *nem. con.*

Mr. HITCH said the shareholders were aware that a heavy portion of the duty of the Directors falls upon the Chairman. The Directors could testify that he had borne the great burden during the past year. He wished to propose—

That in view of the onerous duties which the Chairman of the Company is called upon to perform, he shall hereby be entitled to receive as his fee the sum of Tls. 20 for each Directors' meeting which he shall attend.

The fee for the other Directors remaining Tls. 10, as before.

Seconded by Mr. F. G. WHITE, and carried.

The CHAIRMAN next proposed, and Mr. MCGREGOR seconded,

That Mr. O. Brandt be re-elected as auditor to the Company for the ensuing year.—Carried.

This concluded the business, and the meeting broke up.

SHANGHAI AND HONGKEW WHARF CO.

The adjourned meeting of Shareholders in this Company was held at the Club yesterday afternoon, when the following were present:—Mr. C. J. King, in the chair; Messrs. Banyard, Bell, Bisset, Bromley, Drysdale, Fergusson, Groom, Gundry, Hawtrey, Hennequin, Jacques, W. Keswick, Lawrence, Lindsay, Lucas, J. Macgregor, Nissen, Overbeck, Rodewald, Sutherland, Thurburn, Tootal, Westall, Wood, and A. J. Pollock, Secretary.

The CHAIRMAN said the meeting was called in accordance with the notice which had appeared in that morning's paper, it was an adjourned meeting from the 1st of March last. He did not know if it would be necessary in this instance to read the minutes of the former meeting. They were somewhat lengthy, and were lying on the table, as they were published in the *North-China Herald* of the 4th of March. If the meeting would allow him, he would take them as read, with the exception of the part refering to the business of the present meeting, which was a resolution proposed by himself, and seconded by Mr. Forster, that the consideration of the proposed amalgamation of Hunt's and Heard's Wharves with the Shanghai and Hongkew Wharf Company should be left to the Directors, as a Committee, to report on at a future meeting. The present meeting was held in consequence of that resolution, and it had been postponed on more than one occasion, but they were at last in possession of the report of the committee, which had been printed and placed in the hands of the shareholders. Its perusal would have assisted them in coming to a resolution respecting the proposed amalgamation. No opinion had been expressed in it, and the proposal had been left to the free and unbiassed opinion of the shareholders. He need not say that if any omission was detected, or if any question occurred to anyone present, with reference to the report, the committee would be happy to supply any information thereon. Having become pretty well versed in the matter, the Directors would be able to answer any questions that might be put to them, with respect to either the clauses or the figures.

Memo. of Proposed terms of Amalgamation.

I.—That the Wharves known as "Hunt's" and "Heard's" and the "Shanghai and Hongkew" shall be worked by Messrs. Jardine, Matheson & Co., as General Agents, under a Board of Directors, of whom the Chairman shall be the senior representative of the said firm in Shanghai, and the other Directors to be elected from, and by, the Shareholders of the Shanghai and Hongkew Wharf Company,

and that the terms and conditions of the combined working shall be as follows.

II.—That Hunt's and Heard's Wharves shall be admitted into the amalgamation on the basis of Tls. 30,000 for their net earnings during the year 1874, and the Shanghai and Hongkew Wharf on the basis of 10 per cent. on the Capital of the Company, say Tls. 24,200 per annum; and that out of the working account, provided the earnings admit of it, the said sums shall be paid in full, or in the event of the earnings not reaching Tls. 54,200, then the sum actually earned shall be divided *pro rata* in accordance with the above-valued income of the respective properties.

III.—That the Working Account of the combined Wharves shall be debited with the expenses necessary to the business, such as Coolie Hire, General Disbursements, Office Charges, Fire Insurance, Municipal Taxes, the Rent of the Sailors' Home frontage, Directors' Fees, Commissions, and all ordinary and necessary repairs to the Wharves and Premises, of the character usually borne by Tenants, as well as the repair of existing wooden structures.

IV.—That all Buildings shall be put in an efficient and serviceable state of repair (to the satisfaction of a surveyor, if required) by the parties to whom they respectively belong, on the amalgamation of the Wharves being decided upon.

V.—That out of the profits divided between them, Messrs. Jardine, Matheson & Co., as representing "Hunt's" and "Heard's" Wharves on the one part, and the Shanghai and Hongkew Wharf Company on the other part, shall each severally and separately pay the expenses that are usually borne by Landlords, and that may attach to their respective properties, such as the maintenance of sufficient accommodation to meet the requirements of the business of the wharves, the reconstruction of old buildings, otherwise than of wood, and the erection of new buildings, and the cost of dredging or otherwise keeping deep and serviceable the water in front of their respective properties.

VI.—That in case any expenditure is required for the construction of new buildings (not the re-erection of old otherwise than of wooden buildings), or for the extension of the accommodation of the wharves, as provided for in clause V., interest at the rate of 15 per cent. per annum shall be paid on all sums so expended, and such interest shall be debited in the General Working Account, and be paid to Messrs. Jardine, Matheson & Co. or the Shanghai and Hongkew Wharf Company as the case may be.

VII.—That, it being desirable to retain no more land than is amply sufficient for all wharf purposes—keeping in view the probable extension of business and the prudence of reserving abundant accommodation to meet it—the surrender is agreed upon of land 200 feet in depth along the Hongkew road frontage of Heard's wharf; about 6½ mow to Messrs. Jardine, Matheson & Co.; 100 feet in depth along the Broadway frontage, east of late Olyphant's wharf to the "Chaou Fung" road; and 275 feet in depth along the Broadway frontage of "Ranlet's" land—in all about 24 mow, to the Shareholders of the Shanghai and Hongkew Wharf Company—whenever either party desires taking advantage of such arrangement—as well as any other portions of the respective properties as may hereafter be mutually agreed upon, so long as the withdrawal of all or any portion of such land is not detrimental to the interest of the combined wharves. Buildings affected by the surrender of any land are to be replaced by equivalent accommodation on the front or other part of the respective properties, at the separate cost of the party to whom such surrender is made.

VIII.—That, if in the opinion of the Directors of the Wharf Co., the combined earnings of the Wharves to the 30th June, in any year, will admit of an interim payment on account of the sums named in Clause II., such payment shall be made, provided it does not exceed one-half of the said respective sums of Tls. 30,000 and Tls. 24,200—or say, to Messrs. Jardine, Matheson & Co. Tls. 15,000, and to the Shanghai and Hongkew Wharf Co. Tls. 12,100.

IX.—That on the first day of February in each year, or within one month of that date, the accounts of the Wharves shall be closed, and if it should appear that there is a Balance of Profit in the Working Account, after making the payments of the said respective sums of Tls. 30,000 and Tls. 24,200, the said Balance shall be equally divided between Messrs. Jardine, Matheson & Co., as representing "Hunt's" and "Heard's" Wharves, and the Shareholders of the Shanghai and Hongkew Wharf Company respectively.

X.—That Messrs. Jardine, Matheson & Co., as General Agents for the Wharves, shall charge 5 per cent. commission on the gross earnings of the combined Wharves in full of all charges, for the General Management.

XI.—That the agreement between Messrs. Jardine, Matheson & Co., as representing Hunt's and Heard's Wharves, and the Shanghai and Hongkew Wharf Co., shall extend to the 30th June, 1887, when it shall terminate, unless otherwise arranged; but in the event of the silting up of the river, rendering the frontage of the respective properties useless for the berthing of vessels, it shall be competent for either party to retire from the agreement on giving 12 months' notice to that effect.

A silence of some duration ensued upon the conclusion of the Chairman's remarks. It was broken by

Mr. Groom, who presumed that the terms of the proposed amalgamation had been in the hands of the shareholders for some days, and had been well studied. He would, therefore, propose, without further preface,

That the terms of the amalgamation, as set forth in the memorandum now before the shareholders, be accepted, and that the directors be authorized to carry out the amalgamation and to transfer the business as soon as practicable.

Mr. Jacques seconded the motion.

The Chairman, after waiting some time, and nobody rising to speak to the motion, read it over again. He trusted the meeting would not look upon the matter as agreed to, without giving utterance to a free expression of opinion on the subject generally. It was a very important one, either to be refused or carried, for it included a chapter of twelve years, and it was right that free remark and discussion should be invited. He would be sorry to think the resolution should either be passed or rejected in a silent manner. While some amongst them might consider the proposed amalgamation a good thing, others might consider it a bad one. By free discussion, the meeting would be enlightened as to the true feeling on the subject, and be enabled to come to a conclusion.

Mr. J. A. Taylor said he had heard a good deal of discussion on the scheme for amalgamating the wharves, and it had been the opinion of himself and others that it would not be for the benefit of the shareholders, or the trade of the Settlement, that it should be carried into effect; but that a distinct management, not in the hands of a firm, but by the appointment of a qualified person, would be the best course to pursue. If the payment of a good salary would enable the Directors to obtain the services of such a man, he thought it would be for the good of the merchants, shippers, banks, and general trade of the place, to have such a manager. It was well that there should be a free expression of opinion on the question, for it must not be forgotten that the proposed lease was for a long term. He thought the proposed amalgamation was a step that ought not to be taken without deep consideration, and he would propose as an amendment,

That the management of the Hongkew Wharf Company be placed in the hands of a General Manager, under the supervision of a Board of Directors.

The Company were well able to afford to pay for the services of such a man, they had excellent premises and the command of a good business, with the best situation on the river; and he thought they were not in such a hopeless state as not to be able to carry on their own business, with a competent manager under the direction of a board, in all its requirements. Having given his opinion on the subject, he would move the amendment he had just read.

Mr. Rodewald seconded the amendment.

Mr. F. H. Bell thought it was well that individual opinion should be expressed on this subject, for it was one of the deepest interest. It was well, therefore, that there should be a very free expression of opinion generally upon it. For himself, he was individually opposed to the proposed amalgamation; and, with all respect to the high standing of the firm of Jardine, Matheson and Co., and possessing the greatest confidence in their management, he could not see the usefulness of the proposed scheme. If an increased business was to be acquired, he did not see why the Company could not continue the management themselves. He thought it would be a great mistake to have a monopoly of the kind proposed in the hands of one large shipping firm. He could not see how an increased business was to be obtained by the amalgamation, unless by raising the wharf rates. And any such movement would be opposed by all large shippers, and would prove detrimental instead of beneficial. He had been but a short time on the Board of Directors, but had been much struck with the mode in which the business of the Company had been managed by Messrs. Chapman, King & Co., and with the attention that had been given to its affairs by Mr. C. J. King personally.

The Chairman said the question of a general manager in place of the present agency, had often been discussed at the Board. The Directors had however invariably come to the conclusion that no advantage would attend such a change. The Company was sometimes asked to lend money on goods, but the practice was condemned in that room some years ago, and put an end to. The advances were not for the accommodation of foreigners, for he did not think he had received ten applications from foreigners in as many years. But among the Chinese traders there were needy men who at times required advances on goods brought to the wharf. Of course, a manager might conduct such a business, but he would have to be assisted by a very able shroff, for all sorts of things were brought to them, upon which a foreigner, would be liable to suffer heavy loss. Besides, the amount of advances was exaggerated. If Chapman, King & Co. had Tls. 30,000 out in advances they thought it a large sum, and it seldom amounted to so much,—on an average to not more than Tls. 20,000, which included a number of small sums. Such a business as that, he thought, would be better done by a firm than by the Company. Their manager would have to borrow money, and he would have to let it out at not more than one per cent. profit, or perhaps at even terms, while there would be the liability of fraud from the native borrowers. He therefore advocated the agency of a firm not because he belonged to one, but conscientiously, having reason for saying what he had said, and for one object only, the welfare of the wharf.

Mr. Groom asked, in the event of a manager being appointed, would the banks make advances on his godown warrants, or would they require the signatures of two directors in addition?

Mr. Taylor said he thought the banks would be perfectly satisfied with the warrants, so long as the directors were satisfied with the manager's accounts. He could not understand Mr. King's remarks on the subject. A manager would draw his cheques, and he (Mr. Taylor) did not see why the extra one per cent. should be charged.

The Chairman again said that the practice of advancing the Company's money was condemned at a meeting in that room, while an agent would advance the money himself. All the large transactions were in the hands of the banks

already, and it was only the small men who came for such accommodation. He hoped, as he had said before, that there would be full discussion on the subject.

Mr. F. H. BELL thought they should settle the main question first, as to whether any change at all should take place in the management of the wharf. He proposed, as a second amendment,

That the wharf remain as at present, under the general agency of Messrs. Chapman, King, and Co.

Mr. WESTALL seconded the amendment.

Mr. J. B. TOOTAL asked, with regard to the appointment of a General Manager as proposed by Mr. Taylor, how would Clause 7 apply?

The CHAIRMAN said of course the agency would disappear, which would, however, have to be effected at a subsequent meeting.

Mr. TOOTAL—Then supposing it to be carried now, it would have to be ratified at another meeting?

The CHAIRMAN said that anything that affected the deed of settlement of the Company would require another meeting. If they would refer to Rule 92, they would find that to be so.

Mr. TOOTAL—Then the intention of Mr. Taylor's amendment would not be carried into effect at once?

The CHAIRMAN—No; there must be another meeting held to confirm it, before the present agents could make way for the new manager. The Chairman then said he would proceed to put the propositions to the meeting. There were an original motion and two amendments, which he read in the order in which they were proposed. Unless some other amendment were proposed, he would put the last amendment first, which he accordingly did.

Five hands only were held up in its favour, and about ten against it; it was, therefore, declared lost.

The CHAIRMAN then submitted the first amendment, proposed by Mr. Taylor; when, on a show of hands, there appeared, *for* 10; *against*, 10. A vote was in consequence taken, the result of which was, *for*, 35; *against*, 112. This amendment was also declared lost.

The CHAIRMAN next put the original motion; but before a vote was taken,

Mr. LAURANCE asked if Mr. Daly's votes were to be accepted.

The CHAIRMAN said it was a question in regard to proxies. Those in question had been registered, but the gentleman who registered them had not attended the meeting, having been kept away by sudden illness, of which a medical certificate had been sent. A question might arise, if the voting had been a near thing, whether these proxies could be accepted, but he was glad to say in the present case it was unnecessary to raise the point.

Mr. LAURANCE asked that it might be recorded on the minutes that Mr. Daly's votes were tendered for the amalgamation.

The CHAIRMAN—Certainly.

The CHAIRMAN said, alluding to the vote about to be taken, that two-thirds of the votes in the Company would be required in favour of the amalgamation.

Mr. GROOM asked if that regulation could not be altered at an extraordinary general meeting?

The CHAIRMAN said the constitution of the Company could be altered at an extraordinary general meeting called for that purpose; but the present meeting was called for another purpose. He then read the various articles which were required to be altered in order to comply with the deed of settlement in such a case. He was not sure if the proposed amalgamation itself were not contrary to the deed of settlement.

Mr. GROOM said the question of an agency could be settled by the members present at a meeting

The CHAIRMAN said they would have to carry any alteration of the deed of settlement at a meeting at which two-thirds of the shareholders were represented.

Mr. GROOM said they had thrown out Mr. Daly's votes, because he was not present, and he wanted to know how many shares were represented at the present meeting? He would call attention to another interpretation of Rule 92, by which he held that the present was an extraordinary general meeting, and that there were more than two-thirds of the votes represented. In concluding, Mr. Groom alluded to the postponement of the meeting from time to time, and to the delay that had in consequence taken place.

The CHAIRMAN said he was glad Mr. Groom had called attention to the delay that had occurred, because he thought there were gentlemen present who could exonerate the Directors from having taken any part in causing that delay.

Mr. KESWICK said, if there had been any delay, he must plead guilty to having in some degree occasioned it. He had gone latterly into the business of the amalgamation with some reluctance, and only lately Mr. King had allowed him a further delay for re-consideration. He must, therefore, take the blame for a great part of the delay upon himself.

Mr. GROOM said in alluding to the delay, he meant no slur upon the Directors. He had alluded to the 30 days' notice calling the meeting.

The CHAIRMAN then announced that the result of the casting up of the votes was in favour of the amalgamation of the wharves. The numbers were, *for*, 125 votes; representing 1,321 shares; *against*, 25 votes; representing 196 shares. He thought gentlemen would understand the matter thus: The meeting had decided in favour of the amalgamation, but there were certain rules which would probably have to be altered. The Directors would get over that difficulty in the best way by consulting with Mr. Keswick and Mr. Drummond, when the result would be made known.

Mr. TAYLOR said if they were not in order in altering the Rules at the present meeting, he thought his amendment might fairly come forward again.

Mr. KESWICK understood the position to be this; that the expression of opinion had been in favour of amalgamation, and it would now be for the Directors to consider such alterations in the Deed of Settlement as might be necessary to make the change practicable, and to give thirty days' notice of a meeting at which they might be either accepted or rejected.

The course proposed was tacitly agreed to, and the meeting broke up.

CHINKEANG LAND RENTERS' SPECIAL MEETING.

MINUTES of the Special General Meeting of the Land Renters in the British Concession of Chinkeang, held at H. B. M. Consulate, Saturday, the 24th day of April, 1875.

Present:—E. Colborne Baber, *chairman*. W. Bean, 7 votes; E. Starkey, 8; T. W. Duff, 1; A. Hardoon, 1; D. M. David, 1; A. Novion, 1; J. G. Gearing, 3; M. Wolff, 1; D. A. Emery, 1; G. Williamson, 1

The CHAIRMAN requested attention to the fact that the present was a special meeting, convened for the purpose of considering two questions—1st, The Chinkeang Taotai's proposal that the Land Renters should contribute to the expense of the preventive works rendered necessary by the dangerous action of the river; and, 2nd, the provisional repairing of the Concession Bund.

Mr STARKEY laid before the meeting a report of previous action regarding these points, which was read, as follows:—

Municipal Council's Report for Special General Meeting of Land Renters in the British Concession, Chinkeang, to be held at H. M. Consulate, on 24th April, 1875.

The Municipal Council have of late had some correspondence through H. M. Consul with H. E. the Chinkeang Taotai, on the subject of repairing the Concession Bund frontage.

The Council have been anxious to repair, in an efficient manner, the damages to the Bund, but find, after having employed professional advice, that in order to give the work a secure foundation, it will be necessary to fill up a deep hole which has formed in front of its Eastern position. This hole in the river bed extends the whole length of the Customs' Bund also, and as the Municipal Council's power does not extend to any works in the river, the Taotai was informed that the Land Renters could not share any portion of the expense attendant upon filling up the river bed. As, however, a great advantage would be gained to the Concession frontage by the filling up of this hole, Mr. Medhurst suggested to the Council that the Land Renters should bear a small proportion of the cost of the river works; by which means the Chinese Authorities might be induced to carry out the work in front of the Concession; otherwise he feared they would do nothing. The present meeting of Land Renters has been convened therefore, to determine what sum, if any, shall be contributed towards the expense of the works in the River bed.

The Council further solicit the consent of the Land Renters to a moderate sum being expended in temporary repairs to the damaged portions of the Bund. Thorough and substantial repairs to the whole facing could hardly be attempted at the present river level.

Mr. STARKEY also laid on the table a letter from Mr. Kingsmill, C.E., written at the request of the Council after a survey of the River and Bund, as follows:—

To the Honorary Secretary,
Chinkiang Municipal Council.

SIR,—In obedience to your instructions, I have examined the Bunding at your Port which has given way.

Having previously in 1865 made a survey of the frontage, I have been able to notice the changes which have taken place during that time, and which have caused the present state of matters.

At that time the river fell with a tolerably regular slope from the foot of the bunding to a depth at 240 feet of about 6½ fathoms.

Recent changes in the current of the River seem to have made it impinge on the right bank, below the entrance of the Canal leading to and Changchow.

In consequence of these changes, an eddy has been established opposite the lower end of the Concession and the Custom House, with the result that the bottom of the river has been worn into a deep hole, in parts upwards of 60 feet in depth, and lying within 100 feet of the foot of the Bund.

The water outside this deep hole again shoals to its former depth of about 40 to 50 feet.

This deep hole extends from opposite the Western extremity of No. 1 Lot, at least as far down as the entrance of the Canal referred to above. A mole which formerly formed the Western side of a small dock outside the entrance of the Canal has been completely carried away, while the corresponding mole forming its Eastern side has been partially undermined.

The wearing action of the River has taken place at so great a depth, and the slope from the bottom is now so steep, that I can see no possibility of preventing further encroachments by any merely superficial works.

I would advise as the most practical method of preventing further encroachments, the sinking of vessels loaded with stone or ballast for a distance of about 800 feet along the front of the foreshore.

Some fifty to sixty junks would be required for the purpose, could they be obtained: or in the event of old vessels not being procurable, a number of rough wooden cages could be made and filled with stone ballast. The space between the vessels would likewise require to be filled up with stone ballast.

An artificial foundation would thus be formed on which the works necessary for the bunding would be proceeded with.

The cost of these works would undeniably be great; but with a river like the Yangtze half measures would be useless.

Approximately 200 feet of the foregoing work would be in front of the Concession, the remaining 600 feet being in front, either of the Custom House or of Chinese owned land.

The cost should therefore be divided between the parties concerned.

I shall as soon as possible send you copies of the Chart of the foreshore and sections showing the present condition of the Bunding, together with such further particulars as may be necessary.

(Signed) Thos. Kingsmill, C.E.

Shanghai, March 15th, 1875.

The above having been read, Mr. Gearing remarked that before voting any contribution, it should at least be ascertained what course the Chinese Government proposed to take. In any case the aid the Land Renters could afford would be at the best very insignificant. Mr. Henderson was now in Chinkeang, and it would be advantageous if his opinion of the question of preventive works could be obtained.

In answer to this, Mr. Novion rose to state that Mr. Henderson had pronounced an opinion, as an Engineer, upon the condition of the Bunding and the works which it would be necessary to undertake. Mr. Henderson reported that "to prevent, as far as possible, further damage this next summer, stones should be thrown into the bed of the River, commencing next the Bund and extending outwards at least 100 feet from it; the object being to prevent the current undermining the present Bund. No definitive repair, however, could be effected at the present time. Such could only be carried out at low water next winter. It was desirable that a suitable Bund should be constructed in one uniform line without breaks, from the Concession past the Custom House to the mouth of the Canal."

After some desultory remarks on the nature and urgency of the repairs, Mr. Bean moved

That no contribution be made by the Land Renters towards filling up the hole in the River bed at present endangering the Bund.

Mr. Bean added that such repairs were the duty of the Chinese Government, and if any proportion of the expense were, on the present occasion, furnished by the Land Renters, a fatal precedent would be created, which would inevitably be cited in case of any future accident of a similar nature.

Mr. Williamson seconded this motion, which was also supported by Mr. Duff. The latter gentleman was of opinion that the matter should be forcibly represented to the native authorities by H.M. Consul, and that it should be insisted that the Chinese Government is bound to exert itself in conserving the River. The injury to the Bund, increasing by the neglect of the Taotai, ought in strict justice to be made good by him; and if the Land Renters consented to repair the existing damage, it was already more than could be expected of them.

Mr. Bean's motion was then put, and was carried *nem. con.*, Mr. Novion abstaining from voting.

With regard to the second question for the consideration of which the meeting had been convened, Mr. Bean moved, seconded by Mr. David, a resolution

That the requisite temporary repairs to the Concession Bund should be at once taken in hand.

This proposition was carried unanimously; the Chairman, however, remarked that it did not seem to make sufficiently definite provision for expenditure, whereon

Mr. Hardoon thought that the whole question might have been left to the Council.

Mr. Emery was of the same opinion. He therefore moved

That the amount of expenditure and extent of provisional repairs be left to the discretion of the Council.

Mr. Wolff seconded, and the motion was carried.

The usual compliment to the Chairman terminated the meeting.

E. Colborne Baber,
Chairman.

H.B.M. Consulate,
Chinkeang, 24th April, 1875.

China Traders' Insurance Company.

China Mail.

The following gentlemen were present:—Messrs. A. MacG. Heaton, C. E. Parker, T. C. Hayllar, Brereton, J. J. dos Remedios, P. A. da Costa, R. Deacon, Sands, Tack Mee, Pang Ayun, M. J. D. Stephens, Nicaise, Fairbairn, W. H. Bell, E. G. Low, P. Karberg, McCulloch, Dr. O'Brien, Blakeman, Davis, Nelson, Forrest, Wotton, Mellish, Elwell, Middleton, André, Landstein, Anton, Kiær, Lapraik, Hancock, Hinam, E. Sharp, Leong Wing Choon, Kwong Cheong Leong, Linstead, Figueiredo, Gomes, Dantra, Yee On, Choy Achun, Harrison, Toller, Chater, Quong Kee, Gultzow.

Mr. Ray read the notice calling the shareholders together, and Mr. Parker explained the reason for the meeting. Messrs. Fearon & Co.'s failure he knew would seriously affect Augustine Heard & Co., and cause them to suspend. An extraordinary meeting was called for the 7th May, but as the China Traders' would be without a head when Aug. Heard & Co. ceased to exist, the present meeting was convened to resign the General Agency; appoint some one to conduct the business until the meeting of May 7th was held; and to make arrangements with regard to the debt due to the Company. He stated the position of Messrs. Aug. Heard & Co.'s affairs as far as known to him, and read a statement of the present position of the China Traders'.

He was about to propose the resignation of the General Agents, when Mr. Stephens said he would like to ask some questions. It was painful matter to refer to, but as he was a sufferer by the failure he felt the management of the Company should be closely enquired into. Before making any further remarks he would be glad to have the minutes of the General Meeting of February 19th last read. This was done, and Mr. Stephens continued that the last statement of accounts was not borne out by present statement of affairs. He then read and commented on a correspondence between himself and Mr. M. W. Boyd, and afterwards with Mr. Heaton, the present Chairman of the Company. As to the liquidation of Messrs. Augustine Heard & Co., if a fair dividend were likely to be forthcoming, the best thing would be to accept the assignment; if not, it should not be signed; and for the present, until more details were submitted, he was of opinion the latter course should be adopted. Rather than Mr. Parker's family should suffer, he was in favour of granting a sum of money to meet their present wants. He then asked the following questions:—

1st.—It is currently reported that a Bill to meet the losses on the *Japan* was drawn on the security of the Reserve Fund. Is this true, and, if so, please name amount of Bill and whether drawn by the China Traders'?

2nd.—Why did not the agents apply the working account to meet the losses, before attempting to encroach on the capital of the company?

3rd.—If the General Agents had no available funds in hand to meet this loss, why did they not at once come forward and say so, instead of waiting until the present time?

4th.—Can you give the meeting any idea as to the present position of the company, whether the whole cash in your hands is absorbed, and what amount of claims there will be on the Reserve Fund?

5th.—Produce the Original articles of Association, and also the original draft of such articles.

The articles provided for the winding up of the company under certain circumstances, and he thought it might be well to do so now.

Mr. Hayllar said the meeting was called under his advice. By the articles of association, Augustine Heard & Co. were made General Agents, with full powers of carrying on and managing the business, subject only in a few particulars to the control of a Committee. Upon Messrs. Augustine Heard & Co.'s dissolution the Company ceased to have any head or any person to conduct its business. He therefore advised that an emergent meeting should be called of the shareholders, to provide for two things.—1st. The conduct of the business of the Company till a formal meeting could be held on the 7th May. 2nd.—To take into consideration the advisability of the Company giving an assent to Augustine Heard & Co.'s assignment, which the Committee under the Articles had not power to do; and it was in consequence of this advice that the present meeting was called. The firm was heavily indebted to the Company, and the question was whether they should be forced into Bankruptcy or liquidate under the assignment clause. An assignment of this nature placed the assets of the firm under the control of the Bankruptcy Court as effectually as if a petition was filed, and to all intents and purposes the rights of the creditors were as effectually protected as by the other method of winding up, the expenses would be materially less, and the estate would be wound up more satisfactorily and speedily. If the deed was not assented to, most of the partners being out of the Colony, only Mr. Parker being here, bankruptcy proceedings would be probably necessary in the United States, England, Shanghai, and Japan, or wherever there might be a partner found. Messrs. Whittall and Linstead have agreed to act as liquidators, and they will have full powers to protect the interests of the creditors.

Mr. Middleton enquired whether it was important to take the assignment to-day, and Mr. Nicaise wished to know who was the legal adviser of the shareholders.

Mr. Hayllar replied that he was speaking as a shareholder, and for the Company's good. He had been called to a committee meeting, and had advised that the present meeting be held to meet the urgent questions before them to-day; beyond that he spoke as a shareholder. As to his loss, he had not mentioned it, though he was interested to three times the extent of Mr. Stephens.

Mr. Parker said, in connection with the correspondence read by Mr. Stephens, that he had received a telegram from Augustine Heard that he would leave for China a week after Albert arrived, and this was Mr. Boyd's reason for advising Mr. Stephens to await his arrival. Mr. Boyd being told by Mr. Albert that his brother would come, and Mr. Parker stating that he believed that if it had not been for the present state of affairs Mr. Augustine Heard would now be on his way out.

Mr. Nicaise enquired whether the $238,000 was in hand when the last report was published.

Mr. Parker said it was at the Company's credit in A. Heard & Co.'s books, which were kept as mercantile accounts always were, and it was impossible to follow each individual item.

Mr. Stephens wanted to know if the Report then published was correct.

Mr. Middleton said the Report had been presented to the shareholders and adopted at the General Meeting.

Mr. Elwell knew something about accounts, having had considerable experience with such matters, and said the accounts were made up in the usual way with mercantile accounts; the amount stated was

at the credit of the company in A. Heard & Co.'s books, and so stated in the report.

Mr. PARKER said, in reply to Mr. Stephens' questions, the money with Fearon & Co. was at the credit of the China Traders' Co., a separate account was kept, and an account current sent to the Company monthly. Messrs. Williams, Blanchard & Co. had been authorized to draw on Fearon & Co. for the *Japan* loss, and had the draft reached London and been paid, it would have wiped out all the balance in their hands excepting the fixed deposit, but it was not true that it was drawn on the security of the Reserve Fund receipts. As regards the working account, it always had been applied to payment of losses. With reference to a statement, one had been read, showing the Company to have more than the amount of its original capital intact.

The original draft of the Articles of Association was laid on the table.

Mr. PARKER further stated that Augustine Heard & Co. owed the China Traders' $200,000, and read a memo. of their liabilities and assets as far as known to him. He thought there would be a fair dividend, but as regards Fearon & Co.'s affairs he was unacquainted.

Mr. DEACON proposed that the resignation of Messrs. Augustine Heard & Co. be accepted.

This was seconded and carried.

Mr. HAYLLAR proposed that Mr. W. H. Ray be appointed to carry on the business of the Company under the superintendence of the Consulting Committee till the meeting of the 7th May, and sign policies for the Committee.

This proposition was seconded and carried *nem. con.*

Mr. MIDDLETON enquired about mortgages on Augustine Heard & Co.'s property, and was answered that one had lately been increased, but with that exception no recent change had been made. He then asked what the company's lien was on the steamer *Japan*. Mr. Ray replied $75,000, $25,000 of which was accepted in Hongkong, and has been reinsured, thus leaving the company's risk $50,000.

Mr. PARKER was about to ask the assent of the shareholders to the deed of assignment, when Mr. Stephens wanted the accounts made up to 31st March; two gentlemen who knew something about accounts to investigate them, and if necessary to stop the business of the Company. This proposition, however, met with no favour.

At the request of Mr. Nicaise, the minutes of committee meetings since Mr. Nelson joined the board, were read.

The shares held by the partners of Messrs. Augustine Heard & Co., it was decided should be forfeited.

Mr. DEACON proposed that the assignment be assented to.

Mr. LAPRAIK asked if there was any pressing necessity for doing so at this *meeting*.

Mr. HAYLLAR said it was pressing to save the expenses of bankruptcy.

Mr. PARKER said, if the deed was assented to a valuable business could be kept togegether, which would be lost if the firm was forced into bankruptcy or the partners delayed in starting again. Creditors in Europe and America had assented, and also all creditors here except the China Traders'.

Upon the question of why immediate assent to the deed was necessary, Mr. Parker urged that immediate assent was necessary in order that the business of the old firm might be kept together. If the assent were delayed all the good to be derived from the assent would be lost. A delay even of a few weeks would ruin the chance of keeping together the business, which was valuable and most promising. He knew that the desire of the Heards would be, if possible, to clear the name of their uncle from all liabilities, and he, having thrown himself into the same boat, was determined to go with them in this respect. It was laying out a work of long years before him, but this he accepted, and while unable to make any promises of payment in full, he trusted the time would come when no man could say that he had lost anything by Augustine Heard & Co. The immediate assent of the creditors was necessary, to be of any use.

Mr. DEACON was in favor of signing the deed, as more could be got out of an assignment than the bankruptcy court.

Mr. HAYLLAR seconded the motion. He saw no good to come from the firm being forced into bankruptcy.

The motion that the Company assent to the assignment, was then put and carried *nem. con.*

Mr. KIÆR proposed that the minutes be printed for the information of absent shareholders.

The meeting then dissolved.

Amusements.

S. V. C. SPRING MEETING.

The two preliminary Competitions were shot off yesterday, under favourable conditions of weather. The light was exceptionally good; dull and clear, without glare. There was a light breeze from the right, but not so strong as to require much allowance, and the only drawback was that in the early morning it was a little too cold to be pleasant.

Of 11 competitors entered for the Recruits' Cup, nine put in an appearance about 6.30 a.m. These made in some cases rather indifferent shooting, but the winning scores were fair, considering that none of the men had competed for prizes before. The result was a tie between Privates Pandorf (No. 2 Co.), and Malteau (No. 1 Co.); and on shooting off, the Cup was won by the former, Priv. Malteau taking the second prize.

For the Sweepstakes restricted to Volunteers who had never won a prize, there were 15 entrants, of whom 13 fired. The scoring here was better, especially as the longer range was 500 instead of 400 yards, and Private Sharp (No. 1 Co.) won the first prize, with the good score of 30 (an average of a centre per shot), Private Pandorf being second with 22.

The following were the principal scores:

A.—THE RECRUITS' CUP, presented by Lieut. Sim. Entrance Fee, $1. Open to all Members of the S.V.C. who have never competed for a Prize at any Rifle Meeting. Ranges, 200 and 400 yards. 5 Shots at each. Second Prize, the Entrance Fees.

	200 yds.	400 yds.	Total.
Priv. Pandorf, No. 2 Co.	23323-13	43033-13	26*
,, Malteau, ,, 1 ,,	22222-10	34342-16	26*
Troop. Johnston, Rangers	22233-12	22332-12	24
Priv. Holmes, No. 1 Co.	23023-10	33224-14	24
,, Vale, ,, 2 ,,	00222- 6	32242-13	19

* Ties—Priv. Pandorf....0.2. Priv. Malteau....0.0.

The others who fired were Privates Hodgson and Massey (No. 1 Co.), Thueson (No, 2 Co.), and Lewis (Mih-ho-loong Co.)

B.—A SWEEPSTAKES, open to all Members of the S.V.C. who have never won a Prize at any Rifle Meeting. Entrance Fee, $2. Ranges, 200 and 500 yards. 5 Shots at each. The highest scorer to take two-thirds of the Entrance Fees, the second one-third.

	200 yds.	500 yds.	Total
Priv. Sharp, No. 1 Co.	r3343-13	44324-17	30
,, Pandorf, ,, 2 ,,	32222-11	243r2-11	22
Trop. Johnston, Rangers	304-3-12	22030- 7	19
Priv. Joseph, No. 1 Co.	20223- 9	45r03-10	19
,, Little, ,, 1 ,,	42342-15	03rr0- 3	18
,, Hodgson ,, 1 ,,	42223-13	rr030- 3	16
,, Holmes, ,, 1 ,,	30223-10	00023- 5	15

The following also fired:—Gunner Newbigging (Artillery), Privates Malteau and Massey (No. 1 Co.), Glover and Thueson (No. 2 Co.), and Burrows (Mih-ho-loong Co.)

RACKET HANDICAP.

The following is the result of the usual Spring Handicap, which has been played off during the past month.

CLASS A.

Jones Hamilton Phipps give				
3 to	Dalgliesh			
4	3	Manson Cooper Wheelock Hearn		
5	4	3	Rose	
6	5	4	3	Scott

FIRST DRAWING.

Jones	15	15	15		
J. L. Scott (recg. 6)	7	11	10		
Manson	15	15	15		
Cooper	12	11	12		
Rose (recg. 3)	14	12	15	15	15
Hearn	17	15	9	6	3
Wheelock (recg. 4)	15	11	15	12	15
Hamilton	4	15	11	15	11
Phipps	15	15	15		
Dalgleish (recg. 3)	10	7	4		

SECOND DRAWING.

Rose (recg. 5)	6	15	15	17	
Jones	15	1	8	16	
Phipps	6	18	11	15	15
Wheelock (recg 4)	15	17	15	8	9

Manson bye.

THIRD DRAWING.

Phipps	15	15	15
Manson (recg 4)	5	9	7

Rose bye.

FINAL HEAT.

Phipps	3	17	15	15
Rose (recg. 5)	15	15	11	8

Phipps wins the A Handicap.

CLASS B.

Williamson gives			
3 to	Scott Goodfellow		
6	4	McLeod Church	
7	5	3	Brand Myburgh

FIRST DRAWING.

J. H. Scott	15	15	15
Goodfellow	7	9	13
Williamson	15	15	15
Brand (recg. 7)	9	11	9
McLeod	15	15	15
Church	3	11	3

Myburgh bye.

SECOND DRAWING.

Williamson	15	15	15	15
Scott (recg. 3)	10	10	18	12
Myburgh (recg. 3)	15	9	15	10	15
McLeod	7	15	8	15	6

FINAL HEAT.

Williamson	9	15	15	17
Myburgh (recg. 7)	15	10	12	16

Williamson therefore wins the B. Handicap.

S. Y. C. REGATTAS.

(*24th April.*)

Corinthian Cup.—Value $50. Course from the Recreation Ground, round the Red Buoy and back to Police Hulk.

This race took place on Saturday, and the entries were *Lillie*, *Wave* and *Fearless*, but the two former only came to the post.

At 9.40 a m., the gun fired, and both cast off, the *Lillie* taking the lead. The ebb tide was running strong, and there was a fresh breeze from E.N E. Both boats tacked in mid-stream and stood in for the P. M. S. S. Co.'s Wharf, and then a long reach was made for the Pootung shore, the *Wave* gradually gaining, and ultimately passing her opponent off Boyd's dock. Both boats had taken the precaution to reef down before starting, and it proved necessary, as they were observed to careen over to such an extent that capsizing appeared imminent, though fortunately no such mishap occurred

On passing the Ningpo Wharf, the *Wave* led by 200 yards, and, bar accidents, looked certain to justify the predictions of her backers, she being a hot favourite at 2 to 1. There was a nasty sea on opposite Collier's Dock in which both boats behaved splendidly, the *Wave* gradually drawing away. About this point, the *Lillie* fouled some fishing boats moored on the Pootung side of the river, and an accident seemed inevitable, but by good judgment and wonderful presence of mind on the part of the crack yachtsman, the danger was averted and all went smooth again. The *Wave* entered the ship Channel a mile ahead of the *Lillie*, the latter preferring to take the junk channel. Sheets were eased and the Bar rapidly approached, when the flood tide was met. It now became a difficult task, with a head wind and tide, to round the Red Buoy; and the *Wave* only succeeded in so doing, the *Lillie* having carried away her boom in the attempt, and turned back. The buoy was rounded at 0.11 p.m. and nothing being left to compete with, the run home was done under easy sail, and the goal was passed by the *Wave* at 1.38 p.m., the whole course having been traversed in four hours, less two minutes, the quickest time on record. Spectators and speculators looked anxiously for the return of the boats, and on seeing the *Lillie* first, were only doomed to further disappointment on learning that she had not gone over the Course.

The *Phantom* and *Kelpie* kept the yachts company going down the river, and another boat unknown by name, passed them all but the *Wave*, in boating. On enquiry, we learned that it belongs to the *Berwick Walls*, and is used for landing opium.

——

29th April.

Corinthian Cup—Value $75. Course—from Moorings off Recreation Ground round Red Buoy, and back to Police Hulk.

The entries for this race, the last of the Season, comprised the *Wave*, *Nimrod*, *Lillie*, *Phantom* and *Fearless*, but the last named did not start. At 12.45 the gun fired and all cast off with their usual alacrity. Ebb tide running and a moderate fair wind, the direction being about S. W. The *Lillie* soon took the lead, and being favoured by fortune she maintained it to the Red-buoy, the *Wave* keeping second place, the *Phantom* third, and the *Nimrod* last. Scarcely an incident occurred worthy of note beyond the fact that the *Lillie* proved herself a fast boat with a free wind, as she gradually increased the distance betwixt herself and followers to the turning point. It must be mentioned that the *Nimrod* started with a double reef, which proved a mistake, as the wind fell lighter on approaching Woosung, than it was on parting from the buoys. The Red-buoy was rounded thus:—

Lillie	2*h.*	16*m.*	00*s.*
Wave	2	20	00
Phantom	2	21	30
Nimrod	2	23	00

The ebb tide was still running and all being close hauled, things looked favourable for the weatherly boats. The danger to be avoided was shoal water, but in this the *Phantom* only succeeded, the *Lillie* being the first to touch bottom on Pheasant Point, the *Wave* following suit and the *Nimrod* likewise. In the case of the latter it resulted in a decided loss, as it was fully half an hour before the succeeded in floating again. The *Lillie* led the way through the junks, and the *Wave* followed her; though not showing the good qualities for which she has acquired a fame. After passing the telegraph station, the wind veered to the N. W. which enabled all the boats to ease off their sheets and set jibs. The *Lillie* still led the van, the *Wave* one hundred yards behind her, the *Phantom* ¾ of a mile still further astern, and the *Nimrod* out of sight. When Yangtsze-poo was reached, a dead beat ensued, the *Lillie* and *Wave* being close together and the *Phantom* in the rear. Crowds of spectators watched the race from the banks, and there was never a more exciting race presented than that between the *Lillie* and *Wave* from Yangtze-poo creek to the goal, the distance being about four miles, and a fresh head wind and ebb tide. But the excitement was soon upset, as also were many newly made *pots*, as the leading boat, the *Lillie*, carried away her yard and became totally disabled. The race then appeared to be virtually won by the *Wave*, but here the old adage of "mishaps never coming singly," proved true, as the *Wave* refused to stay. The cause was unknown to those on board; a second attempt was made which proved futile. In the third attempt she grounded on the Pootung shore. The sail was then lowered, and the boat shoved off. Her chance of winning was still good. Another tack was made successfully, and when approaching the Naval Yard it was necessary to tack once more, but the boat would not go round, but became helpless and drifted alongside the Wharf piles. Here the cause of this unmanageableness became visible; it was, a broken centre board. A steam launch came to the rescue and took her in tow. The *Phantom* in the meantime came along and eventually won the race, passing the Police Hulk at 5h. 11m. 20sec, followed by the *Nimrod* at 5h. 20m. 15sec.

The vicissitudes and chances of racing of all descriptions are numerous, but in this race they exceeded all imagination. Four yachts started. The favorite grounded and stuck fast on Pheasant Point; the *Wave* grounded and broke her centre-board; the *Lillie* carried away her yard in the last reach, and the *Phantom* won the race, through good luck, and thus adds another laurel to the many she has already gained.

It is a fact worthy of note, and this being the last race of the spring season, we take the opportunity to mention it, that the three races that have been sailed for, have been won by the *Nimrod*, *Wave*, and *Phantom* respectively, all having being designed and built by Mr. J. P. Croal.

THE S. F. D. PARADE.

Tuesday evening the Shanghai Fire Department answered to the summons issued by their Chief Engineer, and mustered on the Bund, opposite the Club, in the following order, facing South.

Mih-ho-loong H. & L. Co., No. 1.
Hongkew Hook and Ladder Co., No. 2.
No. 1 Company, Shanghai.
,, 2 ,, Hongkew Steam Fire Engine.
,, 3 ,, Kin-Le-Yuen.
,, 5 ,, French Municipal Engine
,, 6 ,, Messageries Maritimes.
,, 7 ,, "Victoria" Steam Fire Engine.

The brigade was headed by the Volunteer band, and about 9.15 p.m. the order was given to start, when they struck up a lively marching tune. The brigade countermarched along the Bund, and turned up Peking Road, along the Honan Road to the Maloo, thence to Hoopeh Road, along Hoopeh Road and down the Foochow Road, finishing on the Bund in front of the Custom House.

The illuminations on this occasion were not equal to those on a similar display two years ago, given in honor of the Grand Duke Alexis; but as viewed from the river, the sight was really imposing. Rockets, blue lights, and fireworks of all descriptions were plentiful. Each engine was gaily decorated, as also were the Hook and Ladder trucks, the more noticeable being that of the Hongkew truck which bore on either side an illuminated view of an extensive conflagration, with the ladders placed against the still-standing walls, and apparently insensible and helpless Chinese being extricated from death by fire. The Mih-ho-loongs had their usual simile of a Water Dragon with an illuminated escutcheon on either side of "Say the word and down comes your house." The "Deluge" Co. displayed themselves by an Auxiliary hand engine, the old engine being laid up in ordinary. The "Kin-le-yuen" was strong in numbers, as also were Nos. 5 and 6, while the Victorias brought up the rear in good force.

The whole display was simply a grand success. On no previous occasion have we witnessed such a multitude of Chinese within the Settlement. Several stoppages had to be made by the procession, owing to the density of the crowd. But no collision occurred, the mob willingly giving way to the well organised brigade. The weather was all that could be desired.

On arrival at the Bund, the Brigade was dismissed amidst a grand illumination, and complimentary interchanges of cheers.

Miscellaneous.

ATTACK ON FOREIGNERS NEAR QUINSAN.

A very serious attack was made on some foreign gentlemen, near Quinsan, on Sunday. Mr. W. Cooper and Mr. F. M. Hague had gone up on a shooting excursion. On Saturday afternoon, in shooting at a snipe, Mr. Cooper unfortunately wounded a Chinaman. The latter was hidden among some barley, weeding or doing something of the kind, and must have risen as the shots passed him. He was, however, very slightly hurt, only a few pellets having struck his face and shoulder which they barely entered skin deep. Mr. Cooper took him back to the boat, dressed the hurt, gave him some money, and sent him away contented. Shortly afterwards however, he was carried back by a crowd, who demanded $50 and would listen to no other proposal. Mr. Cooper offered to go with them to the magistrate at Quinsan, or Shanghai, but they would listen to nothing but $50. He had not sufficient money, but to pacify them promised to obtain it, if a foreign boat came by; they cut the sail rope and eventually went away; but a large boat containing some twenty men armed with cutlasses and matchlocks remained alongside, and stayed the night to prevent the foreigners moving. This boat went away at 5 a.m., and shortly afterwards the Tepao came down and renewed the request for $50. Not having it, the foreigners could not give it; and pushed off into mid channel, out of the way of the people who were beginning to assemble. The Tepao shouted that he could not get the money, and the crowd ordered the lowdah to put in shore. He instead tried to scull away—the damage done to the ropes prevented sailing—when the people got

into little boats, boarded the house boat, took forcible possession and brought her ashore. They knocked the lowdah overboard and struck him severely while he was in the water. They tried to drag Mr. Cooper out of the cabin, having run ropes with nooses at the end, over the house, with the object of strangling him if they could get one over his head. Planting his foot against the steps however, he was able to resist their efforts for a time ; Mr. Hague in the meantime guarding the back entrance. How it would have ended can be easily surmised. Two men could not long resist such a crowd But there was fortunately another houseboat about two miles off, and Mr. Cooper had sent off two coolies to alarm the occupants, at the beginning of the row. The latter had however heard the yelling, and joining two foreigners from another boat which passed during the riot, the four set out with several of their coolies (fortunately dressed in European sailors' dress which imposed on the crowd) all armed with guns, to the rescue. Directly on their approach the crowd dispersed. Two of the latter however were arrested ; and hereupon a general alarm was sounded with gongs, throughout the neighborhood ; and another threatening advance was made. Two other foreign boats however had come up in the meantime, and the foreigners were now strong enough to land and show a bold front, whereon the Chinese appear to have thought discretion the better part of valour, and held back. The prisoners were shipped ; and the whole party went on board, leaving the houseboat which had been the first object of attack, in a wrecked condition, on the spot. The denouement upset the calculations of the Chinese terribly. Instead of murdering a foreigner, they had lost two of their own number who were likely to be punished severely. And instead of $50 they had a boat which they had themselves smashed, left on their hands as evidence of their guilt. The Tepao sent messengers along the banks for two miles, asking to exchange the boat for the prisoners ; but the offer was declined. Two of the boats, which were bound for Shanghai, returned by way of Tsingpoo, and the others pursued their excursion to the Si-ta lake. The former arrived in Shanghai yesterday afternoon, and the prisoners were handed over. The matter has been placed in the hands of H.B.M. Consul.

THE ATTACK ON COLONEL BROWNE'S EXPEDITION.

A common spectacle in China, as everybody who has ever resided for any time in the celestial empire knows full well, is a man's head placed in a bamboo basket and suspended over the gate of a city for the crowd to gaze at and take warning by. It is not often, however, that the demoralized instincts of Chinamen have been gratified by the sight of a European's head in such a position, and we may well fancy what a crowd has stopped to gaze intently on such an unusual object over the chief gate of Momein, one of the walled towns of the remote province of Yunnan. Day after day during the past month the eyes of a Chinese multitude, as it passed in and out of the city gate, were turned towards the *Yang quei tze tow,* or "foreign devil's" head. Some grinned, no doubt, with satisfaction, some wondered in mute astonishment ; and some, perhaps not a few—for all Chinamen are not such idiotic, frivolous creatures they are generally taken to be—made shrewd remarks, and questioned to themselves the wisdom of such a proceeding, however sophistically accounted for in the proclamation posted on the side wall of the city gate.

Poor Margary ! Full of life, and the pride of having accomplished the feat of being the first Englishman who succeeded in traversing from the north-east to the south-western limit of the vast empire of China, and safely got beyond its borders to Bhamo where we have a resident political agent—such, it seems to be too true, is his unhappy fate.

The story is soon told. Having accomplished his mission, to which he was duly accredited by our representative at the Court of the Emperor of China, and by the Chinese Government, and arrived safely at Bhamo on the confines of Burmese territory, he put himself in communication with Colonel Browne, who arrived at Bhamo from the south about the same time, in command of the expedition to the Governor General of the province of Yunnan, to open up a trade route with western China. It was considered that the experience he acquired in his recent journey would be most valuable to the expedition, and he at once prepared to return with it over the same ground to Talifoo, and through China to Shanghai. The expedition consisted of five Europeans, viz., Colonel Browne, Dr. Anderson, Mr. Allen, in charge of the Topographical Department, and Mr Ford in charge of the escort of 15 armed Seiks. To this was added, by the Burmese King's orders, a guard of 100 Burmese soldiers under two of their officers : so that, what with the baggage animals, several of the Chinese servants and other followers, the expedition assumed considerable dimensions.

Its history is, however, a very brief one. Starting from Bhamo through a line of country which had already been determined upon, and the necessary preliminary communications with the Tsawbas or heads of the clans of semi-independent tribes who inhabit the space intervening between Chinese and Burmese territory—who, in fact constitute the "buffer" between those nations—having been duly accomplished, the expedition set out ; but after a few days march some difficulties were encountered, and opposition began to be shown to its further progress. At length it became palpable that proceeding any further would be likely to cause a hostile collision with the people ; this of course was to be avoided, as the expedition, whatever may have been its merits, was strictly a pacific one. This route was given up, and the party returned to Bhamo, where a new one was determined on ; and as soon as the necessary communications with the chiefs residing in that direction were completed, the expedition started on its way again. A few marches had hardly been accomplished when rumours of opposition to its progress were again rife, and as it proceeded these rumours assumed a more definite form. From the accounts we have had the opportunity of hearing from the members of the expedition when they touched at Thayetmyo, where they arrived on the 15th ultimo on their way to Rangoon—and these accounts were necessarily very vague and limited until the official report of the mission is published—it seems the usual duplicity and feeble cunning of uncivilized people was apparent in the interviews with, and messages sent by, the chiefs of the Cochins, (Kakhyens ?)—the usual designation of these people, who are distinguished as Burmese or Chinese Cochins in accordance with their proximity to either the Burmese or Chinese territory, and are generally known in China as the *Shan ye,* or hill men, who prefer their own barbarous independence rather than submit to Chinese laws and customs.

At length the opposition compelled the party to halt, and in order to ascertain the reason of it, and if possible to adjust matters, Margary, with five or six Chinese servants who accompanied him, proceeded in advance.

We shall, perhaps, never fathom what took place in that interval. Suffice it to say that Margary did not turn up in the manner he had pre-arranged with Colonel Browne, and that the last communication with him was a message he sent back saying that the expedition was to come on, as it was all right. The Chinaman who brought back this message returned to Margary, and was one of the unhappy victims of that kind of treachery which has so frequently branded the Chinese character in history. This was near being exhibited on a larger scale. Colonel Browne, receiving the message that it was all right in front, started off ahead of his party with one or two others, and was to all appearance politely received by an official at his residence, which he was induced to enter ; presently it became no longer doubtful that some serious duplicity was intended, which was fortunately frustrated by the timely arrival of the armed escort. There was an immediate retreat, when their worst apprehensions were confirmed by the appearance of armed men on some neighbouring hills, and some shots fired from the jungle close by. One of the Seiks was struck by a spent ball, and a mule belonging the baggage train was shot through the neck. Fortunately, these were the only casualties, but they might have been more serious ; in fact, the safety of all the party would have been in much jeopardy had it not been for the resolute behaviour of the Seiks, who were armed with breech loading Snider rifles, but who had few chances of using them with effect, as the jungle was both close and dense. It was not until the Burmese guard and friendly Cochins, who behaved well, had set fire to the jungle, and thus obliged the enemy to expose themselves in the open, that their firing told. Probably twenty altogether were shot.

After such an unfortunate occurrence, it was of course impossible to think of proceeding further, and the next thought was how to get back to Bhamo. This being resolved on, the expedition retreated as fast as possible over the high range of hills which separates Chinese from Burmese territories. It was well it did so in time, as the armed body assailing it was only the advanced guard of a considerable force, which was being sent on from Momein with the object of cutting off retreat in all directions.

It was since ascertained, however, that there was no doubt as to poor Margary's fate. At the frontier town of Manwein, through which he had passed on his way to Bhamo, and where he had been hospitably received, he had been decoyed into a retired place under most friendly pretexts, when he was speared while he sat on his pony, by some dastardly Chinese ; and his head was sent on to Momein, together with the heads of five or six Chinese who accompanied him. One of these Chinese he had picked up in Shanghai. Another joined him at Hankow. He was a Christian, and a most intelligent and well-informed man. Another was a native of the province of Yunnan, who, being a Panthay, had escaped into Burma from the recent general massacre of his party and settled at Prome, where he married a Burmese wife. He joined the expedition with the view of returning to Yunnan to see his aged mother and surviving relations. He had made himself most useful, and was much regretted by all in the expedition. It must not be supposed that any of the Chinese servants were agents in the treachery ; on the contrary, the expedition owes its escape altogether to the fidelity and quick apprehension of the Chinese servant who accompanied Colonel Browne when he went on in advance.

Now, who were the aggressors ? There can be no doubt they were a band of Chinese braves, with, of course, some local Cochins. One of the leaders, who was more courageous than the rest, got in advance of his men, and was shot by the Seiks. There was an opportunity of

examining him closely, as his men bolted as soon as he fell. This man wore the usualdress of a Chinese mi itary official of a low grade. The Cochins were not altogether hostile to the expedition; on the contrary they assisted in carrying the baggage, and otherwise showed hostility to the Chinese; of course they were well remunerated, which was an important element in gaining their friendship, and they readily assisted in recalling Mr Elias, the Assistant Political Resident at Mandalay, who had started on a separate route to explore the course of the Irrawaddy.

Another reason for supposing that the treachery was approved of, if not instigated, by the Chinese Mandarins, is the fact of the heads having been sent to the Chinese city, where they were publicly exposed. It must also be remembered that this hostile attack took place within a few miles of the proper Chinese territory.

The Chinese Government appear to be bent on keeping a strict cordon around the western borders of their empire, with the object of guarding against the admission of Europeans in that direction. On all sides we see every effort made to get into the country from the west frustrated, and the recent expedition is only another evidence of this old Chinese exclusiveness which has been broken down pretty well on the eastern borders, but still exists where our gunboats cannot reach. There is no provision in the Treaty of Tientsin by which we can claim admission into China by any other direction than the sea board, and the disastrous failure of Colonel Browne's expedition is an unfortunate example of our shortsightedness in framing that Treaty.

Whether the Burmese were privy to the opposition may be hereafter more fully shown, or it may not be so; though the fate of the previous expedition under Major Sladen, and the fact of a Burman expedition having proceeded Colonel Browne's only a few days previously, besides the probability of other evidence being forthcoming, tend to throw some light on the cause of the unfortunate denoument of a project which was intended to be mutually beneficial to Chinese, Burmese, and English interests.

The question now remains, how will all this be regarded by the different nationalities interested in it? The Chinese will of course represent it as a great victory gained over the outer barbarians, and will treat it with the usual exaggeration, boasting how their braves beat back an immense army of invaders and utterly annihilated it, &c

The Burmans will, no doubt, regard it as a piece of diplomacy. They seem to be entirely opposed to the opening up of trade with China *viâ* Burma, and have reduced it almost to a minimum, though at one time it assumed considerable dimensions, and appeared capable of very great extension, had the trade route been thoroughly opened out.

The Seiks, who, though few in number, represent an important nation, will carry back the tidings with them to India. They fully expected to be detained at Thayetmyo until a large force could be collected to take revenge on the Chinese, not knowing of course that there were more direct ways of reaching their government than by sending an army up the Irrawaddy.

And lastly, what will our own people say when they hear the news? Apart from feelings of profound sympathy for the brave man who met with so cruel a fate, and of just indignation against the dastardly deed, it will prove a great disappointment to many who were in hopes, from the occurrence of recent events in China, that at last the dawn of progress had commenced to shine on the hitherto obdurate people of that country. A telegraph was in process of construction, coal mines were to be opened up and their proceeds brought in reach of the seaports by a tramway, which was to grow into a railway; a foreign loan was contracted for, and so on. Now comes this terrible blow. After all these years of diplomatic and commercial intercourse with that nation, it is the same as when we first approached it. The same acts of treachery, of inhumanity and duplicity, distinguish it now as then. There is one hope still left. The man who is now in the ascendant in China may exert some decided influence for good. He has had much intercourse with foreigners while at Shanghai, where he was obliged to reside while the Taiping rebels had overrun the province, of which he was Footai. It was by our assistance he was able to suppress that rebellion, and he has made great exertions to introduce English workmen and machinery into his country; he has, in fact, established extensive armouries and dockyards, for the purpose of manufacturing small arms and the largest cannon, and building armour-plated gunboats. This man, Li Hung-chang, is now the chief minister of state and guardian of the young heir who was elected on the death of the late Emperor. Had he been at the head of affairs when Colonel Browne's mission started, there is no doubt but it would have had a very different issue.—*(Our Chronicle—67th Regt. newspaper.)*

Law Reports.

H. B. M. SUPREME COURT.

Shanghai, 27th April, 1875.

Before Sir Edmund Hornby, *Chief Judge*.

John Samuel Swire, William Hudson Swire, William Lang, James Henry Scott and William Drought Harrison, trading together as Butterfield & Swire *v.* Archibald John Little and Robert William Little, trading together as Little & Co.

Claim—£63.13.8 *and interest thereon at* 8% *per annum, for return of freight over-paid.*

Mr. Wainewright for plaintiffs.
Mr. Robinson for defendants.

The case, as set forth fully in the petition and answer, is as follows:—

Petition.

1.—The plaintiffs are merchants carrying on business at Shanghai, and elsewhere in the Empire of China, under the style or firm of Butterfield & Swire.

2.—The defendants are merchants carrying on business at Shanghai, under the style or firm of Little & Co.

3.—On or about the 6th day of July, 1874, the defendants who were charterers of the steamship *Pleiades*, placed the said steamship on the berth at Shanghai for New York, and advertised her to load Teas for conveyance to New York *vid* the Suez Canal "at current rates" of freight.

4.—On or about the 15th day of July, 1874, the plaintiffs, after having ascertained from the defendants that what they understood as the current rate of freight upon tea for shipment to New York was £5.10.0 per ton of Forty cubic feet, and that they would not take less, agreed with the defendants to ship on board the said steamship, one hundred and twenty-seven tons of tea or thereabouts, and to pay freight for the same upon delivery in New York at the aforesaid rate, and the plaintiffs subsequently shipped on board the said steamship one hundred and twenty-seven tons, fourteen feet eight inches of Tea, and paid to the defendants upon the delivery of the same in New York, namely, on the 14th day of November, 1874, the sum of £700.10.4 stg. as and for freight at the rate aforesaid.

5.—After the said tea had been shipped and after the said steamship had left Shanghai, the plaintiffs found, as the fact was, that the defendants had reduced the rate of freight in favour of a certain shipper or certain shippers, and had taken tea on board the said steamship for conveyance to New York at the reduced rate of freight of £5 per ton, or had made a return or allowance to the said shipper or shippers, which had practically had the effect of reducing the amount paid for freight to £5 per ton.

6.—The plaintiffs thereupon, relying on the well-known and established custom or usage of the port of Shanghai that, in a case where the rate of freight is reduced in favour of one shipper, all antecedent shippers are entitled to a similar reduction, applied to the defendants for payment of the sum of £63.13 8, being the difference between freight at £5.10 per ton, as paid by the plaintiffs upon the said one hundred and twenty-seven tons, fourteen feet two inches, and freight upon the same quantity at the reduced rate of £5 per ton, but the defendants refused to pay the same to the plaintiffs and the same is still due to the plaintiffs.

7.—The plaintiffs allege that the custom or usage of the port of Shanghai mentioned in the last preceding paragraph, formed by implication a part of their contract with the defendants, and that they entered into the agreement with the defendants, and made the shipment respectively mentioned and specified in the fourth paragraph of this petition, relying upon the said custom or usage, and upon the faith that the said custom or usage formed part of the said agreement, or that the said agreement would be subject thereto.

The plaintiffs therefore pray:—

1.—That the defendants may be decreed to pay to the plaintiffs the said sum of £63.13.8 with interest thereon at the rate of 8 per centum per annum from the 14th day of November 1874, together with the costs of this suit.

2.—That the plaintiffs may have such further or other relief as the nature of the case may require.

Answer.

1.—The defendants deny the existence of any such established custom or usage of the port of Shanghai as is mentioned in the sixth paragraph of the petition of the plaintiffs.

2.—The plaintiffs deny that they reduced the rate of freight by the said steamship *Pleiades* in favour of any shipper or shippers as mentioned in the fifth paragraph of the petition of the plaintiffs.

3.—The defendants deny that the plaintiffs were under the circumstances set forth in their said petition entitled to repayment of any freight paid by them on any of the cargo shipped by them on board the *Pleiades* as set forth in their said petition.

The defendants say they never were indebted to the plaintiffs in, or liable to pay to the plaintiffs, any sum of money in respect of the causes of action mentioned in the said petition of the plaintiffs.

Mr. Wainewright said the suit was brought to recover a small sum, being the difference between freight by a certain ship at a certain rate, and freight at another rate. The question really was whether the Court would consider there was a custom, and whether the custom was valid. Mr. Wainewright then read the petition and answer, from which His Lordship would see that, assuming he was able to prove a reduction had been made in the rate paid by other shippers, the case turned on the existence of a custom, that when the rates of freight are reduced in favour of one shipper, all shippers of cargo by that ship shall benefit. He would of course have to prove his facts. He did not know whether his friend would dispute that a reduction had been made; there would be no difficulty in proving it. A return had been made of 10s. a ton in the case of a certain shipper, and the amount had been forwarded by the latter to the consignee of the cargo, and was equivalent to a reduction in the rate of freight. The answer to the petition was, according to the rules of practice in this Court, rather meagre. There was nothing in it which enabled him to foresee what line of defence would be followed; whether Mr. Robinson would raise certain points of defence which were open to him, or not. The defendants denied the existence of any custom, denied the reduction in rate, and denied that the plaintiffs were entitled to recover. He had reason to believe that the validity of the custom would be disputed, and in that case the answer ought to have given certain further information. However, he was not going to rely on a techincal point, and should assume his friend was going to follow this line of defence. Now, as to the law ——

His Lordship suggested that it would be better to postpone discussion on the law of the case, until the custom had been proved. He presumed that, after the facts had been proved, when evidence as to custom was offered, Mr. Robinson would raise the question whether it was admissible. He should not venture to rule at once that the evidence was inadmissible, because that would be to stop the case. He should admit the evidence, without overruling Mr. Robinson's objection, and give him (Mr. R.) leave to argue that he was wrong in so doing.

Mr. Robinson thought the cases were so numerous in which judges had ruled that evidence was inadmissible, that his Lordship would have no difficulty in deciding whether the evidence in this case was so.

His Lordship said there were many cases on both sides; he should prefer to reserve his decision on the point.

Mr. Robinson—Of course it is as your Lordship prefers. Then we are to try the case on its merits. And in case of appeal, the complete pleadings will of course go home.

Mr. Wainewright then proceeded to call

E. Mackintosh, sworn, stated—I am clerk to the plaintiffs. I recollect the *Pleiades* being put on the berth for New York. She was advertised at current rates some time in July. My firm engaged certain freight shortly after the vessel was put on the berth. I saw the letter that passed between plaintiffs and defendants. Personally, I have no knowledge of the rate of freight, except having seen the letter from defendants to plaintiffs. The freight was ultimately engaged at £5.10. I know of nothing special in this business different from others. My experience in Shanghai extends over three years. There

was the *Bengal* on the berth for New York at the time, at the rate of £5.

Witness was going on to give evidence as to custom, when

Mr. ROBINSON objected to the evidence as inadmissible.

The Court admitted the evidence, subject to after discussion and decision.

Witness continued—I understand there is a custom in Shanghai that, where a reduction is made previous to the ship's sailing, and in course of her loading, the antecedent shippers are all entitled to a reduction. This applies to a sailing vessel as well as to steamers. Messrs. Butterfield & Swire are agents for a line of Ocean steamers, running between China and England and between ports in China. I know of our firm having reduced freight-rate while a ship has been on the berth. In October, 1872—the *Hector* was loading in Shanghai at £3.10. Engagements at that rate were made with several shippers; the rate was reduced to £3.00., and all shippers were put on the same footing. The bills of lading were not made out at that, but the shippers were returned the difference. In engaging freight we sometimes use this form (C) handed in; not always. Freight is engaged in various ways. In this particular case no special contract was made. We had a case on the 5th March last. The *Diomed* was loading at £3.10.; the rate was reduced to £3.5. All the previous shippers got the benefit of the reduction, including Messrs. Little & Co. There was no special agreement in this case. In some instances the goods may have been on board. In the case in question the bills of lading were not made out. I do not recollect any other cases in our firm.

By Mr. ROBINSON—The *Pleiades* was advertised at current rates when she was first put on the berth. She had not arrived then. I recognise this letter as in the handwriting of Mr. Lang. I can't say if any goods were on board the *Hector* at the time the reduction was made. I have no personal knowledge of the way in which the reduction was made. I have never known persons when applying to ship stipulate for reduction of freight. Some shippers have done so casually at time of engaging. My only experience was in the case of the *Diomed*, when the defendants claimed the benefit of the reduction. I cannot say whether they had stipulated for it. I have no personal knowledge of the engagements of freight for the *Diomed*. I know of no other instances in our line of any reduction being made to shippers in terms of the last shippers. I know of none outside of our line. We have had instances of raising the freights. In the cases where there was a rise, portions would pay at one rate and others at other rates. It is usual to make specific engagements for freight by our coast and river steamers. We have given advantages in the way of reduction of freight to shippers on the river and coast. I know of the practice in London and Liverpool. I don't think there is any custom of reducing freight in favor of antecedent shippers.

Re-examined—Competition with other lines induced us to reduce our freight. That competition has ceased.

W. PEARSON—I am Secretary of the Shanghai Chamber of Commerce. I was so in 1869. I produce the annual report of the Chamber of Commerce for 1869—the letter from the North Shields and Tynemouth Chamber of Commerce to the Shanghai Chamber, and the reply to it. I have no personal knowledge of the custom of reducing freight.

By Mr ROBINSON—There is nothing more in the records of the Chamber, on the subject of reduction, than those documents I have produced.

A. G. WOOD, sworn, stated—I am a member of the firm of Gibb, Livingston & Co. We deal largely in the agency of both steamers and sailing vessels. I understand it to be the custom that antecedent shippers get the benefit of subsequent reduction of freights. I don't recollect any instance where our firm got the benefit of such reduction, except one, where we loaded ourselves. That steamer was the *Enterprise*, in June 1874. Her rate was £4, and she had 500 tons. It was then reduced to £3.10 - all first shippers got the benefit of that. I don't know if bills of lading had been signed. I don't recollect any special agreement having been made. The reduction was applied for by the shippers. It was made as a matter of course.

By Mr ROBINSON—I have had six years' experience of freighting steamers for coast ports, Europe, and America. We had other steamers besides the *Enterprise*, but that was the only steamer that reduced rates. Except that case, I don't recollect our firm getting reduction of freight for shipments made by us. The capacity of the *Enterprise* was 2,100 tons. I know frequently of stipulations as to reduction being made. It is possible that those 500 tons on board the *Enterprise* were under some such stipulation. There is no fixed tariff for the coast. It is common to make arrangement for a lower rate of freight on the offer of filling the vessel. It does happen that we get a smaller quantity of cargo than that promised. I have not known of any claim being made for the deficiency. In the case of a rise in freight, first freights remain unaltered. One steamer therefore would carry one portion at a lower rate and the other at a higher rate. I think the custom is reasonable. I don't know the custom of London or any other ports.

[Mr. WAINEWRIGHT admitted for the sake of argument that the custom is peculiar to Shanghai.]

Re-EXAMINED—I read through the engagement and manifest books, and that gave me the information in regard to the *Enterprise*. The business was carried on in the usual way. Whether engagement of freight is made in writing or verbally, all get the reduction equally, unless a positive engagement was made. I don't know that the custom prevails in the river trade.

By COURT—In case no application is made, the agent would fill up the bill of lading at the rate originally engaged. We had given shipping orders for the 500 tons for the *Enterprise*, but I don't know whether the goods had been shipped. In cases where goods had been shipped, and bill of lading made out, freight payable elsewhere, letters have been written for the reduction at the port of payment.

J. B. MANSON, sworn, stated—I am in the employ of Reid, Evans & Co. We shipped 700 or 800 tons on board the *Pleiades*, in July and August 1874. The terms upon which freight was engaged are stated in these contracts. Mr. Evans engaged it, but I was quite aware of it. We got bills of lading for the 200 tons at £5.10. We got the return of 10 shillings a ton. We got a return altogether of Tls. 1,073.74. Our constituents in New York got the benefit of the return. We approved the contract and and kept it private. I have had 12 years experience in shipping business in Shanghai. I always make the return, and expect to get it, whether there is any or no stipulation. I think it is fair to do so. We have had returns like that on ships. The last instance was the *Mary Whitridge*, in December last. We had shipped before the reduction was made, and bills had been signed and forwarded to London. Nothing special was agreed in engaging freight by her. I forget whether we applied for the reduction. I know of ships frequently making such a reduction, but I don't know about steamers—I know the business about coast steamers. I refer to vessels going to England and America. I have known of this custom since 1862.

By Mr. ROBINSON—I cannot tell if the 700 tons we shipped by the *Pleiades* belonged to us or to our constituents. We had a third interest in 463 half-chests and whole interest in 50. They would be about 45 tons. The return on those would go to Messrs. Reid, Evans and Company, according to the proportion of their interest. The actual freight paid in New York was £5.10. I have known in my experience where stipulations were made by shippers for the benefit of any subsequent reduction. I don't recollect any other instance where commission was given for giving freight. Freight for the *Mary Whitridge* was engaged by a broker. For aught I know stipulations might have been made there. I went to Russell & Co., and applied for the letter from the Captain of the *Mary Whitridge* reducing the freights. The reduction was either 5 or 10 shillings. I forget what quantity we shipped. Perhaps 200 tons. Our friends in New York got the benefit of the commission on their tea by the *Pleiades*.

By COURT—When the *Mary Whitridge* was on the berth, we shipped, and subsequently when we shipped again, we learned the reduction of freight, and we got the reduction on the whole.

THOS. R. WHEELOCK, sworn, stated—I am a ship-broker, and have had 7 or 8 years experience. My opinion is that it is a custom to reduce the freight for back shipments, if it be reduced to subsequent shippers—particularly sailing vessels. I can't recall to mind an instance after cargo was on board, of a steamer returning freight—nor even after freight had been engaged. I have an impression that such a thing has occurred. In sailing ships, there have been cases, after cargo had been shipped—even where no written engagement was made. I sometimes write out contracts, and sometimes not. Sometimes I make the stipulation for a return; but whether so or not, I expect shippers to get the reduction. I have known of their getting it. I have known returns being made without application. I understand this to be the custom as long as I can recollect. Where reductions are made after bills had been signed, letters are given, and I presume payment of the reduction is made on it. This (shown me) is a form of such a letter. I have seen it.

By Mr. ROBINSON—Sometimes the captain, sometimes the consignees sign the letter. All that I have seen, the captain had signed. I don't know of a single instance where the consignee has signed. In some I do and others I don't know the engagement of freight where the reduction was subsequently made. I have been desired by shippers to secure the benefit of such reductions. I frequently stipulate for this for my clients. I have known instances of merchants getting commission for putting freight on board. It is not usual that a person engages more space than he wants. It does happen sometimes. I don't remember any claim being made in consequence. In case of a rise in freight, the original rate is adhered to. I had something to do in loading the *Mary Whitridge*. She was put on the berth at £3.10., and then reduced to £3. I don't recall what cargo was on board when the reduction was made. I think I engaged 800 or 900 tons after the rate was reduced. Her capacity was about 1,500. I don't know if other brokers were engaged in filling her.

RE-EXAMINED—I don't know of commissions as high as 10 shillings a ton being given to merchants. My instructions to secure benefit of reduction were always verbal. I note it in my contract sometimes, but whether so or not, it is always done. There is no such custom on the coast—it is only on home-bound steamers.

By COURT—I think the commission to merchants for freight is 5 per cent. I don't know of any application for return of freight being refused, except the plaintiffs' case. I don't know if any refusal was made in the case of the *Northampton*.

E. H. LAVERS, sworn, stated—I am a member of Gilman & Co., and have had nearly 15 years' experience in shipping business. It is my opinion that there is a custom in Shanghai of reducing the freight of antecedent shippers when freight is reduced at the last moment. It applies to both steamers and sailing vessels. It does not prevail in the coasting trade. My firm have been agents for a great number of ships and steamers. We have frequently written to captains, representing to them that if their vessels were put on the berth, every shipper should be placed on the same footing. In 1861, we warned the captain of the *Queen of the Ocean* in the same terms. We have always conformed to the custom. We have not made any return, but made the reduction. We frequently made the reduction after bills of lading had been signed. We get a certificate from the captain, and present it to the shipper, as to what rate would be charged. We make the reduction whether any stipulation had been agreed to or not, and make it whether applied for or not. I mention the *Burdwan* in June 1869; July 1869, the *Mary Moore*; June 1870, *Cutty Sark*. *Golden Spur*, July 1870; July 1870, steamer *Glenlyon*; August 1874, *Glenfinlas*. I consider the custom applied to these cases. Messrs. Little and Co. were shippers by the *Glenlyon* and got the reduction. I have engaged freight with other firms and got the reduction in freights; the *Eliza Shaw* from £3 to £2.10. I dont recollect any stipulation being made We got a certificate signed by the Captain, of a reduction. In July 1869 we forwarded a certificate to London that the freight per *Burdwan* was reduced from £4 to £3.10. I consider we are entitled to such reduction whether agreed to at first or not, or whether

steamer or sailing vessel. I think the reason why reductions have not been so often made in the case of steamers as sailing vessels, is that steamers remain in port but a short time, that they go to outports to fill up, and that they have not been running for many years. I think the custom is a reasonable one. The advantages, speaking as a merchant, are that ships placed on the berth might otherwise remain in port a long time. Cargo is put on board, and merchants who ship first would remain a long time out of the use of their money, and it accelerates the loading of a vessel. Some merchants won't begin to ship until they see some cargo on board.

By Mr. Robinson—In the case of a shipper stipulating for a reduction of freight, I consider that a solitary instance entitles all others to the same reduction. It is so, because it is the custom of the port. It is rather an extreme case to expect, that because a captain takes half a dozen cases in his cabin for nothing, he should take the whole of his cargo for nothing. Say five tons—it would then be governed by the custom of the port. I know of other steamers besides the *Glenfinlas* and *Glenlyon*; the *Hector* and the *Diomed*. The rate of the *Glenlyon* was reduced from £4 to £3.10s. I can't say how much cargo was on board when the reduction was made. I have no doubt that in many cases there were stipulations as to reducing freight, and there were many when the reduction was made with no such stipulation. I think a captain may stipulate for freight at different rates contemporaneously. Steamers have been running between Shanghai and Europe since 1862. Since 1867, for the first time we had an important line—the plaintiffs'. In some instances we engaged space, and agreed as to a rate with the proviso for reduction. It is not our invariable rule to stipulate for this reduction. Whenever we have written in, we have stipulated for the reduction. I don't know in my experience of commissions being allowed on freight. It has happened occasionally that more space has been engaged than has been ultimately required. In case of a rise, the first rate is paid. I don't know the London, Liverpool or Glasgow practice.

Re-examined—We don't always engage freight in writing. I don't know if engagements made by brokers include that stipulation. It is generally understood. I do so when writing, to make things clear. I consider I am entitled to it in any case. Vessels very often leave at lower rates than those advertised, and the custom holds as good. Whether rates are advertised or not, I expect the return to be made, and should make it myself.

H. H. Joseph, sworn, stated—I was acting shipping clerk to the P. & O. Co. I have known an instance of the P. & O. reducing their freight after steamer had begun to load. It was the *Mirzapore*—in July, 1873. Her destination was London. She reduced her freight for New York. Freights had been engaged when the change was made, and shippers at the higher rate got the benefit also. The difference was refunded here—freight being payable in Shanghai. I don't know of any stipulations. I don't remember such ever being made. I don't know of the custom of the port in that respect.

By Mr. Robinson—My Shanghai experience extends to three years and a half. Mr. Lind is the Company's agent here. I didn't personally superintend the engagement of the cargo. Mr. Barnes commenced it. I don't down the terms of the first lot. The reduction was made because there were two—the first Tls. 23, the 2nd Tls. 22. I had principally to do with the 2nd. I don't know the rate at which the bills of lading were signed. There was only one firm who had shipped at the higher rate. It had shipped about 50 tons. It is not my business to speak of the policy of the Company.

F. H. Bell, sworn, stated—I have had 17 years experience in shipping business. My firm have been consignees for a great number of ships. I consider antecedent shippers are entitled to the benefit of reduction in the rate of freight. I am not certain whether this custom is applicable alike to steamers as to sailing vessels. I know of a great number of sailing vessels doing so. A circular is sent round certifying the reduction. It is sent round to every shipper, whether any stipulation had been made or not. I know a great many; among others *William Melhuish*, *Huntly Castle*, *Thermopylæ*, *Lady Louise*. I don't think the custom applies to the river and coast lines. I have had instances of the reduction made to us. I have never had the reduction refused. I shipped by the *Pleiades*, and have never applied for the reduction, as I did not know that steamers made the reduction. I dont think it is reasonable, and it is high time steamers should resist it. If the shippers are the stronger body, they can command their own terms and make their own stipulations, but as a custom I look upon it as unjust. I consider it unjust from a shipowner's point of view.

By Mr. Robinson—In the cases of the vessels I have named, there was a general reduction. I know instances where, through the benefit having been obtained by one shipper, all the others had joined. The origin of the custom was, that there were a number of vessels loading the same goods for the same place. Steamers are differently situated now. The *Duke of Abercorn* raised her freight by 10s. a ton. Those who had shipped at the lower rate paid at that rate. I don't know of commissions being given for freight to New York. Strawbraid and silk are available for cargo on board tea-laden vessels. I have no London experience.

Re-examined—The last shipper rules the rate. It very often happens that the advertised rate is higher than the rate at which the early portion of the cargo is shipped.

By the Court—It is certainly reasonable from a shipowner's point of view that in the case of the *Duke of Abercorn* the increased rate should govern the whole.

A. Broom, sworn stated,—I am a freight broker, and have been so since 1863. I consider there is a custom of reducing the freights, and know of many instances. I certainly think it applies to steamers as well as to sailing vessels. The *Gordon Castle*, in October 1872, was put on at £3 for Messrs. Dickinson & Co. for London. The rate was afterwards reduced to £2/10 and they got their bills of lading at that. I know also of all the other instances referred to to-day. I know of many instances where my friends have got the benefit of the reduction. The *Glenlyon*, I engaged freight for. The *Weymouth*, July, 1872 was on at £3/10 and afterwards reduced. I have never heard the custom disputed. The *Nestor* put her rate down in August, 1872, from £3 to £2.10; the *Thermopylæ* the *Sir Lancelot* in June 1874 from £3.10 to £3; the *Dartmouth* from £3.10 to £2.10. I can't call to mind other instances. The custom is quite irrespective of any previous stipulation. I have never known of a return being refused. Supposing there was no such custom, ships would not be able to load so well. No one would give a freight to start with. The first freight is a sort of decoy. I don't think the cusstom holds good in river ports, but I don't know sufficiently to speak of it.

By Mr. Robinson—I have heard difference of opinion on the subject of the custom. I was in Shanghai in 1860, but was at home for some time after that. My attention has not been confined solely to shipping. I have heard the stipulations alluded to. I have never seen a contract with the stipulation. I have mentioned the stipulations to new shipping clerks, but as a rule I have not done so. I shall be very much surprised to hear of commissions being received by merchants for getting freight. Brokers should get them. The *Glenlyon* and the *Gordon Castle* are the only two instances I can call to mind at present.

Re-examined, — My present experience extends now to 5 years. I did have something to do in that line before that. I believe the custom to be quite sufficient not to require it noted in writing.

W. de St. Croix, sworn, stated—I am shipping clerk to Gilman & Co. The *Burdwan* reduced her rate of freight, and bills of lading having been signed, we gave first shippers the certificate. I have been shipping clerk more than six years. Freights are not usually engaged in writing, brokers come in and obtain shipping orders. When the cargo is on board, we give the bill of lading to shippers at the rate and if there is any change at the last moment, either bills of lading are altered or certificates given. I have never had any difficulty in getting reduction, whether there was a written agreement or not. I know of no distinction between sailing ships and steamers, so far as reduction goes. I know nothing about the coast ports. We have had very little to do with the coast ports.

To Mr. Robinson—In the cases of the sailing ships you name, there were no terms. I have looked in the books and found no terms. It is usual to enter the terms. There might have been letters. But I think no terms were made. All these things passed through my hands. My impression is that there were no terms. I have been in the habit of engaging freight through brokers for Messrs. Gilman & Co In such cases I do not think I ever wrote stipulating for reduction. This was done up to about three years ago, when the Chinese used to engage freight. It was sometimes done and sometimes not done. I do not think other people did it. In the case of the *Glenlyon* the rate was reduced from £4.10 to £4. I think she had about 500 or 600 to tons at £4. I cannot tell exactly, because I make out the manifest at the final rate. The *Glenlyon's* capacity was about 3,200 tons. The reduction in her case might apply to 5 or 6 persons. I do not think any of those 5 or 6 persons stipulated for reduction in writing. The broker might have said "on the usual terms," or something to that effect. In the case of the *Glenfinlas*, about 700 tons was engaged at £5. Her total capacity is about £3,200 tons. I think the reduction was only made to one shipper. There was no stipulation in that case, further than that the captain was told when he went on the berth, that he would have to take his chance of a reduction. We shipped cargo at the reduced rate. I agree with previous witnesses that when there is a rise in the rate of freight, the first shippers are entitled to the lower rate.

Re-examined by Mr. Wainewright—In the case of the sailing ships named, they would not have more than 1,000 tons on board—except the *Cutty Shark* which had about 1,100; she carrying 1,630. I have never known a reduction when freight has been payable here.

C. Lucas—I am a member of Blain & Co. I have been concerned in shipping cargo to Europe. I consider that there is a custom that shippers at a higher rate have a right to the lower, whether an agreement has been made or not. I have had abatements made to me in several cases. The latest were the *Dartmouth* and *James Shephard*. I don't recollect any case in which we got reduction on a steamer. We had shipped the tea in the case of the *Dartmouth*, and had bills of lading signed. We had no express stipulation about reduction, either in her case or that of the *James Shephard*.

To the Court—We started the *Dartmouth* and the *James Shephard*; that is, we commenced the freight.

Evidence continued—I consider that makes no difference.

To Court—I consider there is a positive custom of the port as regards steamers. I consider it does not apply to coast and river steamers. That is a different kind of trade. My firm has had constant reductions in other cases. I am not aware that ship owners in London have made the return without any letter. I have never known a case where the reduction has been asked for and refused.

To Mr. Robinson—I am speaking of my own firm's business. I cannot recall a case in which we have had a reduction on a steamer. I don't know of any instance in which a commission has been given for giving freight—other than to brokers. I agree with the rest of the witnesses that if the rate of freight were raised, I should expect to pay at the rate at which I engaged. I know that the alleged custom has been the subject of much complaint by shipowners at home.

John Sharp—I am a freight broker: have been so three years: had to do with freight seven years before, as Shipping Clerk in Gibb, Livingston & Co. I understand it is a custom of the port of Shanghai, that when the rate of freight is reduced, shippers at the higher rate have the benefit of the reduction. It is always stipulated, generally verbally, not often in writing. I consider it necessary to make the stipulation in the case of steamers,

in case of sailing vessels not. I don't think the custom has been established in the case of steamers. There seems to be a doubt about it. I have heard agents of steamers express a doubt. I have not known any cases of steamers where a reduction has been made. I do business with Messrs. Gilman & Co. I did not know of the *Glenlyon* and *Glenfinlas* having paid a reduction. In engaging freight by a steamer I always stipulate that if she takes freight at a lower rate than she is then engaging at, she shall come down in my case also. I make this stipulation verbally. I also do so in the case of sailing ships, to avoid trouble. I have known cases of sailing ships where reduction has been refused. A vessel called the *Georges* came to Gibb, Livingston & Co. The rate was reduced for £4.10 to £4. Bull, Purdon & Co. put cargo on board at the higher rate, and were refused a reduction. They took the Captain to the Consulate and failed to get reduction. I think the reduction was claimed on about 60 tons. That is the only case I remember of a reduction having been refused. I have known a number where it has been admitted—after as well as before B./L. have been signed. I have known cases where the allowance has been made without being stipulated for. The custom does not apply to the coast trade; the agreement there remains as it is made. If the custom were abolished, I think it would be a benefit to shipowners. I don't know in what way.

Mr. Brodie Clarke was next called. Before being sworn, Mr. Clarke asked His Lordship if witnesses in such a case as this were entitled to a fee?

His Lordship—You are entitled to your expenses for coming here.

Mr. Wainewright was prepared to tender the hire of two jin-rik-shas, from E-wo and back.

Mr. Clarke had thought an expert was entitled to a fee of two guineas.

His Lordship—That is when you are in business in your own account, and can prove loss through being taken away from business.

Mr. Robinson thought, as the point had been raised, it would be valuable if his Lordship would decide it.

His Lordship said an expert was entitled to a fee if he were a master, and could prove loss of time and business through being summoned to Court. Still he thought would be a great misfortune if the custom were introduced in Shanghai. As it is, we give each other the benefit of our experience without a fee. No fee, for example, could indemnify the senior member of a firm for being taken away during the busy season.

Mr. Robinson—It is generally arranged by sending for such an one at the time we want him.

His Lordship—Exactly, and your client does the same for him next time.

Brodie A. Clarke—I am shipping clerk to Jardine, Matheson & Co. I have been in that position five years consecutively, and before that 2 years. I have been ten years in Shanghai. I do not consider that there is a custom at Shanghai that when a lower rate of freight is subsequently taken, the first shipper is entitled to reduction—not unless it is specially stipulated. I consider the stipulation is necessary in the case of sailing ships as well as steamers; otherwise the captain refuses to agree to it. In ships that our firm is agent for, I only remember having to reduce the freight once, and then there were only 50 tons on board. That was a sailing ship. The shipper had the benefit of the lower rate. There was a stipulation that if the rate was lowered the shipper should have the advantage. It was verbal. I know the case of the *Georges*. I have known cases where the captain has gone away short, rather than accept reduction. I do not know positively of any other case where reduction was refused. I know of cases by hearsay, but cannot remember names of ships. I have heard it generally reported that captains had refused to lower the rate. I consider there is no custom at all unless specially stipulated. It often happens that a shipper engages 1,000 tons in a ship, and fails in his engagement. It would be very hard on the agents that the ship should either have to go short or take a lower rate. I have often engaged freight without making any stipulation. It has always been considered that if the bills of lading were signed, the captain could hold to the rate. He could not if it were stipulated otherwise. I never so stipulated because I thought it unfair. I do not know that the firm ever had a return made. But I did not always ship the tea. The return would not come to me unless I shipped the tea. They may have got it; but I don't know. The Chaaze generally engages the freight. In engaging freight I should not make the stipulation unless I got especial orders to do so. Brokers sometimes do and sometimes do not make the stipulation. If they make it, I agree to it. There is no such usage on the coast.

To Mr. Robinson—On the coast each man makes his own agreement. I am clearly of opinion that no custom binding the antecedent shipper to get a reduction on freight, has been established as regards steamers. Where freight is raised, the first shipper is entitled to have his cargo carried at the lower rate, if he has his bills of lading signed. It is not true that the *Sir Lancelot* was put on at £3.10 and reduced to £3. There was no freight engaged at the higher rate.

Re examined by Mr. Wainewright—I do not usually engage tea freight. Mr. Jaffray usually does so. I base my knowledge on what I see and hear, and my experience. We have had no occasion to be asked to make a reduction.

Mr. Robinson said, Mr. Wainewright first asked Mr. Clarke a series of questions to show he was an admirable witness, and was now trying to prove his evidence valueless.

Re-examination continued—In case of the *Sir Lancelot*, all that took place was this. I was asked what rate she would be put on the berth at, and said, "I suppose £3.10;" but she really never was laid on at that rate.

To Mr. Robinson—We often get more freight engaged than the broker can give.

His Lordship—In fact, "engaging freight" is rather a loose expression.

Witness—A broker would not consider the quantity named binding. He would not think anything of not producing it. In Foochow the custom is different.

Mr. Wainewright remarked that he had two other witnesses to examine, and was going on to propose an adjournment, when

His Lordship said:—After having heard 13 witnesses, I think that unless the two more you propose to call, can give more certain and positive evidence of the custom upon which you rely, it may be as well for me to state now, that I do not see any thing in the evidence already offered which at all satisfies me of the existence of any such custom as that contended for by the Plaintiffs. The most it amounts to is, that a great many people have in the case of sailing vessels made returns of freight; but I much doubt whether in all those cases it would not be found that there was very little freight engaged when the reduction was made on the rate, or that it was not quite a voluntary act on the part of the Captain or Consignee of the vessel. In a majority of instances it has certainly been returned because at the time the Broker engaged freight a stipulation was made, or an understanding come to, that in the event of the freight being lowered, a previous shipper at a higher rate was to have the benefit of it. A custom, to be upheld, must be valid in point of law, uniform in point of practice—and I think also it ought to be reasonable. There is certainly a complete lack of uniformity in the evidence of the existence of this custom. It amounts merely to this, that shippers have been powerful enough to insist on, and ship-owners or their Captains have not liked to resist, a return of freight when a reduction has become necessary for fear of not getting loaded; but I see no evidence of anything like a custom sufficient to support the petition in this case. I merely throw out these remarks at this stage, because it appears to me that it is throwing away time to hear any more witnesses if they cannot carry the case a great deal further than has been attempted. If you think you can carry it further, I will hear the witnesses, and you, on it to-morrow morning. In the meantime, it is for you to make up your mind whether there is any chance of your doing so.

Mr. Wainewright was much obliged to his Lordship for the intimation. It would of course now require very careful consideration on his part whether he should advise his clients to go on with the case. He would take this opportunity to mention, in case he had not another opportunity, that the object of the plaintiffs in bringing this suit had been to test the validity of the custom. They were really interested more the other way—

His Lordship—It has occurred to me more than once in course of the proceedings, that you must really wish it upset.

Mr. Wainewright—No. We wish to succeed. I have called witnesses without knowing what they were going to say; the object being to test the question for the good of the community; and I have not attempted either to find out beforehand what they would say, or to suppress portions of their evidence which might possibly be adverse.

His Lordship—That is the proper way to bring forward witnesses in a case where a question of custom is involved; not to examine them beforehand.

Mr. Wainewright must confess he was disappointed that the evidence he had brought forward had not made more impression on his Lordship, as to the recognised custom.

His Lordship—But the difficulty is to know what custom it. Custom, as it represents itself to many, is a general course of dealing. But to a lawyer it appears differently. A general course of dealing does not necessarily represent a custom that is bound to be recognised.

Mr. Wainewright thought that at any rate he had shown that it was recognised. He did not know whether his Lordship had looked at the cases.

His Lordship thought he had looked at nearly all. Of course he did not know what cases Mr. Wainewright might be going to cite.

Mr. Wainewright had thought that the present custom, if proved, might be brought in as an incident to the written contract.

Mr. Robinson—But you must prove the custom first.

After some further conversation, it was understood that Mr. Wainewright would intimate to the Court what course the plaintiffs would pursue, before the hour of sitting.

April 28th.

Mr. Wainewright, in terms of the adjournment yesterday, intimated to the Court that, after the strong expression of opinion made by His Lordship yesterday, he had been instructed by his clients not to proceed further with their case, and he submitted to a non-suit.

Mr. Robinson would beg to be permitted to make two observations. A certain amount of imputation had been cast upon his clients of want of good faith in resisting the plaintiffs' claim. Now, they were only co-charterers of the *Pleiades* with a firm in Japan, and it was the resolution of the latter to make the resistance. So far as the defendants were concerned, they had offered to abide by the arbitration of the Chamber of Commerce or any other private individual, but it was the plaintiffs who insisted upon having the question decided by a legal tribunal.

Mr. Wainewright, on behalf of his clients, would also say that, in view of the important point which the case involved, it would have been unsatisfactory for it to be decided on private arbitration.

His Lordship said he thought the case was just such a one that ought to be resisted and brought into Court.

Mr. Robinson's second point was as to the question of costs. He thought the case was one which involved a point of vital interest to the commerce of the place, and the costs should not be taxed strictly according to the scale of the amount at stake.

His Lordship agreed, and instructed the taxing master, who had had the advantage of hearing the case, to allow costs irrespectively of any scale, and according to what should be allowed, in his discretion, for the services rendered.

---

2 P.M.

Walker *v.* Malcolm.

Alleged detention of Opium.

Mr. Miller for plaintiff.
Mr. Drummond for defendant.

Mr. Miller explained that this was a re-hearing of the case Walker *v.* Malcolm, tried before the Magistrate on the 5th April, in which His Lordship was sitting on the bench with Mr. Nicolas. He took it therefore that His Lordship was familiar with the details. The summons had in that instance been dismissed, with costs against the plaintiff.

His Lordship was perfectly familiar with the case, and did not wish to hear any evidence. All Mr. Miller need do was to argue that the Magistrate was wrong in his decision.

Mr. Miller would then take the evidence as reported in the *N.-C. Daily News*, and comment upon it. The case was that, on the 18th March, the Plaintiff and his servants were proceeding along the street, the servants carrying on their persons certain opium valued at Tls. 50. They were seized by eleven ruffians, nine of whom fled, leaving two on the scene of action. And the two undertook to tie the coolies' queues together and took them to the Police Station. And now he came to the question of detention. The Defendant Malcolm was the sergeant in charge of the station on that night. He says that when the men came in, finding the Runners' cards bore the Municipal seal, he ordered P. C. Boysen to escort the whole party to the Mixed Court. Now that, he contended, was detaining the opium in such a way as to lose the plaintiff his opium, and as regarded the coolies it was for his Lordship to judge whether men sent two miles with their queues tied were or were not in custody. Mr. Miller quoted and commented at some length on the evidence; and asked his Lordship to decide, upon it, that Malcolm had, by his action, caused the opium to be lost. The time of detention did not signify; whether it was kept in the Police Station two minutes or five. He was responsible if by his conduct he jeopardised the opium. If he had cast the whole party out into the street—

His Lordship—In that case there would probably have been a further breach of the peace.

Mr. Miller—That would have been another case which would have come before the Court in another way. But the Sergeant did not do so. He dealt with the case; he sent a Policeman up with the men to the Mixed Court, and that was detention.

His Lordship. Let me put a case. Suppose I am sitting in my dining room, and hear a row. I see four men pitching into two. I go down and drive them all into my yard and say: "What is all this about? I don't like a breach of the peace, and shall not allow it." Two of the men produce opium, as a cause of quarrel. I say I have nothing to do with that, and send my servant with them to the nearest Police Court. Would you say I had detained the opium?

Miller—I certainly should.

His Lordship I thought you would be driven to do so. And the case is exactly on all fours with the present one.

Mr. Miller said—If people choose to kick up a row they must take the consequences, but you have no right to interfere. You cannot take a man's goods and make them deviate. They are going one way, and you make them go another. Defendant all along says he had nothing to do with the matter. But as a matter of fact he dealt with it. He ordered Boysen to take the party to the Mixed Court. There has been an unjust attempt to slur this case because it involved opium. But he hoped his Lordship would not allow that to weigh.

His Lordship said he would like to hear Mr. Drummond on the question of costs. In order to get costs, he must justify the conduct of the Police.

Mr. Drummond contended that they had acted according to national comity. He thought the Court would find nothing in the case to show that they had been doing otherwise. Suppose the officers of any Consulate wished to execute an order of that Consular Court,—the Police were deputed by the Council to be guardians of order, and the officers would fall back on them to carry out the order.

His Lordship—Then you liken Lekin runners to the constables of a Consular Court. They are supposed to be the agents of a guild to protect it against smuggled opium. But how if the people carrying the opium were not smugglers?

Mr. Drummond submitted that the Treaty gives the Chinese power to take any steps they see fit, to prevent smuggling. Art. XLVI says "The Chinese Authorities at each port shall adopt the means they judge most proper to prevent the revenue suffering from fraud or smuggling."

His Lordship agreed, and said the Police ought even to go further and detain the opium. But about the smuggling?

Mr. Drummond said the question what was smuggling was, by the same clause, to be decided by the Chinese.

His Lordship—They may say a man was smuggling; but they must give primâ facie evidence of it.

Mr. Drummond—The Municipal Police are under the orders of the Council, and the Council are responsible for their conduct. In order to enable them to have a guide whether men calling themselves Lekin runners are authorized servants of the Guild, they have taken steps from time to time to enable the Police to identify them. The latest method had been by issuing to the Runners, cards bearing the Municipal seal. The question whether the opium was smuggled or not, had to be decided by the Court to which it was given up. The men were brought to the Station charged with smuggling, and the Police passed them on to the Court.

His Lordship—Were they so charged?

[It was shown that there was no entry made on the charge-sheet. But Sergeant Malcolm had entered the incident in an "occurrence" book.]

Mr. Drummond—They were brought in in charge of Lekin runners and sent on in charge of the Police to the Mixed Court, to prevent a breach of the peace. They say we do not know whether the opium is smuggled or not. We have nothing to do with that. We merely send the whole case to the Mixed Court. Large sums were often involved in these cases, and if the Police were not to go, it would be worth the while of smugglers to employ a large force to carry off the opium. To prevent this, to prevent the party being attacked in the street, the Police lend assistance. It appeared to him that this was the only course they could pursue, and they had done so for a long time. If a case were brought to the Station without evidence that the men were Lekin runners, it would be another thing. The Police would have to take stronger action. They might then, as had been remarked, be simple thieves. But in the present case, the Police simply said we will protect you from the station to the Mixed Court, and see that you are not attacked in the streets where we are bound to preserve order. A similar case, Loureiro *v.* Stripling, had been decided by the magistrate from that point of view; and the principle had been adhered to in the present case. Whether or not it was proper that a case of the kind should be brought once at least to this Court for His Lordship's decision, he would not argue; and would not press for the costs of this Court, either one way or the other.

His Lordship then delivered judgment as follows:—

Besides reading the evidence adduced before the Magistrate, I had also the advantage of hearing the case in his Court, and I am clearly of opinion that there has been no detention by the Police of the opium, the property of the claimant, which will support the claim made.

I think it will be well, however, for me to explain why I do not think the course pursued was a right one. The Police of this Settlement base their right of interference between persons employed in carrying opium within the port, and the Lekin runners—who appear to be persons in the employment of certain farmers of the taxes—simply on the ground to prevent breaches of the public peace, and to maintain order in the streets of the Settlement. Now, how do they do this? they see ten men set upon two in the public highway, they permit the ten to tie the tails of the two, and they escort the two as criminals, leaving it in the option of any of the ten to accompany the latter to the Police Station. This is a species of non-interference, which I do not understand. The ten commit the assault, for it is an assault in the eyes of the Police, and yet the two upon whom the assault is committed, are the only persons who are treated as wrong-doers. Then, when the parties arrive at the Police Station, no charge is made. They are not charged with smuggling opium, but they are shown to have opium on their persons, upon which the persons who assaulted them are allowed to take possession of the opium, and again the two victims are taken as Criminals through the streets, under the charge of a Police Officer, to the office of the Native Magistrate; and what becomes of them or the opium, I do not know. It certainly has never been in the possession of the Police; and they are not, therefore, liable for its detention; but I think if they knew there was any dispute about the opium, and of course they did know this, they ought to detain it, so that, at any rate in those cases where it turns out, as it mostly will do, that it is the property of the Foreigner, it may be returned to that Foreigner, and not be confiscated for the benefit of those who have no right to it.

As the facts are in this particular case—they look very much like this: a man is walking in the streets with a watch in his pocket, or a servant is taking his master's watch to a watch-maker—half-a-dozen men set upon him and endeavour to take the watch from him—the Police seeing this, interfere, handcuff the possessor of the watch—walk him off to the station, allowing, if they feel so inclined, those who have attempted to deprive him of his property to accompany them, but in no way compelling them. Arrived there, the watch is produced, upon which it is coolly appropriated by the persons who attempted to take it by force. Why or wherefore is not stated, and the pick-pocketing, robbery, or whatever it may be called, is, as it were, conducted respectably, under quasi-official sanction.

I must now consider what offence, if any, the men having possession of the opium are supposed to, or have in fact, committed, because, if they have committed an offence, the Police are right in facilitating their removal to the proper tribunal for trial. And in doing so, I must necessarily enquire if their master has been guilty of any offence, because if he has, they cannot screen themselves by simply saying they acted under his authority.

I am not going to consider this case from a sentimental point of view. Of all the nonsense that is talked, there is none greater than that talked here and in England about the immorality and impiety of the opium trade. It is simply sickening. I have no sympathy with it, neither have I any sympathy with the owner of a gin-palace; but as long as China permits the growth of opium throughout the length and breadth of the land, taxes it, and pockets a large Revenue from it—sympathy with her on the subject is simply ludicrous and misplaced.

Now, it is not pretended that the opium which is seized by these Lekin runners is smuggled. It has in fact paid the Import duty—at least it is not pretended it has not; but it is seized because it is alleged it is liable to other duties. Is it? I have only the Treaty before me, and to it I refer, and by it I can alone judge of this asserted liability. By the 5th Rule, made in pursuance of the Treaty, it is stated: "Opium will henceforth pay 30 Taels per picul import Duty. The importer will *sell* it only at the port. It will be carried into the *interior* by Chinese only, and only as Chinese property; the Foreigner will not be allowed to accompany it."

Now it is clear from this that opium, which has paid the import duty, is free from any other duty whatever within the port, and as if to make this more clear, it is expressly stated that it can only leave this *Port* to go into the *Interior* as Chinese property and unaccompanied by Foreigners—the object being to make it subject in the interior to all the duties, squeezes, &c., &c., which in the interior are levied legally and illegally on produce in transit or in course of consumption. In the port it is free, but the moment it leaves the port, it is taxable to any extent, and the Foreigner has no right to interfere; but to say that it is taxable within the port under the Treaty, is to strike a fatal blow at the root of all commercial treaties, because it is to give another meaning to the infliction of "import duties." If immediately goods are imported, and have paid import duties, they are open to taxation, then the consideration for the payment of the duty vanishes and is lost, for it is quite possible to impose such taxes as will render the article unsaleable, and thus destroy the very object with which the import duty is imposed. In the Port, then, no duty can be charged or tax levied beyond the import duty of 30 Taels per picul. And the opium can be sold and delivered in the Port on these terms, and can be carried about in the Port from seller to purchaser so far free—there is nothing that I can see in the Treaty which renders it liable to further taxation within the Port,

whether it be the property of a Chinaman or a Foreigner. The Import duty has freed the drug within the Port. This is my interpretation of the Treaty. If I am right it is difficult to see what offence the servants of the plaintiff have committed. Nay, it is clear that they have not committed any offence, and if they have committed no offence, they certainly ought not to be treated as if they had.

So far on the Law of the case, as far as I understand it. But if the conduct of the Lekin runners is an infraction of the Treaty, it does not follow that British subjects are to take the enforcement of what they consider the particular meaning of the Treaty into their own hands. That is for their government to do. It is for the subject to complain, for the government to rectify, and, under ordinary circumstances, to indemnify or obtain indemnification; but I cannot and will not approve of, or permit, any attempt to enforce by violence or force any interpretation which an individual may attach to a Treaty right. I think the Police should continue to interfere to prevent any breach of the public peace, and to prevent the Lekin runners from openly attacking persons carrying opium; and when they do take any such steps, they should take all persons engaged in such breach of the peace to the Station, and retain the opium until the true owner presents himself. I conceive they do not lay themselves open to action by so doing. But persons engaged in this trade will do well to remember that, if it is found they are mere nominees—men of straw—neither they nor the real owners of the drug will have any cause to complain if, in lies they tell to get possession of it, if in the false pretences they make—they fail to be satisfy the Police, and fail to get back the opium. They have no business to complain of unfairness if they are themselves unfair: This Court will not assist them. A trade carried on in disguise—clandestinely and in secret, by men who are notoriously not in a position to carry it on, is open to grave suspicion and is sure to come to grief.

Disapproving, therefore, of the course pursued, I shall confirm that part of the judgment of the magistrate in which he dismisses the case, and simply order the case to stand dismissed without costs.

HALL & HOLTZ *v.* WEST.

The following letter, referred to in the Defendant's answer in the above case (reported last week), will form a useful record in connexion with it:—

Shanghai, 10th September, 1874.

JOHN WEST, Esq.,

DEAR SIR,—As your engagement with our Firm will terminate during the latter part of January next, we deem it right to inform you that at the expiration of same we shall no longer need your services. We give you this timely notice in order that you may have ample time to endeavour to procure for yourself another situation in the East, should you so desire.

By the terms of our agreement you are not permitted to accept another situation here without our permission, but we hereby withdraw that restriction, and give you full permission to engage yourself to any already established business here or elsewhere; and we may mention that, should you be able to obtain an engagement at once, and wish to accept same, we shall be happy to cancel your agreement with us forthwith.

With respect to the clause regarding your setting up in business on your own account, we hold you to our original agreement.

In the event of your desiring to proceed to England to seek employment and wishing to leave at once, we will secure your passage and grant you half-pay for the unexpired term of your agreement; should you, however, prefer to remain with us until the time has fully expired, we shall raise no objection to your so doing, providing we have no cause to complain of your conduct, and at the expiration of said term will at once secure your passage for Europe.

(Signed) HALL & HOLTZ.

POLICE COURT.

Shanghai, April 28th.

Before R. A. MOWAT, Esq.

Drunk.

John Cameron, Thomas Humphry, of the *Fleurs Castle*, and John Hall, a resident at the Sailors' Home, were brought up charged with the above offence, but were discharged upon promising not to offend again.

April 29th.

R. *v.* EDWARD WRIGHT.

Drunk and Incapable.

Defendant, an able seaman, who was recently shipped on board the *Sir Lancelot*, from the Sailors' Home, was brought up by the police, charged with the above offence. It was the prisoner's third offence within a very short period, and he appeared to be suffering from the effects of drink.

His WORSHIP, after a suitable admonition, sentenced him to a fortnight's imprisonment.

U. S. CONSULAR COURT.

Shanghai, April 23rd.

Before GEORGE F. SEWARD, Esq., *United States Consul-General.*

SAVAGE *v.* TYREE.

Decision.

The Petition in this matter sets forth that the plaintiff is a British subject resident at Shanghai, and the defendant a citizen of the United States, and at the moment within the jurisdiction of the Court; and that the defendant has failed to deliver 25 tons of L.B. Lead, bought from the defendant's agent, H. J. Limby, through plaintiff's broker, R. H. Gore-Booth.

Attached to the petition is the broker's note, which reads as follows:—

"Shanghai, 6th Nov. 1874.

"H. SAVAGE, Esq.

"SIR,—I have this day bought from A. F. Tyree, Esq. (of Ningpo), L.B. Tons 25, Twenty-five tons L. B. Lead, at Tls. 5.92½ (Five ninety-two and a half Taels) delivery two months' payment cash.

"Your obedient servant,

"R. H. GORE-BOOTH."

Upon this contract the plaintiff claims for One hundred and sixty-five Taels, being the enhanced value of the Lead at the date when the contract fell due.

The defendant alleges that he is not acquainted with the plaintiff nor with Mr. Gore-Booth, that he has not transacted any business with or through these persons, that he has not made a contract with the plaintiff as alleged, or in any other way for the delivery of twenty-five tons of Lead, and that he has not employed Mr. Limby in the capacity stated by the plaintiff, or authorized him to sell any goods for him through any other person.

The plaintiff offers in evidence the statements of Mr. Limby and Mr. Gore-Booth, and, among other documents, hands in an admitted copy of the Broker's note rendered to the defendant, which is as follows:—

"Shanghai, 5th November, 1874.

"A. F. TYREE, Esq.,

"Ningpo.

"DEAR SIR,—We have this day sold on your account to sundry Foreign merchants 200 tons (Two Hundred Tons) large pigs L.B. Lead at Tls. 5.85 per picul—delivery two months. Payment as customary. Commission nil.

"Yours faithfully,

"H. LIMBY & Co.

"Confirmed,

"A. F. TYREE."

In his evidence, Mr. Limby states that the 25 tons of Lead, bought by the plaintiff through Mr. Gore-Booth, was a part of the lot sold, as shown in the above note.

Without entering further upon the evidence adduced, I notice the following points:—

1st.—That the plaintiff claims to have bought through Mr. Gore-Booth as Broker.

2nd.—That the defendant is said to have sold through Messrs. Limby & Co. as Brokers.

The capacity in which Mr. Gore-Booth acted is asserted by the plaintiff himself. The capacity in which Messrs. Limby & Co. acted may be inferred from the contract note, and is perfectly established by the tenor of the correspondence which passed between the defendant and them.

I believe it to be a principle of law that one Broker cannot employ another to do business entrusted to him without authority from his principal. There is no evidence that such authority was given in this case. The act of Mr. Gore-Booth, therefore, cannot bind the defendant.

That his act should not bind the defendant will be more evident when it is noticed that the contract notes do not agree in date, and more particularly in the prices stated. The difference in prices somewhat exceeds the amount which the brokerage at the usual rate of 1 per cent. would have come to, and indicates that the Brokers considered themselves entitled to two commissions, or to so much of two commissions as the transaction would allow. This way of doing business might be regular enough if Messrs. Limby & Co. were acting as the defendant's agents or factors, but all the circumstances should have indicated to them that they were not acting in such capacity. And, looking to the different prices stated, it may well be doubted whether the defendant would have been bound to fulfil the sale had Messrs. Limby & Co. themselves concluded the assumed bargain. I take it that a Broker's *bought* and *sold* notes are valuable only as evidence of a contract, and that if they differ, beyond the amount of the commissions (which should be stated in them), they become valueless.

I think also that a Broker's note should mention the principals, for otherwise it may be difficult to establish between them any privity of contract. I do no know that this is essential, but it would certainly be better.

For the reason stated, I therefore dismiss the petition. The plaintiff will pay the costs of the Court, which amount to $44.52. These do not include the defendant's costs in coming from Ningpo, as I have no evidence upon this head.

Extracts.

THE ATTACK ON COLONEL BROWNE'S PARTY.

(Rangoon Gazette.)

The members of the expedition to Yunnan returned on Friday, and Dr. Anderson left for Europe on Sunday. Colonel Browne remains here for the present. We are now in possession of full details of the attack upon the expedition, which fortunately, owing to the steadiness of the Sikh escort, and the judicious application of a little palm oil to the Kachyens, escaped destruction. After all, it appears, the presents and so forth were not looted, and barring the loss of Colonel Browne's uniform pillaged by the friendly Kachyens in charge of it, and of Dr. Anderson's dress clothes, coupled with the destruction by fire of a few pack-saddles which were burnt to prevent their falling into the hands of the marauders, but little damage was done, and but few souvenirs remain in the hands of the enemy. Mr. Margary, who was received in an extremely friendly manner at Manwyne on his outward journey, had left the party, and ridden on to that place, utterly at a loss to understand the rumours that were abroad as to obstacles ahead. He, it appears, believed no harm was intended, and wrote to have his journal sent on to him. It would seem he had been in Manwyne for some thirty hours when the Saubwah suggested a ride outside to visit some springs, hot springs we believe, a short distance from the town. As he was mounting his pony, he was speared and subsequently beheaded, and his Chinese attendants, five in number, shared his fate—his syce only, we understand, being fortunate enough to make good his escape. Unaware of the catastrophe which had happened, the expedition resumed its march in the morning, following the road to Manwyne. As the members advanced through a sort of hilly ampitheatre surrounded by dense jungle, they became aware, between seven and eight in the morning, of a thin line of Chinamen below them to the right, while in their rear there were signs of others, in a word, a *cordon* was being drawn round them. To their left was a steep hill with an almost vertical descent on the other side. They were not long left in ignorance of their neighbours' intentions—puff after puff of smoke from the surrounding jungle told that the attack had commenced. The Kachyens forthwith stampeded over the hill, playfully drawing their

fingers across their throats as they passed Colonel Browne, by way of conveying their views of the fate that was in store for him. The Sikhs unstrapped their cartridge-boxes. Methodically and coolly they went to work, and taking up a position by some large stones towards the bottom of the hill, prepared to send a bullet in the direction of every puff. Cautioned by Colonel Browne to be careful of of their ammunition, they threw themselves out in skirmishing order, and from 8 in the morning until 4 in the afternoon, firing was kept up. Meantime a Kachyen hailed the party to the effect that he had been offered five hundred rupees by the enemy to come over to his side; but Colonel Browne topped the offer liberally, and at the request of the Kachyens handed them powder wherewith to fire the jungle. This procedure had a most wholesome effect, and cleared the gorge in the rear, thus enabling the expedition to make good its retreat. The Kachyens were marvellously impressed by the prowess of the Sikhs, and being in a state of maudlin drunkenness would insist upon embracing them. While the Burmese who accompanied the expedition, and who were repeatedly shouted to by the Chinamen not to expose themselves to fire, as they were attacking the foreign devils only, were in a state of uproarious excitement, blazing away and aiming at nothing in particular and shouting the equivalent in Burmese to "We are men," which statement they confirmed in a manner highly illustrative of the principle that "seeing is believing." Fortunately, hardly any casualties occurred. One of Dr. Anderson's men was shot through the arm, and a ball grazed the side of another native. We believe the return of the expedition to Bhamo in safety was not welcomed there by any demonstrations of satisfaction—rather the reverse; possibly the Yunnan Merchants and their constituents in Bhamo do not precisely relish the prospect of open competition, and more especially European competition, in a trade which at present is virtually their monopoly.

There is a rumour that the British Resident is to be withdrawn from Bhamo. We hope that is not so. The opening of that route to trade *must* come, and because the machinations of the old anachronism at Mandalay have for the moment retarded it, it would be idle to look upon the project as impracticable. We believe, on the return trip, H. M. of Burmah intimated his wish to receive the mission. We are glad that our proverbial politeness to barbarous potentates did not in this instance influence the Mission to accept his invitation.

THE MURDER OF MR. MARGARY.

Major-General Margary writes to *The Times* as follows:—As the public have not been informed of the whole facts, real or supposed, concerning the disastrous defeat of the British Mission from Burmah through China, may I beg you to be kind enough to publish the following? The first telegram received said:—"The attacking party was the advanced guard of an army of 3,000, sent by order of the Governor of Momein to annihilate British party; of this there is no doubt." "With deep grief Colonel Browne reports that Margary and his servants, five Chinese, have been killed at Manwine, and their heads exposed over wall of town. Chinese commanded by the nephew of Lee See Hie." The last telegram from Colonel Strover, *viâ* Rangoon, dated March 3, states:—"From private information I learn that Margary went ahead of expedition to reconnoitre, when twelve miles from Manwine, in consequence of hostile interruption; he entered to reconnoitre, and was treacherously murdered." Poor fellow! we know not what horrible torture he may have been subjected to when the Chinese got him into the town. My heart bleeds to think of it. Will our present noble Government and the British nation allow this most outrageous insult and defiance of it to pass unavenged? I trow not. If it did our hold on India would be imperilled. As it is, no doubt exaggerated rumours of a large force of English "foreign devils" being easily defeated will spread through China and elsewhere like wildfire, and what may be the effects of it if we do not act promptly? Manwine should be razed to the ground and Momein occupied by us—two feats easy to be accomplished; and then there would be sufficient protection, both moral and physical, for a commercial route through Burmah into China, open to all countries. We went to war with the King of Abyssinia on account of his imprisoning a Vice-Consul. Lord G. Hamilton, in his tame answer to Mr. Cartwright in the House of Commons on Thursday last, called my son a "distinguished engineer who had joined the expedition at Bhamo," thus making him appear a private individual travelling on his own account, whereas he was in Her Majesty's Consular service in China, and was sent to join the Mission to conduct it through China, by order of the British Minister at Peking. He went most willingly, and held Imperial safe conducts.

TONQUIN.

A Chinese letter from Tonquin, dated 12th January, which has been placed in the hands of the *China Mail*, contains some curious news on the state of affairs there. It runs somewhat as follows:—

I promised to keep you informed of what takes in Tonquin, and especially as to what has become of the poor partisans of the Laes (Le) since they were abandoned by the French, above all since they were paid for the services they rendered to the French cause in being fired at. There Laes are real natives of Tonquin, partisans of the old dynasty of that country, and consequently not in favour of the supremacy of the Government at Hué. When Lieutenant Garnier came to Tonquin with his men, the Laes at once joined them, hoping to have their country placed under the French protection against the Annamites. When Garnier was killed and French troops withdrawn, these Laes were abandoned to the hatred of the Annamite mandarins. At first, part of them were killed by the mandarins, but later, the Laes gathered together to offer resistance, informing the French, however, that if *they* would attack them on behalf of the Annamites, they would not even defend themselves. The French answered them that they would remain neuter on the one side as on the other, that the Laes could fight against the Hué Government, which would have nothing to do with them (the French).

On the strength of this promise they united under the flag of the Laes (old Tonquinese dynasty) for the purpose of trying to drive away their Annamite tyrants, and then re-establish their King. They were advancing rapidly, and were already in possession of two provinces, when the French, unable to any longer resist the solicitations of their friends the Annamites, shot down the poor Laes. Since then the French have renewed their attacks frequently and have nearly exterminated these unfortunate partisans of the Lae family, who were the Frenchmen's friends. It was to put a stop to this that Bishop Calomer interfered.

My former letter left the Laes after their last engagement with the French troops, which engagement did them so much harm and obliged them to take refuge in the "Cotba" mountains. A very strange fact has recently occurred, which once more shows the value of some people's word, and especially the value they put on fulfilling their engagements. Monsignor Calomer, the good Bishop, who, as all those that have followed these events in Tonquin know, deplores the fate of these poor Laes, went and proposed to the French Commander to stop, by a conciliatory measure, the extermination of these good people. He promised to obtain their submission, if the Commander would protect them against the hatred of the Annamite mandarins. This submission the Bishop told him would not only lead to peace, of which the country has so long been deprived, but also to show the people that circumstances alone were the cause of the Laes' misfortunes—misfortunes which they rightly attribute to the French, and for which they reproach them. The Bishop asked in return for an engagement (which he considered simply as an act of charity), that the Laes should be respected by the Annamite mandarins, and that they forthwith should be placed under the protection of the French flag. He added even that the best means would be when their submission was given, to send most of them to Saigon.

The French Commander promised the Bishop that he would take all the Laes under his protection to prevent the Mandarins' exactions, and to ask permission at Saigon to send part of them to Lower Cochin-China, if they quietly laid down their arms and made faithfully their submission.

An Annamite priest was sent to make known these ideas of peace, and to advise the Laes to stop the rebellion, which had been so fatal to them. While this was going on, and the French Commander was thus endeavouring to arrange with Monsignor Calomer this honest and honorable measure to put a stop to the sufferings of the unfortunate Laes, the mandarins found means to insinuate to the Commander that this measure was dangerous, and that they had better get rid of the rebels, &c. They succeeded in making the Commander assist them by lending them two gunboats, the *Aspic* and *Espingole*. Notwithstanding the promise made to the Bishop, who had already sent messengers of peace who by that time ought to be amongst the Laes, notwithstanding the promptings of conscience which ought to show men the infamy of this action, the French Commander consented to assist the Annamite Mandarins in their fight with the Laes, at the very moment when the latter received the word of peace from the Missionary's mouth.

Judge, my dear friend, of the deplorable result of the Bishop's negotiations and the lamentable consequence that would necessarily arise from the parleys and conciliations brought about by the priest. The Laes were ready to listen to ~~the promises~~, were even going to move down, and believed, when they saw in the distance the smoke of the gunboats, that these came to take them off to Hai Phang, when the shells and shot from the men-of-war's guns showed them their false position. During this, the Missionaries had of course to bear the burnt of the wrath of the indignant Laes and got back with much difficulty, bringing the answer that the Laes would not submit on any conditions, and that they would rather die than to trust again to the Frenchmen's treacherous promises.

Monsignor Calomer is a Spanish Bishop residing one day's distance from Haiphong, where the French are.

THE YOKOHAMA TRAGEDY.

Japan Gazette.

The intense excitement which pervaded the community during the whole of yesterday, in consequence of the discovery of the embezzlement of a large sum of money by two employés of the French Bank, and their flight with the plunder on board a schooner which they had purchased, culminated when it became known that the vessel had been overtaken by those sent in pursuit of her, and that the drama which had, though for so brief a space, so strongly enchained the minds of the public, had ended in blood. The *Sea Gull*, with the dead body of one of the defaulters, and the almost lifeless form of the other, reached the anchorage at a late hour last night.

Through the courtesy of one who accompanied the *Sea Gull*, we are enabled to give a very full account of all that transpired from the moment of the steamer's leaving Yokohama yesterday afternoon until the hour of our going to press. The *Sea Gull* steamed out of harbour at 2.20 p.m. yesterday, having on board Mr. F. E. White, H.B.M.'s Consular Constable, provided with warrants for the arrest of Swaby, Adds, and Capt. Withers, emanating from the British Bonsulate, and of Cantelli, from the Italian Consulate; six bluejackets of H.M.S. *Thalia*, in charge of Sub-Lieutenant P. C. Riatt, to enforce, if need were, the civil authority; and Capt. Pagden, whose services were called into requisition to identify the *Iris*, with the appearance of which he was perfectly familiar. These, with two engineers and the firemen, were all who proceeded by the vessel, none others being allowed on board. Our informant's story is as follows:

On proceeding on board *Sea Gull* at 1 P.M., found the fires had not been laid, and sufficient steam to enable us to make a start was not generated until 2.15 P.M. Got away with 15-lbs. steam, the little vessel proceeding at a good speed. Rounded Homoco Spit as closely in as possible, the lead going all the time. As soon as we were clear of the Spit, shaped a

course for about a point inside of Kanonsaki Light, so as to make as straight a course as we could, and to keep out of sight as much as possible. On rounding Kanonsaki Point, at 4.15 P.M., the *Iris* was observed standing in towards Kaneda Bay, a little distance below the Plymouth Rocks. Seeing some fishing-boats very close to her, and thinking that the fugitives might attempt to elude us by reaching the shore, which was at no great distance —say ¾ mile—we put on all steam possible, and hugged the land, to try and cut out any boat going ashore. Two men were stationed with glasses, to watch the ship and the boats, and observe if any one left. Our little vessel went on at an increased speed, although there was a swell rolling in from seaward. As we neared the vessel, when within about 20 yards of her, we observed Swaby and Cantelli standing in the cabin hatchway, watching us very intently, the Captain being busy on deck, working the ship, and Adds also watching us through a pair of opera-glasses. On their seeing the Constable and H. M.'s naval uniforms, and the white ensign at the main of the steamer, and thinking, no doubt, that resistance was useless, they disappeared from sight, and the sound of shots was immediately heard to proceed from the cabin of the schooner. When within a few feet of the *Iris*, the constable and the armed guard immediately sprang on board, and orders were immediately given by Mr. White for sail to be take off the schooner, and at the same time he rushed down the companion-ladder, accompanied by one of the seamen, leaving the vessel in command of Captain Pagden. Eight minutes after she was boarded, a breeze came down from the eastward, and had the pursuers been delayed another 30 minutes, there cannot be a doubt that the fugitives would have effected their escape. Capt. Pagden braced-up, and steered for midchannel. On proceeding below, it being then 4.40 p.m., a sad spectacle met their view. Immediately in front of them, lying athwart the cabin, they found Swaby, on his left side, groaning and breathing heavily. He had a pistol, firmly clenched, in his right hand, the fingers still moving, as if trying to fire again. On the opposite side of the saloon, in the foremost cabin, sat Cantelli, with a pistol in his right hand, staring at them, the blood trickling down his face from a wound in his forehead, just above the right eye. The pistols were immediately taken from both, and they were carefully laid out by the seamen. Water was brought, their faces were washed, and efforts were made to restore Cantelli, who did not seem to be so severely wounded as Swaby. The latter expired about 2 minutes afterwards, and was immediately covered up. On the pistols being examined it was found that two chambers of Swaby's pistol had recently been discharged, but only one of Cantelli's. Cantelli was attended by a seaman until he expired. He would sometimes remain quiet for half-an-hour, then breathe heavily and gurgle in a most awful manner. While the two men were being attended to below, Adds, and the Captain, Withers, were placed at the stern of the vessel, in charge of an armed sentry. Sail having been taken off a hawser was got out, and she was taken in tow by the *Sea Gull* and proceeded with all speed back to Yokohama. Kanonsaki was passed at about 6.15, when, the wind favouring a little on the starboard bow, all fore-and-aft sail was made on the schooner. Arrived off the light-ship at 9.30 p.m, and anchored close to the *Thalia* at 10.15 p.m. The *Sea Gull* was immediately dispatched to the *Thalia* for the doctor, who, on arrival, pronounced Cantelli as certain to die before midnight, and would not, therefore, advise his removal; this opinion proved to be correct—he expired at 11.40 p.m. Numbers of boats came alongside the schooner, but no one but those immediately interested were allowed on board. Early this morning, the undertaker, Mr. P. Bohm, arrived with two shell coffins, and took the bodies on shore. The Constable and Sub-Lieutenant, with the guard, remained on board of the schooner all night, and left this morning after the vessel had been searched. At 2 a.m. Mr. G. Hodges, Consular-Constable, and Sergeant Percival, of the Municipal Police, proceeded on board, and removed Adds and Withers to the Consular Gaol, This forenoon, the Constable, Mr. White, with the assistance of Mr. F. W. Marks, made a formal search of the *Iris*. She had been fitted out without regard to expense, and evidently for a long voyage. Although she had only cleared for Manila, she had on board five sheep, two pigs, a quantity of fresh beef, and about two hundred fowls. In the cabin, everything had been fitted up with an eye to comfort; the furniture was of the best, and, on the poop, there were a couple of rattan lounges. She was also tolerably well armed. On the cabin table were several revolvers, loaded, and ready for use, and a lot of knives and Japanese short swords. The guns spoken of in our last night's issue—of which there were two on deck, lashed, and two below—were evidently intended for signalling only. The trunks, carpet-bags, snd other luggage of Swaby and Cantelli were examined, and in various places money was found to the amount of 31,337 *yen*, in 10, 5, and 2 *yen* gold pieces, besides £48 in English sovereigns. Several 5 and 2 *yen* gold pieces were also found on the bodies this morning. The whole of the money was taken charge of by Mr. White, who took it ashore and deposited it in the hands of H.B.M.'s Consul. Adds and Withers will, no doubt, shortly be tried on the charge of aiding and abetting the escape of Swaby and Cantelli. Whether they are guilty or innocent remains to be proved. Adds certainly seemed to treat the affair with perfect coolness, and when the vessel was boarded was smoking a cigar, with an air of *nonchalance*; but when actually placed under arrest he turned pale, and seemed considerably disconcerted. He maintained that the vessel was his, and asserted that she could not be taken from him.

The Captain, on the contrary, emphatically disclaimed any knowledge of the intentions of his passangers in undertaking the voyage, and seemed thunder-struck when informed by the Consular Constable of the object of his mission.

This afternoon, at 2 o'clock, an inquest was held at the British Consulate on the body of Swaby.

An enquiry was held this afternoon, by the Italian Consul, Sig. P. Castelli, at No. 1114, into the circumstances attending the death of V. Cantelli.

Clippings.

The *China Mail* believes the English and French Governments at home are negociating as to the possibility of acting in concert regarding the opening up of Tonquin on the one hand and Burmah on the other, so as to permit of free ingress to the borders of Western China.

We learn that a gratuity of one hundred taels was allowed to each of the families of those mandarins who were drowned in the *Fusing*, by the C. M. S. S. Company; and in addition to that, a gratuity from the Government is expected, a memorial having been sent to Peking on the subject.—*China Mail.*

In reference to the report we recently mentioned, that the Chinese Government intends to send some boys to England to learn the science of navigation, we now learn that it was not quite correct in detail. They are not to be sent there to go through a course of study in a naval school, but they are to be taken round the world in one of the Chinese men-of-war in order to learn practical navigation under the instruction of Capt. Tracey, R.N. The ship selected for the purpose is the *Yang Woo*, and she is now fitting up for the purpose, but she will not be able to start till the middle of autumn. She will first visit Japan.—*China Mail.*

Later advices tend to confirm our most unfavourable suspicions with regard to the foul treachery and brutality of the Chinese officials concerned in the murder of Mr. Margary. There can be no doubt as to the culpability of the Yunnan Authorities, and we are glad to observe that the entire foreign press unite in condemning the atrocity. It is rumoured in the North that the Chinese Government has expressed its willingness to indemnify the family of the deceased gentleman; but we hope that no satisfaction short of the execution of capital punishment on the ruffianly instigators of the crime will be accepted. The honour of the British flag is at stake, and we trust that it will be fully vindicated by determined and resolute action on the part of H. B. M.'s Minister.—*Foochow Herald.*

At the present moment, China stands answerable for a terrible, unprovoked, and aggravated crime. The way in which she will deal with it will depend upon the attitude and demand of the nation which, through one of its murdered citizens, has been outraged and insulted. It will be well that, as is likely, the circumstances should be investigated by English officials; but it is hardly probable there will a dispute about the facts. Any plea of irresponsibility should be summarily and indignantly dismissed. What England dictates China will no doubt do; and, as has been said, England's policy must be firm and unswerving. First and above all else, England must insist upon the severest punishment of those who instigated and carried out the dastardly crime. Official position of any participant, instead of being accepted in mitigation of punishment, must be pointed out as a reason for the infliction of punishment in its fullest and severest form.—*Hongkong Times.*

Apropos of Mr. Margary's murder, the *Pioneer* has the following. The last sentence is significant:—Our telegraphic announcement —to the effect that the expedition was attacked at a place about half-way between Bhamo and Talifoo; that Colonel Browne has retreated within Burmese territory, and that Mr. Margary has been killed—is as surprising as it is painful. The mistake may have been involved in some over-confident reliance on the credentials of the Pekin Government. In outlying provinces of the Chinese Empire, the authority of the Central Government is very loosely exercised. It is premature at present, however, while the *contretemps* is so imperfectly realised, and the expedition is on its way back, to speculate on the measures which the Government may have to undertake. But our policy in China for years has been tending to lower the British name in Chinese estimation, and sooner or later it will be necessary to give up all intercourse with the country or take steps to restore our political credit with the mandarins.

It is sadly to be feared that the feeble policy of the Government of Great Britain during the past ten years is in some degree responsible for the commission of this (Mr. Margary's) murder. Our Government has relaxed its hold on China, has suffered the treaties wrung from Chinese statesmen at infinite cost and trouble to become practically dead letters, and has lost much of the influence and prestige which formerly attached to the British flag in the East. The inactivity which has characterised English policy in China of late years has certainly not proved masterly. It has been productive of great mischief to our interests here, and has earned for us nothing but the contempt of other European nations, and the insolence of the Celestial. No longer are English officials treated with the marked courtesy once extended towards them in China. They are now put off with lame excuses, treated sometimes with scant ceremony, and, generally speaking, are not paid the deference which in former years they commanded. The reason is obvious. We have fallen in the estimation of the Chinaman; familiarity has bred contempt. The British lion has gone to sleep and they have found him wonderfully tame and harmless. It is advisable, nay imperative, that he should shake himself together and once more show that he still retains his pristine vigour, is prompt and willing to avenge the slightest affront offered to him, and is eager and able to protect his interests, wherever and whenever threatened.—*Daily Press.*

THE MURDER OF MR. MARGARY.

Major-General Margary writes to *The Times* as follows:—As the public have not been informed of the whole facts, real or supposed, concerning the disastrous defeat of the British Mission from Burmah through China, may I beg you to be kind enough to publish the following? The first telegram received said:—"The attacking party was the advanced guard of an army of 3,000, sent by order of the Governor of Momein to annihilate British party; of this there is no doubt." "With deep grief Colonel Browne reports that Margary and his servants, five Chinese, have been killed at Manwine, and their heads exposed over wall of town. Chinese commanded by the nephew of Lee See Hie." The last telegram from Colonel Strover, *viâ* Rangoon, dated March 3, states:—"From private information I learn that Margary went ahead of expedition to reconnoitre, when twelve miles from Manwine, in consequence of hostile interruption; he entered to reconnoitre, and was treacherously murdered." Poor fellow! we know not what horrible torture he may have been subjected to when the Chinese got him into the town. My heart bleeds to think of it. Will our present noble Government and the British nation allow this most outrageous insult and defiance of it to pass unavenged? I trow not. If it did our hold on India would be imperilled. As it is, no doubt exaggerated rumours of a large force of English "foreign devils" being easily defeated will spread through China and elsewhere like wildfire, and what may be the effects of it if we do not act promptly? Manwine should be razed to the ground and Momein occupied by us—two feats easy to be accomplished; and then there would be sufficient protection, both moral and physical, for a commercial route through Burmah into China, open to all countries. We went to war with the King of Abyssinia on account of his imprisoning a Vice-Consul. Lord G. Hamilton, in his tame answer to Mr. Cartwright in the House of Commons on Thursday last, called my son a "distinguished engineer who had joined the expedition at Bhamo," thus making him appear a private individual travelling on his own account, whereas he was in Her Majesty's Consular service in China, and was sent to join the Mission to conduct it through China, by order of the British Minister at Peking. He went most willingly, and held Imperial safe conducts.

TONQUIN.

A Chinese letter from Tonquin, dated 12th January, which has been placed in the hands of the *China Mail*, contains some curious news on the state of affairs there. It runs somewhat as follows:—

I promised to keep you informed of what takes in Tonquin, and especially as to what has become of the poor partisans of the Laes (Le) since they were abandoned by the French, above all since they were paid for the services they rendered to the French cause in being fired at. There Laes are real natives of Tonquin, partisans of the old dynasty of that country, and consequently not in favour of the supremacy of the Government at Hué. When Lieutenant Garnier came to Tonquin with his men, the Laes at once joined them, hoping to have their country placed under the French protection against the Annamites. When Garnier was killed and French troops withdrawn, these Laes were abandoned to the hatred of the Annamite mandarins. At first, part of them were killed by the mandarins, but later, the Laes gathered together to offer resistance, informing the French, however, that if *they* would attack them on behalf of the Annamites, they would not even defend themselves. The French answered them that they would remain neuter on the one side as on the other, that the Laes could fight against the Hué Government, which would have nothing to do with them (the French).

On the strength of this promise they united under the flag of the Laes (old Tonquinese dynasty) for the purpose of trying to drive away their Annamite tyrants, and then re-establish their King. They were advancing rapidly, and were already in possession of two provinces, when the French, unable to any longer resist the solicitations of their friends the Annamites, shot down the poor Laes. Since then the French have renewed their attacks frequently and have nearly exterminated these unfortunate partisans of the Lae family, who were the Frenchmen's friends. It was to put a stop to this that Bishop Calomer interfered.

My former letter left the Laes after their last engagement with the French troops, which engagement did them so much harm and obliged them to take refuge in the "Cotba" mountains. A very strange fact has recently occurred, which once more shows the value of some people's word, and especially the value they put on fulfilling their engagements. Monsignor Calomer, the good Bishop, who, as all those that have followed these events in Tonquin know, deplores the fate of these poor Laes, went and proposed to the French Commander to stop, by a conciliatory measure, the extermination of these good people. He promised to obtain their submission, if the Commander would protect them against the hatred of the Annamite mandarins. This submission the Bishop told him would not only lead to peace, of which the country has so long been deprived, but also to show the people that circumstances alone were the cause of the Laes' misfortunes—misfortunes which they rightly attribute to the French, and for which they reproach them. The Bishop asked in return for an engagement (which he considered simply as an act of charity), that the Laes should be respected by the Annamite mandarins, and that they forthwith should be placed under the protection of the French flag. He added even that the best means would be when their submission was given, to send most of them to Saigon.

The French Commander promised the Bishop that he would take all the Laes under his protection to prevent the Mandarins' exactions, and to ask permission at Saigon to send part of them to Lower Cochin-China, if they quietly laid down their arms and made faithfully their submission.

An Annamite priest was sent to make known these ideas of peace, and to advise the Laes to stop the rebellion, which had been so fatal to them. While this was going on, and the French Commander was thus endeavouring to arrange with Monsignor Calomer this honest and honorable measure to put a stop to the sufferings of the unfortunate Laes, the mandarins found means to insinuate to the Commander that this measure was dangerous, and that they had better get rid of the rebels, &c. They succeeded in making the Commander assist them by lending them two gunboats, the *Aspic* and *Espingole*. Notwithstanding the promise made to the Bishop, who had already sent messengers of peace who by that time ought to be amongst the Laes, notwithstanding the promptings of conscience which ought to show men the infamy of this action, the French Commander consented to assist the Annamite Mandarins in their fight with the Laes, at the very moment when the latter received the word of peace from the Missionary's mouth.

Judge, my dear friend, of the deplorable result of the Bishop's negotiations and the lamentable consequence that would necessarily arise from the parleys and conciliations brought about by the priest. The Laes were ready to listen to ~~the promises~~, were even going to move down, and believed, when they saw in the distance the smoke of the gunboats, that these came to take them off to Hai Phang, when the shells and shot from the men-of-war's guns showed them their false position. During this, the Missionaries had of course to bear the burnt of the wrath of the indignant Laes and got back with much difficulty, bringing the answer that the Laes would not submit on any conditions, and that they would rather die than to trust again to the Frenchmen's treacherous promises.

Monsignor Calomer is a Spanish Bishop residing one day's distance from Haiphong, where the French are.

THE YOKOHAMA TRAGEDY.

Japan Gazette.

The intense excitement which pervaded the community during the whole of yesterday, in consequence of the discovery of the embezzlement of a large sum of money by two employés of the French Bank, and their flight with the plunder on board a schooner which they had purchased, culminated when it became known that the vessel had been overtaken by those sent in pursuit of her, and that the drama which had, though for so brief a space, so strongly enchained the minds of the public, had ended in blood. The *Sea Gull*, with the dead body of one of the defaulters, and the almost lifeless form of the other, reached the anchorage at a late hour last night.

Through the courtesy of one who accompanied the *Sea Gull*, we are enabled to give a very full account of all that transpired from the moment of the steamer's leaving Yokohama yesterday afternoon until the hour of our going to press. The *Sea Gull* steamed out of harbour at 2.20 p.m. yesterday, having on board Mr. F. E. White, H.B.M.'s Consular Constable, provided with warrants for the arrest of Swaby, Adds, and Capt. Withers, emanating from the British Bonsulate, and of Cantelli, from the Italian Consulate; six bluejackets of H.M.S. *Thalia*, in charge of Sub-Lieutenant P. C. Riatt, to enforce, if need were, the civil authority; and Capt. Pagden, whose services were called into requisition to identify the *Iris*, with the appearance of which he was perfectly familiar. These, with two engineers and the firemen, were all who proceeded by the vessel, none others being allowed on board. Our informant's story is as follows:

On proceeding on board *Sea Gull* at 1 P.M., found the fires had not been laid, and sufficient steam to enable us to make a start was not generated until 2.15 P.M. Got away with 15-lbs. steam, the little vessel proceeding at a good speed. Rounded Homoco Spit as closely in as possible, the lead going all the time. As soon as we were clear of the Spit, shaped a

course for about a point inside of Kanonsaki Light, so as to make as straight a course as we could, and to keep out of sight as much as possible. On rounding Kanonsaki Point, at 4.15 P.M., the *Iris* was observed standing in towards Kaneda Bay, a little distance below the Plymouth Rocks. Seeing some fishing-boats very close to her, and thinking that the fugitives might attempt to elude us by reaching the shore, which was at no great distance —say ¾ mile—we put on all steam possible, and hugged the land, to try and cut out any boat going ashore. Two men were stationed with glasses, to watch the ship and the boats, and observe if any one left. Our little vessel went on at an increased speed, although there was a swell rolling in from seaward. As we neared the vessel, when within about 20 yards of her, we observed Swaby and Cantelli standing in the cabin hatchway, watching us very intently, the Captain being busy on deck, working the ship, and Adds also watching us through a pair of opera-glasses. On their seeing the Constable and H. M.'s naval uniforms, and the white ensign at the main of the steamer, and thinking, no doubt, that resistance was useless, they disappeared from sight, and the sound of shots was immediately heard to proceed from the cabin of the schooner. When within a few feet of the *Iris*, the constable and the armed guard immediately sprang on board, and orders were immediately given by Mr. White for sail to be take off the schooner, and at the same time he rushed down the companion-ladder, accompanied by one of the seamen, leaving the vessel in command of Captain Pagden. Eight minutes after she was boarded, a breeze came down from the eastward, and had the pursuers been delayed another 30 minutes, there cannot be a doubt that the fugitives would have effected their escape. Capt. Pagden braced-up, and steered for midchannel. On proceeding below, it being then 4.40 p.m., a sad spectacle met their view. Immediately in front of them, lying athwart the cabin, they found Swaby, on his left side, groaning and breathing heavily. He had a pistol, firmly clenched, in his right hand, the fingers still moving, as if trying to fire again. On the opposite side of the saloon, in the foremost cabin, sat Cantelli, with a pistol in his right hand, staring at them, the blood trickling down his face from a wound in his forehead, just above the right eye. The pistols were immediately taken from both, and they were carefully laid out by the seamen. Water was brought, their faces were washed, and efforts were made to restore Cantelli, who did not seem to be so severely wounded as Swaby. The latter expired about 2 minutes afterwards, and was immediately covered up. On the pistols being examined it was found that two chambers of Swaby's pistol had recently been discharged, but only one of Cantelli's. Cantelli was attended by a seaman until he expired. He would sometimes remain quiet for half-an-hour, then breathe heavily and gurgle in a most awful manner. While the two men were being attended to below, Adds, and the Captain, Withers, were placed at the stern of the vessel, in charge of an armed sentry. Sail having been taken off a hawser was got out, and she was taken in tow by the *Sea Gull* and proceeded with all speed back to Yokohama. Kanonsaki was passed at about 6.15, when, the wind favouring a little on the starboard bow, all fore-and-aft sail was made on the schooner. Arrived off the light-ship at 9.30 p.m, and anchored close to the *Thalia* at 10.15 p.m. The *Sea Gull* was immediately dispatched to the *Thalia* for the doctor, who, on arrival, pronounced Cantelli as certain to die before midnight, and would not, therefore, advise his removal; this opinion proved to be correct—he expired at 11.40 p.m. Numbers of boats came alongside the schooner, but no one but those immediately interested were allowed on board. Early this morning, the undertaker, Mr. P. Bohm, arrived with two shell coffins, and took the bodies on shore. The Constable and Sub-Lieutenant, with the guard, remained on board of the schooner all night, and left this morning after the vessel had been searched. At 2 a.m. Mr. G. Hodges, Consular-Constable, and Sergeant Percival, of the Municipal Police, proceeded on board, and removed Adds and Withers to the Consular Gaol, This forenoon, the Constable, Mr. White, with the assistance of Mr. F. W. Marks, made a formal search of the *Iris*. She had been fitted out without regard to expense, and evidently for a long voyage. Although she had only cleared for Manila, she had on board five sheep, two pigs, a quantity of fresh beef, and about two hundred fowls. In the cabin, everything had been fitted up with an eye to comfort; the furniture was of the best, and, on the poop, there were a couple of rattan lounges. She was also tolerably well armed. On the cabin table were several revolvers, loaded, and ready for use, and a lot of knives and Japanese short swords. The guns spoken of in our last night's issue—of which there were two on deck, lashed, and two below—were evidently intended for signalling only. The trunks, carpet-bags, snd other luggage of Swaby and Cantelli were examined, and in various places money was found to the amount of 31,337 *yen*, in 10, 5, and 2 *yen* gold pieces, besides £48 in English sovereigns. Several 5 and 2 *yen* gold pieces were also found on the bodies this morning. The whole of the money was taken charge of by Mr. White, who took it ashore and deposited it in the hands of H.B.M.'s Consul. Adds and Withers will, no doubt, shortly be tried on the charge of aiding and abetting the escape of Swaby and Cantelli. Whether they are guilty or innocent remains to be proved. Adds certainly seemed to treat the affair with perfect coolness, and when the vessel was boarded was smoking a cigar, with an air of *nonchalance;* but when actually placed under arrest he turned pale, and seemed considerably disconcerted. He maintained that the vessel was his, and asserted that she could not be taken from him.

The Captain, on the contrary, emphatically disclaimed any knowledge of the intentions of his passangers in undertaking the voyage, and seemed thunder-struck when informed by the Consular Constable of the object of his mission.

This afternoon, at 2 o'clock, an inquest was held at the British Consulate on the body of Swaby.

An enquiry was held this afternoon, by the Italian Consul, Sig. P. Castelli, at No. 1114, into the circumstances attending the death of V. Cantelli.

Clippings.

The *China Mail* believes the English and French Governments at home are negociating as to the possibility of acting in concert regarding the opening up of Tonquin on the one hand and Burmah on the other, so as to permit of free ingress to the borders of Western China.

We learn that a gratuity of one hundred taels was allowed to each of the families of those mandarins who were drowned in the *Fusing*, by the C. M. S. S. Company; and in addition to that, a gratuity from the Government is expected, a memorial having been sent to Peking on the subject.—*China Mail.*

In reference to the report we recently mentioned, that the Chinese Government intends to send some boys to England to learn the science of navigation, we now learn that it was not quite correct in detail. They are not to be sent there to go through a course of study in a naval school, but they are to be taken round the world in one of the Chinese men-of-war in order to learn practical navigation under the instruction of Capt. Tracey, R.N. The ship selected for the purpose is the *Yang Woo*, and she is now fitting up for the purpose, but she will not be able to start till the middle of autumn. She will first visit Japan.—*China Mail.*

Later advices tend to confirm our most unfavourable suspicions with regard to the foul treachery and brutality of the Chinese officials concerned in the murder of Mr. Margary. There can be no doubt as to the culpability of the Yunnan Authorities, and we are glad to observe that the entire foreign press unite in condemning the atrocity. It is rumoured in the North that the Chinese Government has expressed its willingness to indemnify the family of the deceased gentleman; but we hope that no satisfaction short of the execution of capital punishment on the ruffianly instigators of the crime will be accepted. The honour of the British flag is at stake, and we trust that it will be fully vindicated by determined and resolute action on the part of H. B. M.'s Minister.—*Foochow Herald.*

At the present moment, China stands answerable for a terrible, unprovoked, and aggravated crime. The way in which she will deal with it will depend upon the attitude and demand of the nation which, through one of its murdered citizens, has been outraged and insulted. It will be well that, as is likely, the circumstances should be investigated by English officials; but it is hardly probable there will a dispute about the facts. Any plea of irresponsibility should be summarily and indignantly dismissed. What England dictates China will no doubt do; and, as has been said, England's policy must be firm and unswerving. First and above all else, England must insist upon the severest punishment of those who instigated and carried out the dastardly crime. Official position of any participant, instead of being accepted in mitigation of punishment, must be pointed out as a reason for the infliction of punishment in its fullest and severest form.—*Hongkong Times.*

Apropos of Mr. Margary's murder, the *Pioneer* has the following. The last sentence is significant:—Our telegraphic announcement —to the effect that the expedition was attacked at a place about half-way between Bhamo and Talifoo; that Colonel Browne has retreated within Burmese territory, and that Mr. Margary has been killed—is as surprising as it is painful. The mistake may have been involved in some over-confident reliance on the credentials of the Pekin Government. In outlying provinces of the Chinese Empire, the authority of the Central Government is very loosely exercised. It is premature at present, however, while the *contretemps* is so imperfectly realised, and the expedition is on its way back, to speculate on the measures which the Government may have to undertake. But our policy in China for years has been tending to lower the British name in Chinese estimation, and sooner or later it will be necessary to give up all intercourse with the country or take steps to restore our political credit with the mandarins.

It is sadly to be feared that the feeble policy of the Government of Great Britain during the past ten years is in some degree responsible for the commission of this (Mr. Margary's) murder. Our Government has relaxed its hold on China, has suffered the treaties wrung from Chinese statesmen at infinite cost and trouble to become practically dead letters, and has lost much of the influence and prestige which formerly attached to the British flag in the East. The inactivity which has characterised English policy in China of late years has certainly not proved masterly. It has been productive of great mischief to our interests here, and has earned for us nothing but the contempt of other European nations, and the insolence of the Celestial. No longer are English officials treated with the marked courtesy once extended towards them in China. They are now put off with lame excuses, treated sometimes with scant ceremony, and, generally speaking, are not paid the deference which in former years they commanded. The reason is obvious. We have fallen in the estimation of the Chinaman; familiarity has bred contempt. The British lion has gone to sleep and they have found him wonderfully tame and harmless. It is advisable, nay imperative, that he should shake himself together and once more show that he still retains his pristine vigour, is prompt and willing to avenge the slightest affront offered to him, and is eager and able to protect his interests, wherever and whenever threatened.—*Daily Press.*

COMMERCIAL INTELLIGENCE.

SHANGHAI, APRIL 30TH, 1875.

ARRIVALS.—From Liverpool—*Nestor;* from London—the *Cawdor Castle* and *Ægean;* and from Marseilles, the M. M. steamer *Sindh*, with the London mails of 12th ultimo.

TELEGRAMS.—London, 27th April.—*Cotton*, 8⅛d.; *Shirtings*, 8¼-lb. *Eagle*, 10s.; markets quiet; *Iron*, £9; and *Lead*, £22 10s.

PIECE GOODS.—A fresh run after *Heavy Shirtings*, the continuance of the excitement in *T-Cloths*, an increasing enquiry for 14-lbs. *Drills*, and greater activity in the WOOLLEN market, are the principal features noticeable in the business for the week closing last night.

Grey Shirtings—6, 7, & 8¼-lbs. Common have been wanted throughout, but buyers have been unable to pay the rates demanded, and, consequently, the settlements have not been so heavy as they otherwise would have been. The stocks of low counts are light, and it must be that prices in the country too closely approximate to the offers of last mail, and to which the dealers have most firmly adhered, that so little has been done here in the interval. At the close, 8¼-lbs. more particularly exhibit rather a weakening tendency, C.P.H. *Peacock*, at the Auction yesterday, realizing only Tls. 1.64⅜ *a* 1.64½ per piece. And further, the news from Tientsin by yesterday's steamer is considered less favorable by the Northern men, who say they must wait for further advices before doing any more in Shirtings. Little lots of good medium to best 8¼-lbs. have occasionally been booked on the basis of last quotations, but enquiry has been extremely lifeless, and although holders, till now, have remained firm, it is becoming more evident that demand must improve, if the position is to be maintained. On the other hand, heavy goods are in great favour again, and no small excitement has prevailed during the past few days. Higher rates have been paid for all classes, and the settlements—nearly all to arrive—are very considerable. Some of the prompts extend to six weeks from date, and buyers seem willing to operate freely in goods per steamer on the way from home, however recent her time of sailing. Business in *Grey Shirtings* since 23rd instant is summarised as follows :—6-lbs.,—13,500 pieces at Tls. 1.34 *a* 1.37 per piece ; 7-lbs.—10,000 pieces at Tls. 1.44 *a* 1.50 per piece ; 8¼-lbs.—35,000 pieces at Tls. 1.65 *a* 1.66 for common, Tls. 1.67 *a* 1.70 for good Common, Tls. 1.72 *a* 1.76 for ordinary medium, and Tls. 1.99 for a few of Dewhurst's *Eagle ;* and 9¾ *a* 10-lbs.—13,000 pieces at Tls. 2.68 *a* 2.80 per piece.

White Shirtings.—Finest Reeds have been steady, and at the close the rates are decidedly against buyers. A high count has been placed to arrive at Tls. 3.25 per piece, and a favorite 72 Reed—godown cargo—has been done at Tls. 2.75 per piece. The lowest counts continue somewhat difficult to move, and the sales of 64 *a* 66s are insignificant. Business estimated at 7,450 pieces.

T-Cloths.—Enquiry for these has not changed in character, nor has it in any way slackened, and the commoner makes of 6, 7 and 8-lbs. are still wanted. 14 × 16 cloths have not altered in value, notwithstanding the demand, simply because sellers are afraid to let an offer pass them, and are only too glad to secure a profit—however small—while it is within their reach. Of Common 7-lbs. there cannot have been less than 35,000 pieces sold to arrive since Tuesday last, prices ranging from Tls. 1.30 *a* 1.36 per piece. The cargo is nearly all in *Hongkong*, and will be here within ten days hence ; and of Ordinary Mexicans at Tls. 1.42 *a* 1.46, the sales aggregate nearly 14,000 pieces, and would have been larger had the supplies been forthcoming. Of 6-lbs. there have been fully 7,000 pieces disposed of at last quotations, and close upon 25,000 pieces of 8-lbs. have changed hands at Tls. 1.65 *a* 1.85 per piece, the highest figure being for Dewhurst's M.T. *Tunsin* chop. Best Mexicans have received but little notice.

Drills.—14-lbs. English. This Cloth has been in constant request, and its increasing scarcity is now making itself felt. There is little in first hands to be met with under Tls. 2.40 per piece, and some holders are reluctant sellers at that figure. Still the dealers as a rule refuse to rise to that level ; nor are they likely to do so while speculators continue to supply the market at 3 *a* 4 candareens per piece under it. Moreover they will hardly look at Ordinary 15-lbs. at about Tls. 2.42 *a* 2.43 per piece at which such are on offer. All stocks are firmly held, however, and importers seem very confident that ere long they will gain the day. *Dutch Drills* are enquired for at the close.

Jeans.—Scarcely any progress to report, and quotations nominal.

Sheetings.—The absence of supplies has prevented business, there having been frequent enquiries, and at slightly higher rates.

Fancy Cottons.—22-in. *Velvets*, and 18-in. *Velveteens* have met with a little more attention, which has resulted in settlements to extent of 500 pieces of the former at Tls. 0.18 *a* 0.18½ per yard, and 210 pieces of the latter at Tls. 0.13½ per yard. Assorted *Chintzes*, and *Gentian Shirtings*, have likewise been in better request, and a few *Turkey Reds*, *Irishes*, printed *Twills*, printed *T-Cloths* and blue *Handkerchiefs* have, this week, changed ownership. Buyers have been paying Tls. 1.25 *a* 1.35 for *Chintzes ;* Tls. 1.75 for 2½-lb. *Turkey Reds* of fair chops ; Tls. 2.30 for printed T-Cloths ; Tls. 4.65 for printed *Cashmeres*, 52 yards ; and Tls. 0.52 *a* 0.54 per dozen for Handkerchiefs.

Woollens.—There has been a slight increase in the business in Woollens since last mail day, but, excepting for special chops of *Camlets*, former market values have been barely maintained. *Long Ells*, C.P.H. and U.U. *Scarlets* have sold at Tls. 7.05 and 7.00 respectively, and a small *assortment* of the latter has been placed at Tls 6.80 per piece. Total sales—2,500 pieces. In *Camlets*, transactions amount to about 1,200 pieces at Tls. 12.25 *a* 12.50 per piece for *black ;* Tls. 13.25 *a* 13.50 per piece for *gentian ;* Tls. 13.50 per piece for *scarlet*; and Tls. 13.20 *a* 13.35 per piece for *assortment*. *Lastings.*—The commoner chops of these have been saleable in little lots on the basis of last week's currencies, and there have been enquiries for No. 2 *Crape Lastings*, but offers are 5c. *a* 1 mace per piece lower than those last advised. *Figured Orleans*, no change in tone or character.—Sellers cannot make progress unless they offer inducement ; but in this way fair quantities continue to go into consumption. The sales for the week are set down at 7,000 pieces at rates ranging from Tls. 2.90 *a* 3.35 per piece. *Plain Lustres.*—A small lot of 500 pieces *Cock* chop, assorted, at Tls. 3.35 is the only transaction reported. *Spanish Stripes* and *Cloths.*—The Auction sales of the former have almost supplied all wants. In the general market there has been scarcely any movement, and fine *Broad-Cloth* has been offered at a decline without attracting a buyer.

OUTPORTS.—Foreign and Native advices from all the Outports for once are unanimous in their reports on markets. Business was very dull everywhere at latest dates.

HANKOW, 26th April.—"Demand for Plain Cottons has fallen off considerably, and sales compare unfavorably with those of the "previous fortnight. Woollens and Worsteds are saleable in small quantities only. *Cotton.*—Stocks are large and quotations heavy at "Tls. 10.50 per piece for best Shanghai Staple. Lead, L.B., difficult of sale at a fall of 2 mace per picul."

CHINKEANG.—Trade enquiry very slack, and prices easier all round.

TIENTSIN.—Lower prices for 8¼-lbs. *Grey Shirtings.* A small business doing in *White Shirtings*, 14-lbs. *Drills*, and Common to Ordinary Mexican *T-Cloths* wanted.

JAPAN—*Hiogo.*—No response as yet—20th April—to the improved state of matters in Shanghai. To *Yokohama*, a similar remark is applicable, and at *Nagasaki*, the trade was confined to some trifling sales of 6 & 8¼-lbs. *Grey Shirtings*, and to cheap *Figured Orleans*, and *Plain Lustres.* *Velvets* were declining in value and becoming more difficult to move at all the ports.

METALS.—*Nailrod Iron.*—Only one small sale of 2,400 bundles com. Belgian at Tls. 2.25 is recorded this week, but rates for all brands, in sympathy with a decline at Home, have a weak tendency. *Lead.*—A few hundred pigs of L.B. have been placed this week at Tls. 6.05 per piece, free of brokerage, but latterly the article has been offering at that figure and buyers are holding off. *Tin.*—Rates are again easier, sales of *Fong Hing* having taken place at Tls. 19.50 *a* 19.60 per picul. *Copper.*—No change. Transhipment to Hongkong continues. *Quicksilver.*—Quiet at quotations.

QUOTATIONS—Duty Paid.

SILK.—The latest public telegrams from London are dated the 27th ultimo, and report of the silk market—"No change, demand slight," and quote Dragon chop Nos. 2, 3 & 3½ Tsatlee at 17s., and 9/12 Moss Taysaam at 12s. per lb. ; deliveries of China 3,000 bales to date.

Since previous date the total settlements for the season have been increased to 71,450 bales, against 57,000 at same date last year. Amongst the purchases were about 150 bales of chop silk, but the larger portion of the business transacted has been in inferior and common re-reels, at Tls. 285 *a* 325 per picul—Tls. 335 *a* 395 per picul for the better grades,—and market Tsatlees costing from Tls. 260 @ Tls. 295 per picul. Arrivals having been very small, the unsold stock is reduced to 300 bales.

The season may now be considered virtually ended, and with the limited stocks left unsold it is impossible to give the usual list of quotations.

Statement of Imports and Deliveries of Cotton and Woollen Piece Goods, and Metals, from 22nd to 28th April, 1875, compiled from the "Customs Daily Returns," Nos. 89 @ 94, both numbers inclusive.

* Exclusive of import cargoes ex *Pera, Conquest, Candor Castle, Gordon Castle, Fi-yen, Glenfalloch, Olympia, Nestor, Sindh, Ægean, Messenger,* several Coasters, and of sundry re-exports.

* * For 189,635 in Report No. 166 read 139,635.

* * * Local Deliveries declared from time to time, but as there were no imports since 1st January last until the arrival of the M. M. str. *Meikong*—the deliveries were omitted in the weekly statement. *White Spots* also are in rather an anomalous position, and I am inclined to think that in the Customs daily returns the Re-exports must be declared in error under the heading, *White Brocades.*

COMMERCIAL POSTSCRIPT.

May 1, 1875.

Arrivals.—(Not reported above.)—April 24th, French barque *Mistri*, from Cardiff.

Departures.—None other than Coasters.

The English mail steamer *Orissa* takes 72 bales of Silk.

Exchange.—On London, Bank Bills, 6 months' sight, 5s. 9d. *a* 5s. 9¼d. First-class Credits to Bank, 5s. 9½d. *a* 5s. 9⅝d. First-class to Private buyers, 5s. 9⅝d. Private and Documentary, 5s. 9¾d. On Paris, Bank, Frs. 7.27½. Private, Frs. 7.35. On India—Bombay Bank, demand, Rs. 306. Calcutta Bank, Rs. 307 *a* 307½. On Hongkong, Bank Bills, demand, 27¼ per cent. discount. Private, 15 days' sight, 27⅜. Gold Bars, Tls. 173.00. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 72.80 per 100. Carolus dollars, Sh. Tls. 79.80 per 100. Copper cash, 1,600 per tael.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 1st May :—

Banks.—There has been a steady demand for shares since our last report, but owing to the firmness of holders, only a small business has been done at 27 % for cash and 31st May ; 24 % at least could now be got, but there are no sellers.

S. S. N. Shares.—Continued pressure to sell resulted in a considerable business at Tls. 70, at which the market closes firm with no sellers.

Fire Insurance Shares.—*Hongkongs* are on offer at $480, and *Chinas* are wanted at $134. Immediately after our last report, *Victorias* were done at $130. On the 26th, business was done at $136 ; on the 28th and 29th at $142, and yesterday at $146. There are now buyers at $148.

Marine Insurance Shares.—Several sales of *Yangtszes* have taken place at Tls. 560. *China & Japans* are quiet at Tls. 80.

Wharf Shares.—A few have been placed at Tls. 96.

The Weather has been fine and mild. The thermometer has ranged from 44 to 71.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, MAY 8, 1875.

NOTHING would seem to be more difficult to destroy, than a religious dogma which has once gained credence. Looking back at the history of the world, we cannot fail to notice how religions have been rooted up, or voluntarily changed, time after time; and, taking a superficial glance at the new formulæ and dogmas which have superseded the old, we seem justified in the belief that religions, like garments, can be doffed and donned with little inconvenience or interference with the personal comfort of the wearer. When, however, the practice of the new religion comes to be enquired into, we find in the majority of cases that the same temper which framed the primitive religion of a people, often survives to weld into its new faith the principles and practices of the old. There are few countries in Europe where the old heathen pantheon of the Greeks and Romans does not even now exercise its influence on the religious forms patronised by the inhabitants; and it need therefore excite the less surprise to find, in China, traces of the most primitive religions of humanity. The most popular divinity in China is perhaps Amida Buddha. The temples of the Buddhist religion contain shrines in his honour, and are thronged with crowds of devotees burning incense before him, or repeating his name in ever-wearying iteration. The atmosphere is redolent of the former, and vibrates with the low hum of the mystic formula —"Amito Foo, Amito Foo," poured out by the worshippers; for he who repeats this name the greatest number of times dispels most effectually all worldly thoughts, all harassing and impious desires. Yet, for all this connection with Buddhism, Amida does not of right belong to it. The doctrine of Amida and his Paradise of the West, so far from being in consonance with that of Sakyamuni, is directly opposed to the fundamental principles of the religion handed down by the sage. The dreamless Nirvana, where non-existence is to be the great balm for poor human nature, has given way to a future world of life, activity, and happiness, to which the devotee, by performing aright his religious observances, may finally hope to attain. Buddhism has been supposed to be peculiarly fitted to Asiatic humanity; but the Northern development of the religion has nearly everywhere overlaid the doctrines of Nirvana with the more practical belief in a future state of rewards and punishments. Whence then comes this doctrine of Amito Foo, or in its Sanscrit form Amitâbha—"measureless light?" We are probably not far wrong in considering it a survival of the old Iranian legend of Yima the Shining and his Terrestrial Paradise. Of it we are told "He took away from the 'daevas' (evil spirits) both blessings and profits, both fatness and herbs, both food and grain; in whose rule were poured out for the body imperishable foods; immortal were men and beasts; the water and trees were not dried up. In his rule was no cold, no heat, no old age, no death; no envy created by the daevas, on account of the absence of lying." The legend of Amito sprung from the districts of the Upper Oxus, where Zarathustrianism gave way about the time of the Christian era to a modified Buddhism; and though the name Amidâbha in Sanscrit expresses "measureless light," it is not impossibly as much a corruption as a translation of the name of Yima Khshaêta, the *Shining*. Yet Yima is older than even the religion of Zarathustra. In the Vedas he is already venerable. He was the first of mortals who died and discovered the way to the other world; he guides other men thither, and assembles them in a home which is secured to them for ever. He is a king and dwells in celestial light in the innermost sanctuary of heaven, where the departed behold him associated in blessedness with Varuna. To the pious he grants luminous abodes in heaven, but he has not yet, as he did in the later mythology of the Hindoos, assumed the rôle of judge of the departed, administering, as does Minos in the twin legend, an equal justice to good and bad. Before this doctrine of retributive justice had sprung up amongst the

conquerors of India, the separation from the Iranian branch had already occurred. Yama, the first mortal, becomes Yima, the king of Aryana Vaeja, where he rules in justice for a thousand years. Virtuous, and above all things hating lying and untruth, his kingdom is prosperous and his subjects are happy. At the last, listening to the voice of the tempter, he becomes envious and untruthful, when Azhidahatra the "Biting Serpent" prevails over him and destroys his kingdom. Such was the legend which prevailed in the valleys of the Hindoo Koosh, when Buddhism made its way and superseded the old religion. But although it nominally extinguished the the older faith, it could not destroy the character of its legends, which thus survived and finally overlaid the impractical precepts of its southern rival. From Cashmere the legend spread till finally Amida, from being an insignificant hero, became a Buddha himself and, in China at least, has given a colour to the religion far different from that intended by its original founder.

Summary of News.

The English mail of the 19th March arrived on the 3rd inst., by the P. & O. str. *Lombardy*.

The English mail of the 5th March *(ex Gwalior)* arrived on the 5th inst., by the P. & O. str. *Bombay*.

A mail leaves to-morrow for Europe by the M. M. str. *Sindh*.

The following Reuter's telegrams have been received during the week :—

War between China and Kashgar is apprehended. Russia is friendly to the latter power.

The 2,000 Guineas :—

Camballo .....First.
Picnic .....Second.
Breechloader .....Third.

The Installation of the Prince of Wales as Grand Master of Freemasons took place in the Albert Hall with a magnificent ceremony. 7,000 masons were present.

Slight disturbances at Baroda. Ranees deported.

The Emperor of Germany has approved of the introduction of a Bill suppressing religious orders.

The Bishop of Munster has been released.

A colliery explosion has occurred at Bunkershill, Staffordshire. 35 persons lost their lives.

A reply of Belgium to Germany has been communicated to the Chambers. It promises to follow the initiative of Germany in the modification of laws.

The Pope is suffering from weakness.

The Chester Cup has been won by "Freeman."

Monday, Tuesday and Wednesday were monopolised by our Spring Race Meeting, which took place under the happiest auspices as regards weather, and afforded good sport. That it should have been so, is matter for congratulation both for the sake of men interested in the sports and of those who look on Race week as an opportunity to go away for a trip. The number of house-boats which went away on Saturday, shows that the exodus up-country was not less than usual; but we do not hear of so many people going to the Snowy Valley. A rumour which has got abroad that the quarters there are going to grief, probably deterred some. The priests collected some money among foreigners, not long ago, for the avowed purpose of repairing the dwelling rooms at the Temple; but the design does not appear to have been carried out.—A full report of proceedings will be found elsewhere.

The fine weather which so luckily prevailed on the three race days, broke up altogether on Wednesday night. Heavy rain during the night and throughout Thursday morning effectually stopped further sport, and the Stewards wisely postponed the fourth day till Monday; an arrangement which is very likely to lead to a second "last day" on Tuesday. The weather cleared in the afternoon, but the state of the course would have prevented any satisfactory racing.

During the ensuing week we are likely to be busy on Municipal matters, Tuesday being the day fixed for the Ratepayers' meeting.—There is a report that the meeting is likely to be postponed till the 18th, in consequence of the non-readiness of the printed documents that have to be circulated beforehand. But we are without official announcement. As yet, only the Estimates for 1875 have been so circulated; and even if the Report can be sent round in reasonable time, there will remain the revised Land Regulations which ought certainly to be in the hands of the Ratepayers several days before the meeting. We are not sure that it would not be better to have two meetings; to dispose of the ordinary business on Tuesday—if the Report can be got out in time, and adjourn discussion of the Land Regulations till the following week. The combined business will hardly be got through in one day, anyhow.

From the documents appended to the Minutes of the French Council meeting, in another column, it will be seen that the Arbitrators have recommended that the Yank-king-pang bund shall remain as it is. They decide against the encroachment in principle, both as to its interference with navigation, and as possibly prejudicing the rights of riverine proprietors. "Every isolated construction which encroaches on a narrow and usually encumbered canal, must more or less diminish the facilities of navigation, if it is not executed on scientific principles and conformably to a plan conceived with the object of ameliorating the course of the water way; and consequently it may prejudice more or less the interests of riverine proprietors on the opposite bank." As regards the question raised by the French, whether the English Council has not also encroached, the arbitrators have no sufficient data to decide. "But as the jetties built on this (North) bank are isolated works, they must, if they depass the original banks, be regarded as encroachments," and as more or less affecting free navigation, and liable therefore more or less to prejudice the interests of riverine proprietors on the other side. That of course is clear; the question is whether they are encroachments at all. However this may be, the arbitrators recommend that matters be left as they are, and that an undertaking be come to between the two Councils, as to the future. —The effect of this decision seems to be to confirm an admitted encroachment, which the arbitrators admit is a prejudicial one. To quote the words of the English statement, "the creek is narrowed some 12 to 14 feet; and this (English) Municipality, instead of enjoying the advantage of a watercourse 50 feet wide as originally intended, will only have one 36 to 38 feet, and the French Municipality become possessed of land to which they are in no wise entitled."

The departure of M. Godeaux has stopped consideration of the Municipal reforms he had suggested, but he promises the French Council to talk about them to the Foreign Office, while in Paris. —The English Council decline to join in ordering any more bridges until they have consulted the Ratepayers. It will be remembered that the French Council suggested they should order one for the Bund, subject to arbitration of the shares to be respectively borne by the two Councils.—Some correspondence has taken place relative to introducing a Contagious Diseases Act in Shanghai.—Land is to be bought to widen the Rue du Consulat.—The Chairman of the French Council is to be a member of the General Hospital Committee.—The Council is in the satisfactory position of being able to deposit Tls. 10,000 in the Comptoir d'Escompte.

We mentioned last week that two of the men concerned in the attack on Mr. Cooper near Quinsan, had been captured and brought down to Shanghai. One of them is said to be cousin to the man who was wounded; but the lowdahs say all he did was to retake a bamboo which had been wrested from the assailants by the foreigners, and handed over to one of the boatmen. Otherwise he was fairly quiet. The second man, however, is declared to have taken an active part in chopping the boat's sail and rigging, and otherwise leading on the mob. It is fortunate so prominent a culprit has been caught.—We understand that H. B. M. Consul has claimed from the Taotai a formal investigation, and has signified his intention to be present at the hearing, either in person or by deputy, no matter whether the case is heard at Quinsan or in Shanghai. The two Chinamen are still in the hands of the police, awaiting the decision of the Consul and Taotai as to their disposal.

Two heavy fires have occurred in the English Settlement; one in the Maloo, between the Shanse and Fohkien Roads burned down 16 houses; a second, originating in Fohkien Road spread to Taewan Road, and destroyed 116 houses. Fuller particulars will be found on another page. About four o'clock on Sunday morning, several bamboo huts near the Broadway, Hongkew, tenanted by coolies, were burnt down; and at about the same hour on Tuesday afternoon, five others, on the bank of the Soochow Creek, were destroyed in like manner.

Mr. Allen, of the Consular Service, and who accompanied Colonel Browne's expedition to Burmah, arrived by the *Bombay* on Wednesday. We learn that Colonel Browne will be shortly on his way here.

On Tuesday morning, shortly after nine o'clock, H.M. corvette *Modeste* got up steam and proceeded down the river *en voyage* to Hankow. Later in the morning, H.M. despatch-boat *Vigilant*, having on board His Excellency T. F. Wade, C.B., and Admiral Ryder, Commander-in-chief on the China station, also left the harbour for the same destination.

We print on another page, an account of the attack on Colonel Browne's expedition and of Mr. Margary's murder, which has been sent to the London *Times* by one of the members of the party, and has been kindly placed at our disposal by the writer. It substantiates, in the main, the narrative we published last week, but is much more comprehensive, and covers, we imagine, the most interesting details of the attack, and of the unhappy murder of Mr. Margary, that are likely to find light pending local enquiry into the circumstances

We also print on another page some documents which throw strong light on the origin of the outrage. It is quite likely, as Indian papers affirm, that the King of Burmah may have had an active finger in the pie; but these documents bring the direct guilt very startlingly home to the Chinese. There are four documents, of which two give distinct evidence of the advent of a large force from Momein, with the object of attacking the English. One letter predicts the day of the attack, and warns a Burmese official in the English camp to quit it for his life, adding that the warning is given by order of the Chinese. Another mentions the arrival of the Momein force at Manwein, under the command of one Shoon—a nephew of the Li-su of whom we heard so much in connexion with Major Sladen's expedition. Li seems to have been at that time a sort of partisan leader, fighting for the Imperialists; he now holds the rank of Colonel, and is military commandant of the district. The inference clearly is that the attack was organised directly by him, quite possibly in collusion with the King of Burmah.

A Calcutta telegram quoted in the *Straits Times*, attributes an important speech to Lord Napier. He is reported to have said that Colonel Browne was then en route to Simla, having in his possession a letter written by the King of Burmah to the Tsaubwa of Bhamo, desiring that every obstacle night be put in the way of the late Mission, and that they should not be allowed to return. If it can be shown that this letter was despatched before Mr. Margary's murder, the King's days as an independent sovereign are surely numbered.

We are glad to find that it is proposed to collect a memorial fund in honor of the late Mr. Margary. The subscription is limited to $5, but any sum from $1 up to that amount will be received. The subscription sheet lies at the Shanghai Club, and has already received a numerous list of names. It is proposed that the form of memorial shall be left to the subscribers. A memorial window or a tablet has been proposed. Possibly if the sum subscribed be large, some other and better idea might be entertained.

The C. M. S. S. *Fei Yuen* is in dock, having the finishing touches put upon the extensive alterations she has been undergoing for some weeks past—preparatory, it is said, for a voyage to England.

On the site of the old Hermitage, at Sicawei, has been erected a new and more imposing building as a place of entertainment, to celebrate the opening of which a *bal masque* is announced to take place this evening.

We have received a number of the *China Punch*, in respect of which we cannot do better than quote the words of the *China Mail*; for, like our own dead favorite Puck, the Hongkong paper can hardly be so well appreciated elsewhere as in its own country. "The colored illustration, "John," is a capital likeness of an esteemed resident. The other drawings are scarcely up to the mark reached on former occasions, but will amuse residents. Of the reading matter, the best, as usual, is the "Ornithological," which hits off several prominent officials here, and one at Canton. The lines to "Our Uncle" are the sharpest in the issue, but some of the advertisements will, in the language of reviewers, "repay perusal." The "Legislative Council" preserves its amusing medium between jest and earnest, and *Punch* pays the *Audacious* Band a deserved compliment."

We have the March-April number of the *Chinese Recorder and Missionary Journal*. The most interesting papers are another chapter of Dr. Bretschneider's "Notes on Chinese mediæval travellers to the West," and one by Archimandrite Palladius on "Traces of Christianity in Mongolia and [illegible]." We shall endeavour to notice them at greater length bye-and-bye. Among the remaining contributions, are lectures on "Medical Missions in Japan," read by Dr. Berry before the Osaka and Kobe Missionary Association, and one entitled "The blood of the Martyrs is the seed of the Church," read by the Rev. A. E. Moule before the Ningpo Association. The Rev. G. E. Moule contributes an article on the correspondence lately published in the *N.-C. Herald* under the heading of "Christian Missions from a Chinese point of view."

We have received the first number of a Magazine entitled "The Friend of China,—the organ of the Anglo Oriental Society for the suppression of the Opium Trade." The present number contains reports of an inaugural meeting, and of a meeting held at Devonshire House to meet Mr. Chan Laisun, besides various extracts &c., bearing on the question. There is also circulated within its covers a letter asking for subscriptions to carry on vigorous operations:—"We have" says the writer, "an arduous task before us, nothing less than to inform the mind, and arouse the conscience of the nation, and this in respect to a subject remote in locality and utterly strange to the majority of Englishmen, although all are implicated in upholding the evil system. Lectures should be given, and Public Meetings held in every town in the land. The Press must be freely employed. Extensive foreign correspondence must be maintained. To do all this, we need both the ample donations of the rich, and the smaller, but equally important, because more numerous, contributions of less wealthy sympathisers." Among the donations already received, we notice the names of Edward Pease, £1,000, and Thomas Hanbury, £250. The names of Mr. Hanbury and Dr. Legge also appear among the Executive Committee.

We have no particular news from the North, except that the Chinese were impertinent to Foreigners at the PEKING races. —It was rumoured that the Emperor has measles.

Messrs. Spencer and Wolff write from CHINKIANG on the 5th May:— The general depression noticed in our last, continued during the early part of the week now under review, but later on some enquiry for Cotton Goods sprang up; and although prices do not yet shew much improvement, a decidedly healthier tone exists.

A serious riot occurred at KIUKIANG on 1st May. A mob attacked the American mission premises and completely smashed the contents. No harm was done to individuals, nor does any ill will seem to have been shown to the missionaries by the respectable inhabitants. Rumours of a pending disturbance appear to have prevailed for some days previous, and this, taken in connexion with the curious way in which the row began, seems to imply that it was preconcerted. A man living hard by, whose son had been in the constant habit of running in and out of the school, asks the porter what has become of him. The porter does not know; the man says the missionaries are detaining him with the object of taking his heart and eyes, etc., according to the old formula. The porter pooh-poohs him; the man gets the mob which has been collecting joins in and guts the buildings. It is curious that several officials live hard by but none interfered. They are said to have since shown some energy in bambooing offenders.

An AMOY correspondent of the *Hongkong Times* writes under date 27th April:—Mr. Pedder, the British Consul, leaves this to-morrow for Foochow by the S. S. *Douglas*, and has handed over charge of his office to Mr. Interpreter Phillips, who will act as Consul.—Our rainy season is not quite over as yet.—It appears that the Japanese intend running a line of steamers on these Coasts.

Shen Paou-chen, the Imperial Commissioner at FORMOSA, has returned to Foochow, and the Lieutenant-Governor of Fonkien had gone over to that island on the 10th ulto. It may be remembered that Commissioner Shen memorialised the Government some time ago for the transfer of the Lieutenant-Governor to Formosa, who is to reside there as the seat of Government. It appears now that the suggestion has been adopted.

Shanghai has been thoroughly beaten in the NAGASAKI regatta. A private telegram has been received, running: "Kobé first, Nagasaki second, Shanghai 100 yards behind. Our class of boat no use against theirs. Weather rough; raining hard. Sculling races postponed till to-morrow."

Some further details of the YOKOHAMA tragedy will be found an another page.

Editorial Selections.

MR. HART'S MEMO. ON THE WOOSUNG BAR.

We have dealt with two features of Mr. Hart's memorial—the alleged deterioration of our river, and the prospective decadence of Shanghai. There remains the question of Chinese competition and the threat that "in ten or twenty years time this competition will have swept the Foreign flag from the coast of China, and displayed the Chinese colours in the London and Liverpool docks." Is Mr. Hart prepared to assert that the Chinese are a superior race to his own countrymen? Because the proposition seems to involve something like that conclusion. If so, we differ from him, and will back the Intelligence and Energy that invented the steamer and has run off the junk, to work that steamer more successfully than the Stolid Stupidity which was content with the junk will be able to do in two generations. The patriotic though mistaken policy of the rice tribute subvention enables the so-called China Merchants' Steam Navigation Co. to run against Foreign steamers. But Foreign steamers hold their own and pay dividends, notwithstanding the heavy handicap. Now, the value of this subvention will be less to the Chinese Company, in proportion as its fleet enlarges; Tls. 300,000 will pay the working expenses of six steamers, and will form a handsome subsidy to twelve; but the Chinese will have to run more than twelve, and more than twenty-four, and more than the Coasting trade of China. So that, if the competition is to be pushed to an extreme, it will be gradually reduced by force of numbers to a fairer and easier basis. The amount of tribute rice can hardly be increased indefinitely; though, of course, some new and still more flagrant subsidy may be employed. On the other hand, it is notorious that the Northern Chinese themselves do not like the line, and that the existing capital is so largely supplied by Li and other high mandarins, that the name of "Merchants' Company" is a misnomer. The Chinese themselves have little confidence in its permanence, and look at it as an individual rather than a national enterprise. On the whole, we think the position of the C. M. S. N. Co. less promising than it seems to Mr. Hart; and, as Foreigners continue at present to hold their own, we will back them to do so still. Unless some vast change takes place in the system of Government, unless great awakening takes place in the Chinese character, and some great impulse is given by both causes to individual Chinese enterprise, it will take Chinese steamers far more than ten and more than twenty years to monopolise the existing trade; and we see no present likelihood of either contingency, while we see every chance of a gradual increase in trade, and consequent demand for more and more steamers to accommodate it. The Customs' arrangements, and the ingrained propensity of the Mandarins for squeezing, would alone suffice to prevent the monopoly which Mr. Hart foresees; and the dislike of the Northern Chinese to the very Company which is supposed to be an embodiment of native enterprise and patriotism, is a curious comment on the whole proposition.

The arguments against the extinction of the Foreign flag on the coast apply more strongly against the prospects of Chinese competition at sea. Chinese merchants would certainly be exempt, abroad, from the official squeezes which check them at home; and it is quite possible they might muster courage to send a steamer across the Ocean, in charge of foreign officers. But are their business and financial arrangements sufficiently complete to permit the operation as a purely Chinese transaction? We have every respect for the profundity of Chinese wisdom, the enlightenment of Chinese civilisation, and the integrity of the Chinese character; but we doubt whether the Chinese banking system is sufficiently developed to cover distant financial operations; and we doubt whether the prejudices of foreign bankers would allow them to come in aid. The Chinese bankruptcy laws are crude, their system of assignees has been found imperfect, and their detective system has not worked well where foreigners have been interested. All these causes will tend to hinder the confidence necessary to large financial transactions. At present, Chinese merchants who [illegible] produce have to do so through a Foreign firm; and Foreign firms have not found it always easy to recoup the loss where margins have proved insufficient, nor have the Chinese commercial code or its administrators proved valuable aids in the effort. There is, however, nothing in the past history of China—unless we except the remarkable expedition in the reign of Yungloh, which seems to have had chiefly a political object—and certainly nothing in our recent experience, to indicate that her people are likely to enter upon distant enterprise. A stray steamer may very likely go now and then to Europe; but this is a vastly different [illegible] injure the position of foreign merchants as traders and carriers between Europe and China. Placing the Chinaman on his mettle as against the European or American, what is there to lead us to believe that the latter will be distanced? Even assuming that the Chinese can get hold of their native trade, where they should have a marked advantage over Foreigners, when they go abroad they must contend with us on our own ground. And there is nothing in their character, or in the present circumstances of the China trade, to lead as to expect that they will make the effort successfully.

Holding then to our conviction that neither the future of Shanghai nor of foreign trade is yet threatened, either by physical difficulties or commercial competition, we insist on our claim that the Woosung Bar should be dredged by the Chinese Government, on broader grounds than Mr. Hart is disposed to allow us. So far from accepting it as a measure that will enable Shanghai only to make a show of vitality during its declining years, we claim it as necessary to accommodate the increasing commerce of which we look to find Shanghai the centre. Disputing altogether the natural and commercial agencies alleged by Mr. Hart to be at work—the former as untrue and the latter as illogical, we hold that the next ten, twenty, thirty years, will witness a growing developement of trade, which the Chinese are bound by treaty obligation, by the custom of the civilised countries among which they aspire to rank, and by their own interests, to facilitate. The United States appropriate millions of dollars annually to the conservative of their water courses. The bed of the Mersey requires constant attention to make it navigable; Glasgow has positively made a channel to accommodate its commerce. But China has not energy to order out a single dredger to facilitate the approaches of a port having a trade of Tls. 100,000,000 yearly, and yielding a revenue of over Tls. 3,000,000 to an impoverished exchequer. We would gladly hope that the impulse which has been given to public feeling by the appearance of Mr. Hart's memorial, and the controversy it has excited, may lead to further insistance on the Chinese performing one of the commonest duties of a Government. But our confidence in the inert force of mandarin stagnation is so great, and our confidence in the present conduct of Foreign diplomacy at Peking so slight, that we cannot venture to be sanguine. If we were given opportunity of fighting fairly our own battles, our chances would be better. There are some Statesmen in the West who are not trammelled by diplomatic fictions nor too much saturated with Chinese casuistry to be able to take a common sense view of a practical question. But when we find such stabs in the dark are being dealt us, as the present memorial, we are placed at a double disadvantage. We are glad to know that a refutation has followed the memorial, to the Government of the United States, and that the present discussion will be brought afresh to the notice of the British Admiralty. It may be hoped that the steps which are being now taken to secure an efficient survey and report upon the Bar, will furnish the authoritative basis which is needed for further representations upon the subject, and that Western Governments will authorise those representations taking the form of a demand.

ATTACK ON MISSIONARY PREMISES AT KIUKIANG.

ON the 1st instant, the premises of the American Missionaries at Kiukiang were sacked by a mob of Chinese, the city Magistrate apparently looking on, unable or unwilling to interfere. The affair had more than a passing interest, as it marked a revival of the absurd and malicious reports which led to the Tientsin massacre of 1870, and there seems to be evidence to prove that it owed its origin to a settled plot. On the afternoon in question, the father of one of the boys, who had been in the habit of attending the school, presented himself, and stated that his child was missing. Having succeeded in collecting a mob, he told them that the Missionaries were desirous of murdering the child, for the purpose of taking out his eyes and heart for use as medicine. It was in vain that the porter protested against the utter absurdity of such a charge. Mobs do not generally reason, and, as in this case there were grounds for believing that the whole affair had been previously planned, the ringleaders were ready, and the work of demolition went on, but fortunately without any injury to life or limb. A person who had left Kiukiang some three days before imforms us that, at the time of his departure, rumours of a threatened disturbance were prevalent; so that the disappearance of the boy, and the charge of making away with him, which were put forward as occurring on the spur of the moment by the father of the boy, were evidently only part of a well-concocted plan. Now, our readers will remember that the scandalous pamphlet "A Death blow to Corrupt Doctrine," which undoubtedly led to the Massacre at Tientsin, owed its origin to a district not very far from Kiukiang. They will also remember that, of all provincial capitals in China, that of Kiangsi (Nanchang) has been distinguished by the unfriendly disposition evinced towards foreigners. It is not many years since Mr. Baber, of H. B. M.'s Consular service, was set upon in the streets of the city; and, had it not been for the presence of mind he displayed, would probably have paid the penalty for visiting the city on official business, with his life. Mr. Mayers, who went up to obtain redress for this treatment of a Consular officer, and also to attempt to relieve some of the illegal exactions on trade which have been customary in this province, met with but partial success; and to the present day the port of Kiukiang is distinguished by the opposition offered to the Transit Pass clause of the Treaty of Tientsin. Kiukiang has become a bye-word amongst the ports on the Yangtsze; one after another, the foreign houses established there have had to succumb to the many obstructions placed in the way of business; and though within the last three years some slight progress has been made, it has been fitful and effervescent. Yet it is known that Kiukiang is capable of developing a large trade. It has the command of a large and fertile district; but so well have the avenues to trade been closed, that the greater part of the foreign commerce of the province is carried on, not by its own port of Kiukiang, but by bye-ways and across mountain passes from Ningpo, Swatow, or Chinkeang.

The most curious part of the attack on the missionary premises was that, although no difficulty seems to have been experienced in getting a mob to destroy the buildings—as indeed little was to be anticipated, when the city Magistrates did not think it necessary to make an attempt to preserve order—it seemed not to be possible to excite the people of the town; and the Missionaries found no difficulty in obtaining shelter and eventually making their escape from the city. In all difficulties at Kiukiang, the so-called *literati* and the mandarins connected with them have taken an active part. Some seven years ago, a bungalow built in the hills by the Foreign residents was attacked and destroyed, and the instigation of the outrage was distinctly traced to a *literate* of local influence. Fortunately, the doctrines which have prevailed to such a extent since, were not then so fashionable as now; and the perpetrators of the outrage had to make good the damage done, and make an apology. Still, every now and then, difficulties of a like nature arise; and we hear once or twice a year of attacks like the last being made on unoffending foreigners. This time, the outrage has occurred within the city, itself closely joining on to the Foreign settlement. Now we have no reason to alter the opinion we have always expressed, that the best method to encourage difficulties like the present is to temporise. A smart and effective punishment readily nips in the bud any desire to proceed to extremities. In this particular instance, no condign punishment is needed. The destruction has fortunately been confined to property, but for this the rioters were scarcely to be thanked. It is a well-known practice with the Chinese themselves to punish all officers who, either by misconduct or incapacity, have permitted a sedition to occur within their jurisdiction. Whether, therefore, the Magistrate who looked on did so approvingly or in helpless impotence, in Chinese eyes he is equally liable to be punished for his fault. Of course, the measure to be meted out would in the eyes of justice be very different; but the fact of responsibility remains. We trust that, now a considerable armed force is either in the Yangtze or about to proceed thither, some sensible ground of action will be determined on, to put a stop to these repeated assaults, before they become so serious as to need more forcible means of repression.

THE PHILADELPHIA EXHIBITION.

THE Americans, laudably proud of the completion of the first hundred years of their separate existence as a nation, purpose, amongst other methods of celebrating the event, to open a large International Exhibition in Philadelphia. Probably no better means could be devised of showing how the arts of civilisation can alter the very face of the globe. The details of the Exhibition building, and the proposed allotments have been decided on, and the various nations have been invited to appoint their respective commissioners. Messrs. Drew, Detring, and Hannen have, with propriety, been appointed as Commissioners in China, to superintend the transmission of articles intended for exhibition. The building itself will resemble most, in style, the original edifice of 1851 in Hyde Park, and in this the Americans have perhaps exercised a wise judgment, for it is questionable if any of the subsequent exhibitions, attempted as they were to be set out with more or less of architectural form, were really so successful. The feature in the former building, formed by the great transept with its semi-circular roof, is omitted, and instead the centre is raised to an extra height, and flanked with four towers. There seems to be a certain want of dignity in this portion of the arrangement, the towers only rising to the height—insignificant when compared with the length of the building—of 120 feet. The building is to be 1,880 feet long, and 464 feet broad—covering almost exactly 20 acres. this is reserved for the United States, and about one-twentieth for Great Britain and the Colonies. The remainder of the space is divided in a most elaborate manner. China and Japan are each allowed 7290 square feet—say a little more than a *mow* each. With the experience of Vienna, this amount will probably not be found in excess of requirements — certainly not, if the Government desire to take an active part. Little, of course, is to be expected from private exhibitors in China. The arts are in too primitive a stage, and too little appreciated to make it worth the while of any such to trouble his mind with exhibiting his goods. Where each man's [illegible] good as his neighbour's, and none rise above mediocrity, there is little scope for display, unless proceeding from an external cause. In time, exhibitions in China itself, where the results of competition could be made apparent to the exhibitors themselves, would probably give a renewed spirit to native enterprise; but the mutual self-improvement which is the great object of international exhibitions, will more or less be lost at Philadelphia as regards Chinese, from the absence there of those who alone could take advantage of it. It is curious, too, to note the relative proportions allotted to other countries —Persia has 7776 square feet allotted,

or more than China. We do not know much of the trade of Persia with the United States, but we should be disposed to imagine, in view of the greater distance and less intimate connection of the two, that Persia would be hardly likely to take so great an interest in the Exhibition as the nearer nation. That the Chinese do take a considerable amount of interest in these affairs cannot be denied, but China is a long way from Philadelphia.

The Exhibition will open on the 19th of April, and close in October. Contributions will be received from each country through its Commissioners only. The Customs' regulations will be relaxed at eight of the principal seaports, so far as to allow goods for exhibition to go forward, under supervision, duty free. No sketches, copies, or photographs, of objects exhibited will be allowed without the permission of the exhibitor. These are the main provisions under which goods will be received.

Attached to the main exhibition will be the Art Gallery, which is intended to be permanent, and which will form one of the characteristic features of the whole. The building will be of stone, with glass and iron roofs, and displays considerable novelty in its form and arrangements. These will be best described by the following extract:—

"The main entrance opens on a hall 82 feet long, 60 feet wide, and 53 feet high, decorated in the modern renaissance style; on the farther side of this hall, three doorways, each 16 feet wide and 25 feet high, open into the centre hall; this hall is 83 over it 80 feet in height. From its east and west sides extend the galleries, each 98 feet long, 43 feet wide, and 35 feet in height. The galleries admit of temporary divisions for the more advantageous display of paintings. The centre hall and galleries form one grand hall 287 feet long and 85 feet wide, capable of holding eight thousand persons, nearly twice the dimensions of the largest hall in the country. From the two galleries, doorways open into two smaller galleries, 28 feet wide and 89 feet long. These open north and south into private apartments which connect with the pavilion rooms, forming two side galleries 210 feet long. Along the whole length of the north side of the main galleries and central hall extends a corridor 14 feet wide, which opens on its north line into a series of private rooms, thirteen in number, designed for studios and smaller exhibition halls. All the principal central hall are lighted from above; the pavilions and studios are lighted from the side. The pavilions and central hall are designated especially for exhibitions of sculpture."

The exterior of the building, in its general design and details, displays considerable merit, though a want of height, rendered necessary from the internal arrangements, may seem to detract in some measure from its appearance. A certain German element is very marked in the renaissance style in which it is composed.

THE G. N. TELEGRAPH CABLE.

It is satisfactory to learn that the Chinese Government has been at length persuaded to acknowledge the existence of the Telegraph Cable. Hitherto they have declined to recognise it officially, and the local officials, following their lead, have refused to treat cases of cutting it by boatmen, otherwise than as pilfering. It is difficult enough to detect cases of theft, where sections of the cable are really cut out and taken away for sale; but it is next to impossible to detect cases of cutting it as it often is cut, merely to free an anchor which has got entangled in it: and only severe punishment when a culprit is found out, can be expected to prevent such wilful damage. About a year ago, the Superintendent of the Great Northern Telegraph Co. explained to the Taotai of Ningpo, how junks could free anchors in case of entanglement, and His Excellency had proclamations embodying the explanation sent to the coast and islands. These had a good effect at the time, but latterly the cable has again been frequently damaged, and the Taotai has been again appealed to, to protect it. The agents of the Company somehow found out who were the culprits in certain cases, and the Acting Superintendent, Mr. Bohr, through the U. S. Consul at Ningpo, furnished the Taotai with their names and address. His Excellency showed interest in the matter, and promised that steps should be at once taken to punish the offenders. The latter were found to live in the Chinhai district, and instructions were sent to the magistrate to pursue them.—These instructions have been carried out, and the Taotai has since issued a proclamation, acknowledging the receipt of complaints from the Superintendent of the G. N. Co., regarding the damage done to the cable, and [illegible] Chinhai magistrate has arrested and punished one offender—with bamboo and cangue—he being undoubtedly too poor to pay for the damage done. The proclamation concludes:—

"The submarine telegraph cable belonging to foreigners is of immense value and a very important affair. I now warn you fishermen that, if in the future any person cut or damage the wire, he will not only be severely punished, but moreover, even if he is poor, be liable to pay the expense of repairing the cable."

A still more important proclamation, which we subjoin, has been issued by the Paoshan magistrate, acknowledging the receipt of orders from the Tsungli-yamen (through, of course, the provincial and local authorities) to see to the protection of the cable. The importance and value of the cable is fully acknowledged; and it is likely that now orders to protect it have been issued from Peking, depredators will be punished in a way that will convince them more clearly of the necessity of care and the unprofitableness of theft.

Fung, by Imperial appointment district magistrate of Paoshan, &c., &c., issues for General Information the following Proclamation:—

I have been honoured with a despatch from H. E. Fung, the Superintendent of Customs in the province of Kiangnan and Taotai, in which it was stated "that the Taotai was honoured with an order from the Viceroy of Nanking H. E. Li. H. E. Li has received from the Tsungli-yamen an official note stating that the Foreign Ministers sent a despatch to the Tsungli-yamen to the effect that it was the Danish Great Northern Telegraph Company which has established a submarine telegraph line from Hongkong to Shanghai, that Chinese merchant vessels and fishing boats, either being unaware of the fact or being careless, when they raised their anchors, also raised the cable and then cut it; moreover that there are people who go out in boats, drag the cable, steal it, and sell it for money; therefore, the Foreign Ministers have asked for sufficient protection for the cable and for measures against it being damaged; the Viceroy was, therefore, ordered by the Tsung li-yamen to issue orders to the local authorities along the sea-coast, to provide means for the safety and protection of the cables, and therefore the Taotai is instructed to order the different district Magistrates that they shall pay full attention to have this affair settled in a satisfactory way."

I think when the Foreigners have laid cables at the bottom of the sea for sending messages, those cables could not in any way have been in the way of your ships. From the commencement of our relations with Foreigners, there have always been weak points in our amicable relations with them. Foreign Merchants from all parts of the world have arrived in our country, and naturally they wish to be in correspondence with their own people at home. Now-a-days our countrymen also go abroad, and they also use the telegraph for sending messages and communications. The telegraph therefore has indeed great advantages both for us and for Foreigners, and therefore it is not to be permitted that malicious people fish up the cables, steal them, and destroy them. Accordingly, I will make careful enquiries in this affair and establish a system for its close protection, and therefore I issue this proclamation to you, trading-junks, fishing-boats, seamen, and all other people, that you cannot and must not anchor with your ships where the Foreigners have laid their cables. If, in storms, it should be inevitable to anchor on those places, then you must be very careful; and if nevertheless the cable should be raised on your anchors you must place it again in its original position in the sea; you must not move it about, nor destroy it. Should hereafter, through carelessness, the cable be destroyed, or purposely cut, and you be convicted of this fact, then I will arrest you and severely punish you, and I shall not pardon you.

Tremble and obey, etc.

THE SHANGHAI "DEFENCE TAX."

We are able to give, below, a rough translation of the Taotai's circular to the Native merchants, which we referred last week in our news Summary; and on another page will be found a translation of a pertinent article from the *Shunpao*, explaining its purport, and protesting against the exaction.

The move appears to be very similar to that of the Customs Taotai at Tientsin, and is not a happy inauguration of the Taotai's reign. A Defence tax was imposed in Shanghai during the days of the Rebellion, and has never been abandoned, although the collection has been materially relaxed. The Taotai now insists on its full payment, and the *Shunpao* very pertinently asks why Shanghai of all places should be subjected to such an impost? For it seems to be peculiar to Shanghai; and the *Shunpao* might have remarked that Shanghai has always been indebted for its defence—even during the rebel times when the tax was instituted—to the protection of foreigners. It is a common remark among Chinese at the

present day, in case of any trouble here—"If Foreigners are driven from Shanghai, there will be no safe place in China."

We understand that the Chinese resolved on Saturday last, to ship no more sugar and chow-chow cargo until the matter is settled, and so far they have carried out the intention. We are told that the Taotai is beginning to feel his position untenable, and that a retreat on his part will probably soon complete the resemblance to the Tientsin episode. In the meantime, the measures taken by his emissaries appear calculated to give the greatest amount of irritation. Two cases which occurred a few days ago have given great offence. While two native hongmen were taking delivery of cargo with their cargo books in their hands, these were snatched away by the Tax collectors, and were lodged in Court before the Taotai. One man was fined Tls. 630, and the other Tls. 450. We cannot but think the present opportunity might be taken, to make a strong move for the abolition of such an anomaly as the Defence Tax, altogether.

Translation of Proclamation issued 19th of 3rd Moon of 1st year of Kwangsu, (24th April,) by Feng Taotai of Soochow, Sungchiang, and Taichang :—

Whereas the receipts from the collection of the Chenfang cheuen (Defence Tax) have been steadily diminishing, it is found that the decrease does not arise from a falling off in trade, but solely from Chinese merchants adopting artful measures to evade it. Foreigners are craftily deputed to pass goods at the Customs, or a surreptitious understanding is entered into with the Tax runners; and all kinds of nefarious proceedings are the result. For instance, the amount of cargo imported or exported by a certain firm forms a large total, while the return of his cargo at the Defence Tax office is insignificant. The malpractices and evasions thus resorted to become apparent. It would be but right to investigate thoroughly into such proceedings, and to deal punishments out with a stern hand. In the present case, however, bygones will be treated as bygones and not be rigorously inquired into; but from this time henceforward merchants will be required to change their course and to allow some little play to the natural feelings of their inner conscience. On every occasion of importing or exporting cargo, they will repair to the Defence Tax Office and there pay tax according to regulation. In the case of merchandise at present on storage and not returned to the office, a limit of ten days is fixed for the preparation of a schedule giving the true quantities, with names of owners, &c. to be handed in to the office, where the merchant will be permitted to make good the arrears of tax due without the imposition of a fine. But in the event of any person daring to resist the present orders, the case, if found out, will be dealt with severely by fine and punishment. Let it not then be said that you have not been forewarned. It thus becomes necessary to issue these commands. Let the merchants and commission agents, on receipt thereof, comply with the same with all alacrity.

A special command addressed to Canton merchants Tsiang Fah-yuen, Pan Tsuenan and others.

Outports.

TIENTSIN.

There is no interesting news in the late Peking *Gazettes;* and I have heard of nothing particular going on, these last few days, in Peking in diplomatic circles. To-day is the first day of the Races there, which I suppose are creating some excitement in the Legations.

The German Envoy is still staying here, and I have not heard when he will start for Peking.—Mr. Mayers, Chinese Secretary of H. M.'s Legation, is expected here this evening, to leave by the S. S. N. Co.'s str. *Chihli* to-morrow morning, for Shanghai.—Mr. Waeber, the Russian Consul, left here this morning for Peking; as also did Mr. Hart, Inspector-General of Customs. H. E. Sun-tze-ta has furnished each of the Consulates here with a Chinese chart of the Peiho, shewing the places where the grain junks will moor and anchor while in the port. Marks have been put up at the extremities of the different places as a guide to the junks to place themselves. The Taotai deserves considerable praise for his exertions in this matter, the arranging of which was much required to prevent collisions between the steamers and junks while navigating this narrow river.

The weather still continues very cold, although we are now nearly at the end of April. The thermometer this morning stood outside at 39° Fahrenheit. If we had a good fall of rain, the country would be much benefited by it. People are this year fearing drought.

27th April.

As to news from the metropolis, I may mention I am in receipt of a letter dated 30th April, in which the writer says :—"I hear that the Chinese were rude to the foreigners at the races at Peking." As the Yunnan affair, as we all know here, is at present being much talked about both by the higher and the lower classes of Chinese as well at Peking as at Tientsin, and as the late and still continuing exodus of a number of families from the Legations in Peking has led the populace of both places naturally to jump to the idea that the foreigners of the capital are leaving Peking because they are apprehensive of trouble [illegible] does not surprise me in the least that we should now hear the lower orders of people at Peking have manifested their dislike to foreigners, at the Peking races.

On the 30th ultimo early, his Excellency Herr von Brandt, the German Envoy, left here for Peking.—Mr. Mayers, Her Majesty's Chinese Secretary of Legation, with his family, has reached here from Peking, and proceeds on to Chefoo by the S. S. N. Co.'s steamer *Shingking*, to-morrow.

The weather since last writing to you has continued extremely boisterous. On the evening of the 28th ultimo, at the end of a day's dust storm, we had a violent thunder storm with rain; and as at this season of the year we naturally look for having, after any rain, calm, fine weather, we were much disappointed in having during the whole of the 29th a furious gale from the north with another dense dust storm. On the morning of [illegible] saw a flock of some thirty wild geese flying south over my house.

PURITAN.

1st May.

HONGKONG.

The most interesting news from Hongkong relates to the steamer *Gwalior*. She got on well after leaving Singapore, until the 16th April, and had reached within 100 miles of Hongkong, when the top of her cylinder blew off, and one of the sluice valves being open she commenced to make water rapidly. When all hope of saving her had been given up, and the boats ordered out, the valve was closed—according to the *China Mail* by the action of the water, according to the *Hongkong Times* by one of the Engineers diving and stopping the hole. The *Gwalior* could not make head way under sail, but drifted and anchored under Hainan. A boat in charge of the second officer, Mr. Seymour, set out for Macao, was plundered by pirates on the way, and reached port in five days. A full account of the incidents will be found in another column.—Mr. Nicaise, the Manager of the Borneo Co., has joined the Directors of the Hongkong and Shanghai Bank.—A theatrical performance has been given on board the *Princess Charlotte*.—The *Daily Press* and *China Mail* join in condemning the appointment of Sung Pao-hwa, to accompany the British delegates to Yunnan. They write, however, from the point of view of our Tientsin correspondent's letter; and as we have already remarked, the appointment becomes less absolutely insolent, when we understand that Sung is not a member of the mission but only an escort to the English Officers. Even so, however, his no-rank makes him a thoroughly unsuitable person, and the *China Mail's* remarks are still applicable :—"We most earnestly hope that, for Mr. Wade's own sake and for the sake of British prestige in China, this appointment, if made, will be cancelled, and another official of proper position appointed in his place. The Minister and his Peking advisers, strongly as they doubtless feel on the matter, are probably unaware of the excitement caused throughout India and China by the murder. It is a topic of constant conversation at every table, and each step taken to avenge it is narrowly watched and hotly criticised. The British Press has been unanimous in taking up the matter, and involving, as it may, a declaration of war upon Burmah, our home politicans have accorded it a notice which questions connected with China have long sought in vain. It is a case in which public opinion will be most outspokenly pronounced, should the measures taken fail to satisfy reasonable requirements."—The *Daily Press*, taking the text of Mr. Hart's memo., joins us in condemning the prevalent secresy at Peking.—The *of Tokio*, has arrived after a passage of twenty-nine days; she is an exact counterpart, in construction and fittings, of the *City of Peking*. Her length is 425 feet; beam, 48 feet; depth of hold, 38 feet; and registered tonnage 5,079.—The *Mail* of the 28th April says the *Braemar Castle*, from Singapore, is anchored off Stonecutters' Island, with sickness of some kind on board. She carried pilgrims from Jeddah to Singapore, and was quarantined on arrival at the latter port.

YOKOHAMA.

The *Herald*, referring to the late tragedy, says :—The escapade which has just had so tragic a termination is remarkable in all its details. Not the least astounding part of it is its inception. We look at present in vain for the ultimate motives of the crime. The defaulter [illegible] position socially, and ought to have been unembarrassed in their pecuniary affairs. They were in the receipt of handsome and increasing salaries, were employed by one of the wealthiest banking corporations in the world, and could reasonably look forward to certain and lucrative promotion in the future. Their immediate superior testified to their industry, good behaviour, and friendly relations with himself. One of the culprits at least is known to have been the son of a man of large estate, and to have relations in the possession of considerable worldly wealth. It has not appeared that either of the defaulters indulged in any extraordinary extravagances, or indeed in an expenditure unwarranted by his income. Future revelations may disclose some powerful causes which impelled them to the commission of so desperate and apparently so unnecessary a crime. At present it appears

to be without reason and without excuse. That they felt their attempt was a desperate one, in which they must succeed or die, is evident from the deliberate manner in which they effected their embarkation and that of their stolen treasure and the utter absence of anxiety they are alleged to have displayed when the saw that they must choose between death and capture. Rarely, indeed, in the annals of crime has been witnessed such a combination of want of apparent motive, consequent facility of prosecution, hardihood both of conception and execution, rapid failure, and tragic termination of the criminal undertaking. We have little doubt that the fears of M. Vouillemont, the manager of the Bank, as expressed at the recent inquest, that the defalcations are not limited to the amount of money actually stolen, will prove to be only too well founded. It may perhaps turn out that systematic fraud had been carried on for some time, and that certainty of approaching detection hastened the criminals to their final *coup*. Bail to the amount of $5,000 has been accepted for the appearance of George Withers, late Captain of the now ill-famed schooner *Iris*, charged with aiding and abetting in the recent embezzlement. The cash-box which, when first discovered on board the *Iris*, it was impossible to open, has since been opened, and found to be nearly full of jewellery. A further sum of $700 in gold has been found by Mr. White on board the vessel. —At the inquest on Swaby's remains, the jury, after three-quarters of an hour's deliberation returned a verdict that the deceased feloniously killed and murdered himself; and some vague and idle rumours having got afloat concerning the burial, the *Herald* thinks it right to set matters at rest by stating the real circumstances of the case. Some friends of the deceased, wishing to see his mortal remains decently interred in a spot befitting the position he held in life, directed the sexton to dig a grave for the body in the reserved part of the cemetery. He complied. Another friend, to whom, in life, Swaby had said he would like his remains to be interred near those of the late Dr. Dalliston, went to the sexton and gave orders to dig a grave near Dr. Dalliston's. The sexton did so. Afterwards came the undertaker, who, acting according to his lights and the strict letter of the law, ordered that the deceased should be buried in the paupers' portion of the cemetery. This involved digging a third grave, in which in due course the remains of Swaby were interred. Out of respect, however, for his friends, permission has been granted to exhume the body and to inhume it elsewhere. At the burial the acting Consular Chaplain, when about to read a portion of the funeral service over the body, was stopped by Constable Hodges, and he then [illegible] himself to the delivery of an address, to which of course no legal or other objection could be urged.—A [illegible] has committed *hara-kiri* because he was rebuked by his employer for some slight reason. This suicide is commented on by the *Mail* as betokening a high sense of honour on the part of the unfortunate, who preferred death to what he deemed disgrace—*hara-kiri* being usually committed to avoid the punishment of death, otherwise inevitable.—To turn to pleasanter matters, the *Mail* announces that eight classes of medals for services of distinction, one of them being for the Formosa expedition, have been determined upon by the Government, and will be shortly issued.—The trade in rabbits appears to have been revived in the Capital. Speculation, however, is restrained within reasonable limits and prices do not exceed 50 or 60 *yen*.—The number of jinrikshas plying for hire in Yedo is often stated at random at 250,000. The accuracy of this estimate is, however, best tested by the number actually constructed in any one given period, and in the month of January 22,860 vehicles were built in the city and its neighbourhood. *Choya Shinbun* gives the total number of jinrikshas plying in Tokio as 10,246; including the suburbs, 22,860. —The *Echo du Japon* mentions that on the 3rd ult. a severe typhoon visited the province of Echizen, during which several villages were almost totally destroyed by hailstones, which are said to have fallen for hours, and many of which were of the size of a nut and weighed 10 *grammes*.—The A. D. C. gave a performance on the night of the 14th ult., selecting two of John Madison Morton's farces, "A Regular Fix" and "A Thumping Legacy," which are described as having been played excellently throughout.—One of the native papers speaks of a machine for cleaning rice, which has lately been invented by a man in Tokio named Okada Yeijiro, the use of which is rapidly increasing. The inventor, by employing thirty-six mortars, can clean 100 sacks of grain, each containing about four *to*, in one day. In the long days during summer he will be able to clean 150 sacks. Two other persons in the neighbourhood have also large appliances on the same principle, which effect an immense saving of labour.

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

April 15th.—(Court Circular). The former Governor of Kiang-su, Ting Jih-ch'ang 丁日昌, paid his respects on arrival at Peking, and had audience.

The remainder of this day's *Gazette* is occupied with the report of the rehearing of an appeal case in Chihli. A villager named Hu Sze had been apprehended on a vague suspicion of his being implicated in a case of high-way robbery, as having lodged overnight the persons supposed to have been guilty of the crime, and, on being [illegible] the Magistrate of the district, he falsely confessed the charge, in dread of being put to torture. When further called upon to acknowledge himself guilty of complicity in a previous case which was on record, he refused to confess, whereupon the Magistrate, believing him to be wilfully prevaricating, ordered him to be beaten with a stick on the palms of his hands and the soles of his feet. A relative named Hu Urh, who had been arraigned at the same time, pleaded for mercy on his behalf, whereupon he himself was beaten, and both were then locked up in prison. Hu Sze, being deprived of the opium to which he was accustomed, succumbed shortly afterwards to an attack of dysentery, and died on the 30th January, 1873. On report being made to the Prefect of the department, he sent another district Magistrate to verify the decease, and he, in company with Hu Urh, inspected the remains and attested the fact that the sores left by the bastinadoing were in process of healing and that deceased had died from natural causes. The appeal which was lodged at Peking grew out of a tumult raised in the Magistrate's Yamên by the widow of deceased, her sister, and two male relatives, who, in consequence of their unseemly behaviour, were committed to prison. Upon this some more of the relatives assembled and carried off the prisoners by force, together with the coffin containing the remains of the deceased. More arrests were made hereupon, and the case was removed to the provincial capital for trial, when it was traversed by the appeal to Peking. The culprits of the Hu family are now pronounced guilty in various degrees, and the ringleader of the disturbance would have been sentenced to death by strangling had he not already died in prison. Several others are sentenced to flogging and banishment. The Magistrate who gave rise to the whole affair is pronounced to have acted indefensibly by bastinadoing a prisoner in a manner and with an implement unwarranted by law, and he would have been dealt with had he not already been dismissed from the service on a separate charge.

April 16th.—(1) The Governor-General of the Grain Transport, Wên-pin, memorializes, referring to the recent appointment of Wên-lin, his second cousin, as Superintendent of Customs at Hwai-an Fu. On the arrival of his relative at his post, Wên-pin has exhorted him most earnestly to discharge his duties with all possible vigour and uprightness; but he has now to ask whether, his own official residence being within a few miles of that of the Superintendent of Customs, although there is no connection between the two offices, and the regulations do not in so many words forbid the employment of relatives at the same time in the two posts in question, [the junior] should not still be removed from proximity to the official jurisdiction of his relative. Rescript: There is no occasion for removal. (N. B. The rule of *hwei-pi* 迴避, or "withdrawal," is designed for the purpose of guarding against collusion between relatives in civil or military employ, who might happen to find themselves placed in authority one over the other. In such cases, the junior is bound to "get out of the way," by exchange into some other jurisdiction or otherwise).

(2) The same functionary memorializes with reference to the Intendant of the Hwai-Yang Circuit, Liu Hien, whose period of service having expired, should according to regulations proceed to Peking for audience. As acting and afterwards as actual Taotai, Liu Hien has occupied his present post for nine years, and it is solicited that he be allowed to remain in it without being required for the present to proceed to Peking, on the ground of his presence being valuable in the conduct of the works in progress for the repair of the Grand Canal, and notably of the great [illegible] 惠濟閘, which is about to be proceeded with.—Granted by rescript.

April 17th.—(1) The Governor-General of Chihli reports the execution of two criminals, mother and son, for the murder of their husband and father. The victim, a man named Wei-Urh Lien-ch'êng, was a small farmer, and a man of dissipated habits, who was gradually disposing of his property and consuming the proceeds in drink. His wife consequently took counsel with her son, Wei-ta Nan-k'an, for the murder of the head of the family, to which he consented; and one evening, on Wei-Urh returning home in liquor, he was beaten to death with a club by the mother and son. As soon as life was extinct, the son took his father's body on his back and carried it out to a cemetery in a neighbouring ravine, where the mother dug a hole in which the remains were put out of sight. Detection subsequently ensued, and mother and son, having been found guilty of the crime, have been subjected to the penalty of *ling-ch'ih* according to law.

(2)—The Governor of Shantung reports the execution by *ling-ch'ih* of a man for the murder of his aunt and his first cousin, by putting arsenic in the millet from which their food was prepared, in revenge for being required by his aunt to give up a house which he had been allowed by her to occupy for a time. One half of the criminal's property is to be awarded to the family of his victims; and as his cousin left no issue to become his heir, the Magistrate of the District is to direct the heads of the clan to which he belonged to select a person, qualified in order of birth and seniority, to be recognized as heir to the murdered woman, in order to continue the family line and ancestral sacrifices.

Public Meetings.

SHANGHAI RACE CLUB.

An extraordinary meeting of members of the above Club was held on the 29th April. Present,—Mr. C. J. King in the chair; Messrs. R. Fergusson, A. McLeod, F. D. Hitch, E. G. Low, J. Hart, G. A. Lindsay, T. M. Drysdale, F. B. Aubert, Lovett, Thorburn, Rees, Limby, Cummins, Lucas, H. de C. Forbes, Sheppard, J. Broadhurst Tootal, McGregor, Savage, Morriss, Pollock, Provand, Rice, Scott, Overbeck, Tiefenbacher, Möller, Brandt, Wainewright, and Barnes Dallas, Secretary.

The CHAIRMAN called upon

The Secretary to read the notice convening the meeting, which he did, and also the resolution passed at the annual meeting, on the motion of Mr. Lucas, seconded by Mr. Haas, "That the correspondence between the Club and the Recreation Fund Trustees be printed and circulated among the members, and the decision in the matter left to an extraordinary meeting."

The CHAIRMAN then said that this meeting had been called in accordance with the resolution of the Race Club just read. The correspondence had been before them for some time, and the object of the present meeting was to give some answer to the letter addressed by Mr. Purdon to the Race Club on the 18th of August last, and which was informally sent to Mr. Dent. He held in his hand a resolution which he would read to them—

That the Secretary of the Shanghai Race Club shall address the chairman of the Trustees of the Recreation Fund, to the effect that the members of the Shanghai Race Club respectfully decline the proposals contained in his letter to Mr. John Dent, of the 18th of August, 1874; as the club is desirous of reserving its independent action in the purchase of the privately held shares in the Race Course, as well as to retain the control of the Race Course and the Grand Stand enclosures in the hands of the appointed officers.

By that resolution, they begged to decline the proposals of the Recreation Fund Trustees to take charge of the Race before putting it, [illegible] Race Course; but to hear anything that could be advanced to the contrary. If there was any good reason for putting themselves in the hands of the Recreation Fund Trustees, it would of course be their duty to listen to it, and act upon it if it were thought necessary.

After waiting for some time, and no one rising to speak,

The CHAIRMAN said if there was nothing more to be said on the subject, he would, without further observation, move the resolution.

Mr. F. D. HITCH seconded, and it was carried unanimously.

It was also decided that a letter of thanks should be written to Mr. John Dent for his services in connection with the subject of the correspondence.

The meeting then terminated.

CONSEIL D'ADMINISTRATION MUNICIPALE DE LA CONCESSION FRANCAISE.

Résumé des délibérations du Conseil.

Séance du 13 Avril 1875, sous la présidence de M. A. Voisin. Conseillers présents :—M.M. A. Hennequin, L. Ewald, F. D. Hitch, E. Millot ; H. Sayn, Secrétaire.

M. Maignan, empêché pour affaires de service, n'a pu assister à la séance.

Communication d'une lettre de M. le Consul Général demandant au Conseil si la date du 20 Avril, qu'il se propose de désigner pour les élections, paraît convenable. Le Conseil prie le Président de répondre affirmativement.

Communication d'une autre lettre de M. le Consul Général, informant le Conseil qu'il prend note de son désir de voir élargir le programme des réformes à introduire dans le Réglement d'organisation Municipale, mais qu'étant sur le point de partir pour la France il ne lui sera pas possible de participer ici même à l'étude de ces réformes. M. le Consul Général ajoute qu'il engagera, toutefois, le gérant du Consulat Général à s'y associer et que, de son côté, il profitera de son séjour à Paris pour entretenir le Département des Affaires Etrangères de la question dont il s'agit.

Lecture de la lettre suivante du Président du Municipal Council au sujet de la réclamation pour empiètements sur le Yang-king-pang :—

"Shanghai, 6th April, 1875.

"SIR,—The Council have received your letter of the 3rd instant, and observe with regret that it was not convenient to you to fix the arbitration for 5th inst. They will be glad to learn the earliest possible date on which it will be agreeable to your Board to proceed with it. The annual meetings of the Ratepayers in both Settlements are now approaching, and my colleagues think that you will agree with them that it would be desirable for all parties concerned to have the result of the arbitration made known before then if possible.

"I have the honor to be, etc.,

"J. G. PURDON,
Chief Justice."

Conformément au désir exprimé par cette lettre le Conseil décide de remettre, dans le plus bref délai possible, le dossier de l'affaire entre les mains de M. le Consul Général, en le priant de vouloir bien fixer, avec l'arbitre du Municipal Council, le jour où ils pourront régler la question d'empiètements sur le Yang-king-pang.

Lecture de la lettre suivante du Président du Municipal Council au sujet du pont Yang-king-pang No. 1 :—

"Shanghai, 31st March, 1875.

"SIR,—Your letter of 29th instant has been considered by the Council, who however are still of the opinion expressed in their letter of 19th instant, that they must defer taking any further steps in the matter referred to until after Ratepayers' meeting, now so shortly to be held.

"I am Sir, etc.,

"J. G. PURDON,
Chief Justice."

Le Conseil regrette que le Municipal Council n'ait pas cru devoir prendre en considération la proposition qui lui a été faite de faire immédiatement la commande d'un pont en fer pour remplacer le pont en bois No. 1, et régler ultérieurement la difficulté financière, car le Conseil ne voit pas qu'une décision prise par les Ratepayers au Nord du Yang-king-pang puisse en quelque façon l'engager :—

Lecture de la lettre suivante du Secrétaire du Municipal Council au sujet de la création d'un dispensaire :—

"Shanghai, 23rd March, 1875.

"SIR,—I am instructed to express the Council's regret at the delay in replying to your communication of 5th November last, but the question involved was one requiring time for careful consideration.

"The Health Officer of the Municipality has at length submitted a very full report urging the only proper way to provide suitable accommodation.

"The Health Officer and Municipal Engineer have visited the building at the head of Foochow Road, in which the Municipal Authorities on this side proposed at one time to commence the work of a Lock Hospital. They do not regard this building as at all suitable for the present purpose, and the Health Officer states that if the inspection of public women is seriously to be taken in hand in Shanghai, it will be necessary to build on a plan somewhat similar to that adopted in the Hospital for Chinese in the Shantung Road.

"Nothing further can be done therefore until the Ratepayers in this side have decided to go to a heavy expense in building and fitting up. Whether they will do this in face of the many difficulties which are said to beset the successful working of a Lock Hospital when established, is doubtful. Should they authorize the expenditure being incurred, under these circumstances, the Board will again have much pleasure in addressing you. Meanwhile, doing myself the honor of conveying the thanks of the Board for your offer to work in union with them,

"I am, Sir, etc,,

"E. B. SOUPER,
"*Secretary.*"

D'après l'opinion exprimée par le Municipal Council sur la création d'un dispensaire, le Conseil est d'avis qu'il n'y a pas lieu de donner suite à ce projet qui ne peut être mis à exécution qu'avec la participation des deux Administrations.

Le Président est chargé de traiter avec M. Hanssen, représentant des Mineurs Webb, pour l'acquisition du terrain nécessaire à l'élargissement de la rue du Consulat, sur les bases de Taëls 5,000 le *mow* de 6,600 pieds carrés, fixées par les arbitres.

A la demande de M. Keswick, président des Administrateurs de l'Hopital Général, le Conseil délègue son Président comme membre Administrateur de cette institution.

Examen d'une demande de transfert de licence pour débit de boissons. Le Conseil ne peut y faire droit, la license demandée étant périmée et aucune autre n'étant vacante.

Examen d'une demande de licences pour la circulation de 100 Jin-rick-shaws. Le nombre des licences étant limité et l'Administration n'en ayant aucune de disponible, le Conseil ne peut, actuellement, prendre cette demande en considération.

Communication d'une lettre de M. l'Agent de la Compagnie des Messageries Maritimes souscrivant pour Taels 200 par an à la Taxe commerciale. Le Secrétaire est chargé de transmettre les remerciements du Conseil.

Examen de deux demandes de réduction d'impôts. Le Secrétaire est chargé d'informer les pétitionnaires que leur réclamation obtiendra l'attention de l'Administration à l'époque de la révision des impôts que le Conseil doit entreprendre incessamment.

Le Conseil ordonne un dépôt, au Comptoir d'Escompte de Taëls 10,000 pour 6 mois, [illegible] 1875, présentant un encaisse de Taëls 4,014.25. Sur cette somme, répartition faite aux employés contributeurs de l'allocation qui leur a été acordée et du décompte applicable à l'année écoulée, Taëls 185.25 sont, aux termes des statuts de la Caisse des Retraites, à reverser dans la Caisse Municipale. Le Conseil approuve le reversement de cette somme.

Examen et approbation des rapports de fin d'année et des inventaires présentés par les chefs de service.

Examen des rapports journaliers des chefs de service.

Examen du rapport de l'Inspecteur des marchés.

Séance du 21 Avril, 1875 Sont présents: —M.M. A. Hennequin, E. [illegible], Voisin, Conseillers restants; C. Leroy, H. Maignan, H. Scott, J. F. Seaman, Secrétaire.

M. Millot, empêché, n'a pu assister à la séance.

Le Conseil s'étant réuni sur la convocation de M. le Consul-Général à l'effet de se constituer sous la présidence du doyen d'âge, M. Maignan prend place au fauteuil.

M. Voisin est élu Président.

M. Hennequin est élu Vice-Président. Vérification des opérations Electorales du 20 Avril. Le Conseil déclare qu'elles se sont passées régulièrement et reconnait en conséquence leur validité.

La Séance est levée.

Correspondance échangée avec le Municipal Council relativement aux empiètements sur le Yang-king-pang :—

Shanghai, 19th April, 1875.

SIR,—I have your letter of yesterday's date,

but I do not quite understand whether you have forwarded to M. Godeaux a plan of the Yang-king-pang, with a note merely explaining that plan, or whether you have submitted your side of the question to him. In either case, I think there has been some misapprehension on your part, as to the manner in which the question was to be submitted to the arbitrators.

This Council never contemplated one side forwarding anything in advance of the other, nor to one of the arbitrators alone, but supposed the usual course in such matters would be pursued.

We understood, as will appear from my previous letters, that the two Councils would fix a day upon which they would forward to the joint arbitrators an agreement as to the points to be decided, signed by both parties and accompanied by a statement from each Council of its case; and each Council was to have a copy of the other's statement, and allowed then to send in, if necessary, to the arbitrators, a written reply thereto, and these documents together would constitute the case.

This Council were of the opinion that no arbitrators would entertain a question unless it was put formally before them in this manner, and it was for this purpose that they wrote to ask what day would be convenient to you.

I would respectfully suggest, therefore, that the points as agreed upon be signed by both parties, and forwarded to Messrs. Godeaux and Medhurst, and as I presume your statement has gone in, we will forward ours so soon as we can have it written out, and forward it to those gentlemen. We will send you a copy of it, and I have to request that you will kindly furnish this Council with a copy of what you have already sent in to M. Godeaux.

(Signed) JOHN G. PURDON,
Chairman.

Shanghai, 20th April, 1875.

SIR,—I have much pleasure in handing you copy of the statement of the Council's case, which they propose sending in to the Arbitrators.

The original correspondence between the two Councils, to which reference is therein made, is already in your possession.

(Signed) JOHN G. PURDON,
Chairman,

A. VOISIN, Esq.,
Chairman, French Municipal Council.

Shanghai, [illegible]

GENTLEMEN,—I forward herewith documents in support of this Council's position in regard to the question now submitted to you for your decision.

From a reference thereto, it will appear that this Council have always protested against the encroachment of the French Council on the South side of the Yang-king-pang (see letters of Dec. 11th, 14th, 27th and 31st, in the pamphlet herewith.)

And it will also be seen that, after a good deal of negotiation, it was agreed at a meeting of the Consular Body to leave the matter to arbitration.

It has ever been the intention of this Council to have this question thus authoritatively settled, but owing to the illness and death of the late Secretary, Mr. Johnston, and the delay in the appointment of his successor, the matter with others was overlooked for the time, but at the first convenient opportunity was again brought up by this Council, and it

The French Council have finally agreed to this course, but have in the meantime admitted that it was an encroachment they had made (see their letter of 13th March, 1875). This Council might have rested the case here, as the fact of an encroachment would be sufficient to justify them in requesting the French Council to rectify it, or failing that, to appeal to the French Consul-Général to decide whether they were not bound to do so. Feeling, however, so secure in their position, and that they would attain the same end through the arbitration, they consented to submit the question in its present form to you.

With regard to the first point, this Council feel confident that it needs no argument to prove that an acknowledged encroachment on a narrow water-course like the Yang-king-pang, is an obstruction to the navigation of of the creek.

With regard to the second point, that it is prejudicial to the interests of owners of property along the Creek, as well as the general public, scarcely admits of more doubt. The enclosed copy of letter from the agent of M. A. Cushny, dated 7th December, 1874, as well as that of a number of Ratepayers in the accompanying pamphlet, dated 15th April, 1862, will show with what jealousy the owners of property regarded any scheme narrowing the creek. And, moreover, that such a scheme may easily prove detrimental to the health of the neighbourhood, it is only necessary to instance the detention in consequence of the crowding of night-soil and other nuisance boats.

It is manifest that, if one side can encroach the other can, and this Council have always reserved to themselves the right to carry their bund line as far into the creek as the French Council have theirs, if the latter was allowed to remain.

At the time the land on both sides of the creek was given up by the owners to the public, and the roads formed from it, and the bridges taken over by the two Municipalities, the width of the creek was 50 feet.

If the French encroachment is allowed to remain, the creek is narrowed some 12 to 14 feet, and this Municipality, instead of enjoying the advantage of a water-course 50 feet wide, as was originally intended, will only have that of one 36 to 38 feet, and the French Municipality become possessed of 12 to 14 feet of land to which they are in no wise entitled.

The injustice of this is so apparent that I will not dwell further upon it.

With regard to the third point submitted at the request of the French Council, it will be seen by reference to copies of my letters to M. Voisin of 16th February and 20th March, 1875, that, while this Council not only do not admit any encroachment, but on the contrary as per sketch plan therewith, show that they have given up ground to widen the creek, yet willingly allowed the question to be submitted.

As the French Council have never pointed out to this Council where such encroachments exist, I am at the moment unable to do more than to deny that there are any.

But I must add that, had any such encroachment been made and pointed out to this Council by the French Council, it would have been immediately rectified; but during the whole time that our expensive stone bunding was being formed alongside that Creek, we Council regarding encroachments, although our protest against their encroachment was before them.

In conclusion, by the admission of the French Council that they have made the encroachment which was the original cause of complaint by this Council, it becomes unnecessary for me to trouble you with plans showing the width of the creek in 1865, which, however, can be submitted should you require them.

And the questions whether such an encroachment is not an obstruction to the free navigation of the creek, and whether it is not prejudicial to the interests of this community, are ones which this Council confidently leave to your judgment.

(Signed) JOHN G. PURDON,
Chairman.

Shanghai, 21 Avril, 1875.

MONSIEUR,—J'ai reçu les lettres que vous 20 Avril, a permis me demander copie du m'avez fait l'honneur de m'écrire, le 19 et le memoire fourni par le Conseil à son arbitre dans la question d'empiètements sur le Yang-king-pang, et la seconde me mettant en possession de celui remis par le Municipal Council à son arbitre pour la même affaire.

Le Conseil a toujours compris que les arbitres communiqueraient à chaque administration les raisons mises en avant par la partie adverse, et qu'ils ne manqueraient pas, le cas échéant, de faire appel à leurs clients respectifs pour éclairer tout point douteux. C'est donc de son arbitre que le Conseil attendait la communication de ceux des arguments de votre administration qui lui auraient paru devoir provoquer spécialement une réponse.

Toutefois, le Conseil n'a aucune raison pour ne pas intervertir la manière de faire connaître les raisons des deux Municipalités à leurs arbitres, et j'ai, par consequent, l'honneur de vous remettre copie de la note explicative qui a été remise à M. Godeaux.

Veuillez agreér, &a.,
Le Président du Conseil,
(Signé) A. VOISIN.

Note explicative pour servir au réglement de la question d'empiètements sur le Yang-king-pang, remise le 16 Avril, 1875, à M. Godeaux, Consul-Général de France.

Extrait de la lettre adressée le 24 Mars, 1875, au Président du Municipal Council par le Président du Conseil Municipal:—

Shanghai, 29th March, 1875.

"Sir,— . . . . . Afin d'obvier à tout malentendu, je vous prie donc, de me permettre presque une redite en énumérant ici les points que le Conseil entend soumettre à la décision des arbitres :—

"1e.—Le construction du quai du Yang-king-pang, entre la rue Discry et la rue Touranne, dans les conditions actuelles est-elle un obstacle à la navigation du Canal?

"2e.—Porte-t-elle préjudice d'une façon réelle aux intérêts des propriétaires riverains?

"3e.—Des empiètements ont-ils été commis par le Municipal Council sur la rive gauche du Yang-king-pang. Dans l'affirmative, ces empiètements sont-ils un obstacle à la navigation du Canal et portent-ils préjudice d'une façon réelle aux intérêts des propriétaires riverains?

"Espérant que les deux administrations se trouveront d'accord pour faire régler, d'un seul coup, par la décision des Arbitres, toute controverse relative à des empiètements sur le Yang-king-pang.

"Je vous prie d'agréer, &c., &c. . . . ."

Lettre du Président du Municipal Council, acceptant les bases de l'arbitrage:—

"Shanghai, 29th March, 1875.

"SIR,— . . . . . I have the honour to acknowledge receipt of your letter of the 24th inst., which was laid before the Board at their meeting this morning.

"The Council, while of the opinion that there are no grounds whatever for supposing that they have made an encroachment on the Creek on this side, but on the contrary, they have voluntarily given up ground to widen it, as explained in my letter of 16th February last, yet, feeling as they do their position in this respect so strong, they do not object to its being made part of the question, if your Council desire it. They, therefore, agree with your Council in understanding the questions to be—

"1st.—Is the Yang-king-pang Bund between the Rue Discry and the Rue Touranne, in its present position, an obstruction to the navigation of the creek?

"2nd.—Does it really prejudice the interests of property owners along the line of the creek?

"3rd.—Have the Municipal Council made encroachments on the North Bank of the Yang-king-pang? If so, are these encroachments an obstruction to the navigation of the creek? And do they really prejudice the interests of property owners?

"The Council suggest that Monday, the 5th April proximo, be the day appointed to submit the question to the arbitrators, and trust this date will be convenient to your Council.

"(Signed) J. G. PURDON,
"*Chairman.*"

Jus qu'à quelle date faut-il remonter et sur quel titre faut-il s'appuyer, pour arriver à la solution des trois points soumis à la décision [illegible] ? L'extrait de la lettre suivante du Président du Municipal Council les précise:—

" . . . . . But I may mention here that this Council has already in its possession sufficient evidence to satisfy them that the works complained of constitute a violation of the agreement entered into by the Councils of the two Municipalities in July 1862, and seriously interfere with the traffic of an important public highway.

"I have, therefore, to protest against your action, the immediate consequence of which has been to jeopardise seriously the interest of property holders in this Concession along the banks of the Yang-king-pang.

"On the part of this Municipality, the agreement has been rigidly adhered to, as our plans and surveys will show, and I trust on considering the circumstances of the case, no time will be lost by your Council in restoring the boundaries of the creek. . . . ."

La convention invoquée dans la lettre ci dessus est relatée dans le document suivant:—

Extrait de la Séance du 25 Juillet, 1862.

" . . . . . Communication d'une lettre du Secrétaire du Conseil Municipal de la Concession Anglaise, demandant au Président une entrevue, qui a eu lieu, et dans laquelle ce Secrétaire, organe du Conseil Anglais, a exprimé de désir de conserver au Yang-king-pang une largeur uniforme de 50 pieds ; il a demandé à cet effet le concours du Conseil d'Administration Municipale Française. Cette largeur sera en conséquence établie en prenant le milieu du Canal à marée basse, et laissant 25 pieds du côté Anglais et autant du côte Français.

"Decidé que le Conseil Français concourra de tout son pouvoir à ce but désirable ; et que son Président est chargé de faire connaitre cette décision au Conseil Anglais. . . . ."

Les deux Municipalités sont donc engagées par la convention de Juillet 1862, et, c'est à partir de cette date qu'il y a lieu de voir si des empiètements ont été commis par l'une et l'autre Municipalité dans les différents travaux qu'elles ont eu à faire exécuter aux berges du Yang-king-pang. Toutefois, après avoir par lettre du 14 Décembre, 1872, ainsi qu'il a été vu plus haut, requis le Conseil Municipal de s'en tenir aux dispositions de la convention de Juillet 1862, le Municipal Council introduit un autre document et une date antérieure, ainsi qu'il ressort de l'extrait suivant d'une lettre datée 31 Décembre, 1872.

" . . . . . They send you a tracing of the survey made by Mr. Yuell, of the Royal Navy in 1855, by which you will see the width of the creek at that date was 50 to 60 feet. The width shown by this plan at the Honan road, where the encroachment amounts to a stoppage of water traffic, is 60 feet.

"The Council would also observe that the creek has never been surrendered, but still remains a Chinese water course.

"The Council trust, therefore, that the plan now sent will remove any misconception that may have existed, and hope that your Board will discontinue further work until the views of the Taotai are learned. . . . ."

Cette lettre a été écrite, sans doute, dans l'ignorance que la Concession Française n'a été doteé d'un Conseil Municipal qu'en 1862, ainsi qu'il en appert de cet extrait de *la seánce d'installation.*

"L'an 1862, le 30 Avril, Monsieur le Consul Général de France a convoqué au Consulat de France, M.M. les proriétaires d'immeubles sur la Concession Française à l'effet de leur présenter M.M. Buissonnet, Schmidt, Meynard, Maniquet, et Fajard, nommés membres du Conseil d'Administration Municipale par décision consulaire du 29 Avril, pour entrer en fonctions à partir du 1er Mai prochain, lesquels ont accepté ces fonctions et ont été reconnus en leur nouvelle qualité par les propriétaires présents. . . . ."

Ainsi, la Municipalite Française n'est responsable de changements faits au cours du Yang-king-pang, qu'à partir du 30 Avril, 1862, date de son existence, et tous changements faits antérieurement à cette date sont imputables aux différents propriétaires riverains.

En résumant ce qui précéde il se presente tout d'abord :

L'existence d'une convention passée entre les deux municipalités en Juillet, 1862, pour déterminer le cours du Yang-king-pang :

Puis ensuite le reproche de n'y avoir point adhéré, fait à la Municipalité Française par le Municipal Council.

Enfin le consentement des deux Municipalités de faire décider si elles ont commis des empiètements par les travaux qu'elles ont fait exécuter aux berges du Yang-king-pang.

Travaux Exécutés

Par la Municipality, Nord du Y. K. P.

Entre la rue Discry et le Pont 6, de	Septembre ou Janr. 1872. 1873.
" Ponts 1 et 2	1874.
" Ponts 2 et 3	1875.

Tous les travaux du quai du Yang-king-pany, sans exception, faits par le Municipal Council, ont par conséquent été executés antérieurement à ceux faits par le Conseil Français.

Afin qu'on puisse se rendre compte da la position de ces travaux, un plan est joint à ce mémoire. Il est à remarquer qu'il représente exactement, outre les lignes actuelles, les lignes fixées par le plan cadastral dont la confection a été confiée par le Conseil Français, en séance du 10 Juin 1864, à M.M. Knevitt, Whitfield et Kingsmill ; or, le Conseil Français était composé des mêmes Conseillers qui avaient souscrit à la convention de juillet 1862, et, il faut ajouter que le plan de la Concession Anglaise a été levé à la même époque et sur la même échelle.

Les plans ont été terminés en 1865 et aucuns travaux de quai faits après la convention de Juiller 1862 n'ont été commencés avant 1866.

Fin de la note remise à M. Godeaux, Consul Général de France, arbitre de la Municipalité Française.

Shanghai, 21st April, 1875.

SIR,—On refering to statement of their case sent in to the arbitrators, the Council find that the bunding works referred to therein were completed in 1870-1871, and therefore prior to the protest lodged by this Board against your bringing forward your bunding in 1872. The words therefore on the last two pages, "*although our protest against their encroachment was before them.*" have been struck out.

Will you please substitute the enclosed part of the statement in the last sheet in your possession.

(Signed) EDWARD B. SOUPER,
Secretary.

——

Shanghai, 21st April, 1875.

SIR,—I am directed to request you to be good enough to obtain the signature of your Chairman to the enclosed document. When completed it will be sent in this morning to the Arbitrators with the Council's statement of their case.

(Signed) EDWARD B. SOUPER,
Secretary.

——

Encroachment—Yang-king-pang Creek.

The questions agreed upon by the two Councils to be submitted to arbitration of the French Consul-General and H.B.M. Consul, and any third arbitrator or umpire whom they may find it necessary to appoint, are as follows :—

1st.—Is the Yang-king-pang Bund between the Rue Discry and the Rue Touranne in its present position, an obstruction to the navigation of the Creek ?

2nd.—Does it really prejudice the interests of property owners along the line of the Creek ?

3rd.—Have the Municipal Council made encroachments on the North Bank of the Yang-king-pang ? If so, are these encroachments an obstruction to the navigation of the Creek ? And do they really prejudice the interests of property owners ?

The two Councils hereby agree to consider the decision of the said Arbitrators in the matter submitted to them as final and binding, and further bind themselves to accept, and act in accordance with, the decision and directions given by the said Arbitrators.

(Signed) JOHN G. PURDON,
Chairman, Municipal Council, North of the Yang-king-pang.

(Signé) A. VOISIN,
Président du Conseil Municipal.

Shanghai, 21st April, 1875.

——

Shanghai, 21 Avril, 1875.

MONSIEUR,—Je suis chargé de vous faire remarquer que l'obligation, pour le Conseil, d'accepter la décision des arbitres dans la question d'empiètements sur le Yang-king-pang et les cases sur lesquelles doit porter l'arbitrage sont spécialement formulées dans les lettres du Président, du 13 et du 24 Mars, 1875.

Néanmoins, pour complaire à la requête que vous me transmettez, je vous envoie la pièce que vous m'avez adressée sur laquelle le Président à apposé sa signature.

J'aurai l'honneur de vous envoyer une obligation conçue en Français dans les mêmes termes, et je vous serai obligé de me la retourner après qu'elle aura été signée par le Président du Municipal Council.

Le Sécretaire,
(Signé) H. SAYN.

Sentence Arbitrale rendue dans la question d'empiètements sur le Yang-king-pang.

Lejourd'hui vingt-trois Avril mil huit cent soixante quinze.

Nous, Ernest Godeaux, Consul-Général de France, et W. H. Medhurst, Consul de S. M. Britannique, arbitres chargés par compromis en date du 21 de ce mois, de juger le different pendant entre le Conseil Municipal de la Concession Française et le Conseil Municipal du "Foreign Settlement" au sujet d'empiètements qui auraient été faits sur le Yang-king-pang,

Avons, en présence de M. Vignale, Consul Général d'Italie, choisi par nous comme tiers arbitre, en vertu du droit qui nous en a été reconnu, pour prononcer entre nous en cas de désaccord, rendu notre décision de la manierè suivante :—

Les questions qui nous ont été soumises sont :

1e.—La construction du quai du Yang-king-pang entre les rues Discry et de Touranne, dans les conditions actuelles, est elle un obtacle a la navigation du canal ?

2e.—Porte-t-elle préjudice d'une façon réelle aux entérets des propriétaires riverains ?

3e. Des empiètements ont-ils été commis par le "Municipal Council" sur la rive gauche du Yang-king-pang ; dans l'affirmative, ces empiètements sont-ils un obstacle à la navigation du canal et portent-ils prejudice d'une façon réelle aux intérêts des propriétaires riverains ?

En principe nous sommes d'avis que toute construction isolée qui empiète sur un canal étroit et ordinairement encombré, doit plus ou moins diminuer les facilités de la navigation, si elle n'est exécutée d'après les principes de l'art et conformément à un plan conçu dans le but d'améliorer le cours de cette voie d'eau, et que par suite elle peut porter un préjudice plus ou moins considérable aux interêts des propriétaires riverains établis sur l'autre rive ; nous croyons en outre qu'elle ne devrait pas être entreprise sans l'assentiment de l'autorité territoriale.

Nous disons, en conséquence, en ce qui concerne les questions No. 1 & 2, que si, dans son état actuel, le quai du Yang-king-pang, entre les rues Discry et de Touranne, empiète sur les rives primitives du canal, il en restreint plus ou moins la navigation, et que par suite ce quai peut être plus ou moins préjudiciable aux propriétaires riverains établis de l'autre côté du cours d'eau, et généralement à toute personne intéressée à sa libre circulation.

Quant à la troisième question, en l'absence de tout moyen de vérifier la largeur primitive du Yang-king-pang, et à defaut du texte de la convention qui serait intervenue en 1862 entre les deux Conseils Municipaux, de même que d'un plan fixant la ligne intermediaire à partir de laquelle devrait être mesurée la largeur que chacune des Municipalités devait laisser au canal, nous ne saurions nous prononcer sur le point de savoir si des empiètements out été faits sur la rive gauche de ce cours d'eau.

Mais comme les quais construits sur cette rive sont des œuvres isolées, ils doivent, être regardés comme des empiètements ; ils restreignent dès lors plus ou moins la navigation et peuvent ainsi porter plus ou moins préjudice aux propriétaires riverains établis de l'autre côté du cours d'eau et géneralement a toute personne interessée à sa libre circulation.

Quoi qu'il en soit, nous recommandons que, de part et d'autre, les choses soient laissées dans l'état, mais que les deux Conseils concluent pour l'avenir une convention tenant compte à la fois des besoins de la navagation et de ceux de la circulation des quais, laquelle convention, accompagnée d'un plan, serait soumise a l'approbation de l'autorité chinoise et préciserait, en fixant des points de repère, la largeur à attribuer désormais au Yang-king-pang. Nous recommendons en outre, que toute construction de quai ulteriéure, de chaque côté du canal, soit l'objét d'un accord préalable entre les deux Municipalités.

Ainsi fait et jugé à Shanghai, les jour, mois et an que dessus, et avons signé en double exemplaire la presente sentence arbitrale.

(Signé) E. GODEAUX.
W. H. MEDHURST.

but I do not quite understand whether you have forwarded to M. Godeaux a plan of the Yang-king-pang, with a note merely explaining that plan, or whether you have submitted your side of the question to him. In either case, I think there has been some misapprehension on your part, as to the manner in which the question was to be submitted to the arbitrators.

This Council never contemplated one side forwarding anything in advance of the other, nor to one of the arbitrators alone, but supposed the usual course in such matters would be pursued.

We understood, as will appear from my previous letters, that the two Councils would fix a day upon which they would forward to the joint arbitrators an agreement as to the points to be decided, signed by both parties and accompanied by a statement from each Council of its case; and each Council was to have a copy of the other's statement, and allowed then to send in, if necessary, to the arbitrators, a written reply thereto, and these documents together would constitute the case.

This Council were of the opinion that no arbitrators would entertain a question unless it was put formally before them in this manner, and it was for this purpose that they wrote to ask what day would be convenient to you.

I would respectfully suggest, therefore, that the points as agreed upon be signed by both parties, and forwarded to Messrs. Godeaux and Medhurst, and as I presume your statement has gone in, we will forward ours so soon as we can have it written out, and forward it to those gentlemen. We will send you a copy of it, and I have to request that you will kindly furnish this Council with a copy of what you have already sent in to M. Godeaux.

(Signed) John G. Purdon,
Chairman.

Shanghai, 20th April, 1875.

Sir,—I have much pleasure in handing you copy of the statement of the Council's case, which they propose sending in to the Arbitrators.

The original correspondence between the two Councils, to which reference is therein made, is already in your possession.

(Signed) John G. Purdon,
Chairman,

A. Voisin, Esq.,
Chairman, French Municipal Council.

Shanghai, 20th April, 1875.

Gentlemen,—I forward herewith documents in support of this Council's position in regard to the question now submitted to you for your decision.

From a reference thereto, it will appear that this Council have always protested against the encroachment of the French Council on the South side of the Yang-king-pang (see letters of Dec. 11th, 14th, 27th and 31st, in the pamphlet herewith.)

And it will also be seen that, after a good deal of negotiation, it was agreed at a meeting of the Consular Body to leave the matter to arbitration.

It has ever been the intention of this Council to have this question thus authoritatively settled, but owing to the illness and death of the late Secretary, Mr. Johnston, and the delay in the appointment of his successor, the matter with others was overlooked for the time, but at the first convenient opportunity was again brought up by this Council, and it

The French Council have finally agreed to this course, but have in the meantime admitted that it was an encroachment they had made (see their letter of 13th March, 1875). This Council might have rested the case here, as the fact of an encroachment would be sufficient to justify them in requesting the French Council to rectify it, or failing that, to appeal to the French Consul-Général to decide whether they were not bound to do so. Feeling, however, so secure in their position, and that they would attain the same end through the arbitration, they consented to submit the question in its present form to you.

With regard to the first point, this Council feel confident that it needs no argument to prove that an acknowledged encroachment on a narrow water-course like the Yang-king-pang, is an obstruction to the navigation of the creek.

With regard to the second point, that it is prejudicial to the interests of owners of property along the Creek, as well as the general public, scarcely admits of more doubt. The enclosed copy of letter from the agent of M. A. Cushny, dated 7th December, 1874, as well as that of a number of Ratepayers in the accompanying pamphlet, dated 15th April, 1862, will show with what jealousy the owners of property regarded any scheme narrowing the creek. And, moreover, that such a scheme may easily prove detrimental to the health of the neighbourhood, it is only necessary to instance the detention in consequence of the crowding of night-soil and other nuisance boats.

It is manifest that, if one side can encroach the other can, and this Council have always reserved to themselves the right to carry their bund line as far into the creek as the French Council have theirs, if the latter was allowed to remain.

At the time the land on both sides of the creek was given up by the owners to the public, and the roads formed from it, and the bridges taken over by the two Municipalities, the width of the creek was 50 feet.

If the French encroachment is allowed to remain, the creek is narrowed some 12 to 14 feet, and this Municipality, instead of enjoying the advantage of a water-course 50 feet wide, as was originally intended, will only have that of one 36 to 38 feet, and the French Municipality become possessed of 12 to 14 feet of land to which they are in no wise entitled.

The injustice of this is so apparent that I will not dwell further upon it.

With regard to the third point submitted at the request of the French Council, it will be seen by reference to copies of my letters to M. Voisin of 16th February and 20th March, 1875, that, while this Council not only do not admit any encroachment, but on the contrary as per sketch plan therewith, show that they have given up ground to widen the creek, yet willingly allowed the question to be submitted.

As the French Council have never pointed out to this Council where such encroachments exist, I am at the moment unable to do more than to deny that there are any.

But I must add that, had any such encroachment been made and pointed out to this Council by the French Council, it would have been immediately rectified; but during the whole time that our expensive stone bunding was being formed alongside that Creek, we Council regarding encroachments, never a word of protest against their encroachment was before them.

In conclusion, by the admission of the French Council that they have made the encroachment which was the original cause of complaint by this Council, it becomes unnecessary for me to trouble you with plans showing the width of the creek in 1865, which, however, can be submitted should you require them.

And the questions whether such an encroachment is not an obstruction to the free navigation of the creek, and whether it is not prejudicial to the interests of this community, are ones which this Council confidently leave to your judgment.

(Signed) John G. Purdon,
Chairman.

Shanghai, 21 Avril, 1875.

Monsieur,—J'ai reçu les lettres que vous 20 Avril, m'a fait l'honneur de m'écrire, le 19 et le memoire fourni par le Conseil à son arbitre dans la question d'empiètements sur le Yang-king-pang, et la seconde me mettant en possession de celui remis par le Municipal Council à son arbitre pour la même affaire.

Le Conseil a toujours compris que les arbitres communiqueraient à chaque administration les raisons mises en avant par la partie adverse, et qu'ils ne manqueraient pas, le cas échéant, de faire appel à leurs clients respectifs pour éclairer tout point douteux. C'est donc de son arbitre que le Conseil attendait la communication de ceux des arguments de votre administration qui lui auraient paru devoir provoquer spécialement une réponse.

Toutefois, le Conseil n'a aucune raison pour ne pas intervertir la manière de faire connaître les raisons des deux Municipalités à leurs arbitres, et j'ai, par consequent, l'honneur de vous remettre copie de la note explicative qui a été remise à M. Godeaux.

Veuillez agreér, &a.,
Le Président du Conseil,
(Signé) A. Voisin.

Note explicative pour servir au réglement de la question d'empiètements sur le Yang-king-pang, remise le 16 Avril, 1875, à M. Godeaux, Consul-Général de France.

Extrait de la lettre adressée le 24 Mars, 1875, au Président du Municipal Council par le Président du Conseil Municipal:—

Shanghai, 29th March, 1875.

"Sir,— . . . . . Afin d'obvier à tout malentendu, je vous prie donc, de me permettre presque une redite en énumérant ici les points que le Conseil entend soumettre à la décision des arbitres:—

"1e.—Le construction du quai du Yang-king-pang, entre la rue Discry et la rue Touranne, dans les conditions actuelles est-elle un obstacle à la navigation du Canal?

"2e.—Porte-t-elle préjudice d'une façon réelle aux intérêts des propriétaires riverains?

"3e.—Des empiètements ont-ils été commis par le Municipal Council sur la rive gauche du Yang-king-pang. Dans l'affirmative, ces empiètements sont-ils un obstacle à la navigation du Canal et portent-ils préjudice d'une façon réelle aux intérêts des propriétaires riverains?

"Espérant que les deux administrations se trouveront d'accord pour faire régler, d'un seul coup, par la décision des Arbitres, toute controverse relative à des empiètements sur le Yang-king-pang.

"Je vous prie d'agréer, &c., &c. . . . ."

Lettre du Président du Municipal Council, acceptant les bases de l'arbitrage:—

"Shanghai, 29th March, 1875.

"Sir,— . . . . . I have the honour to acknowledge receipt of your letter of the 24th inst., which was laid before the Board at their meeting this morning.

"The Council, while of the opinion that there are no grounds whatever for supposing that they have made an encroachment on the Creek on this side, but on the contrary, they have voluntarily given up ground to widen it, as explained in my letter of 16th February last, yet, feeling as they do their position in this respect so strong, they do not object to its being made part of the question, if your Council desire it. They, therefore, agree with your Council in understanding the

1st.—Is the Yang-king-pang Bund between the Rue Discry and the Rue Touranne, in its present position, an obstruction to the navigation of the creek?

"2nd.—Does it really prejudice the interests of property owners along the line of the creek?

"3rd.—Have the Municipal Council made encroachments on the North Bank of the Yang-king-pang? If so, are these encroachments an obstruction to the navigation of the creek? And do they really prejudice the interests of property owners?

"The Council suggest that Monday, the 5th April proximo, be the day appointed to submit the question to the arbitrators, and trust this date will be convenient to your Council.

"(Signed) J. G. Purdon,
"*Chairman.*"

Jus qu'à quelle date faut-il remonter et sur quel titre faut-il s'appuyer, pour arriver à la solution des trois points soumis à la décision des arbitres? L'extrait de la lettre suivante du Président du Municipal Council les precise:—

" . . . . . But I may mention here that this Council has already in its possession sufficient evidence to satisfy them that the works complained of constitute a violation of the agreement entered into by the Councils of the two Municipalities in July 1862, and seriously interfere with the traffic of an important public highway.

"I have, therefore, to protest against your action, the immediate consequence of which has been to jeopardise seriously the interest of property holders in this Concession along the banks of the Yang-king-pang.

"On the part of this Municipality, the agreement has been rigidly adhered to, as our plans and surveys will show, and I trust on considering the circumstances of the case, no time will be lost by your Council in restoring the boundaries of the creek. . . . ."

La convention invoquée dans la lettre ci dessus est relatée dans le document suivant:—

Extrait de la Séance du 25 Juillet, 1862.

" . . . . . Communication d'une lettre du Secrétaire du Conseil Municipal de la Concession Anglaise, demandant au Président une entrevue, qui a eu lieu, et dans laquelle ce Secrétaire, organe du Conseil Anglais, a exprimé de désir de conserver au Yang-king-pang une largeur uniforme de 50 pieds ; il a demandé à cet effet le concours du Conseil d'Administration Municipale Française. Cette largeur sera en conséquence établie en prenant le milieu du Canal à marée basse, et laissant 25 pieds du côté Anglais et autant du côte Français.

"Decidé que le Conseil Français concourra de tout son pouvoir à ce but désirable ; et que son Président est chargé de faire connaître cette décision au Conseil Anglais. . . . ."

Les deux Municipalités sont donc engagées par la convention de Juillet 1862, et, c'est à partir de cette date qu'il y a lieu de voir si des empiètements ont été commis par l'une et l'autre Municipalité dans les différents travaux qu'elles ont eu à faire exécuter aux berges du Yang-king-pang. Toutefois, après avoir par lettre du 14 Décembre, 1872, ainsi qu'il a été vu plus haut, requis le Conseil Municipal de s'en tenir aux dispositions de la convention de Juillet 1862, le Municipal Council introduit un autre document et une date antérieure, ainsi qu'il ressort de l'extrait suivant d'une lettre datée 31 Décembre, 1872.

" . . . . . They send you a tracing of the survey made by Mr. Yuell, of the Royal Navy in 1855, by which you will see the width of the creek at that date was 50 to 60 feet. The width shown by this plan at the Honan road, where the encroachment amounts to a stoppage of water traffic, is 60 feet.

"The Council would also observe that the creek has never been surrendered, but still remains a Chinese water course.

"The Council trust, therefore, that the plan now sent will remove any misconception that may have existed, and hope that your Board will discontinue further work until the views of the Taotai are learned. . . . ."

Cette lettre a été écrite, sans doute, dans l'ignorance que la Concession Française n'a été doteé d'un Conseil Municipal qu'en 1862, ainsi qu'il en appert de cet extrait de *la seánce d'installation.*

"L'an 1862, le 30 Avril, Monsieur le Consul Général de France a convoqué au Consulat de France, M.M. les proriétaires d'immeubles sur la Concession Française à l'effet de leur présenter M.M. Buissonnet, Schmidt, Meynard, Maniquet, et Fajard, nommés membres du Conseil d'Administration Municipale par décision consulaire du 29 Avril, pour entrer en fonctions à partir du 1er Mai prochain, lesquels ont accepté ces fonctions et ont été reconnus en leur nouvelle qualité par les propriétaires présents. . . . ."

Ainsi, la Municipalite Française n'est responsable de changements faits au cours du Yang-king-pang, qu'à partir du 30 Avril, 1862, date de son existence, et tous changements faits antérieurement à cette date sont imputables aux différents propriétaires riverains.

En résumant ce qui précéde il se presente tout d'abord :

L'existence d'une convention passée entre les deux municipalités en Juillet, 1862, pour déterminer le cours du Yang-king-pang :

Puis ensuite le reproche de n'y avoir point adhéré, fait à la Municipalité Française par le Municipal Council.

Enfin le consentement des deux Municipalités de faire décider si elles ont commis des empiètements par les travaux qu'elles ont fait exécuter aux berges du Yang-king-pang.

Chairman, Municipal Council, North of the Yang-king-pang.

(Signé) A. VOISIN,
Président du Conseil Municipal.

Shanghai, 21st April, 1875.

Shanghai, 21 Avril, 1875.

MONSIEUR,—Je suis chargé de vous faire remarquer que l'obligation, pour le Conseil, d'accepter la décision des arbitres dans la question d'empiètements sur le Yang-king-pang et les cases sur lesquelles doit porter l'arbitrage sont spécialement formulées dans les lettres du Président, du 13 et du 24 Mars, 1875.

Néanmoins, pour complaire à la requête que vous me transmettez, je vous envoie la pièce que vous m'avez adressée sur laquelle le Président à apposé sa signature.

J'aurai l'honneur de vous envoyer une obligation conçue en Français dans les mêmes termes, et je vous serai obligé de me la retourner après qu'elle aura été signée par le Président du Municipal Council.

Le Sécretaire,
(Signé) H. SAYN.

Sentence Arbitrale rendue dans la question d'empiètements sur le Yang-king-pang.

Lejourd'hui vingt-trois Avril mil huit cent soixante quinze.

Nous, Ernest Godeaux, Consul-Général de France, et W. H. Medhurst, Consul de S. M. Britannique, arbitres chargés par compromis en date du 21 de ce mois, de juger le different pendant entre le Conseil Municipal de la Concession Française et le Conseil Municipal du "Foreign Settlement" au sujet d'empiètements qui auraient été faits sur le Yang-king-pang,

Avons, en présence de M. Vignale, Consul Général d'Italie, choisi par nous comme tiers arbitre, en vertu du droit qui nous en a été reconnu, pour prononcer entre nous en cas de désaccord, rendu notre décision de la manierè suivante :—

Les questions qui nous ont été soumises sont :

1e.—La construction du quai du Yang-king-pang entre les rues Discry et de Touranne, dans les conditions actuelles, est elle un obtacle a la navigation du canal?

2e.—Porte-t-elle préjudice d'une façon réelle aux entérets des propriétaires riverains?

3e. Des empiètements ont-ils été commis par le "Municipal Council" sur la rive gauche du Yang-king-pang ; dans l'affirmative, ces empiètements sont-ils un obstacle à la navigation du canal et portent-ils prejudice d'une façon réelle aux intérêts des propriétaires riverains?

En principe nous sommes d'avis que toute construction isolée qui empiète sur un canal étroit et ordinairement encombré, doit plus ou moins diminuer les facilités de la navigation, si elle n'est exécutée d'après les principes de l'art et conformément à un plan conçu dans le but d'améliorer le cours de cette voie d'eau, et que par suite elle peut porter un préjudice plus ou moins considérable aux interêts des propriétaires riverains établis sur l'autre rive ; nous croyons en outre qu'elle ne devrait pas être entreprise sans l'assentiment de l'autorité territoriale.

Nous disons, en conséquence, en ce qui concerne les questions No. 1 & 2, que si, dans son état actuel, le quai du Yang-king-pang, entre les rues Discry et de Touranne, empiète sur les rives primitives du canal, il en restreint plus ou moins la navigation, et que par suite ce quai peut être plus ou moins préjudiciable aux propriétaires riverains établis de l'autre côté du cours d'eau, et généralement à toute personne intéressée à sa libre circulation.

Quant à la troisième question, en l'absence de tout moyen de vérifier la largeur primitive du Yang-king-pang, et à defaut du texte de la convention qui serait intervenue en 1862 entre les deux Conseils Municipaux, de même que d'un plan fixant la ligne intermediaire à partir de laquelle devrait être mesurée la largeur que chacune des Municipalités devait laisser au canal, nous ne saurions nous prononcer sur le point de savoir si des empiètements out été faits sur la rive gauche de ce cours d'eau.

Mais comme les quais construits sur cette rive sont des œuvres isolées, ils doivent, être regardés comme des empiètements ; ils restreignent dès lors plus ou moins la navigation et peuvent ainsi porter plus ou moins préjudice aux propriétaires riverains etablis de l'autre côté du cours d'eau et géneralement a toute personne interessée à sa libre circulation.

Quoi qu'il en soit, nous recommandons que, de part et d'autre, les choses soient laissées dans l'état, mais que les deux Conseils concluent pour l'avenir une convention tenant compte à la fois des besoins de la navagation et de ceux de la circulation des quais, laquelle convention, accompagnée d'un plan, serait soumise a l'approbation de l'autorité chinoise et préciserait, en fixant des points de repère, la largeur à attribuer désormais au Yang-king-pang. Nous recommendons en outre, que toute construction de quai ulteriéure, de chaque côté du canal, soit l'objét d'un accord préalable entre les deux Municipalités.

Ainsi fait et jugé à Shanghai, les jour, mois et an que dessus, et avons signé en double exemplaire la presente sentence arbitrale.

(Signé) E. GODEAUX.
W. H. MEDHURST.

Amusements.

THE SHANGHAI RACES.

Stewards:—C. J. King, Esq., F. D. Hitch, Esq., R. Fergusson, Esq., E. G. Low, Esq., F. H. Bell, Esq., A. McLeod, Esq., J. Hart, Esq.

Barnes Dallas, Esq., *Clerk of the Course.*

First Day.

Monday, 3rd May, 1875.

This, the first day of our Spring Meeting, was favoured with most enjoyable weather, the first requirement of out-door sports. The morning broke dull and half-clouded, but with a mild and healthful breeze. As the day wore on, the sky became more overcast, but towards noon the weather brightened up somewhat, and although Sol was merciful, and never burst out with the unpleasant heat sometimes felt even at this early season, there was sufficient brightness to make things cheerful.

The Grand Stand presented a pretty and animated appearance, having never been more numerously attended, the ladies' balcony especially attracting attention, from the number of its fair occupants and the brilliancy of their costumes; while, to make matters still more pleasant, the Race Club Stewards with tasteful forethought, had provided a liberal supply of flowers and shrubs, though in the way of decoration the Stand is susceptible of still greater improvement. The absence of music was much deplored, remembrance of the bands of the *Iron Duke* and *Hartford* being strong in the minds of those who were present at our last Autumn Meeting.

The recent fine weather caused the course to be dry and hard, as was evident from the clouds of dust raised by the competitors in each race; and this, no doubt, while adding to the pace, left the real staying powers of some of the ponies an open question. It is one thing to gallop over a hard and even surface, and another to be forced at racing pace through mud, perhaps fetlock deep. It will be seen from the return appended, that the time in which some of the races were run is given as "the fastest on record;" the reason will be found in the foregoing remarks; and we must wait a little longer before conceding the belief that the China pony will be, even by the law of evolution and an increase in the length of his vertebræ and the number of his pairs of ribs, ever able to compete comparatively with his brother the horse. However, horses are not in China, and the ponies are very fleet; but we must wait for the mud of Autumn before even *Teen Kwang* can be ~~cote—the fleetest han mirel. Did taker. altogathar, the sport to-day was deceptive~~ in more senses than one. Not only was the course hard and unpleasant, but several of the races proved, as a learned friend observed, "mere hunts," the winning pony being so far ahead as to render pursuit hopeless by sight, and in one instance nearly by scent, supposing such a quality to exist among the other excellencies of the China pony. The racing throughout, however, did not fail in interest; and the success of the various winners was the signal for plaudits that reminded newcomers especially of Epsom Downs or Newmarket Heath.

The first saddling bell rang soon after noon, and although at that time there were hardly a score of persons in the neighbourhood of the Grand Stand, yet before the flag was lowered for the start, a large concourse had assembled, and vehicles of all kinds, from the aristocratic pair to the imitation buck-basket, filled the enclosure and overflowed outside. It is superfluous to mention jinrikshas and wheelbarrows,—they are everywhere, and yesterday appeared to be extensively patronised. Spectators on foot, too, assembled in large numbers; and the course was fringed with Chinese, whose number can only be set down as legion. As far as outside attendance goes, the total must be given as greater than ever; which of course shows an increasing interest in the sport even among our Celestial acquaintances. After *Teen Kwang* had disposed of the Griffins' Plate, an interval of three-quarters of an hour was allowed for tiffin. The Race Club, as aforetime, issued an invite to their lady visitors and their friends, and in the Committee room at the back of the Grand Stand they each day found a capital spread, laid out by Mr. Williams of the Shanghai Club. In a tent not far distant, tiffin was also served for the guests of the Shanghai Club, and lighter refreshments were to be had within the basement of the Stand itself.

We ought not to omit to mention that among the occupants of the Grand Stand to-day were Admiral Ryder, Captain Buller, and a number of officers from the different British, American, and other ships in port, and some visitors from the Outports.

The Belle Vue Stand was fully occupied, as were also some other temporary stands erected at intervals on the margin of the Course.

Subjoined is a report of the racing:—

1.—Chu-Ka-Za Cup.—Value, Tls. 75.—For China Ponies only.—Weight for inches as per scale.—Entrance, Tls. 5.—*Half-a-Mile.*

Mr. O'Leary's chesnut *Ravenscote* 10st 8lb.. 1
,, Ten Broeck's grey *Wild Oats* 10st 5lb. 2
The Fhairshon's grey *Ghillie* 10st 0lb..... 3
Mr. Rheubrick's white *Toryboy* 10st 8lb ... 0
,, John Peel's cream *Hughie Graham* 10st 8lb 0
,, Kushan's grey *Caractacus* 10st 6lb..... 0
,, D. Brand's grey *Andante* 11st 4lb 0

For this, the first spin of the meeting, seven out of thirteen entrants came to the post, at 12.15, *Wild Oats* being favourite against the field, though at small odds. After two false starts, the lot got away with almost the regularity of a rank, but it was in a few strides apparent that *Ravenscote* was breaking away from the rest. He soon showed clearly in front, and set the pace so strong that a tail occurred, *Wild Oats* running second, and *Ghillie* third. Rounding the turn into the straight run home, *Wild Oats* drew on *Ravenscote*, but failed to head him, and he ran in a winner by about a length, three lengths between second and third. Time, 57 secs., being the fastest, we believe, on record for any half-mile race at Shanghai.

2.—The Criterion Stakes.—A Sweepstakes of Tls. 15 each, with Tls. 100 added.—For all China Ponies.—Weight for inches as per scale.—Second Pony to save his Stakes.—*One-Mile.*

Mr. O'Leary's grey *Ravenshoe* 10st 5lb 1
,, Zirom's grey *Gladiateur* 10st 11lb 2
,, Foh-kieu's grey *Benachie* 10st 8lb 3
,, Voisin's grey *Flageolet* 10st 5lb 0
,, Rheubrick's grey *Grindstone* 10st 11lb. 0
,, Ten Broeck's grey *Sinecure* 10st 11lb... 0

A comparatively small field came to the post for this race also—six out of seventeen entrants, but they were a very pretty lot, *Ravenshoe* having the preference of opinion, however, and showing very game on leaving the paddock, and also at the post. *Gladiateur* was also in good form, and looked a likely runner, though some preferred *Flageolet* to him. They got off well together, *Benachie* with a slight lead at the rails, *Gladiateur* getting away second, the favourite being fourth. In this order they continued until reaching the ¾-mile post, when *Flageolet* assumed the lead, *Benachie* dropping into third place. *Ravenshoe*, however, now began to show his fine condition, and at the half-mile post was in the second place, and pressing the leader hard. A pretty race ensued between the two, and at the Monument, *Ravenshoe* challenging *Flageolet* the tug of war commenced, resulting in a few strides in the light blue showing in front and putting on the steam vigorously. The black-and-white was equally plucky, but was unable to regain his lost advantage, while opposite Belle Vue, *Gladiateur*, passing both *Benachie* and *Flageolet*, began to press on the leader, whom, however, he was unable to overhaul, *Ravenshoe* going past the post an easy winner by a length. The others were beaten off. Time—2m. 9s.

3.—Griffins' Plate.—Value, Tls. 250.—Second Pony, Tls. 50; last Pony to pay third Pony's entrance.—For China Ponies that have never run at any meeting in China or Hongkong.—Weight for inches as per scale.—Entrance, Tls. 5.—*Three-quarters of a Mile.*

Mr. Seer's grey *Teen Kwang* 10st 5lb..... 1
,, Morriss' white *Shawandasee* 10st 5lb... 2
,, Zirom's grey *Favori* 10st 5lb..... 3
,, Fungus' grey *Flambeau* 10st 5lb..... 0
,, Foh-kien's grey *Argument* 10st 8lb..... 0
,, Kebrevo's grey *Volnay* 10st 8lb 0
,, Jos. Dawson's grey *Piastre* 10st 11lb... 0
,, Rheubrick's grey *Bonito* 10st 8lb 0
,, Bill's dun *Sea King* 10st 8lb 0
,, Do. grey *Sea Foam* 10st 5lb 0
,, Do. bay *Sea Swallow* 10st 2lb 0
Lord Nosoooze's grey *Retrenchment* 10st 8lb. 0
Mr. Hinckley's chesnut *Choctaw* 10st 5lb... 0
,, John Peel's grey *Duncan Gray* 10st 5lb. 0
,, Godolphin's black *Black Thorn* 10st 6lb. 0
,, Sach's grey *Daümling* 9st 13lb 0
,, Drakcir's grey *Radical* 10st 11lb..... 0

This, the test race of all new comers, proved a complete fraud as far as racing was concerned. The lot got off, after some little rearrangement, at the first attempt, *Teen Kwang* almost immediately showing in front, followed by *Favori*, the rest in a troop. The leader increased his distance in the easiest manner possible, until he had placed several lengths between himself and his pursuers, when on nearing the Monument his rider steadied him down into the quietest of gallops. On entering the straight, the gallop became a canter, and all interest in the race was over. *Favori* was hereabout challenged by *Shawandasee*, and quickly yielded second favours. In this order the winning post was reached, the rest coming on in a ruck, the victor being greeted with loud plaudits. Time, 1.30, being again the fastest pace on record.

4.—The Jockey Cup.—Value, Tls. 100.—For all China Ponies that have never won a Race anywhere previous to this meeting.—To be ridden by Jockeys who have never had a winning mount before this Meeting.—Weight, 11st.—Entrance, Tls. 5.—*Once round.*

Mr. Hinckley's chesnut *Choctaw* 1
,, Kushan's grey *Sceptic*..... 2
,, Zirom's grey *Mignon* 3
,, Kebrevo's white *Weisslack*..... 0
.. Troy's grey *Martin Forster* 0
,, Rheubrick's black *Black Rod* 0
,, Mustard's spotted *Scrambler*..... 0
,, Godolphin's grey *Pendarves* 0
,, Sach's chesnut *Blitz*..... 0

The lot got away at the first attempt, *Pendarves* with a slight lead, *Scrambler* next, but all close together, *Sceptic* being last and hard held. There was little or no change, except in the ruck, until nearing Probst's Garden, where *Choctaw* began to show a strong disposition to challenge *Pendarves'* right to first place, deposing him at the Widow's Monument, *Pendarves* gamely striving to regain his lost honours, but fruitlessly; for, on entering the straight, both *Mignon* and *Sceptic*, both of whom had gradually improved their position, came on with rapid strides, and, close to Bellevue, both passed the favourite, when a pretty race ensued for second place. *Choctaw* maintained his lead, and won

easily by five lengths; *Sceptic* beating *Mignon* by about half a length for second place. *Pendarves* fourth. Time, 2min. 45secs.

5.—THE VISITORS' CUP.—Value, $355.—Presented by the Visitors to Shanghai.—For all China Ponies.—Weight for inches as per scale.—Entrance, Tls. 5.—*Two Miles and a Half.*

Mr. Zirom's grey *Gladiateur* 10st 11lb 1
,, Rheubrick's grey *Furore* 10st 8lb 2
,, Blackridge's grey *Oceola* 10st 5lb 3
,, Forbes' grey *Galopin* 10st 2lb 0
,, Jos. Dawson's grey *Sequin* 10st 8lb ... 0
,, Voisin's cream *Tourterelle* 9st 13lb..... 0
,, Bill's grey *Seamew* 11st..... 0
,, Fhairshon's skewbald *Dhuiné Wassail* 10st 8lb 0

Out of twenty entrants, eight put in an appearance at the post, and in obedience to the fall of the starter's flag, all went off at a fast pace, *Gladiateur* and *Sequin* in front, *Furore* third, the rest well up, with *Dhuiné Wassail* last. Nearly in this order they approached Probst's Garden, *Oceola* being fourth. The pace now slackened somewhat, and all drew pretty close together, the positions of the leading ponies being, however, unchanged. The Monument was passed in the same order, but at the straight *Furore* galloped up close to *Sequin*, and passed the Stand nearly neck and neck with him, *Gladiateur* being still well in front. Very slight change was apparent as the ponies passed the Stables, and it was not until the Gardens were reached in the second round that the winner could with any approach to certainty be selected. *Gladiateur* and *Furore* then came away from the rest, and on entering the straight, the former was seen to be winning easily, jockey hands down, and using neither whip nor spur. Nearing the Monument, *Sequin* gave way to *Oceola* for third place, and so the race ended. Time, 5m. 50½s.

6.—THE GERMAN CUP.—Value, Tls. 400.—Presented by the German Community.—For all China Ponies.—Weight for inches as per scale.—Winners at this Meeting, 7lbs. extra.—Entrance, Tls. 10.—*One Mile and a Quarter.*

Mr. Morriss' white *Shawandasee* 10st 5lb... 1
,, Zirom's grey *Favori* 10st 8lb 2
,, O'Leary's grey *Ravenshoe* 10st 12lb ... 3
,, Foh-kien's grey *Benachie* 10st 8lb 0
,, Kebrevo's grey *Volnay* 10st 8lb 0
,, Major's grey *Silver Eagle* 10st 11lb ... 0
,, Rheubrick's grey *Bonito* 10st 8lb 0
,, Ten Broeck's grey *Alone* 10st 5lb 0
,, Gore's grey *Caprice* 10st 6lb..... 0

This was decidedly the best race of the day so far. The stud got off well together, *Benachie* leading, closely waited on by *Furore* and *Shawandasee*, *Bonito* fourth and *Ravenshoe* fifth. The pace was very fast, and opposite the Stand *Bonito* ran into second place. Passing the Gardens the same positions were maintained, and until coming into the straight, when some excitement was caused by seeing *Shawandasee* and *Ravenshoe* answering the call of their jockeys in such a manner as to render the result extremely doubtful. Nearing Bellevue, *Shawandasee* ran into first place, but *Ravenshoe*, although making a gallant effort, was unable to wrest second honours from *Favori*, and finished a good third, though carrying 7lbs. extra as a previous winner; the rest were well up. Time, 2m. 44s.

7.—THE MEMBERS' PLATE.—Value, Tls. 79.—Presented by several Members of the Shanghai Race Club.—For all China Ponies not otherwise entered at this Meeting, and that have never won a race.—Weight, 10st. 7lbs.—Entrance, Tls. 5.—*One Mile and a Half.*

Mr. Field's white *Crumbs*..... 1
,, Troy's grey *Sir Wm. Wallace* 2
,, Bill's grey *Sea Bird* 3
,, John Peel's grey *Tam O'Shanter*..... 0
,, Zirom's brown *Le Pauvre Diable*..... 0
,, Ring's grey *Feemah* 0

This was by no means an extraordinary race, but nevertheless afforded an opportunity of showing what some ponies can do when not held too long. The lot were started in a cluster, *Tam O'Shanter* slightly in front, with *Le Pauvre Diable* in close attendance. At the three quarter mile post, his impoverished majesty, mending his pace, ran into first place, and soon afterwards *Crumbs* also went into second. At Probst's Garden the lot were pretty well together, but on passing the Monument, *Crumbs* assumed the lead, and increasing it won easily hands down by at least four lengths. *Sir William Wallace* had in the meantime run through his horses and become second, while *Sea Bird* making a strenuous effort, which however, came too late, was a good third. Time, 3m. 24½s.

THE HUNT HANDICAP.—Value, $200.—*Twice round the Steeplechase Course.*

Light Brigade 1
Southdown..... 0
Gameboy 0
Spondulick 0
Schwalbe 0
Petit Maitre 0
Maloo..... 0
Cekko 0
Sea Horse 0

The Steeplechase admits of no description. It was a hollow affair throughout, and much fun was caused by the refusals of the ponies to take their jumps, and, in some instances, the consequent unseating of the riders.

Taken as a whole, the afternoon's sport was successful, and it was brought to a conclusion at about half-past five o'clock; soon after which hour the Stand and Course were left to their normal solitude.

SECOND DAY.

Tuesday, 4th May, 1875.

The weather to-day was delightful, though in the open the sun was rather oppressive, but in the shaded balcony of the Grand Stand a grateful breeze played with a refreshing coolness. There were, however, fewer visitors than on the previous day. The number of outside spectators had also diminished, but when it is remembered that the Meeting extends to four days, including the "off day"—generally the most enjoyable of the quartette to sporting men—the fallling-off in this respect cannot be wondered at.

Despite watering in the morning, the course was, if possible, harder than yesterday, and the inevitable result was that several of the races were a foregone conclusion, notably the half and three quarter mile for *Ravenshoe* and the mile and a half for *Teen Kwang*. The Derby pace was, as we are assured by a competent remembrancer, within 28 seconds of the time in which the first Derby was run, and thus speaks well for the fleetness and endurance of the China pony, more especially when it is remembered that the weight is 28 lbs. greater than at Epsom. Respecting the other races, there is little to notice beyond what appears in the description of each; but it is satisfactory to record, however, that two slight differences which occurred unavoidably, were decided by the Stewards in an amicable manner.

As will be seen below, the Engineers' Challenge Cup, the first in Shanghai, led to a capital race,—in fact it was the really exciting race of the meeting.

Appended is a return of the day's sport:—

1.—THE SHANGHAI CUP.—Value, Tls. 75.—For all China Ponies.—Weight for inches as per scale.—Winners of *one race* in China or Hongkong since 1st October, 1874, 7lbs. extra; *two or more races*, 10lbs. extra.—Entrance, Tls. 5.—*Half-a-Mile.*

Mr. O'Leary's chesnut *Ravenscote* 11st 4lb.. 1
,, Ten Broeck's grey *Wild Oats* 10st 5lb. 2
,, Voisin's grey *Flageolet* 10st 12lb..... 3
,, John Peel's cream *Hughie Graham* 10st 10lb..... 0
,, Drakeir's grey *Radical* 10st 12lb..... 0
The Fhairshon's grey *Ghillie* 10st 8lb..... 0

Ravenscote and *Wild Oats* started favourites, the 7-lbs. penalty upon *Ravenscote* being thought in some degree to militate against his chance of winning. After two attempts, the ponies got away to a capital start, *Ravenscote* slightly in front, *Wild Oats* second, closely attended by *Flageolet*, *Hughie Graham*, and the others. On coming into the straight, the light blue was next the rails, and so far in front as to have the race clearly in hand, although *Wild Oats*, in the centre of the course, seemed determined the race should not be lost without an effort. The winner, however, increased his lead, and passed the post easily some five or six lengths ahead. Time, 57s., the same as in the half-a-mile spurt yesterday.

2.—THE SHANGHAI DERBY.—A Sweepstakes of Tls. 15 each, with Tls. 100 added.—For all China Ponies being *bonâ fide* Griffins at date of entry.—First Pony to receive 75 per cent., second Pony, 15 per cent.; third Pony, 10 per cent.—Weight, 10st. 7lbs.—*One Mile and a Half.*

Mr. Seer's grey *Teen Kwang* 1
,, Zirom's grey *Favori* 2
,, Do. grey *Gladiateur* 3
,, Fohkien's grey *Argument*..... .. 0
,, Kebrevo's grey *Volnay* 0
,, Major's grey *Silver Eagle* 0
,, Troy's grey *Martin Forster* 0
,, Jos. Dawson's grey *Louis d'Or*..... 0
,, Morriss' white *Shawandasee*..... 0
,, Rheubrick's grey *Bonito* 0
,, Bill's grey *Sea Foam* 10st 7lb 0
Lord Noseooze's grey *Retrenchment*... 0
Mr. Hinckley's chesnut *Choctaw*..... 0
,, Granite's dun *Stone Crusher*..... 0

Gladiateur and *Favori* started best to win, the former carrying 1-lb. extra. *Choctaw* had also a pound additional, while *Louis d'Or* carried 3-lbs. and *Sea Foam* 2-lbs. overweight. *Teen Kwang*, after his performance yesterday over the three-quarter mile, was of course favourite, *Shawandasee*, also finding considerable favour; the field nevertheless meeting backers at 2/1. After three attempts, the lot went away at pretty even distance, and on entering the straight, *Louis d'Or* was slightly in front, *Gladiateur* second, *Shawandasee* third, something undistinguishable fourth, and the favourite fifth. They passed the Grand Stand in this order, but on nearing the stables, *Teen Kwang* was evidently dissatisfied with his place, and making a rush, went into the front rank. *Gladiateur* and *Favori* accepted the challenge, and the favourite was at present unable to do more than pass into second position. *Gladiateur* fourth. At the far side, the pace began to mend, and *Teen Kwang* drew into first place, *Favori* wresting the second honours from *Gladiateur*, the rest beginning to tail alarmingly, *Bonito* and *Shawandasee* heading the ruck. At Probst's Garden, *Teen Kwang* began to obtain a clear lead, a position he still further improved at the Monument, while the second place was disputed gamely by *Gladiateur* and *Favori*, the latter giving way until reaching the straight run, where he again collared *Gladiateur*, and pressed the leader so hard that he seemed likely to win. *Teen Kwang*, however, increased his distance, and won by about four lengths; two lengths between second and third. *Bonito* fourth, and *Shawandasee* fifth. Time, 3m. 11½s.

3.—THE MERCHANTS' CUP.—Value, Tls. 155.—Presented by the Merchants of Shanghai.—For China Ponies only.—Winners in Hongkong or Shanghai, at or since the Autumn Meeting, 1874,

5lbs. extra for each race won.—Weight for inches as per scale.—Entrance, Tls. 5.—*Three quarters of a Mile.*

Mr. Ten Broeck's grey *Wild Oats* 10st 5lb... 1
,, D. Brand's grey *Andante* 11st 2lb..... 2
,, Voisin's grey *Flageolet* 10st 10lb..... 0
,, O'Leary's grey *Ravenshoe* 11st 11lb... 0
,, Rheubrick's white *Toryboy* 10st 8lb... 0
,, Bill's dun *Sea King* 11st 0lb..... 0
,, Mustard's spotted *Scrambler* 10st 8lb... 0
,, Sach's chesnut *Blitz* 10st 5lb..... 0

As usual in a short spurt, some little trouble was experienced in getting the ponies in order at the post, and it was not until the third attempt that they got off, *Ravenshoe* slightly leading, with *Wild Oats* and *Flageolet* close up, the others in a cluster, *Sea King* last. In this order they passed the Garden, but on approaching the Monument *Wild Oats* assumed the lead, *Ravenshoe* dropping slightly behind. Rounding the turn into the straight there was no change, but here the real interest of the race began, for *Andante* was seen coming up at a fast pace, and seemed likely for a few moments to pass the leading pair. *Ravenshoe*, however, quickly recovered his lost position, and again coming to the front, an exciting race ensued between the three, which ended in *Ravenshoe* passing the judge's chair by a short length in front of *Wild Oats*, *Andante* about a length and a half behind the second. On returning to weigh, however, it was found that *Ravenshoe's* jockey, owing to some oversight, could not scale, and on the matter being referred to the Stewards, they adjudged the race to *Wild Oats*. It was also said that *Wild Oats* did not return to the paddock to unsaddle, but this was overruled. Time, 1m. 32½s.

4.—The Engineers' Challenge Cup.—Value, Tls. 500.—Presented by the Engineers of Shanghai.—For all China Ponies.—Weight for inches as per scale.—To be won two consecutive Meetings by a Pony or Ponies, the *bonâ fide* property of the same owner.—Entrance, Tls. 10; to be paid to the winner until the Cup is finally won.—*One Mile and a Quarter.*

Mr. O'Leary's grey *Ravenshoe* 10st 8lb 1
,, Morriss' white *Shawandasee* 10st 5lb .. 2
,, Fohkien's grey *Argument* 10st 8lb 0
,, Jos. Dawson's grey *Louis d'Or* 10st 11lb. 0
,, Rheubrick's grey *Grindstone* 10st 11lb. 0
,, do. grey *Furore* 10st 9lb 0
,, Ten Broeck's grey *Sinecure* 10st 11lb... 0
,, Zirom's grey *Favori* 10st 5lb 0

For this, the first Engineers' Cup ran for in Shanghai, a small but capital field came to the post, including some of the cracks of the meeting. *Furore* went off with the lead, *Favori* second, and *Ravenshoe* third, all quite close, and the rest very near. On the far side, opposite the line, but shortly afterwards *Ravenshoe* showed in front. Approaching the Garden, *Favori* and *Ravenshoe* were racing together; but between this point and the Monument, the tail was great, *Shawandasee*, however, running into third place. From this time it was clear that the race lay between *Ravenshoe* and *Favori*, and a gallant struggle ensued between the two. On entering the straight it was difficult to tell with accuracy which was leading, but when nearly opposite Belle Vue, *Favori* was slightly in front, and the pair raced side by side, but so close that they cannoned. At the finish, *Favori* was ahead by a neck, *Shawandasee* third. The rider of *Ravenshoe*, however, claimed on a foul. The Stewards afterwards investigated the matter, and after hearing evidence on both sides, decided that the claim was sustained, that *Favori* was disqualified, and that *Shawandasee* should take second place. The excellent riding of *Favori's* jockey was, nevertheless, the theme of much praise on the course. Time, 2m. 44s.

5.—The Race Club Cup.—Value, Tls. 150.—For all China Ponies.—Weight for inches as per scale.—Winners at this Meeting of a Race of one mile or under, to carry 3lbs. extra; of over a mile, 7lbs. extra—penalties not accumulative.—Entrance, Tls. 5.—*Two Miles.*

Mr. Zirom's grey *Gladiateur* 10st 11lb 1
,, Granite's dun *Stone Crusher* 10st 5lb... 2
,, Gore's grey *Caprice* 10st 8lb..... 3
,, Rheubrick's grey *Holy Friar* 10st 11lb 0
,, Bill's grey *Seamew* 11st 2lb 0
,, Hooper's grey *Strathmore* 11st 0lb..... 0
The Fhairshon's skewbald *Dhuiné Wassail* 10st 8lb 0

Gladiateur went away with a slight lead, with *Dhuiné Wassail* second, *Seamew* third, and *Strathmore* fourth, the others tailing, *Stone Crusher* being last. This order was kept nearly the first time round, although near the Monument, *Dhuiné Wassail* drew on *Gladiateur*, and raced with him for some distance, while *Stone Crusher* and *Caprice* putting on steam, began to lessen distance most materially. Nothing more occurred worthy of notice until entering the straight for the finish, when *Gladiateur* still in front, began to push for home, and *Caprice* raced *Stone Crusher* for second place, a capital struggle ensuing, which resulted in favour of *Stone Crusher*. It was all through a safe race for *Gladiateur*. Time, 4m. 34½s.

6.—The Tsatlee Cup.—Value, Tls. 60.—Presented by some of the Silk Inspectors of Shanghai, added to a Sweepstakes of Tls. 10 each.—For all China Ponies that have never won a race at or prior to this Meeting.—Weight, 11st. for 13 hands; to give or take 6lbs. for every inch under or over.—The winner to pay Tls. 50 to the fund.—*One Mile.*

Mr. Zirom's grey *Mignon* 11st 0lb 1
,, Fungus' grey *Flambeau* 11st 0lb..... 2
,, Rheubrick's grey *Bonito* 11st 6lb..... 3
,, Forbes' grey *Galopin* 10st 8lb 0
,, Kebrevo's grey *Volnay* 11st 6lb 0
,, Troy's black *Roland Cashel* 11st 12lb... 0
,, Troy's grey *Martin Forster* 11st 6lb ... 0
,, Voisin's skewbald *Pastel* 10st 8lb 0
,, Rheubrick's black *Black Rod* 11st 12lb 0
,, Bill's bay *Sea Swallow* 10st 10lb..... 0
,, John Peel's spotted *Aiken Drum* 11st 0lb 0
,, Godolphin's black *Black Thorn* 11st 0lb 0
,, Sach's grey *Daümling* 10st 2lb..... 0
The Fhairshon's grey *Ghillie* 11st 0lb..... 0

The field of fourteen non-winners that started for this race made a very pretty sight at the post, but as might had been expected, there was little or no speculation as to the result, *Black Thorn* being, however, favorite. At starting he took the lead, but the race was anywhere until entering the straight, when *Flambeau*, who had taken the lead from *Black Thorn*, had to give place to *Mignon* opposite the Grand Stand, and beaten by about a length and-a-half. *Bonito* finishing third. Time, 2m. 10s.

7.—The Hurdle Race.—A Sweepstakes for Tls. 10 each, with Tls. 100 added.—For all China Ponies.—Four Ponies to start, from *bonâ fide* opposing stables, or no race.—Weight for inches as per scale, with 7lbs. extra.—To be run on the inside Course, over eight flights of hurdles.—*About One Mile and a Quarter.*

Mr. Hochstroem's dun *Schwalbe* 11st 4lb... 1
,, Rheubrick's grey *Light Brigade* 11st 12lb. 2
,, Morriss' chesnut *Greenhorn* 11st 11lb ... 0
,, Rheubrick's grey *Furore* 11st 11lb 0
,, Bill's grey *Sea Bird* 11st 11lb 0
,, Hinckley's chesnut *Choctaw* 10st 12lb. 0

The hurdle race, like the Hunt Handicap of yesterday, admits of but little description. *Furore* and *Light Brigade* went away first, though with but a slight lead; but at the first hurdles it was apparent that refusals would be more plentiful than jumps, and so the result proved. There was in fact, no race, except between *Schwalbe* and *Light Brigade* towards the finish, and that resulted in a comparatively easy win for *Schwalbe*, the rest straggling about the course.

This brought the second day's programme to a finish, at about six o'clock, and the Course was speedily cleared of its visitors.

Third Day,

Wednesday, 5th May, 1875.

The sport to-day presented several features of less interest than yesterday and the previous day. At the commencement, the weather was dull, and throughout the afternoon the company on the Grand Stand and the number of outside spectators were much fewer than on the former days. The events on the card were the same in number, but interest had evidently waned; and there is really nothing special to notice in the programme of the afternoon's sport, for the simple reason that the entries included only the ponies whose prowess had been tried on the previous two days, and whose capabilities were therefore pretty well known.

Shortly after noon, the bell rang for

1.—The Great Northern Handicap.—Value, Tls. 150.—A Handicap for all China Ponies that have run at this Meeting.—To be handicapped by the Stewards after the Second Day's Races.—Entrance, Tls. 10.—*One Mile and a Half.*

Mr. Hinckley's chestnut *Choctaw* 10st 10lb. 1
,, Gore's grey *Caprice* 10st 7lb..... 2
,, Blackridge's grey *Oceola* 3
,, Voisin's cream *Tourterelle* 10st 11lb..... 0
,, Kushan's grey *Sceptic* 10st 3lb..... 0

Choctaw was favourite at starting, with *Caprice* and *Oceola* for place. On passing the Grand Stand, *Tourterelle* was in front, *Choctaw* second, *Sceptic* third, *Oceola* fourth, and *Caprice* last. There was no change until approaching the Garden, when *Sceptic* fell back, and *Choctaw* drawing on *Tourterelle*, the pair raced together past the Monument, but on entering the straight *Choctaw* came away and won easily by several lengths. *Caprice* finished second, with some unnecessary flogging, and *Oceola* third. Time, 3m. 21½s.

2.—The Taotai's Cup.—Value, Tls. 75.—Presented by H. E. the Taotai.—For all China Ponies.—Weight, 12st.—Entrance, Tls. 5.—*One Mile.*

Mr. D. Brand's grey *Andante* 1
,, Godolphin's grey *Pendarves* 2
,, Bill's dun *Sea King* 3
,, Kebrevo's white *Weisslack* 0
,, Rheubrick's grey *Furore* 0
,, Do. grey *Grindstone* 0
,, Hooper's grey *Strathmore*..... 0
,, Kushan's grey *Caractacus*..... 0

Weisslack carried 13st. 9lb., and *Andante* 12st. 6lb. Very little description suffices for this race. After a couple of attempts, *Caractacus* went away with a slight lead, the rest in a cluster. *Andante* shortly showed in front, followed by *Pendarves*, *Sea King* soon after taking third place. On entering the straight, the same order was maintained, *Andante* passing the post two lengths in front, *Pendarves* finishing in front of *Sea King* by about the same distance, *Strathmore* last. Time, 2m. 16s.

3.—The Ladies' Purse.—Value, £33.—For all China Ponies.—Weight for inches as per scale.—Entrance, Tls. 5.—*Three-quarters of a Mile.*

Mr. O'Leary's chesnut *Ravenscote* 10st 11lb 1
,, Zirom's grey *Mignon* 10st 5lb 2
,, Ten Broeck's grey *Wild Oats* 10st 8lb.. 3
,, Jos. Dawson's grey *Louis d'Or* 10st 8lb 0
,, Morriss' white *Shawandasee* 10st 5lb... 0
,, Seer's black *Pepin* 10st 13lb..... 0
,, John Peel's spotted *Aiken Drum* 10st 5lb 0
,, Granite's grey *Pulveriser* 10st 8lb 0
Graf v. Luxemburg's grey *Blücher* 10st 10lb 0
The Fhairshon's grey *Ghillie* 10st 5lb..... 0

This race afforded very little sport, being almost a foregone conclusion for *Ravenscote*, who, after two false starts, went away with the lead; *Ghillie* second, and *Pepin* third. Between the half-mile and the Garden, the position was almost unchanged; but on entering the straight, *Mignon* passed *Ghillie*, who shortly afterwards gave place to *Wild Oats*, *Ghillie* being beaten off. *Ravenscote* was never headed, and won easily by three or four lengths, the rest nowhere. Time, 1m. 32s.

At the termination of the race, the Purse was presented to the winner by Miss Smith, who, as representing the ladies' of Shanghai, congratulated the winner on his success, and expressed the pleasure she felt at being deputed to make the presentation; hoping that on many future occasions a similar pleasure would be felt by other ladies.—Mr. Waller briefly but suitably responded, thanking the ladies of Shanghai, not only for himself, but also on behalf of the Race Club and Stewards of the Meeting for the interest they had evinced in the races. He concluded by presenting Miss Smith with a superb bouquet.

4.—THE BROKERS' CUP.—Value, $160.—Presented by the Brokers of Shanghai, added to a Sweepstakes of Tls. 5 each.—For all China Ponies, Griffins at date of entry.—Weight for inches as per scale.—*Two Miles.*

Mr.	Zirom's grey *Gladiateur* 13st 2lb	1
,,	Granite's dun *Stone Crusher* 10st 8lb	2
,,	Bill's bay *Sea Swallow* 10st 6lb	3
,,	Hooper's grey *Strathmore* 10st 11lb	0
,,	Forbe's grey *Galopin* 10st 9lb	0
,,	Fungus' grey *Flambeau* 10st 5lb	0
,,	Troy's grey *Martin Forster* 10st 9lb	0
,,	Jos. Dawson's grey *Louis-d'Or* 10st 9lb	0
,,	Bill's grey *Sea Foam* 10st 12lb	0
,,	Sach's grey *Daümling* 9st 13lb	0

Starting in a cluster, there was no perceptible change until coming to the turn into the straight, when *Gladiateur* showed in front, followed by *Daümling*, with *Flambeau* third. No effort was made until approaching the Monument the second time, when *Stone Crusher* and *Sea Swallow* went into second and third places. The race was now virtually over, for the two raced away from the others, *Gladiateur* winning by a length and-a-half, hands down; *Stone Crusher* finishing about the same distance in front of *Sea Swallow*. Time, 4m. 35s.

5.—THE CONSOLATION CUP.—Value, Tls. 100.—Second Pony, Tls. 25.—For all beaten Ponies at this Meeting.—Weight for inches as per scale.—Entrance, Tls. 5.—*Once round.*

Mr.	Zirom's grey *Favori* 10st 5lb	1
,,	Seer's black *Pepin* 10st 5lb	2
,,	Jos. Dawson's grey *Piastre* 10st 11lb	3
,,	Kebrevo's grey *Volnay* 10st 10lb	0
,,	Major's grey *Silver Eagle* 10st 11lb	0
,,	Troy's black *Roland Cashel* 10st 11lb	0
,,	Vossin's grey *Flageolet* 10st 5lb	0
,,	Do. cream *Tourterelle* 9st 13lb	0
,,	Rheubrick's grey *Bonito* 10st 8lb	0
,,	John Peel's spotted *Aiken Drum* 10st 9lb	0
Graf v. Luxemburg's	grey *Blücher* 10st 9lb.	0
Mr.	Mustard's spotted *Scrambler* 10st 11lb.	0
,,	Godolphin's black *Black Thorn* 10st 8lb	0
The Fhairshon's	grey *Ghillie* 10st 6lb	0

This was certainly the most open race of the meeting, although *Favori* started favourite, and was looked upon as certain to win, an amount of confidence that he did not disappoint. *Piastre*, the second favorite, did not belie his backers either, so far as being placed went, but he stood very little chance of a win. At starting *Favori* obtained a slight lead, with *Ghillie* in close attendance, the field being so close as to defy distinction. The race was, however, so closely contested, that it was not until passing the Monument that it was considered a certainty for *Favori*. At Belle Vue, he was seen coming out of the cluster, and won easily, *Pipon* second by about two lengths. Time, 2m. 42s.

6.—THE CHAMPION SWEEPSTAKES.—A forced entry for all winners; optional for the winner of the Members' Plate, and all other Ponies that have run at this Meeting, Tls. 15 each.—Winners of two or more Races at this Meeting, Tls. 25.—Weight for inches as per scale.—*One Mile and a Quarter.*

Teen Kwang 10st 5lb	1
Ravenshoe 10st 7lb	2
Andante 10st 11lb	3
Ravenscote 10st 11lb	0
Gladiateur 10st 11lb	0
Wild Oats 10st 5lb	0
Mignon 10st 5lb	0
Favori 10st 5lb	0
Benachie 10st 8lb	0

This was *Teen Kwang's* race throughout, and although a pretty spin ensued between him and *Ravenshoe*, the latter succeeded in obtaining only a fair second place, *Andante* finishing third. Time, 2m. 41s.

7.—THE STEEPLECHASE CUP.—Value, Tls. 200.—For all China Ponies.—Weight for inches as per scale with 14lbs. extra.—Entrance, Tls. 5.—*Twice round a Course selected by the Stewards.*

Mr.	Rheubrick's grey *Furore* 11st 8lb	1
,,	Do. grey *Light Brigade* 11st 12lb	2
,,	Hochstoem's dun *Schwalbe* 11st 11lb	3
,,	Morriss' grey *Southdown* 11st 5lb	0
,,	Rheubrick's grey *Spondulick* 11st 12lb	0
,,	Bill's grey *Sea Horse* 11st 4lb	0
,,	Hinckley's chesnut *Choctaw* 11st 5lb	0
,,	Godolphin's grey *Pendarves* 12st 5lb	0

This, the last race of the meeting, brought a field of only eight out of fourteen entrants to the post. There was really no interest in the affair, *Furore* being too well known to admit of any competition as a jumper and he walked in a winner, *Light Brigade* second, the rest nowhere.

This brought the Spring Meeting to an end; but for the "off day" there are several arrangements made which will doubtless fill up a good afternoon's sport. Among them are The Teen Kwang Cup, value Tls. 250, for all China ponies, *Teen Kwang* excluded, a handicap race, $5 entrance, to go to second;—the Campo Cup, of $200, for all beaten ponies, entrance $5; some matches, and the usual Mafoos' race. Owing to the heavy rain which fell during Wednesday night and Thursday morning, these races were obliged to be postponed, and the Stewards have fixed Monday for the events.

THE A. D. C. PERFORMANCE.

As there is nothing pleasanter to a well-disposed critic than to be able to bestow hearty and deserved praise, so nothing is less agreeable than to have to pronounce an unfavourable verdict, especially in those cases where there has been no lack of talent, zeal, and industry to command it; and where the blame of failure lies only in the misapplication and misdirection of the elements which would in happier circumstances have sufficed to ensure success. It is rarely that the performances of the A. D. C. of Shanghai call for aught but praise, but exceptions are to be found to every rule, and strict regard for truth compels us to pronounce the theatricals on Wednesday evening an exception to the general rule of excellence which has happily characterised the great majority of past performances. This is the more curious, as something uncommonly good was anticipated by those in the confidence of the veterans who witnessed and supervised the rehearsals. But events frequently belie the most learned prognostications, and the most knowing member of the A. D. C. is as likely to make a bad shot in theatrical matters, as are the *White Legs*, the *Owl Eyes*, and other noted prophets of the Turf in sporting matters. Contrary to the usual practice here, the longer and more pretentious piece was given first. "Payable on Demand" is styled in the programme an Original Domestic Drama. It is certainly the work of a practised playwright, but we fail to see anything very original in it. It abounds in hackneyed dialogue and conventional situations, while the most effective bits in the piece are stagey, and melodramatic. The curtain rose on a well-painted interior in the Flemish style, and here we may observe that the scenery and mounting of both pieces were altogether unexceptionable. The earlier portions of the play were as usual lost to the audience, partly through the hubbub and noise created by late arrivals, partly owing to the fact that some of the actors spoke no louder than they would have done in an ordinary drawing-room. Messrs. Griffin and Honeycomb know how to suit their organs to stage requirements, but of the other performers in the first act there is not one to whom the charge of indistinctness and inaudibility does not more or less apply. Miss Castor, whose acting throughout the whole piece was one of the brightest features of the evening, has an unfortunate habit of "running in" her words, of uttering, in fact, some three or four separate vocables as if they formed one compound word, whereby a considerable part of what she said was lost to the audience. We would recommend her at her next appearance to count one, mentally, between every word she utters.

Mr. Doolittle, whose voice is admirably adapted to the stage, and who is ordinarily heard well enough, seemed on this occasion to share the general defect. Perhaps he thought it unbecoming in a French Marquis of the Ancien Régime to raise his voice too much above that of his interlocutors. The first act was received coldly, almost chillingly, by the audience. The not ineffective *tableau* with which it concluded (somewhat marred by the eccentricities of the red curtain) alone elicited any demonstration of satisfaction. The action dragged, and the acting—with the conspicuous exceptions of Mr. Griffin and Miss Castor—was below the average. We ought not perhaps to omit here all notice of the sentry who paraded outside *Goldsched's* house, and whose military appearance and commendable punctuality in his successive reappearances interested us almost as much as the imperfectly heard dialogue of the act.

The second act was rather more lively, and was accordingly received with somewhat more favour. But the cast was far from good. Mr. Doolittle was not successful as the *Marquis de St. Cast* in the first act; he was still more unsuccessful as the Marquis's son, Victor, in the second act. A *rôle* in which manly dignity and quiet strength form the prominent requisites, is sure to find an adequate representative in Mr. Doolittle. Romeo. His manner is too stiff and conscious; he has not the spontaneity, the impulse, the *naiveté*, which the expression of the tenderer emotions demands. Mr Ricochet (we take the names in their order in the programme) was likewise out of place as *Lyons*. We do not know the nationality of M. Lyons; but the manner, accent, and "get-up" of the actor, suggested the traditional comic stage Irishman more than anything else. If this was Mr. Tom Taylor's idea in writing the part, we only regret it was not entrusted to a genuine Milesian. On the whole, we have seen Mr Ricochet to more advantage in smaller parts. Mr. Tintinnabulum was not so much out of place in the part of *Bricabrac*, as is the part of *Bricabrac* out of place in the piece. It is introduced and spun out most artificially, and evidently as a sort of diversion, to relieve the pervading sombreness of the situation. Mr. Tintinnabulum made the most of his part—that is to say, he made too much of it. Three-fourths of it might have been omitted with

advantage to the artistic unity and keeping of the piece. In the hands of a dull actor this would perhaps have escaped notice, but Mr. Tintinnabulum's demonstrativeness contrasted so forcibly with the general tameness, as to bring into undue relief a part worthless in itself and quite out of harmony with the prevailing tone of its surroundings.

We merely echo the general verdict, when we say that the piece was badly chosen, and the actors badly chosen for their parts in it. It was only the fine acting of the two leading players, Mr. Griffin and Miss Castor, that saved it from proving a disastrous failure. The lady did the daughter in the second act better than she did the mother in the first act. Pathos is not her line, as was evident from her comparatively unimpressive delivery of the fine Andromache-like burst where she tries to touch her husband's heart by reminding him of all she had sacrificed for him, of the ties of home and kindred which she had given up for his sake. Only one exception can be taken to Mr. Griffin's reading of *Reuben Goldshched*, and that is that he did not quite attain the high standard of excellence which his many conspicuous triumphs have led us, rather unreasonably indeed, to expect on all occasions from him.

As we have had to speak unfavourably of the Comedy, we would gladly balance this page of our critical ledger by speaking favourably of the Farce which followed. But this we cannot honestly do. Had the former been done full justice to, the overflow of our admiration would probably have swam the minor piece; after a full meal of enjoyment we should not have been too nice about the *dessert*. If good in itself, and well put on, so much the better; if not, we should have been resigned, and said, with the philosopher, "Vixi" for the day. As it was, "Cool as a cucumber" had to form the chief staple of the evening's enjoyment, and it proved hardly more satisfying to the mental appetite than a cucumber salad would to the stomach of a hungry man who had found his joint too tough to dine off. The piece is intrinsically poor, its sole *raison d'etre* having been, indeed, to show off Charles Mathews in his favourite line of comedy. The actor who undertakes the leading character, must expect to be confronted at the outset with the crushing criticism that Mr. *Plumper* was one of Charles Mathews' best parts. There is no getting over this, and the unhappy *tyro* must bear the severity of the comment with all the equanimity he can muster. For ourselves, never having seen Mathews in the part, we took Mr. Hawk's version of it on its own merits, and we are happy to say that he fully justified the high expectations raised by his remarkable success as *Goldworthy* in "Kind to a dramatic season opened. The great end of a farce, after all, is amusement, and so long as Mr. Hawk was on the stage he kept his audience in roars of laughter. The only weak point we could detect was a certain awkwardness in stage business, which experience may be trusted to remove. It is perhaps hardly fair to criticise the minor actors in a *pièce de genre* of this sort, in which they are introduced simply to serve as foils to the chief one. None of them rose above mediocrity. Mr. Tintinnabulum's gestures were certainly comical, the most amusing being an upward and downward motion of the arms half extended—a gesture meant to convey the notion of intense rage, but which rather suggested to our minds the preliminary course of brachial gymnastics, which Icarus and the late Mr. de Groof may be supposed to have gone through, when first they essayed the noble art of flying. This gentleman, however, possesses undeniable dramatic talent, and will show to more advantage when a better opportunity presents itself. Mr. Montressor's impersonation of *Frederick Barkins* is one of those things which we do not profess to understand. It is possible that he had some intelligent conception of the character himself, but he failed to provide the audience with any clew to it. Mr. Montressor acted so creditably in the "Heir at Law," the other day, that we are surprised at his making such a poor hand of the very simple part of *Frederick Barkins*. Miss Edmunds looked prepossessing, and she was very funny as *Jennie Honiton*, but she must learn to talk louder. Her gait and carriage are perfection—in a farce.

If we have been a little hard in our comments on these theatricals, it is because we know the A. D. C. can and will do much better things. The three previous performances this year were as good probably as any ever seen on these boards. With equally good intentions, and practically the same actors, the fourth night turns out a comparative failure. There is doubtless an element of luck and chance in theatrical undertakings, as there is in all sublunary things. For our own part, we do not pretend to explain the *why* of the things which went wrong on this occasion, but we have thought it incumbent on us to point out the things themselves; and our sole object, we need hardly say, is the welfare of the Dramatic Society. We attach as little authoritativeness to our remarks as any of our readers possibly can do, but honest criticism, no matter how imperfect, may always hope to be of some service.

An excellent band of musicians, both stringed and wind, occupied the Orchestra, and enlivened the intervals between the pieces by their playing.

Miscellaneous.

FIRE IN THE MALOO.

A destructive fire broke out in a Chinese medicine shop in the Maloo about 8.15 on Saturday evening, and spread with alarming rapidity to the houses on either hand. It was first perceived by a foreign constable, breaking through an upper window of the medicine shop, and he hastened to give alarm at the Louza Police Station. Almost simultaneously, the alarm was given at the Central Station, and telegraphed to Hongkew, while the alarm-bells were set in motion, and in a few minutes the various fire brigades, the Hook and Ladder Company, a strong body of police, and detachments of seamen and marines from the various ships of war in harbour, were hurrying to the scene of disaster. Inspector Wilson was first on the spot, and endeavoured with an extincteur to put out the flames, but after to descend owing to the intense heat. In less than a quarter of an hour after discovery, the flames had complete mastery of the house, and had caught those on each side. The several engines and hose reels were posted in the most advantageous positions for action, the water-well at the corner of Maloo and Shanse road being first started with. There were, however, owing to neap tides, only about three feet or four of water in it, and these were soon exhausted, having had no perceptible effect on the fire, which now began to work backwards among the dense mass of Chinese dwellings lying between the Maloo and Kiukiang road. The six wells at the junction of Ningpo and Shanse roads were also brought into use as speedily as possible, but their distance from the fire rendered it necessary to pass the water from one engine to another before the flames could be reached, and three engines were occupied in performing this operation, some time being lost before the stream could be brought to bear. Water was also obtained from the well at the corner of Hankow and Shantung roads, and other places, but we are informed that the whole supply was inadequate to check the flames, house after house catching fire, until sixteen were ablaze at one time, and burning like matchwood. Fortunately, there was little or no wind, or the consequences would have been still more disastrous. The heat was so intense, that the houses on the opposite side of the Maloo began to show signs of ignition, and the occupants were seen at their upper windows pouring water from basins and buckets on the smoking wood-work of which the houses are built. In one place, flames actually burst out, and, but for the speedy turning-on of a hose, would have led to a second conflagration. Property and shop-goods of all kinds were thrown into the roadway, only to be trampled to pieces, soaked with water and oil, or stolen. In fact, the scene for hundreds of yards was one of perfect wreck.

It at length became apparent that the efforts of the firemen were useless to stop the progress of the flames, and preparations were accordingly made for demolishing the houses adjoining those to which the fire had now extended. Hooks, grapples, and axes were soon engaged in the necessary work of destruction; but it was not until three houses were destroyed that the flames could be stayed. That object having been accomplished, the engines continued playing on the burning rubbish until all chance of further out-break was at an end. The fire was conquered at as nearly as possible 10.45, but the last of the engines did not retire until past two a.m., a strong body of firemen and police remaining some hours longer, in case of further emergency, and coolies were employed pouring water on the smouldering ruins until late on Sunday forenoon.

The next premises to the medicine shop in which the fire broke out, were used as a general store, and in this, it was said, was kept a large quantity of oil contained in the usual paper-lined baskets, which would account for the fierceness of the flames and their rapid spreading.

There are two theories as to the origin of the disaster,—one, that a man in the employ of the medicine dealer, who was in bed, sick, in trying to light a pipe, set fire to the bed-curtains; the other, that another man was occupied in boiling medicine in a pot on a small Chinese stove, the heat from which set a partition close at hand on fire. It is impossible to give an idea of the value of the property destroyed, damaged, and stolen, but it must have been very great, for the Police Stations were full of native thieves awaiting an interview with the authorities at the Mixed Court next morning, and we regret to add that there are one or two foreigners also implicated, one of them being a man-of-war's man. How many pilferers were undetected cannot be known. So disastrous a fire has not occurred in the Maloo for upwards of ten years, and a view of the ruins creates a feeling of surprise that the flames did not burn their way through into the Kiukiang road.

FIRE IN FOHKIEN AND TAEWAN ROADS.

About half-past eight on Tuesday evening, the Settlement was again aroused by an alarm of fire, and in a few minutes an intense glare in the sky showed the locality to be among the mass of Chinese houses at the upper end of the Fohkien road close to the Taewan and Tientsin roads. As in the fire in the Maloo on Saturday night, the flames fanned by a light breeze spread with awful rapidity, house after house falling a prey to them before the fire-brigades could reach the spot. The scene presented in less than twenty minutes almost defies description. The

heat was so intense that it was only at great risk the firemen could pass along the thoroughfare to station their engines. Before water could be brought into effective use, one large block of houses was entirely consumed, and the flames had reached across the road and set fire to another block, which at ten o'clock was burning fiercely. At another part of the Fohkien road the opposite houses also caught, and for some minutes blazed with such fierceness as threatened them too with destruction; but fortunately the fire on the other side having burnt itself out, the flames at this point were put out with extincteurs. The fire, however, rolled along the second block with such speed as to mock the efforts to extinguish it, house following house again with a rapidity that imagination would almost fail to conceive. The scene throughout the district was heartrending, hundreds of the poor burnt out people, men, women, and children, were running to and fro in the adjacent narrow thoroughfares, in a bewildered manner, and endeavouring to save their property, which was thrown from the windows until it lay in heaps in the streets. The fire brigades generally worked with a will, and were energetically assisted by a strong detachment of marines and seamen from H.M.S. *Midge;* but it was not until an enormous length of hose had been run out, and led to a large pond in the rear of the Racket Court, and to the Soochow Creek, that an adequate supply of water was obtained; but by this time the fire had got complete mastery of the second block, rendering it necessary to pull down about a score of dwellings in the effort to stop its further progress. We learn that the fire broke out in a general store, close to a medicine shop, and that a man employed in the former went up stairs to smoke his pipe, and incautiously throwing a lighted piece of paper on the matting of the floor, on which some straw was strewed, set fire to the premises. These, being of wood, were soon ablaze, and communicating with the next, an ordinary Chinese dwelling, occupied as a *samshu* shop, led to the rapid spread of the flames. Altogether no fewer than 116 houses were destroyed,—97 burnt, and 19 pulled down to prevent the spread of the fire. The value of the property lost cannot be ascertained, as among the business premises that suffered was a noted pawnshop, in which were stored a large quantity of goods of all descriptions, besides other depositories of valuable property.

THE ACCIDENT TO THE P. AND O. STEAMER "GWALIOR."

By Hongkong papers received on the 2nd instant, we are placed in possession of full particulars of the accident which befell the Mail steamer *Gwalior*. The *Mail* says:—It appears that the *Gwalior* had got within half a day's steaming of Hongkong when, on the 16th, one of her cylinder covers either blew off or got fractured, and so rendered the engine useless. A valve in the ship's bottom (most probably one connected with the condenser) was unfortunately open at the time of the accident; and this very nearly brought about a catastrophe compared with which the present mishap is a comparatively insignificant delay. As the water rushed in like a sluice, and all efforts to keep it back seemed unavailing, the boats were launched and preparations made for abandoning the vessel, there being at one time as much as 18 feet (?) of water in the engine-room. This fact appears fortunately to have been the means of saving the ship, as the body of water thus taken on board, pressing outwards, by its own weight seems to have very opportunely closed the valve and stopped the leak. On the discovery of this lucky circumstance, hope revived, and everything was done for which English officers under similar circumstances are noted. All the side valves having been seen to and thoroughly secured, and that which had been so providentially shut having been made as water-tight as handy means would allow, the attention of crew and passengers was immediately turned to the pumps, and soon the ship being clear, all idea of abandonment or immediate danger was happily given up. Every attempt was then made to reach Hongkong under sail, but, as might be expected at this season, the *Gwalior* was drifted by the current in a westerly direction until, after three days' unavailing effort, she was discovered to be dangerously near the Coast of Hainan. To prevent probable disaster, she was anchored (on the 19th,) and the long-boat was sent to obtain assistance. Our advices from Macao state that the boat was altogether five days on her adventurous cruise. Be this as it may, the Chinese Coast pirates made an attack upon the almost defenceless boat's crew, and well-nigh frustrated their errand of distress. Against two well-equipped piratical craft, the boat's crew could merely beg to be allowed to proceed; which, after having been stripped of nearly everything of value, they were permitted to do. In this dejected condition they arrived in Macao, and reported the double plight—of their disabled vessel and their own misfortunes. With commendable promptitude, steps were at once taken by the agents and the Governor of Macao; and while the steamer *Poyang* was at once despatched to Hongkong with the intelligence, the Portuguese war-vessel *Tejo* was promptly sent out to lend what assistance she could to the crippled vessel. The Hainan Coast is not a particularly enviable place for any disabled vessel, even though she be a well-manned and ably commanded P. & O. steamer; and it is an additional assurance for the safety of all concerned that the friendly action of the Macao authorities took the form of sending a war-steamer. H. M. S. *Hornet* has also been despatched to the scene of the breakdown.

The *Hongkong Times*, says—Besides the boat's crew that came from the *Gwalior* there were six passengers, three Greeks and three Austrians, who volunteered to come up with the second officer, Mr. Seymour. Too much praise cannot be given to these men, and we think that something should be done for them as they were robbed of all they possessed by the pirates.

THE ATTACK ON COLONEL BROWNE'S EXPEDITION.

The following account of the murder of Mr. Margary and the attack on the expedition has been furnished to the London *Times*, and has been [illegible] our disposal by a member of the party:—

On the 6th of February, 1875, we took up our quarters at Tse-kaw, a village situated on the left bank of the River Ta-pêng. It consists of one long street,—the Eastern half of which is inhabited by Chinese, and the other half by the Burmese, and surrounded by a bamboo palisade as a protection againg Kakhyengs and tigers, both of whom occasionally prove unpleasant neighbours. Our party, which was composed at this time of Colonel Browne, Dr. Anderson, Messrs. Fforde, Allen and Margary, 2 Chinese writers, 15 Sikhs and servants of all descriptions, was lodged outside the town in a kyoung or priest's house, which was nothing more than a two-roomed frame building with mat walls and a bamboo floor raised on piles to a height of some six feet above the ground. A subordinate officer sent by the Woon of Bhamo, and entitled Tsa-re-dawgyee, was supposed to protect us with the body of 150 men under his orders. Most of these soldiers were only raw peasants called in from the neighbourhood without the least experience in warfare, and armed with weapons varying from the *dah* or cutlass, which every one in these regions carries, to the matchlock, or flint fowling piece by Manton & Co., gunmakers to the King. From the 6th to the 15th, the Colonel was occupied in receiving a succession of Tsawbwas and Pawmines, (chiefs and sub-chiefs or village head men,) who came to make arrangements for our transport, and to receive the customary presents which they exact from all who pass through their hills. Some of these gentry were the most repulsive specimens of human nature that it has ever been our lot to behold. Their persons and their clothes were filthy beyond description. One individual in particular, the Tsawbwa of Ponline, was a man whose appearance it is not easy to forget. He had very small eyes, even for a Mongolian, an enormous mouth stained with the inevitable betel nut, and a nose with no bridge whatever to it. His beauty was further improved by his wearing a ragged Chinese cap with a brass button, such as is worn by a lictor in a mandarin's Yamen, or by a public executioner in China.

On the 15th we were told that all arrangements had at length been concluded. The mules—so many from each Kakhyeng village—to carry our luggage, had been collected; the hostages, who were the Ponline Tsawbwa and his son, the son of the Tsarai Tsawbwa and the son of the Ponsee Pawmine, were taken charge of by Burmese officials at Tsekaw, and so we finished our final packing and prepared to start at daylight on the following morning. No Burman can, however, be trusted to be punctual, nor is it easy to satisfy the grasping demands of their wild neighbours; thus, though the European portion of our party was ready at the appointed time, we found that there was plenty to be done before we could hope to get off. From six a.m. to 4 p.m. the Tsa-re-dawyee was coming to Colonel Browne at intervals of a few minutes, to say how that this Tsawbwa wanted to be paid all his mule hire in advance, and then that this Pawmine was discontented about something else; but at the last mentioned hour we actually did get under weigh, although we only accomplished a short march of four miles that afternoon. Our road lay across a fertile rice-bearing plain, which slopes imperceptibly from the banks of the Ta Peng to the Man Wung Lake, a broad but shallow sheet of water surrounded by reeds and jungle, in which wild fowl and barking deer are found in considerable numbers. The fields are covered by a regular carpet of pretty but tasteless wild strawberries. We halted for the night in a zyat or guest-house in the village of Sehit, a picturesque spot at the very foot of the Kakhyeng [illegible] hardly be termed a road, ran at first up the side of a steep range covered with a tolerably dense tree jungle. We passed through Ponline, and after fifteen miles of very rough travelling reached the fourth of the guard houses which the Burmese Government have established along the road. Here the first report of trouble reached us. Travellers coming from Momein stated that a force of 400 Chinese was about to dispute our passage near Manwyne. The Tsa-re-daw-gyee now declared that it was positively necessary to send on scouts to ascertain what truth there was in this report, and the arrangement arrived at was that we should march on the morrow to the next guard house, and that Margary, having been over the ground before, should go on to Manwyne with a few men if the road was clear, but that if it was not, he was to return at once and tell us. On the 18th a march of 3 miles took us to the fifth guard-house, in a lovely valley, through which

the Nanpêng, a clear mountain stream, runs, dividing China from Burmah at this point. News was brought to us here that two of our hostages, the son of the Tsarai Tsawbwa and the son of the Pontsee Pawmine had made their escape. This was confirmed the next day, and as the Ponsee Pawmine himself was with us, it was decided that he was to become hostage in the place of his son, to which he had to consent, and he was at once sent back to Tsekaw. The following morning Margary started accompanied by his Chinese attendants, namely his writer—who was a polite and pleasant Christian Chinaman, much liked by us all and nicknamed 'Goggles' on account of his huge spectacles—a boy, an official messenger, a cook and groom. A Kakhyeng, the Pawmine of Tshan-poon, with a few men, was the guide of the party. No apprehension whatever was felt by any of us for their safety. We all supposed that if any armed Chinese had collected it was for the purpose of protecting us, not of attacking us, and no one was surer of this than Margary himself, who went off, declaring that he would occupy his spare time at Manwyne in writing up his journal, and asking us whether he had not better go on to Momein if we were more than a month in overtaking him. That evening we received a note from him written from Tsarai, to say that the road was perfectly clear, and that the Kakhyens were laughing at the timidity and caution of our friend the Tsa-re-dawg-yee. He further mentioned that he was going to press on to Manwyne that evening.

We had the usual difficulty in getting our mules started on the 20th, but by twelve o'clock that day we were off, and accomplished a march of about eight miles. The path was terribly steep, and was up hill nearly the whole of the way. We encamped that evening in the open on a plateau on the West side of the Pontsee Hill, at a height of some 5,500 feet above the sea. As this plateau was the scene of our fight with the Chinese, a short description of it will be necessary. The part on which we encamped was nearly circular in shape, and about 100 yards in diameter. To the North of us was a spur of the hill, at the foot of which lay the road to Tsarai, and to the North West a wooded knoll. To the East of us was the Pontsee Hill, forming a sharp ridge some 500 feet above us, along the top of which a road to Pontsee ran. On the West the ground sloped away abruptly down to the Nanpêng valley; on the South of us was a mountain brook, on the other side of which the road by which we came spread out into a small plateau, which was bounded by another spur of the hill covered with thick jungle. At the point where the path ascended this spur, the road ran between two high banks, the mouth of this little defile being some 200 yards from our camp. That evening more rumours reached us of the Chinese attacking force increasing with each successive report. Still we passed an undisturbed night, and prepared to resume our march on the 21st. Finding it hopeless to persuade the Burmans and Kakhyengs to start, Colonel Browne and the other Europeans attended by the Sikh guard set off first, leaving the luggage to be brought on in charge of the Burmese contingent. We arrived at Tsarai, eight miles off, without misadventure, and went to the Tsawbwa to consult him. This chief we found in his house, which was a curious wooden building some 200 feet in length, with a tiled roof. It consisted of one long passage running the whole length of the house, with a row of small rooms on the right hand side, and in the centre an open fire place. There was but little light, and everything in the house was filthily dirty and begrimed with the smoke, which made its escape as best it could through holes in the roof and through the doors, for there were no windows. The Tsawbwa informed us that Margary had passed safely through, and that the road to Manywne was open, and offered, if the Burmans would not take us, to guide us there himself, and further promised to carry a note to Margary from the Colonel that afternoon. Still his manner was very strange. He was a long time in appearing, gave many evasive answers to our questions, and from time to time held whispered conversations with other Kakhyengs who came in and out, though he was polite after his fashion, and gave us refreshment in the shape of eggs and sheroo, a not unpalatable liquor made of fermented rice. His behaviour finally determined Colonel Browne to return to our camp that afternoon and bring up our luggage the next day. Just before we started, the Tsawbwa told the Colonel that he must not be alarmed if he saw a large body of Chinese approaching, because they had nothing but friendly intentions towards us. That evening two men were observed on the top of the Pontsee Hill, watching us with much attention, which put our Burmese guard into a state of great excitement, but no one molested us further that night.

On the 22nd, at about 8 o'clock in the morning, a servant came in with a vague report that Margary and his servants had been murdered, and positive assertion that 3000 Chinese troops from Momein, in conjunction with the Tsarai and Pontsee clans were coming to attack us, and that they were close behind. In a few minutes we could see them passing along the crest of the hill above us. No time was lost in making preparations to defend ourselves. Some of the Burmans were placed as an outpost on the Northern spur, a few on the road to Tsarai, and some more on the wooded knoll to the N.W. where the Tsa-re-dawgyee stayed. The main body was posted to defend the Tsekaw road, and a little lower down our Sikhs were stationed behind a line of rock which formed an excellent breast-work. By the time we were in position, the enemy began the attack. Their men filled the jungle on the southern spur, and many of them came rushing out of the narrow road on to the open space in front, yelling and waving spears and tridents, and shouting to the Burmans that they did not want to fight them, but only to kill the foreign devils The steady fire of our Sikhs soon made this amusement too exciting for them, and they dodged behind trees and stones, only venturing from time to time to raise their heads or brandish their weapons, any such exhibition being promptly followed by a shot from our side. Even this was too much for them, and after about an hour of this work, a regular stampede of them ensued. They all rushed to escape by the narrow road, and as they were getting away the Sikhs gave them a volley with great effect, and we could see that many were wounded, and that one corpse was left behind on the path. Burmans led by the Khyoung Oke, a Burman Shan village headman, ran out to secure the head, which they cut off with their *dahs* and brought into camp. Having performed a most extraordinary war dance round it, they hung it on a tree, the Khyoung Oke shouting out to the Chinese to come on, and share their comrade's fate, "for the Burmans here," cried he, "are none of your ordinary fellows, but servants of His Majesty the King of Burmah." All this time the Chinese were firing on us from the jungle; luckily neither their aim nor their arms were very good, and they did little execution. A Burman wounded in the neck, and an Indian servant who was grazed by a bullet which afterwards lodged in the leather of the cook's shoe, were the only two on our side who were hit. After a while we could see a considerable reinforcement of the enemy arrive, but none of them would venture very close to us, after their experience in the morning. While the fight was going on, the Tsawbwa of Won Kaw came up and significantly informed Colonel Browne that the Tsawbwa of Tsarai had promised him 500 rupees if he would join him and the Chinese. Colonel Browne at once offered him 10,000 rupees, if he would aid us and convey our baggage safely to Tsekaw. It took some time to make this barbarian understand what ten thousand rupees meant, but when it was explained to him that it was ten baskets of silver he promptly closed with the offer. He set his men to work to burn the jungle, and as the wind was favourable and the long grass as dry as tinder there was soon a magnificent blaze, and the Chinese then retreated as fast as they could, completely routed. As they went along the top of the hill we got plenty of shots at them with the 800 yards sight up, and notwithstanding the distance one or two of them were seen to fall. At four o'clock all firing, even from the guard stationed on the northern spur, died away; the mules were brought up from the lower part of the hill where they had been placed during the fight, and loaded faster than they had ever been before, and in half an hour we all started in good order, our trusty Sikhs bringing up the rear guard. As a parting insult to the enemy, the Khyoung Oke and one or two more of the Burmese officers executed a second war dance, and solemnly challenged their foes to come on from each point of the compass. We must say a good word here in behalf of our Burman allies. Notwithstanding their inferior weapons they stood by us and fired steadily and pluckily. The Tsa-re-daw-gyee himself fired one shot into the jungle, where it was impossible to see anything, but he stoutly asserted that he had hit a man in the arm. On reaching the village of Tse-te, some three miles from our camp, the Burmans proposed to stay there for the night, but the Colonel would not listen to the proposal for an instant, as the place was utterly undefended, and surrounded by jungle coming up to the very doors of the houses, so that the Chinese would be enabled to creep up close to us, and pick us off deliberately. We therefore chose a few mules to carry our beds and a few provisions, and continued our march back to Nan Peng, which we reached at ten o'clock that night, having left the Wong Kaw Tsawbwa to earn his ten thousand rupees by bringing on the luggage as best he could. The following morning he brought us word that the Chinese were following us up in force, and that we must leave everything behind us, if we hoped to outmarch them. He further brought a letter from the Burmese Resident at Manwyne to the Tsa-re-daw-gyee, to inform him of the opposition of the Chinese, and of the massacre of Margary and his servants in cold blood by them, and to advise him to throw the Europeans over and look to his own safety. We had to be off, and never expecting to see an article of baggage again, we set our faces for Tsekaw, 22 miles off. The road by which we travelled was not the one by which we had come, but one that passed through the village of Won Kaw, and joined the main road again at the third guard house. We met with no opposition or trouble, and slept that night in comparative safety at Tsekaw. Contrary to our expectations, our luggage was not seized by the Chinese, but was brought down to us in two instalments. The Kakhyengs, however, managed to pilfer a good deal. The uniforms of Colonel Browne and Dr. Anderson were both stolen, and now probably decorate some filthy savage chief, or are hung up in his house as an ornament. We remained two days and a half in Tsekaw, waiting, in much discomfort, for our beds, and clothes, and other appliances of civilization. We noticed there that the Chinese of the village, who had previously been on very familiar terms with us, now avoided us like a pestilence, never shewing themselve near the Kyoung in which

we lived, if they could help it. From Tsekaw we went back to Bhamo, to which place steamers run from Lower Burmah, and so we are supposed to be once more in a settled and civilized town.

Since leaving the Kakhyeng hills we have by degrees received what we may fairly suppose to be an authentic account of what took place on the other side. From these it appears that a force of 3,000 men was sent from Momein and the districts thereabouts, of which a portion, under the command of a mandarin named Fung, was to oppose us on the Sawuddy route, and another portion under Li Ssū, a Hsieh Tai, or officer of the second military rank, if we came by the Mainsee road. Orders were issued that the whole of our party, English, Indian, Burmese, and Chinese, were to be killed. It is said that these orders were issued by the Sub-Prefect of Momein, but as this officer is anything but a mandarin of high rank, we must infer that he was acting under a pressure either of his superiors or possibly of the populace. We sometimes see in China a man of influence in a district putting himself apparently above the reach of the law, and all the officials about him not venturing to move hand or foot to interfere. There is not the least doubt that the notorious Chen Kwo-jui was the instigator of the Tientsin massacre, and that Chung How himself, though Imperial Commissioner, was powerless or at least afraid to stop him. Again, only last year, the Vice-President of one of the Six Boards came down to Nankin and other places in the Kiangsu province, and ordered a number of persons to be executed in defiance of the wishes of the Provincial authorities. So in this case it may well be that some official, full of a rabid hatred against foreigners, has taken it on himself to disregard the Treaty, and the passports issued to the Mission by the Imperial Government itself, and to have attempted our destruction at all hazards. Margary arrived safely at Manwyne on the evening of the 19th of February, and took up his quarters in the khyong of that town, and spent the next day and most of the 21st in walking about, conversing with people, with whom he ing of the 21st, some of the Chinese offered to shew him some hot springs in the neighbourhood, and as he was in the act of mounting his pony to go with them, they struck him down from behind and despatched him with their swords and lances. They then massacred all his Chinese servants, with the exception of the cook, who is believed to have escaped, and afterwards removed the heads from the corpses and stuck them up on the walls of the town. Her Majesty's Consular Service loses a most valuable officer in Margary. He had been for some eight years in China, and was a very promising Chinese scholar. In the summer of 1871 he, together with Mr. Dodd, an English merchant of Formosa, obtained the Albert Medal, and the Medal of the Royal Humane Society, for his gallantry in swimming off and saving the crews of three ships, which were being driven out on the rocks of Kelung harbour during a typhoon. He had just successfully completed his journey overland from Shanghai to Burmah, having been the first European to do this feat since the time of Marco Polo. He appears to have been on the best of terms with all the officials and people along the route. The Governor-General of Yunnan and Kweichow deputed a civil and military mandarin to take charge of him to the frontier, the local officials received and lodged him hospitably, and even the coolies who carried his sedan chair volunteered to accompany him to Bhamo. Li Ssü, whom he met at Momein, behaved to him with great politeness, and Margary often expressed to us the pleasure that he would have in meeting him again. His loss will be much felt by all his brother officers and his many friends in China.

The fate of two others of our party is still a mystery. When we went to Tsarai on the 21st of February, we were accompanied by two Chinese. One was named Mong-yu. He claimed to be a British subject, and was employed as our interpreter, caterer and so on, as he spoke Chinese and Burmese. The other was a native of Shanghai, named Shih Yü-tien, hired by Mr. Allen as a writer. These two stayed behind at Tsarai, and from that time nothing more has been heard of them. A Burman brought back word that one Chinaman was murdered at Tsarai, and that the other escaped to Pontsee and was murdered there, which account is confirmed by one of the Yunnan merchants living at Bhamo, but no further particulars have reached us. Mong Yu was a relation of Li Ssü, and so it is just within the bounds of possibility that he has been able to get away and lie hid until the excitement has blown over. But we shall never hear the full details until the negotiations at Peking, which it may be inferred will be the next step, are completed.

The following documents are important evidence as to the origin of the attack :—

Translation of letters written by the King of Upper Burma's Cotton Agents at Manwaing to the Bhamo Tsare-dow-gyee.

First letter.—The Madai-de Won Customs Officer, Ne-myo-thee-rie-raza-kyaw-hteng, Seller of the Royal Cotton, Oo Oon, and other officials send greeting to the Bhamo Tsare-daw-gyee.

On the 15th Latshan Tabodwai 1236 (20th February 1875), the Englishman Margary arrived at Man-Wien, and on the 1st Labyee-gyaw (21st February 1875) the Chinese killed him, as also three Canton Chinamen and two others—altogether six of them.

As for ourselves, the Chinese officials suspect us, and we have great reason to be afraid.

Second letter.—From the same to the Mumyeing,—viz., Bhwa Tsheng-tsheng-Shoon, Tsheng-tsheng, and Lyo Tsheng-tsheng—have told us to write to you urgently to say that on the 3rd Labyee-gyaw of Tabodwai 1236 (23rd February 1875) you must not remain with the English Koolas whom you are escorting : you must either leave them and return, or you must stay in some place a mile or two miles from them. If you do not do so, and if in consequence thereof any of your men are wounded or killed, you must not blame the Chinese. As they have told us, so we write.

As soon as you receive this, write quickly to say whether you will remain or retreat. The Chinese said that if the Koolas follow you, you are not to receive them.

The attack will be made at night on the 3rd Labyee-gyaw Tobodwai 1236.

Above 3,000 and about 4,000 men are collecting and surrounding you. We think it will be wise for you to retreat.

Translation of a statement of Gna Hmaw, a Burman Scout who was sent with Mr. Margary to Man-wien—dated 5th Labyee-gyaw of Tabodwai 1236 (25th February, 1875.)

I was sent from the fifth guard-house, with Gna Lwon and the Laya Pawmaing Maran to see what was going on in Manwien. We arrived on the 14th Latshan (19th February) at the Tsarai Tsawbwa's house. We slept there, and the next day we went to Man-wien. On the 1st Labyee-gyaw Tabodwai (21st February), the Chinese officers killed Mr. Margary and five Chinese. The Chinese officers said to Gna Hpo Moung and Gna Oon—"You must send some one to tell the Burmans to separate from the Koolas;" and Gna Hpo Moung and Gna Oon accordingly gave me and Gna Lwon a letter to give to the Tsare-daw-gyee. We left Man-wein on the 2nd Labyee-gyaw (22nd February). At Tsarai we met Yoon-tseen-lweng and Yoon-tsheng-tsheng, and the latter asked me if I would tell the Burmans to separate from the Koolas. I said I would.

Some Kakhyengs of Tsarai and the Chinamen wanted to kill me, because they said I had come from Man-wien; but Yoon-tsheng-tsheng ordered me to go at once and tell the Burmans to separate from the Koolas, so I ran away.

On the road I met the Chinese officer, Shouk-goon, who said he was coming back from the fight between the Kakhyengs and Chinese and the English. I ran away, and came up with the Burmese force at Tsalee.

Translation from a statement of Nga Hmoon, a Burman of Bhamo, lately residing at Manwaing,—dated the 1st March, 1875.

I resided at Manwaing on business connected with the King's cotton. I think it was about the 11th Latshan (16th Feb.) that I first heard rumours of Chinamen being collected to go on the hills. On the 1st Labyee-gyaw (21st February), I saw Mr. Margary in Manwaing. I saw him several times. He was going about the town, sometimes accompanied by Chinamen, and sometimes alone. Two officials, Lyo Tsheng-tsheng and Shoon Tsheng-tsheng, came down from Momyeing. It was said they had a force of between 3,000 and 4,000 men. These men were not allowed inside the town, but we heard the noise made by them outside the town at night. On the evening of the 1st Labyee-gyaw, I heard that Mr. Margary and his men had all been killed. Mr. Margary was said to have been asked to go and see some hot springs, and when he got on his pony they knocked him off and killed him. His men were killed in the khyoung in which they were staying. The hpoon-gyee was very angry at this being done. It was done, not by any local Shans or Chinese, but by order of the men from Momyeing. One of Mr. Margary's men—a cook—is said to have escaped: they did not spare him, but I heard that he managed to escape. We Burmans were concealed by people of the place. On the 3rd Labyee-gyaw (23rd February), one of the Chinese officers said,—"These Burmans have joined the English, and have cut off the head of one of our officers. Many Chinamen and Kakhyengs have been killed by them, and they danced in front of the English when they opposed us. They ought to be killed."

The Shans advised us to fly, so I fled at night, and, going through the hills by by-paths, avoiding villages, I reached Bhamo on the 6th Labyee-gyaw (26th February). I believe about six Burmans have not escaped from Manwaing. Maung Oon, a Chinese official, to get on a pony and go towards Tsanda

I heard that the heads of Mr. Margary and the Chinamen who were killed were taken up to Momyeng after being exposed in the town.

Correspondence.

THE MURDER OF MR. MARGARY.

To the Editor of the
NORTH-CHINA HERALD.

SIR,—The murder of Mr. Margary continues to engage the attention of British subjects in China, and in fact all Foreigners, as it is instinctively felt that the action to be taken by the English authorities, must affect, either for good or evil, every Foreign resident in China. Mr. Wade is now among us, and not isolated at Peking as he usually is.

It seems to me very important that the British Minister should be impressed with what his countrymen expect of him in the position in which he is now placed. If the unprovoked murder of Mr. Margary is unavenged, no man's life can be safe in this country, and, in case of a row, I would not give much for Mr. Wade's own life at Peking, unless our prestige is supported. It is the only protection we have, when out of gunshot of our men-of-war, and if we give up that we are poor indeed.

It is desirable under the circumstances to take a retrospective view of our experience with Chinese authorities. Without going back to the treacheries, poisonings, &c., of the first war in 1841, I would recall to mind that there are two cases nearly parallel to that of poor Margary—viz., the seizure, under a flag of truce, of Sir H. Parkes and his escort by order of *Sang-ko-lin-sin*, and the brutal torture and murder of all except Parkes and Loch. The authors of this outrage were never punished. The second was the Tientsin Massacre, where the French Consul went to the yamên of Chung How for protection and assistance. He was not murdered in the *yamên*, but outside, to save appearances, just as in Margary's case. Which of the mandarins were punished in that instance? None! A few coolies were beheaded for form's sake and their heads sewn on again.

This murder of Margary is a natural sequence to that cruel massacre. How can Mr. Wade expect the Chinese Government to punish their authorities for obeying their own orders? It would be absurd to expect them to do so.

If the murderers of Margary are to expiate their offence, *we* must punish them, by sending an armed force to the spot, where the murder was committed. Every feeling of honour and justice calls upon the English as a nation to punish the murderers; and if Mr. Wade allows himself to be cajoled by the Chinese authorities, he will have a heavy account to render to his country.

All eyes are now anxiously fixed, to see what he will do. Any armed interference must come from India, as it is impossible to reach them from this side. The fleet is too remote.

Redressing an outrage on the spot does not, and never did, involve a war with China. The local authorities should in all cases be held responsible, as it is according to Chinese law and custom.

A British Subject.

Shanghai, 29th April, 1875.

TORPEDOES AT TIENTSIN.

To the Editor of the
North-China Herald.

Sir,—Some time ago, I think about last diplomatic arrangement, which was in progression between General Raasloff, the Danish Envoy, and Li Hung-chang, the Viceroy of this Province, to the effect that the former had agreed to procure for the latter from Denmark two torpedo engineer officers to instruct the Chinese officers of Li Hung-chang's Southern Legion, as the corps is commonly called, the way to make and fire torpedoes. My informant was a military man, and quite likely to know accurately about what he was stating; and as his information was shortly afterwards corroborated by the account of other Chinese people, I naturally placed full credence in the several reports of the different parties. I did not, however, at that time, consider it necessary to publicly mention them, as the subject had then no particular interest for my Government. The position of affairs having since then, however, undergone a great change, with your permission I beg to allude to the affair publicly, and more particularly as I have observed that your correspondent Puritan has never once noticed the business in any of his weekly letters to your paper.

On the 22nd March, the S. S. N. Co.'s steamer *Shantung* brought to this port two Danish torpedo engineer officers, and four large and twenty small torpedoes—the torpedoes being intended chiefly as musters to shew to the Viceroy and his military officers, and to explode before them to prove their destructiveness. And, on the 4th instant, the steamer *Leeyuen*, belonging to the Chinese Merchants' Company, brought to the Taku anchorage from Shanghai, the Danish explosive materials to load these torpedoes. The torpedoes shortly after being received here were sent down to Taku. The two Danish officers on their arrival, at once took up their quarters on board the Chinese gunboat *Chinhai*, which was then lying moored in this harbor, where they stayed for a week; during which time they saw His Excellency Li Hung-chang at his residence in the city; and visited besides the Government Foundry at the Temple known as the Treaty Temple. On the 29th March, the gunboat *Chinhai* left her anchorage at Tientsin for Taku and Peitang, the two Danish officers going in her for the purpose, I was told at the time, of immediately commencing their occupation of instructing the Chinese officers of the Southern Legion, who are stationed at the forts there, to load and fire torpedoes in the Taku and Peitang waters. On the 19th instant, the S. S. N. Co.'s steamer *Millêt*, used as a lighter on the river, conveyed from Tientsin, Captain Hoskioer of the Royal Danish Engineers, and some employés of the Great Northern Telegraph Company, together with a quantity of telegraph poles and other telegraph materials, to erect a telegraphic line between the Sin-ching, Taku and Peitang forts; so that the Chinese Government might, in time of war, be able to keep up a telegraphic communication between the Sin-ching forts, where the General-in-chief would be stationed, and the Taku and Peitang forts. Captain Hoskioer, during his stay of a week at Taku, likewise superintended, in the presence of a number of Chinese officers, the loading of some of the torpedoes. General Raasloff had been, we were also told, expected to have been present in company with the Viceroy, Li Hung-chang, but for some cause he did not put in an appearance.

Had there not lately arisen a difficulty between the Governments of Great Britain and China in consequence of the assassination of Mr. Margary, in a Chinese yamên, in the province of Yunnan, it is very probable that I should never have deemed it necessary to mention these torpedoe arrangements. As, however, a war may ere long unfortunately break out between Great Britain and China, through the Chinese Government failing to do justice in the Yunnan case; and as British gunboats, British officers and blue jackets may have to run the risk of being destroyed by these torpedoes being laid in the Taku and Peitang waters, it naturally becomes the duty of every Englishman who may be cognizant of the above mentioned facts, at this early period, to give them publicity; so that the attention of the Government (British) may be directed to the warlike measures which are being adopted by the Viceroy of Chihli at Taku and Peitang, that it may lose no time in taking steps on its side to meet events in case war should break out.

The Governments of America, France, Germany, Spain, the Netherlands, Denmark, &c., are very unlikely to go to war with China, at least for the present; so they are not particularly interested in this torpedo question; and as the Russian Government would go to war with China on the Mongolian side of the Empire, it also does not feel any danger arising in the establishing of these torpedo arrangements to make it apprehensive for the lives of Russian officers and seamen. The case, however, is quite different in regard to Great Britain, so it is important that her officials should be alive to these hostile measures on the side of Li Hung-chang, the Viceroy of Chihli.

I am, Sir,

Your obedient servant,

A Home Volunteer.

Tientsin, 27th April.

Law Reports.

CIVIL SUMMARY COURT.

Shanghai, April 30th.

Before R. A. Mowat, Esq.

H. de Bony *v.* J. H. Hatfield.

This was a claim for $2.50, balance of account for harness work done in the early part of 1874. The total amount due was $9.50, but of this the defendant had paid two instalments, leaving the balance claimed.

Defendant said his sole reason for not paying was that some of the work was done on his account for another person, and that he could not charge that person his proportion, because the plaintiff would not make out an account showing the charge for each item of work done. In consequence of that refusal, he had not been able to send in his own account to the other person for the portion of work done for him.

Plaintiff denied that he was ever applied to for a detailed account, and said it was not his custom to detail every item in such a small matter.

Defendant, in reply to his Honour, said he had told defendant's shroff to tell the plaintiff to send in a detailed account and he would pay the balance.

His Honour said it was useless telling a shroff anything of the kind. They were simply sent to collect money. Defendant should have asked the plaintiff personally for a detailed account.

Defendant replied that he had done so, but could not get one.

Plaintiff said he had applied twenty times for payment, and defendant must have been satisfied with the charges. On Saturday last he wrote and told him if the balance were not paid he should summon him on Monday, but defendant took no notice.

Defendant admitted receiving the letter, but on the following day plaintiff's shroff came and he again told him to tell his master to make out a proper account.

His Honour said whether it was or was not the fact as plaintiff said, that he had not been applied to by the defendant for a bill of items, it was admitted the latter did not apply for one when he received the letter announcing plaintiff's intention to proceed against him. His Honour was sorry that the costs in the case should exceed the amount of the claim, the claim being admitted; but defendant should have communicated with plaintiff, either persually or by letter, on Saturday, giving his reason for not paying. If his business was hampered through not getting such a bill as he wanted, that was all the more reason why he should have applied personally for one. The objection that the bill was not made out item by item was not a proper communication to make to a shroff who understands only two things—payment and non-payment. Defendant must pay the amount sued for, $2.50, and $3 costs.

The money was at once paid.

POLICE COURT.

Shanghai, 30th April.

Before R. A. Mowat, Esq.

R. *v.* James Campbell.

Defendant is an able seaman, belonging to the British ship *Storm King*, and was brought up on three charges, first, of drunkenness and breaking a water jug, part of a toilet set, in the shop of Ching-chong, Hongkew; the second, of being absent from his ship without leave; and the third, the more serious one of

stealing from the above named ship 115-lbs. of old canvas and 135-lbs. of old rope, value £1.15, the property of H. C. Kean, the master.

Mr. Stripling said the prisoner was arrested on the first charge, at the shop of the complainant, when the stolen property was found in his possession. The captain had since seen and identified it.

Prisoner, on being asked if he broke the jug, said he supposed he did, as he heard something break in the shop, but he did not do it wilfully. He was drunk at the time.

Sergeant Skinner deposed that the value of the jug was $2, and it was part of a toilet set worth $6. The Chinaman had, however, said he would be content with $2.

His Worship asked the Chinaman if that amount would satisfy him, and on his saying it would, ordered the prisoner to pay it.

The Captain paid the money for him.

The charge of theft was next proceeded with, the prisoner saying he was guilty, and having no excuse to offer, except that he was intoxicated on Wednesday night, when it happened.

The Captain deposed that the property was stolen during Wednesday night, and the prisoner must have left the ship with it in his possession. He was not on board to turn to with the rest of the men at 6 o'clock or Thursday morning, and he (the Captain) came on shore to optain a warrant for his apprehension for being absent without leave, when he found the prisoner had been arrested in the meantime on the first charge. Prisoner was on board, sober, at 7.30 on Wednesday night, the ship being in the stream.

Sergeant Skinner said it was 8.45 on Thursday morning when he apprehended the prisoner in Ching-chong's shop. There were two coolies outside with the canvas and rope, and on being asked as to its possession, prisoner said he was the boatswain of the *Storm King*, that it was his property, and that the Captain had given it him.

His Worship said the prisoner had told a different story to the Sergeant to what he now said. The Captain had said he was on board sober at 7.30 on Wednesday evening, at what time did he go ashore?

Prisoner said he was not perfectly sober at that time, and went ashore about 8 o'clock. He hoped the offence would be overlooked this time, for if it had not been for the drink he would not have committed it.

His Worship asked the Captain if he wished the charge of being absent without leave gone into?

The Captain replied that he wished the prisoner to be punished for it, or he would not have a man left on board to do the work of the ship. They must not be allowed to come and go just when they pleased. The prisoner had been on board two months, and was a very good man generally.

His Worship asked the prisoner how he obtained the drink on board on the Wednesday night?

Prisoner replied that he got it from a boat that was passing by. In reply to another question, he said he spent the remainder of Wednesday night on the landing stage, and when he came on shore he brought the canvas and rope with him.

The Captain said he would like to know what the prisoner gave the boatman for the liquor.

Prisoner said he gave a pair of shoes for it.

His Worship said he must endeavour to prevent anything of this kind happening again. Pilfering from ships could not be allowed, and prisoner must be made an example of. Such conduct as he had been guilty of could not be permitted to pass unpunished. There was another charge against the prisoner, of being absent without leave, but his Worship would not take that separately, but would deal with it in connection with the charge of theft. Prisoner must go to gaol for four weeks, with hard labour, and if the ship sailed before the expiration of that time, he would be put on board.

May 3rd.

R. *v.* William Stevens, A.B. of the steamer *Ocean*.

Theft.

Defendant was charged with stealing five pieces of fur, one pair Chinese stockings, and a pewter ornament, from the fire in the Nanking Road, on Saturday evening last.

Prisoner denied the charge.

Sergeant Skinner, sworn, deposed—On Saturday night there was a fire in the Nanking Road. At 9.45 I saw the accused in a back room of a house, No. 673. He had a pewter ornament [produced] in his hand. I asked him what he was doing. At first he said "nothing;" then he said that he was there with a man-of-war's man assisting to pull the house down. I asked him what he had in his coat pocket, which was projecting. He made no answer. I took one of the pieces of fur [produced] out. I took him into the street and then searched him. I found four more pieces of fur inside the waistband of his trousers. He then lifted his cap and the stockings, fell to the ground. I picked them up. He said, "You are not going to lock me up for this are you." I said assuredly I was; as he had stolen them from the fire. He then muttered something about having "no intention of stealing." I said that it appeared so, as he had the articles concealed about his person. I then got the assistance of another Sergeant and took him to the Station.

Prisoner said that he was assisting to pull down the house. He had the fur in his pocket and not in his trousers, as the officer stated. With regard to the stockings, he could only account for them by saying that the man-of-war's men were throwing clothes and things, about in all directions, and he thought that it must have been them that knocked his cap off.

Sergeant Skinner reiterated his statement, and was quite sure that the stockings were in prisoner's cap, and that it was in the street that he lifted his cap and let the stockings fall out of it to the ground. There were no man-of-war's men within some distance. One piece of fur was in his right hand pocket, the rest inside the waistband of his trousers.

Heng Peng Foong, a tailor, testified that the furs belonged to him, and identified the pieces by the chop upon them. The value of the five pieces would be $1.

Prisoner said he was struck in the face with the pieces of fur, while he was pulling a rope with the other men, and it was some time before the Sergeant arrested him. It was some time after this that he went into the house. It was merely thoughtlessness on his part that he put the fur into his pocket. He had no intention of stealing. He had been paid off from the str. *Ocean*.

Mr. Stripling said that, on Saturday evening he had reason to believe that a great deal of looting was going on. It was a matter of great difficulty to keep civilians away. The men-of-war's men were supposed to be under the control of their officers, and not to be allowed to straggle about as they did on Saturday.

Sergeant Bird, stated—I was on duty on the night of the fire. I saw the accused there. I and Sergeant Skinner searched him in the street. Prisoner lifted his cap and the stockings fell to the ground, and I picked them up. I called out to the Sergeant. He and I then searched prisoner, and found four pieces of fur tied under his jacket and inside the trousers.

His Worship said that from the first he had no doubt of the prisoner's guilt. He had given him the opportunity of calling the witness, but as all the circumstances were against the prisoner's statement, he would deal with him severely. His language on the point, too, proved that he knew that he was acting unlawfully. He must undergo four weeks' imprisonment with hard labour.

MIXED COURT.

Shanghai, 6th May.

Before the Chinese Magistrate Chen and Dr. Yates, U. S. Assessor.

Pilfering at the Fire.

There was a considerable amount of pilfering detected at the fire in the Fohkien road on Tuesday night, and this morning twelve of the thieves were brought up by the police for examination. They had all been taken in the act of robbery or in possession of the stolen property, which consisted for the most part of wearing apparel, bedding and other household goods. Several of the accused were known thieves, and these were dealt with severely; indeed, Chen was very liberal with the bamboo on this occasion, the number of blows awarded ranging from 200 downwards, some of the old thieves being cangued as well.

Extracts.

THE SHANGHAI "DEFENCE TAX."

Translation of Leading Article in the "Shun-pao" of 1st May.

When the Haikwan Taotai of Tientsin endeavoured recently to revise the regulations pertaining to the collection of the native Custom House duties, merchants designated the proceeding as "an increase of duty." The fact is the old tariff was never altered, but at the same time the term applied to this move of the Taotai by the merchants, although nominally wrong, was *de facto* correct. Wherefore so? Because, where the collection of a tax has for a long period been suffered to remain in partial abeyance, any sudden attempt to rigorously re-establish an effete regulation, whereby the Government receipts in a locality are to be increased several fold, amounts to all intents and purposes to an increase of taxation. Hence it follows that such acts of the Government will invariably be viewed by merchants in this light; and officials must not be taken by surprise at such an interpretation being put on such procdedings, as also at the natural discontent arising therefrom.

Thus has it arisen in regard to the circular of instruction issued by the Taotai of Shanghai to the Canton merchants, in reference to the collection of the Defence Tax, of which we printed a copy in yesterday's issue. The establishment of rates and taxes is a matter resting with the Government; their collection falls to the duty of the various officials concerned, and the adoption of stringent and effective measures to carry into effect the regulations laid down is but the conscientious fulfilment by the official in question of the charge deputed to him. As regards the people, it also behoves them to obey Government orders, and, even where the collections fixed by the Crown are excessive, there is but one course open—*i.e.*, that of submitting with fortitude to the exactions required. In no case can open opposition be justified.

But, whereas the duty of collection rests with the officials, so also is the right to make known their grievances left to the people; and in this spirit we proceed to set forth in the name of the merchants the apparent injustice of the Defence tax.

The Defence tax was formerly inaugurated when the rebels were threatening Shanghai. After the rebels were overcome, the tax was not stopped, and in the whole of China nowhere does this import exist, but in the Foreign Settlements of Shanghai. One step over to the Chinese boundary and the tax no further exists. And is it, we would ask, just that we, the Chinese inhabitants of the Foreign Settlements, should be marked out for special legislation of so invidious a character? By reference to previous numbers of the *Shunpau*, it will be seen that this is not the first occasion on which we have animadverted on this subject. The taxes imposed on the residents of the Foreign Settlements are of a most multiform and oppressive character, and quite unprecedented in other parts of China. Firstly, the Land tax is double that of any native quarter. Lekin levies are collected as elsewhere, and to these are added Municipal taxes, are expended on the police and general administration of the Settlements, and Chinese officials are thus relieved of expenses relating thereto. Therefore, is it fair that the Settlements should be singled out further for this special impost, the Defence tax?

We would now go on to ask what is the meaning of the two characters 籌防? (*Chen-fang*—Defence.) The original signification we take to be protection of the Foreign Settlements. But when Shanghai was but recently likely to be threatened by the Japanese, what protectionary measures, we would venture to ask, were then adopted by the Shanghai officials? We will answer the query. From the time that the Formosan question was first mooted, up to the date when the Japanese agreed to withdraw their troops, Shanghai stood conspicuous as the only large port where no defensive steps were taken. Thus, Shanghai has been singled out to contribute yearly a Defence tax, and is further singled out to be left unprotected when an emergency arises. But this is not the only singular feature. Our former Taotai, after it was manifestly too late to act, devised the

scheme of purchasing from England the ironclad—*Iron Duke*; and how did he propose obtaining the enormous sum required? Why, he wished to collect it from the Shanghai people, who have been heretofore enjoying for years the solitary distinction of paying a contribution called the Defence tax, without knowing to what purpose it has been applied. Verily, the Shanghai Settlements appear to be looked upon as a bottomless source, whence Government requisites can be extracted without limit. And here we would bring forward a little episode which was enacting at Peking, and which throws a peculiar complexion on this demand from Shanghai for the funds to purchase an ironclad, as also on the exaction of the Defence tax. While the danger of collision with Japan was at its highest, the Foreign Ministers were, on behalf of the Tsung-li-yamên, negociating with the Japanese, with a view to place all the Treaty Ports under the category of Neutral Ports. This information we have recently obtained by the perusal of a printed copy of the English Minister, His Excellency Mr. Wade's, despatch to the English Foreign Office. Although the negociation was not concluded, there is reason to believe that, had war taken place, the arrangement would have been completed. Under all the circumstances here narrated, we would then again ask, is there any special ground for continuing to subject the Shanghai Settlement alone to this exceptional impost, the Defence tax? and if the money must be collected would it not be in better keeping to give up the misnomer and unreservedly ter'm it the "Foreign Settlement special impost'?

In the Taotai's circular of instruction, it is mentioned "that the falling off in the receipts of the Defence tax is not from the dullness of trade, but from the increase of smuggling and all sorts of evasions." But, as far as we remember, for the last ten years merchants have been in the habit of making use of the assistance of Foreign names to avoid the tax, and we are not aware that evasions and smuggling have specially increased of late. We would be disposed to impute the deficiency rather to the action of the tax runners and to the real falling off of the trade caused by the heavy burdens of the merchants. To this latter regrettable feature, we imagine, the notices "To Let," to be seen on house after house, all through the settlement, bear ample testimony. Ningpo, Chinkeang and such Ports are not subject to the same heavy exactions as Shanghai, and it is but a natural consequence that the Sugar, Chow-chow, and other trades should gradually be attracted thither, to the detriment of Shanghai. Shanghai is essentially a distributing mart. But if all goods arriving here, in addition to paying *Loh-ti-chuen* 落捐地 (arrival tax) have further to pay Defence tax, which is fixed at about half the Customs Import Duty, is it possible that when sent to other places they can compete with shipments from elsewhere? Really, the present action of the officials is tantamount to devising measures to kill the trade of Shanghai.

The circular of instruction further states certain ferries give a large and, exported by quantity returned is but trifling." This is no doubt the case, but it is only a repetition of what has steadily taken place from the commencement, and we feel thoroughly convinced that, had the condition of things been different, and Chinese merchants had conscientiously paid Defence tax on all their Imports and Exports, the trade of Shanghai would long since have been diverted elsewhere. Therefore, seeing that the tax has never been effectively collected, any vigorous action designed now to collect it in full is equivalent to an increase of taxation in the Shanghai Settlements. The measures taken to carry through the collection in full are in themselves sufficient to account for the present alarm existing amongst merchants; for it is reported that spies have been sent round to the different Hongs, who, while negociating a purchase, take the opportunity to pry into the account books and then lodge their information.

It is but a few months ago that a Censor memorialised the Throne on the necessity of reducing everywhere the Lekin dues. Since then, the people have been in high expectation of witnessing some remedial changes, but how have their expectations been fulfilled? An attempt has simply been made at Tientsin and Shanghai—two places—to take more stringent measures to carry into effect tax regulations, or in other words to increase the taxation; and this forsooth, it would seem, is what the people are to understand by decrease of taxation! We know not what the officials may think of such action, but would it not seem to amount to trifling with the affairs of the people?

It is but recently that a similar attempt at rigorously carrying out old regulations was attempted at Tientsin. The result was a complete stoppage of trade, and failure in carrying the scheme; and we cannot but think that our local officials, in endeavouring to repeat the trial, before even barely a month has elapsed, have, to say the least of it, not been happy in their choice of time for putting into force this new scheme.

THE FRENCH AND COCHIN CHINA.

China Mail.

The Court of Hué seems to be giving the French some trouble. Despite the silence observed regarding the progress of the negociations between the two parties regarding the ratification of the Treaty, and the date of opening the Tonquinese ports to foreign trade, there are, says the *Independant* of Saigon, certain rumours afloat regarding the difficulties encountered. It would appear that the S.S. *Antilope*, which left Saigon on the 4th March, with an agent of the French Government on board, was prohibited from approaching Hué, and was accordingly compelled to return to Saigon for instructions. On the 19th she again left for a fresh attempt. "Do we," says the journal above quoted, "need a fresh example to convince us of the duplicity of the Court of Hué? Is this new fact necessary to open our eyes to the inanity—uselessness—of the treaties concluded with people who take every means of violating them as soon as they are signed?" The answer to these questions is as straightforward as need be. If a Government like that of France is so silly as to make "treaties" with people who never yet, save under compulsion, kept faith in their lives, they must abide the consequences of their misplaced confidence. The plain fact is that, as between Europeans and Asiatics, the old-fashioned "treaty" has of late years been put to a new use. In its original acceptation it implied a certain amount of independent status on the part of both contracting powers. But now-a-days no sooner has the Asiatic been thrashed within an inch of his life than his conqueror concludes a "treaty" with him, and is virtuously indignant if the weaker party regards it as something to be got out of at the first convenient moment. Had the Saigon Government simply said to the King of Annam, "You will comply with these conditions as to certain matters under penalty of a fresh invasion," its conduct would have been intelligible. But to go through the form of a treaty with officials scarcely more elevated in morals or intelligence than the Papuans of [illegible] performing a farce. We are not guiltless ourselves in this matter. Nothing delights the British diplomatist more than, with the aid of troops, to knock his black or yellow brother down until he howls for mercy, and then to tell him that he is a "High Contracting Party," and that his "assent" to this, that and the other is needed before things can be made straight. And if the said brother is found relapsing into original "Topsydom," straightway a perfect chorus of indignation arises about "broken faith," "want of honourable feeling," &c. We are sick of these pretences which serve no purpose save to make the "No. 2 High Contracting Party" mistake his position. When Treaty shams cease to be, we shall have much less trouble. Substitute the word "agreement" for the misused term "Treaty," and if the weaker party breaks it, let him perfectly understand that he does so at his peril. We shall have less work for negociators, but not half as much trouble as to infractions of Article So-and-so. The French have as a rule been commendably straightforward in this respect, and it is new to find them adopting the rôle of treaty-makers with a government which cannot by the most sanguine be deemed likely to keep faith.

THE ENGLISH MAIL STR. "GWALIOR."

(Hongkong Times.)

Shortly after the arrival of the news on Sunday, the 25th, by the S.S. *Poyang* from Macao, the P. and O. S.S. *Bombay* was ordered to get ready and start at midnight to find the *Gwalior*. The weather was so thick at midnight that the steamer did not get under weigh until three o'clock. At one o'clock, H.M.S. *Hornet* left the harbour, and at half-past five was passed off Lintin Island. The *Bombay* had a head wind going round by St. John's Island, as the Captain of the *Gwalior* had said that if he could get the engines to work he would come that way, so Captain Davies, of the *Bombay*, thought it very possible that she might have got under weigh and he would meet her. The second officer of the *Gwalior*, the crew of the boat, and the Italians returned in the *Bombay*, the quartermaster being left at Macao, on board the Portuguese gun-boat *Tejo*, which left at midnight on Monday, to the assistance of the *Gwalior*, receiving instructions that if she picked the *Gwalior* up first, she was to take her in tow and bring her to Hongkong. The *Bombay* made a splendid run down, sighting the mail steamer at six o'clock on Tuesday morning, and got abreast of her at half-past seven; she was anchored about 12 miles from Hainan, in 35 fathoms of water, and about 240 miles from Hongkong in Lat. 19.46 N., Long. 111.12 E. The two steamers laid close to one another for about four hours, whilst provisions, &c., were being sent on board. Then the *Bombay* took the *Gwalior* in tow, and whilst making preparations for doing so, the Portuguese gun-boat *Tejo* came in sight and ran close under the *Gwalior's* stern, asking if she needed assistance. An officer was sent on board from the *Tejo* and he was requested to state that their assistance was not required but that they felt greatly obliged to them. The *Tejo* kept in company for several hours, and then running across the *Gwalior's* stern, bade a pleasant and safe voyage, and steamed away. The wind was blowing from the S.W. during afternoon of Tuesday, and the ship making 5½ knots. In the evening it died away, but about midnight it came on to blow pretty fresh from the N. E., reducing the speed of the ship to two knots. At noon on Wednesday the distance run was 88 miles. After the *Hornet* was passed at Lintin nothing more was seen of her. It is a pity H. M.'s Government do not take a lesson from the Portuguese, and be a little more energetic. Wednesday morning, the wind was blowing heavily from the N.W., and increased towards evening with a rising sea; and at 9 p.m. a heavy gale was blowing with very heavy sea and frequent rain squalls. About midnight, the wind moderated, and by 9 a.m. only a fresh breeze was blowing, and at that time the *Mandarin Cap* was passed, the vessel going at the rate of four knots. At noon the sails were set on both ships, the wind being on the port bow, increasing the speed of the ship to 5½ knots. The distance run during the two days was 148 miles. At 2 p.m., spoke the British barque *Divina* of Liverpool, bound to Hongkong. At three o'clock, took in sails, the ship making 5¼ knots without them. A British ship, supposed to be the *Champion of the Seas*, was seen in the Lamma Channel making for Hongkong. The breeze moderated towards evening, and there being only a slight swell, the *Bombay* was towing at the rate of 6 and 6½ knots, which she continued to do until Hongkong was sighted at 6.30 on the 30th April, the mails leaving the ship at 9.30. Captain Davies of the S.S. *Bombay* deserves great credit for the perseverance which he showed in towing the *Gwalior*, which is a very heavy ship, through the heavy weather which was experienced. Mr. Seymour, the second officer of the *Gwalior*, is acting chief of the S.S. *Bombay*, and sincerely do we hope that he will be allowed to keep the position which he thoroughly deserves. One of the Italians, we hear, who so gallantly offered his services in the hour of emergency, has been made a quartermaster in the P. & O. service. We hope that the S.S. *Gwalior*, under the able superintendence of Mr. Green, will be repaired as quickly, in comparison, as the *Orissa* was, when she broke down outside of the Ly-ee-moon Pass some short time ago. The greatest amount of praise ought to be bestowed upon Captain Haselwood and those under him, for the cool manner in which they acted throughout. Great praise is also due to

the stewardess and passengers,—the stewardess for the way she behaved in keeping up the ladies spirits, and the passengers for the strenuous manner in which they worked at the pumps when the ship was waterlogged.

Clippings.

We are authorised to say that the statement made in the supplement of the *Jornal de Macau* of the 15th April, as to the return of an official despatch lately sent by the Governor to the Viceroy of Canton, is completely destitute of foundation.

The Saigon *Indépendant* contains a prospectus of the Indo-Chinese Bank, setting forth its constitution, rules, and objects. The head office is established at Paris for 20 years, dating from the 21st January, 1875, and two agencies will at first be established, one at Saigon and one at Pondicherry. The bank may at a future time constitute other agencies at any place in the East, where there are some banks already established and regulated by French legislation. Under the same rules it will also be competent for the bank to establish agencies in the ports of China, Japan, and India. The capital, consisting of 8,000,000 francs, is divided into sixteen thousand shares of 500 francs each.

The *New York Times* reports that Mr. Yung Wing, of Canton, chief of of the Chinese Educational Commission now at Hartford, was married to Miss Mary L. Kellog, at the residence of her father, B. S. Kellog, in Avon, the ceremony being performed by Rev. J. H. Twitchell, of the Asylum Hill Congregational Church in Hartford, a very particular friend of the bridegroom. The bride wore a dress of white crape, imported expressly for this occasion from China, and elaborately trimmed with floss silk embroidery. Her brother and sister attended as groomsman and bridesmaid. After the ceremony, a collation was served, in which Chinese delicacies were mingled with more substantial dishes of American style. Messrs. Yo Shu Tung, manager, and Yung Yun Foo, teacher of the commission at Hartford, were present in national costume, but the groom, who long since adopted our style, appeared in full evening dress. The bridal presents were numerous and costly. Mr. and Mrs Wing left on the evening train for New York on a short wedding trip.

For the possible benefit of some of our readers, and, perchance, the amusement of others, we *(Foochow Herald)* have been tempted to reproduce *in extenso*, an interesting article entitled "*Should Christians use Tobacco.*" We are not in a position to assert that the writer of the article in question intended to be humourous; but we cannot resist saying that there is something truly comic (to our mind) in the following passage:—

"A moderate consumer of tobacco will use no less than 1 lb. per month, which will cost not less than four shillings. Now this amount would purchase 8 Bibles, or 24 Testaments, or about 5,000 Gospel Tracts, and each of these may be used as an instrument for converting a soul to God. Let every one who desires to be a true Christian take this matter to the Lord in earnest prayer, let him ask God by the aid of the Holy Spirit in view of the worth of souls and the Judgment day, if it is pleasing to Him that they should use tobacco."

Now, it occurs to us rather forcibly that if the amount of coin requisite to purchase 1lb. of tobacco represents the value of 8 Bibles, or 5,000 Gospel Tracts—what number of Bibles or Tracts could be purchased with the sum or sums of money needlessly devoted to indulgence in such vanities as superfine black cloth coats, silk dresses, &c., &c.? Only think of the number of souls that might be saved from eternal perdition if our friend's peculiar views were carried to a logical conclusion!

The interest felt here in the progress of the Gaikwar's trial has for the moment been overpowered by the disastrous tidings of what has befallen the Bhamo Expedition, which started from Mandalay under such promising auspices. That the interpreter to Colonel Browne's party should have been foully murdered, so soon after his successful journey across China, a feat in these days unparalleled by any European, would of itself have been a deplorable event. But if it be true that Mr. Margary was treacherously attacked at Manwine by Chinese troops sent out by the Chinese Government of Momein, and that Col. Browne's party were driven back with some loss by the same assailants, it is clear that somebody whom we must hold responsible instigated this outrage on a British Mission, duly armed with passports and credentials to the Chinese authorities. It seems, indeed, to be a question whether we have to reckon with one Government only, or with two. The previous despatch of a Burmese Mission to Peking may have had nothing to do with the subsequent outrage; but the suspicion of some direct connection between the two incidents comes naturally enough to those who remember the charges brought by Major Sladen against Burmese officials in the case of his own journey to Momein, and who could point to many instances of Burmese treachery before and since that event. It is to be hoped that the Indian Government will leave no stone unturned to ascertain the real authors of so gross an outrage.

Apart from the indignation which is felt in China towards the Government on account of the murder of Mr. Margary by one of its officials, there seems to be a feeling of profound grief at the loss of one so highly esteemed. His ardent temperament led him to engage eagerly in the manly pursuits so much favoured by the youth of Shanghai, while his irreproachable life and genial nature caused him to be welcome at every fireside. His attainments as a Chinese scholar and his grasp and maturity of judgment pointed him out for early prominence in the Consular Service. He was generous and intrepid. The Royal Humane Society never conferred its gold medal for a more gallant deed than when it awarded that mark of distinction to Mr. Margary for plunging into the sea and rescuing a number of ship-wrecked mariners on the coast of Formosa. In his late journey up the Yangtsze and through Yunnan to British Burmah, he accomplished a feat worthy in itself of the highest honour which the Royal Geographical Society can bestow, and, had he returned, its gold medal would assuredly have been awarded him. His personal friends refer to domestic ties which it is not permitted to us to touch upon, save by saying that he was the idol of many hearts to whom this calamity will come with crushing force and a terrible bitterness. When time has done something to mitigate their sorrow, they may find some consolation in knowing that to his death the future historian of our relations with China will refer as a turning-point in our intercourse with that country. He was not slain by a mob, but murdered by an official of rank, and his country will be justified in demanding as much reparation for his death as if she had expended treasure and life on a warlike expedition.—*Japan Mail.*

We were a short time ago witness to a curious ceremony which was being performed at the neighbouring Shinto temple of Ikuta. A priestess, a woman apparently on the sunny side of 40, clothed in a white robe, was the chief performer, the only other being an old man in plain clothes, who sat beating a small drum. In front of a small temple with open sides stood five large iron boilers, similar in shape to those which are commonly used for boiling rice. Three of these *kama* were full of apparently boiling water, and under these fires had been lighted. Four black poles, connected with straw ropes, from which were hung festoons of white paper, were erected near the pots. The priestess held in each of her hands a bunch of green leaves, resembling those of the ginger plant. These bunches she kept dipping into the steaming water and rapidly switching them on to her back, keeping up all the time a high stepping motion not unlike that which is proverbially said to be made by a "cat on hot bricks," in unison with the tom-tomming of the drum. The water must have been very hot, for this novel flagellation gave out clouds of steam, which before we got near we took to be clouds of incense. When the back of her dress had become well saturated, and her skin, as we should imagine, as red as that of a patient who had undergone twenty minutes of mustard plaster, the priestess threw over her shoulders a wrapper of dark blue silk, and mounting the platform of the little temple,—which latter was also hung with fresh festoons of white paper,—took a bunch of bells, somewhat resembling those of a child's coral, only so much larger, rapidly turned round and round, jingling the bells as she did so. This done, she stepped down and handed to a blushing damsel, who, with two or three women, were the only native spectators, a folded paper, probably a *mamori* or amulet. She then turned to the old servitor, and in the most matter-of-fact way told him to put the fires out, and retired to her dwelling-house hard by.—*Hiogo News.*

From the *Osaka-Nichi Shimbun* we extract the following highly romantic and thoroughly Japanese love story. A few nights ago a young girl threw herself from the Nakatsu bashi. Some junkmen who were coming up the river in their vessel, saw the body floating past and hauled it on board. Seeing, as they thought, some signs of life, the sailors made vigorous efforts to restore animation. At last they succeeded, and as soon as the girl had recovered her senses, she told them her name and address. Her father is a tea merchant in the Shinmachi, and he having been sent for, came and warmly expressed his gratitude to those who had saved his child's life. It appears that the girl is only sixteen years of age, and has always been modest and well-conducted, so much so that she was poetically described as the lotus flower which grows in a mud-bank, (Shinmachi being the reverse of a virtuous neighbourhood). A young man who heard of her, thought how nice it would be to effect a secret marriage with a girl who had hitherto repelled all admirers. He accordingly engaged the service of a go-between, whose cunning tongue, after several trials, at last induced the damsel to listen to her suitor's vows. But in Japan, as in Europe, the old proverb about "The course of true love, &c." would seem to hold equally true. One day the poor girl was at a house where she overheard an acquaintance say that a certain girl, who was voted for her prudery, had caught a lover and was all day teasing him to marry her, whilst he on the other hand was scheming how to avoid doing so publicly. Hearing this, the listener ran home and wrote three letters, one of contrition to her father and two of reproach to her deceivers—the go-between and his employer. This done, she attempted to commit suicide, with the result above related. The lover was overjoyed at hearing of his mistress's escape, and thereupon registered a vow that he would forsake the society of all other girls and be true to her alone. He wanted to reward her rescuers, but this the father would not allow.

HOUSE OF COMMONS.

March 16th. Mr. Wait asked the First Lord of the Treasury whether it was the intention of the Government to demand the punishment of the perpetrators of the treacherous massacre of Mr. Margary and his five servants at Consular service, and what directions, if any, had been given on the subject.

Mr. Disraeli: We sent instructions to Mr. Wade, Her Majesty's Minister at Peking and Her Majesty's most able Minister at Peking, for it would be impossible to speak too highly of his qualifications—to call upon the Chinese Government to make a strict investigation into all the circumstances connected with the deplorable affair, and until we receive his report it will of course be out of our power to decide upon the steps we will take. The death of Mr. Margary is a public calamity. He was the son of an officer in Her Majesty's service, and he was a young man of great promise and ability, who had displayed all those qualities which were suitable to the eminent career which I have no doubt awaited him had his life been spared. This unhappy event occurred in a district in which it is doubtful whether the power of the Imperial Government was clearly established, and which is inhabited by a mixed population of Shangs and Chinese. The moment the Government receive from Mr. Wade the result of his appeal to the Imperial Government, I shall have, I hope, to make a further communication to the House.

COMMERCIAL INTELLIGENCE.

SHANGHAI, MAY 7TH, 1875.

Arrivals.—The London mails of 19th March last per steamship *Lombardy*, and the steamship *Bombay* with the *Gwalior's* mail of 5th idem; also, the steamship *Russia*, from London.

Telegrams.—London, 4th May.—*Lead*, W.B., £23 5s., and *Iron*, £9 10s. per ton; *Cotton* and *Cotton Goods* markets unchanged.

PIECE GOODS.—Business has scarcely attempted to keep pace with the more exciting events of the week closing last night. Whilst the outward mail of 1st instant was under dispatch, there was some little animation in the market, but it subsided with her departure, and quietness has ruled ever since. This has not been caused by the Races, which have just passed away; nor has the proclamation of the Shanghai Taotai—who is seeking notoriety and riches after the late example of his brother official in the North—had anything to do with the lull that has taken place. The proclamation does not affect the Piece Goods traders—as yet—but they may be drawn into the quarrel, if his Worship continues obstinate. At present, his attentions are directed towards China produce only, and the hongs interested therein are all closed, or are being closed by way of remonstrance. No; the real truth is that the dealers have had few orders in hand, and, the desired articles being very scarce, they have considerately refrained from interrupting the harmony of the Race meeting. Moreover, in these times of scarcity, bargains, in such goods as are wanted, are rarely to be met with. Besides, the prospects for such as are in ample stock, are not bright enough to encourage speculation; and these facts have been powerfully influential in keeping buyers within their own homes. Amongst the former articles, *Heavy Grey Shirtings*, *T-Cloths* of all but the very best makes, fine to finest *White Shirtings*, good 14-lbs. *Drills* in first hands. *English Sheetings* and *Camlets* still find a place, and continue saleable, some of them at better rates than were current last week. *Chintzes* also and *Long Ells* for the like reason—their scarcity—cannot now be bought at the quotations of 30th ultimo. But 8¼-lbs. *Grey Shirtings*, and most other imports not mentioned above, and of which supplies are abundant, unless when a special enquiry has operated, have been very difficult and slow of sale, and the market for such is very much weaker than it was. The business reported since the date of last Report comprehends the following sales:—

10,000 pieces of *Heavy Grey Shirtings* "to arrive" in 8 to 12 weeks—private terms.
5,000 ,, *do.* "to arrive" in two or three days, at Tls. 2.70 and Tls. 2.90 per piece, the latter for Dewhursts' Eagles.
Sundry small parcels of 9 *a* 9½-lbs. at Tls. 2.10 *a* 2.45 per piece.
6,000 pieces of Dewhursts' *Eagle* 8¼-lbs. at Tls. 1.98 and Tls. 1.99 per piece—special sales—and
8,500 ,, of common chops at Tls. 1.64 *a* 1.66 per piece. Medium qualities can scarcely be given away—so to speak.
7,000 ,, of ordinary 7-lbs. at Tls. 1.44 *a* 1.46½ per piece.
6-lbs.—Dewhursts' *Red Pheasants*—are wanted, but there are none in stock.
17,000 pieces of common 7-lb. T-Cloths, "to arrive shortly," at Tls. 1.33 *a* 1.34 per piece.
12,000 ,, of ordinary Mexican 7-lbs., likewise afloat, and shortly expected, at Tls. 1.42 *a* 1.45 per piece; and a few of the better descriptions on the spot, at Tls. 1.46 *a* 1.50 per piece. Of 8-lbs. the sales have been very small, entirely because there are not many here, and not many unsold on the way. Quotations, however, do not rise with the occasion. *White Shirtings.*—Some 2,200 pieces of good 64s. and 72s. at Tls. 2.00 and Tls. 2.55 *a* 2.72 cover the transactions in this cloth; and, excepting a trifling sale of Americans, at Tls. 3.37½ per piece, there has been nothing worth recording done by importers in *Drills*. They still hold on to the few 14-lbs. *English* and *Dutch* that are on hand, and this firmness is enabling native speculators to get rid of their stocks at the prices of last week. 15-lbs. continue neglected. *Jeans* have received no notice whatever, and the demand for *Sheetings* has not resulted in any sales—beyond 300 pieces at Tls. 3.02 per piece—owing to the absence of supplies. There are some, however, close at hand, and, doubtless, they will be settled at full rates immediately on arrival—if not before. *Chintzes* of special designs, and fanciful assortment, have been enquired after for Japan, but the Japanese taste has proved too particular. Indeed, it cannot be suited at the price. Some common 22-in. *Velvets* have changed hands for that market at Tls. 0.18 *a* 0.18½ per yard, and a sale of best for the Hankow trade, at Tls. 0.19½ per yard, has transpired, the market closing with a strong enquiry. 440 pieces of 52 yard printed *Cashmeres* at Tls. 3.80 per piece; and, of 5,600 pieces *Victoria Lawns*, which were imported by natives in the last *Costa Rica* from Hiogo, three-fourths of them have been disposed of at remunerative rates. The cost laid down here is said to be a little over 7 mace per piece, against a selling price of Tls. 0.82½. The balance is held for 8 mace. *Turkey Reds* of the lighter weights, and inferior chops, figure for 1,000 pieces at Tls. 1.70 and 1.78 per piece, and *Handkerchiefs* to extent of 3,000 doz. at Tls. 0.52 *a* 0.54 per doz.

Woollens.—Another weekly Auction of sound goods has been inaugurated, and it will be fed chiefly by C.P.H. chops. At that—the first, held on Tuesday last 4th instant—there were placed, 480 pieces of *Camlets* at the average price of Tls. 13.92½ per piece; 1,000 pieces Scarlet *Long Ells* at Tls. 7.11 *a* 7.12 per piece, and 120 assorted averaging Tls. 6.90 per piece; 312 pieces *Spanish Stripes* assorted at Tls. 0.6.0 per yard, and 96 pieces Scarlet—*Stork*—at Tls. 0.57.1 *a* 0.57.2 per yard; 30 pieces Black *Medium Cloths*, fine, at Tls. 1.13¾ and, 30 pieces assorted *Scarlet* and *Gentain* at Tls. 0.8.7¼ per yard. Of Cotton goods there were also sold 200 pieces *Mahommedan Cloths* at Tls. 0.13.4 per yard; 300 pieces *Grey Domestics* at Tls. 0.62 *a* 0.64 per yard; 500 pieces 6-lb. *Peacock Grey Shirtings* at Tls. 1.34; 2,750 pieces 7-lbs. at Tls. 1.43¼ *a* 1.4.4; and 2,500 pieces 8¼-lbs. at Tls. 1.64¼ per piece. In Woollens, otherwise than at the auctions, further particulars whereof are given below, there has been little done. *Camlets* have been in some request, but buyers are somewhat fastidious as to chops, and are not willing to pay the advanced demands of holders. Stocks are becoming reduced. No. 2 *Crape Lastings.*—In these there have been moderate transactions at Tls. 4.00 *a* 4.10 per piece, and there has also been business to a fair extent pieces—of assorted *Long* patterns current last week—a particularly fine article, silk finish, realising Tls. 4.80 per piece. A few—500 [illegible] Woollens, the market for which closes weak, and prices inclining to favour buyers.

From the Outports the advices to hand from time to time, have been uninteresting. Very little business going on anywhere.

METALS.—*Nailrod Iron.*—No farther sales reported. Quotations weak at those given underneath. *Lead.*—Business continues on the most trifling scale, the natives buying from hand to mouth only. They are making strenuous efforts to keep prices down, at least this is the inference from their offering to sell L.B. at Tls. 5.90 *a* 5.95 per picul, and their inability to conclude a sale when called upon. Few foreign holders will sell at Tls. 6.05 *a* 6.10 per picul, which is to-day's nominal quotation. *Steel.*—There has been a little more enquiry for this metal, and the commoner brands are about 2 mace per tub higher. In *Copper*, there is no change to note. There are buyers in the market at Tls. 18.20 for best *Slab*, but the article requires a good five mace per picul over that to cover cost. *Tin.*—No business to report. *Tin Plates.*—In limited request at quotations.

COTTON.—The position of this article is unchanged. At present the country people are too busy in their Rice fields to bring in supplies. At the same time the demand for export is almost nihil. Thus, short receipts are counterbalanced, and quotations remain nominally the as they were quoted in last Report

EXCHANGE.—Sterling rates remain firm at last week's quotations. Bank bills are to be had at 5s. 9⅛d. *a* 5s. 9¼d. Private paper cannot be placed under 5s. 9⅜d. There is a demand for Merchants' paper, deliverable towards the end of this month at 5s. 10d. On India, no transactions reported during the week. There are sellers at an advance of ½ to 1 Rupee on last quotations. On Hongkong, Bank bills are obtainable at 27⅜, but there is very little demand.

NOON.

* Exclusive of import cargoes ex *Pera, Cawdor Castle, Gordon Castle, Glenfalloch, Nestor, Sindh, Ægean, Lombardy, Bombay, Russia, Messenger,* several Coasters, and of sundry re-exports.

COMMERCIAL POSTSCRIPT.

MAY 8, 1875.

ARRIVALS.—None other than Coasters.

DEPARTURES.—(Not reported above.)—May 5th, British ship *Sir Lancelot*, for New York ; 6th, British steamer *Nestor*, for London.

The French mail steamer *Sindh* takes 91 bales of SILK.

EXCHANGE.—On London, Bank Bills, 6 months' sight, 5s. 9⅛d. First-class Credits to Bank, 5s. 9⅝d. *a* 5s. 9¾d. First-class to Private buyers, 5s. 9½d. Private and Documentary, 5s. 9¾d. *a* 5s. 9⅝d. On Paris, Bank, Frs. 7.27½. Private, Frs. 7.35. On India—Bombay Bank, demand, Rs. 307. Calcutta Bank, Rs. 308. On Hongkong, Bank Bills, demand, 27⅜ per cent. discount. Private, 15 days' sight, 28. Gold Bars, Tls. 171.50. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 73.15 per 100. Carolus dollars, Sh. Tls. 80 per 100. Copper cash, 1,600 per tael.

SHARES.—Messrs. J. P. Bisset & Co. report, at noon, 8th May :—

H. & S. Banks.—Although various quotations have been rumoured, no transactions appear to have taken place since the 28th ultimo. The closing quotation of 22 % dis. is a nominal one.

S. S. N. Co.—Immediately after our last report, a sale was made at Tls. 73 for 15th instant. Several transactions have since taken place at Tls. 73 for cash, at which the market closes firm.

Fire Insurance.—*Victorias* have steadily advanced, in consequence of the proposal to wind up the Company, and a considerable business has been done at $150 and $155. No shares are now obtainable even at $155. *Chinas* have also advanced, having been placed to-day at $142.

Marine Insurance.—*Yangtszes* shew a further fall, having been placed at Tls. 555. *China & Japans* have been placed at Tls. 80, at which few are now obtainable.

S. & H. Wharf Co.—A fair business has been done at Tls. 98, at which shares are still on offer.

Other Stocks remain unchanged.

The WEATHER has been fine, with the exception of twelve hours on Thursday morning. Heavy rain began to fall shortly after midnight, and continued till shortly after noon. The wind changed to the North at night, and blew strongly from that quarter on Friday morning. The thermometer has ranged from 52 to 72.

JUST OUT.

A

TRANSLATION

OF THE

PEKING GAZETTE

FOR

1874.

THE work is immensely improved this year, by a very full and complete Index.

By the kind permission of the Editor of the *China Review*, an able article on the "Peking Gazette," by W. F. Mayers, Esq., Chinese Secretary to H. B. M. Legation, forms an interesting and appropriate introduction.

OPINIONS OF THE PRESS.

We have to acknowledge the receipt of another of those useful compilations issued of late years by the *North-China Herald* office, under the title of "Translations from the *Peking Gazette* for 1874." We have already on a previous occasion drawn attention to the extremely valuable nature of the record thus presented to the public, and to the chief features of the highly interesting matter to be found within the covers of the volumes in question. The present issue contains two novel features, which will we imagine greatly enhance its value to both the general public and to students—viz. a complete index, and a reprint of the article from the pen of Mr. W. F. Mayers, published some time since in the *China Review*. As regards the former, it possesses but one defect—that of not being arranged alphabetically. The reprinted article, on the other hand, furnishes most useful information, and though readers of the *China Review* will be familiar with its contents, we may be pardoned if, for the sake of others, we note one of the facts it mentions as to the antiquity of the "father of newspapers." It would appear that "Court announcements," as such the *Peking Gazette* of the present day virtually is, were issued in the eighth century, as a record of the appointment of one Han Yih appeared in this form not later than the year A.D. 741. The *Gazette* (we need hardly say that the English title is not a literal translation of the original, which should be "Metropolitan Announcements") would therefore appear to be at least over 1130 years old. This as times go is respectable; and as its circle of readers must, at the received calculation, be directly and indirectly somewhat about six millions, it can probably claim a circulation before which even that of the leading penny paper must pale. But fancy what possibilities would present themselves to Western enterprize with thirty millions of people able to read, and only one journal which published official news at first hand. The particulars given as to the printing, &c., of the *Gazette* are very interesting, and the proprietors of the volume under notice have done wisely in reprinting Mr Mayers' article. Such a work if continued will some day be of incalculable value to historians; while the issues already published contain even light reading enough to amuse those to whom Chinese matters are as a rule "caviare."—*China Mail.*

We beg to acknowledge the receipt of the "translation of the *Peking Gazette* for 1874," issued from the *N.-C. Herald* office. This work is a reprint of the translations which have been published by the *N.-C. Daily News*, and is the third volume of the series. The one before us has, however, a noticeable improvement on its predecessors, consisting of a copious index which will materially enhance its value. The index is divided into six chief headings, and these are sub-divided into others, rendering it easy to trace any important edict or memorial. An article on the status of the *Gazette*, published last year in the *China Review*, forms an appropriate preface to the volume. It will prove a handy book of reference to all who are interested in watching the progress of China.—*Daily Press.*

We acknowledge, with thanks, receipt of the Translation of the *Peking Gazette* for 1874, printed in a neat and compact form, with an appropriate yellow cover. The publishers of the *North-China Herald* could hardly have issued a more valuable little book, in its way, than this. It contains, in addition to the ordinary edicts, proclamations and memorials, an article from the pen of Mr. Mayers, on the status of the *Gazette*, which will be read with interest by those who wish to be throughly acquainted with the true position of this, so long the solitary representative of periodical literature in China. To one who desires progress for this country in this direction, the *Peking Gazette* will always be interesting as a curiosity, a fossil, probably the last remant of its species; and to the admirer or student of Chinese character and history, past and present, it affords the best starting point possible for investigation of the peculiarities of Chinese official customs, ideas and polity generally. The Index prefixed to the Translation will be extremely useful to all who consult its pages for the native records of the events of 1874. Its classification and general completeness render it an easy matter to find any edict or memorial that may be wanted; and will suffice to make the publication a work of ordinary reference for all those who are interested in the official life and history of the land.—*Shanghai Courier.*

The "Translation of the Peking Gazette for 1874," just issued from this office, is, as usual, a reprint of the translations published from week to week in the *N.-C. Herald*. This is the third volume of the series, and has the advantage over its predecessors of an elaborate index, which will immeasurably increase its value for reference. The index is divided into six chief heads—such as Court Affairs, Judicial and Revenue, External Relations, &c., &c.; and these again are sub-divided under minor heads, such as Audiences, Appeals, Corea, &c; so that any important edict or memorial can be easily traced. An article on the status of the Gazette, published last autumn in the *China Review*, forms an appropriate preface.—*N.-C. Daily News.*

Price, $2.00 per Copy.

To be had at the *N.-C. Herald* Office, at Messrs. Kelly & Co., Hall & Holtz, and Lane, Crawford & Co., Shanghai; Messrs. Lane, Crawford & Co., Hongkong; Messrs. Trubner & Co., Paternoster Row, London, E.C.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, MAY 15, 1875.

AT intervals in his great work, Marco Polo tells of the presence of Nestorian Christians in China; but notwithstanding that these remarks point to a Church which, if at no place very flourishing, yet prevailed tolerably widely over the North of China, Chinese records have hitherto been searched without throwing additional light on the subject. The tablet at Singan-foo is indeed in existence, but remaining as a solitary record, it throws little light on the history of the Church, and missed that authority which, as forming one of a series of records, it might lay claim to. To the Archimandrite Palladius, in the *Chinese Recorder and Missionary Journal* for March-April last, we are indebted for the first clear notice from Chinese records regarding the position of Christianity in China during the 13th century. The communication is of the more importance that it adds another to the many proofs already existing, of the trustworthiness of the great mediæval traveller. The Archimandrite quotes three Chinese authorities—a Buddhist tract, the "Pien-wei-lu;" the dynastic history of the Mongols, the "Yuen-shi;" and a description of Chinkeang-foo, written between the years 1330-1332, the "Chi-shun Chinkeang Chi." The Buddhist tract, written for controversial purposes, describes how a contest took place at the camp of the Emperor Mangu, between themselves and the Taouists, ending, as they boasted, in their own complete triumph. The Emperor, according to this authority, gave the following judgment:—"The ing is the highest; the 'Siu-tsai' that Confucianism is the first; the 'Tie-sie' (Christians), honouring 'Mi-shi-ho,' (Messiah) trust to celestial abodes; and the 'Tashi-man' (Mahomedans), praying to. Heaven, thank it for its gracious deeds. If all three religions are thoroughly studied, not one can be compared to Buddhism." The word "Tie-sie," used for Christians, did not have a long existence. It had been derived from the Mahomedans, and seems soon to have given way to the title "Ye-li-ko-wen," originally meaning a person in holy orders, but bye-and-bye transferred as a general title to all professing Christians. The earlier Mongol Emperors were entirely favourable to Christianity. Khublai's mother was herself a Christian, and her image after her death was preserved in the Monastery of the Cross, in the present province of Kansuh. Khubilai himself founded at Peking, in the year 1289, a Christian Consistory, the "Chung-fu-sze," which subsequently was raised, in 1315, to the still higher dignity of a "Yuen," and invested with the superintendence of the Nestorian bishops and chorepiscops, not only in China but throughout the Asiatic dominions of the Khan. This extension of its powers not working satisfactorily, it was again, in 1320, reduced to a "Sze," with jurisdiction only within the limits of the Chinese dominions of the Khan.

Of still greater interest are, however, the records relating to Chinkeang. Our knowledge of Christianity there, during the thirteenth century, has hitherto been confined to the few words told us by Marco Polo. "There are in the city," he says, "two churches of Nestorian Christians, which were established in the year 1278; and I will tell you how that happened. You see, in the year just named, the Great Khan sent a baron of his, whose name was Mar Sarghis, a Nestorian Christian, to be governor of this city for three years; and during the three years that he abode there, he caused these two Christian churches to be built, and since then there they are. But before his time there was no church, neither were there any Christians." The book already referred to, the old edition of the "Chinkeang fu chi," gives us further information regarding these temples. "The temple Ta-hing-kwo-sze stands in Chinkeang fu, in the quarter called Kie-tao-hiang (夾道巷); it was built in the 18th year of Chi-yuen, 1281, by the Sub-darugachi Sie-li-ki-sze (Sergius). Liang Siang, teacher in the Confucian tomb, wrote a tablet for him." The coincidence in dates is not a little remarkable, as showing the general trustworthiness of Marco Polo. The tablet states that Sergius received, in the year 1277, a "tiger" tablet of authority and an honorary title, and was appointed Intendant-general (總管府) of the Circuit, 路 of Chinkeang. If, therefore, he arrived in the succeding year, the date would perfectly agree with that given by the Venetian; and the temple would have of office. The tablet went on to say:— "It happened once that in the day-time he dreamed that the Seven Heavens had opened, and two saints said to him, 'You must build seven temples;' and they gave him in remembrance of the fact something of a white colour. After awakening, he felt touched, and soon after left the service and devoted himself to the building of temples. Next he gave up his house near the gate T'ie-wen-men, and built there the temple, Pa-shi humula (chief cathedral) Ta-hing-kwo-sze (大興國寺). After this he acquired the hill Shu-t'u-shan (竪土山) near Si-tsin (西津), and erected there two temples, Ta-shi humula Yün-shan-sze (雲山寺) and Tu-ta-urh humula Kü-ming-shan-sze (聚明山寺). Beneath these two temples a free cemetery was laid out for Christians. Further in the district of Tant'u at K'ei-sha (闕沙), he built the temple Talui humula Sze-tow-an-sze (四瀆安寺), outside the Teng-yün gate. On the hill Hwang-shan, the temple Tilen haiyu humula, Kao-an-sze (高安寺) was built; near the Ta-hing-kwo-sze (apparently in the city, and the second of Polo's temfples) the temple Mali-kie-wa-li-ki-sze humula, Kan-t'suan-sze was erected. In Hangchow, near the Tsien-kiaou gate Sergius founded the temple Yangi humula Ta-pu-hing-sze (大普興寺). These seven temples had been erected in fact by the intention (zeal) of this man. His devotedness to the Emperor, and his attachment to the Empire could find no other expression than in the foundation of temples." Max Sergius' good works were not destined long to survive. So, early as 1308, orders were received to desecrate the two temples outside the city, and which apparently were situated on the hill overlooking the present British Consulate, and to hand over their property to the Buddhist Monastery at Kinshan. On a tablet recording this was stated: "In the 16th year of Chiyuen (A. D. 1279), the Christian Ma Sielikisze, who governed the department of Chinkeang, relying on his power, had taken possession of the best place on the elevated shore of the river, and built a temple on top, which was called Yin-shan-sze (銀山寺); and on the adjacent uncultivated land he laid out a cemetery for his fellow-believers;" but nothing is said in the book of the fate of the other temples. Other Christians are named in the old "Fu-chi," some of whom occupied high posts during the time of the Mongol dominion. The Archimandrite adds that ancient descriptions of many other places besides Chinkeang still exist; and that there can be little doubt that interesting accounts of the state of Christianity in China during those early times could be unearthed, were those in search. A few of these descriptions are published, but the greater portion are kept in the Imperial or in private libraries. We have given the extracts relating to Chinkeang at greater length than we otherwise should, because they seem sufficiently definite to allow of the identification of the localities. The sites are readily accessible, and we trust, now that attention has been drawn to them that some of the residents or visitors to the port will supplement the researches of the Archimandrite by investigations on the spot. We believe some few traces of the cemetery still remain; the churches will most likely be found to have occupied the sites of the present temples. Even of these traces in the way of insciptions, may still exist. The destruction of the district about Chinkeang during the Taiping rebellion was so complete, that little beyond the merest fragments need now be looked for. Still, even the merest fragments may aid in the investigation into the records of a time when Christianity seemed to have a fair chance of establishing itself in the Empire of China. The Christian officers sent to Chinkeang by the Mongol Emperor seem for the most part to have earned the good wishes of the people; but, probably Christianity got to be associated with the foreign rule of the Mongol Princes, and shared in the universal detestation which preceded the downfall of the house of Kublai. The Buddhists curiously enough appear in the, to them, strange rôle of a persecuting Church, and doubtless they carefully fostered this sentiment. It is otherwise difficult to account for the almost utter absence of records relating to the Eastern branch of the Nestorian Church. Were it not for the notices in Marco Polo, and in one or two other writers, it is unlikely that a subject so carefully shrouded by the Chinese historians would have met the light of day.

Summary of News.

The French mail of the 26th March arrived on the 10th instant, by the M. M. str. *Anadyr*.

The English mail of the 2nd April arrived yesterday morning, by the P. & O. str. *Hindostan*.

A mail leaves to-morrow for Europe, by P. & O. str. *Lombardy*.

The following Reuter's telegrams have been received during the week:—

The Ex-Confederate General Rifley goes to China to superintend the construction of defensive works on the Chinese Coasts and Rivers.

The steamship *Schiller*, with the homeward Australian and New Zealand mails, (*viâ* San Francisco), and over 260 passengers, has been totally wrecked off the Scilly Islands; only a few of those on board were saved.

The *Berlin Post* considers the Belgian Note to be meaningless and unsatisfactory.

Sir Stafford Northcote's Budget resolutions have been adopted.

Mr. Disraeli's visit to Paris and the result of his interview is anxiously awaited.

Mr. Bourke announced that the British Government had received entirely satisfactory assurances from Berlin. The Government considered that there was no cause to apprehend a disturbance of peace.

The *Schiller* went ashore in a fog. 311 persons perished and 44 were saved. Portions of the mails were also saved.

There is an active demand for money in London.

The island of Saghalien has been ceded by Japan to Russia.

A conspiracy to assassinate Bismarck and Falk has been discovered.

We mentioned last week that the fourth day's racing had to be postponed on account on the rain. The day fixed this time proved fine, though the weather only just held up till the close. Half an hour after the spectators had left, rain began to fall.

A cricket match was to have been played on Tuesday, between 11 members of the Club, having initials A to K, and 11 L to Z, but the rain necessitated its postponement.

Shooting in the S. V. C. Rifle competition began on Tuesday, in most unfavourable weather. The second day was better, but Thursday was again wet. A full report of proceedings will be found elsewhere.

A Flower Show has been often talked about in Shanghai, but one has never yet been held. The first exhibition of the

kind is to be held on the 24th and 25th instant, in the British Consulate Compound. It is hoped that the contributors of specimens of flowers, fruits, and vegetables will be numerous, so as to make the show a successful one, and give encouragement in future years.

It has been known for some time that the National Bank of India purposed opening a branch at Shanghai. The Bank was opened yesterday for business, at the premises on the Bund formerly occupied by the Deutsche Bank.

A meeting to discuss a proposal to wind up the Victoria Fire Insurance Company, is to be held in Hongkong on the 24th instant.

It has been found necessary, as we anticipated last week, to postpone the Ratepayers' meeting, which now stands fixed for the 18th instant.—The postponement was necessitated by various causes. 1°.—The Report had not been circulated. 2°.—The revised Land Regulations are not even yet ready for circulation, and the Ratepayers must certainly have some days to consider these, before they are asked to vote them. But the ordinary meeting might have been quite well held on the 11th, and discussion on the Land Regulations postponed, if the Report had been printed in time.—Then a rather startling proposition was, we hear, received at the last moment from the General Hospital Trustees. They propose asking the Ratepayers to sanction the issue of debentures for Tls. 35,000, to build a hospital on the new site which they have bought for some Tls. 13,000 in Hongkew. The Council have, we unforward the proposal officially, and we suspect the Ratepayers will think the case is hardly one for the Municipality to take up—at any rate on its present basis. The Trustees offer to pledge the property and income of the Hospital as security; but these would be rather a white elephant, if it should not prove remunerative. The Municipality would be then placed in the unpleasant dilemma of having to close the institution, or work it themselves at a loss.—The only measures, so far as we hear, that the Council purpose bringing forward, are a Water Scheme; a resolution to enable the Council to assess Unassessed Property, and to hear and decide appeals in such cases; and a resolution regarding W. H. Fogg's Land Tax. The circumstances of this case, as brought out in the late trial at the U. S. Consulate, will be fresh in the recollection of our readers. It will be for the Ratepayers to decide whether the abatement claimed shall be allowed.

The Taotai's attempt to introduce more rigour into the Defence Tax has excited discussion on the whole question of local taxation; and it is urged that, taking Sir Edmund Hornby's late judgment as a standpoint, the Chamber of Commerce should move the Foreign Consuls to oppose the whole mass of illegal squeezes that are now levied in the Settlement.

In connection with this question, we reprint a list that was brought to notice by Mr. Hanbury some years ago, of rates levied by the Taotai on various British manufactures, when delivered from the Foreign godowns to Chinese shopkeepers in the Settlement, and which we believe holds very nearly good, at the present day:—

			Sh. Tls.
Grey Shirtings,	per bale of	50 pieces,	2.31
White ,,	per case of	,,	2.43
T-Cloths,	per bale of	50 pieces,	1.62
Drills, ,,	,,	30 ,,	1.72
,, ,,	,,	15 ,,	1.05
Fig. Orleans,	per case of	50 ,,	5.75
Camlets,	per bale of	10 ,,	4.14
Long Ells, ,,		20 ,,	3.00
Medium Cloths,		6 ,,	2.76
Chintz,	per case of	50 ,,	1.87

A correspondent signing himself Viator, imagines difficulties in the way of proving the squeezes, and questions whether any real advantage would ensue from their abolition. It seems to us that he answers his own question. He askes us to inform him how the Chamber of Commerce and Foreign merchants are to collect facts about local squeezes—and proceeds to give a series of those facts in the shape of a tariff of taxation. We are not at all surprised to learn that no shopkeeper would venture to give evidence in a Court of Enquiry, as a witness, against the existing squeezes. But neither is it necessary that he should do so. If the Chamber of Commerce can satisfy themselves by private enquiry—as Viator has done, and as we have done—that the tariff he gives represents approximately a system of local taxation indulged in by the Taotai, it will be sufficient for them to state the fact with the weight of their authority, to the Foreign Consuls. The Consuls would, we presume, feel justified in conveying that representation to the Taotai with an expression of opinion that The Taotai will then be committed to one of two courses. Either he must deny the existence of the taxes, in which case every Chinese tax-gatherer found in the Settlement can be arrested as a thief; or he must admit and strive to defend the legality of the taxes—which he will find it exceedingly difficult to do. If there is no object in reducing taxation, that is another matter; it is almost surprising, in that case, that so much outcry is made about the imposition of barrier dues in excess of the stipulated transit due But we hardly think Foreign merchants will agree with Viator's conclusion, in that respect. It may be that the abolition of the tax would not enable the merchant to sell his goods higher, but it would cheapen them to the consumer; and that is generally held to be an advantage, with a view to extension of trade. We cannot see why taxation of any kind, beyond the stipulated import duty on goods sold within the limits of the port, should not be rigidly opposed and prevented.

The Taotai has issued a proclamation recalling his former order about the "Defence Tax," and has thus made the resemblance to the Tientsin episode complete. The Native merchants will resume business forthwith.

An important meeting of merchants was held in London on the 25th February, to consider the Bill of Lading question. Resolutions were passed objecting to the clauses introduced, exempting shipowners from loss occasioned to the cargo by persons in their employ; and in favour of asking the President of the Board of Trade "to insert in the Merchant Shipping Act a provision which shall render inoperative these unreasonable clauses." It was objected by the Chairman (Mr. Hubbard) that it was against all custom and usage of trade, that a contract tendered by one and accepted and signed by another should be held invalid. A Mr. Hanson put the matter in a simple form, in suggesting that Shipowners should be put on the same footing as Railway Companies and other public carriers, and made liable for the negligence of their servants. The matter does not seem an easy one to adjust, but from the earnest way in which it seems to be now taken up at Home, we have no doubt a solution will be arrived at. The Shanghai Insurance Offices circulated last year a pamphlet entitled "Eastern Trade Bill of Lading," which had been prepared to promote the more general use of that form, it being deemed, said the Circular, "essential in the interests of both Merchants and Underwriters that an uniform Bill of Lading should be adopted, properly defining the voyage contemplated, and the ports of call, and free from exceptions introduced with a view to protect the Shipowner from responsibility connected with the safe custody and carriage of the goods, properly devolving upon him." And in order, it went on to say, "that Merchants making use of the form of Bill of Lading so recommended might be enabled to arrive at a distinct understanding as to the risks referred to therein which the Underwriters are content to bear, the following clauses will be attached to the Policy:"—

that the terms of this policy shall apply to the following sea-perils therein referred to in addition to such risks as are already hereby covered:—

1.—All deviation of voyage provided for in the said Bill of Lading, with any risk of land carriage incidental to the voyage.

2.—Sailing with or without pilots, and any act, neglect, or default whatsoever of pilots, master or crew, in the management or navigation of the ship, improper stowage excepted.

3.—All risks attending the goods by reason of their discharge into, retention at, and delivery from, any quarantine depôt, afloat or ashore.

4.—In case of the goods being carried on to a more distant port through stress of weather, or because they cannot be found, the marine risk of the additional voyage, as well as of the return voyage, to their destined port, the assured agreeing to pay for such extra risk such premium as may be agreed upon.

The Taotai has assented to Mr. Medhurst's proposition that a joint investigation should be held into the circumstances of the Quinsan riot; and the two prisoners were handed over to the City authorities on Saturday. The Tipao of the village has been ordered down, and on his arrival the case will be tried.

It is officially notified that a wrought-iron screw-pile Lighthouse will shortly be erected near the Lismore wreck, on the port side of the channel, at the entrance to the Woosung River. The work has been undertaken by Messrs. Farnham & Co., and we understand that the *Kwa-shing*, towing their pile-driver, started yesterday morning for Woosung, with the Engineer-in-Chief and Mr. Blethen on board. After the erection of a temporary stage close to the Lismore wreck, the work of erecting the wrought

iron screw-pile tower will be proceeded with. The illuminating apparatus will be *fixed* Dioptric, of the Sixth Order, showing a *red* light visible all round, and this will involve an alteration in the Woosung Light. On the exhibition of the above wreck light, the *red* sector of light now shown on the port side of the channel from the Woosung Lighthouse will be replaced by a white one, but no other change will be made.

The absence of the *Berwick Walls*, in dock, enables us to realise what an advantage it would be to have the opium hulks moved altogether from their present anchorage. The scenery on the Pootung shore is not remarkably beautiful, but a clear open view of water and trees is very much preferable to the unsightly hulls which now block in the Bund.

The house going up on the site of the old Hongkong Bank is being built considerably within the former walls. The Council have, we believe, arranged for the surrender of 6ft. of the frontage to the Nanking Road.

We hear that four of the Manila lottery tickets for the May drawing, sold by Messrs. Kelly & Co. in Shanghai, have drawn good prizes. The $15,000 and one $1,000 dollar prize have been won by Foreigners, and a $3,000 and a $500 by Chinese.

The steamer *Conquest*, while on her way down the Peiho river on the 4th inst., bound to Nagasaki viâ Chefoo, met with an accident to her machinery. Endeavours were made to proceed to Chefoo, but after several attempts she was obliged to return to Taku, where she will be detained until the damaged portion of the machinery can be repaired at this port

Messrs. Crofts and Sewjee held their usual sale of racing ponies and griffins at the Horse Bazaar on Wednesday afternoon. There was a good attendance of buyers, and some fair prices were realised, but in several instances the animals offered, although presenting attractive points, were knocked out at a low figure. Reserve prices were placed on *Gladiateur*, *Favori* and *Mignon*, and the bids made for them were Tls. 400, Tls. 200, and Tls. 80 respectively, which did not reach the reserve in either instance, and they were withdrawn, the auctioneer announcing that they would be offered for sale privately. A large Cream Griffin, a fine up-standing animal, was bought in at Tls. 110, but was afterwards put up for sale without reserve, and realised Tls. 105. *Spondulick* was withdrawn from the catalogue. The following were the prices realised in taels :—Bonito, 200 ; Bonanza, (griffin) 150 ; Crumbs, 150 ; Holy Friar, 150 ; a large Cream Griffin, 105 ; Flambeau, 75 ; Furore, 70 ; Black Rod, 70 ; Blackthorn, 70 ; Seapoy, (griffin) 65 ; Sinecure, 55 ; Light Brigade, 55 ; Daumling, 55 ; Sea Swallow, 55 ; Grindstone, 50 ; Altair (a good harness pony and a first class back) 50 ; Sacrepont (griffin) 50 ; Sea King, 50 ; Radical, 45 ; Sequin, 45 ; Ghillie, 45 ; Scrambler, 40 ; Pendarves, 40 ; Blitz, 40 ; Eclipse, 35 ; Goshawk (very good paper hunter) 35 ; Pastel, 35 ; King Midas (griffin) 35 ; Blucher, 35 ; Weisslack, 30 ; Poyferre, 30 ; Duncan Grey, 30 ; Galopin, 30 ; McTavish, 30 ; Feimah, 30 ; Hughie Graham, 25 ; No Cure, 25 ; Sea Horse, (griffin) 25 ; Alone, 20 ; Martin Forster, 20 ; Aiken Drum, 20 ; Sea Cock (griffin) 20 ; Sea Star (griffin) 20 ; cream griffin, 10 ; grey griffin, 10.

We take pleasure in noticing a new publication in Chinese, of which the first number is just at hand. It is a neatly got up illustrated sheet called *The Child's Paper—Monthly*. It is difficult to overestimate the value of work among and for the benefit of children, whom it is far easier to improve than the grown-up Chinese. The utter absence, as we understand, of all such literature among the Chinese, gives additional interest to this effort. The publisher expresses a hope that he will be able to illustrate the articles with original engravings, with Chinese costume and surroundings. In the present number, there is a specimen of this kind of work which, though inferior, will perhaps be more attractive to a Chinese child than the better executed foreign prints. We wish the enterprise success. The Rev. Mr. Farnham makes himself responsible for it, though it will need the co-operation of all interested to make it a success. It is in an easy classic style, that it may be used in all parts of the Empire, and the child may the more readily get it read to him if unable to read for himself.

The lecture on Food, delivered by Dr. Jamieson before the Temperance Society, has been printed as a pamphlet, and is for sale at Messrs. Kelly & Co. Dr. Jamieson set himself no easy task in undertaking to compress, within the limit of an hour's lecture, the amount of information conveyed in these pages, but the paper will probably be better appreciated by the reader than it can have been by the listener, and it will well repay perusal. The subject is one on which the majority of mankind are supremely ignorant. They know that food is necessary to support life, and they know roughly by experience that some things agree with them better than others. But of the why of this, and of the relative values and properties of different kinds of food, the prevalent impression is, to say the least, vague. Dr. Jamieson has condensed a great deal of information on the subject into his lecture, and most of us can gather some useful hints from its perusal. We shall not attempt to review it at length, because we can say no more in a column than we have said in these few lines. It is condensed beyond the possibility of further condensation. We might extract passages, but it all hangs so much together that we prefer commending it to our readers as a whole. We shall content ourselves with the sole passage in the lecture which has bearing upon the occasion of its delivery :

"There is a distinction to be drawn, however, between alcohol by itself and alcoholic beverages containing in addition to alcohol many other important constituents. Thus, malt liquors are rich in saccharine and extractive matters which possess nourishing properties. The various wines, again, at least those of the best quality, contain volatile oils and ethereal products to which are in the main due the exhilarating and stomachic qualities of wine taken in moderation. There can therefore be no resonable doubt that the man who abjures a certain class of fluids merely because they are wines, acts as foolishly though of course not as criminally as a man who goes to excess in consuming them."

A Newchwang correspondent writes :—The s.s. *Foochow* left for Swatow direct on the 1st instant. The *Courier* was about leaving for Nagasaki, but calling at Chefoo with light freight, treasure and passengers. Produce rising, and quoted

Beancake.....	Tls. 3.30	per	10 pcs.
Peas	,, 2.22	,,	300 catties.
Oil.....	,, 2.25	,,	picul.

Messrs. Spencer & Wolff write from Chinkeang on the 12th May :—There is little or no change to report in our market for Piece Goods. Small lots are moved off daily at quotations, but if any attempt were made to press sales, lower prices would have to be accepted.

The Kiuking tea market was opened on the 9th inst.; six chops have been settled at prices varying from Tls. 40¼ to Tls. 50, which is about the same as last year, but the quality is said to be not quite so good. On the 11th, 30 musters had been received.

Messrs. Gordon Bros. write from Hankow :—"The season 1875-76 is the earliest ever known at this port, nine chops of Hankow Tea having arrived here on the 8th instant, and muster chests representing eight chops of Ningchow on the 9th idem. No musters have as yet been placed on the market, teamen waiting anxiously for the arrival of Shanghai buyers. Samples will probably be offered on the 13th instant, by which time our stock will be considerably increased. We do not offer any opinion as to the quality of the crop, the few musters we have seen being evidently specially prepared, and the reports circulated by teamen being quite unreliable. There is no doubt the price paid for leaf up-country average quite 10 % under last year's. Foreign hands during the period under review scarcely amount to one-third of those reported during the same time last year. This is accounted for by the small direct Imports to this port, and the greater facilities offered by Native Banks and the various Steamer Companies in Shanghai, to dealers purchasing in that market.—Stocks of Raw Cotton are reduced to 10,000 bales of all kinds. Quotations are Tls. 9.80 *a* 10.80 per picul. Season nearly closed."

An Amoy correspondent of the *China Mail* says :—The works for the small Light-house on Tsing-seu have been commenced, but as yet have not got beyond the stage of levelling the side of the hill where the tower is to be built.

Messrs. Deacon & Co.'s Canton Market Report, dated 6th May, says :—

In continuing our Tea advices from the 22nd ultimo, we have now to announce the opening of the New Season for Scented Teas, and the prices for the few purchases made on market are, if correctly reported, much above what would appear to be warranted by the intrinsic merit of the Teas, keeping in view the present currency in London for such descriptions. —As far as an opinion can be formed from the various musters shown on market, the present crop of Scented Teas is decidedly inferior. The Orange Pekoes are in every respect deficient in merit, and there is an undoubted scarcity of fine. Capers are nearly all more or less mixed with old leaf, wanting in scent, and in appearance and style very defective. The weather for the past ten days has been very unfavourable for the scenting flower, and subsequent musters may in course show an improvement in the scenting.

Editorial Selections.

THE YUNNAN OUTRAGE.

WE have, now, all the information that is obtainable regarding the Yunnan outrage, until enquiry on the spot can throw more light on the origin of the crime. What we know, however, makes the tale all too complete, and furnishes circumstantial evidence against the Chinese, of weighty importance. Subsequent information has confirmed the main features of the reports which first reached us, of the actual facts of the case, while adding details that enable us to gain a clearer idea of the circumstances. Between Burmah proper and China proper there intervene some 150 miles of hill country inhabited by Kahkyen and Shan tribes, who resemble more nearly the Burmese or Chinese, and are more under Burmese or Chinese influence, according as they live nearer to Burmah or China. Almost directly on entering the hills, vague rumours were heard of opposition awaiting the Expedition on the Chinese side, but it was not till they had reached the Fifth Guard-house,—near which is the boundary line between China and Burmah—within 20 miles of Manwein, that these assumed sufficient form to induce Mr. Margary to go ahead and reconnoitre. He encountered no obstacle, and pushed on to Manwein, writing back to say the road was clear. Colonel Browne accordingly advanced, and camped on the 20th February within twelve miles of the latter town. Still morning, and hitch apparent in the forward to the village of Tsarai, within 6 miles of Manwein, to again reconnoitre. He was civilly received by the Tsawbwa, but somehow derived an impression that all was not right, and fell back to the camp instead of riding on to Manwein as he had first intended. His retreat evidently saved his life, for Margary was killed the same day, and Colonel Browne's fate would have been sealed had he advanced into the same trap. He subsequently ascertained that, even while in Tsarai, he had been in imminent peril. The Tsawbwa's house was full of armed Kakhyens, and there is reason to believe a number of armed Chinese were also concealed there. The presence of the Sikh guard, standing to their arms outside the house, probably saved the party. On the following morning, a line of Chinese soldiers was observed defiling towards the rear of the camp; and, almost at the same time, a man arrived with the intelligence that Margary had been murdered; that a force of 4000 men had been assembled by the Chinese officials to annihilate the Expedition, and that the men now in view were the advanced guard of that force. The fighting which followed, and the eventual safe retreat of the party to Bhamo, are vividly narrated in the letter we published last week. It was on the day following these events that the letter subjoined to that narrative was received from the Burmese King's agents in Manwein, relating the murder of Margary and the arrival of a force from Momein for the purpose of attacking the Expedition.

What interests us now, is to see how far the prime movers in the attack are indicated by the facts before us; and we cannot but think these bring home the guilt directly to the officials of Momein. Manwein appears to be considered the Chinese frontier town, and was evidently the focus of intrigue between the Chinese and the hill-men, and the *point de départ* of the attacking force; and it is in its testimony on this head, that the Burmese agents' letter is important. It not only describes Margary's murder,—which appears to have taken place in the temple where he was stopping, instead of in a yamên as at first related,—but it relates the arrival of the troops from Momein on the eve the crime, and warns the Burmese official who is with Colonel Browne to absent himself from the party on the 23rd February, as the Chinese purpose attacking on that day. Neither is the warning given casually, as proceeding from hearsay, but at the request of the officials sent by the Magistrate of Momein. If the warning is neglected and "if in consequence any of your "men are killed, you must not blame "the Chinese. As they have told us, "so we write. As soon as you receive "this, write quickly to say whether "you will remain or retreat. The "Chinese say that if the Foreigners "The attack will be made on the night "of the 23rd February. Above 3,000 "and about 4,000 men are collecting "and surrounding you." We have seen that this letter reached the camp on the morning of the 23rd February, in time for the warning to be obeyed, if the original design had been carried out; but for some cause—probably Colonel Browne's return from Tsarai and prolonged halt, the attack was made prematurely, and the tables were turned on the assailants, of whom about a score (16 Chinese and 4 Kakhyens) are believed to have been killed. A man who was found dead on the road along which the British retreated, was unmistakably Chinese, and the Burmese official pointed this out to Colonel Browne as a proof that it was the Chinese, and not Shans or Kakhyens, who were opposing the party. Neither must we overlook the evidence of another Burman who was living in Manwein, who testifies to the arrival of two officials from Momein with a force of between three and four thousand men, and to the circumstances of the murder "by order of the men from Momein."

The impression in India is strong, that the King of Burmah was the chief instigator of the outrage; and it is quite likely that collusion may be proved between him and the Yunnan officials; but, however much he may be implicated, the guilt of preparation and attack remain with the Chinese. It was no explosion of savagery on the part of semi-barbarous wild men; it was no sudden outbreak by the mob of a Chinese city. Mr. Margary was deliberately murdered in the Chinese frontier town of Manwein, and Colonel Browne was attacked by a Chinese force sent down from Momein, and of which a nephew of Li-su, the Chinese Military commandant of the district, was one of the leaders. It is in the highest degree likely that the whole affair was plotted between Li Su and the Burmese. But the complicity of the latter cannot overshadow the guilt of the former. At any rate, with so strong a clue, the British Government can hardly fail to trace up the guilt to its source. If the Burmese King's complicity can be proved, so much the better. His deposition and the advance of the British frontier to the borders of Yunnan would be a great political gain. But whether or not the instigation can be traced to Mandalay or Peking, it is clear that Chinese officials, for whom the Peking Government are responsible, were the chief actors in the outrage. It is by Chinese that a British officer travelling under Imperial passport has been murdered, and it is by Chinese that a British Expedition, similarly protected, has been attacked. It may well be that the whole affair was planned between Momein and Mandalay, that the Yunnan authorities committed the outrage on their own responsibility, and that the Peking Government knew nothing of the project. That conclusion would intensify the guilt of the officials, but would detract nothing from the responsibility of the Central Government for the acts of its subordinates.

MR. ELIAS' JOURNEY.

WE have seen now what befel the main body of the Yunnan Expedition. It remains to set down what we have been able to learn of Mr. Elias' adventures. Mr. Elias, it will be remembered, did not accompany Colonel Browne from Bhamo, but started without any guard to explore a southern route to Momein *viâ* Sawadee and Maingmaw, with instructions to rejoin the main body at Momein or Yungchang. He succeeded in crossing the hills to Maingmaw, which he reached on the 15th February; but here he too was brought to a standstill, by the firm but polite resistance of the redoubtable Li-su in person. This officer received him with perfect courtesy, but insisted that the road from Maingmaw to Momein was unsafe, and that he would not be able to hire carriage or guides to take him there. The road to Yungchang was preferable, and that one had better be taken. This was the result of one day's talk. And now, having given Mr. Elias clearly to understand on the first day that the road he most wished to follow was

impracticable, he went on at a second interview to close the second also. The road from Maingmaw to Sefan—the first stage of the journey to Yungchang—was also declared to be impracticable, on account of a feud between the Maingmaw and Sefan Tsawbwaships, and Mr. Elias could not be allowed to proceed that way either, with any regard for his safety. The Tsawbwa of Maingmaw was more blunt, when Mr. Elias was urging his point, on the same afternoon. "Passport or no passport," said the chief, "you cannot enter China, but must go back to Bhamo the way you came." Mr. Elias went again to Li, insisted on his possession of the Imperial passport, and asked again why he was not allowed to proceed. "The only reason," he answered, "is the risk to your safety in getting from here to Sefan." He admitted that there was no fighting going on; but there was a feud, and it would be impossible to induce the Shans to cross the border. He had urged the Tsawbwa, but to no effect. The only way would be for Mr. Elias to go to the Burmese Tsawbwaship of Namkhan, and enter Sefan from thence. Constrained to acquiesce, Mr. Elias did so; and arrangements were made for his journey to Namkhan. At leave-taking, Li assured him there would be no difficulty by this road, promised to write to the Sefan authorities on his behalf, and completed his civility by kneeling to Mr. Elias at parting.

Namkhan was not reached till the 19th; and on the following day Mr. Elias applied to the Tsawbwa for assistance in hiring animals to go to Sefan. The latter promised to see what could be done, and accepted presents, which were however returned on the following day, with an intimation that Mr. Elias could not be allowed to go on—1st, because the Khakyens on the road were dangerous and the Tsawbwa could spare no guard; 2nd, that he had no pass from the King of Burma. It was to no purpose that Mr. Elias insisted he was one of Colonel Browne's party, and that Colonel Browne had full authority from the King for the whole Mission to go through. The Tsawbwa evaded that point, and again insisted on dangers from the Kakhyens, who were actually threatening the town, so that he could not spare a guard. He would not even furnish a single guide. Finding it impossible to get on, Mr. Elias extracted from him a written statement that the danger from the Kakhyens made it impossible from him to proceed—along a route, it will be noted, which Li had especially advised him to take as safe and practicable—and retreated to a place called Kutlung, with the design of communicating with Bhamo, and trying to join Colonel Browne by some other route, when he could get news of his progress.

We have already heard how instructions were sent to recall Mr. Elias, directly the attack on Colonel Browne was known, and that he returned to Bhamo in safety. Some money and presents were stolen during his stay in Maingmaw, and what was more important, his note-book containing a survey of his journey from Bhamo; otherwise he had the good fortune to come off scatheless. It is likely that he was fortunate in finding Li at Maingwang, for, though there is good reason to look on this official as the Chen Kwo-jui of the outrage, it may be assumed that he was too astute to allow a British officer, having an Imperial passport, to be murdered in his neighbourhood. It is interesting to notice the presence of this man Li-su, throughout the whole adventures of the Mission. Mr. Margary was received by him with perfect courtesy on his way across to Bhamo. It was no part of his plan to murder, on Chinese territory, a man who would surely fall into his hands under more convenient circumstances, later on. He was perfectly courteous to Mr. Elias, but prevented him quietly from accomplishing his journey. Violence was unnecessary, in the case of a man travelling alone, and would have needlessly implicated him. But it is interesting to know that Mr. Elias was overtaken between Maingwang and Namkhan by two Maingwang officials, who told his people that their Tsawbwa was not responsible for stopping him; it was the doing of Li and the Burmese Government, who had conspired to prevent the Mission entering China; and two Burmese had actually come down with Li to Maingmaw. Li appears, throughout the report of Major Sladen's expedition. At that time he seems to have been looked on as a sort of partisan leader, fighting for the Imperialists. We find him garrisoning a place called Mauphoo, in the way of Major Sladen's approach to Momein, and attacked and driven out by the Mahomedans to open communication with the latter; and the impression on Major Sladen's mind seems to have clearly been that he was bent on hindering the expedition by every means in his power. Li seems now to be Commandant of the district, and a man of considerable power and influence. Everything points to the supposition that he was a moving spirit in the hostility which the present Expedition encountered.

LOCAL SQUEEZES.

We agree with our correspondent "Shanghai Settlement," that the so-called Defence Tax is an illegal levy, and that Foreign support should be given to the Native merchants in resisting it. We go farther, and say that the moment is opportune to stir up the whole question of local taxation, and insist on the treaty being observed at least in Shanghai, if we fail to reach barriers and cities which are less under our hand. The nature of the Defence Tax was clearly explained in the article which we translated on the 3rd instant from the *Shunpao*. It is a 2½ per cent. tax on Native cargo, charged in addition to the regular import duty, in addition to 2½ per cent. which is levied on every article that passes into consumption in Shanghai, and is not only peculiar to Shanghai but to the Foreign Settlements. We do not purpose entering now into the elaborate argument against the tax that might be founded on Rule 1 of the addenda to the Tientsin treaty, because we wish to impugn the whole system of local exactions. Suffice it to say that the tax is so monstrously unjust in its incidence, that the Chinese have themselves rebelled against the infliction, and compelled the Taotai to withdraw the order lately issued for its more rigorous collection. It has, we believe, for several years now been gathered under compromise. That is to say, the merchants interested have compounded for 30 or 40 per cent. less than the fixed amount, and even the reduced sum has been slackly paid. Recent incumbents would seem in fact to have recognised that the tax was an anomaly, and that they had better be content with how small a sum soever they could get hold of. It would be in the fitness of things if the present Taotai's action led to abolition of the squeeze. It has unwisely called attention to a tax whose very name is a condemnation, and we should not be surprised if the stone recoiled heavily.

But the Defence Tax, though important in principle, is are irregular taxes levied in Shanghai, of greater importance to Foreign trade than that which the Taotai has seen fit to revive on Native produce. We believe it to be a fact within the knowledge of most merchants, that opium is by no means the only article subjected to illegal taxation within the Foreign Settlement. Merchants know that tax-collectors stand at the very doors of their hongs, and stamp every bale of goods that passes out into the hands of Native buyers. And we believe we are accurate in saying that a tax of about 2½ per cent. *ad valorem* is levied on every article so purchased, whether it goes into a Chinese retail shop in Honan Road or the Maloo, or whether it goes inland to Soochow or some other native city. A bale of 8¼-lb. Shirtings for instance, bought by a Shanghai shopkeeper, has to pay Tls. 2.31, which at Tls. 1.80 per piece amounts as nearly as possible to the 2½ per cent. that ought only to be paid on transit into the interior. We pointed out, at the time, that Sir Edmund Hornby's able judgment in the late opium case had a far wider range than the opium trade. If there is any meaning in an import tax, it must mean that goods which have paid it are at least freed by it within the limits of the port. If goods that have paid 5 per cent. import duty are to pay 2½

per cent. transit duty for the privilege of passing 100 yards inland from the Bund, the distinction between articles XXVI and XXVIII of the Tientsin treaty becomes a farce, and the whole 7½ per cent. might as well have been made leviable in a lump, under the first article. It is so obvious, on the contrary, what was the intent, that it seems absurd to labour the point. Clause 1 of Rule V of the rules appended to the Treaty lays down that "opium shall henceforth pay thirty taels per picul import duty. The importer will sell it only at the port." What other meaning can these words have, but that the payment of thirty taels frees it within the limits of the port? And so of Shirtings or other manufactured goods. Article X of the Nanking Treaty, on which Art. XXVIII of the Tientsin Treaty is founded, says:—"When British merchandise shall have once paid at any of the said ports the regulated customs and dues, such merchandise may be conveyed by Chinese merchants to any province or city in the interior of the empire of China on payment of a further amount as transit dues, which shall not exceed——(subsequently fixed at 2½) per cent. on the tariff value of such goods."

If it were possible to argue that the distinction between duties to be paid at the port of entry and duties to be paid on transit "to any province or city in the interior" meant nothing, the language of Rule V in regard to opium might be brought in as collateral evidence. But there can be no doubt; clear that it is absurd to labour so point; and it is time the whole subject should be raised afresh and fought out with the local authorities. The onus of the initiative lies on the Chamber of Commerce. It is for the Chamber to collect facts, and lay these facts before the Treaty Consuls. It will be for the Consuls to insist on the discontinuance of levies which are evidently in contravention of the Treaty. We believe it will be found that the Foreign Consuls are well disposed to fight the question, if facts are supplied them on which to work. It needs only that an argument well founded and carefully reasoned should be drawn up, to ensure their support. It is for merchants to collect these facts, because they come in contact with the native dealers and can more easily ascertain them, and because they are naturally expected to move when they have a grievance to redress. There can be no doubt that taxes in contravention of the Treaty are levied upon Foreign merchandise generally, as well as upon Native goods and opium; and we repeat that the time is opportune for insisting that every article which has paid duty according to the treaty tariff is entitled to be sold, free of further tax, at any point within the limits of the Foreign Settlement or the Native city of Shanghai. If this be the ruling of the Treaty Consuls—and we cannot see how they should rule otherwise,—it will be for the Council also to change the rôle of the Police. Instead of helping the Chinese in their extortion, by helping their Tax-collectors to arrest any victim they elect to squeeze, it will be for the Police to arrest the Tax-collectors themselves, as men guilty of an illegal action, and hand them over to the Chinese authorities for punishment. They might not be punished, but they would be worried and hindered to such an extent as would very materially check their action.

FIRES AND CHINESE HOUSES.

THE two recent fires amongst the Chinese houses in the Settlement, show how much more stringent regulations are needed to arrest the progress of a conflagration which has once gained head-way. The unusual dryness of the weather rendered the wooden houses an easy prey, when once the first block had caught, while the unfortunate want of water in the quarter of the Settlement where the later fire took place, compelled resort to the more destructive method of stopping the flames by pulling down those buildings which were likely to carry them on. It was entirely owing to these measures that the fire, east and west, in the Fuhkien Road was eventually prevented from becoming one of the most serious, if not the most serious, calamities which has befallen the Settlement since its formation. Both fires threw light on one curious point. With little or no wind, and with no actual contact of flame or sparks, the wooden buildings at the Fuhkien Roads became ignited. The Chinese occupiers in the former were able to overcome the flames; but in the latter case, it seemed almost inevitable that the fire would spread into the crowded district lying east of the Fuhkien Road. The fire extinguishers used by the Municipal Police were however punctually at hand; and it was curious to observe the men standing in the street between the two fires, able with those small instruments to keep down the progress of the flames in the already charred and burning fronts. At the Taiwan Road, the exertions of the Brigade were not so fortunate, and the flames, having taken hold of the houses at the opposite side, one block, containing property of considerable value, was destroyed. In dry weather such as we have been having lately, the experience of the last two fires goes to prove that the intervention of a street lined with wooden houses is of comparatively little effect in stopping the course of a fire. The streets allow means of access; and of course, with a good supply of water, it would be impossible for any fire to cross a street 30 feet wide. But there is not a good supply of water, though we are glad to see that projects for such a supply are beginning to assume a practical shape.

In the meanwhile, however, much can be done. Although streets, lined with wooden houses, can as we have stated above, be overleaped by a fire such as that of Tuesday night, a fire in Chinese buildings seldom penetrates through even the slightest brick and plaster wall. It causes very little additional expense, in building, to divide rows of Chinese houses by these walls. At present, though these so-called fire-walls are made use of to a large extent in the rows of houses facing the roads, they seldom or never penetrate the cook-houses and sheds at the back, which thus are able to carry on the flame and outflank the wall. The backs of the cook-houses themselves are seldom protected by brick walls, and hence fire is conveyed from one block to another. Were the Ratepayers to insist on proper fire-walls, entirely surrounding the block it is intended to protect, being erected at a distance not exceeding, say, five houses apart, risk of the fire spreading beyond these limits would be almost taken away. In new foreign-owned properties, such precautions are usually taken, as experience has shown the various fire insurance companies the advisability of enquiring into these particulars. The fire at the Fuhkien Road originated in a block of Chinese-owned houses, and spread along what, before the occupation of the settlements by Foreigners, had been a considerable village. To the present day, this quarter of the Settlement has remained in a most unsatisfactory condition. The Chinese have shown not the slightest disposition to improve their properties, and have out, even when tempted by the fancy prices sometimes offered in moments of inflation by foreign investors. Pressure has scarcely yet been brought to bear in the way of opening up roads, and the consequence was that, even after the engines had been got to play, the narrow and tortuous lanes hindered their action. We hope that the Council will take the opportunity afforded by the fire of Tuesday night, to effect some improvements in a district which has proved itself to be a standing danger in the Settlement.

MUNICIPAL.

The Municipal Report, covering 171 pages, was circulated among the Ratepayers on Friday morning. The total expenditure for the year has been Tls. 244,137, against an income of Tls. 244,2 5. These figures show an increase over the estimated income under several heads; and this increase, together with the avoidance of several items of expenditure sanctioned but not incurred, has enabled the current expenditure of the year to be met without recourse to the debentures which the Council were authorised to raise at the last Ratepayers' meeting. The following *precis* of accounts gives details of the variation:—

Reviewing the detailed statement of Receipts and Expenditure appended, we find under the former head that the revenue from

the following sources has exceeded the original estimate, and for the reasons set against them as under :—

General Municipal Rate—Native—owing to number of new houses erected.

Dues on Merchandize—owing to heavy shipments of Silk.

Wheelbarrow Fees—in consequence of increased number plying for hire.

Local Post Office—by sale of stamps and postage on loose letters.

Stud Branch—by sale of Council's Stud not allowed for in framing Budget.

Municipal Stock and Stores—sales casual and therefore not considered prudent to rely on receipts from this source in framing Budget.

	Tls.	
The Expenditure amounts per detailed statement to	244,137.12	
The Budget 1874-1875 allowed	237,160.99	
The Budget has therefore been exceeded by..		6,976.13
But in the amount ... are included items which the Council were authorised to meet by the issue of debentures.	244,137.12	
Bridge—Honan Road—Soochow Creek	5,000.00	
Bunding—Whangpoo—Heard's Wharf to Pacific Mail S. S. Co.'s premises..	1,287.08	
Hongkew Creek—West Side, Whampoo to Iron Bridge..	2,691 20

Seward Road Extension	2,000
Purchase of Land outside Settlement for deposit of Garbage	500
	9,500

not having been required for those purposes.

The Municipal income for 1875-6 is estimated at Tls. 233,699, and the ex- shows a minute nicety of calculation that can hardly be realised in practice. It is likely the revenue will prove larger than it is put down at, but the Council are wise in keeping well within bounds, as they have allowed no margin on expenditure. One indicated source of possible extra receipt is the Taotai's contribution of Wharfage Dues, which he has been asked to increase. We quite agree that the present contribution is very insufficient, but we dislike these applications to the Taotai for contributions to Municipal expenditure, because they simply afford an excuse for local taxation. The Taotai can say : if you ask me to help out your revenue, you must expect me to recoup myself. A far more satisfactory plan would be to give up the commutation altogether, and collect the tax ourselves. Say to the Taotai, we want nothing from you, but neither shall you take anything from us. Practically, it is likely that the year will consist of nine months, and the budget has been framed with this view—separate estimates being given for the last nine months of 1875, and the first three months of 1876. The change will be a convenient one, and will allow time for preparation of the report and accounts, and their circulation some time before the meeting, instead of the hurry and inconvenience now involved in the annual effort to get the Ratepayers' meeting over, before tea and silk and hot weather distract attention too much from Municipal business.

The Water Works scheme suggested by the Municipal Council is based on taking the Soochow Creek as a source of supply. The estimated cost is Tls. 256,200, which would be raised by debentures at 8 per cent. The yearly outlay is estimated at Tls. 43,496 (Tls. 20,496 interest on loan, and Tls. 23,000 working expenses), and the yearly income at Tls. 44,600, derived from a rate of 2 per cent. on foreign houses (Tls. 9,600) and $2\frac{1}{2}$ per cent. on Chinese houses (Tls. 30,000) plus certain extra sales of water, and Tls. 2,000 saving in cost of watering roads. In case the Loong-hwa site should be preferred, an addition will have to be made to the cost, of Tls. 107,000. But an additional income, more than sufficient to cover the interest on this sum, would then be derived from sale of water in the city. No account is taken of saving in the expenses of the Fire Brigade, which, as the scheme provides for hydrants throughout the Settlement, each capable of throwing three streams of water 60 feet high, and from which the engines could be supplied, would probably be material. No special site for the reservoir is indicated, but that is a matter of detail. A scheme suggested by a Ratepayer for utilising the Defence Creek, is quoted, but the Municipal Engineer objects that it would be more convenient to concentrate the works, than to have long straggling works such as that plan would involve. Further details will be best gathered from the report itself. We cannot but regret that this was not issued a month ago. To-morrow, being mail day, is practically a *dies non*, so that Ratepayers have only four days, including Sunday, to consider a scheme involving an outlay of a quarter of a million taels. We much fear that this change will involve postponement of a matter which the community are nevertheless anxious to see dealt with. The questions, for instance, whence the supply shall be drawn, and how a Water-rate should be raised, are open to much discussion. It is possible that Loonghwa or the Yangtzepoo may be preferred to the Soochow Creek, and that hydrants from which water could be bought, may be preferred to a fixed tax.

Outports.

TIENTSIN.

I hear of no news. The weather has become a little warmer, but we still have occasional gales. Rain is very much wanted by the peasants.—The Emperor appears to be visiting the Kwang-teh-teen every third day ; he must be a very religious child for 4 years old. He last went there on the 30th ultimo, as per Peking *Gazette*.—On the same day, Maouchang-he was called to the Council Room with the Ministers of State, on business. Maouchang-he is not a member of the Council, but is a chief of the Tsung-li-yamên.

4th May.

In the Peking *Gazette* of the 2nd May, we find the announcement that Chung How had presented his thanks to the Throne for having had the honor to be appointed acting Right Vice-President of the Board of Civil Office. I may mention that he holds the position of Left Vice-President of the Board of War, and is a Member of the Tsung-le Yamên. He was formerly Superintendent of Foreign affairs for the North of China. Further on, in the same *Gazette*, we read that Chung How had been summoned, in conjunction with the Ministers of State, to the Cabinet Council Room.

In the *Gazette* of the 3rd May, we find the announcement that Tsung Kwo-tseuen (brother of the celebrated statesman Tseng Kwo-fan), lately appointed Governor-General of the Yellow River works, had an audience to pay his respects to the Throne, before taking his departure for his post. Further on, in the same *Gazette*, we read that Tsung Kwo-tseuen had been summoned, in conjunction with the Cabinet Ministers, to a Cabinet Council.

In the *Gazette* of the 3rd May, we find an Edict appointing Tso Tsung-tang, who holds the position of Governor-General of the provinces of Shen-se and Kan-suh, Imperial Commissioner for the Settlement of Military affairs in Sin Keang—meaning *The New Frontier*, and hitherto known to foreigners as *Turkestan*, the region conquered by the Emperors Kang-he and Keen-lung. The same edict also appoints Kin-shun (金順) Assistant Imperial Commisioner in the same Commission with Tso Tsung-tang (左宗棠). From the appointing of this Commission, I am led to suppose that something of national importance has lately occurred in the Eastern Turkestan region, demanding the greatest attention on the part of the Chinese Government. In the *Gazette* of the 4th May, we read that King-leen, a General of the Chinese Manchu White Banner, had been appointed to succeed Kin-shun as General at Oroumtse, a town in Soungaria.

From Peking, I just now learn "that the German and Danish Ministers had reached the metropolis safely, and that there was nothing 'rotten in the State of Denmark,' but that there was undoubtedly much rotten in the State of China."

Here in Tientsin, the weather keeps cold for the time of the year. Last night we had a heavy fall of rain, which will do the crops much good.—Thung.

PURITAN.

6th May.

FOOCHOW.

A correspondent informs the *Herald* that the teaplant is now under pretty extensive cultivation in the Yuen-foo district.—It is reported that orders have been received from Peking to disband the gingal and bow-and-arrow-men at present in garrison, and substitute foreign drilled troops.—It is understood that the Great Northern Telegraph Company's negotiations with the Provincial Government are proceeding most favourably, and that there is every prospect of the construction of the line to Amoy being resumed shortly.—The str. *Hai-loong*, chartered by the Government to convey troops to Taiwan-foo, was detained in port for several days, owing to the reluctance of the soldiers to embark in wet weather. Says the *Herald* : "If these valiant Celestials were equipped in the same manner as a body of troops that we popped upon, a few weeks ago, at the Pagoda Anchorage (armed to the teeth with *umbrellas* and *fans!*) it is difficult to account for their squeamish objections to the weather."—The native authorities are very reticent with regard to Formosan affairs ; but there is no doubt that the aborigines are quite able to hold their own against the motley crowd of Chinese soldiery opposed to them. We believe that in all the recent engagements the Imperial troops have been badly beaten.

AMOY.

Information has been received in Amoy that an agreement was entered into last week between Mr. Dreyer, on behalf of

the "Great Northern Telegraph Company," and a Mandarin deputed by the Peking Government, for the construction of the telegraph line from Foochow to Amoy, at the expense of the Chinese Government. And the Government is to pay the Company for destruction of property and for damage by detention up to the time when the new contract was entered into. Mr. Delano, U. S. Consul at Foochow, was selected as an adviser or mediator. If the rumour be true, I hope the Chinese are not getting the enterprise into their own hands for the purpose of destroying it whenever they think proper.—*Hongkong Times.*

3rd May.

SWATOW.

Trade seems rather brisk at this port, if we may judge from the numerous arrivals and sailings. We have no less than sixteen sailing vessels and three steamers in port at present. The weather has been very unsettled this last week or so. Just now it is blowing a strong breeze from the north-east, the barometer standing high, and the themometer rather low, considering it is the first of May. We hear that since Fong's return from Canton, he has been very active in getting sections of Forts built on Fishermen's Island, and has had the *Chen-to* out firing at them two or three times already. We learn that she has fired over thirty rounds of shot and shell at them from her 7-inch Armstrong gun, but so far as can be seen when passing the Butts (or sections), some 200 or 300 yards away from them, they do not seem to have received very much damage. The gallant commander of the *Chen-to* and her chief engineer, have each received from General Fong a gold medal, a reward we believe they well deserved for energetic assistance they rendered to Fong some two or three years ago, whilst he was bringing under Imperial subjection the numerous rebellious villages in the surrounding district.—*China Mail.*

CANTON.

The *Chinese Mail* says that the soldiers forming the body-guard of the Viceroy have rendered themselves obnoxious to the inhabitants of Canton. They frequently bought things of the hawkers and refused to pay for the same. A soldier was the other day paraded through the streets with a cangue on his neck. He had been tyranising over peaceable hawkers and using violence to them, thinking no doubt that his position on the guard of the highest mandarin in the Province would secure him from consequences. But he was mistaken, for as soon as H. E. heard of his peccadilloes, he ordered him to be at once taken before the Namhoi Magistrate, who ordered him to be flogged 150 blows, and to be paraded through the streets with a cangue, as a warning to the other soldiers. —On the 26th ultimo, while a passage boat was coming from Sunwui to Canton, a sudden gust of wind came over and capsized it before the sails could be taken down. There were a good many passengers on board at the time, more than ten of whom were drowned. The gust seems to have been felt with disastrous results within a certain radius. A boat coming from Shuntak on the 26th, reported that at a place called Kom Chuk, wrecks of all kinds were seen floating about on the water there, and that several bodies were seen floating past. It is also reported that a cruiser junk was also capsized, but whether any lives were lost has not been ascertained.

HONGKONG.

A meeting of shareholders in the Victoria Fire Insurance Co., is to be held on the 24th instant, to take into consideration a proposition for voluntarily winding up the Company.—At a meeting of shareholders in the Hongkong, Canton and Macao Steamboat Co., it was resolved to work the Company in future by a paid secretary and agents, instead of through the agency of a firm. The business of the Company was stated to be prospering. They had $120,000 on fixed deposit in the Hongkong & Shanghai Bank, about $28,000 invested in Chinese Bonds, about $45,000 on current account in the Bank, and had paid $25,000 on account of the steamer which was being built. The Chairman added that before parting he should like to say a few words as to the part which the late General Agents had taken in the affairs of the Company. The Company was started in bad times, and was by them carried well and successfully through opposition to its present state of prosperity; he begged to propose a vote of sincere thanks to the members of the late firm of Augustine Heard & Co. This was seconded by Captain Sands, and carried *nem. con.*—The *Daily Press* of May 6th says:—At the Police Court yesterday, before Mr. Russell, Mr. A. F. Chambers was again brought up and charged (1) with unlawfully obtaining the sum of $43,000 or thereabouts, the money of complainant (the Hon. J. Whittall), during July, 1873, and at different times thereafter; and (2) with feloniously embezzling at various times during 1873, 1874, and 1875, the sum of $17,850, the property of Messrs. Jardine Matheson & Co., managers of the Canton Insurance Company. The hearing was again conducted in private, but we understand that the result of it was that the accused was committed for trial on both charges. Bail refused.—Amongst the passengers arrived in the *Yangtsze*, are two divers, who are engaged to work on the wreck of the S. S. *Japan*.—Referring to the Indian telegrams which will be found among our mail news, the *Mail* says the Government seem determined not to let the King of Burmah forget that he is under surveillance. A man of war has been telegraphed for and artillery has been ordered to be in readiness to sail from Madras immediately. Furthermore, a detachment of Fusiliers now serving in the Andamans has been ordered to rejoin its head-quarters in Burmah forthwith. All these movements are of course primarily connected with the difficulty which Sir Douglas Forsyth has been deputed to arrange; but they come in very conveniently for the investigation yet to be held as to the King's complicity in the Yunnan outrage. Profound peace is scarcely likely to reign in Ava for some months to come.

The *Mail* renews its protest against the appointment of Sung Pao-hwa, even with the knowledge that he is not to be a member of the Commission but only an escort to the foreigners. "Not even an Imperial edict will induce the Chinese to regard the positions of the foreign and native officials forming the party, in their true light. It is all very well to say that the Native Government is quite sincere in admitting that the British officials form the Commission, and that Sung is a mere guide and escort. In Chinese eyes, Sung will be the commissioner, and Messrs. Grosvenor and Baber will be merely his companions, appointed to report on what he may discover. It is so obvious on the face of it, they will urge, that British officials can have no possible power over the Yunnan officials, that Sung *must* be the really powerful man of the party: and this once accepted as gospel, it is easy to see what mischief may ensue. The Chinese are already remarking in this Colony on the proof afforded by Sung's appointment, that the Peking Cabinet does not deem the matter of very great importance, and this feeling will shortly become universal. Nor is the manner of Sung's nomination more satisfactory. It appears that he is not appointed by the Tsungli Yamen at all, but by Li Hung Chang, the Viceroy of Chihli, in his capacity as Commissioner of Foreign Affairs. This we hold to be a grave mistake. In a matter so important, no authority, save that of the Imperial Government itself, should be recognized, and it should be called upon not merely to appoint a delegate itself but to select one of high rank."—It is reported that the new customs Taotai at Tientsin, Lai Chiu Tong, will start in a day or two for his post. He has been ill since his appointment, hence the delay in his departure.—H. M. S. *Hornet* has returned after an unsuccessful search for the *Gwalior*, which is fast being restored to a condition that would have qualified her to go in search of her intending helper. The gunboat it appears ran short of coal, and had to put into Haining, whence she obtained a sufficient supply of wood to bring her over.

HIOGO.

The Annual Athletic Sports were held on the 24th ultimo, and the afternoon was to have afforded a general holiday, but the pleasure was marred by a soaking downpour of rain, it being the first time, says the *News*, that the Club's gala day has turned out a wet one. Twelve "events" were nevertheless got off, a flat race of 100 yards being won by J. Henson, M. T. B. Macpherson, 2; A. C. Sim, 3. Time, 10¾ sec.; putting the shot (16-lbs.); A. C. Sim (scratch) 34 ft., M. T. B. Macpherson (2 ft. 10 in.) 32 ft. 8 in.; high jump, M. T. B. Macpherson (scratch) 5 ft. 1 in., A. C. Sim (4 in.) 4 ft. 10 in.; flat race, quarter mile, dead heat between J. Henson (scratch) and A. C. Sim (50 yards' start), two others ran, handicapped 60 and 70 yards respectively, but were beaten off. Time, 52 secs. The heat was not run off; throwing cricket ball, H. J. Gorman (6 yards) 89 yards, F. Low (6 yards) 88 yards; M. T. B. Macpherson (scratch) 84½ yards; hurdle race, 100 yards, 8 flights, B. Macpherson, the former winning the deciding heat in 15 seconds; F. Low won the long jump, clearing 15 ft. 6 in., A. C. Sim being second, with 15 ft. 4 in.; a hurdle race of 300 yards was won by J. Henson, who received 5 yards' start from M. T. B. Macpherson, second. Time, 41½ secs.; throwing the hammer, F. Walsh (9 feet) 86ft., R. Wilson (scratch) 82ft. 11in.; two other flat races of half-a-mile and mile were won by M. T. B. Macpherson, respectively in 2m. 18s., and 5m. 35s.; and a "sprint" of 100 yards by J. Henson.—The Kobe Cricket Club has been reorganised, Messrs. Lucas, Groom and Sim being appointed a committee, and half a dozen names entered, at a meeting held on the 30th ult.—The *Parana* fell in, on the 26th ult., eight miles from the Isumi light-house, with some shipwrecked Japanese, floating on a capsized boat. Two men and a woman were rescued, and one man, quite dead, left behind. From the state they were in, they must have been exposed for some time, two of three saved shewing symptoms of insanity, and all being too weak to move.

YOKOHAMA.

The *Mail* says, "The China papers report that Mr. Wade will demand $150,000 of the Chinese Government for the murder of Mr. Margary," and adds an emphatic protest against any such dealing with the affair, utterly objecting to assessing the lives of Englishmen at any number of thousands of dollars. "Let Lord Northbrook send a couple of regiments to Manwyne, institute an investigation into the affair, punish the responsible mandarins, hold the place for one year, and let the Chinese pay the expense of the occupation."—The

native journals are, according to the same paper, engaged in a warm discussion upon the women's rights question; many writers are anxious to raise the status of the wife to an equality with that of the husband, and it is said that public opinion is gathering force in its favour.—The *Advertiser* says that it was reported that the Loo-chooan Mission, now in Yedo, had, from patriotic motives, refused to accept $100,000 of the compensation paid by the Chinese Government, and that the Japanese Government had decided to present them with a steamer fully equipped in lieu of this sum; but as the Loochooan question is likely to turn up again in an embarrassing form, this decision will it is thought be modified.—The *Gazette* records an unfortunate accident which happened on board H. M. S. *Thalia*, on the afternoon of the 22nd ultimo, while getting underweigh for Hongkong. When catting the anchor, the purchase carried away, and the leading-block flying round struck three of the men at the capstan. Two of them, John Hickey and Francis Hill, were hurt so severely that signals were made for H. M. S. *Challenger* to send a boat to take them to the Royal Naval Hospital, where it was found that each had sustained a fracture of the left leg. The third man received only a few bruises.—Two shocks of earthquake were felt on the 21st ult., the second being a severe one, though fortunately no damage was done. On the 26th, another severe shock was experienced, and on the night of the 29th ult., a fourth, but not so severe.—A terrific thunderstorm passed over the Settlement on Sunday morning, the 25th ultimo. During the early part of the previous evening, heavy showers fell, and, about 2 A.M. on Sunday morning, thunder commenced to roll and lightning to flash in a way seldom seen in these latitudes, heavy rain falling incessantly.—A native official who, whilst in Switzerland, witnessed the operation of a machine for working up waste silk, is about to construct a similar one for use in Japan.—The fishermen of Vries Island have recently captured a crab which measured 11 ft. 6 in. from one extreme point to the other. It was brought to and was exhibited at the Pier Tavern.—Benjamin Taylor, a seaman of the U.S. gunboat *Monocacy*, who committed a wanton assault on G. Giles, a marine belonging to H. M. S. *Frolic*, by smashing an empty bottle in his face and severely cutting it, was ordered to be tried on board his ship.—In H. B. M.'s Provincial Court, on the 28th ult., Charles Adds, owner of the three-masted schooner *Iris*, and George Withers, late master of the same vessel, were placed in the dock for preliminary examination, charged with being implicated in the late robbery from the Comptoir d'Escompte de Paris. Withers was discharged without blame, but Adds was committed for trial. The total amount of the defalcations of the deceased, Messrs. Swaby and Cantelli, was stated by the manager of the bank to be $67,775.—The Amateur Athletic Sports, announced to take place on the 30th ult. had to be postponed, on account of bad weather.—The *Herald* says the Rev. Mr. Syle has retired from the pastoral charge of Yokohama.—Burglaries and house robberies have been again plentiful in Yokohama and neighbourhood, and very few, if any, of the marauders have been captured.

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

April 18th.—(1) An edict, in reply to a memorial from Shao Heng-i, Footai of Shensi, setting forth the result of an investigation into the condition of distressed districts in the province of Shensi, and praying that arrears of land tax and grain contributions be remitted partially or entirely; or the collection deferred, as called for by the circumstances of the respective localities. The vast tracts of unreclaimed land, lying waste since the devastations of the late civil war, and the length of time required for the people to recover their normal state of prosperity, are laid down in the edict, as reasons sufficient to call for special leniency in respect to old arrears; and over fifty districts are enumerated, in separate lists, as cases for special mark of Imperial clemency. The arrears are sub-divided according to the different years to which they pertain, extending from various dates—*i.e.* from 11th year of Tungchi, downwards. The majority are remitted in *toto*, others are allowed to remain over till the gathering of the wheat harvest, in the present 1st year of Kwangsu; while the remission in a few districts of well watered rice land is disallowed. The Footai is commanded to proclaim forthwith this act of grace, on yellow placards, throughout the localities concerned, and to take precautions against nefarious attempts at extortion on the part of the yamên clerks. "Let our extreme commiseration for the sufferings of our people be made fully manifest on this occasion."

(2) Edict, appointing Chen-ming to the acting post of Brigadier-General of the Yellow Bordered Chinese force.

(3) The Footai of Shantung, Ting Pao-chen, memorializes the Throne in reference to the trial and award of a case of re-appeal, by one Sung Pao-shan. During the 12th moon of the 9th year of Tungchi (beginning of 1870), the appellant's father, Sung Wei-tien, was introduced by a friend to a farmer, Hwang Tun-li, to act in the capacity of laborer. Hwang, finding by interrogation that the man knew little of husbandry, and seeing that he was, further, advanced in years, refused to employ him. Sung Wei-tien was much disappointed, and being ashamed to return home, committed suicide on the farmer's premises by cutting himself in the abdomen. The son, Sung Pao-shan, refused to believe that his father would seek death by such means, and accordingly accused some of the farmer's that they would be supplanted by his father. The case was tried in several Courts, one after another, always in favor of the accused, and assuming each time larger proportions, until a host of relations and yamên runners were dragged in as accomplices and connivers. The Footai adjudges the appellant to be guilty of false accusation, actuated by the design of extorting money, and the parties attempted to be implicated being over ten in number, and the consequence being death to the accused if convicted, the crime, while too grave to benefit by the Act of grace of 15th of 11th Moon of 13th Year of Tungchi (1874) should be dealt with by the utmost severity of the law. The sentence arrived at, therefore, is that the appellant be conveyed to the border to serve in the Army as a felon. [The Board of Punishment is commanded to consider and report.]

April 19th.—(1) Several minor official promotions, retirements of deputy officers owing to mourning, and honorary distinctions are gazetted.

(2) The Governor of Shansi memorializes respecting the appointment of Teh-pou to the post of Sub-Prefect over the Manchu population of Tai-yuen-foo, the provincial town of Shansi.

(3) Shui-lieu, Commander of Sheng-ching (the birth-place of the present dynasty), reports to the Throne on the apprehension and examination of certain culprits, who had plotted together to extort money from the farmers and settlers on the Imperial hunting grounds at Jehol. Grants of these lands have from time to time been made for the purpose of cultivation; and re-surveys, with a view to taxation, are periodically made. The present conspirators falsely represented themselves to be petty officials and runners invested with authority, and were in league with one Lien-tsiang, who represents himself to be a clerk in one of the Boards at Peking.—Rescript: Let those prisoners at present at large be at once apprehended and brought to justice; and let the case of Lien-tsiang be investigated.

(4) The foregoing official reports on the examination, according to rule, after the expiration of one year, of two Manchu officers placed under his jurisdiction. A full account of their antecedents is given, and both officers are represented to be deserving of being retained on the list of expectants for full appointments.

April 20th.—(1) Court Circular. Certain officials are deputed to officiate at the ceremonies of the "Advent of Summer" term, on the 1st of the 4th moon, and at the ordinary prayer-offering for rain on the 10th of the same month. Other officers are also nominated, to present the libations required on the two occasions.

(2) The Governor of Canton, Chang Chau-tung, addresses the Throne, in reply to a circular of instruction from the Criminal Board, to report on the expediency or not of carrying into effect, in the province of Canton, the Censor Feng Ching-ling's representation that, in view of the whole country having been brought round to its normal state of quietude, the execution of robbers, bandits, and all criminals should be regulated by rules formerly existing. The Governor expresses himself as deeply impressed with the feelings of humanity which prompt the present enquiries of the Imperial Government. A retrospect of the reasons for the suspension hitherto of the necessity to submit to the Board all cases before dealing out the extreme penalty of the law, is given; the rifeness of robbery by armed bands, and the desirability of dealing out prompt and dread warning, in order to check the turbulent feeling existing, are adduced; while, at the same time, no undue precipitation is represented to have been shown in executive proceedings. The memorial concludes by stating that cases of kidnapping decreased; that these can now be dealt with in the ordinary course; but that insubordination throughout certain classes of the Province is still prevalent, and that a great element of danger exists from the extreme number of disbanded and disqualified braves. If the inmates of the prisons were allowed to accumulate too much, serious consequences might result; and the Imperial assent is craved to allow all cases of robbery by violence and sedition to be reported to the nearest Taotai or Prefect; and for prisoners to be executed on the spot, after receipt of instructions therefrom. As regards the Kwang-chen-foo—the provincial capital Fou—the culprits can be forwarded, as heretofore, to Canton for trial and award.—Rescript: Let the Criminal Board take note.

(3) Liu-shu, a member of the Imperial family, reports that the King of Corea had, on the 18th of 10th moon of last year, sent forward two Chinese to be handed over to the commandant of Fung-hwang district, with a letter stating that the men were Shantung traders, that their boat had met with bad weather, and been blown towards the coast of Corea; and that they had been taken in hand, clothed, fed, and returned in charge of an officer to their native country. From the King's letter, it does not appear that the boat was wrecked; for it was found anchored off the coast; but what was done with the craft is not stated. Liu-shiu finds that, in the 20th year of Tau Kwang, a similar instance occured, when the sum of Tls. 30 was presented to the Corean officer in charge of the refugees. He therefore prays that the Imperial generosity be made equally manifest on this occasion, and that Tls. 30 be paid from the Sheng-ching

盛京 exchequer to the present Corean messenger.—Rescript: Noted. Respect this.

(4) Several official movements are reported.

21st April.—Edict. Ting Pau-chun, Governor of Shantung, reports that, while supervising the filling up of certain breaches in the River at Chia-chwang in Shantung, manifestations of divine assistance from the River Deities were repeatedly met with, and works of a most dangerous and difficult nature were finally accomplished, owing to the divine help thus offered. By record, it is found that the posthumous title of Queen of Heaven was, in the 23rd year of Kangshi, added to the dignities of the "Golden Dragon King" deity, but in regard to further honors to be conferred on the "Yellow Great King" and several others, the Board of Rites is commanded to confer and report. A special temple is also ordered to be erected in memory of the Lih Ta-wang.

(2) An Edict in reference to repairs to certain Imperial graves.

(3) The Court of Censorate at Peking reports as to the revision of the constabulary regulations in the Capital. An increase of the force is urgently called for, but the low financial condition of the Board's exchequer renders such course inexpedient, while an increase of taxation would be too burdensome to the people. A rigid revision of the police regulations is therefore resorted to as the only alteration. These are submitted *in extenso;* and among many reforms mentioned, which are probably but a reiteration in fresh words of old existing rules, may be mentioned a recommendation that the police runners should be paid their wages of five mace per month in full, without any deduction from the underling clerks; also, that the clandestine opening of Opium-smoking shops, which are considered to offer but meeting places for thieves and vagabonds, should be visited with severe punishment.

22nd April.—(1) A very lengthy Edict in reference to various misdemeanours and light by several Censors, in separate tablets to rials, and revealed in part by an appeal case by Chang-sz chen, a graduate by purchase, and others. An official, Kwang-chen, was specially deputed from the Capital, to enquire into the state of affairs; and sentences based on his report are passed on several of the *literati* guilty of extortion, and who had been previously stripped of their degrees, varying from 50 blows of bamboo upwards to transportation. Several officials are also referred to the Civil Board for punishment. One or two *likin* and examination stations are ordered to be closed, and the expediency of removing others is to be considered. The appeal by Chang-sz-chen, arising out of an alleged case of extortion by military travelling accommodation station keepers, is adjudged to have been prompted by private motives—*i.e.*, he had borrowed money from a station and was exasperated at being pressed for its repayment; but, although his particular charge is unfounded, malpractices are found to have been long going on. These stations, as well as horse and coolie stations (夫馬局) for Government use throughout seventy six departments and sub-departments, are announced to have been already closed by a single order; and the Governor-General is commanded to instruct all his subordinate officials in the remaining sixty-five departments, to close the military constabulary stations and retain certain horse and coolie stations, in accordance with a list drawn up. Public notifications are to be also issued informing the people of the steps taken.

(2) A decree in reference to the repair of the Government granaries and to the sale of surplus wheat on store.

(3) A decree. Yang Yuh-ping, former Governor-General of Shensi and Kansuh, petitions to the effect that his two parents are old and suffering from ill-health; and he again prays to be allowed to repair to his native place to attend upon them during their last years. Yang Yuh-ping's request is prompted by filial duty and is to be commended. Being experienced in naval affairs, he is commended to act jointly with Peng-yu-lin in inspecting annually the naval stations on the Yangtsze, and in taking measures to increase the efficiency of the service. The funds required for this purpose will be supplied by the Governor-General of the Two Kiang and of Hupeh and Honan. During the intervals of his labour, Yang Yuh-ping will be allowed to visit his family.

(4) A petition that the period for distribution of Congeé Rice from two charitable institutions in the capital be prolonged. A donation of 200 *shih* of rice from the Imperial Granary, and of Tls. 400 from Duty receipts are craved.

The remainder of the *Gazette* is taken up by reports on the conduct and character of certain expectant officials, in pursuance with a regulation requiring an examination after one year from their arrival in the Province in question.

April 23rd.—(1) Decree, allowing the period for the charitable distribution of rice in the Capital to be prolonged.

(2) The Governor-General of Hu-peh and Hu-nan, and Governor of Hu-peh, jointly report on the trial of a suit lodged by deputy at the Capital by Li Kwang-chau (a former Compradore to a Foreign firm at Hankow before referred to). The appellant undertook the embankment and reclamation of certain land on the Han river, and situated on the Han-yang side. The scheme was reported to and originally allowed by the Che-shien, and the land proprietors to be benefited thereby were to contribute two strings of cash for each *sheh* of rice producible. The undertaking was subsequently appealed against by other landowners as interfering with the recession of flood water, and, after a survey by the higher authorities the embankment was accuses certain persons ma Li Kwang-chau statements, and thereby interfering with his undertaking. The finding is that the embankment was made to serve the interest of the appellant, while acting to the prejudice of others, and interfering with the flow of the Han River. As Li Kwang-chau is awaiting in prison the sentence of decapitation for false statements in regard to timber offered for Imperial use, his guilt in this case need not be passed sentence upon. In regard to the deputy, Liu Ta-yung, he was probably ignorant of the untenableness of the charge, and no punishment need be dealt out to him.

Reports on the character of Expectant officials follow.

April 24th.—(1) A Decree. Chang Chan-tung, Governor of Kwangtung, impeaches the conduct of certain officials on the Expectant list. Let the Expectant Sub-Prefect, Chen-shuen, whose mode of life is reported to be ill becoming his position, while his discharge of official duties shows ignorance and neglect; as also another officer named, be both deprived of their rank and never allowed to again take office, as a warning to others. The remaining officers mentioned may be dealt with as suggested.

(2) The Minister Wen-siang, on his knees, memorializes the Throne, stating that he has not recovered from his previous indisposition, and imploring that he may be allowed to retire from office. "Your slave was impelled by sickness to repeatedly apply to his departed Majesty for leave of absence; and words are inadequate to depict the deep gratitude to which he was moved by the Royal regard so frequently shown. Your slave was in hopes that, by medical attention, he would partially recover, and immediately return to his duties; but, alas! on the 5th of the 12th moon of last year, news of the great calamity came upon him with a shock that rendered him insensible for a considerable period. After coming to, struggling with his weakness, he hastened to the Palace, and with wails of lamentation, prostrated himself to the ground. But the trial was too great; fresh symptoms manifested themselves, and the next day his strength was insufficient to enable him to re-attend. From that time there has been no alleviation of his sickness." The statesman further goes on to say that his illness has now extended over a year, and the symptoms become daily more unfavorable. He has been burning with anxiety to improve in health, to enable him to requite one ten-thousandth part of the deep favors of which he has been the recipient: but in vain; and he has no recourse but to implore that his post be filled up by another, and that he be left to seek the reward of quietude in his native home during the declining years of his life. According to rescript previously Gazetted, Wen-tsiang was permitted to absent himself to attend to his health, but his post was left vacant.

(3) The Imperial Commissioner to Formosa, Shun Pao-chun, memorializes respecting the death of Colonel Wang Kai-sün, who was recently surprised and killed in an ambuscade by the "Lion head" wild tribe of Formosa. The bravey displayed by this officer on the present as well as on former occasions is expatiated upon, and posthumous honor is prayed to be accorded to him as if he had held the rank of Lieutenant-Colonel. Marks of sympathy are also desired for an attendant officer and 93 soldiers who also fell on the occasion. A rescript has already appeared granting the request.

(4 and 5) Wen Liu-kwei, newly appointed to the Inspectorate of the Customs of Wei-an 淮安 in Kiangsu, reports taking over the seals of office; and the Inspector relieved reports giving over his seals. The latter states that, during his tenure of office, 2 years and 26 days—Tls. 11,430 which he purposes conveying himself to the Board of Revenue.

(6) The Governor of Kiangsu reports having taken over the acting post of Governor-General of the Two Kiangs on the 6th of 2nd Moon. The importance of the post is dwelt upon, and salt administration, river works, and Imperial grain supply are instanced as among the first of the multifarious duties to be attended to. The Acting Governor-General also declares his intention of inspecting the new forts erected.

Amusements.

THE S. V. C. RIFLE COMPETITION.

First Day, Tuesday, May 11th.

The Spring competition of the S. V. C. began this morning, in the midst of high wind and incessant rain. The early hour of 6.30 was fixed for the commencement of the shooting, and although the weather was so deterrent, some dozen riflemen put in an appearance at the range. The deary aspect of the scene around,—heavy leaden-looking clouds fleeting fast across the sky, the rain and wind beating in gusts, and everything dripping and muddy,—at first rendered it unlikely that the competition would be proceeded with in such weather, and the plucky ones huddled together beneath the mat-constructed refreshment tent, the picture of indecision and disconsolate repentance at turning out under such untoward circumstances. The wind blew so strongly across the range that it was a matter of speculation what allowance in aim would have to be made to ensure hitting the target even at the

shorter ranges, to say nothing of bull's eyes and centres at the longer ones. Half an hour was spent in lamentation, and the squad were about coming to the right about turn for the homeward march, in the hope of "better luck next time," when the officer appointed to take charge of the range arrived, and it being impossible to get more thoroughly soaked, a commencement was decided upon, and the men went to work.

The Competitions were made later this year, because weather in April had hitherto been generally very unfavourable, whereas when the match against Hongkong was shot off last year in May, it was all that could be desired. The arrangement has however turned out unfortunately, for Tuesday was as bad for shooting as it could possibly be.

Only two prizes were on the programme, the Chaasze and Municipal Cups, and as will be found recorded in the appended scores, the shooting, taken as a whole, was above the average that might have been expected under such unfavourable surroundings, and admits an opportunity for a word of commendation, as showing the result of much early morning practice. The tie for the Chaasze Cup, between Privates Wyatt and Sharp, has not been yet shot off, owing to Private Wyatt's absence from Shanghai. The Municipal Cup was won by Private Andrews, with a score of 37, which, in the unexpected absence of the scoring-sheets at the muster of the afternoon squad, at one o'clock, was magnified by rumour to 47—so high a figure as to make the entire squad (as was afterwards complained of by all of them) less careful in their shooting for this prize than they would have been had the real fact been known. It was generally felt that it would have been preferable to have postponed the competition, rather than have proceeded with it under such exceptionally unfavourable circumstances, which tended to make it both unpleasant and unsatisfactory.

The weather in the afternoon was but little different to that of the morning, and only five competitors put in an appearance. The wind was not quite so boisterous, but soil was by this time converted into a sticky morass, over which it was difficult to walk from range to range. The shooting was not concluded until nearly four o'clock.

It should be mentioned that, by one of the conditions, several Volunteers, who were likely to be unavoidably absent from Shanghai from the 11th to the 13th instant, shot in the more favourable weather of the 26th April, for the Chaasze Cup; and also for the Souvenir Cup and Consolation Prizes, included in the second and third days' programmes respectively.

The following were the scores :—

I.—The Chaasze Cup, value Tls.—presented by the Chaaszes of Shanghai. Ranges, 400, 500 and 600 yards; 5 shots at each. Second Prize, three-fourths of the Entrance Fees.

	400 yds.	500 yds.	600 yds.	Total.
Priv. Sharp	14	18	13	45*
,, Wyatt	19	16	10	†45*

,, Pandorf	9	0	0	9
,, Hohn	4	0	0	4

* These scores were made on 26th April.

Second Day, Wednesday, May 12th.

The muster this morning was again at the early hour of 6.30, but the firing did not begin until nearly seven. The competitors were favoured with much more favourable weather, there being almost a dead calm, though the sky was cloudy, and nearly up to the time of commencing, a heavy fog obscured everything around, including the target. It fortunately cleared off just in time, and the morning became all that could be desired for rifle shooting, both as regards light and absence of wind. As time wore on, however, the clouds began to disperse, patches of blue being perceptible in places, and the sun showing in faint gleams at intervals across the landscape. This, however pleasant to an admirer of nature's beauties, was not the sort of thing for rifle competition, because it caused a shifting light to prevail, militating greatly against accurate sighting. But this untoward aspect of affairs did not last long, for in the course of an hour or so the sky cleared sufficiently to give a steady though somewhat glaring light, and under this the competitions were shot off.

The afternoon was brilliant, too much so in fact, for the sun poured down upon the range so hotly, and with such vividness, as to be almost as deterrent of good shooting as was the morning's unsteadiness of light. Notwithstanding these drawbacks, which, as all riflemen know, interfered materially with the shooting, and necessitated considerable changes of elevation, the scoring generally showed an improvement.

The most interesting feature of the day was the aggregate scoring for the Gold Cross of Championship. For this, Private Wyatt, the winner last autumn, had made on 26th and 27th April the good score of 156 or 2.60 points per shot. At the close of the shooting for the Salvage Cup, it became evident that Private Sharp, of No. 1 Company, was the only man who had a chance of reaching this figure, to do which he required to make 40 points in 15 shots. At 400 and 600 yards he shot with great steadiness, making 18 and 17 out of a possible 20 in each case. This left him with 7 points to score at 800 yards; in his first 4 shots he made 6, and his last shot being a centre he won the Gold Cross by two points. Private Wyatt receives a Silver Cross as the best shot of the Mih-ho-loong Company. The other Companies, No. 2 and 3, had not a sufficient number of men entered to entitle them to Silver Crosses.

The following were the scores :—

III.—The Salvage Cup, value Tls. —. Presented by the late Salvage Corps of Shanghai. Ranges, 200, 500 and 700 yards; 5 shots at each. Second Prize, three-fourths of the Entrance Fees.

	200 yds.	500 yds.	700 yds.	Total.
Sergt. Bishop	14	17	16	47

Third Day, Thursday, 13th May.

The weather this morning was a close imitation of that of Tuesday, thick with cloud and a drizzling rain falling. The wind, however, had gone half round the compass, and now blew south-west, as on the previous days. Notwithstanding this repetition of discomfort, four of the English and three of the Scotch team had put in an appearance by seven o'clock, to compete for the International prize. It was impossible, however, then to commence the competition, the target being invisible owing to the falling drizzle, and it was in consequence thought by several that the target was not there, for the loom of the butt could be seen plainly enough, and one of the squad went to see if it was in its place. This difficulty having been solved satisfactorily, it only remained to wait for clearer weather, and fortunately the demand on patience was but short, for at about eight o'clock the weather cleared sufficiently to enable the shooting to begin. In the meantime, messengers had been sent for the missing men, and at the time named, shooting began with five English and four of the Scotch on the ground. As the missing Scotchman, Private Glass, had not appeared when the others had finished the first range, Lieut. Sim, who was looking after the scoring, shot as a substitute for him.

At the first range, as will be seen, the English led by 4 points, the practice all round being fair. At 500 yards, however, the shooting of the Scotch team improved, while that of the English fell off considerably; some very good scores were made here, Sharp making 18 out of a possible 20, and Carnie and Sim 17 each on the Scotch side, while for England, Bishop reached 17 and Tucker 15. The Scotch gained 14 points at this range, placing them 10 in front.

At 600, the English shot very well, the leading scorers being Tucker and

Sharp, 15 each for their respective teams. Judging from the closeness of the contest, it would seem to have been impossible to have chosen more equal sides —the English losing by one point only, although one of their number, Private Holmes, of No. 1 Company, had not, we are told, previously engaged in any rifle competition. If he could only have scored, at the same ranges, as he afterwards did for the Consolation Prizes, when he made 32, with 15 at 200, and 17 at 500 yards, the English team would have won easily. The shooting on both sides was, however, somewhat better than that of last Spring, when the victors, the Scotch again, succeeded in placing 179—the present losing score—on the register; the English making 169.

The Consolation, open to all members of the Corps, who had won no prize at this meeting, was also better contested as regards shooting, than at either the Spring or Autumn Meeting of last year, when the highest scores made were 29 and 31 respectively. The number of entrants this time was smaller, but as two or three crack shots, whose names will be distinguished below, were among the competitors for comfort on the present occasion, it is not to be wondered at that the shooting was better.

Taken altogether, the meeting has not been so successful as on former occasions, but for this falling-off no doubt the bad weather is in a great degree accountable Still there does not seem to be that amount of interest taken in these competitions by the Corps generally, as might reasonably be expected. To find less than a score competitors, out of a total strength of some 300 men, is not what ought to be; and it is certainly to be hoped that in future seasons the list will include, in addition to the "old familiar faces," at least as many fresh ones.

Subjoined are the scores of the day's shooting :—

V.—THE INTERNATIONAL MATCH. To be shot for by Teams consisting each of Five Men of any Nationality. Entrance, $25 per 5 shots at each.

SCOTCH.

	200 yds.	500 yds.	600 yds.	Total.
Priv. Sharp	9	18	15	42
,, Carnie	11	17	11	39
,, Hall	14	11	10	35
Lieut. Sim	14	17	3	34
Priv. Andrew	14	6	10	30
	62	69	49	180

ENGLISH.

	200 yds.	500 yds.	600 yds.	Total.
Capt. Tucker	14	15	15	44
Sergt. Bishop	12	17	12	41
,, Rogerson	13	12	13	38
,, Dunman	15	7	11	33
Priv. Holmes	12	4	7	23
	66	55	58	179

VI.—The CONSOLATION PRIZES. A Subscription of $3 from each Winner of a First Prize, and $2 from each Winner of a Second Prize, added to three-fourths of the Entrance Fees. Two thirds of the whole to be taken by the highest score; one-third by the second. Opens to all Members of the Corps who have won no Prize at this Meeting. Rangers, 200 and 500 yards; 5 Shots at each.

	200 yds.	500 yds.	Total.
Lieut. Sim	15	17	32*
Priv. Holmes	15	17	32*
Capt. Tucker	15	13	28
Priv. Glass	15	12	27
,, Wyatt	14	12	26†
Sergt. Dunman	16	5	21
Priv. Hawtrey	8	13	21†
,, Dillon	8	8	16†
Sergt. Rogerson	11	4	15

* Tie.
† Shot on 28th April.

In shooting off the tie, Lieut. Sim made a bull's eye and Private Holmes a centre, the latter thus losing the first prize by one point only.

This brought the competition to a close.

The following is the completed Prize List of the Meeting :—

CHAASZE CUP.

Priv. Sharp, No. 1 Co. } Tie for 1st
,, Wyatt, M.H.L. Co. } and 2nd.

MUNICIPAL CUP.

Priv. Andrew, M.H.L. Co. ..... 1st.
,, Hawtrey, do. ..... 2nd.

SALVAGE CUP.

Sergt. Bishop, No. 1 Co. ..... 1st.
Priv. Hall, do ..... 2nd.

SOUVENIR CUP.

Priv. Sharp, No. 1 Co ..... 1st.
Sergt. Ulrich, No. 2 Co ..... 2nd.

INTERNATIONAL MATCH.

Scotch Team ..... 1st.
Priv. Sharp, No. 1 Co.
,, Carnie, ,,
,, Hall, ,,
Lieut. Sim, ,,
Priv. Andrew, M.H.L. Co.

CONSOLATION PRIZES.

Lieut. Sim, No. 1 Co ..... 1st.
Priv. Holmes, ,, ... 2nd.

GOLD CROSS FOR CHAMPIONSHIP.

Priv. Sharp, ...No. 1 Co.

SILVER CROSS FOR BEST SHOT OF A Co.

Priv. Wyatt, ...M.H.L. Co.

RACKETS.

Mr. J. H. Scott (Class B) having challenged Mr. Robinson for his position in Class A, the following match was played on Tuesday :—

Scott	15	15	4	15
Robinson	6	11	15	12

Mr. Scott therefore supplants Mr. Robinson in the A class.

THE SHANGHAI RACES.

Stewards:—C. J. KING, Esq., F. D. HITCH, Esq., R. FERGUSSON, Esq., E. G. LOW, Esq., F. H. BELL, Esq., A. MCLEOD, Esq., BARNES DALLAS, Esq., *Clerk of the Course.*

FOURTH DAY.

Monday, 10th May, 1875.

The "off-day" of our Spring meeting, held to-day in consequence of a postponement from Thursday last on account of wet weather, afforded some good sport. The weather was dull and windy, but delightfully cool, indeed too cool for some, who lamented the absence of overcoats when compelled to remain still. The afternoon was essentially a sporting one, but of spectators there was a great deficiency as compared with the three regular days of the meeting. The Grand Stand was but thinly attended, and only three or four ladies occupied the balcony. The Committee of the Race Club obtained, by the courtesy of the Captain and officers, the services of the band of H.I.R.M. corvette *Vsanick*, who played frequently during the afternoon in admirable style. There is little to notice in regard to the races, beyond the description of each appended to the subjoined return, with the exception of the match between *Teen Kwang* and *Gladiateur*, with reference to which it may be presumed that, with even weight, the result would not have been so wide. A difference of 2 stone, over a long course, is simply crushing. At half-past two, the saddling bell rang for

THE CRAMPO CUP.—Presented.—Value, $100; added to a Sweepstakes of $5 each, less $25 to go to the Second Pony.—For all China Ponies that have run at this Meeting, Winners excluded.—Weight for inches as per scale.—Distance, two miles and a-half. —Post Entries.

Caprice 10st 5lb 1
Furore 10st 10lb 2
Stone Crusher 10st 11lb 3
Sinecure 11st 9lb 0
Sir W. Wallace 10st 13lb 0
Sea Swallow 10st 5lb 0
Galopin 10st 9lb 0

A capital start was effected at the first attempt, *Stone Crusher* leading, *Sinecure* second, the rest close behind. At the Stables' corner, *Furore* drew slightly on the leading pair, passed them, and at the Garden was a long way ahead, *Sinecure* going into second place. Entering the straight the first time, *Furore* was still leading, the other positions being also maintained. Passing the Stables the second time, *Stone Crusher* began to make running, and taking second place, drew on *Furore*, and was level with him opposite the Stand, *Sinecure*, beaten, dropping into last place. At the Garden, *Furore*, going easy, still kept his lead, but *Caprice*, who had hitherto held but a subordinate place, was now seen coming up at a pace that betokened evil to the leaders, and soon after entering the straight for home collared *Furore*, and heading him, passed the post a winner by three-quarters of a length, *Stone Crusher* third; the rest finishing well, except *Sinecure*, who was last. Time, 5m. 50¼s.

MATCH.—$50, Once Round, weight for inches.

Favori 1
Pepin 2

Won easily, *Favori* having the race in hand throughout, and winning with the slightest spurt on the post.

THE TEEN KWANG CUP. — Presented.—Value, Tls. 250.—Handicap for all China Ponies that have run at this Meeting, *Teen Kwang* excluded.—Entrance fee, $5 each, to go to the Second Pony.—Distance, one mile and a-half.

Argument 10st 10lb 1
Wild Oats 10st 8lb 2
Bonito 10st 10lb 3
Flageolet 9st 12lb 4
Mignon 11st 4lb 5

Out of ten entries, only half the number came to the post. A good start was effected with the lead, *Wild Oats* and *Flageolet* going away with *Mignon* and *Argument* being last. There was no change rounding the bottom turn, but on approaching the Stables, *Wild Oats* went up, followed by *Bonito*, the latter closing with *Flageolet*, and *Mignon* falling behind, the weight evidently being too much for him. At the Monument, *Wild Oats*, increasing his speed, assumed first place, and *Argument* following suit, was soon second, with *Bonito* third. A good race ensued between the three, *Flageolet* and *Mignon* being hopelessly in the rear. On coming into the straight, *Argument* rushed into first place, *Wild Oats* and *Bonito* racing for second place, the former taking it, and in this order the race was finished; *Argument* winning easily by several lengths. Time, 3m. 20s.

THE GRAND STAND SELLING STAKES of $5 each.—For all Griffins entered at the Meeting and not placed in any Race. The Winner to be sold by Auction immediately after the Race. *Weights.*—11 Stone, if entered to be sold for Tls. 100, and 4 lbs. more or less for every 10 Tls. over or under that sum. The 2nd Pony to receive 75 %, and the 3rd, 25 % of any Surplus the Winner fetches over his entered price. Native Jockeys allowed to ride. Distance—Once Round.

Volnay, 9st. 8lb. 1
Black Thorn, 8st. 12lb. 2
Pastel, 8st. 6lb. 3
Martin Forster, 9st. 8lb 0
Holy Friar, 9st. 8lb. 0
Black Rod, 9st. 12lb. 0
Flambeau, 9st. 4lb. 0
Sequin, 9st. 0
Blitz, 10st. 2lb. 0
Retrenchment, 9st. 8lb. 0
Eclipse, 8lb. 6lb. 0

All native riders. At the post *Blitz* and *Pastel* became restive, and on the word to go being given, darted off so much in front, that the lot were recalled. The two named, however, could not be held. *Pastel* was ultimately pulled up on the far side of the course, and walked slowly back. *Blitz* continued his career, and raced right round the course. While waiting for *Pastel*, he darted off again, and succeeding in throwing his rider, gallopped back to the Stand where, the gatekeeper obligingly opening the gate for him, he went into the paddock, and was there captured and remounted. After another false start, when *Blitz* took the opportunity of making another short bolt, the lot went off well together, *Pastel*, *Flambeau* and *Black Thorn* in front. *Flambeau* shortly fell into third place, and there was no change until nearing the Monument, when *Volnay* gallopped through the others, and took up the running, *Black Thorn* second, *Pastel* third. The same order was maintained to the finish, *Volnay* winning easily; *Blitz* last, but still pulling hard, and still going on till he had succeeded in throwing his jockey for the second time some 200 yards beyond the post. Time, 2m. 40½s.

The winner was sold to Mr. Yuill, of Foochow, for Tls. 105.

Match—Two and a half miles, catch weights.

Gladiateur, 13h. 2in. 8s. 3lbs (The Flea) 1
Tween Kwang, 13h. 0in. 9s. 12lbs (Cheedah) 2

Gladiateur went away with a strong lead, but *Teen Kwang* soon drew up, and the two raced easily till nearing the ¾ mile post on the second round, when *Teen-Kwang* was evidently beaten and was shortly afterwards pulled in, leaving *Gladiateur* to win as he liked. Time, 5m. 38s.

First Mafoos' Race.—Post Entries.—Once round. For all China ponies that have run at this meeting, winners excluded. Weight 9st 7lb. Entrance $5. Native riders. Stakes to be handed to the riders,—winner 5/8; second 2/8, third 1/8.

Piastre.....(The Horse) 1
Bonito.....(Chifney) 2
Aiken Drum.....(Tom Jones) 0
Argument.....(Joe) 0
Tourterelle.....(Chopin) 0
Le Pauvre Diable.....(School) 0
Sea Foam.....(Layell) 0
Ghillie.....(John Scott) 0

This was an easy win for *Piastre*. *Tourterelle* led to the Stables, when the winner passed him, was never headed, and won easily by several lengths, *Bonito* and *Furore* also passing *Tourterelle* between the Garden and Monument, and finishing second and third respectively. Time, 2m. 40s.

Second Mafoos' Race.—Post Entries. Winners admitted. Once round. For all China ponies, the property of members of the Shanghai Race Club. Weight 9st. 7lbs. Entrance $5. Native Riders. Winner to receive 5/8 of the Stakes, second 2/8, and third 1/8.

Favori.....(The Flea) 1
Crumbs.....(Cheedah) 2
Wild Oats.....(Chifney) 3
Blücher.....(The Horse) 4

There is nothing to describe in this race, *Favori* winning easily. *Crumbs* was a good second, the others beaten off. Time, 2m. 39s.

Steeplechase, to take the wall at start. Entrance $5. Once round. Catch weights.

Light Brigade..... 1
Goshawk..... 0
Petit Maitre..... 0

Light Brigade led at starting, *Goshawk* second. *Petit Maitre* fell at the wall, but was remounted; but falling again at the second jump, gave up the race. *Light Brigade* refused once at the double jump, and was passed by *Goshawk*, but opposite the Stand on the far side, the latter's pace was not good enough, and *Light Brigade* passing him, and taking all his remaining leaps in good style, came past the post alone. Time, not given.

This brought the afternoon's sport to a conclusion, at 6.30, and rain coming on immediately afterwards, the course was soon cleared of visitors.

THE NAGASAKI REGATTA.

(*Rising Sun & Nagasaki Express.*)

The Annual Spring Meeting of the Nagasaki Regatta Club this year has been unusually attractive owing to the influx of visitors, a number of competitors from Shanghai and Kobe, and a good programme. It was indeed a happy suggestion that induced the committee to challenge the Shanghai and Kobe Clubs to a friendly trial of strength and skill on the water.

The weather at Nagasaki at this particular time of the year is generally so salubrious and suitable for holding such meetings as the present, that it is not surprising the residents of Shanghai and Kobe should readily accept the challenge thrown out to them, especially when we couple with it the fact of low fares prevailing on the steamboats. There is just a probability that the exorbitant rates hitherto charged by the Pacific Mail S. S. Company have had a great deal to do with preventing such friendly gatherings between the foreign residents of China and Japan; however, if this is the first of the kind it may not be the last.

For many days past the chief topic of conversation has been "The Regatta." The committee have been busily engaged making preparations for the grand event of the season—and, in fact the only really general holiday in which our community in dulges—and, in addition to an attractive racing programme, a Duck Hunt, always an amusing event, and a Greased Pole for any venturesome person or persons to walk, were advertised to take place at the close of the proceedings.

The weather on Wednesday indicated that rain would set in before the races were completed on Thursday. The morning broke dull and cloudy, and about nine o'clock a light shower fell, but after that it cleared up and expectations of a fine day were general; but these anticipations were doomed to be blighted, for about two o'clock in the afternoon it commenced to rain slowly, but gradually increased until at length it was deemed advisable to postpone the remainder of the races until next day.

The first race on the programme was for sailing boats, and punctual to time the competitors drew up alongside the P. M. barge *Shamrock*, which was the starting place. The American launch was the favorite for this race, and would undoubtedly have won it but for her capsizing about a mile and a half from Papenberg on her return. A stiff breeze was blowing at the time, and in tacking she went over and thereby lost all chance of winning the race, though she was nearly a mile ahead of the second boat when the accident occurred. A similar fate nearly overtook the *Curlew's* first cutter, but she contrived to weather the breeze.

The uncertainty as to the time when the chief event of the day would come off, took a trifle away from the interest manifested previously in the race; as it was, the race was started and won before some knew anything about it. The result was rather a take in for those who profess to be possessors of the art of prophesying. The general impression before starting was that the Shanghai crew would win, with the Kobe boat a good second, while the Nagasaki boat was not to be in the race. These prognostications, however, proved to be adrift, for the Kobe boat won, with Nagasaki a good second and Shanghai nowhere. The reason assigned for the Shanghai crew being last is very feasible indeed. The *Whangpoo* is built for smooth water rowing, and on account of the roughness of the water yesterday, the crew were prevented from putting out their strength, for the boat was so low in the water as to prevent the free use of the oars.

In the canoe race, Kobe had it all their own way. Mr. Brown, who won the canoe race last year, did not seem to be up to rowing mark. His little canoe was too small for such rough water, and to make matters worse the frail bark capsized. Subjoined is an account of the different events which came off during the day:—

1.—Sailing Race.—Tankosha Prize.—Kindly presented by the Tankosha Mining Company.—For all open boats. Entrance fee $5.—A 1st Prize and a 2nd Prize.—Course.—To start from the *Shamrock*, leave Papenberg on the starboard hand, round the Hirase Rocks, with option as to turning; leaving Papenberg on the starboard hand in returning, and winning between the Flag Boats on the inside of Papenberg.

Curlew's No. 1 Cutter—Red flag.
Do. No. 2 Cutter—Blue flag.
Ashuelot's Launch.—White with blue cross.
Mr. Hallien's *Frachtwagen*.—German flag.
,, Russell's *Anna*.—Chinese rig, Danish flag.

Owing to the course having been altered after the entry of the *Frachtwagen*, her owner withdrew from the contest at the last moment. About nine o'clock the four contending boats came up to the starting place, and took their position stern on to a line drawn from the *Ariel* to the P. M. barge *Shamrock*, all sail down. Upon the gun being fired, sails were hoisted as speedily as possible, and the little *Anna* was the first to make a move. A very light but fair breeze prevailed, and the boats soon tailed off, the *Anna* taking a strong lead, with the *Curlew's* 2nd cutter second, and 1st cutter third, the American launch bringing up the rear, and it was very evident that with such a light wind she would be out-sailed. The *Curlew's* 1st cutter was piloted by the 1st Lieut. and the launch by Mr. Callender. After rounding the point, a stiff breeze sprang up, and the *Ashuelot's* launch began to overhaul the others and succeeded in establishing a strong lead in the first tack for home, which she increased rapidly. At this stage in the race the boats ran thus: *Ashuelot's* launch first, *Curlew's* 2nd cutter second, with the first cutter third, and Mr. Russell's little boat bringing up the rear. Unfortunately for the launch, in tacking she went over and precipitated her crew into the water, from which involuntary bath they were rescued by some sampans. Capt. Church also dispatched two of the *Curlew's* gigs to the scene of disaster. The boat was raised and an attempt made to bail her out, when she went over the second time. The *Curlew's* No. 2 cutter passed the winning post first at 12 m., beating cutter No. 1 by 15 minutes, though she experienced some difficulty in passing the goal on account of a strong head wind. Time, about two hours and three quarters.

2.—Regatta Cup.—Open to all Club Visitors.—To be rowed in Four Oared Out-riggers, according to the Rules of the Nagasaki Rowing Club. Distance, 1½ miles. No entrance fee. Valued, $100. Straight Race.

Kobe Club.

Leven.	*Red White and Blue.*
M. T. B. Macpherson	151 lbs.
J. Henson	152 ,,
W. Mackenzie	195 ,,
A. C. Sim *(stroke)*	161 ,,
B. B. Lewis *(Cox)*	143 ,,
	802 ,,

NAGASAKI CLUB.

Bashful Maiden.	*Light Blue and Gold*
A. B. Glover	155 lbs.
F. Dittmer	177 ,,
A. Wright	180 ,,
H. Gribble *(stroke)*	146 ,,
F. Ringer *(cox)*	139 ,,
	797 ,,

SHANGHAI CLUB.

Whangpoo.	*Dark Blue and Gold*
O. M. Wyatt	164 lbs.
Sir W. Johnston	183 ,,
R. Mackenzie	201 ,,
D. Glass *(stroke)*	175 ,,
J. M. Cory *(cox)*	140 ,,
	863 ,,

This was *the* race of the day, and the result took the majority of spectators by surprise. The *Whangpoo* was first favorite for this race, and the *Leven* ranked next. The result was another illustration that favorites are not always to be relied upon. On starting, the *Bashful Maiden* dashed away with the lead, followed closely by the *Leven*, and she held the lead for three quarters of a mile, when her crew began to evince signs of fatigue, and the Kobeites crept up and finally passed her, winning by about 2 lengths, the *Whangpoo* being about the same distance behind the *Bashful Maiden*. The water was very rough at the time this race came off, or no doubt the gentlemen from Shanghai would have held a different position. No correct time was taken, but it is said it was a very quick race.

3.—PULLING RACE—Custom House Cup.—Kindly presented by the Commissioner and Officers of the Nagasaki Imperial Custom House. For all men-of-war Cutters and barges pulling 10 Oars and upwards.—Distance 3 miles.—Time allowance 10 seconds per Oar—Entrance fee $1 per Thwart.

Ashuelot 1st Cutter, 12 oars.—Red, white star.
Do. 2nd Cutter, 10 oars.—Blue, white star.

This race was rather a tame affair, owing [illegible] and only two boats 2nd cutter made a show, but finally fell off, and her competitor passed the post 40 seconds ahead.

4.—CANOE RACE.—Propelled by Europeans. Distance, ½ mile. Entrance fee $2. Prize, $20.

Mr. A. C. Sim's *Rob Roy*.—Rob Roy tartan.
,, C. Brown's *Ida*.—Light blue and white.
,, Mackenzie's *Flora*.—Red and black.
,, Rohr's *Ethel*.—Red.
,, Vischer's *Telegraph*.—Yellow.

Considerable interest was felt in this race on account of two strangers competing. It was generally thought the race would lay between Mr. Brown and Mr. Sim, and so far as Mr. Sim was concerned, favorable anticipations proved to be correct, as he came in first, closely followed by Mr. Mackenzie, the others being nowhere.

5.—CLUB RACE.—LADIES' CUP.—Presented by the Ladies of Nagasaki.—To be rowed in Four Oared Out-riggers, according to the Rules of the Nagasaki Club.—Distance, 1 mile.—Entrance, $10.

CLUB NO. 1 BOAT.
Blue with White Cross.
White Swan.
A. B. Glover.
F. Dittmer.
F. A. Potter.
J. C. Smith *(stroke.)*
F. Ringer *(cox.)*

CLUB NO. 2 BOAT.
White with Red Cross.
Black Swan.
A. Vischer.
V. Whittall.
A. Wright.
H. Gribble *(stroke.)*
Y. Deur *(cox.)*

A good start was effected, and for a short distance the *Black Swan* held the lead, but was finally compelled to relinquish it. The race was well contested throughout, and the *Black Swan* would have been closer had not Mr. Vischer's oar slipped out of the rowlock.

6.—PULLING RACE.—Nagasaki Ken Cup.—Kindly presented by H. E. the Governor of Nagasaki.—For men-of-war and Ships' Gigs, pulling Four or Five Oars. Distance 1½ mile.—Entrance fee, $5.—Clipper Gigs or House Boats not admitted.—A first and second Prize.

Curlew's Gig No. 1.—Red flag.
Curlew's Gig No. 2.—Blue, white cross.
D. N. Deboo-kan's Gig.—Japanese flag.
Do. Gig No. 2.—Blue.
Ashuelot's Gig No. 2, *Violet*.—White, red star.

This was one of the best races of the day, and again proved that it is dangerous to depend upon favorites, for it was thought the *Ashuelot's* gig was to be the winning boat, but instead of taking the lead she drove the rest in. A smart race took place between two of the *Curlew's* boats, which came in respectively 1st. and 2nd. The crew of the *Teboo-kan's* little gig pulled well and made a very good show.

All the other races were postponed on account of the rain, which by the time the race for the Nagasaki Ken Cup was concluded, was falling heavily and there were indications of a blow.

Correspondence.

THE "DEFENCE TAX."

To the Editor of the
NORTH-CHINA HERALD.

SIR,—I read the translation given by you last week, of a leading article from the *Shunpau* on the Defence Tax in Shanghai; and, without purposing to go into the question of the present stoppage of Chinese trade caused by the Taotai's recent action, I wish to confine my remarks to the subject of a special impost having been allowed to be collected in the Foreign Settlement, without any remonstrance from those en—our Foreign Consuls. It is the custom now-a-days—not formerly, if I remember rightly—to say that any taxation of native articles collected from the Chinese has no concern with Foreigners, but in reference to this policy I should like to put a few questions, *i.e.*—

1.—For what reason were duties fixed on all native articles by the framers of the Tientsin Treaties; and, in view of the tariff drawn up, would the Chinese authorities be permitted to increase the duties at will in the case of native shippers?

2.—Was the above treaty designed or not to open out a carrying trade for Foreign vessels: and, seeing that our ships are limited to calling at the Treaty Ports, would it be in the spirit of its meaning to hamper cargo so bought by *special* taxation, before allowing it to reach the interior?

3.—Is not such action on the part of the Chinese calculated to divert the carrying trade from the treaty Ports to native boats, which can convey merchandise to native ports where no such special imposts exist?

4.—Is not the purchase of land supposed to convey with it vested rights, and are these vested rights of Foreign holders of property in the Foreign Settlements being done justice to, by allowing the Chinese Authorities to single out the inhabitants of the Shanghai Settlements as victims for a special levy?

I put forward these queries for the solution of your readers generally, and think that it cannot but become apparent to all that the collection of a tax in the Foreign Settlements, which exists not elsewhere, is a direct contravention of the spirit of the Tientsin Treaty. If so, it is the duty of our Consuls to stop its further collection. Shipping agents and property holders are those most interested in the questions; but, inasmuch as all residents, as well as their servants, are more or less daily buyers of some articles of native produce, prices of which are enhanced by the tax under discussion, it will be seen that the subject affects indirectly every Foreigner in Shanghai. I therefore trust to see an influential address to the Consuls, requesting them to take action in this matter; and, vested as they are with the protection of Foreign interests, it would seem to me that they will be clearly neglecting their duty if the obnoxious tax is suffered to continue. As regards the Municipal Council, it would also seem to be desirable that, before affording protection and even assistance to native tax collectors, it should first make enquiries as to the nature of the tax it is backing up.

SHANGHAI SETTLEMENT.

Shanghai, 6th May.

LOCAL TAXATION.

To the Editor of the
NORTH-CHINA DAILY NEWS.

DEAR SIR,—In your article to-day on the "Defence Tax," you say it is for the Chamber of Commerce and the Foreign merchants to collect facts, &c., &c. Will you kindly go one step farther, and point out to them the manner in which this is to to be done

"Would you be surprised to learn" that not one of those shopkeepers, nor one of those natives, who are interested in the Foreign goods trade, dares to give the required information? And most certainly not one of them has the courage to appear before any Court of enquiry as a witness against the existing squeezes.

Surreptitiously, I have procured the Tariff now attempted to be enforced, and I send it to you herewith, for publication. It differs slightly from that furnished in times past to Mr Hanbury; and, inasmuch as many an article embraced in it has materially declined since those days, the tax acts all the more prejudicially upon alone who is the sufferer. In confirmation of this, I submit the following illustration, sincerely hoping that the disclosure—if it may be dignified by such a term—may not be made the occasion for a strict investigation into the practice by the Powers—Native—that be:—

A bale of Shirtings—no matter what its weight or cost—in addition to what is required by the importer and his employés, pays Tls. 2.3.1, if carried whole as a bale from a Foreign godown into a Native shop in the Maloo, or elsewhere in the Foreign Settlement.

If broken up and apportioned amongst a community of buyers before being so transported, the squeeze is evaded; the collectors either cannot take cognizance of the apportionment, or it is that by reason of the trouble in collection from each actor, they wink at the evasion.

And as is the case with Grey Shirtings, so is it with almost every article of Foreign manufacture consumed within the limits of our so-called Foreign Concessions.

But mark! This evasion does not in any way redound to the profit of the Foreign seller. He would not get a cent higher for his goods, were every bale that passes through his hands apportioned in like manner—no more than he would do were the impost altogether removed. Trust the heathen Chinee for that. At all events, such has been the experience of the past.

Therefore, any enquiry that may be instituted by the sufferers, must be conducted on purely philanthropic principles, having for its sole object the benefit of the man, or men, or class of people, who lack the courage openly to seek for redress, and who deem it preferable

to resort to smuggling—as it is familiarly called—in order to compass their ends.

I am not writing in defence of the tax. On the other hand, I should be glad to see it abolished. But I question whether its removal would be beneficial, and whether some more irksome squeeze, and one more difficult of evasion, would not take its place. At present, the tax does not press so very heavily upon the traders, for I am assured by interested natives that little more than fifty per cent., all round, of the impost is exacted from them (*i. e.*, what they actually pay does not exceed that per centage), and this they pay—"contented with the ills that are."

Yours obediently,

VIATOR.

To the Editor of the

NORTH-CHINA DAILY NEWS.

DEAR SIR,—I am pleased to see the position you take in your leader of this morning, with reference to the system of squeezes practiced upon us by the Chinese. Six or eight years ago, my attention was called to it by having a bale of Drills stopped on the Bund by one of these *Squeezers*. When he found the goods belonged to a foreigner he apologized, and said, "It is all right." I replied it was not *right* for him to forcibly stop persons on the street, and was so simple-minded as to suppose that if this highway robber (?) were dragged before the Police Court he would be punished. But, subsequently, I saw in the reports of the Mixed Court that such cases were tried, and the offender was simply reproved for letting the "foreign devil" discover his trade, and "cautioned"—that is, was told not to allow himself to be caught again. It is time that we knew the Chinese officials have never kept a single clause in the Treaty except when it suited their convenience, and they never will unless compelled.

This double government and double system of taxation is ruinous, and according to the first principles of government, we are bound to protect those residing within the Settlement from further taxation, or cease to levy taxes upon them ourselves. No people should be subjected to two systems of government and two systems of taxation at the same time.

I was told by a lumber dealer that the squeeze the Taotai's minion sought to get from him, on a certain bill of lumber sold to me, *was no definite sum; he would get all he could!* And the Taotai's prison, and tortures such as the inquisition vainly sought to copy, are used to enforce and collect this simple and equitable (!) tax (!) Good heavens, is this a *tax*, is this a *Government?* And the collectors of these taxes (!) walk our streets, stand in the merchant's doors checking his sales, thick everywhere, guarding every avenue of trade, sucking the life-blood and cutting the very sinews of commerce. "It is no definite sum, but whatever they can get," said the lumber dealer; yet such a good honest man as Mr. Hanbury was induced to believe and publish certain fixed rates *à la* Foreigner. They may prevail in certain small transactions, but such a custom is contrary to the genius of the Chinese Government, and is not likely to be general. Let not your readers suppose that the squeeze the native meets at almost every mile in the country round Shanghai, that is paid on every *cash* worth of produce that comes across the river, or is landed upon the bank of any creek near here, affects the Chinese only. It affects the interests of every man living in Shanghai. The tendency of this squeeze is to ruin the place, and if not repelled, it will cause grass to grow in the streets of Shanghai Foreign Settlement.

Yours truly,

M.

Shanghai, 11th May.

Law Reports.

CIVIL SUMMARY COURT.

Shanghai, May 10th.

Before R. A. MOWAT, Esq.

AUGUSTUS CHARRIER *v.* C. H. NAIL.

This was an action to recover Tls. 62.20 for hire of and damage to a pony.

Defendant said he was satisfied with the charge for hire Tls. 2.20, but disputed the amount charged for the damage. The affair was purely accidental.

Plaintiff said the defendant on the 2nd instant hired a pony and trap from him. He returned at about nine o'clock, and brought them back. The pony's two knees were broken, there was a bruise on its chest, and some damage to a hind leg. Next day, the manager sent to him to let him know the pony was injured, and later in the day also sent the pony, so that he might see the damage. Defendant wrote a letter saying he would call the next day, but he did not come. He (plaintiff) therefore went to him, when defendant said the accident arose through there being an opening, made right to show it; it was nine o'clock, and the pony was going at such a speed that when he came upon the opening, he could not stop in time, and the pony went into it. The injuries were, the defendant had said, only mere scratches, the fact being that the skin was torn off both knees. The value of the pony was Tls. 60, and it would take about twenty days to cure it. If defendant did not take the pony, he (plaintiff) would charge Tls. 20 for injury and loss of time. There was a mafoo sent with the trap.

Defendant said the opening in the road was at the junction of the Rue du Consulat with the Bund. There was no light to show it, and he drove right into it. The side was sloping, and the pony did not fall on it knees. Defendant believed the injuries were inflicted on the animal by the mafoo, in getting it out. There was no shock when they drove into the opening. Defendant did not consider he was responsible, because there was no kind of protection to the opening afforded by the French Municipal Council, whose workmen had made it. He thought that in ten or fifteen days the pony would be fit for work. Both lamps of the trap were lighted, and defendant and a friend who was with him, were quite sober. They took all possible care in getting the pony out of the shafts, by unfastening the traces. Defendant and his friend got the trap out of the cutting, and the mafoo extricated the pony.

CHRISTIAN HARRY KAHLER, who was in defendant's company at the time in question, gave confirmatory evidence. He did not see the opening in the road, as there were no lamps near, and he was sitting on the side of the trap away from it. There was a lamp, not a street lamp, close to the Hotel d'Europe. They were driving at a medium pace, and did not know of the existence of the cutting, as at starting they went in a different direction.

Plaintiff's mafoo was next called, and stated, through Heding, that as they were driving up the Rue du Consulat, the trap came in contact with a lamp, smashing it. Immediately afterwards the pony and trap went into the cutting. When the trap struck, witness stood up, and saw it was against a lamp. There was no light in it then. It was a Chinese glass lamp, and when witness saw it, the light was extinguished. There was a post and horizontal beam from which the lamp had been suspended. He told the driver then to take care, as there was an opening near. He said, "Look out; take care; one hole." He saw the cutting only a moment before they were in it. The cutting was about 100 feet in length, and running east and west. There was a lamp, also, at the Whangpoo end, burning, and a man in charge of it. He was a Chinaman, and was standing by the lamp. There were no street lamps about the place—it was dark but for the lamp at the cutting. They were not driving too fast at the time. Defendant drove very well going to Sicawei, but not so well coming home.

By Defendant—The lamp I first spoke about, was, I inferred, suspended from the beam, but I cannot say certainly. As I was getting the pony out of the cutting, the watchman from the other end came to us.

Defendant said there was a lamp, near the the Hotel d'Europe, fully 100 yards from the head of the cutting; it was burning very dimly. It was suspended from an upright bamboo to which a cross-piece was attached. The cross-piece extended further out into the road. He went to the right to avoid it, but the splash-board caught the end of the cross-piece and threw the lamp down.

His HONOUR said he must have some more evidence as to the lamp, and the distance it was from the cutting, and also as to the absence of barricades. He could scarcely believe the lamp was so far off as a hundred yards. At such a distance, it would be of no use as a warning against the cutting. Did it not occur to the defendant, from the fact of a lamp being placed in such a position, that very careful driving was necessary there?

Defendant said it did not occur to him to drive more carefully than he was driving, because the lamp was so far away from the cutting that he did not imagine there was anything obstructive beyond it.

The case was adjourned until Wednesday.

May 12th.

AUGUSTE CHARRIER *v.* C. H. NAIL.

This was an adjourned hearing from Monday, the suit being to recover Tls. 62.20, for damage to and hire of a pony. Defendant admitted the charge for hire, Tls. 2.20; and the question to be decided was as to his liability to pay the damage. The case was adjourned for the production of further evidence.

Plaintiff produced a copy in French of the report of the accident made to M. Barbe, by the policeman on duty at the time. Neither M. Percebois, Surveyor to the French Municipal Council, nor M. Barbe were able to be present.

His HONOUR read the report, which was to the following effect:—"At twenty minutes to ten o'clock, a carriage, with one horse, containing two Europeans, upset a barrier placed near the Consulate-General, broke the lantern which marked the obstacle, and afterwards got into a cutting opened a little higher up the road, for drainage-works. No one was hurt, but the carriage was damaged."—His Honour went on to say that it was certainly not twenty minutes to ten, nor was the carriage injured. He had been to look at the place, and now knew something more of the matter. At the time the case was being heard, he had forgotten there was a side street leading into the Rue du Consulat, but not across it, and he also now knew where the Hotel d'Europe was. The distance from the Hotel d'Europe, at the corner of that side street, to the Bund, was about 120 yards, and it was at the junction of the side street with the Rue du Consulat that the barrier and light seemed to have been placed. How long did the defendant suppose the cutting was?

Defendant replied that he should think it was about two-thirds the length of the Court-room, and near the Bund end of the Rue du Consulat.

His HONOUR went on to say that he could understand the reason for placing the lamp at the point near the Hotel d'Europe. It was to indicate that some work was being done beyond, which could not well be passed—in fact, to tell persons to turn down the side street. When he first heard the case, he thought from both plaintiff's and defendant's statements that defendant was not liable, and that he had done all that was required—had exercised all the care that he was bound to exercise—and he was likewise under the impression that there was no barrier or light near. A person who hires a trap in no sense insured its safety, and was not reponsible for any damage that may be done to it, provided it could be shown that proper care was taken at the time of the occurrence. He mentioned that, because he thought the plaintiff seemed to be of opinion that the defendant was liable under any circumstances.

Plaintiff said he knew what his Honour had stated was the case.

His HONOUR went on to say that up to the time of hearing the plaintiff's and defendant's statements, he did not think the defendant was responsible, and considered that the plaintiff could not charge him with the damage. But after hearing the mafoo's account, that there was a lamp, and that the defendant knocked it down and broke it, the case was altered, because a prudent person could not have imagined the lamp was put there for no reason whatever. The inference in any person's mind would be that there was some obstacle further along the road, and that more than ordinary care would be required to pass by it. It seemed to him that the defendant should have walked the pony until he got to the end of the street. If that had been done, this accident would not have happened.

Defendant said the lamp was more than half across the street, and he did not think it implied that the road was closed.

His HONOUR said it did not, but its existence there suggested to any ordinary mind that there was something out of the common, and consequently more than common care was required. On the contrary, it appeared that after defendant had capsized the lamp, he did not alter his pace at all, but kept on as fast as he was going previously. He ought clearly by saying that under the circumstances [illegible] believed a jury would say that defendant had not acted as a prudent man would with his own property, and was therefore liable to pay the damage. He was, however, liable only because it had been proved there was a light put up to warn persons of the obstacle beyond.

Plaintiff in reply to His Honor, said he could not accept less than Tls. 20, and had he not known that a barrier had been erected at the place, he would not have brought the action.

His HONOUR supposed the defendant did not wish to take the pony?

Defendant said the pony was of no use to him.

His HONOUR then entered judgment for plaintiff for Tls. 20 for the damage, and Tls. 2.20 for the hire.

No other evidence was called in the case than that heard on the first day, but a witness who had been subpœnaed on behalf of the defendant, now stated that on Sunday night about a quarter to nine, he was walking along the Rue du Consulat towards the Bund; there were no lights at that time, at the place named, and only a slight upright with a cross piece reaching partly across the road; while a bamboo fence on the right hand side of the Rue du Consulat, obscured the light of a lamp at the corner of the Bund, throwing the cutting, of the existence of which he did not know, into shadow, and he was nearly walking into it. He also visited the place on Monday night, and there was again no light.

His HONOUR said there was, however, something there as a barrier (and also a light when the defendant passed), which should have shown passers by that more than ordinary care was required, which the defendant did not take, and therefore he was liable. If the defendant was not satisfied with the decision, he could take the Chief Judge's opinion on it.

POLICE COURT.

Shanghai, 7th May.

Before R. A. MOWAT, Esq.

R. *v.* A. MURRAY, J. A. SAMUELSON, JOHN CARLSON and RICHARD WILLIAMS.

Desertion.

Murray is an able seaman, the other defendants being ordinary seamen, who had entered and signed articles for the British ship *Sir Lancelot*, and were now charged with desertion. They gave themselves up at Hongkew Police Station on Thursday night. Murray had been ashore since the 24th of April, the others from the 27th. The ship sailed for New York on Wednesday last.

Mr. BOWEN, Superintendent of the Sailors' Home, said, in reply to the Court, that the prisoners reported themselves to the constable of the Home, who brought them to him, but he told them he could do nothing in the matter, and that they must report themselves as deserters to the proper authorities.

Police Sergeant Malcolm, who had the case in charge, said the prisoners, since deserting the ship, had all been living among the natives, below the Yangtszepoo Creek.

Williams said he had been ill-treated on board, and had summoned the second mate for assaulting him. On the night of the day the case was heard, he returned on board, when a cork fender was thrown at him by some one, and struck him heavily on the back. He was afraid to remain on board, and came ashore the same night, putting his clothes in a boat alongside. About £5 in wages were due to him.

Murray's excuse was, that he came ashore on leave, got drunk, and was in consequence detained in the Police Station for two days. On being released, he heard there was a warrant out against him for desertion, and believing that he would in consequence lose all the wages due to him and be forced to work the voyage for nothing, he determined to remain on shore. Betweeen £4 and £5 wages were due to him, and he had left most of his clothing on board, having sold some of the remainder to buy food. The clothing he had sold was brought on shore by another man who was paid off from the ship, but he (prisoner) did not tell him to bring them.

Samuelson said he was afraid to go in the ship, in consequence of being threatened by the work on board," and he had besides been beaten every day.

His WORSHIP asked prisoner why he did not complain to the authorities if he was so ill-used?

Prisoner replied that he also summoned the second mate for assaulting him. He had brought none of his clothes on shore, and there were about £4 wages due to him.

Carson's excuse was similar. The wages due to him were between £3 and £4. He had summoned the Captain for an assault upon him, and he was ordered to pay the costs.

His WORSHIP said he could not overlook cases of this kind. If seamen had any complaints to make, they should come to Court to make them. They would then be enquired into, and what was right would be done. Prisoners had all put themselves in the wrong by their conduct, for there was plenty of time between their going on board after the hearing of the former cases, and the ship sailing, to come to Court again. If their statements were true, they would not have been put back on board the ship, and so would have obtained their object in a much simpler way. As it was, they had got themselves into trouble. With regard to Murray, his Worship did not think he could have really believed that, because he was two days absent—in fact, only one, he having been on leave the first day, and his absence on the second day being due to the fact of his being locked up for drunkenness—his wages would be forfeited, and that he would have to work the voyage for nothing. There was no sense in such a belief. What caused some little doubt to arise in his Worship's mind in Murray's case, was the circumstance that some of his clothes were taken ashore by the other man, which made it appear that he (Murray) did not mean to go back. How would the man have brought the clothes on shore, unless prisoner had told him to do so? It was not a very bad case, however, against the prisoners, but still their conduct was wrong. They had all lost the wages due to them, and in addition they must all go to prison for a week, with hard labour.

8th May.

R. *v.* J. ALLEN.

Furious driving in Broadway, Hongkew.

Defendant, in answer to his Worship, admitted that he was the worse for liquor, but denied that the charge of furious driving was correct. The pony was one that would not trot, but galloped.

Mr. STRIPLING said that it was rather an aggravated case, as defendant had beaten the mafoo and driven him away.

P. C. No. 18, J. STEIN, sworn, deposed—At about 7 p.m. yesterday, I saw defendant driving furiously down the Broadway. I called to him, but he did not take any notice. After going towards the Hongkew Wharf, he turned back, still at the same pace. I got up behind the trap, and took the reins from him and pulled the pony up. There were a great many people about, as is usually the case about that time in the evening.

Mr. STRIPLING said that during the afternoon, the defendant had been warned by the police, the trap having been capsized into a ditch on the Sicawei Road.

Defendant denied the assertion that he had beaten the coolie, and said that during the afternoon, as the pony would not trot, the mafoo was asked to drive, which he did. On arriving in town, he (defendant) unfortunately got a glass too much, and wished to drive the pony home, hence this trouble. He was very sorry, as it was the first time in his life that he had been in such a position, and felt it keenly, having a wife and eight children at home.

His WORSHIP—What wages do you receive here?

Defendant—£17 per month, or $110. I send $50 a month home.

His WORSHIP—Under the Land Regulations a fine of $10 is inflicted for all such offences, and under the circumstances, you having been twice warned, I cannot do otherwise than inflict the full penalty upon you.

The fine was paid at once.

R. (AH-RE) *v.* W. TOZER, (AH-NAY) *v.* W. TOZER, (WEI POW) *v.* C. KETCHIE.

Assault.

[illegible] plainants servants at the Sailors' Home, and the former were charged with being drunk and assaulting the servants on Friday morning.

Defendants were brought up on Friday afternoon, and after hearing the facts of the case, his Worship remanded them until to-day.

His WORSHIP now said, with regard to Ketchie, as he had been before him on a previous occasion on a similar charge, he should take care that he did not offend again, and sentenced him to ten days' imprisonment with hard labour, and to be deported.

Mr. BOWEN said, in reply to the Court, that the defendant Tozer was a quiet man when sober, but very violent when drunk.

TOZER said he was very sorry, but that the first complainant had made him angry by carelessly upsetting some hot tea over him at the table.

His WORSHIP said, according to the complainant's statement, the assaults did not take place at the table, but in the passage some time afterwards. Although Mr. Bowen had given him a good character when sober, he could not allow such conduct to pass unpunished, as he had used great violence to the two Chinese, who had several teeth loosened by the violence of his blows. He therefore sentenced him to two weeks hard labor for each offence.

10th May.

R. (JOHN MCKENZIE) *v.* WILLIAM FLETCHER.

Assault and Wounding.

Prisoner who was brought up in custody of P. C. Boyson, is a fireman of the steamer *Bengal*, and was charged with assaulting the complainant, boatswain of the same ship, by striking and cutting him in the face with an iron ladle.

Complainant, whose right cheek was plaistered up, deposed—I am the boatswain of the *Bengal*. On Saturday evening I was in my berth with a few friends. A fireman came

by and asked for a light. He came in, and I gave him a light. He said "You don't mind a fireman coming inside." I said, not for a short time. Some one outside heard this, went down below, and brought up five other firemen. The prisoner was among them. I cannot say if he was drunk. I shut the door to prevent them coming in. They burst the door open, and I stood in the doorway, and threatened that I would knock the first man down who came in. Immediately upon that the prisoner struck me on the right cheek with an iron pitch ladle, inflicting a severe wound, and breaking the ladle from the handle. My cheek bled a great deal, and the wound gave me much pain. It was about half past nine o'clock. I went to the Hongkew Police Station, where the wound was dressed by Mr. Stripling.

Inspector Stripling described the wound as being three-quarters of an inch in length, the cheek bone being laid bare for a quarter of an inch in width.

Prisoner said he had been drinking all the afternoon, and if he had not been the worse for drink, it would not have happened. He was very sorry for doing it, and would never do such a thing again. It was the first time he had committed himself in such a manner. He had a good character for twelve months from his last ship.

The Chief Officer of the *Bengal*, in answer to the Court, gave the prisoner a bad character for insolence and insubordination, and further stated that at the same time he struck the boatswain, he also wounded another man, a fireman, with the same implement, inflicting a much more severe wound. The fireman, who refused to appear against him, had merely said prisoner ought not to have struck the boatswain.

His Worship said he was sorry the prisoner's assertion as to his good character was not borne out by the statement of the Chief Officer; and the plea of drunkenness was no excuse for the commission of an offence, for it did not make the pain or the inconvenience the person injured suffered any the less. He should sentence the prisoner to two months' hard labour.

Extracts.

[illegible] "Gwalior"

The following account of the disaster to the *Gwalior* has been placed at our disposal by a passenger:—

The *Gwalior* left Bombay for China on the 23rd March. On the 25th, she was forced to stop for a few hours to adjust part of the engine, but notwithstanding that, completed her journey to Galle by the evening of the 27th. She waited outside the harbour for a pilot, but when this functionary came on board it was found impossible to start the engines. The anchor was therefore dropped, and the necessary repairs executed. She came into Galle harbour on the 31st, and left again the same day after the engines had been duly passed by the surveyors. On the 2nd of April another break-down ensued, which occasioned a further delay of 32 hours. Penang was reached on the 7th and Singapore on the 9th, but at neither of these places was any additional survey considered necessary. The *Gwalior* left the latter place at 10 a.m. on the 10th, and met with no misadventure until the 16th. All the time there was a slight escape of steam from the top of the high pressure cylinder, but very fair time was made, especially as there was a head wind for nearly two days. Early on the morning of Friday, the 16th, the weather began to look very dirty. A sharp thunderstorm came up, and the sea began to rise. At about 5 a.m., when we were by dead reckoning about 130 miles from Hongkong, the cover of the high pressure cylinder split into about half a dozen separate pieces, with a crash that woke most of us. The steamer pitched and rolled about very uncomfortably all that day, while the engineers tried to repair damages. The sea, now very rough, and the clouds and rain completely prevented any sights being taken. We knew that we were drifting away from Hongkong, but it was impossible to ascertain the set or the speed of the current.

At 1 a.m. on the following morning, an attempt was made to start the engines, the broken cylinder cover having been secured, but it was of no use for the steam could not be held. The engineers then covered the top with layers of canvas and portland cement, and fastened down the lid on the top of this, lashing and securing it with chains and massive blocks of wood, and at about three in the afternoon started the engines. The steam was still too strong for them. It escaped in clouds, bespattering the engine room and upper deck with the cement, and the engines had therefore to be stopped again. We were all looking on and wondering what we should have to do next, when the order was given to lower away the boats as the ship was sinking. It appears that by some inexplicable carelessness the circulating pumps were opened below, while the discharge valve was unclosed. The latter was thus jammed open, and the sea came pouring in like a cataract. Fortunately there was no confusion. The boats were in perfect order, and they were at once supplied with food and water and safely lowered; neither crew or passengers lost their heads, and every one was placed in the boats without any accident occurring, and the greatest credit is due to the Captain and officers for the perfection of the arrangements on this trying occasion. An officer or quarter-master was placed in charge of each boat, and orders were given to push off from the ship and wait, while the Captain, engineers, and some of the officers tried what could be done to save the ship. If the steamer sank, all the boats were to hang on to a kedge until the gale moderated, and then we were to make our way to the nearest land, which we presumed to be Hainan. Hoi How or Hai K'ou was the port which we hoped to fetch. A very high sea was running, the waves being so large that as we sunk down in the hollows we lost sight of the hull of the ship, and it may be imagined that this was a most anxious time; for the boats, especially the second life boat, were much crowded, and most of us felt that we should be very fortunate if we got safely to shore. We had not been waiting long when to our most intense relief we were ordered back to the steamer as the leak had been stopped. This was effected by a bracket being broken away, and the spindle of the valve knocked down thus closing the aperture. As the boats were getting back, the jolly boat was swamped in turning round, and two of the persons in her were drowned. One was the serang of the boat and the other a Chinese deck passenger, who is believed [illegible] about him. This was the only loss of life, for the transfer of the people in the other boats was effected without accident and with very little damage to the boats themselves.

We had now something like 700 tons of water in the steamer, which meant about 17 feet in the stoke hole and engine rooms. The sight of the water rushing backwards and forwards in these two places as the ship rolled, and the noise made by it, were quite appalling. Every one was at once set to work to clear the water out, every pump in the ship was rigged and gangs told off to each. Among the deck passengers on board were seven Italian sailors who made themselves particularly useful, and worked without ceasing at the pump which was connected with the engine room, but there was no reason to complain of shirking on the part of any one. Perhaps the most useful person on board the ship at this crisis was Mrs. Stokes, the stewardess. Her presence of mind was an example to all, and every passenger on board will acknowledge her kindness and helpfulness.

About 12 o'clock at night there was a further alarm, when it was found that there was 7ft. 6in. of water in the after hold. It was feared that there must be a further leak somewhere and that the water was gaining on us.

We trusted that *Gwalior* would remain afloat until daybreak, but every one was very anxious, until it was discovered that there an escape from the engine room into the after-hold, and that we were absolutely gaining on the water actually in the ship. On Saturday morning, in addition to the pumps a large cask was rigged on a whip, leading down into the stoke-hole, by which means we were enabled to discharge about a ton of water every three minutes, but it was four o'clock on the afternoon of Monday the 19th, before the water was sufficiently reduced to allow the furnaces of the donkey boiler to be lighted. As soon as this was done the steam pump quickly finished the work for us. The gale died out on Sunday, and was followed by fine bright weather, and we were thus able to get sights. These shewed that we had drifted down close to the Taya islands near the coast of Hainan. We tried to get the steamer under sail and bring her before the wind, but though the foresails were braced round and a hawser passed over the stern, she would not come round a point, and we were forced to let her drift as she would. When we were safe inside the islands and at about twelve miles from the coast of Hainan, the anchor was dropped in 35 fathoms, and we made up our minds to stay till assistance should reach us, unless the screw could be moved by means of the low pressure cylinder working singly.

On Tuesday evening Captain Haselwood despatched one of the life boats in charge of Mr. Seymour the 2nd officer, with instructions to go to Macao or Hongkong and procure assistance, and on the following night a junk which passed us was chartered, and sent on a similar errand. We calculated that unless the life boat had bad weather assistance ought to reach us on the evening of the 25th.

On Saturday, the 24th, as fresh provisions were running short, a party of us went in the cutter with the 4th officer and the purser to see if we could buy anything to eat in Hainan. We landed in a lovely little cove at the back of the Toncon promontory. Here we found a few wretched huts inhabited by stalwart looking fishermen. The oldest of these at once demanded a squeeze from us for landing where we did. This we declined to pay, but we offered to pay one of them who could come with us as guide, and this offer was, after some demur, accepted. He told us that we were in the district of Wén Ch'ang (文昌), and there was a town at some miles distance. We had no time to go thither, but contented ourselves with foraging at the farm houses about. We were, however, unsuccessful, for though we saw plenty of live stock, the country people flatly refused to sell us anything except two fowls, for which they demanded the modest sum of two dollars. It was very tantalizing to see the bullocks and cows grazing all round us and not to be able to get a single one of them, but we had no help for it, and were forced to return to the ship empty-handed. The country where we landed [illegible] a succession of cocoa and groves on the rising ground, and on the low ground paddyfields.

Early on the morning of the 27th, the *Bombay* hove in sight, to our great joy, and the first person to board us from her was Mr. Seymour, whose adventures are already known to our readers. Six of the seven Italian sailors mentioned before, accompanied him on his voyage. He says that their services were invaluable, and that they worked hard long after the Chinese crew were exhausted. About two hours after the *Bombay* had arrived, H. M. F. M.'s gunboat *Tejo* also came up and kindly offered to assist us. We hear that H. M. S. *Hornet* was also in search of us, but we have not seen any signs of her. We were taken in tow by the *Bombay* and started at the rate of 5 or 6 knots. Unfortunately it came on to blow hard again on the 28th, and our speed was reduced to a little over 2 knots. It would have been less had the engineers not succeeded in disconnecting the shaft. However it lulled again on the 29th, and as this is being written on the 30th, we are in sight of Pokfoolum, and so we trust that we are safely at our journey's end, and very thankful we are that this is the case.

While we readily and gratefully acknowledge our obligations to Captain Haselwood and his officers for the discipline and good order prevailing on board, and for the care taken of us in a time of great difficulty and danger, we think that there are two points of which we have a right to complain. The first is the construction of the ship and engines. Is it right that compound engines should be used which become utterly helpless so soon as one of the cylinders is disabled? And what can one say of a ship which cannot be brought before the wind, so as to use her sails, although an anchor is let go astern, and the foresails set. Again, it seems a mistake that the donkey boiler should be below. Would it not be possible to have it on deck without inconvenience? The second cause of complaint is that the *Gwalior* was allowed to

leave Singapore with her engines in such a doubtful condition. It is all very well to say that we were going over ten knots when we reached that port, but in coming up the China Sea we were liable to be exposed to the force of the monsoon, in which case the chance of accident would be greatly increased, as the event shewed. We trust that these points will be brought to the notice of the Company, in order that any more disasters of this kind may be avoided in future.

Engineer's Statement, (from Hongkong Times.)

The S. S. *Gwalior* left Bombay on the 23rd March with engines and all in complete working order, which continued until the 25th of March at 10 minutes to eleven, when the engines were eased and stopped at eleven o'clock, owing to a heavy knock on the high pressure cylinder. The high pressure piston was raised at twenty minutes past five, and the ship proceeded at full speed with the engines working satisfactorily which they continued to do until ten minutes past five a.m. on the 27th March, when they were stopped, in order to receive a pilot to enter Galle harbour. At five minutes past twelve the engines were tried, but would not move, the fires were banked and steam blown off, the high pressure cylinder cover was raised, and it was found that a portion of the piston had carried away. The same was repaired, and on Monday the 29th March, at twenty minutes past two a.m., the engines were tried again, but would not move. The fires were again banked and steam blown off. At half past six a.m. took out the high pressure slide valve and found that one of the steam ports for giving the engines steam, on top of the piston, had carried away. The same was repaired by a quarter to eleven on the 31st, and the ship proceeded slowly into Galle harbor on the same day, at a quarter past eleven, when the engines were stopped and moved ahead or astern as was required, until half-past eleven : the fires were banked and the same day the steamer left Galle, and after discharging the pilot the engines went at full speed and all worked well until the 2nd of April, at half-past four a.m., when the engines were again stopped owing to another heavy knock on the high pressure cylinder cover, which was raised, when it was found that a portion of junk ring on the 3rd of April by ten minutes past one a.m. when the engines proceeded at full speed. Arrived at Penang at half-past seven on the 7th, and left again the same day with boiler and engines working well. Arrived at Singapore on April the 9th, and left at noon on the 10th. On the 16th, at 5.20 a.m., the engines were stopped again, and it was found that the high pressure cylinder cover was broken into six pieces, and another portion of the junk ring carried away, also a core plug in cylinder cover dropped out. On the 17th, 2.25 p.m., tried the engines again two or three times ; they made two revolutions and then they were stopped for an examination of the circulating pump to be made, but the ship commenced to make water rapidly, which was not stopped until half-past three. At four o'clock, all hands turned to at the pumps, and pumped all Saturday night, Sunday, Sunday night, and up till Monday at 1.40 p.m. when the water was sufficiently abated to allow the donkey to be lighted which before had been under water, and at 4 p.m. commenced to use pumps in connection with the steam winch. At 4.30 p.m. engine room donkey put to pump out engines. On the 20th, at six o'clock, all hands were engaged in the engineering department in clearing the stoke hole bilges of coal, and at half-past ten a.m. the third officer and some deck hands gave assistance in the same occupation. At six o'clock the bilges were moderately clear, and stoke hole plates were laid about 8.30 p.m. On the 21st, at a quarter to two, the engines were again tried but without success, and after that repeated trials were made but still with the same effect.

BILLS OF LADING.

A crowded meeting of merchants and others was held on February 25th, at the Baltic Sale-rooms, Threadneedle-street, under the Presidency of the Right Hon. Gillibrand Hubbard, M.P., for the purpose of taking into consideration the present unsatisfactory state of Bills of Lading. The Chairman was supported by members of the most eminent Shipping firms in London.—The Chairman, in introducing the business of the meeting, said that, as upon many other occasions, he was very pleased to place his services at the disposal of the gentlemen who desired to discuss or ventilate any great public question or grievance. As to the question at issue, he candidly confessed he knew little, and his duty would be simply to see that every speaker had fair play.—Mr. Miles Coventry moved the following resolution :—"That the special clauses introduced into Bills of Lading for the purpose of protecting Shipowners from the defaults and negligence of themselves and their servants, by relieving them from all responsibility which properly attaches to them as carriers, are unfair to Merchants and contrary to public policy." He said that in Bills of Lading a clause was inserted which exempted the owners of vessels from loss occasioned to the cargo by the negligence of the persons in their employ, and this clause was generally printed in type so small that it almost required a microscope to read it. The Bill now before Parliament for regulating Shipping appeared to offer a fair opportunity for obtaining redress. What was asked was that Shipowners should not be relieved from the consequences of bad conduct and neglect on the part of their servants, and this appeared so reasonable that he thought there was every reason to believe a clause might be inserted in the Act of Parliament remedying the grievance complained of.—Mr. Reginald Hanson seconded the resolution, and said the object was to ask Parliament to place Shipowners on the same footing as Railway Companies and other public carriers, and make them liable for negligence and defaults of their servants. He pointed out that some years ago the Bill of Lading was simply a receipt for the goods delivered to the Shipowner, but now clauses were introduced which were all in favour of the Shipowners and to the disadvantage of the Shippers of cargo. Again, if the Shippers of cargo refused to sign the Bill of Lading, the Owner refused to carry the cargo, and, therefore, the Shipper had really no alternative.—Mr. E. Phillip Maxted, of Hull, thought that they should go back to the old conservative Bill of Lading. It was difficult to determine what the respective duties of Merchants and Shipowners were. He thought the great point which came from the other side of the water, and were presented to those for signature who were powerless. It was a difficult question to deal with, and he scarcely knew where legislation was to begin and end. The Shipowner was entitled to some consideration. It would hardly be fair to make the Shipowner liable to the extent of his whole fortune. In a case which had recently come under his notice, an Engineer, in a hurry to get ashore, left a tap open, and in the morning it was found that there were eight feet of water in the hold, and the whole cargo was damaged.—The motion was then put, and carried unanimously. —Mr. W. S. Kenene said they had met as practical men to do a practical work. As chairman of the provisional committee he had sent the resolutions to his friend Mr. Paul, the Chairman of the Corn Trade Association in Liverpool, who had written to him in reply, enclosing a resolution passed at a meeting held in that seaport, approving the action taken in London, and in his letter Mr. Paul said the Bills of Lading at present in vogue were an outrage upon business propriety and offered a premium upon fraud. (Loud cheers). He moved the following resolution :—"That a committee be appointed to obtain the assistance of members of Parliament, and to wait upon the President of the Board of Trade to induce him to insert in the new Merchant Shipping Amendment Act a provision which shall render inoperative such unreasonable clauses."—Mr. John Walker seconded the motion.—Mr. Craven, as a Shipowner, contended that, as a rule, all Shipowners were ready to meet all reasonable claims ; but from long experience, he felt bound to say that, when goods arrived to a bad market, the claims of Merchants upon the Shipowners were much heavier.—Mr. Alderman Cotton, M.P., supported the resolution, and disagreed with the previous speaker. Merchants and Brokers were in the habit of making advances upon Bills of Lading pretty nearly up to the full value of the goods shipped ; and, if there was to be no remedy against Shipowners if those goods were not delivered in good condition and in the quantities mentioned, the result must be very vexatious. He thought the Bills was formed more in the interest of the Shipowners than of the Merchants.—The resolution was put and carried unanimously. A committee was appointed.—The Chairman said that what he gathered from the discussion was, that though in his early days sea risks were ordinarily covered by a Policy of Insurance, yet within the past quarter of a century one clause after another had been introduced into the Bills of Lading, which entirely altered the complexion of affairs, by introducing a new element of risks, against which it was found impossible to insure, and introduced an element of insecurity which did not previously exist. His experience was that a general reason to deal with a particular difficulty generally resulted in failure. To his mind it was no argument to adduce the low rates of freight, because those rates were fixed by the Shipowners. The remedy proposed was that a clause should be introduced into a Bill declaring all such clauses null and void ; but it seemed to him that it was against all custom and usage of trade that contracts tendered by one, and agreed to, accepted, and signed by another should be held invalid. There were difficulties surrounding the question, but they were not insuperable, and he would promise that any measure having for its object the giving of the relief sought, should have his most earnest consideration. The proceedings then terminated.

Clippings.

The U. S. S. *Saco*, which arrived from Manila on Monday, was towed to the quarantine ground in the evening, by the steam-tug *Rose*, as there was reported to be cholera on board.—*Hongkong Times.*

Sir Douglas Forsyth, with Colonel Horrace Brown, has left Calcutta for Simla, where Sir Douglas Forsyth will receive his final instructions from the Viceroy direct. The Mission to Mandalay is not likely to start till the beginning of May.—*Indian Daily News.*

A daring case of abduction is reported from [illegible] of the city with a marriageable daughter, who was much admired for her beauty. On the 23rd ultimo, the widow had occasion to go out, leaving the girl in sole charge of the house. Some vagabonds in the neighbourhood became aware of this, and at once planned to carry her away. Six or seven of them visited the house, and had no difficulty in having the poor girl tied, gagged and placed in a sedan. All this was managed so quietly that none of her neighbours knew of it. They carried her through the city, and when about a mile from the village, the gag became loosened. She was therefore able to raise an alarm. It happened that a party of hawkers were returning home. They heard the outcry and came to her rescue. The kidnappers were beaten off, and the girl was restored to her mother, who knew not how to express her delight and gratitude.—*China Mail.*

The news from Kiukiang is up to 6th inst., and reports on new Teas as follows :—"Musters of three chops Li-kü Teas were to be placed on the market on the 7th inst. The quality said to be fair and consequently the market was likely to be opened at once." We are indebted to the courtesy of a correspondent for the following particulars of the Kiukiang outrage :—The Ur-foo and another official visited the placed a day or two ago to settle up the affair, and have agreed to all the requests made by the sufferers, namely to restore the chapel, schools and buildings to their former condition, and to punish the offenders severely ; that the Chen-t'ai and the Tao-t'ai should issue a joint proclamation, warning the people and declaring that all such wild stories as tearing out eyes, etc., are false ; and that those who continue to spread them will be summarily dealt with. No other difficulty has occurred, and on a missionary visiting the chapel on Sunday he found that the Hsien had closed the doors and windows to prevent robbery.—*Shanghai Courier and China Gazette.*

COMMERCIAL INTELLIGENCE.

SHANGHAI, MAY 14TH, 1875.

Arrivals.—From Liverpool the s.s. *Deucalion*, from London the s.s. *Glenearn;* and from Marseilles the M.M. s.s. *Anadyr*, bringing the London mails of 26th March last; also the P. & O. str. *Hindostan* with the London mails of 2nd ultimo.

Telegrams.—London, 7th May.—*Cotton Mid. Or.* 8⅜d. 8¼-lbs.; *Eagle Grey Shirtings* 9/10½; *Iron* £9/10 and W. B. *Lead* £23/5.

Piece Goods.—Business has not increased, neither have the wants of the trade materially altered since last mail day. The articles in favor, then, have been asked for throughout, and are in some request at the close. But 14 lb. *Drills* only have improved; *Camlets*, although in very fair demand for the upper Yangtsze districts, having actually receded in value, and the decline is attributable directly to the Auctions. There were nearly 3,000 pieces disposed of at the last four sales, and that quantity, together with what has been offering privately, has proved too much for the market.

Grey Shirtings—A few—under 7,000 pieces in all—of common 6 *a* 7-lbs. have changed hands on the basis of Tls. 1.36 *a* 1.37 for the former, and Tls. 1.46 *a* 1.47 for the latter. For 8¼-lbs. there has scarcely been any enquiry, and quotations, excepting in so far as they have been established by the auctions, are purely nominal, Dewhurst's *Eagle* being almost the only other chop for which a rate can be given, and in regard to that, it is enough to say that last week's prices have just been maintained. Medium chops have been going a begging at the following figures—viz., *Red Pheasant;* Tls. 1.81 *a* 1.82; Collies, No. 1 *Lion*, at Tls. 1.84 *a* 1.85, and other fair to good 15 × 16, counts at Tls. 1.70 *a* 1.78 per piece; C.P.H. *Peacock* has dropped to Tls. 1.62 per piece. Dealers are expecting some *Mildews* ex the *Ulysses*, the greater portion of whose cargo has been brought on by the *Deucalion*. *Heavy Shirtings* for immediate delivery still command extreme rates, but the enquiry for distant arrival has rather slackened. Buyers, ex *Ulysses*, are somewhat disappointed that so large a portion of their purchases were sold at Jeddah. For Dewhurst's Eagle, "on the spot," Tls. 2.84 *a* 2.90 per piece has been paid.

White Shirtings.—The general market has been very dull, and the only notable event under this heading is the sale "to arrive" of some special chop, 64 *a* 66 Reeds, at Tls. 1.90, Tls. 2.00, Tls. 2.15 and Tls. 2.28 per piece.

T-Cloths.—The nature of the demand for these has not changed yet. Common counts of 6 and 7-lbs. and the ordinary to fair Mexicans of 7 and 8-lbs. still engross the attentions of the dealers, who, or rather the speculative portion of whom, have been making satisfactory progress with the supplies brought on by recent steamers. The reported transactions from first hands show the following totals:—viz, 14,000 pieces Common and 1,100 pieces Mexicans 6-lbs. at Tls. 1.16 *a* 1.20 and Tls. 1.30 per piece; 12,500 pieces Common 7-lbs. at Tls. 1.34 *a* 1.36, and 26,000 pieces Mexicans—chiefly to arrive—at Tls. 1.42 *a* 1.48 for Ordinary to Good, and Tls. 1.57 for a small lot of Dewhurst's best M.T.; and 9,000 pieces of 8-lbs at Tls. 1.68 *a* 1.76 for fair makes; and Tls. 1.95 per piece for Mendel's *Crown*. The market for 8-lbs. is not quite so strong at the close, but the enquiry for 6 and 7-lbs. of the desired qualities continues, although it is scarcely so buoyant as it was.

Drills.—*English* and *Dutch* 14-lbs. have taken a start, and their scarcity has at last begun to influence 15-lbs. Recent sales embrace 14-lbs. Dutch at Tls. 2.34 *a* 2.40 per piece; 14-lbs. English at Tls. 2.38 *a* 2.42½ per piece; and 15 lbs. at Tls. 2.44 *a* 2.48 per piece, a small parcel of the latter weight—very fine—having realized Tls. 3 per piece. Mendel's *Pillar*, 14-lbs. [illegible] that telegraphic orders have gone home for both Dutch and English 14-lbs., to arrive here within 2 to 3 months hence, prices being based on present currencies.

Jeans & Sheetings.—No business in either worth noting. In the former, because there has been absolutely no demand, and in the latter, because there are none in stock.

Fancy Cottons.—Velvets, 22in.—The enquiry, noted at the close of last week, resulted in sales aggregating over 3,000 pieces, and one or two of the chops brought ¼ *a* ½ cand. per yard higher than the rates then ruling. Quietness again prevails. 500 pieces of good *Gentian Shirtings* have been sold at Tls. 2.55 per piece, and through a continuance of the desire for *Chintzes*, *Printed Twills* and *Handkerchiefs*, the following business has been booked:—*Chintzes—blue*, to arrive, 5,000 pieces, at Tls. 1.30 *a* 1.35 per piece; *Assorted*, 2,300 pieces, at Tls. 1.35 *a* 1.40 per piece; *Printed Twills—Cashmeres*—1,050 pieces, 2,550 yards, at Tls. 1.92½, and 3.85 per piece, and 5,000 doz. *Blue Handkerchiefs* at Tls, 0.51 *a* 0.53 per doz.

Woollens in general seem to have fallen in value. The sales of *Camlets*, *Long Ells*, and *Spanish Stripes*, as noted below, compare unfavorably with the rates realized at the Auctions of the 4th and 6th instant, and almost every other article has had to be forced off as it were. Foreign shippers have good accounts of their *Camlet* and *Long Ell* shipments to Hankow, and the Native merchants are as well pleased with their recent transactions for that market. But notwithstanding these favorable indications, the Native, helped by the Auctions, has gained a decided advantage here since last mail day. Of *Long Ells*, the few in private hands—and by private, I mean those which are not to be auctioned—are very firmly held, and there is great firmness also amongst the private holders of *Camlets*. Moreover, the latter have effected small sales at rather better figures than were obtainable a fortnight ago, while the former have made progress at the old rate of Tls. 7 per piece for U.U. scarlet. *Figured Orleans.*—The same unsatisfactory business goes on in these, and it is a matter of great difficulty to quote any chop. No. 2 *Crape Lastings* move off heavily, the latest sales of *Horse Head* chop shewing a decline of 1 mace per piece. To-day the sale of over 1,000 pieces Woman chop *Crapes* is reported. The rate is Tls. 4.00 per piece, the last valuation of those goods was Tls. 4.15 per piece. In the other kinds of Woollen goods there is no noticeable alteration.

METALS.—A very trifling business has been done in *Nail Rods*, only one lot of 900 bundles, M.M. Crown, at Tls. 2.70, having changed hands during the last week. Arrivals of common brands have been considerable, and consequently lower quotations for these are has been for the Ningpo market, and prices have favoured sellers, Tls. 6.10 per picul cash, free of brokerage having been given for L.B. *Tin.*—A further decline in the value of this metal has been established, and it can be bought to-day at quotations. *Copper.*—Best *slab* is now nominally worth Tls. 18.50 per picul. There is little in stock, and holders are firm. *Quicksilver* is nominally quoted Tls. 1.10 for English, without enquiry.

FREIGHTS.—*Bengal*, British steamer, 1,303 tons, Hankow to London, no lay days—private terms; *Alexandra*, British steamer, 287 tons, Chefoo, Newchwang and Swatow, 24 lay days—$3,550 in full; *Europe*, British steamer, 528 tons, Shanghai to Swatow with original Cargo of Beancake from Newchwang, no lay days—£. 0.1.2 per picul; *J. S. Stone*, American barque, 710 tons, Nagasaki and back, 20 lay days—$2.25 per ton, coal.

COTTON.—A demand for Hongkong and Amoy—for which places about 3,000 piculs have been settled—combined with very moderate receipts, has acted on prices, raising them by two mace per picul over the quotations of last week, and the hongs are firm at the advance.

EXCHANGE.—Little alteration to be reported in quotations, although the sterling market is very firm. The business for the week has been small. Remitters seem to be hanging back, hoping to get better rates when the Export season opens. At the same time, there are very few private bills on offer. On India, rates at one time were quoted Rs. 309 *a* 310, but at the close, the best that can be done is Rs. 307 *a* 308 per 100 Tls. On Hongkong, only a trifling demand at 27⅜ % discount.

Total Export to Great Britain from all China is as follows:—

	1874-75.	1873-74.	1872-73.
From Shanghai to date	77,622,950 lbs.	68,660,043 lbs.	72,731,207 lbs.
,, Foochow total season	61,581,299 ,,	55,488,663 ,,	52,937,142 ,,
,, Canton total season	19,863,912 ,,	15,775,807 ,,	20,492,303 ,,
	159,068,161 lbs.	139,924,513 lbs.	146,160,652 lbs.

Black Tea.—There is no news from Hankow of the actual opening of the new season for First Crop Congous, but musters of nine chops of Hankow and eight chops of Ningchow Teas had arrived on the 8th and 9th May, and it was expected that the market would be opened on the 13th, by which date many more arrivals of Teas by muster or in bulk would have taken place. It was not possible to report reliably on the quality of the samples shown, but prices paid for the leaf up-country were said to be 10 % under last year's rates.

From Kiukiang we learn that the market was opened on the 9th, at prices varying from Tls. 38 *a* 50; it is said that about 4,000 packages were settled, and that a steady daily business was being transacted. As to the quality of the Teas and other details we must defer our remarks for the present, as the news has only just reached us, and cannot be considered quite trustworthy until our information is more complete.

Statement of Imports and Deliveries of Cotton and Woollen Piece Goods, and Metals, for week ending 12th May, 1875, compiled from the "Customs Daily Returns," Nos. 101 @ 106, both numbers inclusive.

* Exclusive of import cargoes ex *Pera*, *Cawdor Castle*, *Nestor*, *Sindh*, *Ægean*, *Lombardy*, *Bombay*, *Russia*, *Messenger*, *Deucalion*, *Glenearn* and *Anadyr*, several Coasters, and of sundry re-exports.

COMMERCIAL POSTSCRIPT.

May 15, 1875.

Arrivals.—(Not reported above.)—None other than Coasters.

Departures.—(Not reported above.)—None other than Coasters.

The English mail steamer *Lombardy* takes 5 bales of Silk.

Exchange.—On London, Bank Bills, 6 months' sight, 5s. 9⅛d. *a* 5s. 9¼d. First-class Credits to Bank, 5s. 9⅝d. *a* 5s. 9¾d. First-class to Private buyers, 5s. 9½d. Private and Documentary, 5s. 9⅞d. *a* 5s. 10d. On Paris, Bank, Frs. 7.27½. Private, Frs. 7.35. On India—Bombay Bank, demand, Rs. 308. Calcutta Bank, Rs. 308. On Hongkong, Bank Bills, demand, 27⅜ per cent. discount. Private, 15 days' sight, 27⅞. Gold Bars, Tls. 171.50. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 73.10 per 100. Carolus dollars, Sh. Tls. 80 per 100. Copper cash, 1,600 per tael.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 15th May :—

The market has been unusually dull since our last, and few transactions have taken place.

Banks.—No business reported. Locally, there are neither buyers nor sellers.

S. S. N. Co.—No business reported. Buyers do not offer better than Tls. 71 cash.

Fire Insurance.—A few *Hongkongs* kave been placed at $475 and $470 cash, and a fair number at $475 for 15th June. A few *Victorias* were sold early in the week at $158, but holders generally ask $160 and over. *Chinas* are offered in small lots at $142.

Marine Insurance.—*Yangtszes* have fallen to Tls. 550, but there is little demand, and *China & Japans* have been done at Tls. 80, at which they are firm.

S. & H. Wharf Co.—No business reported. At the moment, there are no buyers at anything like quotations.

Imperial Loan Bonds are wanted, but there are no sellers.

The Weather has been very variable. Monday was cool enough for winter clothing ; Wednesday was hot enough for white clothes and punkahs. Rain has fallen on several days. The thermometer has ranged from 55 to 76.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, MAY 22, 1875.

THE entrance to the Yangtsze is not quite so bad as that to the Mississippi, and yet New Orleans contrives to exist. Shipping, however, suffers very serious inconvenience from the number and shallowness of the channels by which the river makes its way to the Gulf of Mexico, and the improvement of the passages, or 'passes' as they are called, has long been a subject of anxious care with the Government. The delta of the Mississippi, projecting as it does far beyond the ordinary coast line of the Gulf of Mexico, and forming as it were an enormous fan, presents many points of peculiarity. Notably, the division of the waters into so many channels diminishes the scour, and aids the deposit of the matter held in suspension on the bars. At some miles from the sea, the river divides into three channels, the one to the north-east dividing into two, and one of these again bifurcating before reaching the sea. These arms are known as the South-west, South, North, North-east, &c., passes. They all flow through the alluvial flat deposited by the river. The mouth of each is partially shoaled by a sand bar; and outside all, in the gulf itself, lie shoals, built up of the solid matter brought down by the river. The outside deposits gradually join on to the delta, and the bars at the mouths of the passes move in accordance, advancing seawards at an uniform rate. The passes, going down the river, so long as they preserve their ordinary width, are of a navigable depth and present few difficulties to navigation. On reaching the outer edge of the delta they widen out; the current, loaded with matter held in suspension, is thus checked, and a deposit formed across the mouth. Outside this line of deposit, the water gradually deepens again, but as accretions grow at the sides of the bars, and the narrow channel is carried out seawards, the bar itself takes part in the onward motion, a deposit in front corresponding with the increased scour behind. Some of those bars have as little as seven feet of water over their surface, but in the south pass the minimum is about seventeen feet.

An ingenious scheme to surmount the difficulties of the entrance to the Mississippi was suggested a few years ago, and reported on favourably by the Government engineers appointed to enquire into it. The scheme was both feasible, we may add, and ingenious, but would have entailed an enormous expenditure of money. As we have said, the delta projects far into the Gulf of Mexico, almost in a fan shape. The stream is thus in many places in closer proximity to the open water at its sides than to the outside mouths of the channels. The project proposed was to cut a canal from one of these channels and form a side outlet into the bay. Of course, if the river were directly turned into this canal, it would only form another "pass," with its regularly advancing bar. It was, therefore, intended to form a lock 500 feet in length, 65 feet wide, and 27 feet deep. In connection with this lock was to be a basin 1000 feet by 2500 feet, and thence the canal was to stretch to the sea in a channel 27 feet deep, 200 feet wide at the bottom, and with side slopes of 2 to 1. This canal would have passed in a straight line through the flats, lagoons, and shoals into deep water, changing from a canal with sloping banks the top of which would be but a little above the sea-level, to a mere channel, dredged out from the shifting alluvial deposit above the head

of the delta. The length of the canal would have been 6½ miles, and the highest land along the route is not more than 3 feet above high tides. As we stated, the Mississippi is in some respects worse than the Yangtze, and the first practical difficulty arises from the nature of the soil. We know what a mass of slush we ourselves are depending on; but the soil to be passed through by the canal consists of a mass of blue mud, into which a pole can easily be thrust by hand to depth of from 5 to 15 feet. It has been bored to a depth of 100 feet, at that depth however—contrary to Shanghai experience—becoming more compact than at the surface. The difficulty, in addition to the shifting nature of the deposit outside, was to persuade such soil to retain the form of the channel, and still more to form a protection for the proposed locks and reservoir. The estimated cost by its promoters was £2,300,000; but, looking at these facts, there was no guarantee what expense might be incurred before these difficulties could be overcome. At this juncture, Captain Eads, the engineer of the great railway bridge over the Mississippi at St. Louis, came to the front with another, less daring, but apparently more effective scheme. As stated above, the bars are formed by the spreading of the current at the mouth of the various passes, and the consequent deposit of the silt held in suspension. The water within, where the current is sufficiently powerful to prevent deposit, being 30 feet on an average in depth; while outside are the deep waters of the gulf. Captain Ead's project is to carry out, by dykes or jetties, the uniform width of the channel, from the point where the bottom begins to rise above the 30 feet line, to a similar depth outside, and to confine the current to this artificial channel. The deposit where the current spreads will, therefore, be all laid down without the 5-fathom line, and the inclosed stream, over what is now the bar, will be sufficient to keep open a clear channel to that depth. Two of the passes have been proposed as suitable for improvement in this manner—those known as the South and South-west. The latter is the principal entrance to the river, and is some 1,400 feet in width. The former has shallower water, and is only some 730 feet wide. The difference in expense between the cost of the two is, however, very great—some £1,600,000; so Congress have authorised the carrying out of the smaller scheme, at an estimated outlay of £1,588,000, including a sum of £520,000 being the capitalization of an annual expenditure of £26,000, for works to be kept in progress, to keep up the embankments with the seaward growth of the delta. Captain Eads undertakes, under certain conditions, to carry out the works. He is to be permitted to do so in any manner he thinks fit, provided the navigation of the pass is in the meanwhile not seriously interfered with, and provided he commences the work within a period of eight months after the passing of the Act. If however, within 30 months after the same date, a depth of at least 20 feet be not obtained; and if, therefore, an annual increase of 2 feet be not ensured till a minimum depth of 26 feet is reached, the power accorded by the bill will cease. In consideration of the work being successful, the U. S. Government will pay Captain Eads a sum of $5,250,000; and, thereafter, for maintaining the channel, a further sum of $100,000 for each year that a depth of 30 feet shall be maintained, during a period of 20 years. These sums will come due to the engineer on the completion of the work, except a sum of £200,000, which the U. S. Government will retain as security for the maintenance of the works. They will, however, pay interest on this at the rate of 5 per cent., so long as the channel is kept in proper order; and will repay one half at the end of ten, and the remainder at the expiry of the 20 years for which the contract has been made. Congress has evidently made a tight bargain: but Captain Eads has already distinguished himself by his successful work at St. Louis; and it is to be hoped will prove equally successful in his new undertaking. Though not altogether without precedent, the scheme proposed has many elements of novelty, and certainly seems more feasible than the canal project originally proposed. We are indebted to *Engineering* for the outlines of the scheme. Although we have doubts as to the advisability of such an important work being made the subject of a contract such as that entered into with Captain Eads, the action of Congress is an indication of the intelligent interest taken in matters of the kind by the United States Government.

Summary of News.

The French mail of the 9th April arrived yesterday, by the M. M. str. *Djemmah*.

A mail leaves to-morrow for Europe by the M. M. str. *Anadyr*.

Only the following Reuter's telegrams have been received during the week:—

The Peace preservation Bill (Ireland) has been passed.

Dufaure has introduced the Constitutional Bills in the French Assembly and they are referred to Committee.

The Annual Meeting of Ratepayers was held on the 18th instant. Eighty persons, representing 237 votes, were present. Discussion was had upon a variety of subjects. Resolutions were passed in favour of Municipal Water-Works, of lending Municipal money to build a new General Hospital, of excluding Proxies of Resident Ratepayers, of making the Municipal year end with December instead of in March, and various other matters. A full report of proceedings will be found on another page.

A resolution announced by Sir Edmund Hornby, but withdrawn, has been a subject of much private discussion. It is felt that a great deal of work falls upon a Chairman of the Council who gives earnest attention to Municipal Work; and we can see no good reason why the Community should not give a special acknowledgment of those services. A proposal to give a permanent salary would be certainly unpopular. But the alternative of a special vote on expiry of the term of office would probably commend itself to the Ratepayers. There is a great deal to be said, and a great deal has been said, upon the subject; but it is likely that some such recognition as that will bye-and-bye find approval.

At a meeting of the new Municipal Council held Wednesday morning, Mr. Purdon was elected chairman, and Mr. Lemarchand vice-chairman, and the Council resolved itself into the following Committees:—

Defence—Messrs. Purdon, Hart and Kidner.

Finance—Messrs. Lemarchand, Cowie and Krauss.

Watch—Messrs. Kidner, Hart and Heyden.

Works—Messrs. Purdon, Mackenzie and Webb.

A meeting of the Temperance Society was held on Friday evening, at which a number of visitors were present. Admiral Ryder occupied the chair. The Secretary's report and Treasurer's accounts were presented. A sensible address was read by Mr. Martin; several songs were sung; Mr. Iburg played a violin solo which was much appreciated; a congratulatory address was read by the Rev. C. H. Butcher, and the meeting wound up with a vote of thanks to Admiral Ryder for presiding, about 11 p.m

The trial of the suit against the steamer *Ocean* for Tls. 200,000 damages for the loss of the *Fusing*, commenced on Thursday before the Supreme Court, and after occupying the whole of that day and yesterday was adjourned till Tuesday.

It will be remembered that the Consuls referred to Peking, severally, as shown in a printed report of one of their meetings, the question of indemnity for the sufferers in the riot of May 1873. We hear now, incidentally, that no settlement has been arrived at there. It appears that the Ministers look to the French Legation to press the matter, and that the Chinese have not met the latter in a favorable way. The prospect for the sufferers does not seem bright, under these circumstances.

We regret to hear that some apprehension is entertained for the safety of two Shanghai pilots—Messrs. Snowden and MacDonald. We are informed that, on Thursday the 6th of May, at 2 p.m., Mr. Hume spoke the pilot-boat *New York*, outside, having Mr. Snowden, pilot, on board; and at 4 p.m. of same day, a Chinese boat, with Mr. Macdonald on board. At 8 p m. it came on to blow hard from the north-west, and the gale continued to increase until noon of the 7th. No tidings have been since heard of either boat up to this date.

The cathedralisation of Trinity Church has been arranged, and the ceremony will take place to-morrow. Our readers will be glad to learn that Bishop Russell intends

to confer the office of Dean of the new Cathedral on the Rev. Canon Butcher, and that the Rev. T. McClatchie is to be appointed to a Canonry.

H. M. ships *Vigilant* and *Modeste*, with Admiral Ryder and Mr. Wade, returned from their cruise up the Yangtze, on Wednesday.

Viator returns to the charge about local taxation. He really seems to be "retained for the defence." He "furbishes anew every rusty old tool" that has been brandished for the last ten years as a reason to let the Mandarins have their way, and declines utterly to notice the counter-arguments which are patent in the Tientsin treaty. The Chinese Government has a perfect right to tax its own subjects so long as it does not infringe on that Treaty. But, in levying on Foreign imports a tax of 2½ per cent in addition to the import duty—while those imports are still within the limits of the Port—it does infringe the treaty. It is not a question of temporary, fortuitous, or permanent residence of Chinese within the limits of the Foreign Settlement, but of the right of the Chinese Government to tax afresh goods which have already paid the only tax they ought to pay within the limits of the Port. It is likely that reasonable men will hold not only the Foreign Settlements but the Native City to be included within those limits; otherwise the words "Port" and "Interior" can have no distinct meaning. It is not a question as between Governors and Governed; though our impression is that the Chinese people would be very much obliged to any one who will relieve them from the oppressive taxation of their Mandarins. The point foreigners have to go on, is treaty stipulation in regard to imports for which a tariff is laid down in the treaty. And we repeat that we are convinced the Treaty Consuls would feel themselves justified—on a representation from the Chamber of Commerce—in addressing such a remonstrance to the Taotai as would land him in this dilemma. Either he would have to deny the levy of the squeezes—in which case every *Lekin Runner* found in the Settlement must be a thief; or he would have to prove that the said taxes are legal—which he cannot do.

Four very handsome brazen gas-standards, the gift of a friend who desires to be anonymous, have been placed in the Chancel of Trinity Church. They are in strict keeping with the rest of the iron work introduced into the building, and have a very beautiful effect when lighted.

A cricket match between two scratch elevens of the Club was played on the 18th and 19th inst.

Our Chinese contemporary, the *Wei-pao*, announces that its publication will be suspended for a time, in consequence of intended removal of the office to other premises. The Chinese say there is a doubt among the proprietors whether it shall be continued, as it is said not to have been remunerative.

Chinese of the male gender are again compelled to forego the tonsure for a hundred days, only three or four of which have transpired, the weather meanwhile waxing warm. They seem to think they are having too much of a bad thing, and as regards Chinamen who are living in the foreign Settlement, there seems to be a determination to disobey the proclamation, and let those mourn for the late Empress who are obliged to,—those who are within reach of the Yamên. It is between the thirtieth and fiftieth days that the discomfort of leaving the head unshaved is said to be the greatest.

We hear that a few small musters of new Silk were received on Thursday.

The *Deucalion* has been the first steamer to get away with new teas. The was loaded down here, from river steamers. The *Hankow* brought down 4,000 ½-chests in the beginning of the week; after having taken in which she went to Woosung, where she received 13,600 more packages from the *Shanghai*.—The *Deucalion* left Woosung at 2.10 a.m. on the 21st, but had to anchor until daylight, outside the Red Buoy, owing to the thick fog prevailing.

The Agent of the P. & O. Co. announces that the mail steamers will, until further notice, run through from Shanghai to London, viâ the Suez Canal. The arrangement will commence with the *Hindostan*, leaving on the 30th instant. Cargo for Europe and America can be shipped on through Bills of Lading from Hankow, Kiukiang, Chefoo and Tientsin.

Monday forenoon, a person named W. Morris was arrested in Broadway, Hongkew, by a Consular constable from Chefoo, charged with embezzling about $600. He was taken to the Central Police Station and detained in custody, awaiting his return voyage to Chefoo. He only arrived in Shanghai on Friday.

Our report of the PEKING Races comes to hand rather late; but we print it for the benefit of those who may not have yet learned the results.

It is reported at TIENTSIN, that Mr. Hart's recent visit to Li Hung-chang had reference to the method to be pursued in negociating such further loans as the Government or any of its provincial officers may need to make; the object being to centralize borrowing operations in Mr. Hart's hands, or at least in those of the general Government.

It is hinted also that the recent consideration, at Peking, of questions in regard to the construction of telegraphs and railroads, and the opening of mines was so far unfavorable that Li may be obliged to suspend his preparations for mining operations in the South-western part of the province of Chihli. For whatever reason, Li appears to be somewhat unhappy just now. The unfavourable attitude of the Central Government may be one reason for this, but perhaps the condition of his mother's health may be a greater reason. Her demise may happen at any time, and it is altogether likely that the great Viceroy will then be obliged to retire for the customary three years of mourning.

"Massacre fans" have appeared in the Southern parts of the province; they are said to be of the most objectionable sort. The Consuls have been informed, and they are likely to take prompt action to have them suppressed. The first steps in any attempt to raise an excitement against foreigners, ought to be met promptly. Whenever this is done, there is little danger to be apprehended. All or nearly all difficulties result from the efforts of people who conspire to create alarm and to implicate foreigners. Such persons are disconcerted when promptly shown up, and will generally abandon their operations.

Our correspondent reports an insurrection in Manchuria, and the despatch of troops to suppress it. We hear that the trouble is connected with the mines. The Government are perpetually endeavouring to repress an industry which they had better legalise. It is said that the Mandarin who has been deputed to arrange matters, is inclined to report in favour of this view.

A notice has been issued to the effect that the lamps formerly employed at Tunglo-tu, Tantoo, Bethune Point, and Wuhu, in the CHINKEANG district of the Yangtsze, have been replaced by dioptric illuminating apparatus of the Sixth Order, shewing a *fixed white light*.

Messrs. Spencer & Wolff write from Chinkeang, on the 19th May:—Our market for imports at last shews some signs of activity. Nailrod iron and sandalwood have been in good enquiry, and piece goods dealers are again entering the market, although they still act with caution, buying only sufficient for their immediate requirements.

The total settlements in KIUKIANG up to last advices are 11,000½ chests. Two chops have been bought at 54 Kiukiang taels, which is equal to about 3s. 3d. a lb.—A correspondent gives some details of the settlement of the latest missionary trouble.

The HANKOW tea market was opened by the settlement of nine chops, (chiefly Yun lao-tuns) at Tls. 23½ to 30½. These rates are said to be slightly under last year's, but the quality is said to be also rather inferior to last year's. Two chops of Ningchow were also settled at Tls. 48. A large business has since been done at rates which, for the first few days, showed a steady advance. Latterly, however, prices have somewhat given way. 50 chops were bought on the two first days. Tea is being shipped in enormous quantities. It is thought likely that the str. *Bengal* will be first away. Latest advices will be found on our commercial pages. It is reported that Tls. 62½ have been paid for a crack chop—the highest price, we believe, on record. And yet we are told that the prices in the interior are 10 per cent. under last year.—Our correspondent relates the arrival and departure of Admiral Ryder and Mr. Wade, and their visit to the Viceroy at Wuchang.

The *N. C. Daily News* says, "At a meeting of the Society for the Propagation of the Gospel it was resolved that £200 per annum be granted towards the support of one or more chaplains at Hankow, the English residents guaranteeing £300 per annum to the society for the ministry of such chaplains to themselves, the chaplains to devote a portion of their time to missionary work."

A. F. Chambers has been tried in HONGKONG for embezzling $43,000, the money of the Hon. J. Whittall, and $17,850, the money of Messrs. Jardine, Matheson and Co., managers of the Canton Insurance Company. The prisoner was sentenced to nine years' penal servitude.

Editorial Selections.

THE YUNNAN OUTRAGE.

The Peking *Gazette* of the 10th of April contained a memorial from the Acting-Resident in Thibet, curious in connection with the recent misdeeds in Yunnan. It is unfortunately impossible to arrive at the particulars of the case referred to in the memorial, as probably, in the present position of affairs, the Chinese Government was not desirous of throwing more light than it could possibly avoid on the subject of its policy on the Western frontier. All we can learn is that someone was charged with illicit communication with people beyond the border, and that certain Chinese officials had, in order to procure false evidence, leagued together and administered torture to the witnesses, whether for the prisoner or prosecution we are not informed. The facts of the case would seem, however, to show that at the very moment when the Government at Peking was granting a safe conduct to Mr. Margary, and declaring its willingness to permit the exploration of the border, it was actually pursuing its old and ridiculous policy of using all the influence in its power to prevent intercommunication. We use the term ridiculous advisedly, —not in reference to the results of this policy, but to the childish reason which led to its inauguration and continuance. It may be impossible to convince the Chinese, by reasonable arguments, of the senselessness of the position they have taken up; but if the Government can be brought to see that it is simply rendering itself a subject for ridicule, and that its arguments cannot be accepted as the productions of sensible men, we may have some hope that it will eventually be saved the humiliation of yielding to force what it has steadily refused to grant to reason. Every little incident, so far, goes to prove that the course of conduct which led to the murder of Mr. Margary and the treacherous attack on the Expedition at large, was only in pursuance of a policy dictated from Peking, and for which the Government is as clearly responsible as if it had sent down express orders to murder the party. We have shown the utter uselessness to the Chinese of their present attempts to lock their Western frontier, and now the evil they wish to inflict on others returns with four-fold force upon themselves. There are not wanting men amongst themselves who are able to take this more sensible view of affairs, and who would willingly lend their aid to a vital change; but the party of inaction neither will nor can move of its own accord. It is in a position not unlike that of the mesmerised hen, so intent on gazing at the chalk line marked out in front of her head, that she is willing to forget the external world. We have tried reason to a considerable extent at Peking. The various Ministers have at intervals shown, in plain language, the difficulties the Chinese Government was laying up for itself, but all to no purpose. The chalk line was there, and the foolish bird preferred to keep its beak to the ground. A little ridicule might have perhaps done good, but none of the Ministers seem to have been adepts at the art. In fact, Peking is not a likely place for the shafts of humour to penetrate; the Phaiakian life led by the Foreign residents is little conducive to such an art. The Ministers come and go, like the great ships in the Scherian land, without helmsman or rudder, sail or cordage; and their very silence, like the shake of Lord Burleigh's head, leads the idle spectator to assume that they know the thoughts and the minds of men. Into some such position British interests in China seem to have at present drifted. Both in England and here, the public waits for some expression of opinion, or some sign of action. The mysterious ships go and come; we would fain comprehend their objects and intentions. We hold up our hands from the shore, but no answer comes. Yet the present is not a matter to be treated in a light or hap-hazard manner. Such national crimes cannot be passed over with impunity, without bringing down on both parties eventual discredit and disgrace. Our difficulties in China have increased, owing to the dilettante style we have adopted; and the worst omen for the future is that each difficulty has been more serious than the last. It is of little avail that Mr. Hammond has given up the management of the Foreign Office, and that Sir Rutherford Alcock has been pensioned off, if the spirit which still actuates the relations between Great Britain and China is guided in the same channels as heretofore. We have hope however that the strong hands which are now at the helm of Foreign and Indian affairs, in London and in Calcutta, will impress a new vigour on our policy.

THE RATEPAYERS' MEETING.

Eighty Ratepayers were present at the meeting on Monday, out of 408 qualified voters. Those present, however, held proxies bringing up the total to 237 votes, so that a large majority were represented. The various subjects were very fully discussed, and in most cases a clear decision was arrived at. There was no hesitation in voting the necessary supplies. The Ratepayers were quite clear that they would like to have the Soochow creek cleared out by the Chinese, and that they would like to have a foot bridge constructed over it at the end of Szechuen Road, instead of the present cumbrous "Free Ferry Bridge," which has served its purpose. A large majority were equally clear that they wished the Council to undertake the construction of Water-Works. The minority was considerable, but the vote was clear and decisive.—It was quite otherwise with the question which arose out of the proposal to reduce Mr. Fogg's land-tax. That proposal was rejected, partly because the Ratepayers did not think it well to remit a tax which had become fairly due under existing custom, and which differed not at all in principle, though somewhat in degree, from a hundred other cases in the Settlement; but partly we believe because they intended to pass a resolution later on, providing for a general re-assessment on a different principle, which should remove any charge of unfairness in the future. Elaborate discussion was had, and various proposals to this effect were brought forward—the expressed opinions all tending one way. Yet the matter fell through on a simple question of form. We are singularly deceived in our estimate of the prevalent feeling among the Ratepayers present, if a large majority did not desire a re-assessment of both houses and land, and that that re-assessment should be made on the principle of excluding from taxation land given up to public use. Nearly every speaker admitted the fairness of that principle and the excessive valuation of the present assessment. Throughout the discussion, the opposition turned on points of form. One proposal was out of order; another was too complicated, another imperfect. And the end was that the Ratepayers threw out, on a point of form, a proposal which they wished to see adopted in principle. To reduce the area of taxable land will involve an increased rate of land tax, but that will be preferable to unfair incidence of a lower rate. So convinced are we that a reform of the assessment is generally desired, that we would suggest having a special meeting at an early date, to discuss the subject anew, and to consider the Revised Land Regulations which dropped out of sight in the most peculiar way, on Tuesday. These were brought up seemingly in the wrong place, and subsequently overlooked, or there would have no doubt been a proposal to adjourn the meeting for their future discussion.—In carrying a resolution adverse to the admission of proxies of resident ratepayers, the meeting merely confirmed the opinion expressed last year. A similar resolution was then carried, but rejected by the Treaty Consuls as insufficiently explicit. It is believed that the present resolution will amend that defect.—The Council's proposal to make the financial year end on the 31st December instead of the 31st March, was unanimously approved. We have had sufficient experience, this year, of the inconvenience of the latter date. It involves annual effort and annual failure to bring out the budget before the hot weather and the busy season begin. The change will allow ample leisure.—The only other important subject was the General Hospital scheme. As we remarked before the meeting, there was at the outset a strong

feeling against the proposal put forward by the Trustees. Disapproving the site which had been chosen, looking at the outlay upon it as excessive, and disliking in some measure the constitution of the hospital, people did not feel inclined to saddle the Municipality with a debt of Tls. 35,000 on its account. There was, on the other hand, a keen appreciation of the necessity for a hospital, apparent throughout the discussion to which the proposal gave rise. This discussion enabled the Trustees to understand better what was the public feeling, and led to a material change in the terms of their proposal, which secured its acceptance by the Ratepayers on Tuesday. As laid before the meeting, the resolution gives to the Municipal Council a power which it is fitting they should exercise, in the adoption of site and plan. But it will be right, as suggested by Sir Edmund Hornby, that their voice should extend further, and that they should have an active share in the management of a Hospital which they provide the funds to erect.

SHIP-BUILDING.

THE discussions now going on in England with regard to the strength of ships and their seaworthiness, cannot fail to have in the long run a beneficial effect. Cases like those of the *Mary* and the *Chusan* have drawn attention to the diversities of opinion existing between the builders and the classifiers, and much the same question arises on the moot point of the compulsory marking of a load-line. Recent changes both in storage and in the course of trade have necessitated the construction of ships of very different dimensions from what we were accustomed to, even so lately as fifteen or twenty years ago. It has been calculated that the tension on the upper works of a ship of 3,000 tons is one and-a-half times as great as on a 1,500 ton ship, twice as great as on a 700 ton ship, and five times as great as on a 100 ton vessel. The tendency now-a-days is to construct vessels approaching nearer the former than the latter limit, and as a consequence the question of strains becomes daily of more importance. Hydraulic packing has almost done away with the old style of measurement cargo, and a dead instead of an elastic weight has now generally to be taken into consideration. It was not till within the last few years that the question of strains in ships was really taken into consideration, and it may be said that the first attempts in this direction were made not by shipbuilders or naval architects, but by shore-going civil engineers, who pointed out the resemblance of a ship to a loaded girder. Lately, both shipbuilders and the surveyors for the various classifying offices have occupied themselves much with problems of the same nature; but an inherent defect seems to exist in most of their calculations, namely, too great a tendency to reduce them to a rule of thumb. It is well known that the official calculations for registered tonnage represent very inadequately the real storage capacity of a ship, and that much ingenuity is exercised in building vessels, so that this discrepancy shall be a maximum. It seems at the first blush an easy thing to ascertain the entire contents of a vessel; and, doubtless, were the actual contents made the rule for registry, surveyors would soon light on methods approximating sufficiently near to the truth. At present, hard and fast rules, which give in certain cases an approximation, but in others differ widely in their results from the actual capacity, are made the basis of measurement. Again, with regard to the strength required in the various portions of a ship there will naturally exist difference of opinion between the rules laid down by the classifying officers, and those likely to find favour with the ship-builder. The former will naturally favour rules which he knows from experience will give the requisite strength, even at the expense of a somewhat excessive amount of material, while the latter will endeavour as naturally to reduce the amount of material required to a minimum consistent with his ideas of strength. Were the strains to which a ship is liable, as capable of rigid demonstration as those appertaining to engineering works on shore, the settlement of these differences would be a comparatively easy matter. Unfortunately, naval engineers have not yet decided on the *a b c* of the art, so that calculations of strains are differently applied, and often on mere abstract rules. The ship-builder with justice says that the rules of the classifiers compel him frequently to use a superabundance of material in portions of a ship where strength is not actually needed, and that this extra weight of material is in itself an evil, as actually tending to weaken the vessel as a whole. The classifier says that in some possible cases such may be the fact, but that his rules are the result of a more practical and extended experience than falls to the lot of the ship-builder, and that in any case it is inadvisable when circumstances vary so much to run the risk of too great refinement in calculation. The invariable load-line is again a subject of a dispute of a different nature between the ship-owners and the public. The former resist its being made compulsory, or even introduced as an element, while the latter consider that one of the greatest advances towards safety would thereby be made. As with all other hard and fast rules attempted to be applied to shipping, there would possibly be really little gained in the end. If a ship were to be prevented loading over her load line, the ingenuity of builders would be devoted to reducing her strength above what was needed for this line, to the lowest limits; and to do this the present rules for registered tonnage would probably be found to have a detrimental effect. Against this, it is suggested that the actual displacement of a ship should be taken as the basis for the registration of her tonnage, and that as economy of materials in the case of a girder is frequently sought by increasing its depth, so economy of materials might in this case coincide with greater height of freeboard, and therefore extra safety. Doubtless, height of freeboard is one of the great elements of safety; but the result of making the displacement of a ship the test of her registered tonnage, would be to increase the economic temptations to a reduction in the scantlings of the materials of which she is to be built. Altogether the matter is so beset with difficulties, and the conclusions arrived at for the present are so inconclusive, that we shall probably have to wait many years before any definite action is taken.

THE MUNICIPAL BUDGET.

The Budget for 1875-6 is not a sensational one, and calls for little comment. The purchase of the Tunsin property has to be completed during the year, but the issue of debentures for the purpose was sanctioned by Resolution XI. passed at the Ratepayers' meeting in May last year. Tls. 76,000 is asked for Public Works, and we believe with the Council that that sum can be well spent. Among the chief proposals are a new bridge across the Defence Creek to the Sinza Road, a new bridge on the Seward road, and ½ cost of a new bridge over the Yang-king-pang at the Bund; Tls. 3,000 bunding Yang-king-pang creek between Shantung and Fohkien roads; a new drain in the Chekiang road, from the Hupeh to the Nanking road; a new iron pontoon, Tls. 2,800; Public Garden, including Tls. 600 for a new pavilion, Tls. 1,500; the extension of the Alpha Farm road to the Jessfield road Tls. 1,100, of the Cemetery road into the Sikaway road near Overweg's bungalow, Tls. 2,000, and of the Seward road Tls. 2,000. Tls. 8,000 Office expenses, and Tls. 29,000 for ordinary repairs to roads, go to make up the total. The purchase of a Gatling gun, instead of the present unwieldy howitzers, is proposed, and will no doubt be sanctioned.

The Report bears so much upon the estimates, that the two need to be taken together. It contains a vast deal of matter (especially correspondence) which has been already published among the Minutes of Meetings; but there is a residue—when one can disentangle it—of considerable interest. It is remarked, for instance, at the outset, that a saving of Tls. 10,000 has been effected on the expenses of the staff since 1873; the fact will be noted with satisfaction, and we believe further effort in the same direction will be welcomed.—The community are indebted to Mr. Thorndike for having built and handed over to the community a foot bridge over the Soochow creek at

the end of Kiangse road.—The decision of the arbitrators in the Yang-king-pang question has been already made public though the minutes of the French Council. In the course of a few weeks, it will probably come out with all the force of novelty in the minutes of some long past meeting of the English Council.—The Defence Committee have a good deal to say that will be of interest to Volunteers; but the question of guns, to which we have already referred, is the only one that calls for special notice. We may remark that, in regretting the small attendance at drill in the early part of the year, a word might have been as well said about the 2,000 members of the community who do not enlist at all, as about the 200 volunteers who give only a partial attendance. No doubt the 200 (or 243, which appears to be the exact number) undertake certain duties which they are bound to fulfil. But there is no special exemption entitling the 2,000 to shirk service altogether. The opportunity is taken of paying the Volunteers a well-deserved compliment for their bearing at the Parade in March last.—The British Post-office wants to be exempt from taxation; the Council see no good reason.—It is recommended that the Finance Committee be empowered to deal with special cases of assessment.—The Fire department have actually succeeded in keeping their expenditure within the sum allotted.—Dr. Macgowan suggests the planting of trees as a sanitary measure, around the ponds and swampy land in Hongkew.—There has been a falling off in the fees derived from pawnshops, owing to a falling off in business.—An offer has been made for a piece of land at Sinza, suitable for a slaughter-house.—The Inspector of Nuisances advises the purchase of a small steam pump to fill water carts. The first cost would be Tls. 1,000; and the subsequent cost of working would be met by saving in labour, &c.—It is curious to learn that the number of cattle slaughtered during the half-year from October to March was—bullocks 2,675, sheep 4,025, calves 280, pigs 109. No trace of cattle disease has been remarked.—76 ponies and 57 carriages are licensed to Native livery stable keepers.

The Superintendent of Police reports that there have been fewer serious crimes during the year. He is of opinion that the inadequacy of punishments inflicted by the Mixed Court is a fruitful cause of crime; that is to say, they are insufficient to deter.

A memorandum by the Health Officer on the proposed constitution of a lock hospital, deserves attention. The scheme is undoubtedly a good one if it can be carried out, and we regret to see the Council do not consider it feasible.—The deaths of 83 foreigners were registered during the year. It is noteworthy that the death rate was lower than it has ever been, and that the per centage shows a steady decrease over a series of years.

In 1870	deaths reg.	103,	mortality	indicated 34.3	per 1000.
,, 1871	do.	99,	do.	33.0	do.
,, 1872	do.	101,	do.	33.6	do.
,, 1873	do.	90,	do.	30.0	do.
,, 1874	do.	83,	do.	27.6	do.

The Health Officer does not believe a statement which has been lately made, that most of the deaths set down to heat apoplexy in Shanghai are attributable to drink poisoning. Without pretending to decide a point where doctors disagree, we have a very clear opinion that the bad liquor sold in Hongkew helps materially to the result, and that the same men would in most cases have escaped, had it not been for the liquor. Four deaths are reported from aneurism, and eleven from drowning. In view of the present agitation about Water-Works, Dr. Henderson's remarks on water supply will be read with interest.—729 children have been vaccinated during the year, at the Council's dispensary in the Ningpo road and at the country branch near Paoshan. We were not before aware that the Council maintained an establishment in the latter district.

The Fire Commission want more fire-wells, and as it must be some time before Water-Works can be brought into play, their recommendation should be attended to. The fire in Fohkien road the other night was a case in point. The purchase of a fire-escape is recommended. The "Deluge" engine is worn out beyond repair. The home Insurance offices continue to derive benefit from the fire organisation, without subscribing towards its support; and we repeat that, if it were not for the loss and suffering entailed on the inmates, we should recommend that buildings insured in home offices be let burn. The Commission estimate the expense of the department for the ensuing nine months at Tls. 5,385, including Tls. 1,000 for new plant.

Bridges seem to be a perpetual source of worry at Shanghai. Hardly have we begun to get round those over the Soochow Creek, than those over the Yang-king-pang come to a deadlock. The long correspondence with the French Council, which is incorporated in the Working Committee's report, has been already published in the paper, so our readers are aware of the dispute about share of cost which threatens to end in those bridges collapsing. However, we think the English Council are quite right in the position they have taken up, and fancy any inconvenience that may ensue will be felt quite as keenly on the South as on the North of the Yang-king-pang. We fully agree with the Council in objecting to narrowing the Soochow Creek to a width of 200 feet. This perpetual bunding out to the edge of mud banks, which are continually re-forming, is an error in dealing with water-courses so sluggish and so charged with deposit as those of Shanghai. We are glad to see it is proposed to ask the Chinese to clear out the creek. If we remember rightly, they offered to do so some time ago, and we were puzzled to know why they were hindered.

We are glad to see the attention the Council has been giving to the widening of roads where practicable. It is to be regretted that previous Councils have neglected the urgent representations made on this head, and so allowed many opportunities to slip. There seems to be a difficulty about the proposed road through the Canton Garden, and Mr. Camajee states his case rather differently from the Council. However, it seems to be mainly a question of compensation, and therefore not insuperable. We regret to see there is a hitch in the extension of the Chekeang road between Kiukiang and Hankow roads. Such letters as Mr. Souper's of the 20th April are hardly likely to smooth away difficulties where such exist. The Council have agreed to pay the land-tax on land surrendered to the Yangtzepoo road. The Taotai collects it from the Tepaos, and the Tepaos demand it from the people. It is not fair the latter should be mulcted; but the tax should be abandoned.

The community are indebted to Mr. Rothwell for the care with which he has managed the public garden during the past year. It is complained that the grant of Tls. 500 per annum is insufficient.—The chief financial features of the report were summarised in the *precis* we published last week.

Outports.

TIENTSIN.

In my letter of the evening of the 6th instant, I mentioned that in the Peking *Gazette* of 2nd May, just then received, I had read an announcement that Chung How 崇厚 (formerly Superintendent of Northern ports) had, at an audience, thanked the Imperial Regents for the appointment of Acting Right Vice-President of the Board of Civil Office; and that it was further mentioned in the same *Gazette* that Chung How had been summoned to appear that day at the Council Room of the Cabinet, in conjunction with the Ministers of State, for the transaction of business. In the *Gazette* of the 5th May I now read that Ching-lin 成林 (formerly Superintendent of Customs at Newchwang) Vice-President of one of the Boards (I forget which one at this moment), had been summoned to appear that day at the Council Room with the Ministers of State. And in the *Gazette* of the 7th May, I see that Tih-chun (德椿) (formerly in territorial charge of the Newchwang region and later Superintendent of the Imperial Arsenal at Tientsin), Vice-President of the Colonial Office, had been summoned to appear that day at the Council Room.

Now, as all these officials have been for years past in relation with Foreign officials in the transaction of international business, two of them, Chung How and Ching-lin, being at the present time members of the Tsung-li-yamên, we may take it for granted that the Imperial Regents summoned them to the Council Room to obtain information and their views regarding certain *international* affairs having great importance for the Government at this hour. If we add these facts to the tenor of the Edict which appeared in the *Gazette* of the 3rd May, appointing Tso Tsung-tang 左宗棠, Governor-General of the provinces of Shense and Kansuh, Imperial Commissioner for the superintending of military affairs in Eastern Turkestan (the Kashgar region); and the appointment of General Kin-shun, holding the appointment of Commander-in-chief at Oroumtsi in Soungaria, as Assistant Imperial Commissioner for the superintending of military affairs in Eastern Turkestan, we may reasonably come to the opinion that international affairs of importance are in operation touching Chinese welfare, which demand the earnest consideration and action of the Court of Peking. I have read the London telegram of the 29th April, in the *N.-China Daily New* of the 3rd inst., that—"War

between China and Kashgar is apprehended. Russia is friendly to the latter Power." Tso Tsung-tang's appointment to Eastern Turkestan is connected with the events taking place in Kashgar.

Three days back, I heard from three different quarters that H. E. Li Hung-chang had left Tientsin for Peking, two nights previously, in a very private manner, leaving his yamên on horseback, dressed in plain clothes, in the night-time. The people here invent such false tales, however, about officials, that I cannot place confidence in the story; yet it seems the general belief is that his Excellency is not in Tientsin. The Yamên people say, however, that he is in his yamên. Tseng Kwo-tseuen arrived here on the afternoon of the 9th inst. He called on the different Taotais yesterday. It is not known when he leaves for the Yellow River station.

May 11th.

Since writing to you on the 11th instant, I have heard no Peking political news. Here, during the last four days, the talk has been about a rebellion in Manchuria and the death of a General in command of the Imperial forces in that region. On the 13th instant, we learnt that the Central Government had given orders to Li Hung-chang to immediately despatch a body of troops to Newchwang. Later, we learnt that mandarins had been to the office of the agent of the S. S. N. Company here, to arrange regarding the conveyance thither of a regiment, one thousand strong, of foot soldiers, of men belonging to this province; and that a regiment of horse soldiers, five hundred strong, are to be sent from here by way of the Shan-hae pass to Newchwang. We are told that the soldiers—Foreign drilled men—sent from here to Newchwang some eight or nine years ago, had mutinied and joined the people in rebellion against the Imperial Government.

Li Hung-chang was at his yamên on the 11th instant, so we may take it for granted, I imagine, that he must have been here all along, and that the report of his having gone to Peking on the evening of the 5th instant was incorrect. Tsêng Kwo-tseuen, the Governor-General of the Yellow River, left here on the 12th instant for Paouting-foo.

PURITAN.

15th May.

KIUKIANG.

H.M.S. *Vigilant*, flying the flag of Vice-Admiral Ryder, and with Her Majesty's Minister on board, accompanied by the *Modeste*, arrived here at 4 p.m. on the 14th instant, having left Hankow on the morning of the same day. It is believed that, after a short stay at Nanking, the vessels, with Admiral Ryder and Mr. Wade, will return to Shanghai.

I hear that the native Authorities at Kiukiang have behaved very well in the settlement of the late Missionary difficulty there. They have agreed to put the Chapel building and furniture in good order, and to pay the full amount claimed for sundry losses of the mission servants. I am told also that this result has been reached without the exercise of any great pressure, the native Authorities having met the representations of the United States officials at once, and in a very friendly way.—The weather here is close and lowering.

15th May.

HANKOW.

Admiral Ryder, with Mr. Wade, arrived here on Tuesday last in the *Vigilant* accompanied by the *Modeste*. During their stay in port, the rain did not cease at all, which was a great disappointment to many, as a game of cricket had been arranged to take place between the crew of the *Modeste* and the gentlemen on shore.

Yesterday afternoon, the Admiral with Mr. Wade, and a number of gentlemen from the *Modeste*, as well as Mr. Wade's secretaries, visited the Viceroy at Wu-chang. The *Modeste* took the party up a distance of three miles, off Wuchang, on the other side of the river, when they landed, and were taken to the yamên in chairs. I hear a salute of 15 guns was fired from the *Modeste* when Mr. Wade landed, which we did not hear at Hankow on account of the rain. The Viceroy returned the call at once, on board the *Modeste*, in all the rain, for which he deserves credit, and was also saluted on leaving; after which the *Modeste* returned to Hankow.—The *Vigilant* and *Modeste* both left this morning at daylight for Shanghai.

No one seems to know what, if any, political significance is attached to the visit of the Minister and Admiral to the port. I hear, however, that the Hon. Mr. Grosvenor and Mr. Baber, of the Consular Service, are to proceed at an early day to Yunnan to be present at the trial of the murderers of Mr. Margary.

We have had five days of rain, greatly to the disgust of the Tea people, who are here in great force and eager for the fray. You are doubtless aware that the market has been opened, at a high price.

14th May.

FOOCHOW.

The *Foochow Herald* says:—The news from Formosa is somewhat conflicting; but from what it can gather, the position of the Imperialists is in no way improved. An irregular kind of warfare prevails, in which the Aborigines (who are fighting for bare life) are almost invariably victorious. The recent execution of an Imperialist officer—for rank cowardice in the face of the enemy—may have a salutary effect on the rest; but we are doubtful.—The Arsenal Authorities are vainly attempting to dredge the river by means of a wretched little machine, worked by steam it is true, but utterly worthless for any practical purpose, short of dredging a creek.—A sad accident occurred at the City Arsenal last week. While proving a smooth bore muzzle loading gun, cast by native workmen, the gun burst at the breech, causing such fearful injuries to the unfortunate man who was firing, that he expired in a few minutes. One large fragment of the gun struck him in the forehead—smashing in the whole of the fore part of his head. Now that a man has been killed, all guns when being proved are to be fired electrically on the Woolwich system.—It is understood that the Prefect of the city will on the 15th instant officially review at the South Camp (weather permitting!) the Bow-and-Arrow-men—horse and foot—of the garrison. The evolutions will, we are informed, embrace the most varied and amusing acrobatic feats, dancing in tigers' skins, &c., &c. It is said these valuable auxiliaries are about to be disbanded.—Mr. Pedder arrived from Amoy, to take charge of the British Consulate, on the 29th April.—A meeting of the Chamber of Commerce was held on the 13th May.—The steamer *Glenfinlas* is expected to load the first teas.—A marked increase is noticeable in the number of the tea plantations in the Pehling district.—In regard to the Amoy telegraph, the *Herald* says H. E. Shen Pao Chen, Imperial Commissioner at the Arsenal, is hourly expected from Formosa. His Excellency is, as our readers are probably aware, the official specially charged with the investigation and settlement of the Great Northern Telegraph Company's claims. During the absence of His Excellency from this port, his powers were delegated to certain officers of the Provincial Government, who having already arrived at a decision (favorable, we believe, to the Company) now only await the Commissioner's return, to make known the result of their deliberations.

FORMOSA.

A correspondent of the *Universal Circulating Herald* says:—

About the beginning of last month, an officer named Chü took fifty bales of cotton and some casks of oil into the region inhabited by the aborigines. He poured the oil on the cotton, which he then set fire to and burned the forests, which abounded in valuable trees. The glowing hue of the conflagration reddened the whole sky, and the reflection could be distinctly seen at Takao. In this way very many valuable trees, useful in the construction of ships and for other purposes, were destroyed.

General Lo Tai Chün operated against the aborigines on the north of the island about the beginning of last month and obtained a complete victory over them. Some 40 of them were killed on the field, and a chief was made prisoner. The aborigines always tried to remove the bodies of their killed or wounded comrades, shewing that they too have a reverence for the dead.

News from Foochow states that Soong Chentai will be sent over to assist in operating against the aborigines, and soldiers are being despatched to reinforce him.

CANTON.

The Provincial authorities at Canton have decided to open the coal mines in the Province. A place called Yeong Kong is known to be very rich in this mineral, and steps have been taken to engage some Chinese who have had some experience of mining operations in America. When they arrive, the experiment will be tried under purely native auspices.—The progress being made towards the fortification of the approaches to Canton is both great and comical. It seems hardly credible that a people which have shewn such an appreciation of foreign artillery, as to order out from Europe the most expensive productions of the Krupp foundry, and who have already adopted the foreign model for their men-of-war, could be guilty of erecting such inane parodies of what the civilized world calls forts. We hope shortly to furnish same acurate details of their construction, but may observe that they appear to be intended as single tier case-mated batteries of very slight strength, as strength goes now-a-days, and admirably calculated to form good targets for the first iron-clad which may be called upon to tackle them.—The *China Mail* quotes a proclamation by the Viceroy of Canton, as a proof that the native Press is assuming an important position in Chinese eyes. On the 1st instant, the *Chinese Mail* published a paragraph complaining of certain amiable weaknesses on the part of the Viceroy's soldiers for taking goods from hawkers without payment, bullying shopkeepers, and generally letting people know that they were under puissant protection. On the 4th it noted with satisfaction that one of these gentry, caught squeezing, had received a sound flogging and a term of cangue. But not satisfied with this, H.E. the Viceroy, on the 5th, issued the proclamation alluded to, in which, while directing that the responsible officers be deprived of their buttons until the offenders are discovered, he makes pointed allusion to the newspaper source of his information. We suspect that the Viceroy's body-guard will in future have a respect for the *Chinese Mail*, which no realisation of its mere literary merits would ever have

impressed upon them.—Piracy is complained of as very rife on the Canton River.—The gambling houses in Canton have been subjected to heavy squeezing, and several have had to close.

HONGKONG.

A meeting of shareholders in the Victoria Fire Insurance Co., called (on the 7th instant) to provide for the future management of the Company, was adjourned *sine die* in view of the second meeting that has been called for the 24th instant, to discuss the winding up of the Company.—The *Hongkong Times* says, on the passage of the German barque *Albatross* through the Carimata Straits, a brig was in sight for two days. On April 8th, after passing Carimata Island, saw a brig, supposed to be the same one as sighted, on Ontario Reef, and could see from aloft that the vessel was a wreck with only a little of the fore part above water. The sails were hanging loose on the yards, showing that she could not have been on the reef long. There was a barque steering down for her to see if she could be of any assistance, and afterwards saw the barque take in her sails and anchor close to the Reef.—The U. S. S. *Saco* came out of quarantine on Saturday, and was towed to the man-of-war ground by the steam-tug *Little Orphan*.—The *China Mail* says, the steamer *Killarney*, about to leave for Cooktown, has been most comfortably fitted up for 800 Chinese passengers to that port. Some 600 are to leave by her on her present voyage. She is under a monthly charter for six months.—The *Mail* congratulates the colony on the progress that is being made with the reconstruction of the boathouse and gymnasium that were destroyed during the typhoon.—At the Peak the maximum temperature recorded in the *Gazette* of Saturday during the previous week was 75.0, the minimum 58.0; at the Harbour-Master's Office, Praya West, the maximum was 83.5 and the minimum 66. The greatest rainfall was on the 4th instant, when 0.08 inch fell.—The *China Mail* says the new Customs Taotai for Tientsin had arrived from Canton, and was to leave for the North by the *Amoy*.—A Chinaman wants to run a small steamer called the *City of Whampoa* in opposition to the Hongkong, Canton and Macao Steam-boat Company. She is to ply between Hongkong and Canton, and will only charge 50 cents each passenger. Some objection is said to be raised by the Colonial Authorities. If the Harbour Master refuses leave to run her, she will, it is thought, start from some place beyond Colonial jurisdiction.—The American barque *Juno* has gone to Canton to be broken up.—A Marine Court of enquiry is being held, to enquire into the circumstances of the grounding of the steamship *Viking* on the Bombay shoal.—Much dissatisfaction is expressed at the terms of a despatch received from Lord Carnarvon on the blockade question, which promises little relief from the annoyance.—The *Hongkong Times* says the Danish diver and his assistant, who have been engaged to recover the treasure from the P. M. S. S. *Japan*, have been at the scene of the wreck for several days past. The strong undercurrent has, however, prevented their operations being very successful. The *Japan*, it will be recollected, lies in about twenty fathoms of water, and it was doubted if anyone could go down to such a depth and remain there any time. Of this, however, there is now no doubt, the diver having been down and examined the wreck. On being brought to the surface he appeared quite fresh, and not to have suffered any physical injury. On the last occasion on which he went down, the undercurrent was less strong, and he was enabled to move about more readily. Great confidence is now expressed as to the recovery of the treasure, which is said to amount to over $300,000.—The American barque *Lizzie and Rosa*, one of the vessels which drove on shore in the late typhoon, has gone to Canton to be broken up.

NAGASAKI.

We have a Nagasaki *Express* of the 14th instant. The U. S. war str. *Kearsage* had arrived from Hongkong.—The regatta was finished on the 8th. Kobe (Sim) won the single sculls, Shanghai (Wyatt and Glass) coming in second and third.—Kobe (Sim and Macpherson) also won the double sculling race, Shanghai (Wyatt and Glass) a good second. The *Express* notes that a day or two after the Deutsche Bank was robbed (in Yokohama,) the Chinese compradore of Messrs. Walsh, Hall & Co.'s establishment disappeared, the total amount of his defalcations being estimated at 4,000 dollars.

OSAKA.

On the 6th inst., three rascally traders, having failed to take refuge from their foreign creditor in bankruptcy, got their deserts. Last year they bought a large parcel of cloth from a foreign house at 60 days' credit, and failing to pay, were sued for the amount. Their defence appears to have been one of non-indebtedness, each swearing that the cloth was obtained by another party altogether, and that he alone was liable. The trio were sentenced, one for ten, the others for seven years' hard labour, but whether for fraud or perjury is not known.—Fires recently in Kioto and Takamiya-zai Goshin, have destroyed 260 houses.—A menagerie of foreign animals has also been consumed by fire, through the accidental upsetting of a lamp, and all the unfortunate brutes were burnt.

HIOGO.

There appears to be some obstacle to fusion between the Kobe Cricket Club and the Recreation Ground managers. The *News* believes that the Committee appointed to re-organise the Cricket Club has not as yet been able to settle upon a Ground, owing to some extent to the fact that the question is mixed up with that long-standing one of the Recreation ground. It is generally hoped that the present stay of H. E. Sir H. S. Parkes at this port may lead to the final settlement of this latter much vexed question.—The development of the mimeral wealth of Japan has been long under consideration, and at length a French mining engineer who has been prospecting on behalf of some Japanese for a year or more past has been established in a regular laboratory in Sakai-machi, for the purpose of assaying specimens of copper.—Two slight shocks of earthquake are reported as having been felt here within the week ending the 8th instant.—The steamer *Kuroda*, from Yokohama, brought about two hundred tons of Hakodate ice.—Two British man-of-war's men according to the *Minato Shimbun*, having stolen some rings from a Japanese store, were arrested by the police.—Amongst one of the evidences of the want of civilization mentioned by a writer in the same native paper, the *News* notices the assertion that the notices of bankruptcy are so numerous that they would make a pile higher than Fujiyama, and that it is impossible for a passer-by to remember them all.

YOKOHAMA.

The *Japan Herald* says another Bank robbery has been discovered. The compradore of the Deutsche Bank has made away with 28,000 *yen*. Particulars will be found in another column. The same man appears to have been imprisoned for a similar offence, in Hongkong.

The *Herald* says that the Dramatic Corps gave their fifth performance for the season on the evening of the 6th instant, when the pieces selected were *Milky White* and *Cool as Cucumber*, both of which are said to have been well put on the stage.—A cricket match was played on the 6th between players of the Settlement and H. M. S. *Challenger*, when the tars were beaten by an innings and ten runs.—Messrs. Walsh, Hall and Co.'s compradore is a defaulter to the amount of about $4,000, the firm, however, suffering little if any loss, as the defaulter is largely secured. The employés are chief sufferers, one of them, Mr. Pigult, being said to have had a deposit of $3,000 in the man's hands.—An amateur concert, in aid of the General Hospital, given on the 4th instant, was very successful.—After a postponement, in consequence of bad weather, the Athletic Sports came off on the 4th instant. No fewer than seventeen prizes were offered, the weather was fine and the ground in splendid condition. The band of H.M.S. *Challenger* played a selection of air during the afternoon.—The *Gazette* says that at a meeting of the members of the Y. U. Club, held this afternoon, it was decided by a majority of two that Selling Lotteries on the forthcoming races should not be held.—The Compradore of the Comptoir d'Escompte de Paris has been given into custody on suspicion of having been implicated in the recent robbery from the Bank. It appears that, after all the books had been examined, the Compradore had failed to account for $5,000. He says that Swaby took the money by cheque, which he afterwards abstracted.—The celebrated Mr. Fukuzawa has erected a lecture hall at Mita, for the good of the town. It was opened on the 1st instant, under the name of "Insetsu Kai-kan," and free lectures are to be given every Saturday.—On the occasion of the visit of H.M. the Mikado to the residence of H.E. Arisgawano-miya, on the 4th instant, several articles of interest were exhibited, amongst which were gas-lamps supplied by gas from a large bag. The Emperor was so pleased that, on his departure, he took the latter receptacle away with him.—The mania for keeping rabbits seems to be on the increase amongst the Japanese. One has been sold for 80 *yen*; another, belonging to a pawnbroker at Asakusa, cost 100 *yen*!—The funeral of Mr. Karl E. Schmid, late First Assistant at the British Consulate, Yokohama, took place on Saturday afternoon, at 5 o'clock. Mr. Consul Robertson, in official uniform, and many members of the diplomatic and consular corps, accompanied the body to the grave.

SAIGON.

We have further news from Tonquin, of an interesting character. The Commission sent to Hué for the exchange of the ratifications of the Treaty, returned to Saigon on the 24th. The deepest silence is, however, preserved as to what transpired. The *Duchaffant* remains, as agreed, at Chun Moy. The *Antelope* went up to Hue, but did not go as far as the town itself, there being, it was said, not water enough—though those who know the river assert that there is always sufficient for a vessel of her draft at high tide. She was probably kept back to oblige the Annamese.

The scanty details to hand of the reception of the Commission imply rather high handed conduct on the part of the native authorities. It was accompanied by an escort of 25 marine infantry soldiers and ten sailors, but upon reaching the gates of the city the Annamese refused to allow them to enter with their arms.

The Chief of the Commission therefore consented to disarm his men, and the party entered empty-handed, preceded by two buglers not looking very particularly dignified. It had been agreed that the ratifications should be exchanged with the king "in person," but the sense of this understanding was ingeniously evaded. The Commission had an audience of some one hidden behind a curtain, who might have been the king or might have been a mandarin. The day for opening Tonquin does not as yet appear to have been fixed, and it was stated that this would be delayed until the approved draft of the Commercial Convention annexed to the Treaty is sent out from France. Strict instructions have, however, been sent out to the Governor of Saigon, to proceed with the ratification without waiting for the arrival of the Convention, and to declare the country open as soon afterwards as possible.—*China Mail.*

Public Meetings.

ANNUAL MEETING OF RATEPAYERS.

The annual meeting of Ratepayers was held in the Lyceum Theatre, on Tuesday, the 18th May. The following are the names of those present, with the number of votes they represent:—

Ashton, John.....	1	Lavers. E. H. ...	4
Barton, G. K. ...	1	Love, J., Jnr. ...	3
Batt, E. W.	3	Macbean, Jno. ...	1
Bell, F. H. 11		Mackintosh, L. ...	1
Birt, W.	2	MacLeod, Alex...	4
Bisset, J. P. 15		Manson, J. B. ...	3
Blethen, C. P. ...	6	Miller, Rowley...	1
Boyce, R. H. ...	1	Miller, J. I.	1
Brand, David ...	2	Moffat, R. C. D...	2
Camajee, H. D...	2	Morel, E.	1
Corner, G. R.....	2	Morris, Herbert.	1

Total, 237 votes.

At 9.25 a.m.,

Mr. PURDON said it was nearly half-an-hour after the time, and although there were few present, he believed there were a good many votes represented, and would suggest that they should now commence business. He proposed

That Mr. Seward take the Chair.

Mr. COWIE seconded the motion, and it was carried.

Mr. SEWARD, having taken the chair, proposed

That Mr. J. A. Pond be appointed Secretary to the meeting.

Mr. PURDON seconded the motion, and it was agreed to.

The CHAIRMAN then said the business of the meeting had been duly notified in the *North-China Daily News*, as required by the rules of procedure, and it was not necessary to read it now. The first business was to pass the report and accounts of the Council for the year ending 31st March last.

Mr. PURDON said, before passing the report, it would be as well to refer to the resolutions brought forward at the last general and special meetings. The only one left over from the first, was for the deflection of the Broadway. It had been postponed in order to obtain a better line of road, and it now only remained for the Ratepayers to authorise the Council to carry out the arrangement made. All the others had been carried out. The Bridge over Soochow Creek at Honan Road had been finished and thrown open to the public, and was a great improvement. The purchase of the Tunsin property has been completed as far as possible. The expenditure has been kept well within limits, and it must be a satisfaction to the Ratepayers to see that there has been a saving of Tls. 10,000 per year in the cost of the General Establishment and the work done as well as formerly. The Council had avoided issuing any Debentures, although authorized to do so, as they preferred using money appropriated for works that could not be carried out, to putting the community further into debt. He must say of the Staff of the Council that they had worked well and performed their duties satisfactorily. He had been at the office at nearly all hours, and could testify to their diligence and ability. With regard to the resolutions of the special meeting, there was only one left for the Council to deal with,—the "Amalgamation of the Settlements," and that had been forwarded to the Consuls, but no reply had been yet received. The Committee appointed to revise the Land Regulations had published their report, and doubtless would submit it to the meeting. One other thing he must allude to. There was a letter published in the *North-China Daily News* by Mr. Camajee, the whole of which was misleading, but one part the Council particularly wished to deny. Mr. Camajee said that he was required to sign an agreement without consideration. So far from that being the case, some suggestions that he made were not only listened to by the Council, but the proposed agreement was amended in accordance with them, and when the amended agreement was ready, Mr. Camajee was asked to come round and meet the Chairman of the Council on the subject. He came and took away the statement, and had it twenty-four hours, but came on the following day, and said that after consulting his legal adviser, he had been advised not to sign the agreement. With reference to the stones, they were on the property when he took it, and he had taken them up and thrown them by only lately. That was the way in which Mr. Camajee had treated the Council, and he had treated the Consular Body in the same way. He had applied for a Consular Court to try the case, and three Consuls had been nominated to do so. But that was the last they had heard of the matter. He (Mr. Purdon) had mentioned the subject, in order to set the action of the Council right before the Ratepayers. The Council could never ask a man to sign an agreement without consideration. He would now propose

That the Report and Accounts of the Council for the Foreign Community of Shanghai for the year ended 31st March, 1875, be approved and confirmed.

Mr. COWIE seconded the motion, which was carried unanimously.

Mr. PURDON apologised for coming before the meeting so often, but he could not induce his colleagues to bring forward any of the resolutions. In the regular routine he had therefore now to offer the following resolution :—

That the Council for the Foreign Community of Shanghai, North of the Yang-king-pang, be hereby empowered by this Meeting, and in conformity with the provisions contained in Art. IX, pp., 15-17 of the Land Regulations and Bye-Laws of 1870 for the Foreign Settlements of Shanghai, North of the Yang-king-pang, to collect from Foreigners and Chinese residing within the limits abovenamed, the following rates, dues, fees, &c., at the dates set opposite to each, viz :—

LAND TAX—at the rate of 3/10ths of 1 per cent. on the assessed value of land, as assessed in 1873-74, from the renters of land registered in the various Consulates at Shanghai—on 1st April 1875, or as soon after as possible, for 6 months ending 30th September next ; on 1st October 1875, for Quarter ending 31st December 1875 ; on 1st January 1876, for Quarter ending 31st March 1876.

GENERAL MUNICIPAL RATE of 6 per cent. on the present assessed rentals of houses inhabited by Foreigners, from the occupants, quarterly in advance, as soon after the 1st April as possible, and subsequent collections to be commenced on the first of the following periods,—July and October, 1875, and January 1876.

DUES ON ALL GOODS passed through the Custom House or landed, shipped, or transhipped, by persons resident within the aforesaid limits—monthly, on the established tariff in force, or as may be hereafter amended, provided said dues shall in no case exceed the amount of one-tenth of one per cent., on the value of the Goods so passed.

All such rates and dues being payable at the time when declared due, and within fourteen days of presentation of Tax Note.

GENERAL MUNICIPAL RATE of 8 per cent. on native rentals, from Chinese residing within aforesaid limits—monthly or quarterly as may appear advisable, in advance, as soon after 1st April 1875, as possible.

TELEGRAPH FEES—Taels One Hundred (Tls. 100) per line per annum.—In advance.

CEMETERY FEES.—In advance.

LOCAL POST OFFICE SUBSCRIPTIONS.—In advance.

LICENCES.

For every SHOP or STORE for the sale of Wines, Spirits, Beer, Intoxicating Drugs, Butcher's Meat, Poultry or Game, according to class of Establishment, from $6 to $200 annually, payable in advance.

For every house of ENTERTAINMENT, HOTEL or TAVERN, Foreign or Native, according to class of Establishment, $6 to $200 annually, payable in advance.

Music Hall Theatre Circus	Foreign or Native	According to class of Establishment,

from 10 Mexican cents to $5 for every night open, payable in advance.

DANCING SALOON, according to class of Establishment,—for every Night open from 25 Mexican cents to $5, payable in advance.

BILLIARD or BOWLING SALOON—for every Night open, computed at the rate of $3 per quarter for each Billiard Table or Bowling Alley, payable in advance.

SAMPAN REGISTRATION at one Dollar each for two months, payable in advance.

NATIVE BOATS—Every two months, in advance.

PAWNSHOPS—according to class.

HORSES or PUBLIC VEHICLES from Cash 200 to one Mexican dollar per month for each horse or vehicle, payable in advance.

JIN-RIK-SHAS—400 Cash each Jin-Rik-Sha per month, payable in advance.

PERMITS TO ERECT SUN-SHADES over public thoroughfares—in case of Foreigners, one mace per lineal foot; in the case of Chinese, two Mexican Dollars each house ; in both cases payable in advance.

PERMITS TO CONNECT PRIVATE DRAINS with Municipal Sewers—Tls. 3 each, payable in advance.

Seconded by Mr. LEMARCHAND.

Mr. C. THORNE saw a resolution announced to be brought forward further on, about a re-assessment of land and houses. Did not that affect the present resolution, which authorised the collection of the tax on "existing rates?"

Mr. PURDON said there was a resolution to be brought forward bye-and-bye by a Ratepayer ; but that, if carried, would have to apply hereafter ; it could not affect this year because the Budget was based on the present assessment. Besides, it would take a long time to make the assessment.

The resolution was then put and carried.

Mr. Purdon said the Budget had now been in the hands of the Ratepayers for some time, and did not require any remarks from him. He would simply propose—

That the Estimated Expenditure in the Municipal Budget for the year commenced 1st April, 1875, and ended 31st March, 1876, as proposed by the retiring Council for the Foreign Community of Shanghai, together with the recommendations attached thereto, be hereby approved and adopted.

Mr. Cowie seconded.

Mr. Kingsmill asked whether the Council were now really prepared to carry through the second road and construct a bridge over the Hongkew Creek, and to come to some arrangement with Mr. Camajee in the matter.

Mr. Purdon said the arrangements to carry out the road were now in a fair train towards completion. The Council were now defining the line along the small extent where it had not been carried out, and everything was prepared to carry it through.

Mr. Kingsmill remembered that, at a meeting held some years ago, Mr. Reid had brought forward a special resolution about the extension through the Canton Garden, and it seemed to him that Mr. Camajee must have taken over the land with a full knowledge of the arrangement proposed by the owner. He could not see how there should be any difficulty on the subject. Mr. Camajee had spoken to him (Mr. K.) on the subject, and he had advised him to come to an arrangement with the Council, who should give him a fair value for his land.

Mr. Purdon had thought Mr. Kingsmill was referring to the extension on the other side of the creek, in reference to which there had been some little delay; that had now been arranged. In regard to the Canton Garden, the Council were prepared to take the steps which they deemed necessary, and which they were glad to find, in the opinion of the Ratepayers, it was proper they should carry through. The Council had never refused to pay compensation, although they believed the former owner had been willing to give it up. They were prepared to submit the matter to arbitration as Mr. Camajee had at first agreed.

Mr. Camajee said when he took the property he did not understand that he had to give some of it up to the Council. He only understood afterwards that the Council expected he should do so; but in that case he would be entitled to compensation. He had received a letter from the Secretary to the Council, saying the land had been given up by the former owner; but the Council must give him some proof of the fact. So far, they had only shown that Mr. Reid was a promoter of the scheme; that was not sufficient. He (Mr. C.) had afterwards applied to Mr. Reid, but had not yet had an answer. He thought when that answer came, it would be to the effect that the Seward Road extension through the Canton Garden had not been arranged; but it had been arranged that if the Council took the creek road, they should give back the Boone Road. If the Council could prove that they had a right over the middle road, he would of course have to give it up.

Mr. Kingsmill said it was not a question of "giving up." No one would derive greater benefit from the proposed road than Mr. Camajee. If he had been owner of the land, he should have done exactly as Mr. Reid had done, and moved every engine to get the road made.

Mr. Purdon said it was only necessary to add that all Mr. Camajee had advanced now, he would have had an opportunity of alleging before the arbitrators.

After some further remarks from Mr. Camajee in reference to the arbitration, the subject dropped.

Mr. Kingsmill wished also to ask what was being done with reference to the continuation of the Chekeang Road from the corner of the Mixed Court. Arrangements with this object had gone a certain length, and he had on behalf of a certain institution made arrangements which he now found himself unable to carry out. He hoped the Council would be able to come to some arrangement for continuing the road. It was an important one, as it opened up a new road through the Settlement from North to South. There was nothing in the Budget regarding it; but he thought it only right to bring it up, as correspondence regarding it had been published in the Report.

Mr. Purdon said there was no mention of the road made in the Budget because, if it were carried out, it could be brought in under the appropriation for new roads. The Council were trying to get the road through in an amicable manner. It was true that, when the matter was first taken up some years ago, the representative of the owner of the property had been absent from Shanghai, and, after some negociations, he had now thought it well, as the Ratepayers were aware by the correspondence, to withhold his assent; but the Council had hopes of being able to carry through the arrangement. The agent of the property acknowledged it would be an improvement, and did not wish to stand in the way.

Mr. Haas noticed an appropriation of Tls. 2,000 for the extension of the Seward Road. He had had to do with the negociations for extending the road, and he believed this sum would not be enough. It would have been enough at the time the boundary stones were placed; but during the two years that had elapsed, several new houses had been built across the line of road. He had lately made a new estimate, with the District Magistrate, and the conclusion had been that at least Tls. 2,500 would now be wanted. There was another point. Since the road had been marked out, several new Chinese graves had been erected on the proposed line. Foreigners set apart special ground for interments; but the Chinese can make graves where they like; would it not be well to have a certain tract set apart for Chinese, also? It was a great inconvenience that they should be allowed to put graves where they liked. And this brought him to another point. He saw Tls. 83 set down in the Budget for taxes on cemeteries. The Chinese custom was not to pay taxes on land occupied by graves; and it might be possible to induce the Taotai to abandon the land tax on the Cemetery.

Mr. Purdon understood that the extension of the Seward Road might probably cost more than was set down, but the difference was so small that there could be no trouble in appropriating the amount. It could be provided out of the appropriation for new roads or contingencies. This would be more convenient than amendment of the Budget. With regard to the burial of Chinese, there were regulations in existence, forbidding the burial of Chinese in the Settlement. In regard to the Cemetery tax, the Council would look into the point suggested by Mr. Haas.

Mr. Iveson said that the Council proposed bye-and-bye to bring forward a resolution authorising the removal of the Free Ferry Bridge. He intended to propose that another bridge should be built there. Would it be necessary to make an amendment on the Budget providing for the outlay?

Mr. Purdon said if the bridge would cost a large amount, it would have to be provided; but if only a foot bridge, costing a small sum, were contemplated, the resolution favouring it could be passed, and an appropriation for it be introduced in the next Budget.

Mr. Iveson said a foot bridge was all that was needed.

Mr. Purdon thought that Mr. Iveson had better get sanction to it in a subsequent motion, as an amendment or rider to the Free Ferry Bridge resolution.

The Budget resolution was then put and carried.

Mr. Purdon said the only resolution left over from the last meeting was one relating to a rectification of the Broadway near Mr. Hayes' house. It was left over at the suggestion of certain Ratepayers, who thought a better road than that suggested could be made. The suggestion had been acted on, and he had now to propose—

That the incoming Council be authorised to enter into the arrangement for the deflection of Broadway as herein provided and shown on the plan exhibited at this Meeting, viz.:—

That Mr. A. A. Hayes shall purchase from Mr. Vincent the strips marked

	m.	*f.*	*l.*	*h.*
E E measuring.....	1	1	7	2
D D ,, ...	0	6	4	3
	1	8	1	5

At the rate of Tls. 500 (five hundred Taels) per mow.....Tls. 907

And surrender them to the Municipality for the purpose of making the road as indicated, receiving as compensation:—

The small portion of Broadway (in front of his house) marked B B, measuring 0 *m.* 8 *f.* 7 *l.* 6 *h.*, at Tls. 500 per mow..... Tls. 438

And also the amount the Council had agreed to pay Mr. Vincent for the portion marked D D, say. 250

———Tls. 688

Mr. Blethen seconded.

Mr. Kingsmill had only one remark to make before the resolution was put. He had been told that the Council would probably find difficulty from the presence of a grave in front of the proposed line, and that some of the owners had said they would not sell their land if the line were altered. As he had been requested to mention this, he did so; but he had told his informant that, in case it were decided the line should go as proposed, he was sure the proprietors would not object to any reasonable proposition.

Mr. Purdon was not aware of any grave being in the way; if there were, it could be removed for a very small sum.

Mr. Kingsmill would add another remark. While the Council were dealing with the Broadway, could they not make some arrangement between the owners of Endicott's and Vincent's lots, to take the excessive crookedness out of the road at these points, by a give and take line?

The Resolution was then put and carried.

Mr. Purdon said the next resolution was brought forward more particularly in deference to a suggestion made by the United States Consul-General, when the case relating to Mr Fogg's taxes was lately decided by him. The Council were also of opinion that in a case of this kind, where so large a portion of land was outside a man's compound and in the use of the Public, it is not fair that the same rate should be levied as on land inside. He would therefore propose—

That the incoming Council be authorised to allow an abatement of one-half of the tax due on that portion of the land owned by W. H. Fogg which is used by the public.

Mr. Kidner seconded.

Mr. Bisset asked, if this resolution were carried, whether it would apply to other properties similarly situated? There were a number of properties along the Yang-king-pang in exactly the same position; if this resolution was passed, would the Council feel authorised to deal with them in the same way?

Mr. Purdon said—No. The resolution applied only to this one case. The Council did not know of any other similar

cases. People similarly aggrieved would do best to follow a similar course.

Mr. BISSET—That is, to resist payment?

Mr. PURDON—Unless an amendment is brought forward empowering the Council to take into consideration all such cases. If the resolution is carried as it stands, the Council will not consider they have a right to deal with other properties, but only with the one in question.

Mr. C. THORNE moved as an amendment, to be added to the original motion—

And also on any other land similarly circumstanced.

Mr. PURDON thought it only right to point out that this opened up the whole Settlement. There was not a property fronting on any road which had not given up land. As Mr. Thorne's was rather an addition than an amendment to the Council's resolution, would it not be better to pass the latter as it stood? If other property-owners were similarly affected, they could also refuse to pay. They need not go to Court; the case could be referred to arbitration. As it was, no one else had refused payment, and the assumption was that no one felt similarly aggrieved.

Mr. HART said, as the matter was under discussion, it would be well to consider whether it would not be expedient to collect the tax only on land within the compound walls. It would become a sore subject in future. Why not deal with it at once? He would propose

That taxes be levied on the property actually contained within the respective compounds, irrespective of the question whether the ground has been surrendered or not.

Mr. PURDON thought this was one of the proposals that sometimes came up at public meetings, which looked more simple that it actually was. Mr. Hart's proposal would virtually conflict with the Budget. It would require a re-survey of the Settlement to see what land was within the compound walls. The amount of land now in use of the Public was over 500 *mow*, and to surrender the tax on this would involve a great difference in revenue. They would have to raise the rate of land tax, and upset the entire Budget. Holding the amendment to have this force, he must hold that it came rather late, as the Budget had been passed.

Mr. HART said a number of departures might be made from the original design, which would alter the symmetry of the Budget; but he could not think that a reason for neglecting a matter which, sooner or later, would have to be dealt with. He was sure the machinery already existing would prove sufficient to deal with it; and he could not see why it should not be taken into consideration.

Mr. PURDON said this year's Budget had been passed. In a future Budget it could be done. He thought the proposal would come up better as an amendment on the resolution which was to be brought up bye-and-bye, in regard to assessment.

Mr. KINGSMILL said the present mode of assessment had become so much a matter of custom in Shanghai, that it was always considered the area of a lot included half the neighbouring roads. This was such a custom that people hardly ever asked the actual area unless in special cases like that of Fogg & Co. On this basis the last assessment had been made, so, if a resolution of this kind were passed, the assessment on property would be reduced by a considerable amount, and would not represent anything like the actual value. So, although the resolution was one which it would be well to keep in mind, and which would have to be adopted in the future, it could not come in under the present assessment without unfairness.

Mr. PURDON said his objection only went to defer the amendment until the subject of assessment came up; it could arise out of a question of assessment, but it could not arise out of the present resolution. He would ask the Chairman's ruling on the point.

The CHAIRMAN asked whether Mr. HART were willing to defer his amendment until Resolution 8 came up? It would come in more naturally there.

Mr. HART—Do you rule that the amendment is out of order here?

The CHAIRMAN said, if Mr. Hart forced him to ruling, he considered that the amendment, in one place or the other, was substantive, and ought to have been made a matter of notice. It went to entirely remodel the principle of assessment. But probably no objection would be taken if it were brought up in connexion with a future resolution.

Mr. HART could see no object in postponing it. If the Council's resolution were carried, and Mr. Fogg were allowed to obtain a return, his amendment would naturally fall in. But if the resolution were not carried, the amendment might still be accepted.

Mr. BISSET seconded Mr. Thorne's amendment.

Mr. KINGSMILL said if Mr. Hart would place his amendment on the ground that such a rule would be an expedient one to adopt in future, it would be a good resolution to adopt as representing the feeling of the meeting as to what should be done for the future. But as it stood, it really upset more than the Budget; it upset the assessment, and would cause serious inconvenience.

The CHAIRMAN understood that Mr Hart's amendment was intended to strike out, and take the place of, the Council's resolution.

Mr. HART assented.

Dr. YATES remarked that the resolution in regard to Mr. Fogg referred to taxes due and past; but the amendment had reference to an assessment for the future. It could not, therefore, properly take the place of the resolution. It would come naturally under Resolution No. 8, and take the place of that.

Mr. PURDON said the resolution in regard to Mr. Fogg did not deal altogether with the past. If it were carried, the Council could only levy in future on the reduced amount. He thought it well for the Council to point out that if Mr. Hart's amendment were carried, it would entail a considerable difference in revenue and would unsettle the taxes. The revenue would be seriously interfered with, and the rate of taxation would have to be raised.

Mr. WESTALL seconded Mr. Hart's amendment.

The CHAIRMAN said if there were no further observations, he would put Mr. Hart's amendment.

A poll was taken, the result being *for* Mr. Hart's amendment, 54; *against*, 94.

The CHAIRMAN said the amendment was therefore lost, and the question now turned on Mr. Thorne's amendment.

Mr. PURDON said the point raised was very indefinite; it threw the whole thing into the hands of the Council, and they did not want the responsibility. The amendment was exceedingly vague, but he merely desired to point that out to the meeting.

Mr. KESWICK said, if he was still in order, he would say it would simplify the matter very much if a resolution by the Chairman of the Municipal Council would deal with it directly, either by affirming or rejecting it. He supposed there would be a special meeting held afterwards, and thought thereat a substantive motion should be brought forward, that all land in the occupation of the public should not be taxed. Such a resolution would simplify matters very much, and by it all would be put on the same footing.

Mr. PURDON said Mr. Keswick's object would be gained if Mr. Thorne's amendment were thrown out; Mr. Keswick's suggestion could then come in under Resolution 8.

The CHAIRMAN then submitted Mr. Thorne's amendment, and it was lost.

The original motion, as proposed by the Council was next put, and was also lost.

The CHAIRMAN said the next resolution was with respect to the Yang-king-pang Bridges.

Mr. PURDON said the resolution was one regarding which everybody had heard, through the correspondence which had been published, and he did not think it necessary to go further into the question now. He therefore proposed—

That no new bridges be built, nor repairs be made to existing bridges across the Yang-king-pang Creek, unless the French Municipality agree to bear half cost of same.

Mr. KIDNER seconded.

The CHAIRMAN then put the motion, and a poll was called for, the result of which was 94 *for*, 55 *against*. (Applause.)

The motion was therefore carried.

Mr. KINGSMILL asked how votes were to be taken at this meeting—whether proxy votes were being taken or not? He should have asked the question previously, but it was not too late now; and he reminded them that a resolution was passed at the last annual meeting, that the proxies of persons present in Shanghai should not be taken. He would like to ask how they had been taken to day, or if a resolution passed by the Ratepayers was of no avail?

Mr. PURDON said he did not know that the Council had anything to say about it. If there was any objection to the mode of procedure, it should have been made at the beginning of the meeting. He might say, they could have thrown seven proxies in favour of the Council's resolution. They were the votes of persons who had been present at the meeting, but had left. He (Mr. Purdon) did not think it was generally known that the votes of persons who left the meeting fell into the hands of the Chairman, but that was the rule, and it had better be known. As they all knew, the question of proxies would come on for consideration at a future time.

Mr. KINGSMILL again referred to the resolution passed by the Ratepayers at the last meeting, and said he merely asked if the Council had received the proxies of persons now in Shanghai, but not present at the meeting, and whether the resolution was to be set aside? He thought it right the question should be answered.

Mr. PURDON said the Council did not send the resolution referred to by Mr. Kingsmill to the Consular body, and the gentleman who did so did not hand it to the Council for their sanction. The Council, therefore, had nothing to do with it, and it was not competent for them to alter the Land Regulations in any way. Proxies were admitted at the last meeting, and as the Council had not been instructed in the matter, they had nothing to do with it.

Mr. KINGSMILL asked if the Council could ignore a resolution of the Ratepayers?

The CHAIRMAN said the case was a perfectly simple one. A Resolution was brought forward at the last meeting, the Consuls took cognizance of it, and their action was published in the newspapers. The Consuls had not settled the matter amongst themselves, nor with the Chinese authorities, and the Land Regulations could only be altered by the body of Consuls in concert with the Chinese authorities. The question would be brought forward for discussion, and until the whole subject was before them for legislation, they could do nothing with it.

The matter then dropped.

The CHAIRMAN said the next question for discussion was that of investing police funds.

Mr. PURDON said the object of the Council was to get the sanction of the Ratepayers to invest the balances of the

police funds, as mentioned in the resolution, in debentures. There was nothing to prevent the Council taking the money out of the bank, and investing it themselves, but they thought it would be unadvisable to do so without bringing the subject before the Ratepayers. The money was now in the bank, at five per cent., whereas if invested in debentures, they would receive eight per cent. He saw no reason why it should not be done, and therefore proposed—

That the Balances standing at credit of the "Police Gratuity," "Reward" and "Passage Funds" be invested in Municipal Debentures as opportunity offers.

Mr. Lemarchand seconded.

The Chairman put the motion, and it was carried *nem. con.*

The Chairman said the next motion proposed by the Council was with regard to cleaning out the Soochow Creek.

Mr. Purdon said the resolution was a simple and short one. The Chinese authorities had once proposed to do it, but at that time it was inconvenient to have it done, and it was set aside. If they were now asked to clean out the Creek, no doubt they would do it. He would, therefore simply propose—

That the Chinese authorities be requested to clean out the Soochow Creek.

Mr. Kidner, in seconding, said it was considered on all hands that it would be better, for various reasons, to have this work done.

Sir Edmund Hornby—Provided it is not done in the summer months.

Mr. C. P. Blethen asked how it was proposed to have the work done?

Mr. Kidner said the object was to clear out all the mudbank, from the Honan Road Bridge to the Garden Bridge, and so deepen the creek for that distance.

Mr. E. M. Smith remarked that he could not see why the Yang-king-pang could not be included in the motion, for it required to be cleansed as greatly as the Soochow Creek did. He therefore proposed as an amendment—

That the Chinese authorities be invited to co-operate with the English and French Municipal Councils for the purpose of cleansing the Soochow and Yang-king-pang Creeks.

Mr. C. P. Blethen would enquire how it was proposed to keep the Soochow Creek clean after it had been cleansed?

Mr. Kidner replied that he supposed the Council would again ask the Chinese authorities to clean it out, when it was required to be done.

Mr. Blethen mentioned the present width and depth of the creek at different points, especially calling attention to the fact that from near the Honan Road Bridge to the Garden bridge there were only about four feet of water at high tide, and at low water only a few inches. The creek therefore at low water was for that distance useless for navigation, and it would be a good thing to have it cleaned out, and the depth of water maintained. He also suggested that something should be done to improve the bank line of the creek, either by bunding, or in some other way.

Mr. Kidner said that what Mr. Blethen had mentioned was what the Council wanted to do. He did not believe in bunding out a creek, because it had been found in these waters not to answer at all. There must be a sloping bank, and by dredging and cleaning out to keep the water-way clear, his belief was that the creek would be useful for all purposes for eight or ten years to come

Mr. Blethen thought the Stone Bridge should be taken away, when they would have a greater flow of water, and that would probably help to keep the creek clean.

Mr. Purdon said the work could not be done in the hot weather, but if the resolution were carried, the Council would arrange with the Chinese authorities, and then the question of the line of the creek would be decided. With reference to Mr. Smith's amendment as to the Yang-king-pang, it was not necessary to say "co-operate with the Chinese authorities," for the two creeks belonged to the Chinese, and they would have to do the work. If thought requisite, the Yang-king-pang could be included in the resolution with the Soochow Creek.

Mr. E. M. Smith said that would meet his views.

Mr. Kingsmill said that the two creeks were differently circumstanced. With regard to the Soochow Creek, it was doubtless a provincial matter in which the Chinese Government was interested. The other merely divided the two Municipalities. He thought they would be getting themselves in a false position by asking the Chinese authorities to do the work in the Creek which really belonged to the Municipal Council. He thought it was a most vicious course to pursue, for it was in fact giving the Chinese authorities all the handle they wanted for coming into the Settlement, and levying taxes which were detrimental not only to the place itself, but also to its Municipal Government. He considered that what was done to the Yang-king-pang should be done by the Council, and that no application for assistance should be made to the Chinese authorities with respect to it.

Mr. Twombly would ask if the cleansing of the Yang-king-pang was not done on the last occasion at the expense of the Municipal Council, and whether the bunding was not done at the cost of one or other of the Councils, according to which side it was required? Also, if the Chinese were to do the work of cleaning out the Creek, if would it not be likely that they would throw down the bunding by digging close to it and under it?

Mr. Purdon said he was not in the Council at the time alluded to by Mr. Twombly, but he believed that what was done then was done at the expense of the two Councils. As to the Chinese, if they were to clean out the Yang-king-pang, being likely to hurt the bunding by deepening down under the piles, of course the Council's engineer would see that that should not be done nor the roads injured.

Mr. Twombly said if the Chinese were requested to do the work, they could hardly be restrained from doing it in their own way, which would only be their right; but if they were asked only to co-operate, the Municipal authorities could supervise them.

Mr. Purdon said of course the Municipal authorities would supervise the work, and would not allow it to be done to the injury of the roads.

Mr. Hogg said with, respect to the Soochow Creek, he would ask, on the part of the Ratepayers, if the effort on the part of the Council would be to keep the creek as wide as possible?

Mr. Purdon said the whole scheme of widening and deepening the creek would come up for consideration and decision.

Mr. Hogg said he asked the question, because in the Council's report it was set down that the engineer was in favour of narrowing the creek to 200 yards, and that in this he was supported by other professional opinion. It was an important question, and he had brought it forward now in order to obtain a definite reply.

Mr. Purdon said that if Mr. Hogg had read the report further on, he would have seen that the Council did not concur in this opinion.

Mr. Hogg had observed that, but still thought the expression should be more explicit.

Mr. Kingsmill would propose, as an amendment—

That the resolution remain in its original shape, referring simply to the Soochow Creek.

Mr. Keswick seconded, and there being no further discussion,

The Chairman put the amendment, and it was carried.

Mr. E. M. Smith said then that virtually threw over the Yang-king-pang altogether.

The Chairman replied in the affirmative, and then put the original proposition, and it was carried.

Mr. E. M. Smith thought it was necessary to have a poll. (No, no.)

The Chairman was of opinion that a poll was not required, there being no doubt as to the opinion of the meeting.

Mr. E. M. Smith said he must bow to the decision of the chair.

The next business was a motion by the Council, proposing the removal of the Free Ferry and mole.

Mr. Purdon said this was another resolution that did not require any great length of time to consider it, and he would at once propose—

That the incoming Council be authorised to remove the Free Ferry and Mole.

Mr. Kidner begged to second the motion.

Mr. Iveson would like to add to the resolution,—

And to construct a foot bridge at the end of the Szechuen road, at a cost not exceeding Tls. 2,000.

The traffic across the pontoon bridge was now very considerable, and he thought the construction of a foot bridge at the point he had named would be advisable.

Mr. Purdon said the Council would offer no objection, if the Ratepayers thought it necessary.

Mr. Kingsmill said that this work, if agreed to, could only be done after the arrangement with the Chinese authorities with regard to the line of the Soochow Creek. He should say it would be premature to undertake a work of the sort until that arrangement was made.

The Chairman said Mr. Purdon had accepted the proposal.

Mr. Hogg suggested that the new bridge should be erected before the old one was removed.

Mr. Purdon said if it was proposed to do the work immediately, they would have to provide the means of doing it, for it was not included in the present estimates. He did not know there was any great objection to Mr. Hogg's suggestion, because the old bridge need not be removed yet, and there would be only a few months' delay, as the work could not be done in the hot weather.

Mr. Twombly asked if, in building, the foot-bridge would be extended from shore to shore, the whole width of the creek when it was cleaned out, or whether it would be built on the present piers?

Mr. Purdon said the pontoon bridge was not at the end of the Szechuen Road where it was proposed to erect the new one, but the mole would be removed when the old bridge was taken down.

The resolution, with this addition, was put to the meeting and carried.

Mr. Purdon said that for many years the question of the water supply of the Settlement had been agitated. Of late years it had been more and more agitated, for, of course, as the Community grew, the greater became the necessity for a better supply of water. The Council had been asked to do something in the matter, and they had brought forward the scheme that was before the Ratepayers. It was manifest that no Council could bring forward such a properly and well digested scheme as would there and then be accepted by the Ratepayers. The Municipal Engineer had had some experience in water works, but he wished his estimates should be looked over and checked by some other Engineer. He (Mr. Purdon) thought that the Ratepayers would never be willing to undertake works of the

kind on the opinion of any one man, and therefore the resolution he had to propose provided that the estimates as contained in the report of the Works' Committee, should be checked by a proper and competent authority. There was no doubt a feeling among many that a private company was the proper way of getting the water supplied to the Settlement, and if there were a sufficient number of well-known men who would come forward and subscribe for shares, no doubt such a company could be floated; but he could not help thinking that an undertaking of the kind, on the security that this Municipality could offer, would be much more readily taken hold of. If it were left in the hands of a private company, it would virtually amount to a monopoly, for it would be no use saying another company could be set afloat if the first did not meet the wishes of the Community; the capital required was too large for anything of that kind. The community might find themselves bound hand and foot to the company, and if the company found that private consumers did not pay them, the public would have to pay just whatever the company chose to ask, for every gallon of Water used on the streets or thrown on fires, or else have to buy over the Company's Works at whatever price they chose to ask. If there was no doubt that a liberal revenue was to be derived from a good water supply, there was no reason why the Community generally should not have the benefit of that revenue. What the Council wanted at first, was some good ground to work upon—some starting point to build on. If they got authority to obtain the opinion of a competent engineer, and so get a well-defined scheme, the Council could at once proceed to the question of raising the money and providing the interest, and lay the whole scheme properly before the Ratepayers for their approval; and debentures, if issued, would doubtless be soon taken up. They had not named a sum, but even if they had to spend Tls. 4,000 to 5,000 it would be well spent in getting what they wanted, for even if it was found that no scheme could be carried out for two or three times the estimated amount, it would be worth while to spend the money in getting that opinion. There was nothing more for him to add, he believed, to what he had already said, and he therefore begged to propose—

That the Municipal Council be and are hereby authorised to take such steps as may appear necessary to have the estimates for the Water supply, as proposed in Report from the Works' Committee, submitted to some competent authority; if requisite, to engage an Engineer for the purpose, and on such report—if favorable—to obtain tenders from responsible firms for carrying out the scheme which appears most feasible; a special Meeting of Ratepayers being called on receipt of such tenders to approve of same and to authorise the issuing of Debentures, to provide for cost of constructing the works.

He would, however, add that all such details as to where would be the best place to erect the water-works, would be discussed on receipt of the report of the engineer whose opinion they might seek. All that the Council now did was to suggest that as a starting point, and to ask for it the sanction of the Ratepayers.

Mr. LEMARCHAND seconded the motion.

Mr. HOGG said he thought the preliminary expenses should not be thrown upon the Ratepayers, especially when it was seen that a happy spirit of competition had set in, which it would be well to encourage (Hear.) He thought the Ratepayers should not be called upon to put their hands in their pockets. There were two private companies before the Ratepayers, and the latter were not required to go to any expense in the matter at all, unless they chose to take up shares in either of the rival Companies. Those companies could be safely left to incur all the preliminary expenses themselves, without troubling the Ratepayers.

Mr. PURDON was of opinion that it was not the thing to let those Companies go on with their preparations, and incur expense, and then step in and take advantage of their experience.

Mr. HOGG said it was the way in which things were frequently done in this world.

Mr. KIDNER said he coincided with Mr. Purdon. It would be monstrous to let two Companies go on for a time, and perhaps complete their arrangements, and then for the Municipal Council to step in and take advantage of what they had done. He considered it was a work that was properly taken up by the Council, for he further agreed with Mr. Purdon, that water-works in the hands of a private company would be nothing short of a monopoly. The Ratepayers had had a pretty good experience of a monopoly, in the shape of the Gas Company which supplied bad gas at a high price. (Laughter).

Mr. HOGG said of course the Council would take care that no undue advantage would be taken of a monopoly in water supply.

Sir EDMUND HORNBY said—I have only three objections to make to the proposal of the Council, if it is seriously made by them. 1.—I think that anything which a private company can do, and is willing to try to do, and which legitimately falls within the province of a private company to do, private enterprize ought to be allowed to effect—especially in a place like Shanghai. 2.—That the Council have plenty of more legitimate things to do, which private enterprize cannot effect, and to realize which it is useless to look to private enterprize to effect. 3.—It seems to me absurd, and, indeed, putting the cart before the horse, to suggest going to considerable expense to ascertain the practicability and cost of undertaking certain works, before it is first ascertained whether, when this expense has been incurred, the money can be raised to carry the work out. I do not think a man would be considered very wise who employed an architect to furnish him plans for a house, unless he had the money in his pocket to build the house, if the plans suited him. On these three grounds I shall vote against the Council being authorized to expend a single farthing of money in respect of any works which they are not sure they will be able to carry out.

Mr. KESWICK said he had listened to Sir Edmund Hornby's remarks with deep attention, and must say that he thought he had travelled widely beside the question. He (Mr. Keswick) considered it was a public and not a private matter to provide water for a community; and that it was not putting the cart before the horse to enquire the cost first. It was simply like enquiring the cost of the mansion to which Sir Edmund had referred, before commencing to build. It was properly a question for the Municipal Council to be informed upon and to take up; for he thought if a private scheme were to be launched here, there would be an infinity of trouble occasioned by it in the future; for when a Company had once filled the streets with water-pipes, it would be quite within their province to charge what they pleased. (Applause.) It was for the Ratepayers to decide the question, however, and also to consider the advantages they would derive from the work being done by the Municipal Council or being left to private enterprise.

Mr. KINGSMILL said he knew something of similar affairs at home, and knew he had had to pay very dearly indeed for water supplied by a Corporation. The City of Dublin was in former years supplied with water by private companies, but some people thought the Municipality was the best body to carry on such an enterprize. They brought forward a motion in accordance with their opinion, and a Bill was afterwards passed, giving the City of Dublin the privilege of drawing water from a river some thirty miles away. The estimated expenditure was more than doubled, and although Dublin was now getting a good supply of water, the Ratepayers had to pay five times as much as before. That was not at all a satisfactory result, and although he did not predict such a thing would happen in Shanghai, if the Ratepayers authorised the Municipality to establish water works, he could not but think that private enterprize in such a case was best. In Great Britain, the large majority of the towns was supplied with water by private Companies, but with reference to the Metropolis, it was on a different footing altogether. London was not supplied by one company only, but by seven different companies. The spirit of private enterprize still had fast hold of the people at home, and although there was a bill brought into Parliament by Major Beresford to consolidate those companies, it was difficult to say whether it would be carried. With respect to the Settlement of Shanghai, he did not know whether it would be generally conceded that they would be more likely to be better supplied with water from the works of a private company than by those of the Municipal Council, but he thought the dread of raising a monopoly if it were left in the hands of a private company was groundless, because the company advocated there to-day, gave the Council the right of pre-emption at any time; so if the Ratepayers found it irksome to have a private company, they could call upon the company to sell under an arbitration. That got rid of that difficulty; and with regard to the other, that of getting out an engineer from England—which would entail great expense—he thought there was no occasion for doing anything of the kind. There was no need to send to England for the services of an engineer to set such a thing as water works going. He had himself, so long ago as 1870, been in correspondence with a rising engineer at home, and they had eventually drawn up a scheme and exchanged estimates. The thing was simplicity itself. They would have to draw their water from a source near at hand, and from no elevated source, because there was no elevated source within 90 miles. The only question was, where could they get the purest water from in this alluvial soil, and all the information that was necessary could be ascertained on the spot, and without incurring enormous expense.

Mr. PURDON said if Mr. Kingsmill would look at the resolution, he would see that it was not proposed that an engineer was to be brought out from England. There might be one in Shanghai, or in Hongkong, or somewhere else. At all events, he did not think it likely that the Ratepayers would be satisfied by taking the opinion of only one man.

Mr. J. B. TOOTAL said he had a resolution to propose, but did not know whether, if the meeting adopted that of the Council, it would place him out of order in proposing to obtain the permission of the Council to open the roads to lay down water-pipes.

Mr. PURDON said not necessarily so, because the Ratepayers could, if they thought proper, give the permission required.

Mr. TOOTAL asked whether his resolution could come in as an amendment to the Council's proposition?

The CHAIRMAN said he did not see why it should not.

Mr. TOOTAL then went on to say that the community had waited many years for the establishment of good Water-Works, and the company he belonged to had been started in the hope of providing a much-needed requirement. They proposed to begin at once, and to go on gradually with the work. There were

other schemes before the Ratepayers, one of them by the Works Committee of the Municipal Council, to cost Tls. 260,000 with a contingent and probable addition of Tls. 107,000. In this the proposal was to get the water from the Soochow Creek, but if this place was not satisfactory then the water was to be brought from Loong-wha, but the filtration would be on the creek, and as the water at Loong-wha was full of the ordinary Shanghai sediment and Loong-wha was five miles from the place where the works were to be constructed, water heavily impregnated with sediment would have to traverse these five miles. He would like to know how long these pipes would last, without being choked; he gave them three months only. Fancy gentlemen, five miles of sediment! Again, one of their the Council's own body had just now described the Soochow Creek to have a "reeking foreshore." Would the Council give the inhabitants water to drink which had traversed this reeking foreshore? His Company did not seek to be monopolists, but they did ask permission to open the roads, to lay down water pipes for the supply of the Community. Another scheme, the prospectus of which he had not seen, but he understood embraced the plan of establishing the works at Loongwha, and involved a capital of Tls. 500,000; but from what source was the capital to be raised? He (Mr. Tootal) understood that on the proposed amended Land Regulations, the Council had sanctioned a limit of their borrowing powers to an amount equal to two years' revenue; this would be about Tls. 500,000. Already, the Council had some Tls. 60,000 issued, this day they would be asked for Tls. 35,000 more, and they were committed to Tls. 40,000 for the Tunsin property; how then could they raise Tls. 500,000, or if they did in what position would they be for other requirements? He would remind them that the company he represented was a public company, and that the Council could pull them to pieces if they thought proper; but he asked if it would not be as well for the Ratepayers to give his company permission to at least make a beginning? He would propose, an as amendment to the Council's resolution—

That the Council be authorised to grant permission to the Shanghai Water-Works Company to open the roads within the limits of the Settlements, for the purpose of laying water pipes.

Mr. Purdon said it was not the desire of the Council to in any way stifle private enterprise; but, looking to the importance of having a good water supply, and the works carried out in a complete manner, it was thought it could be done better under the care of the Council than by private persons.—It being now 12 o'clock, he proposed an adjournment until 1.30.

The meeting then adjourned.

The meeting having reassembled,

Mr. Tootal said they had been dismissed so peremptorily from water to wine, that he had not been able to conclude the remarks he had proposed making in support of his amendment. Mr Keswick had drawn a picture of the horrors of monopoly; but since he came into the building, he (Mr. T.) had been told that every application for a reduction which had been addressed to the Gas Company, by the Council, had been granted. On the other hand, it had been suggested that this ready concession rather supported the idea that there had been a surcharge. Then, whatever might be Mr Keswick's horror of water monopoly, he did not appear to suffer from the same complaint in the matter of the Hongkew wharves. It occurred to him that if the Loong-hwa sheme were carried, the works would be outside Municipal limits. In the not unlikely event of a row, therefore, after we had spent Tls. 500,000 upon these Water-works, the Chinese could cut off the supply, and, having stopped the water at one end, could apply the torch at the other, and burn the Settlements. He appealed to the Ratepayers—not the Land-Renters. The Land-Renters—where were they? Absentees, most of them, living on turtle and in luxury, whilst their agents here were blocking up our homes and filling our streets with Chinese, and filth, and disease. He appealed to the Ratepayers; those were the men who watched us the closest—the men who had to live in Shanghai; and to them he said, if you consent to this Municipal scheme now, you will repent it in future. Be wary! Having said this, he would propose his amendment.

Dr. Jamieson had pleasure in seconding the amendment. In doing so, he must say that till ten minutes ago he had no idea that he would be called on to do so. He understood that there had already been discussion of the subject at the morning sitting, but he had not the opportunity of being present; so that if he were guilty of going over ground already trodden he trusted they would excuse him. No doubt they were agreed that they ought to have pure water. In the light of recent investigation at home, we had come to learn that a great deal of disease was due to the impurity of water, and whatever might be our views as to the way in which our requirements should be met, we could not deny they ought to be met; and then the question arose as to the comparative merits of rival schemes. He was not competent to go into the question of finance involved; but he believed he might say that the scheme with which Mr. Tootal had associated his name, and for which he asked from the Ratepayers so much assistance as is implied in permission to lay pipes in the roads, did not involve one-half the cost of the scheme put forward by the Works' Committee. The respective suggestions contemplated Loonghwa, the Soochow Creek and the River near Yangtszepoo, as sites for Water-Works. The Shanghai Water-Works proposed to take their water from the latter point, and they had had an analysis made by Mr. Cleave, who was a thoroughly competent analytical chemist, and that analysis was perfectly satisfactory. The water which would be supplied by the Company was certainly far purer than the majority of the samples supplied to the different boroughs in England. He would like here to correct a misconception which might arise from his now praising a local source of water supply, whereas he had always, since he had an opportunity of influencing public opinion through the Customs Medical Reports, abused the Shanghai water; but the reason was that, his reiterated objections were levelled at the water as consumed. That water was undoubtedly of extremely impure character. It was taken at all times of tide, from the ends of jetties and from off the mouths of sewers, and it was to eliminate these impurities that the Water-Works Company was established. The Company contends that, under the precaution it is prepared to take, it will be able to promise a pure supply. It will take water only at high tide, when the great bulk is derived directly from the Yangtze, and at a point where there can be no junk or city contamination. The impurities which enter into the buckets filled at the ends of jetties in the vicinity of sewers will therefore be originally absent. But the Company will of course deliver the water much purer than they receive it. Bearing in mind the unquestionable importance of obtaining a pure water supply– and it is imposible to close our eyes to the fact that diseases such as typhoid fever, due greatly to impure water, are on the increase among us—any scheme which proposes to supply pure water, and above all, which promises to supply it without any delay, ought to receive support. He hoped the Ratepayers would not hurry over the subject; he would prefer rather that it should be referred to a special meeting, when the Company would be in a position to say more fully what were their hopes and prospects, and at what date the works would be accomplished.

Mr. Purdon would like, before the resolution was put to the meeting, to make one remark. Dr. Jamieson had referred to a scheme. There was no scheme of Mr. Tootal's before the meeting. There was nothing to bind the Company to take water from any place; there was nothing to prevent them taking it even from the ends of jetties or sewers. The object of the Council was not to bind themselves to take water from the Soochow Creek, but to get a starting point, to get proposals and estimates of the cost of bringing water into the Settlement. They asked sanction to spending a certain amount of money to do that, and they will bye-and-bye bring forward a definite plan and ask the Ratepayers to sanction it.

Mr. Kingsmill said the Company were quite prepared to furnish the Ratepayers, now or any time, with full particulars of their scheme. Meanwhile, documents were before the meeting, stating where they proposed to take water from, and they were bound by that statement.

Dr. Jamieson said the Company were bound by their public proposition. There was such a thing as public opinion in Shanghai, which would prevent them taking water from the end of sewers as Mr. Purdon suggested. Besides, it was not likely they would do anything so sure to spoil their business.

Mr. Tootal said the Water-Works Company were not likely to go elsewhere than where they proposed to take their water, any more than, if the Gas Company undertook to supply good gas, it would be expected they would supply it from Loong-hwa. People would suppose it was to come from the Shanghai Gas Works.

Mr. Keswick did not know whether he was quite in order in speaking again, as he had spoken on the original resolution. But he would like, if he were in order, to make a few remarks on the amendment. He might have to traverse again some of the ground he went over before. He would repeat that he thought it the duty of the Ratepayers to be most particular in such an assential thing as giving a private Company a monopoly of water supply. At the present time, they had seen an advertisement that there was such a Company as the Shanghai Water Works Company, but of the nature of its scheme, or its proposed extent, they knew nothing. Then there was the rivalry of its opponent—he did not know how far the formation of the Loong-hwa Co. had gone—it might also want to disturb our streets. He thought the Ratepayers should consider very carefully, before deciding, whether it would not be better to have a scheme from the Council under such management that they would be able to deal with it. They should be careful not to part with the authority the Council has. To him it was clear the supply of water should be a Municipal affair, as much as the care of our roads and jetties, and not issue in a private undertaking. As a matter of finance also, if there were sufficient prospect of emolument to induce two rival schemes, if the advantages appeared such to private companies, it was right for the Council to undertake the work. They would find private individuals still ready to invest, and there could be no fear of the tax involving hardship on the Community. People who had made themselves acquainted how such matters were now dealt with in other countries, would be aware that anything approaching a concession was jealously regarded. Nothing should be done to give preference to individuals or companies. Mr Tootal had referred to the Wharf scheme, but

that was purely a mercantile matter, and quite apart from any public interest. It did not affect the public health or rights—the two matters were not analogous, and there was no comparison between them. He repeated that the Council should not be divested of any authority, and that no private company should be allowed to break up our streets and roads, or interfere in any way with a matter so essential to our health as water supply. The duty devolved on the Council, and by them should be performed.

The amendment was then put to the meeting, and declared lost. A poll was called for; but before it was ended, the adverse vote was accepted; and the Chairman recalled attention to the original resolution.

Mr KINGSMILL would suggest, before they were asked to vote on the original proposition, that, as there were so few Ratepayers present, the whole question should be referred to a special meeting, when the Company would bring forward estimates and definite proposals. It was almost certain that the present meeting would have to be adjourned, and he would propose as an amendment—

That the consideration of the Water Scheme be referred to a future meeting, to take place within one month from date.

Mr. HAAS seconded.

The amendment was lost. The original resolution was then put, and declared carried.

Mr PURDON had now to offer a resolution, which was designed to meet a requirement in the present condition of the Settlement. There was no provision to meet the case of unassessed property, and the Council thought it desirable for the Ratepayers to make such provision. He wished to propose—

That whereas there is at present no provision for the assessment of lands and buildings not already assessed, the Municipal Council for the time being be and are hereby authorized to assess all such lands and buildings: and that all appeals against such assessments shall be made to the Finance Rate and Appeal Committee who shall have power and are hereby authorized to deal with each appeal according to their discretion, and whose decision shall be final.

He would remark that this was not at all intended to apply to existing assessments. These assessments had been made by an Assessment Committee; appeals had been heard by an Appeal Committee and decided; and the Council had no power to go back on their work. The resolution applied only to unassessed property in future, and would only give to the Finance Rate and Appeal Committee a power which its title implies.

Mr. COWIE seconded.

Mr. HOGG asked, before proceeding, whether nothing could be done with regard to the previous resolution. He had cried "divide," and was under the impression that a division would be had; but found this resolution introduced before he had realised that his call had not been heard.

The CHAIRMAN had heard the word "divide," and looked around, but could not see where it came from. If a poll were desired, he had no objection.

Mr. PURDON said the Council could have no objection to a division. It was not at all their wish to stifle discussion. A poll was then taken on the Water-Works resolution, and the votes were—117 for, and 62 against.

Mr. PURDON remarked that these numbers did not include the proxies which the Council held.

The Assessment resolution was then put to the meeting, and carried *nem. con.*

Mr. PURDON said that ended the official business, and the Council were now really out of office. As they would see by the notice convening the meeting, the Committee appointed to revise the Land Regulations would now have to present their report.

Mr. IVESON said copies of the revised Land Regulations, accompanied by the Committee's report, had been circulated among the Ratepayers. They had cost the Committee a good deal of time. He did not suppose they were perfect; in fact, the comments made in that morning's paper showed they were not so. He had only to lay them before the Ratepayers and ask them to consider them. In the meantime, the Committee expected to be relieved of their commission.

The subject dropped, the Chairman intimating that it was now competent for the Ratepayers generally to bring in the business which had been notified.

Mr. HAAS said—Mr. Nolting, who is unavoidably absent, has asked me to second the resolution of which he has given notice—

That a revision of the assessment of rents shall take place.

Mr. PURDON asked the Chairman whether a resolution could be proposed by any one not present in the meeting? Would it not be better for Mr. Haas to propose the resolution, and get some one else to second it.

Mr. HAAS assented, and Mr. TOOTAL said he would be very glad to second it.

Mr. KIDNER suggested that a great many people had voted against Mr. Hart's amendment on Res. No. 7, under the impression that it would upset the Budget. No doubt, however, the principle which Mr. Hart advocated was just, and if he would put his proposal as an amendment to the present resolution, it would probably be now carried.

Mr. HART said he had intended to bring brought forward an amendment to the resolution which he thought would have met the case, had it been carried—he referred to resolution No. 8. The resolution was, however, put so quickly and carried, that there was really not time to do it.

The CHAIRMAN was not aware that the resolution had been carried very quickly. He thought he had allowed time. Could not Mr. Hart's amendment come in on resolution No. 9,—as an amendment to Mr. Nolting's proposition?

Mr. HART said if it could be allowed to reopen No. 8, he would prefer it.

Mr. KIDNER said he thought Mr. Hart did not quite understand the meaning of No. 8. It was simply an authority to empower the Council to assess new buildings, and collect taxes upon them until such time as an assessment could be made. Now, Mr. Nolting proposed a revision of assessment upon rents, and if he would add to it, an assessment of property, including roads, it might be admitted.

Mr. HART said he would read the amendment he had intended to bring forward, which he did as follows:—

That provision be made for a revision of the assessment on any house or land, upon the application of the tenant or owner thereof, and that in making such reassessment land used by the public be not taken into account.

Mr. KINGSMILL said he would like to make a suggestion, if permitted, without putting it in the form of a motion. He had been concerned in one or two assessment Committees, and knew that the labours of such committees were of a very onerous unthankful nature, but he thought an improvement might be effected if the suggestion he was about to make were adopted. It was that the Council should once in each year, before the end of November, make up their books of assessment, which should afterwards be publicly exhibited, so that the Landrenters and Ratepayers should have an opportunity of inspecting them; and that an Appeal Committee should be appointed by the Ratepayers, who should go over the books, and compare them, and hear appeals, their decision to be final. He was speaking of these matters as he had said before, from personal experience, and he knew that the present assessment had gone on until it had become so incompatible with the market value of the land and houses, that some violent measure was rendered necessary. He, therefore, made the suggestion as being a more simple system, and he considered Mr. Hart's proposition, that the actual area of land occupied should be taken as the basis of assessment, was a very good one.

Mr. HAAS said he would withdraw his proposition in favour of Mr. Hart's.

Mr. WESTALL seconded Mr. Hart's amendment.

Mr. KIDNER said that seemed to be a very curious way of putting the matter, that land occupied by the public should not be taken into account.

The CHAIRMAN asked Mr. Haas if he accepted the amendment in the place of his resolution.

Mr. HAAS said he did so.

The CHAIRMAN then read the amendment over again, and was going to put it to the meeting, when

Mr. KINGSMILL said the amendment was a little vague. How were the provisions for carrying it into effect to be made?

Mr. PURDON, on behalf of the Council, might say that he was just going to ask the same question. There was nothing in it to show them what to do, and the Council would not be able to work under such an amendment. It did not even say who was to make provision for it—there was no provision of machinery under which the Council could work.

Mr. HART said the machinery could be provided afterwards.

Mr. E. M. SMITH submitted that the resolution as it now stood, was one of most serious danger; and it seemed to him that to place in the hands of three gentlemen of the Municipal Council, the power of making a revision of an assessment that had taken a whole year about, was open to decided objection. It would lead to complications that would be likely to set them, like the Kilkenny cats, fighting all together.

The CHAIRMAN announced that Mr. Hart had added to his resolution, the words "having regard to the former resolution."

Mr. PURDON said that, so far from not having mentioned the subject, he had mentioned it a good many times—perhaps before Mr. Hart came to the meeting, and so he did not hear it. What he (Mr. Purdon) wanted to point out was that the Ratepayers at their last meeting had appointed an Assessment Committee, and an Appeal Committee who had decided all appeals, and the Council did not see their way to overthrow former assessments; and if this amendment was considered at all by the Ratepayers, there should be added to it that any application asking for a reassessment should be carried out by two professional men at the applicant's own expense. If the reassessment of any property was thought necessary, it would be worth the owner's while to pay fees to two professional men for their assistance—to be afterwards submitted to the Council. But they could not do it under this amendment.

Mr. HART said it was time something was done in the matter; and he was obliged to think it was the business of the Council to have brought forward some proposition for revision of assessments.

Mr. PURDON—Why not bring forward a proposition for a reassessment altogether? There was no objection to that. The Council had, however, arranged their Budget on the present assessment, which, as a Council, they were not aggrieved by. He held that it was for those parties who felt themselves aggrieved to bring the matter forward.

Mr. HART said if Ratepayers were to be

met with such determined opposition, it was useless bringing anything forward.

Mr. Purdon said it was not the wish of the Council to meet the question with any vexatious opposition, and the better thing to do would be to bring forward a resolution for a revision of the assessment on all land and houses, though the Council could not now offer any opinion on it.

Mr. E. M. Smith thought it was competent for any individual to bring forward a proposition for revision. With respect to this amendment, as soon as it was passed, there would be no end of persons coming forward with appeals, and a great deal of trouble be given. The best plan would be to have a thorough revision of the assessment of both land and houses.

Mr. Kingsmill said from his experience on two Assessment Committees—and he thought Mr. Purdon could support his view—it would be much better to have a yearly assessment.

Mr. Purdon asked Mr. Kingsmill if he intended his suggestion as an amendment to that of Mr. Hart? He thought some such arrangement as that contained in Mr. Kingsmill's suggestion could be carried out.

Mr. Kingsmill said he did not wish to make any formal proposition, and had hoped his suggestion would have been adopted without doing so. His object was simply to recommend it to the notice of the Council, and for them, if they saw fit, to work on it. He believed, however, it would meet the wishes of the Ratepayers, and he would lay it before them.

That the Municipal Council shall once in every year before the 30th November, cause an assessment to be made of the value of the various lots of land within the Settlements, and of the houses and other buildings within the said limits, and shall cause same to be publicly displayed within the offices of the Council for the information of all concerned; and the actual area of land, not including land devoted to public purposes, shall be the area to be taken into consideration in all assessments of such land;

And the Electors shall, at the ordinary annual meeting of each year, appoint an Appeal and Revision Committee of not less than seven members, of whom three shall form a quorum, who shall hear all appeals from such assessment, and whose decision shall in all cases be final and conclusive.

Mr. Purdon said he believed that something of that sort could be worked on by the Council. In fact, if Mr. Hart's amendment were carried, there were only two ways in which the Council could work. They would either have to make an entire reassessment, or hear appeals as they were made, and decide upon them. The suggestion made by Mr. Kingsmill met all that, but he did not believe that the revision of assessments, as set down in Mr. Hart's amendment, could be worked at all.

Mr. E. M. Smith said he thought if Mr. Kingsmill's suggestion were acted upon, it would be throwing too much work upon the Staff of the Council, and they had already quite enough to do, without having other onerous duties thrust upon them. Mr. Kingsmill's suggestion amounted to a perpetual revision of assessments, and if it were carried out, a committee ought to be appointed to do the work.

Mr. Kingsmill said a committee of electors would be appointed by it.

Mr. Hart said, with the consent of Mr. Westall, he would withdraw his former amendment, and propose the following—

That a reassessment of the land and buildings within the Settlement be made, and that in making such reassessment, land used by the public be not taken into account.

Mr. Westall seconded the amendment.

Mr. Tootal asked how long that assessment was to last? He thought Mr. Kingsmill's suggestion was a very feasible one.

The Chairman said Mr. Kingsmill's suggestion was not before the meeting yet, and could not be until it was proposed and seconded. He really ought to say that providing for future assessments was very like making a new Land Regulation.

Mr. Kingsmill said he must beg to differ from the Chairman's view that his suggestion was making a new Land Regulation. It was only providing new machinery, and he would now move it as an amendment.

Mr. Tootal seconded the amendment.

The Chairman asked Mr. Kingsmill to read his amendment over again.

Mr. Kingsmill did so, and said it only meant that the Assessment and Appeal Committee should at once be able to enter upon their labours. He had been asked to add to it, "and that the actual area of land occupied, should be the basis of assessment." If that addition would meet the views of the meeting, he would not object to insert it.

Mr. F. H. Bell said it appeared to him that a subject of such great importance had hardly received the consideration it deserved. In a meeting like that, and in the course of only half-an-hour's discussion, it could not be brought fairly before them. He could not see that any man of common sense could say that Mr. Kingsmill's was a fair amendment to Mr. Nolting's resolution. It was a simple proposition to put the whole of the assessments of the Settlement in the hands of three persons only, whereas there had always been a committee appointed to consider it. He (Mr. Bell) thought it was a most crude suggestion, and required a great deal more consideration than they had been able to give it that afternoon. If such a proposition was considered necessary, notice should have been given of the intention to bring it forward. They ought not to have been called upon to vote on so important a matter without notice. It was a fundamental motion, which he thought the present meeting could not deal with, and that it ought to be delayed till the next yearly meeting. (Hear.)

Mr. Keswick said there was no object to the gained by delay, if, as he understood Mr. Kingsmill's amendment, it was confined merely to providing the machinery for the assessment. That was all that was required, and it was not such a great resolution, nor had it the importance that Mr. Bell attached to it, looked at in that way. It was important that the present assessment, which had given such dissatisfaction, should be corrected.

Mr. Purdon asked how would it meet the opinion of the Ratepayers, if the Council would say they would take up the question, and bring forward a resolution looking to a new assessment? in short, to bring forward a scheme for a new assessment. He thought Mr. Bell was right in saying it was a fundamental question, whereby a great change would be brought about in the rating of the community, and he did not know if it did not amount, as the Chairman had said, to the formation of a new Land Regulation. If the Council would say that at the end of the present year they would be prepared with some scheme of reassessment, perhaps it would meet the views of the meeting. He considered it was a question they could not settle that afternoon.

Mr. Tootal said if the proposed reassessment did not come before the Community previous to the middle of January next year, the Ratepayers would be mulcted in the first quarter of the following year—the rates being payable in advance.

Mr. Purdon said that was very true, but it was not a matter of much importance.

Mr. Wainewright said the remarks which had just been made, applied to Mr. Kingsmill's amendment, and not to Mr. Hart's, and he asked why they should wait for another year? The present assessment was very unsatisfactory, and caused much complaint. Mr. Hart's proposal was that a revision of the assessment should take place now, and it was not open to the objections Mr. Bell had made, nor to what the Chairman of the Council had said.

The Chairman then read Mr. Kingsmill's amendment, and said that, as he had said before, it seemed to him like making another Land Regulation. He then submitted it to the meeting.

The vote being cast, the noes were declared to have it, and the amendment was lost.

The Chairman said the question next had reference to Mr. Hart's amendment.

Mr. Hogg—Who is to make the assessment?

A Voice—That will be settled hereafter.

Mr. Purdon said there was neither time nor person appointed to make the assessment, and as far as he knew the feeling of the members of the Council, the result would be, if the amendment were carried, that at their next meeting they would say there was nothing to tell them to do the work, that there was no committee appointed, and no means provided. And as for the Council being asked to take the trouble of ascertaining the exact amount of property within every compound wall, he thought they ought not to be called upon to do anything of the kind, in addition to what they always had to do.

The Chairman then put Mr. Hart's amendment to the meeting, and it was also lost, and the original motion having been withdrawn, the subject dropped.

The Chairman said the next motion on the paper was with reference to the proposed new Hospital.

Mr. Keswick rose in pursuance of notice, to ask from the Landrenters their support for an institution that had now been a great benefit to the Settlement for upwards of ten years. The General Hospital had unfortunately to vacate the building it at present rented, in consequence of the ownership of the property having been changed, and the Trustees had been obliged to procure a site upon which they could erect a suitable building and where they could permanently establish the institution. There had been a great deal of discussion on the course of action taken by the Trustees, who had had a difficult task to arrange for a site that would in all respects meet the views of the Community, and at the same time afford ample space for the business of a hospital. The Howard's Wharf site was offered to them on very favourable terms, but the Trustees were unable for various reasons to accept that site. The question then arose where to get a site. The great difficulty that prevented them getting one near the centre of the Settlement was the great cost of land, and the only site that was available which they considered eligible, was the piece of land at the end of the wharves on the Whangpoo bank. It was a distant place, but a place that in the course of a few years would be considered a much more convenient site than it was at the present time. The extension of Shanghai, judging from what was now taking place, would be in that direction; and the position in a sanitary point of view was unexceptionable. As to the great benefit derived from the Hospital, it was unnecessary for him to offer any remark upon it. It was an institution that had done great service, and unhappily it was more than likely that its services would be required in the future, especially if they did not get that supply of pure water that was so much talked about. The sum that would be necessary for the erection of a new Hospital it was not contemplated would fall as a tax upon the Ratepayers, for he

believed that the institution, if Tls. 35,000 were expended as proposed, would be able to provide a sinking fund, that would in about 15 years pay off the loan now asked for, and leave the Community in possession of a good Hospital. The resolution he was about to propose did not ask the Ratepayers to sanction such an advance without having good reasons for doing so. The object of the resolution was to empower the Council to assist the Trustees to make every arrangement on behalf of this very important institution, and he therefore begged to propose—

That the Council be authorised to assist the Trustees in establishing the Hospital by advancing a sum not exceeding Tls. 35,000, and be empowered to issue Debentures for that purpose if necessary, provided the property of the Hospital is pledged as security for the loan, and that the plan of the building, the selection of the site, and mode of providing for paying off the debt be submitted to and approved by the Council.

Mr. IVESON seconded the resolution.

Sir EDMUND HORNBY said—I shall certainly not give a silent vote in favour of Mr. Keswick's proposition. Situated as we are in Shanghai, I do not think there can be a worthier use of public money than the building of an hospital. It is a work which benefits no single nation in particular—but the citizens of all nations alike. It is a work which ought not to be a private enterprise, because it will never pay—as, indeed, it never has paid, anywhere as an investment. The amount is not large, and I am certain that every farthing asked for and obtained, will be well and carefully employed; and I do not believe the Hospital can be built as it ought to be built for one farthing less. I understand the building is intended ordinarily to accommodate 50 patients—not one whit too many, and that at a pinch it will accommodate twice or thrice that number. I make no observations on the site, but I do so on the vote for Mr. Keswick's motion, for it will be a vote that will do honour to the community, besides proving a lasting benefit. The only suggestion I would make—not by way of amendment—is that, now, practically, the community will advance all the money requisite, it should have a greater and more important share in the government of the Hospital. The present Trustees represent the Subscribers—the Subscribers have ceased to exist—at anyrate their money has gone, and most of them have given up their shares and interest in the little that remains. They no longer, therefore, represent the people who had advanced the money. It was a private institution—it is now to become a public one—let, therefore, the Ratepayers choose the governing body, or at any rate, a large share of it. I hope the vote will be carried unanimously.

The resolution was then put to the meeting, after a pause, and carried with two or three dissentient voices.

Mr. BELL said the motion he rose to propose required no comment from him. It was almost identical with one they had carried last year, and was brought forward merely to supply a verbal defect in the former. He therefore at once proposed—

That Article XIX. of the Land Regulations be amended by the insertion (in the eleventh line on page 24) after the words of the Article "shall be entitled to vote in the election of the said members of the Council and at the public meetings"—of the following words—"Provided always that the proxies of "Ratepayers only who are absent from the "Consular District of Shanghai, or are "prevented by illness from attending, shall "be admitted to vote at such meetings."

Mr. IVESON seconded

Mr. PURDON remarked that, at the election of Councillors, proxies were not admitted by the present Regulations.

Mr. BELL said the resolution was only to provide for the proxies of absentees from the meetings, and would not touch elections.

The resolution was then put, and carried *nem. con.*

Mr. KINGSMILL would not detain them more than a few minutes in proposing the resolution of which he had given notice. The Polytechnic Institution had secured a site for a building on the north side of Hankow Road. It had previously been in treaty for a plot on the south side, but had been unable to complete the purchase. It had then been in communication with Messrs. Jardine, Matheson & Co., and the purchase had been agreed on of a site on the north side, at a point where the proposed Yin-wo-ka Road joins the Hankow Road. The land for this road had never been given up possession of by the proprietors, but the Council had been authorised to treat for a road leading from the Kiukiang to the Hankow Roads. The road was only 178 ft. from the adjacent Kwangsi Road, it would not lead anywhere particular, and the whole block would have only a frontage of 420 ft. without a road, if it were abandoned. So the public would not suffer in any way from want of communication. All he proposed was, that the Council be authorised to retire from a resolution that had never been acted on, and so facilitate the building of an institution which commended itself to the support of the community. His resolution was—

That arrangements having been made for the purchase of a plot of Ground for the new Polytechnic Institution adjacent to the Hankow Road, the Municipal Council be authorised to give up the proposed extension of the Yin-wo-ka between the Kiukang and Hankow Roads.

Mr. KESWICK seconded.

Mr. BELL would like to have the opinion of the Council as to giving up the extension of a road which had been once voted. He had always understood the Council were anxious to open up roads in that neighbourhood; and now they were asked to stop the construction of one, he would like to have the opinion of the Council as to the wisdom of doing so.

Mr. PURDON said the Council did not think it desirable to abandon the proposed road. They did not wish to appear in opposition to any such institution, but that was their opinion. The road was already open from the Maloo to the Kiukiang Road, and it remained to extend it from the latter into the Hankow Road. If it were given up, a long block would be without any cross road. If it were left to the Council, therefore, they were obliged to say they were not in favour of giving it up. If this extension were carried out, the road could be still further extended. (Applause.)

Mr. KINGSMILL had thought he had the opinion of the Council that they would do their best to carry out the Chekeang Road, which was a much more important one, and would render this unnecessary. The Yin-wo-ka Road was of no public importance. He thought the gentleman who was standing in the way of the Chekeang Road would listen to reason. The result of the Council's opposition would be that the Polytechnic would be obliged to go elsewhere, to a more inconvenient site; and it was really no use pressing the road, because the proprietors objected to give up the land.

Mr. PURDON replied that the argument as to the shortness of the road did not bear, because it was only a link in a long road. If it were carried out from the Maloo to the Yang-king-pang it would be a long road; and as to the Chekeang Road extension, it was still problematical whether they would get it. (Applause.)

Mr. KINGSMILL would withdraw his proposal in deference to the Council's opinion. (Applause.)

Mr. KESWICK added that, in seconding the resolution, he was under the impression it had the approval of the Council.

The CHAIRMAN said the meeting would now be made a special one, for consideration of a proposal to be brought forward by the Council. The Land Regulations provided that the Senior Consul present should take the chair at special meetings; therefore he presumed there would be no objection to his continuing to occupy it. It was also necessary that, before such meetings were declared constituted, the Secretary should state that two-thirds of the Ratepayers were present or represented. The requisite number were represented.

Mr. PURDON said the Council's business would detain them very little time. They thought it would be more convenient to have the year end in December than in March, and he had, therefore, to propose—

"Whereas the Municipal year has hitherto commenced on the first day of April, and ended on the thirty-first day of March, and whereas it is expedient that the said Municipal year should for all the purposes of these Regulations be the same as the Calendar Year, Now therefore be it further ordered that the words "April or May" in Article IX. are hereby repealed, and the words "January or February" shall henceforth be substituted therefor: That the word "March," in Article XIX., is hereby repealed, and the word "December" shall henceforth be substituted therefor: That the annual meeting mentioned in Articles XII., XXI. and XXV. shall henceforth mean the meeting to be held in the month of January or February: That the Municipal year referred to in the Article XVIII., and elsewhere, shall henceforth, and for all purposes, be deemed to commence on the first day of January, and to end on the thirty-first of December in each and every year, anything in these Regulations to the contrary notwithstanding."

Seconded by Mr. DRUMMOND, and carried unanimously.

This closed the business before the meeting.

Mr. BELL proposed a cordial vote of thanks to the retiring Council, which was carried by acclamation.

A vote of thanks to the Chairman was proposed by Mr. PURDON, and the meeting separated at 4.30 P.M.

Correspondence.

LOCAL TAXATION.

To the Editor of the
NORTH-CHINA HERALD.

DEAR SIR,—I am inclined to dissent from some of the conclusions in your Editorial note on my communication, appearing in your last issue. My letter was written under the impression that the Chinese authorities have the right to tax their own subjects in whatever way, and to any extent, so long as those same subjects are contented. I refer to such subjects, of course, as retain their allegiance to the Emperor of China, and as are domiciled within his realms.

If I am wrong, and if the accidental, and perhaps only temporary, residence of a few natives within the limits of our so-called Foreign Concession, exempts them from contributing towards the maintenance of their country's institutions, by all means let us have every *Runner* secured and punished, and let there be an immediate abolition of all native local taxation within our borders. But I think some one of our authorities has laid it down as law that we—*i.e.* foreigners—have no right to interfere between the native and his Governor; and, that being the case, it is my opinion that the native will thank his well meaning friends to leave him to arrange his own difficulties.

As to my having answered my own question, perhaps you will concede that it is one thing for me, and for others like me, to obtain—under the rose—information of what is actually going on; and that it is quite another affair, in the utter

absence of direct evidence from those who hand over the money to the collectors, to induce the Consular body, and more notably the native authorities, to accept the information so obtained as proof conclusive on the point at issue.

Still waiting to learn how such direct evidence is to be secured, believe me.

Yours, &c.,

VIATOR.

P.S.—M., who addresses you this morning, has let his virtuous indignation run riot with his reason. Bales of Drills, Lumber, Runners, the Inquisition and double Government, have evidently been all jumbled up together in his noddle, and he has let the public have each with an ! attached. Double Government ! Why didn't M stop to consider that his very (?) innocent Chinese place themselves voluntarily within the pale of his double Government, if by that he means our Municipal system and their liability under their own citizenship? We foreigners—Britishers—have three or four Governments to satisfy, and we may growl as much as we please against them, but we have got to subject ourselves to them all the same. Shall I mention a few? No. One only shall be named by me, the REGISTRATION REGULATION.

V.

THE GENERAL HOSPITAL.

To the Editor of the
NORTH-CHINA DAILY NEWS.

DEAR SIR,—A correspondent of the evening paper asks some questions about the General Hospital, which I will answer briefly, with your permission, through your columns.

1st.—"Is it true that the sum paid for the proposed site (Endicott's garden) is more than the marketable value of the land?"

The Trustees of the Hospital were engaged in the search for a site for several months, and their negociation for the lot in question extended over a considerable period of time. They believed then, and still believe, that they got the lot at a reasonable price. There may be persons in the community who are better informed in regard to real estate matters, and the requirements of the Hospital, but it is certain that the Trustees used their best judgment.

2nd.—"It is reported that Mr. Hanbury offered to the Trustees the site of Howard's wharf, on which to build the new Hospital; the terms being that no rent should be asked for three years, and that after that time the rental should be only nominal. Is it true that this generous offer of the best site in the Settlement was declined, because the Trustees were influenced by the objections of a resident who thought the Hospital would be too close to his house?"

Mr. Hanbury offered the Howard's wharf site at a rental of 1,000 Taels a year, no rent to be paid for three years. It is understood that he will give outright 3,000 Tls. toward the building of the new Hospital upon the Endicott garden site. The new site cost 13,000 Tls., the interest on this amount, at 7%, will be somewhat less than the rental required by Mr. Hanbury, and the property will be freehold.

The offer of Mr. Hanbury was refused because of the objections made by all the residents in the part of Hongkew adjacent to the Howard wharf. It was understood that those objections would, out of public spirit, be waived by those more nearly concerned, among whom was the United States Consul-General, if the Trustees would provide contagious disease wards elsewhere. The Trustees thought that the objections then taken were well founded, and after considering the proposal to establish contagious disease wards elsewhere, concluded that it would be impracticable.

At a late moment, when the plans of the new Hospital were completed, it became evident that the Howard wharf site was too small. The contagious wards, as proposed, actually abutted directly upon the street in the rear, and the buildings covered the whole lot, excepting a narrow corner in front and a court within the wings. The Trustees, looking then to the size of the lot and to the objections which had been raised, believed that it would be wise to go elsewhere.

3rd.—"Can you inform me why the Trustees were so anxious to settle the matter, without once consulting the resident physicians?"

The Trustees were not anxious to settle the matter without consulting the resident physicians. It is precisely what they were anxious to do and did do. In the early stage of their consideration of the subject, they dealt only with the surgeon of the Hospital, in whose judgment they had and have great faith. They believed that he knew the feeling of his fellow physicians, and have still no doubt upon this subject. When, at the moment of closing the purchase of the Endicott garden site, the Trustees found that many of the medical body questioned the wisdom of building at so great a distance, they invited the whole number of the medical body to consult with them. The result of this consultation was that the physicians were satisfied that the Trustees had acted wisely in abandoning the Howard wharf site, and that that they could not do better than to go on at Endicott's garden.

It may, I think, be justly said that the task devolved upon the Trustees in the building of a new Hospital is not a light one; and that, as they are acting from public spirit and have no pecuniary interest in the Hospital, it is not fair to meet them in a narrow and caviling way. They doubtless desire and invite suggestions and fair criticism, but they can hardly be expected to consider the unpleasant insinuations of your contemporary's correspondent of this sort. When that correspondent goes so far as to intimate that they were "anxious" to avoid publicity, he simply proves that he has not been anxious to ascertain facts and write justly.

Having, then, indicated the carefulness shown by the Trustees in their conduct of the important business they had in hand, and the final concurrence of the physicians in their conclusions, I may add the remark that, before closing for the down-river site, the Trustees visited, by Committees of their number, various other proposed sites, and could find none which seemed in all respects anything like so desirable. I may also add a statement, that the affairs of the Hospital are by no means hopeless. The actual working of the last two years, which have been dull years, shews that the Hospital will pay all working expenses, including interest upon the loan which must be made to secure the funds needed for building operations, and leave something of a margin to provide for a sinking fund. The Hospital is a much needed and very valuable institution, which will pay its expenses. If the public are careless about it; if, instead of meeting the Trustees fairly, they propose to throw overboard Trustees and Hospital, they have it entirely in their power to do so, *and the loss will be their own.*

It is fair to the Trustees to say, that I have written without consultation with them.

Yours &c.,

ST. VINCENT DE PAUL.

May 14th.

To the Editor of the
NORTH-CHINA DAILY NEWS.

SIR,—In Saturday's issue of your paper I observe that a writer, signing himself "St. Vincent de Paul," makes sundry statements with regard to the "resident Physicians" which do not apply to me. The following is a correct account of my connection with the affair to which he refers:—

In September of the past year, needing a holiday, I had arranged to spend a fortnight in Chefoo. Three days before I started, I learned that arrangements were nearly completed for building the new Hospital upon what is now termed the Endicott Garden site. I had never before heard this site mentioned, and up to that date believed that the Trustees had decided to build on the ground known as Howard's Wharf. I was not then, and never had been, directly or indirectly, consulted in the matter. I have forgotten now who my informant was, but am certain that the news reached me through no one connected with the Hospital. Before leaving Shanghai, I assisted Drs. Jamieson and Johnston in drawing up a letter addressed to the Hospital Trustees, protesting against their intention to remove the Hospital to such a distance from the Settlement. A meeting of those interested in the matter was called by the Trustees a few days after I left Shanghai. I have never seen any report of that meeting, but was told, when I returned to the Settlement, that the protest had been abandoned in consequence of three statements advanced by the Trustees:

1st.—That the Howard's Wharf site was not large enough for the buildings required.

2nd.—That besides the Endicott Garden site, the Trustees had failed to discover another suitable situation for the Hospital.

3rd.—That the Endicott Garden site had already been purchased.

I returned from Chefoo on the 19th of September, and had I continued to protest, I should then, I believe, have been without support. I judged it useless to take further action in the matter, but have never altered the opinions to which I subscribed my name, and still believe that Howard's Wharf is the proper place for the Hospital, and that a serious mistake will be committed if the building is erected on the site of Mr. Endicott's Garden.

I am Sir,
Your obedient Servant,

EDWARD HENDERSON.

May 15th.

To the Editor of the
NORTH-CHINA DAILY NEWS.

DEAR SIR,—I am glad that the proposed change of site of the General Hospital is attracting public attention, as I think the Community will deeply regret the choice made by the Trustees. I cannot say, however, that I am glad for the sake of those gentlemen, that their defence has been undertaken by the writer who signs himself "St. Vincent de Paul." Let me examine some of his statements.

1st.—With regard to the value of the piece of ground called Endicott's Garden, I am not an expert on the subject of real estate, and so will not say distinctly that the sum paid is more than the marketable value of the land, but I distinctly remember that, at the time, the sellers were spoken of as very lucky men, and congratulated upon getting a capital price for their land.

2nd.—With regard to Mr. Hanbury's offer, in spite of other issues ingeniously raised, the fact is admitted that the Trustees, who are now through their Chairman about to ask the Municipal Council to issue debentures for Tls. 35,000 for a Hospital, refused a site which they might have had for three years for nothing.

3rd.—The most important point at issue is the question whether the Trustees did or did not consult the physicians of the Settlement, as to the propriety of removing the Hospital. Your correspondent

says, "When at the moment of closing the purchase of the Endicott Garden site, the Trustees found that many of the medical body questioned the wisdom of building at so great a distance, they invited the whole number of the medical body to consult with them. The result of this consultation was that the Physicians were satisfied that the Trustees had acted wisely in abandoning the Howard's Wharf site, and that they could not do better than to go on at Endicott's Garden." Now this sounds very well, but it differs absolutely from the report I have heard of the interview. Is "St. Vincent de Paul" quite sure that the circumstances were not as follows? Were not the Physicians requested to attend, and, after having been politely listened to for a few minutes, were they not told "*that the arrangements were already made, and the purchase of Endicott's Garden concluded?*"

We are told, further, of the carefulness shown by the Trustees in their conduct of the important business entrusted to them, but a very strange proof of this case is incidentally given. I read that "at a "late moment, when the plans of the new "Hospital were completed, it became "evident that the Howard's Wharf site "was too small." Now surely the space at the disposal of the builders should have been the first thing considered in drawing plans for a building.

The question is really a very important one, and I hope the Community will not let itself drift into the commission of a blunder that could not easily be retrieved if once made. The site proposed is too far from the Settlement. Persons injured by accidents would run great risk in being transported such a long distance. The Doctors could not pay so many visits to the Hospital as they do now, and so consultations would be less frequent. The friends of patients could not call and see them so often as they do now, and thus the sufferings of the sick would be increased. These are a few of the objections to the change that present themselves to my mind, and I am sure that they are sufficient to make the Community hesitate in taking a step so disadvantageous and so costly as the one proposed.

Yours sincerely,

CAUTION.

To the Editor of the

NORTH-CHINA DAILY NEWS.

SIR,—As Chairman of the Board of Trustees of the Shanghai General Hospital, I am very glad to see that the public is beginning to take some interest in that institution; and my Co-Trustees are, I am sure, also only too glad that the views of the public generally should be openly expressed, so that if they have made any error of judgment it may be rectified before it is too late.

My object at present is therefore to correct certain mistatements which have appeared in your evening contemporary regarding the Hospital, and to endeavour to put the views of the Trustees fairly, and in as few words as I can, before the ratepayers.

I may mention in the first place that a copy of the report for the last three years will be in the hands of the ratepayers on Monday, where the present state and future prospects of the Hospital are fully explained.

When the site known as Howard's Wharf was first offered to the Trustees by Mr. Hanbury, on certainly favorable terms, they highly approved of it, but on examination it was found too small to accommodate the class of buildings suitable for a Hospital—and also the idea of having the Hospital there was very generally objected to by the residents in the vicinity, and not by one person alone. As the Hospital is a public institution and dependent on the Community for support, the Trustees, I think, very properly considered that the objections of this portion of the Community were entitled to due regard; and that, as there was a strong feeling amongst them against its being built there, coupled with the fact that the area was too small, decided that they must go elsewhere. They also felt that an institution of this kind should be thoroughly independent, and that it was preferable to have it standing on its own ground. The only eligible sites which presented themselves to the Trustees at this time, were, the site which they eventually bought for Tls. 12,000, known as Endicott's Garden, comprising 30 mow and having a large river frontage, and a piece of land immediately to the west of it, for which a larger sum was required than for the land eventually purchased. In connection with the purchase of this site, it is stated that the medical men of the Settlements were never consulted, and that the site was acquired entirely against their judgment. This is simply untrue. Most of them certainly did object in writing, as they preferred the Howard's Wharf site, but when they met the Trustees in person and were told the reasons against taking Howard's Wharf, they gave in their adhesion to the present site, the purchase of which, although already negotiated for, was then, and not till then, concluded. I should mention that Dr. Henderson was absent from Shanghai when that meeting was held. That the site, simply as a site for a Hospital, is a good one, I think there can be little doubt. The only question is, whether it is so far away as to seriously inconvenience those who are obliged to make use of it or the medical gentlemen who have patients there. These latter have answered for themselves so far. As regards the former—the Hospital if built on the proposed site will be but little further out of the way to a considerable portion of the Community than the present Hospital, while it will be much nearer the general shipping and wharves, where accidents of a serious nature more generally occur. It is also easily approachable by water, and before long there can be little doubt that the means of communication with that portion of the Settlement will be much improved.

Those are the points which I think principally require correction. The Trustees, I know, are actuated by only one desire, and that is to locate the Hospital where it will be of most use to the Community immediately and permanently; and if the present discussion serves to secure a better site than the one selected, I shall be glad that it has taken place. The Hospital is unfortunately a necessary institution, and it would be with infinite regret that I should see anything occur in the least calculated to impair its usefulness. The Sisters who minister to the wants of the sick, have also to be considered in the arrangements made for a new building. They have, with infinite devotion, and with an utter disregard for their own convenience and comfort, continued in a building which has never afforded them the accommodation which by agreement they were entitled to.

Apologizing for the unavoidable length of this letter,

I am, Sir,
Your obedient servant,

W. KESWICK.

Shanghai, 15th May.

P.S.—The above was written before the letter on the same subject in your to-day's issue was seen, and which has in so many respects anticipated my own statement.

To the Editor of the

NORTH-CHINA DAILY NEWS.

SIR,—Many of your readers may not be aware of the requirements which a new hospital for Shanghai should fulfil, or may have formed their idea of a hospital from visits to the present one, which is not by any means a suitable building for its present purpose. I therefore beg you to find room for the following remarks. The proposed new hospital provides for about fifty patients, who require accommodation differing according to the class they pay for, or according to the nature of their ailments. One day, there will be more patients of one class, or suffering from one disease, in the hospital, than on another day. The new hospital must be, therefore, probably nearly as large as one for a hundred patients who could be indiscriminately distributed through the wards or who required no separate rooms.

It is authoritatively laid down that, in the construction of a new hospital, the adoption of separate pavilions or buildings with lateral windows on opposite sides and natural ventilation, is essential. These separate pavilions must be at such a distance from one another that, when the windows are open, the air from one pavilion should not blow readily into the neighbouring one.

There are many other essentials of a hospital, but the above is sufficient to show to any one, with necessary measurements, that the Howard's Wharf site is too small for the new hospital, if it is to be properly constructed. A garden or some considerable piece of ground round the hospital is absolutely necessary both for the use of convalescents and for the erection of temporary sheds for patients, as it was done three years ago for some patients sent to the hospital sufferinng from a form of gangrene such as was likely to spread. Again, when during epidemics additional accommodation is required, it cannot be obtained by placing more sick in the wards, but by the erection of temporary buildings.

Should the hospital be built on Howard's Wharf, there can be scarely any vacant space round it, and the wards must be crowded together, whilst on Endicott's Garden a hospital can be built as nearly perfect in its construction and arrangements as possible, and therefore more healthy, and comfortable for its inmates.

Although well aware of the inconvenient distance of Endicott's Garden, I am of opinion that a good hospital there is preferable to a bad one in the centre of the settlement.

I am, Sir, your obedient servant,

L. S. LITTLE.

Shanghai, 17th May.

JUNKS IN THE PEIHO.

To the Editor of the

NORTH-CHINA HERALD.

SIR,—I wonder what "Puritan" was thinking about the other day, when he commended Sun-sze-ta for the measures he had taken to keep the junks from anchoring in the steamer channel. Never since I first began to visit Tientsin have I seen the river in such disorder. The junks were anchored here and there, and anyhow. Instead of being all on one side of the river, as they used to be, they are now to be found anchored on both banks of the stream, and then not in single lines, but sometimes as many as three abreast on one side, whilst two lay in the same manner on the other.

At certain places on the banks of the river may be observed a series of cone-shaped structures, erected in order to mark the places where the junks ought to anchor. These have lately been whitewashed by Sun-sze-ta, and this, I am informed, is all the Customs Taotai has done. It will be a wonder if the present disorderly manner of anchoring the junks can continue without causing disputes between the junk-owners and steamer companies; and if Sun-sze-ta be not so much scared at the junkmen as he was at the dredgers who chased him away from

the creeks he was engaged in deepening, he will pay them a visit and endeavour to restore something like order amongst them.

Yours truly,

TRAVELLER.

Amusements.

CRICKET.

A Scratch Match between two Elevens of the Club was commenced about 4 30 p.m. on Tuesday. Mr. St. Croix's side went first to the wickets, but were put out for 47. After four of the opposite side had been disposed of, the approach of dusk obliged the stumps to be drawn.

The match was continued shortly after 5 P.M. Wednesday, and was remarkable for the amount of leather hunting provided for the fielders. The feature of the match was the innings played by Mr. Gore-Booth, who astonished himself and the spectators by his free and clean hitting, notwithstanding the changes of bowling resorted to. His clean forward square-leg hit for 6 was the hit of the match. Messrs. Jones, Newbigging and Smith were very troublesome men to get rid of, scoring 24, 17 and 16 respectively. On the second innings of the losers, we refrain from making any comments, but wish them better luck at their next attempt. A little evening practice would do much good to all the aspirants for Cricket fame :—

PEKING RACES.

Monday, the 26th, and Tuesday, the 27th April, 1875.

FIRST DAY.

1.—MAIDEN PLATE.—One Mile.—Prize, $75. For ponies that have never run before.

Mr. Scandinave's *Surprise* 1
,, Vapereau's *Croquemitaine* 2
,, de Roquette's *Réactionnaire* 3
,, Julius' *Chassepot* 0

Time, 2m. 9½s.

2.—MIAO-CHIA-TI STAKES.—½ Mile. Prize, $60.

Mr. Vapereau's *Raton* 1
,, Hart's *Blackbird* (late *Satan*) 2
,, d'Imécourt's *Fomalhaut* 3
,, Hunter's *Pai Yang* 0

Time, 1m. 2s.

3.—THE HAI-KUAN CHALLENGE CUP.—Value 100 Taels, and $50 added from the fund, if won for the first time. Presented by Robert Hart, Esq., and other gentlemen of the Imperial Maritime Customs. 1½ Mile. The Cup to become the property of any gentleman residing at Peking whose pony or ponies win it two years consecutively.

Mr. Hunter's *Ling Yang* 1
,, Vapereau's *Vide-gousset* 2
,, Ohlmer's *Reinfall* 0

Time, 3m. 28s.

4.—LADIES' PURSE.—¾ Mile.—Presented by the Ladies of Peking. For Ponies owned and ridden by Peking residents only.

Mr. Scandinave's *Surprise* 1
,, d'Imécourt's *Pousse-cailloux* 2
,, de Roquette's *Réactionnaire* 3
,, Hunter's *Pai Yang* 0

Time, 1m. 39s.

5.—TIENTSIN CUP.—Value $100. Presented by gentlemen of the Tientsin community. 1¼ Mile.

Mr. Hart's *Blackbird* (late *Satan*) 1
,, de Roquette's *Commandant* 2
,, Vapereau's *Raton* 3

Time, 2m. 55s.

6.—WELTER RACE.—¾ Mile. Prize, $60. Weight, 12 stone and upwards.

Mr. d'Imécourt's *Belle Rose* 1
,, Ohlmer's *Reinfall* 2
,, Scandinave's *Mistake* 3

Time, 1m. 41s.

SECOND DAY.

1.—PEKING DERBY.—1 Mile. Value, $100. Winner of either the Maiden Plate or the Tientsin Cup to carry 5 lbs. extra; of both, 7 lbs. extra.

Mr. Scandinave's *Surprise* 1
,, Vapereau's *Raton* 2
,, de Roquette's *Commandant* 3

Time, 2m. 9s.

2.—PRESENTATION PLATE.—Presented by Their Excellencies M. M. de Butzow and Raasloff. ¾ Mile.

Mr. Vapereau's *Croquemitaine* 1
,, Harts *Blackbird* (late *Satan*) 2
,, d'Imécourt's *Fomalhaut* 3
,, Ohlmer's *Reinfall* 0

Time, 1m. 39s.

3.—TSUNG-LI YAMEN PRIZE.—Presented by the Ministers of the Tsung-li Yamên. Two miles. For Peking-owned ponies only.

Mr. d'Imécourt's *Belle Rose* 1
,, Hart's *Blackbird* (late *Satan*) 2
,, Hunter's *Ling Yang* 3

Time, 4m. 39s.

4.—HACK RACE.—Once round (nearly ¾ mile.) Prize, $50. For ponies which are regularly ridden as hacks.

Mr. Rocher's *Claymore* 1
,, Jamieson's *Lethargy* 2

Time, 1m. 42s.

5.—TRIAL STAKES.—1¼ mile. Prize, $100, added to a Sweepstakes of $10 each. A forced entry for winners; optional for other ponies. Hacks excluded.

Mr. Scandinave's *Surprise* 1
,, Vapereau's *Raton* 2
,, Do. *Croquemitaine* 3

Time, 2m. 51s.

6.—CONSOLATION STAKES.—1 mile. Prize, $50. For ponies which have run and won no race.

Mr. de Roquette's *Réactionnaire* 1
,, Ohlmer's *Reinfall* 2

Time, 2m. 20s.

7.—MAFU RACE.—Once round. 1st prize, $10.; 2nd prize, $6.; 3rd prize, $4.

Mr. Hunter's *Huang Yang* 1
,, Vapereau's *Raton* 2

&c., &c.

Law Reports.

H. B. M. SUPREME COURT.

Shanghai, May 15th.

CHING CHONG *v.* J. H. HUME.

This was an action to recover $164.80, for goods sold and delivered. Defendant disputed his liability, and the chief judge adjourned the case to enable plaintiff's books to be examined by the Clerk of the Court. The result of the examination was that the various items charged for the goods were found to be correct, but that the dates were incorrect.

Judgment was given for plaintiff, for full amount, defendant to pay costs of suit and $2 extra for the trouble of examining the plaintiff's books. The total to be paid into Court in a week, or execution to issue.

CIVIL SUMMARY COURT.

Shanghai, May 19th.

Before C. F. R. ALLEN, Esq.

J. WHEELWRIGHT *v.* W. PECK.

This was an action to recover $99.42, for goods supplied and money lent on behalf of the defendant, who acknowledged that he owed some money to the plaintiff, but to what amount he could not say. He was not able to read or write, and the plaintiff had been keeping his books for him.

Plaintiff was sworn, and deposed that the money sued for was for some sheep that the defendant purchased of him, between the 1st January and 30th April last. The account was taken from defendant's books, and he was prepared to swear to its correctness.

Defendant, sworn, said his books were in a state of confusion, and nothing could be made of them. He had had three different persons to look after his accounts, but they were so muddled that, when the books were some time ago produced before Mr. Mowat, nothing could be made of them. He could not dispute the plaintiff's claim, for he could not say how the account stood between them.

His HONOUR said that, under those circumstances, he could not do otherwise than give judgment for plaintiff, for full amount claimed, with costs.

POLICE COURT.

Shanghai, May 17th.

Before C. F. ALLEN, Esq., *Acting Police Magistrate.*

R. *v.* CHARLES KETCHIE.

Deportation.

The prisoner, who is a Hindoo, was brought up in custody from prison, after undergoing a sentence of ten days' hard labour for assaulting the servants at the Sailors' Home. Having been previously convicted, he was also ordered to find sufficient security for his future good behaviour, or to be deported.

The position in which he stood having been explained to him by Deighton, the interpreter, the prisoner said he could not find security, and

His WORSHIP therefore ordered the sentence of deportation to be carried out, and remitted the man to prison until he could be sent away.

R. (W. R. FULLER, Chefoo) *v.* WEBSTER MORRIS.

Charge of Embezzlement.

The prisoner, who is a piano tuner, and was also in the employ of the prosecutor as clerk, was apprehended in Broadway, Hongkew, on Sunday, by Mr. Molesworth, Consular Constable at Chefoo, on a warrant, charged with embezzlement. There are several cases alleged against him, the aggregate amount being estimated at about $600, the dates ranging from April, 1874. He was now brought up for the purpose of being remanded in custody until the departure of the next steamer for Chefoo.

No particulars were gone into, and the warrant having been attested by the Consular Constable

His WORSHIP made the necessary order for the detention of the prisoner.

COMMERCIAL INTELLIGENCE.

SHANGHAI, MAY 21ST, 1875.

ARRIVALS.—From Liverpool, the steamships *Antenor* and *Agamemnon;* from Hamburg, the s.s. *Galatea;* from London, the s.s. *Horriang* and *Craigforth;* and from Marseilles, with the London mails of 9th ultimo, the M. M. steamer *Djemnah.*

TELEGRAMS.—No change on the quotations of last week.

PIECE GOODS.—Depression has been the ruling spirit in our PIECE GOODS market, and the Auctioning hongs claim honorary mention as having done the largest share of the business here since this day-week. Of course, prices are lower, but that apparently is a matter of secondary moment. The goods are imported to be sold by auction, and sold they are. The principle has to be carried out, and the Chinese reap most of the profits. Privately, the transactions have been trifling, embracing chiefly common 6 and 7-lb. *T-Cloths, Drills,* and English *Sheetings,* and almost every article, but *Drills,* has declined in value. At the close there is little enquiry for anything, while holders generally are courting offers, and the desire to be doing something is evidently growing upon them.

Exclusive of the auction proceedings—noted below, the published business of the week may be summarised as follows :—

Grey Shirtings.—1,500 pieces common 6-lbs. at Tls. 1.35 per piece ; 6,000 pieces 7-lbs. at Tls. 1.45 *a* 1.47 per piece ; about 5,000 pieces 8¼-lbs. at Tls. 1.63 *a* 1.77 per piece. *Heavy* goods—resales only and at lower rates. Market for all weights inanimate.

White Shirtings.—Ordinary to fair 64 Reeds—1,600 pieces at Tls. 1.90 *a* 2.05 per piece. Finest Reeds wanted but no stock.

T-Cloths.—14,000 pieces—common to good—6-lbs. at Tls. 1.14 *a* 1.22 per piece, portion of them "to arrive" ; 12,000 pieces common, and 5,300 pieces Mexicans 7-lbs., to arrive, and hard cargo, at Tls. 1.33 *a* 1.34½ per piece, and Tls. 1.43 *a* 1.60 per piece respectively ; and 6,200 pieces 8-lbs. at Tls. 1.66 *a* 1.70½ per piece. Common 6 and 7-lbs in fair enquiry throughout, and buyers, to arrive, still to be found, although at reduced rates ; but Mexican descriptions have been in little favor, and the quotations for such are decidedly weaker.

Drills.—14-lbs. *Nil.* High offers are said to have been declined for *Pillar.* The ordinary market quotation for this cloth, however, is only Tls. 2.42 *a* 2.43 per piece. Nor has much been done in 15-lbs., although, probably, there would have been a larger business in this weight had not dealers got frightened by the decline which was established at Tuesday's Auction. Prior to that event firmness enabled at least one seller to realise a better price, by 2 cands. per piece, for a lot of 1,000 pieces good quality, than was offered to him last mail day. He sold at Tls. 2.50 per piece ; and that could not be done to-day. But foreign holders are in no way alarmed, and are contented to wait for the restoration of confidence among the dealers. About 3,000 pieces, *American Drills* at Tls. 3.37½ *a* 3.47 are reported. *Dutch* are wanted—None here.

Jeans.—No business and no demand.

Sheetings.—3,500 pieces 15-lb. English, partly "to arrive," at Tls. 2.94 *a* 2.96 per piece. The higher figure shows a clear drop of 6 cands. per piece, on the selling rate of last week.

Fancy Cottons.—An insignificant local enquiry for *Dyed Brocades, Handkerchiefs* and *Chintzes,* but nothing of importance effected. The dealers wish to get everything cheaper than the generality of holders care to accept. The recent arrivals of *Blue Chintzes* have nearly satisfied all requirements, and buyers, "to arrive," are anxiously looking for their cargoes before the market leaves them. Sundry parcels of *Scarlet Chintzes* are on offer, but there is no sale for them at present. For the North, 1,000 pieces of favourite chop 3-lb. *Turkey Reds* have been settled at Tls. 2.15 per piece, and a few ordinary 2¼ and 2¾-lbs. at Tls. 1.65 and Tls. 1.90 have been taken for Japan ; 1,000 pieces, 12-yd. *Printed T. Cloths,* at Tls. 2.25, and some *Mahommedan Cloths* and *Printed Twills,* at about last quotations, wind up the business in the Fancy department.

Woollens.—Holders of those descriptions on which the superstructure of the Auctions has been raised, have had rather a quiet time of it. But although rather-down cast, hope does not seem to have quite deserted some of them. They have had enquiries for *Long Ells,* for *Lastings,* and for *Mediums,* and have elected to hold for previous currencies. Nor is there anything unreasonable in their efforts to establish them. Current prices do not cover cost. Moreover, the stocks of *Long Ells,* and fine *Black Lastings,* are very moderate, and the position altogether favours their action. Some special colors of *Figured Orleans* have realised full figures, upwards of 1,000 pieces having changed hands at Tls. 3.40 proportion and Tls. 3.65 per piece. The Auction sales speak for themselves. They comprise—

COTTON.—The settlements amount to about 1,000 piculs, for the South, at former prices.

EXCHANGE.—Business for the past week has been on a small scale, although sterling rates have advanced ¼d. all round and close firm at quotations. On India, transactions were reported early in the week at Rs. 307, and subsequently at Rs. 308 and 309. At the close there are sellers at Rs. 310. On Hongkong, rates have advanced to 27½ *a* 27⅝; very little doing, however.

EXPORTS.

TEA.—The advices from Hankow extend to the 19th, and we can now record the opening of the new season on the 12th. First musters were placed on the market on the 12th, and settlements were at once effected at Tls. 26½ for Oonahms, Tls. 29 *a* 30 for Yong Low Toongs, &c., and Ningchows at Tls. 40 *a* 48. An active business has since been done at high rates, and the competition of buyers for Russia seems to have been eager, at exceedingly high prices, as the subjoined statement will serve to show—

Prices paid :—	1875-76.		1874-1875.
For Ningchows ..... Tls.	32 *a* 63	against Tls.	36 *a* 54
,, Finest Oopacks ..... ,,	33 *a* 42½	,,	32 *a* 37
,, Other do. ..... ,,	24 *a* 32½	,,	24 *a* 31½
,, Oonahms ..... ,,	23½ *a* 32	,,	21¾ *a* 29½

No Teas from Shongsam had been shown.

Total settlements, 86,000 chests, stock 65,000 chests.

It will be seen that for finest parcels of all classes (more especially of Ningchows) an unheard of range of prices has been obtained.

The quality of the Teas so far is reported upon favourably, and some chops that have come under one notice are very choice indeed; but the average of samples is perhaps not superior to those of last season, and in the case of Ninchows we think all below the very best chops are inferior to those of last year.

The *Glenartney*, *Bengal*, *Fleurs Castle* and *Glenearn* were to have immediate despatch, and the *Deucalion* which left Woosung yesterday (the 21st) had a large quantity of the New Tea transferred to her.

HANKOW—May 19th 1875.—We have been favoured with a copy of Messrs. Gordon Bros.' Tea Report, which we reprint in full :—

We have to record a most unsatisfactory commencement of the season 1875×76.

The market has, before now, been opened after dark, likewise while scarcely 15 musters were on offer, but on the present occasion it may almost be said that both circumstances were combined, buyers operating during one of the heaviest rain storms experienced at the Port and with only 12 samples to select from.

Had prices been exceptionally cheap, buyers could not have been more eager to secure the Teas, unusually large Russian orders giving an extra stimulus to competition and causing each chop to be picked up at once on arrival at a rapid advance on opening rates.

The first musters, consisting of Teas from the Yung-Low-Toong and Sun-Yong districts were shewn on the 12th instant, and offers were at once made on the basis of last year's rates, the "Blue Riband" falling this season to Messrs. Major & Smith, who opened the market by purchasing "Chun-ga" 906 half-chests Low-Yong Tea at Tls. 26.5 per picul, or 1s. 8¾d. per lb., laid down in London. Messrs. Sassoon and Drysdale immediately followed suit at Tls. 29 *a* 30.50 for the Oopacks, the 12 chops on offer being placed before the evening.

The unfavorable weather experienced during the whole of last week delayed the arrival of the Tea boats, and consequently up to the evening of the 15th, only 40 musters of Hankow Teas had been placed on the market, the settlements shewing an advance of Tls. 1 *a* 2 on opening rates. On the 16th, large supplies came to hand, including Teas from Chong Sow Kai, the market for these being opened at Tls. 37.25 per picul, the same Tael cost as last year. Later purchases from this district at Tls. 30 *a* 33, we make fair value.

The first samples of Oanfaas were offered yesterday, and settlements reported at Tls. 35 *a* 36.50 per picul.

Ningchows.—Settlements have been almost entirely for Russia, as high as Tls. 63.5 being paid for finest chops, against Tls. 52 last year. Prices for other kinds vary from Tls. 32 *a* 61 per picul.

With regard to the quality of the crop we consider—

Oopacks.—*Sun Yongs*, *Chong Sow Kais.*—Strong, well made, and fine, good in water but inferior in leaf to last year. *Yung Low Toongs.*—Well made, but thin. *Hip Ka Si.*—Average.

Oanfaas.—The best are strong, full tone teas, a very marked improvement on last year.

Oonams.—*Ping Kongs.*—As last year. *Low Yongs.*—Rather better. *Lye Tings.*—Rough leaf, brighter infusion. *Wun Kai.*—Inferior.

Ningchows.—Finest equal to last year, good to fine decidedly inferior in every respect.

	Chests.	Half-Chests.	Boxes.	Ningchows & Ho Hows.
Business to date is as under :				
For England.....	16,350	67,270	2,250	12,310
,, Russia	13,180	30,740	430	41,420
Total	29,530	98,010	2,680	53,730

Total settlements to date, as compared with the first week of last season, amount to equivalent of—

1875×76. 1874×75.

56,730 chests ..... 32,860 chests for England.

49,360 ,, ... 25,000 ,, for Russia.

Settlements for Russia are greatly in excess of the same number of days last year, also business for England, although buying has not been general, prices for most descriptions being considered dangerously high.

With regard to prices paid for England at the commencement of the season, we consider all Teas under Tls. 28, Tls. 1 *a* 2 higher, and those over this figure on a par with last year. For Russia, prices are so irregular it is impossible to compare them.

Our market closes with a decided disposition on the part of Teamen to accept lower rates, but the first steamer being full, a very large decline ought to be established before prices reach a safe level.

FREIGHT.—The (s.) *Shanghai* took 1,000 tons Tea for the *Deucalion* at £4 5s. The *Glenartney* leaves to-morrow morning, and the *Bengal* is also full at £5.

EXCHANGE.—On London 6/0½ for credits ; 6/0¾ for documents.

Statement of Imports and Deliveries of Cotton and Woollen Piece Goods, and Metals, for week ending 19th May, 1875, compiled from the "Customs Daily Returns," Nos. 107 @ 112, both numbers inclusive.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 22nd May:—

The Market continues dull with little business.

Banks.—No transactions reported. A limited number of shares could be placed at our quotation, but there are no sellers.

S. S. N. Co.—Some business was done, late on the 15th, at Tls. 71, and a private sale was reported to have been made at Tls. 72. Since that date a limited business has been done at Tls. 72 and latterly at Tls. 71.

Fire Insurance.—Hongkongs remain unchanged. In *Victorias*, no business transpired till the 19th, when purchases were made for Hongkong at $160, at which few shares are now to be got. *Chinas* remain steady at $142, but no business reported.

Marine Insurance.—Yangtszes were sold on the 19th at Tls. 550, cash in 15 days, and shares are now obtainable at Tls. 547 for cash. Buyers now offer Tls. 81 for *China & Japans*.

S. & H. Wharf Co.—Pressure to sell, in the absence of demand, resulted in a sale on the 18th, at Tls. 90, at which there are buyers.

Imperial Loan Bonds are wanted at £100—*cum interest*.

Some rain fell on Tuesday night, but the weather has since been fine and hot. The thermometer has ranged from 60 to 81.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, MAY 29, 1875.

IT is to be feared we are not very much nearer a revised code of Land Regulations than we were in the spring of 1874. The Committee then appointed by the Ratepayers neglected the matter too long, and, taking it up within a few weeks only of the annual meeting, placed in the hands of the Ratepayers only 48 hours before that meeting, a code so greatly altered in form, and involving such marked changes in principle, that it was out of the question that it should be voted, or even discussed. If we were asked only to adopt bye-laws that could be changed next year if found impracticable, the case would be different; but Land Regulations are not easily altered. They have to be approved by the Consuls, and sanctioned by the Ministers, and endorsed by the Governments; and any change involves a renewal of the elaborate process. Careful consideration is needed before the adoption of permanent laws; and the subject very naturally

dropped when Mr. Iveson, the chairman of the Committee, had handed in their report. The Committee have not attempted to patch up or add to the old code, but offer a completely new one, which has at least the merit of being shorter and more intelligible. They have gone on the principle of laying down the bases of government in the Regulations, leaving all details to be dealt with in bye-laws, which it is proposed there should be power to enact locally, without reference to Peking. The present system, under which every trifling rule has to be sanctioned by a dozen Legations, is in the last degree inconvenient. The idea of putting as much as possible into bye-laws, which shall not need to go beyond the Treaty Consuls for sanction, is, therefore, a good one. But we can hardly say whether the Regulations are complete, until we have the bye-laws too; and, as it is unlikely the Ratepayers will be called together again before the autumn, to discuss the subject, it would be well to complete the new code by the addition of bye-laws, so that we have the whole thing before us at once.

As regards the code put forward by the Committee, some of the proposals appear good; others will be certainly opposed Articles III and IV contemplate a marked reduction in the qualifications for Elector and for Councillor, which require grave consideration. If it were merely a case of electoral privilege, there could be no word of dissent. But it is not so. The electors are also legislators, in Shanghai. They do noto as in other countries, elect men t constitute a legislative assembly. They are electors and members of parliament in one. They pass laws themselves, and only elect a government to administer them. The very reduction which is now proposed, was suggested at the time of passing the present Regulations, in 1869, when the objections to the proposal were summed up by Mr. F. B. Johnson, in terms which it may not be amiss to quote: Mr. Johnson; said "the constitution of the "municipality, as proposed to be amend-"ed, would be more democratic in "principle than any other in the world, "that he knew of. Elsewhere, the people "elected a constituent body who made "laws after mature deliberation; in "such a case he did not object to even "universal suffrage; but here the "Council had administrative, not legis-"lative functions. The electors them-"selves considered laws and voted "money at a hastily called public "meeting, without the sense of responsi-"bility which a representative assembly "would necessarily have. In fact, the "position was very similar to that which "might be imagined were all England "called together on Salisbury Plain, to "pass laws by acclamation. He thought "the qualification of Tls. 500 per "annum rental quite low enough." The reduction in the qualification of Councillor is perhaps not objectionable, but it is unnecessary, as is the increase in the number of Councillors from nine to twelve. Art. V proposes to restrict the amount of money which the Municipality shall raise on loan, to two years' income. But this is hardly a subject for legislation. It is one the money market may be left to decide. If we borrow too much, the rate of interest will soon be 18 instead of 8 per cent. Art. VI does away with the distinction between Foreign and Chinese house-tax, but arrives practically at the same result by making the rate 8 per cent on rentals below Tls. 300, and 6 per cent. on those above that sum. The result of putting it in this form is to make us accept the principle of taxing the poor higher than the rich. It would be better to retain the old distinction between Chinese and Foreign houses.—Neither do we see the advantage of altering the present principle of the land-tax. The maintenance of a proportion between the rate on land and that on houses is a practical and equally useful restriction; and unnecessary change is as objectionable as the maintenance of objectionable laws. Art. VII gives power to the Council to act for the suppression of any riot, but it is not worded with sufficient explicitness. The Council, for instance, did not understand it to give the power of initiative which was intended; and that mere fact is sufficient to condemn it; precision of language is above all things essential. Art. IX gives a necessary power in regard to expropriation of land, but is open to objection in detail. Art. XII brings within the scope of taxation foreigners residing without the Settlement, who have hitherto escaped taxation while deriving fuller use than other residents, of the roads and gas-lights which foreigners living within the Settlement are taxed to keep up. We have heard it urged in their behalf that they have also offices in town, and do pay taxes on those. But a man having offices in the Strand, is not exempt from taxation on his house in St. John's Wood.

The code contains in all only thirteen articles, against twenty-nine in the present Regulations; and it will be necessary to compare the two very carefully, to see that nothing essential to be embodied in the Regulations, has been let drop in revision. The Committee have no doubt done this; but the Ratepayers will hardly be justified in voting a new code, without satisfying themselves on the point. It is of course intended that a great portion of the missing articles shall subside into bye-laws; and a great deal of the contraction no doubt is attained by the exclusion of redundant verbiage. The proposed Regulations comprise some very good clauses, and we cordially agree with several of the Committee's remarks, notably with that objecting to the presence of Chinese tax-gatherers in the Settlements. We have noted some objections that occur to us, but we are not to be understood as undervaluing the code as a whole. The subject is one on which difference of opinion is certain to prevail. We hope that Ratepayers will give the matter their full consideration, and that time and opportunity will be found, in the autumn, to discuss and vote Regulations that will meet our requirements for many years to come. We rather regret to gather from the Council's memoranda that another code is impending over us, prepared by Mr Rennie with the aid of legal opinion in England. We do not want English legal opinion. We know better, ourselves, what we want, than the best European lawyer can tell us. We shall get technical phraseology which it will need a lawyer to interpret; whereas we want plain English which every Ratepayer can understand.

Summary of News.

The English mail of the 16th April arrived on Thursday, by the P. & O. str. *Zambesi*.

The American mail of the 17th April arrived on Saturday, by the P. M. str. *Oregonian*.

A mail leaves to-morrow for Europe by the P. & O. str. *Hindostan*.

The following Reuter's telegrams have been received during the week:—

The South Wales Strike is virtually terminated.

The King of Spain has authorized liberty of the press. Meetings preparatory to the Elections are being held.

The Liege Tribunal has dismissed the charge against Duchesne. The result has created a sensation at Berlin.

Frequent religious disturbances have taken place in Belgium. The Populace assaulting Pilgrims.

The Peninsular & Oriental Steam Navigation Company is unable to pay an interim dividend, owing to decrease in the receipts.

THE DERBY.

Galopin	First.
Claremont	Second.
Repentance	Third.

The French Municipal report for 1874-75 shows a credit balance of Tls. 43,000. It is proposed to expend nearly all this durin

the ensuing year on public works, but a reduction on taxation is also promised. While certain people in the English Settlement are crying out to tax the Chinese more heavily, the French policy is to lighten their burdens. It is not difficult to foresee what would be the relative effect on the value of property in the two Settlements, if the different policies were carried out.

The English Council meeting of the 19th May was little more than a formal one, for the transfer of responsibility from the old to the new Council.—While regretting that their resolution about an abatement of Mr Fogg's Land-tax was lost, the Council have of course no alternative but to collect the outstanding sum. As we have already remarked, we anticipate that steps will be taken to obviate this source of trouble in future.—Further consideration of the Land Regulations is to be deferred till Mr Rennie's report is received. Perhaps, as the matter has lapsed for the moment, it is well to have this document, as well as others, to lay before the Ratepayers when discussion is invited. We hope, however, that neither matter will be left over till next Spring. The annual meeting has enough to do with current business.

At the meeting of shareholders in the Victoria Fire Insurance Co. held in Hongkong on Monday, a resolution in favour of winding up the Company was carried *nem. con.*

The Supreme Court has been again occupied for two days this week, with the *Fusing* v. *Ocean* collision case. Judgment was delivered on Wednesday, to the effect that both vessels were in fault, and that the damage sustained by both, together with that occasioned to the cargo, be added together, and that half the damage be borne by each vessel.

An important case has been heard in the U.S. Consular Court. F. B. H. Jenkins, sued George D. Glover, Commissioner of Chinese Imperial Maritime Customs at this port, to recover Tls. 6,687, the alleged contract price of 275 revolving rifles and 140,000 cartridges. Plaintiff alleged that the contract was made by him with a duly authorised officer of the Chinese Government, and that the arms were imported under a special permit from the Superintendent of Customs at Shanghai, but that on their arrival the agent of the said officer refused to take them. In April last, the plaintiff offered the arms and ammunition for sale by public auction, but the defendant was alleged to have stopped the sale, as being illegal and in violation of the treaty between the United States and China, signed on the 18th June, 1858. The hearing was confined to the question, raised by Mr. Wainewright, whether the defendant, as being a servant of the Chinese Government, and acting under its authority, was amenable to a Consular Court. Mr. Eames, for the plaintiff, contended that he was amenable, insomuch as it was not shown that he had not acted outside his instructions, and, further, that the arms, having been legally imported to the order of the Chinese Government, though afterwards refused by its officers, became disposable in the same way as ordinary merchandise. The Court decided in favour of defendant, holding that he was acting under instructions and was justified in his action. It seems to us that the Court carries its idea of the possible duties of a Commissioner of Customs, rather far.

A Flower Show has been held in the British Consular compound, and went off successfully. A full description will be found on another page. The Band of the *Audacious* was present, and the weather fine.

A Cricket match, between eleven of the Shanghai Cricket Club and eleven of H.B.M.'s Navy, was played on Wednesday, and resulted in a crushing victory for Shanghai in one innings.

A Spring Regatta was held on Wednesday, over the usual course, between Lindsay's Wharf and Boyd & Co.'s, Pootung. A full report is given on another page.

Monday, being the Queen's birthday, the various men-of-war and merchant vessels in the river were dressed with flags, presenting a very gay appearance.

We are glad to learn that the new Chehsien of Shanghai arrived yesterday, and [illegible] of Yeh, the late incumbent, will be a source of congratulation both to foreigners and Chinese. No magistrate who has held office here since Shanghai was a treaty port, has excited such a feeling of indignant dislike by the cruel tortures that have been often used in his Yamen; and in one case at least, that of the actor Yang Yeh-liu, his conduct was as unjust as brutal.

We hear that the Chinese Government have decided to appropriate the amount required to secure a representation of their produce, manufactures, &c., at the Philadelphia Exposition. The sum which is needed is about 40,000 Taels, and it is expected that for this they can make a better display than they did at Vienna. It is said that Hoo, Taotai of Hang-chow, will send on his own account about 10,000 Taels worth of silks, porcelains, &c.

A correspondent writes:—"I noticed, some days ago, a remark that we had no right by treaty to enter China except by the seaboard, so that, even if we had Burmah, we could not make use of it to trade with China. This erroneous idea should be corrected, as by the favored nation clause we can do as other Powers do, and by Art. 4 of the Russian treaty, it is agreed—'At all places along the frontier agreed upon in the first Article of this Convention, Russian and Chinese subjects may hold intercourse at pleasure. There shall not, in any case, be duties levied, and all frontier officers shall afford protection to merchants quietly carrying on trade.' Apart from the fact that we should hardly submit to such a restriction as that invented by the writer, we have here a clear treaty right. What trouble some people will take, to find reasons for "not doing it!"

The *Courier* learns that one of Mr. Margary's Chinese attendants has arrived at Hankow, having escaped death himself through being absent from Manwein on an errand, at the time of the murder. "He was told that the two Chinese with Mr. Margary at the time (his cook and a man he had brought with him from the Shanghai Consulate) fought desperately; the latter killing several of his opponents before he himself was overpowered. Margary was killed before he had time to strike a blow. After despatching him and his two attendants, the crowd proceeded to his lodgings, where they found the teacher and the boy, whom they literally cut in pieces. Of course they stole everything they could lay hands on. Our correspondent gathered this information from his teacher, who saw and talked with the man the morning he wrote to us. But we hear that the man is half silly from privation and suffering, and is as yet unable to give a very coherent account of his proceedings." He had begged his way to Hankow, hiding all through the day, and travelling only at night.

Within the past ten days, there have been several narrow escapes from fire within Chinese precincts, arising in every instance from the carelessness of the occupants of the houses. Of this it will be [illegible] late hour on a recent night, an alarm was given that a fire had broken out in a chow-chow house in the Shantung road. The cook, it appears, having put too much fuel in the stove, it blazed up and set fire to some woodwork close by. Running quickly up, the flames caught the roof, and had just broken through it, when a foreign member of the Police force luckily came up. The occupants of the house were making no efforts to stop the progress of the flames. The policeman at once set to work, and by the aid of some of the *women* of the neighbourhood, who carried water for him, he succeeded in extinguishing the fire, which in a few minutes would have been beyond control. Cannot the Chinese be made to feel the necessity of carefulness in regard to fire?—perhaps by way of penalty at the Mixed Court, in case gross carelessness is proved.

The gale of Thursday and Friday week is said to have been one of the most severe that has happened on this coast for a long time, and in the neighbourhood of the Saddle Islands it was felt with terrible intensity, involving much loss to native shipping and lamentable destruction of life. Mr. Snowden, the pilot concerning whose safety, and that of his crew, some anxiety was felt last week, came up the river on Saturday morning, having been weather-bound for several days among the islands. He reports that on the Friday he saw at one time three Ningpo boats bottom up, with several men clinging to the keels. At great risk he put out from his anchorage, and steered towards them in the hope of saving life. He succeeded at one time in getting close enough to see their features, but the sea was running so high and the wind so fierce, that it was equally impossible either to lower a boat, cast a rope to them, or steer the schooner near enough to take them on board, although he remained in their vicinity the entire day, experiencing the horror of seeing the unfortunate wretches

washed off one and two at a time, until all were drowned before his eyes. The scene was, he says, most agonising, but owing to the noise of the wind and sea, he was spared the additional pain of hearing their cries for help. Large quantities of junk wreckage were floating in the neighbourhood of both the False and North Saddles, betokening the force of the gale.

The brig *Georgina*, from Nagasaki, is on shore at the Block House spit. Lighters have been sent to her assistance. She has been sold at auction as she lies. The hull, &c., realized Tls. 720, and the cargo (coals) Tls. 140.

The steamers *Bengal* and *Glenartney*, from Hankow, are reported as having passed the Lightship on the 22nd instant. The *Bengal* passed the Red Buoy at eleven p.m., the *Glenartney* several hours in advance.

The mail steamer *Zambezi* passed the following tea steamers during the passage from Hongkong to this port—steamers *Bengal* and *Deucalion* below Amoy, an unknown steamer shortly afterwards, and the steamers *Fleurs Castle* and *Glenearn* Wednesday

port yesterday, went alongside the steamer *Antenor*, to discharge some 6,000 packages of tea.

The steamer *Fire Queen* brought down 4,700 packages of tea for transhipment to the P. & O. steamer *Hindostan*, which leaves to-morrow with the mails.

The M.B. str. *Kanagawa Maru* went on shore in the river above Half Way Point, and had to discharge cargo before she could be got afloat.

The German barque *Saturnus*, from Hamburg, having some 23,000 kegs of powder and ammunition on board, is berthed outside the lower limits of the Harbour.

The Chinese gunboat *Fau Paw* is alongside the Hongkew Wharf, taking in one ten-ton Krupp gun and several others of smaller calibre, for the forts near Ningpo.

We have received the March-April number of the *China Review*. It contains—1o. An interesting paper by Messrs. Bowra and Lister, entitled "The Last of the Chinese"—a sketch of some incidents in the Mongol invasion, and of the part taken by Wên Tien siang in resisting the invaders. 2o. A Chapter, which is apparently to be first of a series, on "the Folklore of China"; 3o. A further instalment of Mr. Allen's translations of "Tales from the Liao Chai Chih Yi;" and 4o. A continuation of Mr. Hutchinson's rather elaborated narrative of "Three Weeks' in the Interior." A short paper by Mr. E. H. Parker, on "the Hankow Dialect," and a poem entitled "The illness, death, and funeral obsequies of Mr. Locust," over the initials G. C. S., complete the number.

Our Tientsin correspondent calls attention to a memorial in the Peking *Gazette* of the 15th March, from the Governor of Yunnan, relating the arrival of Burmese Tribute-bearers at the provincial capital, during last March. This evidently is the Mission which preceded Col. Browne's party, and which is supposed, in India, to have pre-arranged the attack. What our correspondent notes about the changes of officials in Yunnan, is significant, and shows the error of delay. Nothing is more natural than that the Mandarins implicated should be removed out of sight; we suspect by the time the British officers arrive, there will be no one left to examine.

Messrs. Spencer and Wolff write from Chinkeang, on the 26th May, 1875:—"There has been a moderate enquiry for Cotton goods since the date of our last. At the commencement of the week, the prospects of trade looked brighter, and an improvement in the demand was confidently anticipated; later on, however, the market again became inactive; it closes quiet at quotations. A fair business has been conducted in nailrod iron and Sandalwood. We also notice somewhat heavy clearances of Sugar."

A Chefoo correspondent writes that the Chinese have a rumour of the death of Tso Tsung-tang, the Viceroy of Kansuh, and lately appointed Special Commissioner for affairs in Turkestan. We have heard nothing of it otherwise, and mention it for what it may be worth. It is important, if true, as Tso was the only Chinese who could compare in power and influence with Li.

The vexed question of the Bund frontage came up for discussion again at Kiukiang, [illegible] Landrenters held on the 12th instant. It was resolved to leave the Municipal Council to make such terms as they think fit, provided these are not less than Tls. 500 per annum for 500 ft.—Tls. 100 per annum is to be charged for the privilege of attaching a pontoon to the Bund.—Bulk musters of the second chops first crop Tea will be here in a day or two. —Settlements since the 21st amount to three chops of Hohow at Tls. 26¼, Tls. 30½ and Tls. 34, respectively.—The s.s. *Lotus* is shortly expected from Hankow to fill up here.—Total settlements to date, 23,718 half-chests and 981 boxes. Stock, about 2,000 half-chests; shipped to Hankow, 111,083 half-chests and 596 boxes. Prices —Ning-chows, Tls. 34 *a* 55¼; Hohows, Tls. 26 *a* 34. Every probability of the crop being a large one.

A Hankow correspondent writes, on the 21st May:—We had a Lottery last night on the Ocean Steamers—

"Fleurs Castle," ...1st favorite.
"Hankow," .....2nd do.
"Glenartney," .....3rd do.

The "Glens" are much fancied, and the "Hankow" is being backed freely to make the fastest time from here to Gravesend. My favorite is the "Glenearn;" her public form is first rate, and I fancy she will give them all a dusting. She is, as the sailors say, a "heeler." —Messrs. Gordon Bros. write that there have been unusually large settlements, Buyers being so eager to secure the Teas that the stock never accumulates to over a few thousand packages. Prices have varied considerably, a few settlements shewing a decline of Tls. 2 *a* 3 per picul on opening rates, while a large proportion of the others exhibit a like advance.

For England all classes of Tea have been sought after, but more especially Oanfaa kinds at Tls. 26 *a* 30 for good to fine, and Tls. 31 *a* 38.25 for finest, the latter being the price paid for "Sin Chong," commonly known as the "Monarch of Oanfaa." As high as Tls. 41 per picul has been given by Russian Buyers for several chops of exceptional quality from this district. Further acquaintance with the Oanfaas confirm us in our opinion that they are vastly superior to last season, although not as good as we have known them in former years. Chong-Sow-Kai teas have also been in favor at Tls. 30 *a* 33 for second, and Tls. 26 *a* 29 for third chops. Seangtam kinds hung fire for several days after their arrival, but our market has since then been quite cleared at Tls. 20 *a* 22.5 per picul, or 1/4 *a* 1/5½ per lb. laid down in London. The Teas are better than last season, but the prices paid appear to us extreme value.

For Russia the demand has run chiefly on fine to finest Teas from the Ningchow, Oopack and Oanfaa districts together with common Seangtam kinds. Finest chops have been eagerly competed for, and the highest prices on record have been paid, say for

Ningchows	Tls.	32 *a* 63.5
Oopacks	,,	32 *a* 43
Oanfaas	,,	32 *a* 41
Seangtams	,,	19 *a* 22.5

Opinions regarding the crop vary, several connoisseurs considering the Teas to be the best and cheapest known for years, while others (probably the majority), agree with us in thinking the Teas from several of the Hankow districts rather superior in quality, but fail to see the comparative cheapness; 184,560 chests have been bought, against 136,220 last year. The export to date is 9,720,805-lbs. against 2,600,000 in each of the previous years. The departures for London are as under:—

May 20,	"Glenartney"	2,255,953 lbs.
,, 21,	"Bengal"	2,047,227 ,,
,, 23,	"Fleurs Castle"	2,645,221 ,,
,, 24,	"Glenearn"	2,244,967 ,,

The *Lotus*, *Gordon Castle* and *Glenfalloch* are loading for London at £4.17s., and the *Hankow* at £3.15s. The *Strasburg* is nearly full, but her destination has not transpired. The *Russia* loads for Odessa at £5.10s. The through rate of Freight to London by P. & O. is £4.15s., and by Holt's line £4 per ton of 40 feet.

The Foochow tea market was not opened on the 26th instant; but a good many Pehlings had been taken—at a price to be fixed when that event came off. Arrivals of Congou amounted to about 80,000 chests. Russian buyers were reported to have made full offers for some of the teas from the Fokoan district.

Messrs. Deacon & Co.'s Canton Market Report, dated 20th May says:—

During the past fortnight a fair business has been passing in Tea, and as anticipated in last report, Teamen have had to submit to reduced rates, especially for Scented Capers. Scenting flower has not been very abundant, and high prices have had to be paid, so that sellers of Scented Teas have in many cases arranged for an extended time for delivery, in the hopes of cheaper flowers, and immediate shipments are in consequence curtailed. The steamer *Nestor*, which sailed from Hongkong for London on the 14th instant, took some quantity of tea, but particulars have not yet been circulated.

About 30 bales of New Silk have arrived on this market, but as yet no settlements are reported to have taken place. $330 per picul or 12/3d. per lb. is asked in the country for "Kowkong" No. 4 Tsatlee. The quantity of the New Crop is decidedly fair, and an improvement on the corresponding yield last season, and as the weather has been dry of late, less than the ordinary amount of moisture in the thread may be looked for. Before departure of next French mail, several hundred bales will likely be in stock, and doubtless some shipments will be made by that opportunity. We are not in a position to furnish quotations for any classification of staple, but $320 *a* $325 per picul is talked of as the probable opening price for No. 4 quality. Parsees are said to have purchased 60 piculs (chiefly old Silk) for shipment to India.

Editorial Selections.

THE BLOCKADE OF HONGKONG.

If the Earl of Carnarvon's dispatch, with regard to the Blockade by the Chinese cruisers of the harbour of Hongkong, is to be accepted as an indication of the policy intended to be pursued by Her Majesty's present advisers, can we only express our deep regret at the conclusion they have arrived at. From various quarters, from the Premier's lips, and from sentences let drop by various members of the Ministry, we have heard laudatory expressions with regard to the present British Minister in China. Lord Carnarvon goes further than his colleagues, and tells us plainly that, for many of the difficulties under which the trade of Hongkong is made to suffer, the advice given by Mr. Wade and Sir Brooke Robertson is mainly answerable. We are not going to enter into a tirade against Mr. Wade's policy in China. We have stated our opinion, frequently and strongly, that it is a mistaken one, and that it has not in the past been calculated to gain us respect, nor in the future profit. So long as it seemed possible that Mr. Wade was acting under the compulsion of his own Government, all reasonable men in China were willing to give him credit for being pressed into a line of conduct to which he might personally be opposed—although surprise was felt that his advice, in that case, could have had so little influence. Lord Carnarvon's despatch, however, seems to place him in a different light, as not the instrument but the originator of a policy detrimental to national interests and national prestige. The report of the Commission appointed to enquire into the Blockade question has been held back from publication so long, that it seemed as if it were destined to lie on the same shelf with "bayonet-ploughed" memorials, Woosung Bar enunciations, and the other medley of curious and entertaining misstatements which have by back ways found an entrance into the archives of the Foreign Office. Lord Carnarvon, in this report, more regardful of the interests of those under his department than his colleagues, has at last permitted the document to see the light. It is difficult, after a perusal of its clear statements, to comprehend the position finally adopted by the Colonial Minister. His own hesitancy is marked. It is evident that the strength of the case made out by the memorialists had really convinced Lord Carnarvon of the impolicy of permitting the present state of affairs to continue; but that, out of deference to his colleagues, he was forced at last to submit, and that, to cover this submission, he produced the very curious but unconvincing argument submitted in his dispatch. With the statements adopted therein, we are only too familiar. They crop up from time to time in such documents as Customs' Reports, and we have known them, in at least two instances, to have found their way by irregular channels to Her Majesty's Foreign Office. When, at the time of the attempted revising of the Treaty of Tientsin, Sir Rutherford Alcock was directed by the then Government to place himself in communication with the Tsung-li-yamên, we have his own words for the fact that, Mr. Hart, Inspector-General of Foreign Maritime Customs, having offered his services as an intermediary, those services were accepted. The Foreign Office has never made public the very curious dispatches to which this strange method of carrying on diplomatic relations led. They were no less curious, and no less edifying, than those by accident disclosed with regard to the entrance to the Yangtsze and the Trade of Shanghai. Yet they seem to have been accepted gravely as matters of fact, and to have had far more weight attached to them than to the published memorials from merchants and others, whose refutation, were their statements false or exaggerated, was inevitable. Were the trade of Shanghai, owing to the obstructiveness of the Chinese Government in not dredging the Woosung bar, really in the moribund condition depicted in the now published memorial to which Mr. Hart's name is attached, we can imagine the incalculable amount of mischief likely to be done by the acceptance, without enquiry, of such a document. Yet the possession of that document was carefully guarded by the Foreign Office; and we do not know that the misstatements, ridiculous as they are when examined by the light of facts, ever excited a word of question on the part of the British Minister or the Foreign Office. How many more documents of similar nature have been placed before Her Majesty's Secretary of State for Foreign Affairs, to enable him to form a judgment on Chinese affairs, we are of course unable to conjecture. The family likeness, however, running through the few despatches we are permitted, or contrive, to see, leads us to suppose that they are neither few nor far between. The very secrecy in which they are shrouded, adds weight to our suspicions that Her Majesty's advisers see Chinese matters, not with their own, but with other peoples' eyes. We have wandered rather from our original point—the Blockade of Hongkong; but the despatch of Lord Carnarvon is so intimately in accord with the whole tenor of what has been lately accepted by the Government, that we could not enter on the special subject without some previous commentary on the entire question.

II.

It is difficult to understand how so clear and straightforward a document as the Report of the Commission on the Blockade of Hongkong has failed to convince Her Majesty's Government of the importance of the case at issue. Thanks to Lord Carnarvon's care for the interests of those confided to his department, we are in possession of that document, but we are kept studiously in the dark as to the arguments on the other side which seem to have had sufficient weight with the Foreign Office to ensure its practical rejection. From Lord Carnarvon's dispatch we can, however, form some idea of these arguments, and their acceptance appears to be a deliberate abandonment of the policy which has hitherto actuated Great Britain in her policy in the East. It is assumed that China is a country possessing revenue laws; that these revenue laws have a tangible existence; that we are therefore called upon to respect them, and that any interference with the collections of a Chinese official really amounts to an act of smuggling. This is in point of fact giving up the very question to settle which two wars have already been found necessary. The Treaty of Nanking is a witness of how very far China Article X. reads, "His Majesty, the Emperor of China, agrees to establish at all the ports which are by the second article of this treaty to be thrown open for the resort of British merchants, a fair and regular tariff of export and import customs and other dues, which tariff shall be publicly notified and promulgated for general information; and the Emperor further adds that, when British merchandise shall have once paid at any of the said ports the regulated customs and dues agreeable to the tariff to be hereafter fixed, such merchandise may be conveyed to any province or city in the interior of China, on paying a further amount as transit dues which shall not exceed ——." Sixteen years after, so little had the Chinese Government attended to its compact with regard to revenue laws, that the following clause had to be introduced into the treaty of Tientsin :— "Whereas it was agreed in Article X. of the treaty of Nanking, that British imports, having paid the tariff duties, should be conveyed into the interior free of all further charges, except a transit duty, the amount whereof was not to exceed a certain percentage on tariff value; and whereas no accurate information having been furnished of the amount of such duty, British Merchants have constantly complained that duties were suddenly and arbitrarily imposed by the provincial authorities as transit duties upon produce on its way to the foreign market, and on imports on their way to the interior, to the detriment of trade; it is agreed that, within four months from the signing of this treaty, at all ports now open to British trade * * the authority appointed to superintend the collection of duties shall be obliged upon application of the Consul to declare the amount of duties leviable, &c." Seventeen years have again elapsed since it was found necessary to

introduce such a clause in a solemn compact, and we may turn to the Report of the Blockade commission, to learn what progress has been made by China towards establishing revenue laws. It is notorious that, in the province of Kwangtung, containing as it does two ports actually opened under treaty and one, the opening of which though promised by the treaty of Tientsin the Chinese Government has continued to keep closed to the present day, not one package of goods has been sent into the interior, nor exported therefrom under this provision of the treaty. Spain is a country scarcely to be held up for the admiration of the world, and, doubtless, Lord Carnarvon thought that in making our position with regard to it a crucial test in this matter of China, he was propounding an unanswerable argument. Spain, however, has some revenue laws, and at least is blessed with a fixed tariff. The revenue officer at Tarifa would scarcely, even under existing circumstances, feel it consistent with his position to stop vessels proceeding to Xeres and indefinable tax. If Gibraltar were, as Hongkong is, a centre of British trade, and Spanish officers were to indulge in those excentricities, it is unlikely that the circumstance would be permitted to pass unnoticed. The situation in China is not now very different from what it was when our first war became necessary. It is only necessary for an officer to discover that he can levy exactions with impunity, to ensure his doing so. The government is impecunious and rapacious. It has no settled system of revenue, but calls on its officers to pay up certain sums in consideration of their offices. The latter apply the same rule to their inferiors, and these in turn to the trade over which they can exercise control. It is simply the good old rule "That he should take who has the power, and he should keep who can." If breaking such a rule as this be an act of smuggling, then all the native trade of China is smuggling. It is notorious that, along certain lines, competition actually exists amongst the mandarins to induce cargo to travel by their route. It is thus that the import of opium at Swatow has increased three-fold, at the expense of Amoy, Foochow, and even Ningpo. It would be as reasonable to call the increased import at Swatow smuggling, as to apply that opprobrious name to the native trade from Hongkong. The old custom of the empire has never required that such vessels as leave the colony should go to Canton to effect a clearance. Such a course is contrary to all native precedent, which, if it indeed delivers the traders tied and bound into the hands of every petty tax-collector, leaves him free to make his best arrangement when there. Did the payment of duty to the Canton authorities in any respect do away with the liability of the trader to the other duties, we could understand in some degree Lord Carnarvon's argument. We could comprehend even some attempt at a compromise, such as that payment of the duty at Canton should entitle the goods to be delivered anywhere in the empire on the additional payment of the transit rate as per Treaty. As it stands, an official at Canton levies arbitrary exactions on the trade of the Colony, and these exactions afford no guarantee that after he has taken his squeeze, the same process will not be repeated again and again by every official into whose power the unfortunate trader may pass. Twice, as we have said, we have had to make those exactions matter of treaty, because if we neglect them trade becomes a matter of impossibility. It augurs little for the practical experience of those intrusted with British interests, that a third time they should have to be reminded of the conditions which twice before made commercial intercourse with China practically impossible.

THE FRENCH MUNICIPAL BUDGET.

The French Municipal Report is a marvel of terseness and lucidity, covering only 2½ pages; but details are supplied by a reprint of the Minutes of Council Meetings, and these are so clearly written and well-arranged that it is quite unnecessary to go over the ground again. The Report discloses a state of affairs which must be highly gratifying to the Ratepayers. Drainage has been extended; an iron bridge has been procured for the Yang-king-pang (opposite Honan Road); gratuitous concessions and purchases of land have been arranged for the purpose of widening sundry streets; the Yang-king-pang Bund has been nearly remade, and still the Council are able to effect a large reduction of taxation. Chinese houses are to be taxed to the extent only of Tls. 15,000 in 1875 6, against Tls. 18,736 levied in 1874-5; and only Tls. 8,000 is to be raised as a Nuisance and Lighting rate, instead of Tls. 9,144 raised last year.

We understand that an Assessment Committee, comprising 4 Municipal Councillors and several foreign landholders, assisted by some Natives having large interests in the Concession, is now sitting. The result of their revision will permit the Council to take definite steps for the contemplated reduction. When the commission has finished its work, either the percentage will be reduced, or the taxes collected on valuation will be fixed under the real valuation ascertained by the commission. At any rate the Council contemplates to diminish the taxes progressively, every year, till they are in proportion with the Municipal wants, and expects this year to waive the collection of about Tls. 4,000 *a* 5,000.

The following précis exhibits clearly the state of the finances.

	Tls.
Credit Balance on the 1st April, 1874	34,627.54
Estimated Revenue for 1874-75	81,600.00
	116,227.54
Actual receipts	84,850.03
Balance on the 1st April, 1874	34,627.54
	119,477.57
Expenditure	75,633.51
Balance on 31st March, 1875	43,844.06

But public works involving Tls. 13,000 of this sum are already entered upon.

No wonder the Council congratulate themselves that their financial task has been an easy one:—

"The increasing prosperity of the Municipal finances has enabled them give a great impulse to public works and to think at the same time of reducing the charges on the community. If the sources of this prosperity are sought, experience proves that they have their origin in the simplicity and therefore economy of the system of Municipal Administration, and in the productive power of the Concession in the matter of finances."

Referring to the riot which occurred during their term of office, the Council remark:—

"The Council is convinced that the immorality of the triumph of violence will not be consecrated, and it is with confidence that the cause has been confided to the French Legation at Peking. It is its support, time, and patience that must be relied on for the re-entry of the Municipality in its rights of roadway over the Rues de Ningpo and Saigon, which have been so far recognised as well-established by M. de Geofroy, Minister of France at Peking, after reading the memorial which the Council addressed to him."

The Council go on to regret that, for the first time in its existence, good understanding with the English Council has been disturbed. The most serious difference, resulting from the wish of the latter to have the French Bund retired, where it had encroached on the Yang-king-pang, has been settled by the recommendation of the arbitrators that the *statu quo* be maintained. The other matter, which is not mentioned in the report, is of course the relative share to be borne in the cost of bridges over the Yang-king-pang. As the English Council have declined to submit this to arbitration, there seems no chance of its being so easily settled. The income for 1875-6 is estimated, including the balance of Tls. 43,000 in hand, at Tls. 127,374; and the expenditure at Tls. 120,360, which would leave a balance of Tls. 7,014 on the 31st March, 1876. The expenditure is divided into three heads,—Secretariat, Tls. 33,601; Public Works, Tls. 54,025; Police, Tls. 32,734. These figures exhibit an increase, in each case, over the expenditure for 1874-5; the most marked being in Public Works, on which only Tls. 18,000 were spent last year, out of Tls. 30,000 allotted. Practically, the large balance has greatly accrued because the expenditure on Public Works has been slight, and it is to be reduced now to a normal level by making up for lost time.

Outports.

TIENTSIN.

I once more, with your permission, presume to lay before the British public a few observations respecting the intended investigation into the assassination of Mr. Margary and his servants in the province

of Yunnan, and which I trust your readers will at this moment deem acceptable.

Mr. Margary, on his making the journey through China from east to west, stayed some days—report says a week, at the town of Manwein; and was entertained by the Chinese civil authority of that place; Mr. Margary having been furnished with a passport, which was drawn up in the English and Chinese languages, and which bore the seals of Great Britain and China; and being besides furnished with despatches from the Tsung li-yamên, at the desire of Mr. Wade, Her Majesty's Envoy, to the provincial authorities on the route. The Chinese functionaries at Manwein were thus well aware that Mr. Margary was a British subject, and a British officer, travelling in the Empire of China by the written permission of the Chinese Imperial Government; and that it was consequently their duty as stated in the passports, to protect and aid him while on the journey within their jurisdiction. Consequently, on Mr. Margary's second appearance in Manwein, and still provided with a passport and despatches as before, the local authorities were fully cognizant of his nationality, and of his position as a British officer; and as the inhabitants of the place had already seen him holding official intercourse with their authorities on his first coming to Manwein, they also, most undoubtedly, were perfectly cognizant of his nationality, and of his rank; for the Chinese people have the habit of asking for information [illegible] points on seeing Foreigners; and, consequently, when Mr. Margary was assassinated at Manwein, both the Chinese functionaries and the Chinese people of the place were aware that a British subject, and a British officer, was being assassinated.

The civil authority of the town of Manwein is a Foo-sze, or native magistrate, and the military officer stationed there will be found to be of the rank of a Major in the Imperial service. The chief civil functionary at Tăng-yuĕ (Momein) holds the rank of Sub-Prefect, and, from the Chinese Red Book I learn he is named Fang kwei-fang (方桂芳) and is a native of Anhwuy province, (a native of the same province as Li Hung-chang, and, I think, also as Pwan Ting-sin, the Fantae of Yunnan). The chief military authority at Tăng-yuĕ holds the rank of Major-General, is named Le Wei-shuh (李維述) and is a native of Yunnan province. From the accounts we have before us, it is shewn that the town of Manwein lies only a short day's journey, some 7 or 8 miles, from the garrison town of 盞達, written by Du Halde, *San-ta-fu;* by D'Anville, *Santa;* in the "Middle Kingdom," *Tsan-tah;* and by the Sladen Expedition *Sanda*. I will write the name, however, *Chan-tah*, as given in Williams' New Dictionary. Chan-tah appears to be a fortified place, and, of course, contains a suitable garrison, and lies on the route by the Tee-pe Pass from Bhamo to Tăng-yuĕ. The soldiers who attacked Colonel Browne's party, were no doubt drawn from the garrisons of the fortified town of Chan-tah and of the city of Tăng-yuĕ. The commandant of the Imperial troops in the Tăng-yuĕ region holds the rank of Tsung-ping, or Major-General, and is named, as said above, Le Wei-shuh. General Margary, in his letter to the *Times*, alludes to the Chinese troops who attacked Colonel Browne's party, "as being commanded by the nephew of Lee See-hie." Le Wei-shuh and Lee See-hie may be the same general under different names.

It is, under all these circumstances then, of great importance for the strict and just carrying out of the investigations, that an official of high rank be appointed by the Central Government of China to go to Yunnan with the British officers, *to aid them in every way possible, by his superior standing in the Imperial service, and by his being unconnected, as a provincial official, with the local provincial authorities of that part of Yunnan where the outrage was perpetrated, to obtain the actual facts regarding the assassination, so that the British officers may later have no doubts left on their minds as to who are the guilty parties.* I have in my former letters already pointed out that Sung Paou-hwa, the officer selected by H. E. Li Hung-chang to go with the two British officers in the Yunnan Commission, is not a proper man for the important business of investigation, in consequence of his subordinate standing as a Chinese officer giving him no authority over the Yunnan officials; for even the civil functionary of Tăng-yuĕ (Momein) is of higher standing, being a Sub-Prefect, than the officer selected by Li Hung-chang; and if the accounts we have received be true that the head of Mr. Margary was exposed over the gate of Tăng-yuĕ (Momein), the chief civil functionary of Tăng-yuĕ is assuredly a guilty party; and according to Chinese law must be interrogated, together with all his people, in regard to the assassination of Mr. Margary and his servants.

We have, then, reason to take it for granted that the Sub Prefect of Tăng-yuĕ, the Major-General of the Imperial forces in the Tăng yuĕ region, and the subordinate officers of these two men, are concerned in the assassination and in the attack on Colonel Browne and his party. [illegible] the province of Yunnan are, we are perfectly aware, the subordinates of the Governor of the province of Yunnan; and in all ordinary cases, we should look to him alone to investigate his provincial affairs and do justice. The present affair is, however, an extraordinary one, and we cannot depend altogether upon his judgment in settling it. Hence, the British public has yet to learn who has been deputed by the Central Government *to try judicially these civil officials and military officers of the province of Yunnan*; for we trust we shall not in the end have to come to the conclusion that the nominee of H. E. Li Hung-chang, Sung Paou-wha, is the official deputed for that purpose. According to the British Treaty with China, Chinese are tried by the Chinese territorial authorities of the place in which they have been guilty of any outrage on British subjects; but this language refers to the Chinese people alone, and not to Chinese officials. The British officers deputed by Mr. Wade, Her Majesty's Envoy, to go to Yunnan, proceed there, as we may say, to watch the proceedings of the Court; to put interrogatories to the parties under examination, in order to obtain satisfactory information for Her Majesty's Government; to point out to the judge of the Court parties whom they wish to be examined; *and finally to obtain justice for the assassination of Mr. Margary and his servants, and for the attack on Colonel Browne and his party.* After the massacre at Tientsin, the Central Government *at once* deputed high officials from Peking and other places, and not holding territorial positions in the province, to go to Tientsin. It appears then, to my humble judgment, only right that we should demand that the Central Government deputes a high official to proceed from Peking to Yunnan, to try the guilty parties.

In a friendly spirit, I will now sincerely and earnestly urge upon the Central Government of China to act with promptitude in this affair, and with all sincerity and justice to settle it; for they may rest assured that the British people are determined to have justice; and should the British Government, in the end, become convinced that the Government of China is endeavouring to evade doing strict justice, Prince Kung and the Ministers generally may be assured that the hour will soon arrive when England will, like Macduff, exclaim "My voice is in my sword." China will lose a staunch ally in Great Britain, in her approaching troubles from the West—Kashgar and Eastern Turkestan.

11th May.

Yesterday morning, about half-past nine o'clock, H. E. Li Hung-chang came to the mercantile establishment of the C. M. S. N. Company, situated in this Settlement, and after staying there for a quarter of an hour, went on board the C. M. S. N. Co.'s new str. *Yehsin* and inspected her, this being her first trip to Tientsin from Shanghai, since her arrival from England. He remained on board for about half-an-hour, after which he proceeded in his sedan to the lately erected granaries of the Grain Transport Service, situated near the Rampart Forts, about six hundred yards below the British Settlement. He stayed there for a quarter of an hour, after which he returned to the city in his steam-launch, which towed a gig conveying some of his people. His Excellency was accompanied in his inspection of the steamer and the new granaries by General Chin, the Commandant of the Tientsin garrison; by Woo, the Territorial Taotai; by Sun, the Customs' Taotai; by Chao, the Salt Taotai; by Ma, the Prefect (Che-foo) of Tientsin foo; by Yin, the Magistrate (Che-hsien) of Tientsin; and by Chao, the Taotai of the Grain Transport Service, besides a host of petty mandarins: and [illegible] on his Excellency reaching the granaries, the Chinese gunboat manned yards and fired a salute of three guns. On his departure in his steam-launch, this was repeated.

In my last I mentioned that we had received tidings here that an insurrection had broken out in Manchuria, and that the Governor-General of this province had received instructions from the Central Government to send troops as soon as possible to the disturbed region. To-day, General Chin, the Commandant of the garrison at Tientsin, inspected a regiment of foot soldiers—one thousand strong in rank and file, besides officers; a regiment of cavalry—five hundred strong in troops, besides officers; and a battery of artillery; and paid them one month's pay in advance. These troops will leave here on the 23rd instant for Newchwang—the foot soldiers going by sea, and the cavalry and artillery going by land, *viâ* the Shan-hae Pass. The men are all natives of the province of Chihli, and drilled after the Foreign fashion.

The weather may be now called warm, the thermometer at daylight standing at from 60° to 65° Fahrenheit, and rising during the day to 85° Fahrenheit. The country around has within the last few days assumed a green colour, yet we are still much in want of rain for the benefit of the crops, as the ground is very dry.

18th May.

When at dinner yesterday evening, the Peking *Gazettes* of 15th and 16th May came to hand. In the first there is a long memorial—in fact the whole *Gazette* is filled with the memorial and its supplement—by Chin Yuh-ying, in his double capacity of Acting Governor-General (Tsung-tuh) of Yunnan and Kweichow provinces, and Governor (Suan-foo) of Yunnan, on the tribute sent by Mung Tun, the King of Burmah, to the Sovereign of China. There is no date appended to this State paper, to show when it was penned by Chin Yuh-ying; but in the memorial itself it is mentioned that the Burmese tribute party crossed the borders of the prefecture of Tăng-yuĕ (Momien) on the 22nd January, and arrived at the capital city of Yunnan on the 9th and 22nd March; thus the memorial must have been penned after the latter date, and consequently after the assassination of Mr. Margary at Manwien on the 21st February.

As far as I could gather from the short examination of the memorial and supplements (which I may mention I despatched that evening to Shanghai), the following mandarins at the places mentioned held office at the time of Mr. Margary's murder :—

At Yunnan city—the capital of the province—Chin Yuh-ying (岑毓英) the Governor of Yunnan and the Acting Governor-General of Yunnan and Kweichow provinces.

Also at the capital, Pwan Ting-sin, (潘鼎新) the Fantae or Provincial Commissioner of Finances and the functionary next in rank to the Governor Chin Yuh-ying.

At Yung-chang-foo (永昌府), within which Momien is situated, and 64 miles English from it, Choo Pih-mei (朱百梅) the Prefect of Yung-chang-foo, which is 448 miles from Yunnan, the capital.

At Tāng-yuē (Momein) (騰越)— miles from Manwein, Woo Ke-leang (吳啟亮) *Acting* Sub-prefect of Tāng-yuē-ting.

At Tâng-yue (Momein) Tseang Tung-han, (蔣宗漢) *Acting* Tsung-ping, or General of the Imperial forces within the Tang-yue sub-prefecture (騰越廳).

In the Tang-yue sub-prefecture, under the command of General Tseang Tsung-han, (蔣宗漢) and Lieutenant Chin Weitung (陳偉同).

In the Red Book published for the spring of this year, and which I obtained this forenoon, I find a Mandarin named Sung Teh-ke (宋德基) given as sub-prefect of Tâng-yue (Momein), and a Mandarin named Yang Shing-tsung 楊盛宗 as Tsung-ping or General of the Imperial forces at Tâng-yue. From these differences between the Peking *Gazette* and Red Book, it would appear that a change of the officials has lately taken place. In the districts and prefectures all round Tang-yue (Momien), the supplement to the memorial of Chin-yuh-ying, found at the end of the Peking *Gazette* of the 16th May, testifies to a number of changes having been made amongst the territorial functionaries at these places. This action on the part of the Chinese Government at this moment, strikes me very forcibly as being worthy of the consideration of Her Majesty's Minister.

I am particular in remarking upon all these matters, as it is of great importance that the British officers should know beforehand, who were the Chinese officials who actually held office at the abovementioned places when Mr. Margary was assassinated. The British officers should, as early as possible, have an accurate memo. of all the officials of the abovenamed places, for reference when the investigations are going on, in order to call upon the judge of the Court to examine everyone of them.

I have no additional information to send to you from the North of China, in the way of further direct proceedings on the part of the Chinese Government for investigating into the assassination of Mr. Margary in Yunnan. At present, all eyes are directed upon Mr. Wade, Her Majesty's Minister, anxious to learn and to see what steps he will take in the Margary affair. Time, we are all well aware, will cause the wearing away and the disappearance even of a granite stone ; what then must it not be doing every hour upon the persons of the Chinese officials in Manwein and Momien regions? Every hour, consequently, that we allow to pass over without action, is an hour of valuable time lost to acquire accurate data on the events of the Margary assassination ; for within an hour, those who perpetrated, or instigated others to commit the deed, may disappear from the stage; nominally by the course of nature, but virtually, more probably, by political action, through removal to another place. Every Englishman must at this moment be anxious that Her Majesty's Minister and the Government generally shall be put in possession of irresistible data respecting the murder, on which to ground a rightful demand for the most complete justice. For should we hereafter be compelled to throw away the scabbard, I trust it will be in our power then and afterwards to show to the whole civilized world that our cause, based on undeniable facts, is a just one ; and I trust also that the whole civilized world will likewise then and afterwards approve of our action.

PURITAN.

19th May.

AMOY.

A meeting was held at the Club on the 15th May, at which it was decided to give a ball on the 24th inst., H. M. Birthday. After the Indian style, the dancing will be done under punkahs, and I am assured by an old resident in India that it will be quite cool. *Crede experto.* A Regatta is also to take place on the 29th, a proposed programme for which has already been [illegible] Jones, called in on the 15th on her way to Foochow. She had powder and shell for the *Growler*, but as that vessel had not returned from Formosa, she transferred it to the *Ling fêng*, pending her arrival, and left to relieve the *Kestrel* on the 16th.—*China Mail.*

HONGKONG.

Hongkong papers are much taken up with the trial and sentence of A. F. Chambers. We mentioned last week, that a sentence of nine years' penal servitude had been passed on the prisoner. The only charge pressed, was obtaining $42,000 on false pretences from Mr. Whittall ; that of embezzling $17,000 from the Canton Insurance Company was not pressed. The sentence is spoken of with approval by the Hongkong papers, and a high tribute is paid to the bearing of Mr. Whittall throughout the case.—The *Daily Press* says one box of treasure has been recovered from the wreck of the *Japan*, by those on board the schooner *Scotland*. — The Government are taking steps for the improvement of Kowloon. A road is to be made from the landing place to Yowmahtee, and another will be constructed leading to the docks, and if a number of trees were planted about these thoroughfares, it would tend very much to the better appearance of the locality.—A sad occurrence took place on board the German bark *Livingstone*, on her passage from Cardiff to Hongkong. On the 28th March, when the vessel was in lat. 17 degrees 40 minutes S., long., 104 degrees 26 minutes E., Captain Popp, then in command, was missed at 11 p.m. It was the second mate's watch, and the captain was last seen about 10 p.m. Search was made for him, but all to no purpose ; he was never seen again. Whether he jumped overboard or fell over, is not known on board. The vessel was going along steadily at the time, without a roll, the weather being fine, and was making 9 knots per hour.—H.M.S. *Thalia*, from Nagasaki, having one case of smallpox on board, has gone into quarantine of Stone Cutters' Island.—The Chinese gunboat *Sui Tsing*, is in a state which necessitates the condemnation of the hull. Her engines will be taken out and fitted in another vessel.

MACAO.

Since my last, another attempt has been made by the Customs' cruiser mercenaries to board a junk in the Macao waters, and levy blackmail. As the Portuguese are determined to put down these irregularities, and have kept a sharp lookout, the mercenaries again caught a Tartar, the boat being taken alonside the *Tejo*, and there detained, pending the result of diplomatic correspondence, now going on between the Government of Macao and the Viceroy of the Two Kwang —It is rumoured that the present Governor, Senhor Lobo d'Avila, is talking of going home. It is not yet known who is to be his successor ; but a man of the stamp of the assassinated Amaral is anxiously looked for to put down with a high hand these Customs' practices. Five hundred lashes on the fat back of a Customs' mandarin, caught in *flagrante delicto*, boarding peaceful traders in Macao waters, would do more to put down this intolerable abuse than a long correspondence conducted by the best diplomatist.—*Hongkong Times.*

SAIGON.

We learn from Saigon that fresh difficulties have arisen regarding the opening up of Tonquin. In spite of the fact that an official agreement had been made to open it in June, the Annamites urged a further delay, and the French authorities, [illegible] reprehensible reason, have consented to a postponement. According to present advices the date now fixed is in September next, and the Court of Hué does not disguise its gratification at what it considers a diplomatic victory. We are of course unable to say what reasons have obtained with the Governor of Saigon to induce him to act in this manner, but can readily believe that it is dangerous to French prestige to allow the Annamites to imagine that an agreement entered into can easily be rendered nugatory by the display of a little obstinacy. The delay will at all events be a matter of sincere regret to all interested in the opening of Tonquin.—*China Mail.*

NAGASAKI.

The *Rising Sun* learns from a reliable source that two Corean Officers have been beheaded, one on the 9th and the other on the 16th of last month, for interference with the Japanese Ambassador, who went to Corea for the purpose of entering into a treaty with that power.

YOKOHAMA.

Among the chief items of news in the Yokohama papers which arrived on Saturday, are the following :—The *Herald* says the Imperial Japanese corvette *Tsubo-Kan* has been despatched on a four months' cruise round the islands. The object of the cruise is to give the cadets of the Naval College an insight into the practical working of their profession.—The *Gazette* says a preliminary inquiry has been held, touching the charge of default (to the amount of $28,000) laid against King Yao, late compradore of the Deutsche Bank. On the application of Mr. Mammelsdorf, the Manager of the Bank, the representatives of the press were excluded, and therefore no details can be given. The Shroffs who were examined as to their knowledge of, or complicity in, the embezzlements have been released on bail in the sum of $300 each.—The compradore of the Comptoir d'Escompte de Paris, who was apprehended on suspicion of being implicated in the robbery from that Bank, has also been examined. Mr. Vouillemont, manager of the Bank, was present. The prisoner

persisted in his previous statements—that Swaby had obtained $5,300 from him by cheque, and that the cheque, which had been deposited in the safe by Cantelli, as being equivalent to money, was afterwards abstracted. He often gave sums to Swaby and Cantelli by cheque, and did not think anything was wrong. He admitted his liability for the $5,300, and expressed a determination to replace it as quickly as possible. He was remanded *sine die*.—The *Echo* states that a rich quarry of marble has been discovered in the mountains of the province of Bizen, near Mitsouiche. The marble is white, and of a superior quality to that imported from Europe.—The Imperial library at Tokio is completely organised. The gates will be opened to the public from 9 o'clock a.m. until 5 p.m. daily.—As the frequent death of dogs from worms in the heart has been again under discussion lately, in China, it may be worth while quoting the following paragraph from the *Japan Herald* :—"Many European dogs die annually both in China and Japan, from the presence in their hearts of long worms, a species of trichinæ, which grow in bunches and coils, with great rapidity and to a considerable length. We saw the other day a dog's heart which had been opened and preserved in spirits. The organ was enormously enlarged, and perforated by coils of trichinæ. One bunch was at least half an inch in diameter, and must have contained several hundred yards of those dreadful parasites, which were white and about the thickness of crotchet cotton. It would be interesting to know whether, as we have heard, this disease in dogs is unknown in Europe, and if so, what are the climatic or alimentary causes of its prevalence in the Far East."

Public Meetings.

THE ERECTION OF TRINITY CHURCH INTO A CATHEDRAL.

Trinity Sunday, 1875, will be remembered as a red letter day in the annals of the Church in North-China. On that day the Church of the Holy Trinity at Shanghai was erected into the Cathedral Church for the diocese of Bishop Russell, in North-China. By 11 o'clock a.m., the hour appointed for the commencement of the service, a large congregation had assembled, amongst them being H. E. the British Minister, Admiral Ryder, Sir E. Hornby, Judge of H. M. Supreme Court, G. F. Seward, Esq., U. S. Consul-General, and many officers of H. M. Royal Navy. At the hour of morning service (11 a.m.) the clergy having entered the Church and taken their respective positions, the opening sentence, "I will arise," was sung by the Choir; Morning Prayer was read by the Rev. C. P. Scott, Missionary of the S P. G., from Chefoo

The Lessons proper for the festival were Isaiah vi., to v. 11., and Revelation i., to v. 9, and were read respectively by the Rev. F. F. Gough, of Ningpo, and the Rev. J. D. Valentine, of Shaou-hing, missionaries of the C. M. S.

The Psalms were sung to Double Chants, and the *Te Deum* to Jackson's well known music.

The Second Lesson being finished, Canon Butcher and the seven clergy walked down the chancel to the West door, where they met the Bishop of North-China, accompanied by the Trustees. The clergy then returned, and the Bishop, standing before his Throne, the following ceremony took place :—

Rev. C. H. Butcher.

I, Charles Henry Butcher, Consular Chaplain of Shanghai, and Incumbent of this Church, do now, on behalf of its Trustees, and in the presence of this Congregation, request you to state for their satisfaction, and that of all others whom it may concern, whether it be your wish and purpose to select and assign this Church as the Cathedral for your Diocese in North-China.

The Bishop.

It is my wish and purpose so to do; and I hereby declare that this Church is to be the Cathedral for my Diocese.

Rev. C. H. Butcher.

In the name of its Trustees, I now induct and install you into the real and actual possession of the chair of this your Cathedral; and I do hereby invest you with all the privileges thereto appertaining. In token whereof I present unto you the keys.

Rev. C. H. Butcher and Rev. T. McClatchie now retired to the vestry, and were conducted therefrom to the Bishop by his Chaplain, Rev. F. F. Gough.

Rev F. F. Gough to the Bishop.

Rev. Father in God, I present unto you this our Brother to be invested with the office of Dean in this your Cathedral Church.

The Bishop to Mr. Butcher.

We, William Armstrong, by divine permission, Bishop in North-China, do now invest you with the Office of Dean in our Cathedral Church; and do hereby induct you into the real and actual possession of this stall. In token whereof — [illegible] you the keys.

The Bishop to Mr. McClatchie.

We, William Armstrong, by divine permission, Bishop in North-China, do now invest you with a Canonry in this our Cathedral; and do hereby induct you into the real and actual possession of this stall. In token whereof we present unto you the keys.

The ceremony being concluded, the Benedictus was sung and the service proceeded as usual. The Anthem was taken from the Psalms—"Praise the Lord O my soul; while I live will I praise the Lord; years long as I have any being I will sing praise to my God; O pray for the peace of Jerusalem; they shall prosper that love thee. Peace be within thy walls and plenteousness within thy palaces. They that put their trust in the Lord shall be even as the Mount Sion, which may not be removed, but standeth fast for ever. As the mountains are round about Jerusalem, so the Lord is round about his people from henceforth even for ever." (Goss.) For the Introit, Bishop Heber's Grand Hymn—"Holy, Holy, Holy Lord God Almighty," was sung to Mr. Dyke's Tune "Nicæa."

The Communion Service was commenced by Bishop Williams, of the American Church, the Kyrie being sung to a melody by W. T. Best. The Rev. E. H. Thomson, Missionary of the American Episcopal Board, read the Epistle, and the Rev. G. D. B. Miller (of the American Episcopal Church) the Gospel.

The Hymn before Sermon was Neale's translation from the Latin—"Christ is made the sure foundation," to Mr. Monk's Tune "Oriel."

Bishop Russell then ascended the pulpit and preached an eloquent sermon from Isaiah ii., 3.—"Come ye and let us go up to the mountain of the Lord, to the house of the God of Jacob; and he will teach us of his ways, and we will walk in his paths." After showing that the mountain and house of the Lord here referred to were Mount Moriah and the beautiful Temple of Solomon, the Bishop drew a parallel between the ancient Temple, as the most splendid edifice of its day, and the Cathedrals of our own Church now; showing that, even as Solomon's building was a place where all might repair to give thanks unto the Lord, and a cementing tie to bind them together, so should this beautiful edifice be a rallying centre for all in these parts, whether resident here or in the outports. The Bishop also maintained that, even as the Temple on Mount Moriah became a place of quiet retirement from the world, so should this Cathedral serve such a holy end. In conclusion, the preacher went on to say that of all the uses to which the Cathedral should be put, there was none so great as the instruction of God's people by his appointed servants. There are, the Bishop said, two ways of God which ministers should give prominence to in their vocation—1st, to point out God's way of righteousness and justice; and 2nd, to show the way of reconciliation and peace with the unrighteous and the wicked. His Lordship concluded by imploring God's blessing on this Cathedral as the centre of religious life in North-China.

The sermon ended, a short pause was made to allow non-communicants to withdraw, and then the administration of the Holy Communion was proceeded with, the Bishop being himself celebrant.

Thus ended a service of great interest and importance. Especially as it was the means of bringing into closer union the two sister Churches, viz., the Church of England and the American Episcopal Church.

Evening Prayer was at 6 p.m.

The Prayers were read by The Rev. J. D. Valentine, and the Lessons by The Rev. J. Llewellin, chaplain of H.M.S. *Modeste*, and Dean Butcher. [illegible] preached again, taking for his text the 4th verse of the 10th chap. of the Epistle to the Ephesians, part of the 2nd Lesson—"There is one body and one spirit."

We subjoin the legal record of the transaction, which was executed on the following day :—

Be it known to all whom it may concern by this Public Instrument of Record, that the undersigned, the Right Reverend William Armstrong Russell, Bishop of North-China; the Reverend Charles Henry Butcher, Chaplain of the British Consulate and Incumbent of Trinity Church, Shanghai; the Reverend Thomas McClatchie, and Alfred Adolphus Krauss and Frederick Hayley Bell, Trustees for the Subscribers and Pew-renters of the said Church, personally appeared before me, Sir Edmund Hornby, Knt., Chief Judge of Her Britannic Majesty's Supreme Court for China and Japan, this Twenty-fourth day of May, 1875, and declared as follows :—

That on the 23rd day of May, 1875, being Trinity Sunday, the said Trustees did in the said Church, being present—the Right Reverend the Bishop the Reverend Charles Henry Butcher, the Reverend Thomas McClatchie, and the Congregation, on behalf of the said Subscribers and Pew-renters of the said Trinity Church, and in conformity with a certain resolution passed on the 1st day of March, 1875, by the said Subscribers and Pew-renters, in a public meeting assembled, and with the consent of the Reverend Charles Henry Butcher, offer the said Trinity Church to the said Right Reverend William Armstrong Russell, Bishop of North-China, aforesaid, as and for his Cathedral Church, always reserving to themselves and their successors all their rights, title, and interest in the said Church; and the said Bishop did accept the same, subject to the said reservation, and did there and then nominate the said Church as his Cathedral Church, and did appoint the said Reverend Charles Henry Butcher, the present Incumbent thereof, Dean of the said Cathedral Church, with all the rights and privileges appertaining to such dignity or office; and did further nominate the Reverend Thomas McClatchie to the dignity or office of Canon of the said Cathedral Church.

To all which facts this Public Instrument of Record testifies, and is further authenticated by the signatures of the parties therein mentioned.

In witness whereof, We, the undersigned,

have this Twenty-fourth day of May, 1875, in the presence of and before Sir Edmund Hornby, Knight, Chief Judge of Her Britannic Majesty's Supreme Court for China and Japan, hereunto affixed our signatures.

Edmund Hornby, *Chief Judge.*
W. A. Russell, *Bishop of N.-China.*
Charles Henry Butcher, *Incumbent of Trinity Church, Shanghai.*
Thomas McClatchie, M.A.
Alfred Adolphus Krauss, Fred. H. Bell, *Trustees of Trinity Church, Shanghai.*

MEETING OF LANDRENTERS AT KIUKIANG.

Meeting of Lotholders on the British Concession Kiukiang, held at H. M.'s Vice-Consulate, on the 12th May, 1875.

Present :—Messrs. Kopsch, R. Francis, Anderson, Hart, A. Little, and A. Bean. Mr. W. G. Stronach, Acting Vice-Consul, in the chair.

The Minutes of the last full meeting were printed and in the hands of those present, and were therefore taken as read.

Mr. Anderson then proposed, and Mr. Kopsch seconded—

That, the rental of 500 feet of the Bund shall stand as before, at Taels 800 for one

It was then proposed [illegible] to the above by Mr. R. Francis, seconded by Mr. Bean—

That Taels 500 be substituted in the above for Taels 800.

This amendmen twas lost by 13 against 9.

A second amendment was then brought forward by Mr. R. Francis, and supported by the Rev. V. C. Hart, as follows :—

That the Municipal Council be authorised to make such terms as they may consider advisable with companies or individuals desiring the use of the Bund-frontage, but no cession of a frontage to be made for less payment than Taels 500 annually for a frontage not exceeding 500 feet, nor for a longer term than five years, subject to confirmation by a subsequent meeting of Lotholders.

Carried without a dissentient voice. The original motion was therefore lost, and the amendment took its place as Resolution I.

Resolution II. — Proposed by Mr. Anderson, seconded by Mr. Hart—

That no pontoons be placed before, or be attached to the Bund, without permission of the Muncipal Council and paying for the privilege at the most a rental of Taels 100 a year,—the charge not to be retrospective.

Ayes 15, Noes 7. Carried.

Resolution III.—That cargo boats belonging to non-payers of wharfage dues be taxed for the use of the Bund when landing or shipping cargo from it, or be forbidden from using the Bund.

This was proposed by Mr. Kopsch and seconded by Mr. Anderson. The votes in favour of it were 15, none being recorded against.

Resolution IV.—Proposed by Mr. Kopsch and seconded by Mr. Anderson—

That the rental of 500 feet mentioned in Resolution I. is understood not to exempt the renter from Wharfage or other dues as paid at present.

A discussion ensued as to whether such a resolution was not *ultra vires*, as meddling with a question of taxation which had not been previously announced. Setting aside the question as to whether taxation was *ultra vires* in any case, some such definition of the intention of the meeting was evidently necessary in the present instance, as the lotholders were divided in their views. The Resolution was, therefore, ruled to be in order, as simply declaratory, in order to avoid sending forth to the world a perfectly ambiguous deliverance. An amendment to leave out the word "not," was lost by 15 votes against 7, and the Resolution was accepted as it stands without further vote.

The meeting was then closed with a vote of thanks to the Chairman.

W. G. Stronach,
Acting Vice-Consul.

MUNICIPAL COUNCIL FOR SETTLEMENTS NORTH OF THE YANG-KING-PANG.

Council Meeting of 19th May, 1875.

Present :—Messrs. J. G. Purdon, G. J. W. Cowie, J. Hart, W. Kidner, A. A. Krauss, F. W. Lemarchand, S. D. Webb, and the Secretary.

The Police Force was inspected, and Mr. Purdon took the opportunity to express the Council's satisfaction at the way in which the Police duties had been performed during the past year, dwelling particularly on their behaviour at Fires. Upon returning to the Council Room, Mr. Purdon stated that ordinarily the retiring Council explained to new members the nature of the business left outstanding, but as on this occasion most of the old members were continuing in office, this formality could be dispensed with. It was agreed that any information required on a subject should be given at the time it came up for discussion.

The members of the retiring Council then passed a vote of thanks to Mr. [illegible] for his services as Chairman during the past year, and desired that it might be recorded in the minutes that his colleagues felt much indebted to him for the time and attention he had devoted to Municipal matters during the term.

Mr. Purdon briefly acknowledged the compliment, adding it was due to the members generally that the work had proceeded so satisfactorily and pleasantly.

The meeting then elected :—

Chairman—Mr. J. G. Purdon.

Vice-Chairman—Mr. F. W. Lemarchand.

Defence Committee — Messrs. Purdon, Hart and Kidner.

Finance Committee — Messrs. Lemarchand, Cowie and Krauss.

Watch Committee—Messrs. Kidner, Hart and Heyden.

Works' Committee — Messrs. Purdon, Mackenzie and Webb.

The Chairman then mentioned the following matters as outstanding.

Land Tax—W. H. Fogg.—The Council regretted their motion at the Ratepayers' meeting had been lost.

Instructions were given to the Secretary to collect the amount for which judgment had been given in the United States Consular Court.

Revision of Land Regulations.—Decided to postpone further steps till the opinion referred to by Mr. Drummond in his report had been received from Mr. Rennie.

Drill-Instructor.—Communication from Hongkong was looked for.

Jinrickshas.—Regulations are being drawn up, and before being acted upon it was determined that they should be submitted to the French Council, so that the regulations for both Settlements might be in harmony.

Slaughter House.—Enquiries are being made of the owner—at present in England—as to the terms on which he is prepared to sell a lot of land situated at Sinza, suitable as a site for a slaughter house.

Amusements.

THE FLOWER SHOW.

The Committee are to be congratulated on having achieved a decided success. Seeing how very recently a taste for floriculture has grown up in Shanghai, a Flower Show was rather an ambitious project. The result, however, has fully justified the confidence of the promoters, and has convinced people generally that next year's show will be a better one than the present. There is always more or less difficulty in starting a thing of the kind ; many people are shy of sending things even for exhibition ; but now that they have seen it is possible to do so and survive the ordeal, we anticipate the contributions will next year be much more numerous. They may derive encouragement from one instance. The first prize for heliotropes was awarded, unsought, to a gentleman who had only sent the flower to help adorn the tent ; but he arrived, and found himself famous.

One misfortune has befallen the show, but it is one which the Committee could not foresee. The season has been so early that flowers which were expected to be in perfection on the date fixed, have blossomed and died. In ordinary years, sufficient roses might have been expected, to constitute a show in themselves ; whereas roses were in perfection a full fortnight ago, and the few which are exhibited in the Consular Compound, are relics of a past. The same remark applies to other sorts of flowers ; and it surprised many to see so fine a show of azaleas as were exhibited, under the circumstances. But if the forwardness of the season deprived the Flower show of some part of its attractions, it has hastened forward some of the other products which always find place in such exhibitions. The strawberries which stood close to the entrance of the tent were [illegible] and people were surprised not only to see fine young potatoes, but to learn that the cultivator had been enjoying them as a table luxury for the previous fortnight or three weeks. Some very fine leeks and asparagus on the same table attracted notice. Perhaps the greenery formed the prettiest portion of the show ; and of this there was an endless variety. Some Japanese maples, with different kinds grafted on the same stem, were much admired, as were also two Australian pines. Two prettily trained lemon-plants attracted by their graceful form as much as by their fragrance. The fern stand, if we may so name a stand on which ferns predominated though any other plants found place, was much admired ; but there were many other handsome shrubs, and two tree ferns (from Amoy) formed a striking feature in its neighborhood. There was a handsome Yucca too, in full flower, in this part of the tent, and a caladium was pointed out to us as a rarity. But we cannot pretend to enumerate severally the hundred attractions offered ; and will only go back for a moment to the flowers proper. Let it not be imagined from what we have written, that flowers are absent or deficient in the Show. On the contrary, there is a striking collection ; prominent among which are a fine display of geraniums, several handsome lilies, petunias, and fuschias just budding into flower. The camelias exhibited, like the roses, are somewhat past, and exemplify our regret that the forwardness of the season should have so upset calculation.

What visitors will find, on a second and closer inspection, is how many more things there are in the tent than they at first suspected. The string of orchids, for instance, hanging over their heads, might escape notice ; but they will not fail to see the canaries which add to the charm of the show, for they invite attention in thrilling tones.

The weather on Monday was perfect ; a cool breeze tempered the heat, and combined with the attaction of the show to draw more people into the Consular compound than are often to be seen assembled in Shanghai. The band of the *Audacious* performed admirably ; and everyone seemed to thoroughly enjoy the afternoon.

The Flower Show was well attended again, on Tuesday afternoon ; Admiral

Ryder, Mr. Wade, and a number of officers from the men-of-war in port being among the visitors. Several Chinese gentlemen also availed themselves of the opportunity to inspect it. The band of the *Audacious* again performed during the afternoon, and gave much pleasure to the visitors. It is, we think, the best band that we have had in Shanghai for some years. The Refreshment tent was well supplied and well appreciated. The community are much indebted to the ladies who contributed this portion of the entertainment, and took great trouble in arranging it during a day of summer heat. The bouquet tent was also tastefully supplied, and most of the gentlemen present bore evidence of their appreciation of the pretty nosegays offered there. At a rough estimate, we should say some 400 people were present on the first, and 300 on the second day. We are glad to hear that it is estimated the receipts will just cover the expenses. Altogether the Show has been an undoubted success, and the Committee — Messrs. Medhurst, Drummond, Endicott, Scott, and Wheelock— must be gratified by the result of their effort to inaugurate a fresh amusement. Admiral Ryder and Dr. Little were the judges.

S. R. C. SPRING REGATTA.

26th May.

Judge.....J. A. MAITLAND, Esq.
Starter .....ROBT. MACKENZIE, Esq.
Umpire .....A. C. WESTALL, Esq.

The programme announced that the first race would be started punctually at 5.15 p.m.; it was therefore a subject for congratulation among the spectators, that the actual start took place at 5.55—that is, at least five minutes before it was expected. Regattas never come off punctually, most of all on the Pootung side; the difficulties of transport and arrangement are great; and the hope that they will prove less embarrassing than last time, always proves delusive. —The first boat to appear on the scene was the Umpire's steam launch which, after a prolonged cruise in search of the Judge and Starter, concluded to drop down to the starting post and await events. She was soon followed by the *Dragon*, having on board a number of spectators; and not long after the Red eight appeared paddling quietly down. The Blue was not long behind, and after some little time had been lost getting into position, owing chiefly no doubt to the strength of the wind—at 5.55 p.m., as we have said before, the word "go" was given. There was still a slight flood tide running, but its influence was scarcely perceptible inshore on the Pootung side; and the choice of inside place was chiefly influenced by a wish to get shelter from the strong wind that was blowing across the river. The first race was a close one till near the finish, when Blue, which was already leading, put on a spurt and won with something in hand.

An interval ensued during which the Starter indulged in a short cruise in his houseboat, and the Judge was detected at the wrong end, on board the *Dragon*. Both, however, were at their posts when wanted, and the second race was eventually started about 6.25. It was an interesting one from the fact that one of the competing boats (Takoo) was holder of the Cup from the previous year, and because it was reported that the opposing crew had tried a novel system of training. If so, the result was adverse to the experiment. Takoo, rowing a long steady stroke, again won the Challenge Cup, and holds it therefore for the second year.

Although both these races had been steadily pulled, the interest had been wanting, of an exciting finish; this was supplied by the third, in which the positions of the boats changed several times towards the end, and in which Blue's plucky spurt at the last promised, for a moment, to recover an apparently hopeless race.

(1) CLUB EIGHT-OARED RACE. (2)

	Mr. Muller's Crew—*Blue*.	st.	lb.		Mr. Reid's Crew—*Red*.	st.	lb.
Bow	Morse	9	2	Bow	E. Rehders	9	12
2	C. W. Richards	10	7	2	H. H. Joseph	9	4
3	J. H. Cheetham	12	4	3	C. S. Sharp	10	11
4	W. Hamilton	11	1	4	O. Meuser	11	2
5	J. Andrew	13	3	5	J. W. Shepherd	11	0
6	E. Gipperich	11	0	6	W. M. Primrose	10	5
7	G. Lewis	11	0	7	T. Nelson	10	0
G. Muller, *Stroke*		11	12	F. Reid, *Stroke*		11	7
B. A. Clarke, *Cox.*		11	4	J. Hall, *Cox*		9	5

Blue won the toss and took the inside, got away quickest and gained ¾ length in the first 50 yards. Red lessened the distance to a ¼ length shortly afterwards, but failed to get level. The two maintained their position till nearing Roberts' yard, when Blue increased its lead, and drawing clear with a spurt, came in winner by 2½ lengths.

HONG FOURS CHALLENGE CUP.

	1.—Takoo.	st.	lb.		2.—Way-foong. (Honkong Bank) *Dark Blue*.	st.	lb.
Bow	J. Hall	9	5	Bow	C. Barron	10	2
2	J. H. Scott	13	0	2	A. W. Maitland	10	1
3	J. Andrew	13	3	3	And. Veitch	11	10
A. Burrows, *Stroke*		0	12	Alf. Haselwood, *Stroke*		9	8
J. M. Cory, *Cox*		10	2	*Cox*			

Blue won the toss and took inside. Red took a slight lead at starting, and kept it throughout, gradually increasing it towards the end of the course, till at Roberts' yard they were able to take Blue's water, and the race was virtually won. Passing the jetty a full length clear, Red increased their lead and won easily by 2 or 3 lengths.

CLUB FOURS.

1.—*White*.	2.—*Dark Blue*.	3.—*Red*.
Morse.	Hughes.	Rehders.
Meuser.	Richards.	Joseph.
Chestham.	Shepherd.	Sharp.
Gipperich, *Stroke*.	Hamilton, *Stroke*.	Andrew, *Stroke*.
Cox.	*Cox*.	*Cox*.

White took inside place, Red next and Blue outside. The boats got away to a very even start, but Red began to tail soon after, the two previous races having rather taken it out of the Stroke. Blue was the first to show in front, White 2nd, and Red 3rd. These positions were maintained for about ¼ of the distance, when White drew up, and at half-way had taken a lead, which was increased to nearly two lengths, Red meanwhile also drawing upon Blue and looking like 2nd honors. On nearing Roberts' yard, the two last boats were nearly even, when Blue put on a fine spurt which drew him rapidly clear of Red, and brought his nose level with the White coxswain. If he could only keep it up, he looked to have a chance of the race, as the White crew began to go to pieces; but at the critical moment a crab was caught, and it was over. White recovered the lost ground, winning by some two lengths, Red the same distance [illegible]

The afternoon was not a favourable one, as the strong wind made the water rather lumpy even inshore. The breeze, however, tempered the heat pleasantly to the spectators. A smart shower fell about half-past 5, and a few drops of rain at intervals subsequently, but not enough to drive spectators under shelter.

The Committee desire to express their thanks to Messrs. Boyd & Co. for their kindness in erecting a landing-stage, and providing a dressing room and cooling drinks for the competitors; and also to Messrs. S. C. Farnham & Co. and the Agent of the P. & O., for the several steam-launches kindly placed at the disposal of the members.

CRICKET.

S. C. C. *v.* ROYAL NAVY.

A match was played on Wednesday, between a selected eleven of the S. C. C. and an eleven of the Royal Navy, made up from H. M. S. *Audacious, Modeste, Vigilant,* and *Midge*. The wickets were pitched shortly after 10.30, and play was continued with but little intermission throughout the day, the match terminating shortly after six o'clock. The temperature was high, and the sun shone brilliantly during the earlier part of the play, but the heat was greatly modified by a pleasant breeze, which towards the afternoon become half-a-gale, and brought up some masses of cloud, from which a gentle shower fell towards the conclusion of the match. The play on the part of the S. C. C. was excellent, both in batting and fielding, and an inspection of the subjoined scores will show that some extraordinary numbers were made. Mr. Souper contributed no fewer then 106 runs, and then retired from sheer fatigue; the next highest were Mr. E H. Gore-Booth with 79, and Mr. J. B. Manson, with 44, and run out; the total score reaching 282. The Navy went to the wickets for their first innings at about four o'clock, but ill-luck attended them throughout, and they only succeeded in putting 26 upon the paper. In their second innings they were more successful, but still fell far short of their opponents, reaching only 64—or a total of 90 in both innings

Towards evening a considerable number of spectators occupied the Pavilion, and a number of ladies were present in

the Marquee erected for their accommodation. The band of the *Audacious* was in attendance, and played frequently during the afternoon. The following is the score :—

Correspondence.

THE RATEPAYERS' MEETING.

To the Editor of the
NORTH-CHINA HERALD.

SIR,—With reference to the speech of the Chairman of the Municipal Council to the Landrenters, there is one statement he has made respecting Mr. Camajee which calls for correction, wrongly imputing as it does, disrespect (if nothing more) to a body of gentlemen, the 'Treaty Consuls,' who, it seems to me, have no concern in the business one way or another. I explain for Mr. Camajee, as he cannot be expected to do so as easily as myself. When this dispute arose, and for many months after, it was the generally received opinion that there was no redress against the Council for any injury they might commit against an owner of private property in Shanghai, in the regular Courts, and that the only tribunal was the 'Court of Treaty Consuls.' It was ascertained that there was some disposition on the part of H. M.'s Supreme Court to exercise its jurisdiction against the Council (the British subjects). On referring to the Constitution of the Court of Treaty Consuls, it was found that whilst it was convenient for adjusting a certain class of Municipal affairs, it was impotent to afford redress for aggression upon private property. At this time there appeared a judgment by one of the Superior Courts in England, wherein the members of a public body established by an Act of Parliament, were held individually responsible for a trespass committed against private property. To this, I directed the attention of the Council through their Secretary. Under these circumstances, Mr. Camajee abstained from proceeding before the Treaty Consuls without any disrespect towards that body, and, I think, without leaving it open to the Council to create a prejudice in respect of it. From the Report, it appears that the Council think Mr. Camajee is dilatory in resorting to extreme measures against them; if this be so, he evinces his confidence in the impartial sense and courtesy of many members of the Council, who, if left to themselves, would coincide with his own ideas in ten minutes, without recourse to any long winding arbitration or interminable law procedure.

I am, Sir,
Yours truly,
19th May. D. COOPER.

Law Reports.

H. B. M.'s SUPREME COURT.

Shanghai, May 20th.

Before Sir EDMUND HORNBY, *Chief Judge, Sitting in Admiralty*; and N. ROSKELL, Esq., Master of P. & O. str. *Hindostan*, *Assessor*.

THE STEAMER *Fusing v.* THE STEAMER *Ocean*. *Collision.*

Mr. DRUMMOND and Mr. EAMES appeared for the plaintiffs.

Mr. WAINEWRIGHT (solicitor for Peter Denny, of Dumbarton, Scotland, the owner of the *Ocean*) and Mr. HANNEN, for the defendants.

This was a cause of damage, instituted on behalf of Tong-king-sing, one of the owners of the C. M. S. N. Co.'s steamer *Fusing*, to recover Tls. 200,000, value of the said steamer and cargo, which was sunk in collision with the British steamer *Ocean*, on the 4th April last.

His LORDSHIP having, on the suggestion of Mr. Drummond, described the mode of procedure in such actions, with respect to the addresses of Counsel and the taking of evidence,

Mr. EAMES said it seemed to him hardly worth while to read the pleadings as originally filed, as his Lordship was doubtless familiar with them.

His LORDSHIP said he could not say he was [illegible] with them, as he had not seen them. He saw, however, that some alterations had been made in the petition with pencil.

Mr. WAINEWRIGHT said those alterations would be presently explained.

Mr. EAMES went on to explain that the name of Robert Morton Andrews, the Captain of the late *Fusing*, was originally inserted in the petition as being the plaintiff. It had, however been arranged to take out Captain Andrews' name, and substitute that of Tong-king-sing. That change necessitated some other alterations, but the substance of the petition was of course unchanged. It was merely the substitution of one name for another. He would now read the petition :—

1st.—The Chinese steamship *Fusing*, being tight, staunch, and strong, and well fitted, and fully manned, sailed from the port of Shanghai on the 3rd day of April, 1875, laden with a general cargo, and bound to the port of Tientsin, and everything was well with her until the date mentioned in the next paragraph.

2nd.—On the 4th day of April, 1875, between 10 and 11 A.M., the *Fusing*, with the necessary officers and crew on deck, keeping a good lookout, with fore and main trysails set, was proceeding under steam towards Tientsin in the prosecution of her said voyage, and was about 125 miles North of Shaweishan, when a steamship, which proved to be the British steamer *Ocean*, was observed on the starboard side of the *Fusing*, approaching her nearly at a right angle, about one to one-and-a-half ship's length distant, apparently with her helm to port.

3rd.—At the time hereafter mentioned, and for several hours before that time, a thick fog prevailed, and those on board of the *Fusing* first became aware that a steamer was near them, through hearing a steam-whistle three or four points on their starboard bow. The *Fusing* was then going at reduced speed, and, when the whistle was heard, her engines were stopped; and, when the *Ocean* was seen, the *Fusing's* engines were at once reversed and turned full speed astern. But the *Ocean* kept on apparently at full speed, and with her helm still to port, striking the *Fusing* at the angle aforesaid, with great force, about 40ft. from her stem, cut her down, and caused her to sink, with all her cargo and a number of passengers, in a few minutes thereafter.

4th.—The aforesaid collision, and the total loss of the said steamer *Fusing*, her cargo and the lives of some of the crew and passengers, are solely imputable to the fault and misconduct of those on board and having the control and management of the said steamer *Ocean*, in consequence of their going at full speed in the thick fog, and of having improperly ported her helm; and the said collision, total loss of said steamer, her cargo, etc., are not in any way or degree imputable to the said steamer *Fusing*, or to any person on board of her, her officers and crew having done the utmost in their power to avoid or prevent the said collision.

The Plaintiff therefore prays relief as follows :—

1st.—That the Honble. Court will pronounce for the damage sued for in this cause, and refer the amount of said damage to the Registrar and Assessor, and condemn the defendants and their bail therein, together with the costs of this suit.

2nd.—That the Plaintiff may have such further relief as the nature of the case may require.

The answer to the petition was as follows :—

1st.—On the 2nd day of April, 1875, the British steamship *Ocean* left the port of Chefoo laden with a general cargo, and bound for the port of Swatow. The said steamship was then tight, staunch, and strong, and was navigated by William Brown, her master, and a crew of thirty-nine hands, of whom nineteen were Europeans and twenty (including thirteen firemen) were Chinese.

2nd.—On the 4th day of April, 1875, between 10 and 11 a.m., the *Ocean* with the necessary officers and crew on deck keeping a good look-out, was proceeding under steam at a moderate rate of speed towards Swatow in the prosecution of her said voyage, and was about two hundred and thirty miles South of the Shantung Promontory when those on board the said steamship heard the sound of a steam whistle, a few points on her port-bow. At the time hereinbefore mentioned, and for several hours before that time, a thick fog prevailed, and at the time the said whistle was heard, those on board of the *Ocean* were unable to see the vessel from which it proceeded. The steam whistle of the *Ocean* had been sounded at frequent intervals from the time the said fog came on.

3rd.—Immediately upon the said other steam whistle being heard, the helm of the *Ocean* was put hard-a-port, and her engines were stopped, reversed and turned full speed astern and her steam-whistle was again blown.

4th.—About two minutes after the said other steam whistle was heard, a steamship which proved to be the Chinese steam-ship *Fusing* was observed a little on the port bow of the *Ocean*, crossing her course nearly at right angles about one and-a-half or two ship's lengths distant, and apparently going at full speed, and with her fore and main trysails set, and with her helm to starboard.

5th.—Immediately after the said steam-ship *Fusing* came into view, and before anything further could be done, the said two steamships came into collision, the *Ocean* striking the *Fusing* on the starboard bow and nearly at right angles, and in a few minutes thereafter the *Fusing* sank.

6th.—The Defendant denies that the collision in question, and the losses and damage consequent thereon, are imputable to the fault or misconduct of those on board and having the control and management of the *Ocean*, as stated in Article 4 of the Petition, and he alleges that the said collision, losses, and damage are solely imputable to the fault and misconduct of those on board and having the control and management of the *Fusing*, in having improperly starboarded her helm, and in not having kept clear of the *Ocean*, by porting their helm in time and passing the *Ocean* on her port side as they were bound to do, in accordance with the rules and customs of Ocean Navigation, and also in their having omitted to stop and reverse the engines of the *Fusing* as soon as they heard the whistle of the *Ocean*, and also in their having sail set, and also in their not having kept the course usual and proper for vessels proceeding from Shanghai to Tientsin.

7th.—No blame whatever in respect of the said collision is imputable to any person on board of the *Ocean*, and the said collision was so far as the *Ocean* was concerned an inevitable accident.

8th.—Save as herein appears, the Defendant denies the several allegations of the petitioner.

And the said Robert Ernest Wainewright prays this Honorable Court to pronounce against the damage proceeded for, and to dismiss the said steamship *Ocean* from this suit, and to condemn the plaintiff in costs.

Mr. EAMES then enquired if his Lordship would make an order sanctioning the changes in the petition, as pencilled in?

His LORDSHIP replied that he had already done so.

Mr. HANNEN said he supposed Mr. Tong King-sing appeared for the owners of the ship and cargo.

Mr. DRUMMOND said the owners of the ship were also the owners of the great part of the cargo, and then went on to say that this was a procedure in Admiralty in respect to damages incurred by a collision between two vessels as set forth in the preliminary act, the C. M. S. N. Co.'s steamer *Fusing*, and the British steamer *Ocean*. The *Fusing* was a vessel of 532 tons register, but he did not know the registered tonnage of the *Ocean*.

Mr. WAINEWRIGHT said the net tonnage of the *Ocean* was 970.

Mr. DRUMMOND resumed by saying that on the morning of the collision, the 4th April last, the weather was foggy and the wind light from the S. S. W. The *Fusing* was steering nearly N. at slow speed, the engines having been slowed some hours previously to the collision, and she was making four-and-a-half or five knots per hour. A whistle was heard, and a good look-out was then kept towards the quarter from which the sound came. Soon afterwards, a vessel came out of the fog, apparently proceeding at full speed on a strong port helm; and despite the precautions taken on board the *Fusing*, that vessel—the *Ocean*—struck her about forty feet from her stern on the starboard bow, causing her to sink in a few minutes with the loss of forty or fifty lives. The case of the plaintiff was a peculiar one, and the decision of the Court would be very valuable for reference hereafter. The facts of the case would be found to lie in very small compass, and the law applying to them would also be found to be very easy. He referred his Lordship to the very old decision of Lord Stowell (*Abbott on the Law of Merchant ships and shipping—Collisions; p.* 598), which respect to the four possible circumstances under which a collision at sea could occur, and which he would now read :—Our Court of Admiralty, before which misfortunes of this kind are fairly the subject of discussion, adopts, when both vessels are in fault, the rule of Maritime Law; and accordingly in the case of the

Woodrup, Lord Stowell lays it down that there are four possible circumtances under which a collision may occur.—In the first place, it may happen without blame being imputable to either party, as where the loss is occasioned by a storm on any other *vis major*. In that case, the misfortune must be borne by the party on whom it happens to light, the other not being responsible in any degree. 2,—Where both parties are to blame, there having been want of due diligence or of skill on both sides; in such a case, the rule of law is that the loss must be apportioned between them, as having been occasioned by the fault of both of them. 3,—By the misconduct of the suffering party only; then the rule is that the sufferer must bear his own burden. Lastly,—It may have been the fault of the ship which ran the other down; and in this case the innocent party would be entitled to an entire compensation from the other. Now the case of the plaintiff in the present action rested on the fourth of those possibilities, viz., that the *Fusing* was run down by the *Ocean*, and therefore, she was entitled to full and complete indemnification. It would be shown that the *Ocean* was proceeding at undue speed, and without taking proper precaution under the unusual circumstances. The *Fusing*, not having complied with the rules laid down by the Admiralty, must be treated in every respect as a foreign ship, and could not be bound by those rules. Neither was the *Ocean* bound by them. There was a very long list of countries which were bound by those rules, but China was not amongst them, and he would at once direct his Lordship's attention to that fact. Those rules, however, had been drawn up by men of great skill, possessing great knowledge of the subject. They would therefore, be brought forward in this case, as being the best possible guide as to whether the steps taken by the *Ocean* were right or wrong, according to those rules. At the same time, it was not necessary for him to enter fully into the merits of the case now, for it would be better for him to reserve what he had to say until the final summing up, when his Lordship would have the whole of the evidence before him. He would, however, mention one case only that covered this case. It was that of the "*Rona* and *Ava*" (29, *L. T.*, new series, p.p. 781 and others; Privy Council.) That case was important as resulting in a decision overruling another, both steamers being ultimately held to blame. The case turned almost entirely on the question of seamanship, and there was only one authority quoted in the whole of the report. One of the ships was British and the other French, and the judgment showed that although the Court at Hongkong had decided the case in accordance with the Admiralty rules, the Privy Council had afterwards taken it out of the rules altogether, and made it a question of seamanship entirely. The *Rona* was found to blame for proceeding at eight-and-a-half or nine knots in her own smoke—thereby creating a local fog; and the *Ava* was found to blame for a double error, in not having slackened her speed and not having ascertained the exact position of what she was approaching. In the present case, the *Fusing* and *Ocean* were steering a parallel course, and if the whistle had not been blown, they would have passed clear and without seeing each other, because each would have kept on her course. The *Ocean*, however, ported her helm on hearing the *Fusing's* whistle—the *Fusing's* position being almost exactly opposite to what it was supposed to be by those on board the *Ocean*. The alteration of her helm took the *Ocean* five points off her course, and brought her into collision with the *Fusing* which did not alter her position at all. The collision was therefore, caused by the *Ocean* being put on a strong port helm, the *Fusing* as he had said not having altered her course. The question for the Court would be,—Was the *Ocean* justified in taking the step of porting her helm as she did? If the Court found that it was a wrong step, it would have no difficulty in deciding the next point, that that step contributed to the result that had ensued. That was the case between the two ships; and upon the points he had raised he would cite the case of the *Black Diamond* (*Pritchard*, vol. 2, p. 1041.) The point established in that case was, like that in the *Rona* and *Ava* case, that porting the helm was not a proper thing to do until the exact position of the other vessel was distinctly known—it was not permitted as a precautionary measure at all. Mr. Drummond concluded by saying he would not proceed further with the case at the present time, but proceed at once to call evidence in support of the *Fusing's* case. He would first call Mr. Tong King-sing.

His LORDSHIP asked if this witness was to be called to prove ownership?

Mr. DRUMMOND said, yes.

His LORDSHIP—Is not that admitted?

Mr. WAINEWRIGHT—We should like to hear what Mr. Tong King-sing has to say.

TONG KING-SING, deposed—I am plaintiff in this suit, and also a shareholder and manager of the C. M. S. N. Company, the owner of the vessel that was lost. I have here a list in Chinese of the shareholders of the Company, and also of the owners of the cargo that was on board the ship. The Company were the owners of the rice that was on board when the ship was lost. I am acting in this case with the knowledge and consent of all the others of the Company and the owners of the cargo. I produce the bill of sale of the *Fusing*. It gives the particulars of the steamer *Precursor*, which was the former name of the *Fusing*. There are 447 names in the list of shareholders of the Company.

By Mr. HANNEN—Amongst those 447, there are no foreigners. We give instructions to our Captains to follow the English sailing rules. The instructions are given by word of mouth, not in writing. All the ships are commanded by either American or English Captains, chiefly English.

ROBERT MORTON ANDREWS, examined by Mr. Eames, deposed—I was master of the *Fusing*. I left Shanghai on the last voyage, on the 3rd April. I have been on this coast for three years and a half or four years, running North. I was bound to Tientsin, and was steering the usual course. On the 4th of April, at 10.40 a.m., I had a collision. The weather was foggy, with light wind from S. S. W. The first intimation I had of a steamer being near, was hearing a whistle on the starboard bow. I was on the port quarter deck at the time. There was no bridge. The wheel was forward, on a high deck—about 2½ to 3 feet high. The model produced is made to scale. The wheelhouse was just abaft the foremast. It was a wide wheelhouse, with an open front. The second officer and second engineer were on duty at the time, with a Chinese on the look-out, and a Chinese quartermaster at the wheel. The fog set in thick about 6 a.m. Before the fog set in the *Fusing* was going about 8¾ knots; it was afterwards—at 6 o'clock—reduced to five or six knots. I do not know if the speed was afterwards further reduced. I went forward when I heard the whistle, and at the same time I heard our gong strike to slow. We were then going at reduced speed. That reduced her to very nearly dead slow. I put my head down the engine room skylight, and told them to stop her. The engines would at that speed be stopped very quickly, and the vessel would stop in five or six lengths.

By His LORDSHIP—The ship was 202 feet long.

Examination resumed—The collision occurred soon after this, and I suppose the ship had gone four or five lengths. I heard the *Ocean's* whistle a second time. That was after we had stopped the engines. When I saw the *Ocean*, I gave the order to reverse the engines. The *Ocean* was about two lengths distant, on the starboard bow, bearing about 6½ to 7 points. When I saw her, I ordered the helm to be put hard-a-starboard and to reverse the engines. That was about 30 seconds before she struck us. I do not think the *Fusing* answered the starboard helm at all. The *Ocean* then came into collision with us, and nearly cut us through. The *Fusing* did not float more than four or five minutes afterwards. We had no time to save anything but what we had on. Neither of the log books was saved. Several of the crew were drowned, and one officer, the third engineer. I never saw any of the old logs. I only saw the one in use. It was in use when I took command. I know of no other. I have had prepared a model illustration of the position in which the ships were just before and at the time of the collision. (Witness produced the model—a very ingenious contrivance—and explained it to the Court, by means of two moveable models of the ships.) It is a fair and proper representation of the position of the ships. I also produce a chart, on which the positions of the *Ocean* and *Fusing* are marked. If the *Ocean* had not altered her helm, it is impossible that a collision could have occurred. If she had kept on her course, she would, as far as I could judge, have passed the *Fusing* about a quarter of a mile distant. There were windows all round the wheel-house, and the helmsman had no difficulty in looking well forward—the mast was no obstacle.

By Mr. HANNEN—We were following the outer course marked in pencil on the chart, not the inner one. The inner line is a bee line from one point to another. It starts from Shaweishan, and would clear the Promontory by about six or seven miles. The outer course was the ordinary course on a flood tide. I did not see Shaweishan at all on shaping my course to run out. We passed Shaweishan about seven in the evening. Of course, I ran across the banks from the Lightship. We were at the Lightship at four p.m. I kept the same course, N.E., until eight o'clock, until I made sure I was past Shaweishan. At that hour I changed the course, and considered I was four miles north of Shaweishan. I changed the course to N.N.E., and continued on it until twelve. I set my patent log at eight and hauled it in at twelve. We had then gone 35 miles by the log. At twelve I changed my course again to N. ½ E., and continued running on that course until the collison. At eight a.m. we had run 99 miles by the log, and at 10.40, the time of the collision, 120 miles altogether.

Mr. HANNEN said the plaintiff's preliminary act said 125 miles.

His LORDSHIP said the statements in the preliminary act should be kept to.

Witness resumed—I had a conversation with the captain of the *Ocean* as to the distance I had run. I said it was 120 miles, not 125. I am still in the service of the Company, but have no command. I am waiting for a ship to come from home. I was walking on the port quarter deck, when I heard the first whistle. The sound was on the starboard bow. I went forward, and asked the second mate "Where is she?" He said, "Broad on the starboard bow." The lookout man was stationed quite forward, in the night-heads. When the fog came on, I kept the two look-out men still on duty. That was an extra precaution, because during the day the only persons on the look-out are the officer of the watch and the man at the wheel. When I got forward, I heard the whistle again, a little before the beam. It appeared to be travelling past us on the starboard beam. Supposing the *Fusing's* helm had been starboarded and her head went a little to port, the effect would have been exactly the same. Immediately after the second whistle I saw the *Ocean*, and ordered the helm hard-a-starboard and the engines full speed astern. The compass was in the wheelhouse. I was standing outside, and could not see the compass. The man tried to execute the order to starboard, but there was no time for the ship to answer it before she was struck. There was about time to get the helm down. The *Ocean* cut into us about 20 feet. The *Fusing* was thin plated, not very thin. I had a survey made of her at Tientsin. I cannot remember the particulars. It was held on account of a collision in the Tientsin river. I believe there was a remark in the report as to the excessive thinness of the plates. Altogether there were about 100 people on board. We had four boats, and one of the larger ones helped to save life. She stayed and picked up till she was full. There were 26 in her. She was one of the largest. The smaller ones would hold about 20 each. The old logs are always kept on board a ship, till they get worms in them, and then they are taken on shore. I never saw any of the old logs of the *Fusing* on board. When the *Ocean* struck us, she was coming very nearly at right angles, and her head was about W. by S. Her head must have been very nearly West, with a little South. The string of the *Fusing's* whistle led over the front of the wheel-house, and in through the window. The engine room telegraph was inside the wheel-house. As a rule the quartermaster at the wheel was the only person stationed in the wheel-house. At the moment of hearing

the *Ocean's* whistle, he was the only person in there. The *Fusing's* screw was a right-handed screw. Standing where I was, and in a fog, looking forward, I could not see if the ship's head went round, without looking at the compass—unless by looking back at the wake. When we see a steamer ahead, we port our helm. If we only hear her, we stop the engines, and wait till we see her; and neither port nor starboard. So far as I know, other vessels of the Company follow the same rule. We carry four quartermasters. Three were saved. I know of no steamers on the coast which do not follow the English sailing rules. One of the quartermasters lost was off watch, one was sick, one was the wheel. There was only one quarter-master on watch at the time of the collision, and he was steering. There was no extra hand put on instead of the quarter-master who was sick.

Re-examined by Mr. Eames—I have my certificate; it is dated 1868; it is that of an extra master. It has not been usual for us to see how near we can get to land without touching. We usually give the shore a good berth. The courses I have given are the true courses. There was a ¼ point westerly deviation. A survey was made of the *Fusing* at Tientsin, on the 4th or 5th March; another was made in Shanghai, on the 3rd April. It made by Captain Barton and Captain Bolton. I have never seen a ship with *every* log book on board. They are generally kept till they get worms in them, and then sent ashore.

[Mr. Hannen objected that the survey report must be handed in by Captain Bolton. It could not be handed in by the witness. The Court agreed.]

Witness—the Surveyors reported that she was a good risk.

Mr. Eames—You have been asked about a conversation you had with Captain Brown after the collision. What was that conversation?

Mr. Hannen objected that this was introducing new matter. His question had only had reference to a particular point.

His Lordship ruled that Mr. Eames was entitled to elicit the whole, for this reason; it would otherwise be possible for the opposing Counsel to elicit only one point in the conversation and confine a witness to that, if he found the rest was likely to make against him.

Mr. Hannen admitted the reason was good so far, but contended that the reason why the introduction of fresh matter in re-examination was inadmissible, was that the other side had no chance of cross-examining upon it.

Mr. Drummond said there would be no objection to Mr. Hannen cross-examining, and

Witness continued—Captain Brown said the reason he put his helm a-port was that she answered that helm so much more quickly than the starboard helm. He also said that he had had great trouble with his engines in going astern.

To the Assessor—Our lowest speed, if we eased her down, was 3 knots. There was not wind enough to keep our fore and aft sails full. They were flat. The distance of our whistle from the leech of the fore-trysail was about 10 feet. I had no reason to believe that the sound of the whistle would be diverted by the trysail.

To the Judge—There was very little wind; we had had sails set all night. There had been a strong wind, but it had been going down from midnight, and there was very little at the time of the collision; we were going at a rate of 6½ knots. The effect of reducing to 3 knots would not to allow the wind to fill the sails. It might allow them to fill a little more, but not enough to have any force on the ship; there was not enough wind. I cannot tell the rate of the flood tide at the time of the collision. We have very little tide when we get past the entrance to the Yangtsze. At the time of the collision, we had run 120 miles. At 8 o'clock we had run 99 miles.

The Chief Judge—Therefore, from 8 o'clock up to the time of the collision (at 10.40) you had run 21 miles. If you divide 21 by 2h. 40m., that gives a speed of over 8 knots an hour. How do you reconcile that with your statement that the speed was 5 or 6 knots?

Witness admitted the discrepancy, and said he must look into it; he might be mistaken.

The Chief Judge wished that he would do so. The Court had of course no wish to trip him up. It only wished to ascertain the actual fact.

Mr. Hannen said the witness had no means of checking his statement except by thinking it over. The log-book had gone down; and there was witness's formal deposition.

Counsel for plaintiff suggested the distance was only estimated, and it was difficult to judge in a fog.

Witness continued, (in reply to the Judge)—I do not think it would have been better to go on when I heard a whistle broad on the starboard bow. I stopped, fearing we might come in collision. To go on might in some cases lead to the ship drawing clear, but it would not have done so in this instance. I think the order to stop was a proper one. I have said that I heard the sound of the whistle apparently travelling along the starboard beam. [In answer to a question if he still thought it right to stop?] I saw the *Ocean* directly after.

Hugh Brook Rose, examined by Mr. Drummond, deposed—I was second officer of the *Fusing*. I had a certificate of competency as second mate. It was lost with the ship. At the time of the collision I was officer of the watch, and was stationed between the wheelhouse and the bow. When I went on duty at 8 in the morning of the 4th April, the ship's course was N. ¼ E. by the magnetic compass. There was only about 2° variation W. There was very little difference between the magnetic and the true course at that place.

By Captain Roskell—The deviation of the wheelhouse compass was hardly appreciable on the Northerly course.

Examination resumed—I did not change the course while I was on duty. We had the sails set that appear in the model. They were not drawing. The booms were secured by a tackle amidships. The ship was making five and-a-half or six knots when I went on deck. The weather was thick, foggy.

By His Lordship—We could see about a length and a half of the ship. The fog was general, not local.

Examination resumed—There was little or no wind. What little there was came from the S.S.W., and was favourable for our course. There was a rolling sea, and I think it came from the S.S.E. I do not think it was strongh enough to check the progress of a vessel. I kept the whistle blowing at intervals, and had a man on the look-out in the bow. I should say the sails that we had then set would not interefere with the sound of the whistle. The booms were on the starboard side, I do not think the sound was interfered with at all. Ours was a shrill whistle, not one of the deep-toned American whistles. The speed of the ship was reduced before I came on deck. The chief mate was then on watch. The *Fusing*, at her best speed, might have gone 9½ knots. I should say that would be her best speed. Her best speed, in my watches, was 8¾. She made that the night before the collision.

By His Lordship—My watch the night before was from 8 o'clock until 2 a.m.

Examination resumed—The station of the officer of the watch in the *Fusing* was between the wheelhouse and the bow. There was no one near me on deck at the time of the collision. The first I knew of another steamer being near me was by hearing her whistle. The sound was on the starboard bow, distant I should say, about three or four points.

A large drawing of a compass was here produced, and the witness was requested by Mr. Drummond to place the model of the *Fusing* in the position she was alleged to be when he first heard the whistle, and afterwards the model of the *Ocean* where he supposed she was at that time.

Examination resumed—I am quite positive that the noise I heard was on the starboard bow and at least three points. Our ship was then going from 5½ to 6 knots—at reduced speed. When I heard the other whistle I answered with ours. I gave an order to the man at the wheel to sound the whistle, I gave him no other order by voice. I also telegraphed to the engine room to slow the engines. That would bring the ship to dead slow, to about 2 to 2½ knots, just keeping way on her. She would gradually come down to that from the 5½ or 6 she was previously going. I think she might have gone about a couple of ship's lengths before she came down to 2 knots. Our whistle was answered from the other ship in a very short time indeed. All three whistles were immediately after each other. The sound of the second whistle seemed to be travelling along towards our stern. I could not see the other steamer then, and the only idea I formed was that she was a passing ship. From the direction of the sound it seemed as if the other steamer was clearing us. When the captain was standing near me on the deck, I heard him give the order to hard-a-starboard. That was only a little over 30 seconds before the collision. The other vessel was in sight then, just coming out of the fog. I cannot tell whether the man obeyed the order to hard-a-starboard. There was not time for him to have got the helm hard over. Supposing him to have had time to alter the helm, the ship's course would have been very little altered at the slow speed she was going, I do not think the man could have got the wheel half-over in 30 seconds. The wheel was forward, and there was a long drift of chain to the stern. It takes longer to put a wheel over when it is forward than when it is astern. (Witness next placed the models in the position the ships were when the *Ocean* was seen by him.) The *Ocean* was then close to us, and I heard the captain say, "My God, she's into us,—full speed astern." That order was given after the order to starboard—almost immediately afterwards. I could tell it was obeyed, but the only way I could judge was by the *Ocean's* bow. If our ship had not stopped, I believe the *Ocean's* bow would have cut as far as our engine-room. I believe the *Fusing* was very nearly stopped at the time of the collision. The *Ocean* appeared to me to be going between W. and W. S. W. That was heading into the shoals, according to the chart. The *Ocean* must have changed ner course very considerably to have got into that position. She must have gone round on a port helm. She struck the *Fusing* on the starboard bow. (Witness placed the models at the angle indicated by their then position.) I left the deck for about a quarter of an hour, when the chief mate took my place. With that exception, I was on deck until the time of the collision. I kept a look-out at the wheel compass, and am certain there was no change of course up to a few seconds before the collision, when the captain gave the order to hard-a-starboard. If that order had been carried out, it would only have caused the *Ocean* to strike us about the engine room, but there was no time to carry it out. The *Ocean* would not have cleared us if it had been carried out. Placing the model of the *Ocean* the same distance on the port bow of the *Fusing*, the witness said if the latter had starboarded her helm in that position there might have been no collision. We should have had to have starboarded some five or six points. From what I know of the respective courses and the speed of the two ships, it would have been impossible for them to have struck, supposing the *Ocean* to have been on our port bow. To have got into that position the *Fusing* must have gone off her course five or six points, which she did not do. In a thick fog, hearing a whistle not very far off, but not seeing anything, it would be my duty to return the whistle. If the whistle was ahead, I should stop instantly,—if two or three points on the bow, I should, in that place on the coast, as a measure of precaution, slow the engines.

By His Lordship—From the quarter in which I heard the whistle, I could not tell whether the other ship's head was pointing North or South—coming towards us or going away from us.

Examination resumed—I should not change the ship's course under any circumstances until I saw the other ship. That was the reason I did not change her course when I heard the whistle. If the ships had kept on their true course towards their respective ports, North and South, I believe they would have passed clear by a quarter of a mile. The only indication of the speed of the *Ocean* that I had was the little jet or feather of water thrown up by her stem. I am not aware there was any tide there to cause that. I should imagine her speed to have been six knots. I should estimate it at that, but I only had time to turn round from the engine room and glance at her. I am quite sure she was moving forward, towards us. She cut into the *Fusing* about 15 feet. The *Fusing* had a very large beam, about 30 feet. She was what would be called a bluff-bowed ship. The *Ocean* cut into the fore skylight, about 20 or 30 feet from the stem. There was some rice in bags stowed just where the *Ocean's* bow struck. The compartment

was full of cargo. I should say it would have added to the resistance of the *Fusing* to the blow, as rice is very heavy. After the collision, when the ships came apart, the *Fusing* seemed to be quite stationary and settling down. The *Ocean* disappeared by backing into the fog, somewhere about from where she came. The sea rushed into the *Fusing* immediately, and the bow seemed to go under directly. The plates seemed to be all broken and smashed. She sunk in about four minutes, I should think. We tried to clear away the boats, as being the only step we could take to save life. One boat saved several lives. I was clearing another boat when the ship sunk, and I went down with her. I came to the surface, and caught a log of wood, and was afterwards taken into Capt. Andrews' boat.

By Mr. HANNEN—On the morning of the collision there was a swell on, but not enough to check the speed of a vessel coming South. There were 26 persons saved in the *Fusing's* boat. They were as many as she could carry in a calm heaving sea. There were other boats coming from the *Ocean*. I do not know where the ship was when I came on deck at eight o'clock the night before. I was told she had passed Shaweishan. I believe there were indications of fog at that time. There was not a similar fog to that of the following morning. There was sufficient fog to obscure the Shaweishan light—a very little fog will do that. The light is very high, and sometimes we can see the land and not the light, because of fog. I had no orders to slacken the speed, although it was a foggy night, and so kept on at full speed. I estimated the speed by the vibration of the ship, and by looking over the side of the ship at the water. We slackened speed in the morning because of the increased fog. I kept the sails up, because I thought the fog would clear off and a wind spring up. The sails were doing no harm, and in fact no good. I had every reason to expect the fog to clear off, as it had done before, and it did clear soon after the ship was lost. I heard a whistle on our starboard bow, and it was answered almost instantly. I know it takes some little time for sound to travel. The *Ocean* cut into us 15 feet, but I did not see that a portion of our bow was torn out in the direction of aft. I was looking at the *Ocean's* bow, and for a means of escape. After the first whistle, I was not certain which way she was steaming—whether towards us or away from us. The second whistle seemed to be travelling towards our stern, and I concluded she was a passing steamer, until I saw her. There was a Chinaman on the watch with me. He was not a quartermaster. There were four quartermasters on board, one of whom was sick. One of them was drowned. I cannot say whether our ship went at all to port. I did not look at the compass. I did not hear the helm changed. I could have heard the helm chains from where I was standing. The *Fusing* would, I think, lose her way in about two lengths after slowing the engines, and she would stop entirely in 30 seconds after reversing them. The time between my striking the gong to go slow, and the Captain's order to go full speed astern, was I think two or three minutes. (Witness then described the mode of communicating from the deck to the engine-room.) If the engines were going slow, one gong would make them go dead slow—the engines only just moving.

By Mr. DRUMMOND—Had the second quartermaster not been sick, he would have been on deck. We put a sailor in his place. Sometimes a man was kept on the look-out in the daytime, and nearly always two during the night. I do not think it necessary to have two, but it is the custom. Had there been two men on the look-out, I do not think the collision would have been avoided. The first whistle I heard was, I think, heard all over the ship, but it was not reported by the look-out man. I left the sails set because I expected a breeze from the S.S.W. and the fog to clear, as that frequently happens on this coast.

By Captain ROSKELL—I feel quite sure in my own mind that the first whistle I heard was on our starboard bow. There was nothing to obstruct the sound.

By his LORDSHIP—The weather between twelve o'clock and two on the previous night was foggy—it was what we called a drifting fog, opening and closing. The course was not altered during that time. I hauled in the log at twelve, and found we had run 35 miles. The chief mate hauled it in at eight in the morning, but I do not know what was on it. It was down when the ship sunk.

JAMES FERRIER, examined by Mr. Eames, deposed—I was chief engineer of the *Fusing*. I went off duty at 8 o'clock on the morning of the 4th. The second engineer relieved me. I went to my berth, close to the engine-room skylight. The first I heard of something being wrong was hearing a gong. When I left the deck, the ship was going at reduced speed, about five or six knots. The gong meant to go slower—about a mile-and-a-half an hour. I was partially dressed, and made preparation to go on deck. I got on deck just at the moment of the collision. I looked down in the engine-room, and saw the engines were going astern. The bow of the *Fusing* was just going under water. The *Ocean* was backing away from her. I went below, by the Captain's order, stopped the engines, and opened the safety valve. The ship sunk in about four minutes. I had just time to run aft, after coming up out of the engine-room, before the ship sunk from under me. The ship's best speed was about 9 knots, at 62 revolutions; when slowed down, there would be about 48 revolutions. The engine-room log was lost. I consider the *Ocean* had cut two or three feet more than half across the *Fusing's* deck. I heard the captain give the order to move the engines at dead slow, to keep the ships together. The *Ocean* was then backing off. Captain Brown, Captain Andrews and myself were talking together after the collision. Captain Brown in the course of the conversation said he had had some little trouble with his engines at Singapore—they would not go astern, but were now a little better.

By Mr. WAINEWRIGHT—My cabin was on the starboard side. I did not go forward at all. The *Ocean* was just backing out when I first saw her after the collision. I was 70 or 80 feet away from the bow, but could judge the distance the *Fusing* was cut into, by seeing the *Ocean's* bow half across her deck. At full speed the *Fusing's* engines made 62 revolutions, and reduced speed would make a difference of three or four knots per hour. I judge of that from experience, and my knowledge of the ship, after being in her for a year and a half. The time that elapsed from the collision to the sinking was about four minutes. I was about a minute and a half in the engine-room. Captain Brown did not mean that he had any difficulty with his engines on this occasion. He was speaking of them generally. He said he usually ported his helm, because the *Ocean* went round quicker that way. He did not mention that in connection with his not knowing where the *Fusing* was.

JAMES SHERER, examined by Mr. Drummond, deposed—I was second engineer of the *Fusing*. I took charge of the engines on the 4th April, at 8. a.m. The engines were then making 47 or 48 revolutions. I do not know what speed that would give.

By His LORDSHIP—I have known the *Fusing's* engines to make 69 revolutions. That was in the river, going to Hankow.

Examination resumed—In bad weather and with a sea on, the engines might make a great number of revolutions, and the ship make little way. In ordinary weather the revolutions are a guide to speed. On looking at the sea I would be able to judge the speed. On the morning of the 4th April, there was a slight swell on, but no broken water. When I took charge of the engines I was told to keep them as they were. About two hours and-a-half after I had been on duty, I received an order by the gong to go slow. I obeyed it immediately, and reduced the engines to dead slow, about 20 revolutions. She continued at that about ten seconds, when the Captain called down the skylight to stop her. I did that, and entered both orders on the log slate. Almost immediately I received another order to go full speed astern. I obeyed it, and the engines were going astern for about a minute. I felt the shock of the collision, but cannot judge what the ship was doing at that time. I remained in the engine-room about half-a-minute, opened the tube and furnace doors, and then went on deck. The chief engineer told me the ship was sinking. He went down into the engine-room, and I followed him. I have been an engineer for two years and two months, and had a certificate, but it was lost in the ship.

By Mr. WAINEWRIGHT—I saw there was a slight swell on that morning, but no broken water. I merely glanced over the rail as I went along. I could not judge of the speed of the *Fusing* from the number of revolutions of the engines. My cabin was on the port side, near the engine-room. There are no means of calculating the exact speed from the number of revolutions. I have no reason to suppose that I have a more accurate recollection of the circumstances now than when I was before the Naval Court. From the time I got the orders from the Captain until the ship was struck was about a minute and a half. When I left the engine-room, the engines were going full speed astern. I "have no mind" what I said before the Naval Court. When I came up out of the engine-room, I went first to my berth, and then met the chief engineer. He went down to the engine-room and I followed. We were down about half-a-minute, and the chief engineer then said we would go aft, as it was our only chance of escape.

By Mr. DRUMMOND—The reason I left the engine-room was that I thought the ship was going to sink immediately. I could see she was very much down by the head, because the platforms were sloping.

FREDERICK H. WALLACE (examined by Mr. DRUMMOND) deposed—I was chief officer of the *Fusing*. At the time of the collision I was in my berth. I had been on duty from two o'clock until eight. I relieved the second officer at nine for a few minutes. The ship was then going between five and six knots, on account of the fog. By the wheelhouse compass, the ship was steering N. ¼ E. There was a deviation of ¼ point W. by the standard compass. The true course was N. ½ E. We did not see Shaweishan, but judged that we passed it about seven on the previous evening. The log was put over at eight o'clock, and was hauled in every four hours. The collision took place about 120 miles N. of Shaweishan, but I cannot be certain within a margin of five miles. We took no observation that morning, because there was no sun, and our only guide to the position of the ship was the course steered and the distance run. My cabin was on the port side, aft, and I was awoke by hearing the Captain call out. I got out of bed, and almost immediately felt the shock. I went forward, and saw that the ships were then in actual contact. She had cut the *Fusing* more than half through. I did not observe how the engines were going at the time. Almost immediately before the collision, I heard the Captain order the helm to be put hard-a-starboard. It was about ten seconds previous. The order to reverse the engines had been given before. From the time of the collision to the ship sinking was about three or four minutes. I went aft, and then saw the *Ocean* backing off into the fog. There was a slight roll of about three or four feet, but no broken water, and not sufficient to check the *Ocean* more than half a knot. It would not have increased the speed of the *Fusing* so much as a knot. There was no wind to make our sails draw. When the water had got to the funnel, I jumped overboard and was picked up by one of the *Ocean's* boats. Everything was done that could be to save life.

By Mr. HANNEN—I hauled in the log at eight o'clock on the morning of the collision. It marked 99 miles. I had also hauled it in at four o'clock, and it then marked 71 miles. I do not not know what it marked at twelve o'clock. The lines drawn on the chart produced were, I think, the course steered. At seven the previous evening, we were in six fathoms. The weather was at times foggy and clear. It was foggy when we passed Shaweishan. We could see about a mile, and were going at full speed. I cannot say if the *Fusing's* bow was torn in a backward direction. I only saw the *Ocean's* bow was more than half across the *Fusing's* deck.

By Mr. DRUMMOND—The 99 miles were made in 12 hours, from eight to eight, but for the last two hours we went at reduced speed. For ten hours, the speed was about 8¾ knots, and from 6 to 8 o'clock, it only about five or six knots.

Captain BARTON deposed—I surveyed the *Fusing* just before she left on her last voyage, on behalf of her owners and the insurance offices—the Union of Canton, the Yangtze, the China and Japan and the Chinese. The

report produced is the one I made at the time. It bears my signature.

By Mr. Wainewright — I study the interest of those offices, and it is my duty to survey all ships insured with them. All the offices named had a risk upon the *Fusing*. My report was a favourable one. She was an awning-decked ship, and her plates were half-inch and five-eighths, the top plates being lighter. She was strongly built for her class, 80 at Lloyd's. I consider her plates were strong enough for her size. She had been in collision with the *Haining*, and I simply looked to see if the repairs had been properly carried out.

The Court then adjourned till 10.30 next morning.

May 21st.

The Court resumed this morning at 10.30, the first witness called being,

Chen Ah-kung, who, examined by Mr. Eames, through a native interpreter, deposed—I was one of the native quartermasters of the *Fusing*. I left Shanghai in the ship. I was on duty at the time of the collision. There was a thick fog. It was part of my duty, in a fog, to blow the whistle. On that morning, I blew it often, but cannot tell the exact time; there was no clock in the wheel-house. I went on duty at 8 o'clock. I heard another whistle on the starboard side of the ship; I cannot tell the position exactly, but the sound came from a vessel a-head on the starboard side. I could not see the vessel. When I went to the wheel, the *Fusing* was heading N. ¼ E. I kept on the same course, without change. I heard the *Ocean's* whistle twice. The *Fusing* answered the first whistle, and then whistled twice afterwards,—three times in all. The ships came into collision in a very short time after the *Ocean's* first whistle. I have been a quartermaster for about a year. The *Fusing* was going very slow when the whistle was heard. There was no order given on board the *Fusing* until after the last whistle on board the *Ocean*, when the Captain ordered me to change the helm to hard-over-starboard, but I had no time to get it over before the collision. There was no time to alter the course.

Mr. Eames said they had called this witness as a matter of course, and he thought he need not ask him any more questions.

By Mr. Hannen—On the evening of the 3rd, I was on duty from six to eight o'clock. The weather was "pretty dark," with very slight fog. I could not see the Shaweishan light on account of the fog. At the time of the collision, the captain, second officer, and also a quartermaster and a sailor, were on the look-out, besides myself at the wheel. The quartermaster and sailor were both drowned. The quartermaster's name was E-sun and that of the sailor Ah-kun. The captain, second mate, and quartermaster were walking the deck, the sailor being at the extreme end. The first whistle was very close, and somewhat startled me. The noise was quite close; and considerable bustle ensued. I sounded the whistle, and the second mate ran into the wheel-house, and pulled the string of the gong to stop the engines. I cannot speak certainly as to the time between the sound of the second whistle and the collision, but I should think it was about half-a-minute. During that half-a-minute the captain told me to alter the course, but I do not know what else he did. The quartermaster who was on watch was slightly sick, but he kept his watch nevertheless. From the time of hearing the first whistle, I am sure I did not alter the course of the ship. I kept the helm always amidship, and maintained a straight course. That is the position of the helm when pursuing a straight course.

Re-examined by Mr. Eames—It is no part of my business to ascertain who is on deck on the lookout. It is my business to attend to the wheel only. When on a straight course, I always keep the helm amidships.

Mr. Drummond said that closed the case for the plaintiff.

Mr. Wainewright, in opening the defendant's case, said he entirely concurred in the proposition laid down by his friend, Mr. Drummond, that it was a case not to be decided by Admiralty rules, but was solely a question of seamanship. One of the vessels belonging to a country that had not come under the sailing rules, those rules did not apply to it. At the same time he agreed that the sailing rules that had been adopted by every civilized nation were very good guides as to what was the duty of navigators, even though they were not bound by them. So far, he went with his friend's argument, but no further; and he would draw his Lordship's attention to the first proposition, that in cases of this kind the plaintiffs had cast upon them the burden of proof that they were in the right and the defendant in the wrong. There were several cases upon this point reported. One was the *City of London* (*Swaby*, page 301), in which Lord Wensleydale had laid it down that the burden of proof, in such cases, lay with the plaintiff, who must show that the cause of loss lay with the opposite party. He would mention two other cases in the same connection, those of H.M.S. *Swallow* (*Swaby*, p. 31), and the *Ligo* (2, *Haggard*, p. 360.) He drew his Lordship's attention to the proposition in the first instance, because he contended that, unless the plaintiff made out a strong and conclusive case against the *Ocean*, the defendant could not be charged with any liability whatever. The plaintiff laid two charges against the *Ocean*,—one, that she was going at an undue rate of speed; and, secondly, that those in charge of her took a wrong step, in ignorance of the facts of the case by which they were surrounded; or, in plain language, that the *Ocean's* speed was too great, and that she was wrong in porting her helm as she had done. The circumstances which surrounded the case were pretty well agreed upon, as would be seen by looking at the preliminary acts filed by the plaintiff and defendant respectively, which agreed as to the time and place of the collision; and, with regard to position of the ships they would be found to be pretty correct when worked out on the chart. There was, however, a difference of five or six miles in the calculations. The *Ocean* made it 130 miles N. of Shaweishan, while the *Fusing* gave it as 125 miles. The plaintiff said the wind was very light at the time, but the defendant's experience of it was somewhat different.

His Lordship—They were going with it, and you were going against it—that might make some difference.

Mr. Wainewright admitted that, and went on to say that both agreed that it was very foggy at the time, and that there was no question respecting lights in the case. They also agreed that when the ships came in sight, they were only 1½ or 2 lengths distant from each other, though some allowance must be made in that agreement, because the *Ocean* was so much longer than the *Fusing*. As to the course and bearing of the ships, some more evidence would have to be obtained. The facts already elicited, however, showed there was no great difference between the cardinal points of the case, except on the very important point as to which bow the *Ocean* was on as regarded the *Fusing*, when she was first heard. The *Ocean* said she was certainly on the *Fusing's* port bow; while the *Fusing* was equally certain that the *Ocean* was on her starboard bow when first heard. Those were the outlines of the case, which, doubtless the Court were familiar with by this time. As to the two charges brought against the *Ocean*, the first of which was the question of speed, evidence would be given as to the speed she was going, and he thought they would be able to show she was going a little over six knots, while the *Fusing* says she was going five-and-a-half or six—but that was not in accordance with the evidence afforded by the log, which was somewhat strange. Plaintiff said the collision took place 125 miles from Shaweishan, but the times and distances run given by them, would leave them at 8 o'clock, on the 4th, 103 miles N. of Shaweishan showing a difference in 2⅔ hours of 22 miles, which would give the *Fusing* a speed of over 8 knots, during the last two hours and forty minutes of her run. The Captain wanted to make it appear that he was 120 miles N. of Shaweishan, but, even taking an extreme case, that would give 6½ knots as the rate they were going. Mr. Wainewright next commented on the evidence given by the engineer and mate of the *Fusing* as to her speed, and also on the mode by which they said they had formed it,—viz., by looking at the sea over the ship's side; and then said he thought he might ask the Court to take it, that the speed of the *Fusing* was about 6½ knots; and by the end of the case he thought the Court would find that the two vessels were going, at the time of the collision, at a nearly equal rate of speed. There was not a pin to choose between them on that point. The question, therefore, was, was it a too great rate of speed under the circumstances? He would now refer the Court to *Pritchard's Digest*, p. 186, where reference was made to the case of the *Europa* (14, *Jurist.*) In the present case, the defendant said it was possible to have avoided the collision, provided the *Fusing* had done all she could, but that his efforts were defeated by the way in which the *Fusing* was handled. In the next case he would cite (the *Perth*, 3, *Haggard*, p. 414) the decision looked as if the Court thought six knots in a crowded way was not too great a speed—and that was about the speed the *Ocean* was going. He meant to contend that it was perfectly reasonable that a steamer in a fog should go six knots. There were several other cases he might quote, in one of which two steamers, going at five knots, came into collision in a harbour, and that was held to be a reasonable speed in such a place as that. It would be for the Court to say whether five or six knots was a reasonable speed in this case. The vessels were not in a crowded way nor in a harbour, and they would also prove that the *Ocean* was going outside the usual course of vessels sailing North—that she was not making for Shanghai at all, but for the Saddle Islands, much more to the East. It would be also proved that extra precautions were taken on board the *Ocean*, and that when she got near the Shantung Promontory, she continued on a course that took her a good deal further out than the course she would have steered had the weather been clear. She then steered East, and Captain Brown considered he was far out of the track of vessels going North, and that he was in no danger of coming across the track of any vessels, because there was no port lying to the Westward.

His Lordship—Except sailing vessels.

Mr. Wainewright would except sailing vessels, but he did not expect that any large steamer would be crossing the *Ocean's* course. During the fog, the whistle was sounded, and warning was so given to anything that was approaching. Next came the point, that a slow rate of speed would have subjected the vessel to the influence of currents, which would have taken her out of her course, and it was clear the other side entertained a similar idea.

His Lordship said the preliminary acts said nothing about currents.

Mr. Wainewright said no, but he should be able to prove the existence of currents, and also their influence, if speed was reduced too much. Reducing the speed too much interfered with the navigation of the ship, which would not answer her helm so well, as the Assessor knew. The next question was—What was the *Ocean's* duty with regard to her helm? As he had said at starting, the case did not rest upon Admiralty Rules, but solely on the principles of navigation. It had been laid down in *Pritchard*, p. 157, section 270, that vessels meeting each other at sea must pass on the larboard (port) hand. Then in a Privy Council case cited in Pritchard at page 207 it was decided that when two vessels approach each other, having the wind free, they must pass on the starboard hand; and again in the case of the *Chancellor*, the rule of the sea is laid down that, when two vessels meet each other, having the wind free, each vessel is bound to port her helm and go to starboard of the other.

His Lordship—But all those cases suppose that the vessels see each other.

Mr. Wainewright said that was so. He thought he need not cite any more authorities, but there was an American case he might mention, which was also a guide to the settled rules of navigation, whether for steam or sailing vessels, which said that on two vessels meeting, each shall port and turn to the right. Therefore, the question was—Was the *Ocean* justified, under the circumstances, in porting her helm; she heard the *Fusing* approaching on her port bow, and very near to her—it was known by her whistle that she was very near. The *Ocean* immediately stopped her engines and went full speed astern, a sign that the danger was thought imminent by those on board. Having the most complete conviction that the *Fusing* was on her port bow, the *Ocean* next did what he (Mr. Wainewright) contended, she was fully entitled to do—ported her helm to get further out of

the way. The *Fusing* must have been a "meeting" vessel, for if the *Ocean* had been following her, she would have heard her whistle several times, and therefore the reasonable thing to do was to port, and she had a right to suppose the *Fusing* would do the same. As the Captain of the *Fusing* had said yesterday, there were no steamers on this coast that did not do as English steamers would do, and, therefore, the *Ocean* had a right to expect that the *Fusing* would port her helm. As to the question of what was her real direction, he thought his Lordship would come to the conclusion, when he had heard the evidence for defendant, that the *Ocean* was justified in thinking the *Fusing* was on her port bow. He did not, in fact, think there was any other course open to the Court, except to say that the ships were very nearly end on to each other, justifying the *Ocean* in porting her helm. Knowing what was the best to be done under the circumstances, they would be able to prove that it was their duty to go to port, and that it was the duty of the *Fusing* to have ported also, which she did not do, but attempted to put her helm to starboard. That point he must leave to the Court; but there was another charge still, and a very grave one, against the *Fusing*, which was, that, when they heard the *Ocean's* whistle, they did not reverse, but went on for about two minutes without reversing their engines, until the vessels were only about 1½ or 2 lengths apart, when they did reverse their engines. He would be able to show that if the *Fusing's* engines had been reversed directly the *Ocean's* whistle was heard, the collision could not have happened. It was their duty to have stopped and reversed at once. On this point, he would refer the Court to *Parsons*, p. 536 to the *Perth*, 3, *Haggard*, to an American case, 6, *Wallace*, and to the *Frankland v.* the *Kestrel* Law Reports, Privy Council cases, vol. 4, p. 529. The marginal note to the latter case said that a steamer in a fog hearing another's whistle, was bound not only to stop her engines, but to reverse them, and that was supported by the judgment. He submitted that, in this case, if the *Fusing* had reversed her engines when she heard the *Ocean's* whistle, there would have been no collision at all. That was proved by their own evidence. Capt. Andrews had said that when her engines were going slow, she would have stopped in five or six lengths; and the mate said she would come down to three knots when going slow. Then he (Mr. Waine-wright) said that if she had reversed her engines, instead of contenting herself with stopping, she would have stopped her way altogether in a very short time; if she had reversed, she would have stopped some 20 or 30 feet from the *Ocean*, and the collision would have been avoided, He, therefore, said the collision arose through the *Fusing* not stopping and reversing her engines, which he contended she ought to have done. Then, again, the *Fusing's* screw was a right-handed one, which would have had the effect of throwing her head to starboard when she went astern, a fact that must be borne in mind with respect to this collision. Those were the points on which he should rely on behalf of the defendant—the neglect of the *Fusing* to port her helm and her failure to stop and reverse her engines. One thing, how-ever, he had passed over, relative to the question on which bow the *Ocean* was, and that was the look-out kept on board the *Fusing*. The evidence of the witness who had been examined on the point that morning, showed that there was most direct conflict of testimony. The second officer had said the quartermaster was sick and not at his duty, while the witness that morning said the quartermaster was a little sick, but was on deck with another man. That at least showed there was some doubt on the point; and the Captain himself was evidently in some doubt, when he went for-ward and asked the second officer "Where is she?" If he was so sure the *Ocean* was on his starboard bow, why should he have asked that question? The second officer also said the man on the look-out reported a whistle on the starboard bow, but the man at the wheel said he did not hear anything said as to where the whistle was. The sole evi-dence as to where the whistle was, lay with the Captain and second officer. He (Mr. Waine-wright), therefore, thought upon the evidence adduced on the question, that there was some doubt about the position of the sound. He would now refer for a moment to the case of the *Rona* and *Ava*, quoted by his friend. That case, he would submit, was distinguishable from this, insomuch that the *Ava* began to port when she was about three miles off, and he thought his friend was wrong in his argument that when a whistle was heard, but the vessel not seen, they must sit down, put their hands in their pockets and do nothing until the approaching vessel was seen.

His LORDSHIP thought it was one of the misuses of the word "seen," because there was also the sense of hearing. He did not think that could be the meaning intended—that when a vessel was heard approaching, but not seen, that nothing was to be done on board the vessel that heard her coming until she was seen.

Mr. WAINEWRIGHT said it certainly could not be meant that the captain of a ship should sit down and put his hands in his pockets on hearing an approaching ship, and wait until he saw her before doing anything to avoid her; but that was the construction attempted to be put upon it. He would not trouble the Court with any further observations now, but would leave what else might have to be said until after the hearing of evidence.

WILLIAM BROWN was next called, and (examined by Mr. HANNEN) deposed—I am master of the steamship *Ocean*. I have been a master for 20 years. I produce my certificate. It is an extra one. The *Ocean* left Chefoo on the 2nd April, at 2.30. My crew consisted of 19 Europeans and 20 Chinese. The weather was fair. I passed the North Rock at 0 o'clock in the afternoon, leaving it one mile to the S., steering E. ½ N. That course I laid down on the chart produced. Kept that course till 8 o'clock, and then changed to E. ¼ N., and ran it till three o'clock in the morning, when we were 74 miles from the North Rock. Then changed course to S. ½ E. At eight on the previous evening the weather was a little foggy. I kept out further than I otherwise should, in consequence of the fog, to avoid steamers on the coast. From three o'clock kept S. ½ E. till noon on next day. At noon, took an observation, and put down the latitude in the log (produced), 36° 37″ W. and longitude 123° 6″ E. I marked the spot on the chart (produced.) The old log was filled up at Chefoo, and I was obliged to purchase this one.

Mr. HANNEN, referring to the chart produced, said—This chart is the one used by Captain Brown on this voyage, and is left exactly in the state he used it. There are a few pencilled lines drawn on it, which he will explain.

Witness explained—There are two lines drawn on the chart. I discovered an error in the first calculation, and of course corrected it. Therefore, the second line is the accurate one. By 4 a.m. on the 4th, we had run 136 knots by the patent log; by 8 o'clock, 161; making about 6½ knots from four o'clock. At four o'clock, the weather was getting a little foggy. It was sometimes clear and then foggy. At four o'clock I was in bed. The second officer called me, and told me it was a little foggy. I told him to double the look-outs and blow the whistle if it became thick. The wind was then about S.; it had been before about S.E. I got up at seven, but had been up several times during the night. During the night it was blowing a strong breeze, and freshened in the morning; the strongest part of it was about six. There was also a strong sea on. It had washed down in the engine-room, and the decks were all wet. From four o'clock to eight, the speed of the vessel had decreased from about 8½ knots to about 6½. After eight o'clock, she continued at about the same speed, as far as I could judge. I walked round, then, to see if all the officers were in their proper places, and the whistle ready for blowing. There were two look-out men and four other seamen on the deck, with two quartermasters and the second officer. One look-out man was right forward, another 15 feet aft of him, the officer on the bridge, a quartermaster at the wheel, and another just abaft the engine-room hatch. It lightened a little at eight o'clock. After breakfast, I walked about the deck till a few minutes after ten, and then went on the bridge. I remained there until the collision took place. Just after we sounded our whistle, it was answered by another on the portside. I am quite certain it was on the portside. The man forward reported a whistle a-head. I am not aware that any one else reported it. The second officer said something about a vessel on the portbow. I at once ordered the helm to be ported, hard-a-port. The answering whistle was not loud, but a kind of "wavering" sound. I thought the ship was very near. I saw the order to hard-a-port executed. That was the first order I gave. I did not give any order to put the helm a-starboard. I also telegraphed to the engine-room to stop and go full speed astern. The telegraph is a round dial with a handle on it. The handle was turned round to full speed astern. It sounds a bell in the engine-room. I immediately took the handle and turned it, because I thought the other vessel was very close to us. In about a minute, or a minute-and-a-half, the *Fusing* hove in sight. She seemed to be heading right across our bows. That would be about N.W. by the compass. The compass was on the bridge, and I saw it. When the *Fusing* came in sight, the *Ocean* had fallen off. She was then heading S.W. ½ W. She had fallen off about 45 degrees. Our screw is a left-handed screw. When going astern, this would tend to throw her head to port. When the *Fusing* hove in sight, the first thing I saw was her mainsail, and immediately after that I saw the whole length of her broadside. I looked at her stern, and saw the propeller was still moving, and her helm hard a-starboard. The collision took place in 30 or 40 seconds afterwards. The *Ocean* struck her about 15 or 20 feet abaft the stem. I remained on the bridge looking out for the collision until the moment we struck her, when I left the bridge and ran forward. I looked at her bow. The *Ocean* was going only about three knots, but the *Fusing* seemed to be going very fast. The plates of the *Fusing* were torn back by the force of the collision. We struck her at nearly right angles. When I looked over the side, I saw "the wound was fatal," and called out to the people to come on board, but I saw nobody. Our ship got clear, and I then stopped the engines. I was forward, and sung out to stop the engines. They were stopped, and then I ordered out our boats. All our boats were lowered. There were four. We saved 58 people,—five Europeans, the rest Chinese. One of the *Fusing's* boats also saved life. They came to the *Ocean*, and were hauled up on the leeward side. They could not have come alongside on the portside. There was too much sea on. Our fore compartment was full of water, and I had to throw cargo overboard. My boats were out two hours, and I remained by the wreckage seven hours. I was running outside the track of steamers coming from Shanghai. I did so to keep out of the way of steamers on the coast, and because it was a direct line for the Saddles. I was bound for Swatow. When I left Shanghai for Chefoo, I kept in the track of steamers and laid it down on the chart. At the time of the collision, I was about 20 miles outside the usual track of steamers. I was going at about 6½ knots, and I consider that a very moderate rate under the circumstances. With the sea that was then on, the *Ocean* would not have been handy with her helm at a much less rate, on account of the chopping sea. We were not so likely, either, to be drifted about by currents.

His LORDSHIP.—Is there anchorage all along this coast?

Mr. HANNEN.—No my Lord; at this spot there were 42 fathoms of water.

Witness resumed—I have since been informed that there are currents on that coast. I was not aware of it at the time. The exact spot was marked on the chart by observation. The point where we changed our course at noon is marked on the chart, and is the exact spot of the collision, by observation. The spot marked with a blue cross is the spot of the collision by dead reckoning. After leaving this spot, I have drawn my course for Shaweishan. I took the course to reach Shanghai, because I was in disabled state. I left the spot of the collision at 6 p.m. on the 4th ult. The course by the compass that I took was S. by W. ¼ W., and there was a ¼ point difference, making it ½W. true. The weather was clear, and the wind N. I went af 6 knots, because I did not know whether the collision bulkhead would stand at a greater rate of speed. Continued at that pace till a little past nine, when I found the bulkhead would stand, and increased the speed. There was a strong breeze from the N., and I went at 8½ knots. I continued

at that until 7 in the morning, and then took soundings—13 fathoms. Went on at the same pace, until 9.30, and then saw Shaweishan just about the time that I expected to sight it. The spot of the collision as marked on the chart, worked out true—came out correct within a mile or two.

His Lordship asked how many miles he had run.

Mr. Hannen (after measuring on the chart,) said it was 134.

Mr. Wainewright.—And a little more where the course turns in.

His Lordship asked how far that differed from the *Fusing's* chart.

Is was said it was not the same chart, nor on the same scale as the *Fusing's*.

Captain Roskell measured the two charts, and found the *Fusing* had laid it down as 121 miles, and the *Ocean* 131 miles, to the scene of the collision from Shaweishan.

Mr. Wainewright—And in their preliminary act, the *Fusing* gives it as 125 miles.

Witness resumed—I had a conversation with Captain Andrews on the day after the collision. I did say that I had had a little difficulty with my engines in going astern, but I did not say they were a little better now. I did not tell him that my reason for porting my helm was that the ship would go round quicker on that helm. I remember having a difficulty when the starting pedestal broke. That pedestal was renewed altogether in Shanghai. There was no difficulty in reversing the engines after that. I might have talked to Capt. Andrews about the ship's going. It is just possible I might have said the *Ocean* went round quicker on a port helm, but I did not give it as a reason for porting on this occasion, nor was it a reason. Part of a plate of the *Fusing's* side was left on board the *Ocean*, after the collision. I have not got it now, because it was washed overboard. It was very thin,—much thinner than the *Ocean's*.

By Mr. Drummond—I was never up this coast before to Tientsin. I went up in company with another vessel, and following the course she took. That is all I know about the track of vessels on that course, and from what I have been told about it by other captains. The chief mate keeps the log. I cannot say when it was written up. I have not got my official log here. The first course I laid on the chart was incorrect, but I corrected it immediately after. It made the vessel further out. I was told that the wind was strongest at six o'clock. It decreased considerably from six till eight, and then freshened again. Our speed was decreased to six-and-a-half knots by the sea and wind. I do not know what speed the engines were going at—or what revolutions they were making. They were not to my knowledge, changed to reduce the speed. The greatest speed of the *Ocean* is a little over nine knots. At the time of the collision, I could see perhaps a distance of a length and a half of the ship, but not more, on account of the fog.

At this point of the case, the Chief Judge, after consulting with the Assessor, expressed the opinion, 1st, in the case of the *Fusing*, that the rate of speed, considering the dense fog that prevailed, giving it only as stated in evidence by the witnesses for the plaintiff, as five and a half or six knots per hour with a following sea, was too great; that the *Fusing* did not reverse on hearing the first whistle of the *Ocean*, but only slowed down by order of the second officer, and then stopped by order of the Captain; and that her lookout was insufficient. As regards the *Ocean*, the Court considers the Captain's own evidence conclusively shows that, at the least the steamer was certainly going at six and a half knots, after allowing for all opposition of wind and sea; and that notwithstanding the fog—so dense that he could not see more than half a length beyond his own ship's length—he never slowed his engines, but kept them at the full speed rate of eight to nine knots, however, much the wind and waves may have checked the speed; and the Court considers that the rate the vessel was going, six and a half knots, was unjustifiable in such a fog as then prevailed. The Court did not wish to stop the case at this juncture, but unless there was evidence to be produced that would alter the opinion just expressed, it was hardly worth going on further. It was the duty of a captain to go dead slow in a fog, and, when another vessel was heard, whether ahead, or on the port or starboard hand, it was his duty to stop and reverse the engines at once. He must say that for those who had the care of the lives of passengers and crew, to go through the water, in a dense fog, at the rate of six knots per hour, was monstrous. It had been shown that the *Fusing* could go as slow as three and-a-half knots, and she ought to have gone down to that. It appeared to the Court and Assessor that both steamers were wrong in going at the rate of speed they did under the circumstances.

Mr. Hannen said the Captains of steamers on the coast considered it was the best speed they could go at, under such circumstances.

His Lordship—Then it is high time they learnt differently.

Mr. Drummond asked if the Court would express an opinion on the *Ocean* porting her helm.

His Lordship did not reply directly, but said if there was likely to be an appeal he would go on taking the evidence.

Mr. Hannen—So far as we are concerned, we think we are not justified in throwing up our case.

Mr. Wainewright—If the case is appealed, the underwriters will want all the evidence they can get.

His Lordship—Very well, then we will go on with it; but so long as the fact remains that the ships were going six knots an hour in a dense fog, it will not alter the opinion of the Court.

Mr. Drummond said that, so far as the plaintiffs were concerned, they were willing to accept the opinion expressed by the Court as a judgment in the case.

His Lordship (to Mr. Hannen)—Are you going to show that you were going less than six knots per hour.

Mr. Hannen—No, my Lord.

His Lordship—Then you will now confine yourselves to the question of porting the helm?

Mr. Hannen—Yes, my Lord; but the question of porting might be shown to have influenced the speed.

His Lordship—Is it intended to appeal?

Mr. Hannen—I cannot say; we are in the hands of the underwriters.

A brief consultation took place, and it was decided to go on with the evidence.

Capt. Brown resumed—I do not know how many revolutions the engines were making. The whistle I heard was a "wavering" sound. I do not know that that would indicate distance—it seemed to be very close to us. The *Ocean* would perhaps go a quarter of a mile after her engines were put full speed astern, having been originally full speed ahead. I am not sure about it, and can only give my opinion. I ordered the helm to be put hard-a-port, and at that time saw nothing but fog around. I heard only one whistle before porting my helm. That order would only be justified by the other ship being nearly end on to me. I should say those words "end on" cover two points on each side the bow. I am not aware that it has been decided that a point-and-a-half is defined as being the outside limit. I never gave an order to starboard. The second officer was on the bridge with me, and if he had given the order to starboard I must have heard it. I had a man—a European—stationed for the purpose of passing on my orders to the man at the wheel. If he says he heard an order given to starboard, I cannot imagine where he got it from. I do not know that he did hear it—I cannot account how he got it into his head. I do not think it is possible he could have heard it from the other ship, and passed it on as an order from me. When I saw the *Fusing's* propeller moving, I should not like to say whether it was going ahead or astern. I noticed clearly that her helm was hard-a-starboard. I noticed nothing particular about the sails, only that they were set. I have only had experience in collisions previously in Shanghai—nowhere else. I gathered all those important points as to the propeller, the helm, and the sails at that critical moment at a glance—I saw the whole ship. The collision took place in about 30 seconds afterwards. At Singapore, the *Ocean's* engines would not move, but I do not say that I told Captain Andrews so. I might have said something to him about the engines. I certainly did not tell him that I ported my helm, on the occasion of the collision, because the *Ocean* would go round much quicker on a port helm. I ran into the *Ichang* about three months ago, on leaving the wharf; and on another occasion, at Woosung, the *Ocean* did not swing to her anchor so soon as we expected. I cannot say she took the bottom. The pilot was in charge.

By His Lordship—She was then drawing 16 feet of water.

By Mr. Drummond—I should think the *Ocean* could be stopped in three or four minutes. At Woosung, she would not go either ahead or astern, but it was in consequence of a nut or something of that sort dropping out of the machinery.

By Mr. Hannen—Immediately previous to the collision, the engines reversed at once on the order being given. It would have been remarkable if I had not seen the sails of the *Fusing* first, and then the hull; and seeing her hull as I did, I could not avoid seeing her propeller and helm also. I have had information from captains as to the proper track of vessels from Shanghai to Tientsin. When the patent log was hauled in at four o'clock, it showed a mean speed of 6¼ knots.

John McKecknie (examined by Mr. Wainewright) deposed—I was second officer of the *Ocean*. I was officer of the watch on the morning of the collision. The weather was foggy, and it became dense after nine o'clock. I sounded the whistle about every four or five minutes. When the *Fusing* answered my whistle, I kept my whistle sounding a long scream. I have no doubt whatever that the *Fusing* was on our port bow. I saw the helmsman put the helm hard-a-port directly the order was given. I heard no order given to put the helm a-starboard. I do not think it could have been more than a minute and a half after my hearing the *Fusing's* whistle, before I saw her. I saw her bow first, on our port bow. The collision took place in about half-a-minute. Up to the time of the collision, we were going about seven knots. I consider that seven knots is a proper speed for a ship of her length to answer her helm. Her length is 285 feet, and beam 31 feet. (The remainder of this witness's evidence was confirmatory of that given by Captain Brown.)

By Mr. Eames—When I first heard the *Fusing's* whistle, our engine room telegraph was at full speed ahead, but when she actually struck, the *Ocean's* speed was reduced to about five knots. The *Ocean* is a rather sharp ship, and has a nice sheer—not very much. She is a pretty dry ship, and does not take in water in a moderate sea. She took in a little spray on the morning of the collision. There was a heavy swell on at the time, but no broken water. None of our boats were swamped in the endeavour to save life from the wreck of the *Fusing*. The *Ocean* steers very well, but not so well in a head sea.

By Mr. Hannen—The position of the telegraph does not in the least indicate the speed the ship is going.

His Lordship—It indicates the last order given to the engineer.

By Mr. Hannen—The engines may be going at full speed ahead, but under certain circumstances of wind and sea, the ship might not steam more than one or two knots.

Henry Russell (examined by Mr. Hannen)—I am a master mariner, and hold a certificate as Naval Navigating Lieutenant. I was formerly in command of the *Appin*, and have made frequent voyages between Shanghai and Tientsin. I think that a speed of eight or nine knots is not too much to run in a fog on this coast. Some of these fogs are local and some general, and I always ran at about that speed, the chances of collision are so small. There are variable currents running on to the land. With a head sea on, unless a vessel is going at a good speed, there would be danger of deviating from her course, and losing her reckoning, and so perhaps getting on a rock. The course pointed out to me as the course of the *Ocean* is outside the track of steamers by 23 miles. We can sight Shaweishan in clear weather at 14 or 18 miles' distance. If the course laid down on the chart, from the point marked with a blue cross to Shaweishan, was that taken by the *Ocean*, she would have been, according to the evidence of Capt. Brown as to speed, in 13 fathoms of water at seven o'clock on the morning of the 5th.

By Mr. Eames—I have been running on this coast since 1857. I am not in command of the *Appin* now. In running at the speed I have mentioned, in a fog, I always took every precaution for the safety of the ship in every way, by keeping a good look-out. I always hoped the fog was a local one. I

consider it quite prudent to go nine knots in a fog, by keeping a good look-out, although it might be impossible to see more than a ship's length ahead. The currents are very uncertain, and I believe they are caused by the wind—especially after a S.W. wind has been blowing some time.

The Court then adjourned by arrangement until Tuesday morning.

May 25th.

The Court resumed this morning at ten o'clock.

His LORDSHIP asked what was the length of the *Ocean*, and also the correct latitude and longitude of the spot of the collision?

The *Ocean's* length was given as 285 feet.

Capt. ROSKELL, on measuring the chart, found that the correct position was Lat. 33°. 31'.30" N.; and Long. 152.59 E.

Mr. HANNEN applied for leave to amend paragraph 5 of the defendant's answer, under Section 93, by the addition of the words, "The *Ocean* herself sustaining extensive injury by reason of the said collision;" and under Section 55, by liberty to file a counter-claim by a cross-petition, and for an order to hear the counter-claim together.

Mr. DRUMMOND objected to such an amendment at so late a period of the hearing, when it might have been done at an earlier period, and before the expression of opinion on the case by the Court, almost amounting to a judgment.

Mr. HANNEN said on the face of the petition it not appear that the *Ocean* sustained any damage.

Mr. DRUMMOND said he must object to anything being now introduced that would have the effect of a cross suit.

Mr. HANNEN said the amount of damage sustained by the *Ocean* was not specified in the answer, and all that was asked was that it should be inserted.

Mr. DRUMMOND said he must oppose its insertion at so late a period in the case. It was asked for to give the defendant the benefit of a cross action, and although there was a good deal of right in the allegation of his learned friend, he was bound to object. The application had arisen on the opinion expressed by the Court on a previous occasion, but for which it would not have been made.

His LORDSHIP disallowed the application, as it raised no specific defence, but was merely a statement of a fact, which appeared in the evidence, and was therefore not the foundation of counter-claim, the Court having full jurisdiction to do equity between the parties in its judgment.

The case then proceeded.

The following witnesses were then examined:

HECTOR MCKINNON (examined by Mr. HANNEN), deposed—I was a quartermaster on board the *Ocean*. On the morning of the 4th April, I was at the wheel, steering S. ¾ W. That was by the aft compass. I heard a whistle. It seemed to me a little on the port bow. There was a quartermaster standing aft of the engine-room skylight. He ordered me to starboard my helm. Before I had time to starboard my helm, I got the order from the bridge to hard-a-port. I followed that order, and watched the compass anxiously to see if the vessel paid off. I watched till her head was about S.W., and then I heard the crash; that made me look up, and saw the *Fusing* right across our bows, about a right angle to me, from where I was standing. She answered her helm properly and quickly as she always did. She would not have answered so quickly if she had been going only three knots. The weather was foggy and there was a little head sea on.

By Mr. DRUMMOND—When I ported the helm, the *Ocean* paid off three points and a quarter, from S. ¾ W. to S. W. I first got the order to starboard, from the quartermaster on deck. I heard the order from the bridge immediately afterwards, to hard-a-port. I had no time to starboard the helm—did not shift it in that direction at all. If it was blowing hard, and I could not hear the whistle from the bridge, I should take an order from any officer or quartermaster who would pass it to me from the bridge. I could see the bridge at the time of the collision. The Captain and second officer were on the bridge. I think the second officer gave me the order to go hard-a-port. I cannot swear, but I think it was him, because I knew his voice. I heard nobody else, anywhere, besides the quartermaster, give the order to starboard the helm. I put it to port at once on receiving the order. I could not see the man on the look-out in the bows, because the bridge hid him from me. I think I could see about a ship's length all round. I did not see the *Fusing* until I heard the crash. I did not think she was so close. I think it was about three minutes from the time I got the helm hard-a-port before the collision. I cannot be sure, but I think I had the helm hard-a-port for three minutes. I cannot say what speed the *Ocean* was going during that time. I know nothing about the speed; and that's all I've got to say about it. She would answer her helm at two knots, but not so quickly if there was a wind on the bow to check her. There was a slight swell on, with very light wind. I think the wind was more on the port bow than ahead.

Captain BROWN recalled by Mr. WAINEWRIGHT, deposed—The damage the *Ocean* sustained was a large hole in the port bow, about ten feet long and five feet in depth. Some of the plates above and below the hole were indented. On the starboard bow there were one or two small holes, the rivets having been knocked out. The covering-boards were started, and the chains and hawsepipes broken, with other smaller damage. All those injuries were caused by the collision. I have not got a bill of the particulars.

NEIL MCNEIL (examined by Mr. WAINEWRIGHT), deposed—I was a quartermaster on board the *Ocean*, and was on watch at the time the collision occurred with the *Fusing*. The weather was very foggy. I heard a whistle, as far as I could make out, on our port bow. I was standing at the after-end of the engine room skylight. I received an order from the bridge to put the helm a starboard. I do not know who gave it. My duty was to pass the orders from the bridge to the man at the helm. I passed on that order. I also received an order from the bridge to hard-a-port, which I also passed on. There was "no time" between the two orders. I did not see the helm a-starboard, but I saw it a-port. The next thing was that we ran into the *Fusing*. I did not see her before the collision. I think we struck her at nearly at a right angle. The next order I got was to lower and man the boats.

By Mr. EAMES—I was in the *Ocean* as quartermaster, about three months, always under the same officers. I cannot tell the distance from the bridge to the wheel. There was a light breeze ahead,—a little on the port bow. We could not well hear a voice from the bridge. I received an order to have the helm put a-starboard. I did not recognise the voice, because I "had got such a start" on hearing a whistle so close to us. The second officer gave me the order to hard-a-port. I cannot tell if it was the same voice that gave me the order to starboard. I cannot tell how long the ship went on a-port helm before the collision. There was no time to put her to starboard. I did not look at the compass, and cannot say how much she paid off to starboard before porting. There was no time to starboard.

WILLIAM STEPHENS next deposed—I am an able seaman on board the *Ocean*. At the time of the collision I was standing in the stem on the look-out. I was as far forward as I could. It was foggy, but I think I could see more than the length of the ship. I heard the *Fusing's* whistle once, and it seemed to come from a-head somewhere. I reported a whistle a-head somewhere. When I first saw the *Fusing*, she was about a point and a half or two points on the port bow. I first saw her starboard bow as far as the Chinese letters on her side, "where the bridge ought to be." Cannot say how far she was off. Saw the *Ocean* strike her on the bluff of the bow, about fifteen feet from the stem. She appeared to be answering a starboard helm, and was slewing across our bow when she was struck. She had headway on her—appeared to have good headway. I ran aft, abaft the fore-rigging. There was a good swell, about half-a-point on the port bow. There was no broken water, just a swell. No water came over the bow. The wind had been on the starboard bow, but had gone right ahead—fore and aft.

By Mr. DRUMMOND—I first saw the *Fusing* on the port bow of the *Ocean*. The first glance I had of her was as far as where the bridge should have been. I think the *Fusing* must have altered her bearings, judging from the position we were in when I first saw her, and where we struck her. I do not recollect having said in my former examination that she did not alter *the* bearing. When I reported the whistle, somebody sung out starboard, and the captain put his hand up, and jumped to the telegraph. He just put his hand up, as I thought, to answer my report. If I had been at the helm I should not have taken it to mean to starboard the helm. I heard the order in the first place given either to "starboard" or "standby"—I cannot say which. The order was given on board the *Ocean*. I heard the order to port given on both ships—on the *Ocean* first. Before I saw the *Fusing*, the captain and second officer of the *Ocean* were singing out to port. I also heard them on board the *Fusing* singing out to port. As we struck her, she must have been approaching on a starboard helm. I had my oilskins on, on account of the fog. The *Ocean* had taken some water over early in the morning.

By Mr. WAINEWRIGHT—The man I relieved told me so, but I put on my oilskins more on account of the fog than that. She took no water in during the time I was on watch.

THOMAS ROONEY (examined by Mr. HANNEN), deposed—I am a boy on board the *Ocean*. On the morning of the collision, I was stationed at the forecastle hatch, to keep a sharp look-out. Our whistle was blown at intervals, and I heard a whistle answer it on our port bow. I am sure it was on our port bow. I heard the second officer "roar" out hard-a-port. I heard no order to starboard. I was standing between Stephens and the bridge. I saw the *Fusing* in about two minutes after hearing her whistle, and we struck her in about two seconds. I lent a hand with the boats. I am past seventeen years old.

By Mr. EAMES—I have been in the *Ocean* eight months. I can tell the captain's voice, and also that of the second mate, when I hear them. I was looking out on the port side. I do not know the compass yet.

By Mr. WAINEWRIGHT—I know a little of the compass, but cannot tell how many points the *Fusing* was on our port bow.

WILLIAM CRAIG, chief engineer of the *Ocean* (examined by Mr. HANNEN), deposed—I have the charge of the engineer's log, in which I make the entries. I make them day by day, generally from the engine room log-slate, which is kept in the engine room. The engineer on the watch enters them on the slate. I made the entries in the book relating to the 4th April. (Log-book put in.) The first I knew of the collision with the *Fusing* was the shock. I was in my room at the time. I went immediately to the engine room, and gave the engineer in charge orders to open the doors, ease the safety valve, and do other things that were necessary. The engines were then stopped—the engineer on watch stopped them. I was not more than a minute in getting to the engine room. There was plenty of time to stop the engines before I got there.

By Mr. EAMES (to Witness)—Perhaps you will read your entry in the log-book?

Mr. HANNEN would prefer that the officer of the Court would read the entry.

Mr. BISHOP accordingly read the entry, which was to the effect that the engines were stopped at 10.40, and put full speed astern, and that at 10.43 they were stopped from going further astern.

Witness resumed—I wrote the log up on the 4th. I never knew an engineer's log written over on the next page. We interline and sometimes go right round the page. I do not keep a watch. There are four engineers, including myself. I was in my room at the time of the shock. My room is right aft. I went on deck and thence to the engine room. I was not more than a minute getting to the engine room. The fourth engineer was on watch, and he told me the engines had just been stopped. I gave no order then about moving the engines. I remained below about half-a-minute, and then went on deck to look at the hole in the bow of the ship. I went below again, and gave the engines half-turn ahead and half-turn astern just to see if they were all right for starting. All this took about a quarter of an hour. I did not see the *Fusing* at all,—only her sails. I only know from what the fourth engineer told me, and from what was on the log-slate, what was done to the engines before I got down. I stated on a previous occasion that there was no writing on the log-slate, but that the time was entered, and I copied it into the book. I told the fourth engineer to be careful as to the time. There is very little vibration in the

Ocean. In the daytime, when there is so much noise, I cannot hear any alteration of the engines in my room. I did not notice the stopping and backing astern on this occasion. I did not notice that the engines were turned astern about the time of the collision.

By His Lordship—I copied the entry from the log-slate—not perhaps in the same words, but to the effect.

By Mr. Eames—Full speed astern and the stopping were marked on the log-slate. There were no remarks. I got them from the fourth engineer verbally. I have said I got down into the engine room in about a minute. Our telegraph gong is an ordinary one. I did not hear it in my room ; it is too far off. I do not know what the *Ocean's* draught is. She was in capital trim, and at full speed in smooth water would go about 9½ knots. That is the best speed she ever made since I have known her. I do not know that she was offered for sale to the C. M. S. N. Company—I am not let into those secrets. She must be in good trim to make 9½ knots. The engines were making 48 revolutions at the time of the collision. The highest number of revolutions on the trip was 50, between Chefoo and Newchwang. There is another entry, where, with fore-and-aft sails set, she only made 50 revolutions. The masts and sails are not of much use to her.

By Mr. Hannen—In the log, there are instances of the engines making 56 and 57 revolutions, and so on, between Shanghai and Nagasaki. When I went down to the engines and gave them half-turn ahead and astern was from 15 to 20 minutes after the collision. I merely went to see if the engines were ready to go either ahead or astern as they might have been required.

James Gregg (examined by Mr. Hannen), deposed—I am a master mariner, in command of the *Cawdor Castle.* I have been pretty frequently on this coast, but not of late. I think about 6 knots is a fair speed for a ship to run in a fog, provided she is not near the land. Supposing a ship is at dead slow, the only way to make her answer her helm, is by putting the helm over and moving her engines full speed ahead. I think 6 knots in a fog is a safe speed ; if she was near land I should use a little more care. If I had reason to think she was near the land, I should go slower. After going a little distance, and by keeping position, you very often run out of a fog quickly on this coast It is still more necessary to keep up a reasonable speed when there are currents. That is one of the chief reasons why I would do so.

By Mr. Drummond—I think 6 knots is a reasonable speed in a fog, when not near the land. I think it is a safe rate of speed in the regular track of vessels. If there were a large number of vessels about—if I found I was among a field of ships, I should go slower perhaps. I consider my ship is perfectly under control at 6 knots. There are different degrees of fog. To ask how far I could see if the atmosphere was what we call foggy, is a vague question. Sometimes you can see a mile, and at others not more than 300 feet. If I could not see more than a mile, I should call it foggy—sometimes you can see three miles in a fog, at others two miles. I have seen some fogs in which you could not see the length of a ship of 350 feet—standing at the stern, you could not see the bow. I was not in the *Cawdor Castle* when she went ashore in a fog on her last voyage. I do not know anything about the *Gordon Castle* or the *Drummond Castle* getting ashore in fogs. Most ships go down to half-speed of engines in a fog. If I was to go dodging on at two or three knots, I should perhaps be unable to clear rocks, which I should if going faster. It depends upon how I know my compasses, to keep off the shore in a fog, not having been able to take an observation. Very often by moving on we get out of a fog. My experience has been so, in all parts of the world. Seventeen or eighteen years ago, I used to be up and down this coast often, but I do not pretend to any local knowledge. Fogs are very nearly the same all the world over. Some places you cannot pass without getting in a fog—like the banks of Newfoundland. With respect to the term local as applied to fogs, it is a well-known fact that if you keep on for fifty miles or so, you get out of it. If I got caught in a fog, so that I could not see more than the length of my ship, I should go slower to ensure my own safety and that of the ship. Six knots is not an unsafe speed in a fog, and to ensure absolute safety, I should keep the fog horn going and a good look-out. Six knots is but a mile in ten minutes, and you can do a great deal in ten minutes. Four miles is the slowest speed at which I believe a ship could be handled with safety—at two or three she would not have safe steerage way on her. The slowest possible speed at which a ship could steam safely, would depend upon the weather, upon the wind and sea. A vessel going at 6 knots could be stopped in about 700 feet, with a head wind and sea.

By Mr. Hannen—There would be great risk in going so slow as two knots in narrow water in a fog.

By Captain Roskell—Six knots is a speed at which I could have my ship best under command. The Cunard ships are of great power, which makes a great difference in a head wind and sea, and enables them to go at four knots against a westerly Atlantic gale. If you are in narrow waters, in a fog, with danger of touching the bottom, it is better to push along and get out of the danger.

By His Lordship—If the fog was so dense that I could not see more than her length, I should like to go a little slower than 6 knots, but it would depend upon wind and weather, and where the ship was.

By Mr. Hannen—In the locality on this coast, pointed out to me on the chart, I should think 6 knots in a fog a not unreasonable rate of speed.

Charles Wylie (examined by Mr Wainewright), deposed—I am fourth engineer of the *Ocean,* and was on duty on the morning of the collision. I cannot say what speed 48 revolutions would give. I heard the whistle going. At 10.40 I received a telegraph to reverse the engines. It took me 20 seconds to do it. I logged it on the slate—"engines stopped at 10.40 and went astern ; at 10.43 stopped engines." They were then going 44 revolutions, which I chalked on the bunker, as usual. I opened the furnace doors and safety valve, by the chief engineer's orders, and then went on deck. About 20 minutes after, went down again with the chief engineer and put the engines in a position to start easy, and then went away with one of the boats.

By Mr. Drummond— I take the number of revolutions by my watch. I borrow the chief's watch because I have not got one of my own. I never go on duty without a watch. There is a clock in the engine room, but we cannot tell by that. I do not know if there is an indicator on the deck. When I went on duty, the engines were making 48 revolutions at full speed, and continued at that rate until 10.40, when they were reversed and put full speed astern. I was the only engiuer on watch at the time of the collison.

By Mr. Wainewright—I cannot tell whether those on the bridge can tell from the thud of the engines how fast the ship is going—48 revolutions is no guide as to the speed of the ship. It is the usual speed they are driven at.

Thomas Laurie deposed—I am third engineer of the *Ocean,* and remember the collision with the *Fusing.* I was off duty, and standing on the port side under the bridge. I heard the *Fusing's* whistle. It sounded on the port bow, a little ahead. I heard the second officer say "a whistle on the port bow." The captain gave an order to port the helm. There was no order given to starboard. I saw the captain go to the telegraph, and I then ran to the engine room and saw the index go to "stop" and then to full speed astern. The engines worked beautifully and went astern immediately. I went to the engine room in case my services might be required. (The witness then detailed the circumstances of the collision in similar terms to those previously given, adding that when he first saw the *Fusing,* she appeared to be going at a good speed through the water, and he did not notice her slacken.)

By Mr. Eames—I was not called as a witness at the Naval Court. I am not prepared to swear that the *Fusing* did not slacken when she approached us.

Alexander MacFarlane (in answer to Mr. Drummond), deposed.—I am chief mate of the *Ocean,* and on the morning of the 4th, at ten o'clock, I was in my room in bed. I left my room because I heard a whistle on our port bow. The door and port of my room were closed, but the skylight and companion of the mess room were open. I was not asleep. I was reading. My cabin is below, aft, on the port side, a good bit abaft the engine room. I knew the strange whistle was on our port side because I was lying with my head forward of the ship, and was at once convinced. I told the captain so afterwards, when the ship was in safety.

Mr. Hannen said there were no other witnesses to be examined, and if he could have ten minutes to-morrow morning, he thought he could probably say all that was necessary in the case, whereas if he were required to address the Court this afternoon, he would have to go through nearly all the evidence. Perhaps the same course would suit Mr. Drummond ?

Mr. Drummond said he had no objection to the course suggested.

His Lordship consented to the adjournment, and it was arranged the Court should reassemble at 10.30 next morning.

May 26th.

Mr. Hannen, on rising to address the Court on behalf of the *Ocean,* would like to put in the finding of the Naval Court held in the case, or, as it was called, the order of the Court. Mr. Drummond had consented to take the document he (Mr. Hannen) then held in his hand, as the proper order, and it had been verified by Mr. Wainewright. He would therefore put it in now.

His Lordship—Of course, you can do anything in these cases by consent, but in any other case it must not be considered a precedent.

Mr. Hannen resumed by saying that he wished to call his Lordship's attention for one moment to the application made to amend the answer, merely to suggest that, supposing it to be his Lordship's intention on finding both vessels in fault, to order the damage to each to be added together, and the *Ocean* to pay one-half, exactly the same result would follow from the course proposed to be adopted by the amendment, and to ask if it could not be permitted ?

His Lordship replied that he had considerd the question of amendment, and did not see how he could allow it, but he would make a note of this application.

Mr. Hannen said if his Lordship came to the conclusion that both vessels were to blame, he would of course make a special decree ?

His Lordship said he would do so.

Mr. Hannen then went on to say that the first point he should consider was as to the speed of steam-vessels in a fog—Was six knots per hour too great a speed ? It had been mentioned in this Court that a six knots speed under such circumstances was too great ; but the Board of Trade Regulations required a *moderate* rate, and all the decisions agreed in holding that what *was* a moderate rate of speed must be decided by the surrounding circumstances, as regarded wind, weather, and position. This had been distinctly laid down in the case of the *Europa* (14, *Jurist*), mentioned also by Mr. Drummond. There was no report of the case in Shanghai, but very full notes were given in Pritchard ; and it was laid down that no rate of speed could be said to be dangerous, but that the speed in each particular case must be taken in connection with the attendant circumstances as to weather and other things. In the present case, it had been proved that the *Ocean* was running 30 miles outside the track of steamers, and he would say that if ever a steamer could run at six knots in a fog, the *Ocean* was justified in doing so on this occasion. The Court had said that in this case, the vessels should have gone dead-slow, but that opinion could not be reconciled with the language of the authorities, nor did it accord with the decision in the case of the *Europa.* That decision when it spoke of speed—did not speak of *dead slow* ;—it always spoke of a moderate rate of speed. There was an intimation that five knots was almost inconceivably slow for a vessel to go ; the judgment said that if a vessel was running through a *crowded way,* she must go "even as slow as five knots." Therefore, he contended that five knots was a moderate rate of speed in a crowded way ; and under the circumstances in which the *Ocean* was placed, six to six and a-half would be a reasonable and moderate rate of speed.

His Lordship—The speed being five knots, the consequence would be that two vessels coming into collision would meet with a force of ten knots.

Mr. Hannen said that would be so if neither of them stopped or reversed. He

would next draw attention to the case of the *Perth*, (3 Hagg: 414) in which it was by implication held that in a track frequented by coasters, six knots was a reasonable rate of speed. Moreover, it was certain that the captains on this coast, and indeed everywhere, considered that a moderate and not a slow was a safe speed. There was a very good reason at the bottom of this. It was the result of a well-known natural law, the law that a flat surface driven through a fluid encounters a resistance which is as the square of the velocity, whence it followed that a ship would turn in much less space when going fast than when going slow. On this coast to go about 6½ knots was a universal rule, and if it was the universal rule to go at six knots, steamers approaching each other would believe that they were both coming at such a rate, and would be more likely to clear each other than if one were going slow and the other fast. If there had been any doubt as to the rate of speed maintained on this coast in a fog, it was removed by the evidence that had been given in this case, though some slight difficulty had been laid upon the defence in getting evidence upon the point, through the expression of opinion given by the Court on a previous day that six knots in a fog was too fast. If the Court had not expressed its opinion, the defendants might have obtained more evidence as to the opinion of coast Captains upon the rate of speed. It is difficult to induce men to come and *say that they* think right and habitually do that which a Court is about to condemn. But the defendants offered to the other side the opportunity of disproving the custom and opinion if they chose to attempt it. But supposing the *Ocean* to have been going too fast, there still remained the question, *did this speed contribute to the collision?* Except in so far as it was true that had the *Ocean* not been going at that particular rate, she would not have been in that particular spot at that particular time—the speed did not contribute to the collision; the defendants were able to turn their vessel's head 45° before colliding, and must have gone clear had the *Fusing* reversed her engines at once on hearing the whistle. Moreover, she ought to have ported her helm, whereas he (Mr. H.) would shew that she starboarded it. If the speed did not contribute to the collision (and it was for the plaintiffs to make out that it did), the *Ocean* could not be held to blame. (1, *Pritchard* 197; the *Telegraph*, 1, Spinks 436; the *Vivid*, Swabey 88.) Another point which his friend Mr. Drummond had made a great deal of, was that the *Ocean* should not have ported her helm under the circumstances, and in expressing that opinion he had relied on two cases only. Now with regard to one of them—the *Rona* and *Ava*—his friend's contention must be that, that case decided that those on board a vessel in a fog on hearing another vessel quite close at hand and approaching them, must sit still and do nothing. He (Mr. Hannen) thought it was absurd to say that although they could not see the *Fusing*, but could hear her coming, yet, because they could not make use of that particular sense, viz: of sight, they were to sit still, no matter how firmly convinced of her position by their sense of hearing, until the approaching vessel was *seen*. Upon that point, he would refer the Court to 1, *Pritchard*, p. 164, "Wheeler *v.* the *Eastern State*, in addition to the cases cited by Mr. Wainewright. It was an absolute rule that where there was a chance of two steamers which were meeting, coming into collision, both must port their helm.

His LORDSHIP—That is when they see each other.

Mr. HANNEN said that was in a case where the sense of sight came in; but in this case it was the sense of hearing that was concerned. There could be no valid distinction between the two means, sight and hearing, of acquiring knowledge. The *Ocean* could not have been catching the *Fusing* up, or she would have heard her whistle before,—therefore, on that coast, and knowing that she was a steamer, the *Ocean* knew also that the *Fusing* must have been meeting her. The first question on the evidence was:—Was she on the *Ocean's* port bow? Seven witnesses on behalf of the *Ocean* had been called, all of whom said positively that they heard the whistle on the port bow. The counsel on the other side had not in the least shaken that evidence, and it must be taken that they had failed to make it appear that the *Fusing* was on the *Ocean's* starboard side. They, being plaintiffs, unless they made out affirmatively that they were on the starboard, and upset our evidence proving them on the port-side, their case failed, and it must be taken that she *was* on the port-side. That there was considerable doubt on board the *Fusing* as to where the *Ocean* was, was evidenced by the fact of the captain of the *Fusing* asking, "Where is she?" Their positive evidence was reduced to that of two witnesses only. 1—The officer of the watch. 2—The quartermaster at the wheel, who was proved by his own witnesses to have told a falsehood. The *Fusing* being then on the *Ocean's* port-side, the collision must have resulted in a very different way to that which was shown on the model produced by the *Fusing*. Although the other side had said the *Fusing* never starboarded her helm, it rested solely on the evidence of the quartermaster at the wheel. Now the Court would remember that the quartermaster told a distinct falsehood respecting the other quartermaster, who was in bed sick at the time of the collision, as proved by the captain and mate, but who he distinctly swore was on duty on deck at the time. Then again, he swore that to keep the ship's head straight he never moved the helm from amidships, whereas every one knew that the helm must be slightly eased at times, and that a screw tended to throw the ship's head to one side or the other, and this tendency must be counteracted. But in reality, the man must have been flurried at such a moment, having the helm to look after, to receive and execute orders respecting it, and also to pull the whistle string and sound the engine gong and jingle—having to do a lot of things at one time, like the street musician of many instruments who banged the drum, blew the pipe and jangled a cluster of bells with his head. The Court would remember, too, that the sound of the whistle, according to the witnesses for the *Fusing*, seemed to be passing along her beam. That effect would have been brought about by their starboarding their helm, and this little incident was of great importance as it came out naturally, and was one of those that would not be prepared for beforehand. That they did starboard, was, he contended, proved by their own evidence. The *Ocean's* witness, as to the way the ship was heading at the moment of the collision, was a stolid old quartermaster, who was not likely to be put out by any circumstances around him, as his Lordship might have noticed when the witness was in the box. That witness's testimony was that the *Ocean's* head was S.W. at the time of the collision, and it was agreed by all the witnesses on both sides that the *Fusing* was very nearly at right angles to the *Ocean*, so that her course must have been N.W. She *must*, therefore, have starboarded, to have changed her course from N. ¼ E. to N.W. Then, in support of that evidence was the testimony of Captain Brown, that he noticed the helm of the *Fusing* to be a-starboard just before the collision. He (Mr. Hannen) contended that all this amounted to conclusive proof that the *Fusing* must have starboarded her helm; and against this there was the bare testimony of a Chinese quartermaster, proved to have told a falsehood, since the captain and mate of the *Fusing* acknowledged that they could not tell if the ship's head moved to starboard. Where there was conflicting evidence, the probabilities which surrounded a case must be taken into consideration, and in support of this, if it needed support, he would quote the case of *The Mary Stuart*, 2, *W. Rob.* 244, quoted in 1, *Pritchard*, page 128, as "*The Mary.*" The burden of proof, as Mr. Wainewright had previously shewn by the authorities, lay with the plaintiffs. But upon that question he would not further take up the time of the Court, and would at once say that the testimony on behalf of the *Ocean* had not been in any one way shaken on any of the points they had raised—namely, that the *Fusing* was on the *Ocean's* port-bow; that the *Ocean* stopped her engines and reversed them at full speed; that the *Ocean's* head was turned 45° by the action of porting her helm; and that the *Fusing* must have turned out of her course and come across the *Ocean's* bows as she was heading N.W., and was at right angles to the *Ocean* at the moment of collision. Under those circumstances, he contended, the case ought to be given in favour of the *Ocean*. Her speed was not greater than the *Fusing's*, as was shown by the unimpeachable testimony of her patent log, while the *Fusing* had no record, except the testimony of the engineer and others, who said they had looked over the side down at the water, and so judged the speed. But it had been elicited that she must have been going 8 or 8½ knots by the distance she ran by the patent log; moreover, he contended that it had been shown that the pace the *Ocean* was going did not contribute to the accident. There was one other point suggested by the finding of the Naval Court, that the *Fusing's* sails might have interfered with the sound of the whistle; whether it could be diverted he left to the Naval Court, but it certainly could be deadened. It was known that a wet sail would stop sound.

Mr. DRUMMOND—There is no evidence of that.

His LORDSHIP—It is a scientific fact.

Mr. HANNEN said that if Mr. Drummond wanted his authority he would give it him. In the December number of the *Contemporary Review*, at page 151, Professor Tyndall, in a paper "On the atmosphere in relation to fog-signalling," says, "A piece of millboard, or of glass, a plank of wood, or the hand, placed across the open end of tunnel intercepts the sound of a bell in a padded box, and stills the sensitive flame. (Model diagram shown.) An ordinary cambric pocket-handkerchief, on the other hand, stretched across the tunnel end produced hardly an appreciable effect upon the sound. Through two layers of the handkerchief, the flame was strongly agitated; though four layers it was still agitated; while through six layers, though nearly stilled, it was not entirely so. Dipping the same handkerchief into water, and stretching a single wetted layer across the tunnel end, it stills the flame as effectually as the millboard or the wood. Hence the conclusion, that the sound-waves in the first instance passed through the interstices of the cambric. Through a single layer of thin silk the sound passed without sensible interruption; through six layers the flame was strongly agitated; while through twelve layers the agitation was quite perceptible. A single layer of this silk, *when wetted*, stilled the flame." In this case, the chances were that, had the sails been furled, the *Ocean* would have heard the whistle of the *Fusing* long before she did, and the collision would have been avoided. The sails were wet from the spray and fog—it having been shown in evidence that spray did come over the bows at one time in the morning, and the dampness of the fog rendered it necessary for the witness Stephens to wear his oilskins. Those were the points upon which he rested the *Ocean's* case, and he would not trouble the Court with any further observations.

Mr. DRUMMOND, in commencing his address on behalf of the *Fusing*, said he would pass over as quickly as possible the several points in the case, and would take as a starting point the opinion already expressed by his Lordship, which was in effect that, both vessels were to blame. Taking the case of the *Fusing* first, he would refer the Court to the evidence given by Captain Andrew, and also by his chief and second officers and engineer; and, without labouring through the whole of it, would submit that the tenor of their testimony went to show that the *Fusing* moderated her speed, carefully, four hours previous to the collision, on account of the fog. That was an extremely important element in the case,—that her speed was reduced to a moderate rate, which was in accordance with Admiralty Rules, which laid it down that a moderate rate was required under such circumstances. The *Fusing* reduced her speed to five or six knots on account of the fog, but whether that was sufficiently slow was a point for the Court to determine. But he would ask the Court to remember that she had slowed to that rate of speed for four hours. Now, on the part of the *Ocean*, they had it in evidence that she went at full speed up to the time of hearing the *Fusing's* whistle, and he (Mr. Drummond) would ask the Court to take special note of that fact, as the Court had already expressed an opinion as to the rate of speed. If the view taken in the case of the *Perth*, already quoted, was a correct one, then five or six knots would not be an unreasonable rate of speed to go at in a fog, and would be in accordance with the Admiralty Rules, which were not binding on the *Fusing*,

but which her Captain had nevertheless adhered to. There was the fact, that the *Fusing* did reduce her speed on account of the fog, and the only question in regard to it was—Was it reduced sufficiently? Upon the question of speed, he would refer the Court to the cases of the *Europa*, the *Great Eastern*, and *Iron Duke* (1, *Pritchard*, p. 186). There were other authorities on the same point to which his Lordship had been already referred to. From those cases, he would deduce the principle that a steamer could go at such a rate of speed as would enable her to stop her way within such a distance as she could see an object in front of her. It amounted to this, that if a steamer could stop in half-a-mile, and those on board could see half-a-mile ahead, the ship was going at a safe rate of speed, and the same for a quarter of a mile, or other distances. He did not think that was reducing the argument to an absurdity at all. It was the case of the *Europa*, and he thought it fairly represented the case of the *Fusing*. She was going at such a slow rate of speed, that she could have stopped in two or three lengths, and she could see one-and-a-half length—she had therefore broken the rule as to speed by about half-a-length, and was in fact just outside the edge of the rule. If the Court contrasted that with the conduct of the *Ocean*, which did not slacken her course at all, it would see the striking contrast in the conduct of the two vessels. The case of the *Iron Duke (Robinson's Reports)*, applied directly to the *Ocean*, and he did not think he need refer the Court to any further authority on the point, for those already quoted were quite sufficient to establish it, and to show that the *Fusing* was within the point. He would now come to the question of the look-out. It was said in the opinion expressed by the Court that the look-out kept on board the *Fusing* was not sufficient, and in case that might be repeated in the judgment of the Court, he would refer to what was done on board the *Fusing* in regard to look-out: There were no less than four men on deck, stationed at different points in the fore part of the ship, the Captain having placed an extra man on the duty because of the fog. Whether the Court still considered that was an insufficient look-out remained to be seen. In the case of the *Ocean*, the Captain's only precaution was to add a little boy to the ordinary look-out. But the main point with regard to the question of look-out was as to whether it *contributed to the collision*. He contended that it did not contribute to the collision, and that to put it in the judgment that the *Fusing* was to be blamed for not keeping a sufficient look-out was a very strong step indeed. He submitted that there was a good look-out kept, and that it had nothing to do with the collision. It was a main ingredient in the case, and would necessitate the Court looking over the evidence, and saying in the first place whether there was a sufficient look-out kept; and in the second, whether it contributed to the collision. If his Lordship was of opinion that the look-out was not sufficient, he (Mr. Drummond) would urge that if insufficient, it did not *contribute* to the accident, and was therefore merely collateral evidence of faulty seamanship. (*Pritchard*, p. 128, Common Law.) He considered that, on the evidence, he was entitled to ask the Court to find that the *Fusing* was not to blame on account of the look-out, the collision occurring as it did in a fog and the look-out being as he had mentioned. The whistle was heard simultaneously all over the ship, and a thousand look-outs could not have averted a collision. A whistle was heard by the look-out man, and was not reported by him.

His Lordship—That was the point the Court looked at, that under such circumstances the look-out should have been an officer. A quartermaster was to be considered a more intelligent being than a common seaman. The Court did not mean that four pairs of eyes were better than two as a look-out at such a time.

Mr. Drummond went on to say that the whole point was that the look-out *did not contribute* to the collision. It had not been shown that the look-out had contributed to the collision in the slightest degree. He would put it more broadly, and say that *every fault* which the Court was asked to find in this case *must be a fault which contributed to the collision*, and it was so important a point on the part of the *Fusing*, that he was bound to urge it on the attention of the Court with all the power he could. The next point with regard to the *Fusing*, was that of not reversing her engines on hearing the strange whistle. The only case quoted by Mr. Wainewright on the point was that of the *Kestrel* and *Franklin*, the whole gist of which was contained in the words "*if necessary, to stop and* reverse." (Sir Robert Collier.) After reading the case, Mr. Drummond asked how those circumtances fitted the present case, in which the whistle was heard once only—not *many times*, and was broad off the starboard bow, indicating a passing, not a meeting ship. On that point, the evidence was clear. If the Court fixed the position of the two vessels at the time the whistle was first heard—which he presumed would be done—he thought they would find they would have passed clear of each other, and that if there had been no whistle at all there would have been no collision. He thought that would come home to the minds of all who had heard the case, as an inevitable conclusion. But they did not think they were approaching each other,—the *Fusing* had already eased her engines, and then put them at dead-slow, which was the very slowest speed at which the ship would be under command. If the Captain had gone one step further, he would have lost the command over his ship. There were certain exceptions which referred to certain cases of imminent danger, but he said broadly, with regard to cases of this sort, that every ship must bear the results of her own acts. If it appeared to a Captain that another ship was in such and such a position, and he acted accordingly—if his act proved to be a mistake, he must bear the result of the mistake he made. The Captain of the *Fusing*, in stopping and keeping his course, acted rightly, and if the speed of five knots was not too much, the *Fusing* was not to blame on any one point. Those were the points on behalf of the *Fusing*, and he now came to the case of the *Ocean*, the two points being "speed" and "porting the helm." The speed of the two ships had been attempted to be brought down to the same rate, whereas it had been shown that the *Ocean's* engines were going full speed ahead, which meant 9 to 9½ knots. The Captain had spoken of the weather as a heavy gale, but he was the exception, for all his witnesses had brought down the force of the wind and sea to just as little as that testified by the witnesses for the *Fusing*. The Captain had taken off a third off his speed on account of the wind and sea; but his witnesses had taken off the gale itself, and therefore the Court must come to the conclusion that the *Ocean* was really going at full speed,—9 or 9½ knots, while the *Fusing* was only going at 5 or 6 knots; there was therefore a striking difference, which did not admit that the cases of the two ships stood on anything like a parallel. The provisions for safety which the Captain of the *Ocean* took in the fog were to put a boy on the look-out, and not to slow the engines at all. Next came the important question of porting the helm, which was the point on which he wished to urge the attention of the Court, as being the most important of all on which to obtain the judgment of the Court. With respect to the evidence as to the order to starboard, which was first passed to the man at the wheel, it was most difficult to arrive at an exact conclusion as to where the word "starboard" came from. Several theories had been attempted, but he would not trouble the Court with them, except to say that the order must have been given by some one on the bridge of the *Ocean*, of which there was no doubt. He did not think the order was given on board the *Fusing*, as had been contended on the part of the *Ocean*; but that it was given from the bridge of the *Ocean* itself, in the first hurry and confusion. He thought the first impression was correct, that the *Fusing* was on the starboard side of the *Ocean*, and if the order to starboard was given by the man on the *Ocean's* bridge, it showed that the man who gave the order thought the *Fusing* was on her starboard side at the moment when the whistle was heard. If that was the thought, it was a correct one; but the consequence showed that second thoughts were not at all times best, for immediately afterwards they changed their minds and gave the order to hard-a-port. The evidence on this point given by the chief mate of the *Ocean*, was so remarkable that, although the other side did not think proper to examine him, he (Mr. Drummond) had thought it right to bring it before the notice of the Court. The witness said he lay in his bed reading, the door and port of his room (which was below), closed, and yet he could not only hear the *Fusing's* whistle, but knew it was on the port bow of the *Ocean!* That was certainly a most remarkable statement, but it bore the inference that, having acted as they did, the position must be supported all through the case. That evidence was, however, too good to be true—as he thought the Court would see, when it took the evidence as to the position of the ships into consideration. Now came the question of porting, which must also be looked at from another point of view. What state of circumstances justifies a ship in porting her helm? He thought it would be within the knowledge of the Marine Assesssor, as well as that of his Lordship, that porting the helm had led to more collisions than anything else. There was at one time a rule laid down for the very purpose of permitting porting, but the danger was ultimately seen to be so great that the rule had been abrogated. The principle was now laid down, as in the case of the *Rona* and *Ava*, that no ship may port her helm *in ignorance of the position of the other*. Now with reference to the question in regard to hearing a whistle in a fog, his Lordship had pointed out that a histle in a fog showed that a ship was somewhere about, and nothing more—she might be going in any direction and that any step that may be taken on board the ship hearing it might be either right or wrong, and she may get into the very danger she wished to avoid. Take the case of the *Ava* for example; she saw a small cloud three miles off, and ported her helm, but the Court held she was not justified in changing her course until she was sure of the position and course of the other—that she was not justified in acting on any supposition whatever. The point was laid down with so much precision that he thought the Court would not care to look upon any other authority. The Court said of the *Ava*—you did not know the course the *Rona* was steering, but altered your own course, and therefore must bear the brunt of the fault. He (Mr. Drummond) applied that case to the *Ocean*, for it really represented the whole facts—the *Ocean* ported when at some distance, and fell off some four or five points, thereby putting herself off her own course and causing the collision. She was heading for the shore when she struck the *Fusing*, and that he contended was in itself a very great error, and brought about all that had happened. It was not once in a million times that two ships got end on to each other.

His Lordship said it seemed to his unsophisticated mind that in such cases the only thing two ships seemed to do was to run stem on to each other. He was in such a case once, where, after dodging about from port to starboard for some time, the two ships came within two lengths of each other, and head on.

Mr. Drummond went on to say that the *Fusing* kept her course until she obtained *knowledge*, while the *Ocean* on the other hand *acted without knowledge*, and the result of her precipitate action brought about the collision. It was a point of the greatest importance in this case. He was supported in his contention by the case of the *Black Diamond*, which was very like the present case. The *Black Diamond* improperly ported her helm, and was held to blame because she was in absolute ignorance as to where the other vessel was. He considered the evidence on the part of the *Ocean* had failed to prove her position at all, while the evidence of MacFarlane, on that point, was most extraordinary. There were one or two other minor points to be considered, and he would remind the Court that, in their preliminary act, the other side made no mention of speed at all, although they gave the position of the *Ocean*. He would next refer to the practice in such cases, and to the Admiralty Rule that under certain circumstances the damage should be equally divided. In *Abbott*, page 598 and through to 600, there were some important notes on the point. An attempt had been made, in the course of the case to amend the pleadings, and he thought he had heard his Lordship say that the Court was a Court of Equity.

His Lordship said that what he had meant to say was that the whole base of its jurisdiction was on equity.

Mr. DRUMMOND said even if the Court considered the *Fusing* to blame and that the *Ocean* had suffered damage through her fault, he would submit that the damage of the *Ocean* be not assessed, nor added to that of the *Fusing*, but that the case should be brought before the Registrar and Merchants to assess the damage and loss of the *Fusing* alone. The proper judgment would be that the damage of the *Fusing* be assessed, and that the *Ocean* pay half of it to her. If the Court desired to have the damage on both sides added together and divided, he should contend that the other side had not brought a cross action.

Mr. WAINEWRIGHT—The *Ocean* could not bring a cross action.

Mr. DRUMMOND was of a different opinion.

His LORDSHIP—Where would it be brought?

Mr. DRUMMOND—In this Court.

His LORDSHIP—But how could this Court attach a Chinese ship?

Mr. DRUMMOND said, it was not necessary to attach the ship, and instanced the case of the *Charkieh*, a frigate belonging to the Pasha of Egypt, which ran down an English vessel in England.

His LORDSHIP—Reverse the case, and put it in Turkish territory. The present case is in Chinese territory.

Mr. DRUMMOND submitted that Chinese, coming voluntarily into this Court, placed themselves on the same footing as foreigners. He did not think the Court would be right in giving the *Ocean* a judgment which would enable them to have the damages assessed. It would have been much easier in the first instant to have filed a cross suit and had the whole case tried together. The application to amend the answer was an attempt to obtain this by a side wind, but the Court had not granted it. In conclusion, Mr. Drummond said that Clauses 3 and 4 of the Order in Council it was distinctly laid down that subjects of China shall be on the same footing as other foreigners in this Court, and with a few other remarks in support of his argument, he left the case in the hands of the Court.

His LORDSHIP said that since the Court adjourned on the previous night, both the Marine Assessor and himself had had an opportunity of going through the evidence, but not together. He would first read the Marine Assessor's opinion on the case, and then the judgment of the Court.

The following is the opinion of the Assessor:—

It is my opinion that the *Fusing* was in fault; in maintaining too high a rate of speed in so dense a fog, that she was inefficiently navigated in the matter of look-out, and that she committed a grave error in not checking her way, by stopping and reversing her engines, when she first heard the *Ocean's* whistle.

I consider that the *Ocean* was also in fault, for maintaining too high a rate of speed.

Her engines were at full speed after the first whistle of the *Fusing* was heard, nor were they slowed until after the order to port was given.

With regard to porting, it appears to me to have been done rather in the flurry of the moment, which would have been natural enough, the impression being that the whistle was somewhere on her port bow; but as no evidence has been produced to prove that the *Fusing* did starboard her helm, until the last moment, when it could not possibly have altered the position of her head, I am inclined to the opinion, after weighing all the circumstances of the case, that the *Fusing* was really a little on the starboard bow of the *Ocean*, and that the collision resulted from the porting of the *Ocean*.

The evidence as to the direction of the sound of the whistle is conflicting.

The evidence with regard to speed also is not quite satisfactory; and I am inclined to believe that the speed of both ships was nearer 7 than 6 knots immediately before the collision—a speed, I think, unjustifiable under the circumstances, as they could have steamed at 4 knots without difficulty as regards navigation, and with less if not the minimum of risk to life and property.

Had both ships, on hearing each other's whistles, at once stopped, and reversed their engines, without moving their helms, it is my opinion that little or no damage would have been sustained by either party.

The Chief Judge then delivered judgment as follows:

This is a case of collision between two steamers—the *Fusing*, owned by a Chinese steamship company, and the *Ocean*, the property of a Scotch firm. Both ships were commanded by Englishmen, and the officers of both ships were English; the crew of the *Fusing* being Chinese, the crew of the *Ocean* being composed of 19 Foreigners and 20 Chinese.

The *Fusing* was 202 feet long, her gross tonnage being 875 tons.

The *Ocean* was 285 feet long, of a gross tonnage of 1,470. Both vessels were propelled by screw.

The collision occurred off the coast of China, in 33° 31′.30′ degrees of Latitude and 122° 59″ East degrees of Longitude, on the 4th of April, about 40 minutes past 10 a.m.

The *Fusing* was steering North ¼ East. The *Ocean* S. ½ W. There was a rolling sea, consequent on a breeze from the S.E. the night before. The wind had died or was dying away. The *Fusing* felt little or no wind—her fore and aft sails, which she had not furled since the wind fell, were flapping. The *Ocean* going in a contrary direction felt the wind slightly. There was a dense fog, which rendered a ship invisible a ship and a half's length. There was no tide, but the *Fusing* had a following sea, and the *Ocean* a head sea. The *Fusing* sank within 4 minutes of the collision, 63 passengers and crew going down in the vessel were drowned.

The evidence offered on behalf of the *Fusing* tended to show that she had reduced her speed at 6 a.m. in the morning, in consequence of the fog, from 8 or 8½ knots to 5½ or 6. The first mate says that the following sea would assist her to the extent of half a knot; against this, and tending to show that this reduction in speed did *not in fact to the extent stated* take place, is the statement in the Preliminary Act of the owners of the *Fusing*, that the collision occured 125 miles north of the Island Shaweishan, a statement which is borne out by the Preliminary Act of the owners of the *Ocean*, which places the scene of collision 230 miles south of the Shantung Promontory—a point about 128 miles north of the before mentioned Island. Moreover, the evidence of the captain, and of the 1st and 2nd mates of the *Fusing*, shows that the distance run from the Island between the hour of 8 on the previous evening when the Island was passed and the patent log set, and the time of the collision, had been 120 miles—reckoned by the patent log and thus divided. At 8 o'clock a.m. the distance marked was 99 miles; therefore, placing the steamers where the captain of the *Fusing* places them, 21 miles must have been run between 8 a.m. and 10.40 a.m.—two hours and forty minutes—which would give a speed during that time of about 8 knots an hour.

It does not appear that there was more than one look-out man employed after 8 o'clock a.m., although the Chinese quartermaster at the wheel says another Quartermaster was on deck; but in this he is contradicted by the captain and mate, who say that the only persons on deck were themselves, the look-out man (a sailor), and the Quartermaster at the wheel; the Quartermaster referred to by the man at the wheel being sick in his berth. The captain was aft, the watch being kept by the 2nd mate, who was stationed in front of the wheel-house.

It appears also that when the first whistle of the *Ocean* was heard, as was thought close on the starboard-bow, the 2nd officer told the man at the wheel to answer it which he did; the engines were then slowed by the 2nd mate, who used the telegraph; the effect of this, it is stated, would be to bring the engines to dead slow—that is—if she had been going slow at the time. As soon as the whistle of the *Fusing* was answered by the *Ocean*, the captain of the *Fusing*, who was on the port-quarter called out "hard over to starboard," and a few seconds afterwards when the *Ocean* came in sight, he ordered the engines to be put full speed astern, saying "My God she is into us." It may then be assumed, from the evidence of the captain and the mate of the *Fusing*, that whatever the rate of speed the steamer was going, her engines were not put astern until the vessel was seen, and when she was seen, she was so close on that the manœuvre was useless.

On this evidence alone, the Court is of opinion, and the Marine Assessor agrees with it,—1st, that the rate of speed, *even* placing it only at 5½ or 6 knots, at what the *Fusing* was going, was not justified under the circumstances. The fog being so dense that any object was only visible a ship's or at most a ship-and-a-half's length off.

2nd.—That the *Fusing's* engines ought to have been stopped and reversed immediately the first whistle of the *Ocean* was heard. The fog being dense and the sound of the whistle showing that a vessel was in dangerous proximity.

3rd.—That the look-out kept was under the circumstances insufficient.

The evidence offered on the part of the *Ocean* is that she had been going at 8½ knots up to an early hour in the morning. That afterwards the speed was reduced, *not however by the slowing of the engines*, but by the action of the wind and sea, to 6½ knots. The second mate, who was on watch at the time of the collision, putting the speed of the steamer at 7 knots when the whistle of the *Fusing* was heard, the handle of the telegraph being at "full speed ahead." The nature of the blow received by the *Fusing* is also evidence of the violence of the shock, which violence is attributable, in the mind of the Court, to, and is confirmatory evidence of, the rate of speed at which the *Ocean* was proceeding. The starboard bow of the *Fusing*, between 30 and 40 feet from the stem, was cut open, the cut-water of the *Ocean* penetrating through the cargo, consisting of bags of rice, to some planks beyond the mid-ship line.

The captain, mate, look-out men and steersman of the *Ocean* state that they first heard the answering whistle on their port-bow, and, imagining the vessel to be in that direction, the wheel was put hard-a-port, and the engines reversed full speed astern. The look-out kept appears to have been all that could be desired.

On this evidence alone, the Court is of opinion, and again the Marine Assessor agrees with it—that putting aside anything else, the rate of speed at which the *Ocean* was going, was, in a dense fog, such as is admitted by all existed, wholly unjustifiable.

That with regard to the porting of the helm under the circumstances, the Court is not inclined to say that it was dicededly wrong, if it was quite clear to the minds of all those navigating the *Ocean* that the whistle proceeded from some vessel ahead on its port-bow. It is disinclined to lay down any hard and fast rule that the organ of sight is alone to be the guide as to the expediency or propriety of taking or following a particular course of action—because if the organs of hearing—touching—and, as in the case of the *Ava* and *Rona*, smelling, are never to be relied on, or acted on, when the organ of sight cannot from circumstances be used, accidents might occur, which the proper use of these organs might be the means of avoiding. But where there is any possibility of doubt,—and in most cases there is great probability of doubt, the value of the simple rule—"not to alter the course, but to go full speed astern," on the moment of a whistle in a fog, showing a vessel in dangerous proximity, being heard, is at once apparent.

The evidence as to the exact relative position of the two vessels is conflicting, and the Court does not pretend to decide which account is the more reliable; but the Marine Assessor is inclined to think that, on the evidence offered, and on the probabilities of the case, the accident is more likely to have occurred in the way stated by the *Fusing*—that the captain and officers of the *Ocean* were mistaken as to the exact quarter whence the sound of the whistle of the *Fusing* proceeded; and that by porting the helm of the *Ocean*, she was driven into collision with the *Fusing*.

Some attempt was made by the defendant to show that 6½ knots an hour was a moderate rate of speed to navigate a steamship in a dense fog, in which an object so large as a vessel was invisible at a ship's—or a ship-and-a-half's—length. The most this evidence amounted to, was that it was usual to run at that rate of speed. Whether usual or not, it is clear to the mind of the Court that it is imprudent to run at that rate, and that it cannot be considered under the circumstances of this particular case either as a *moderate*, or *safe*, or *prudent* rate.—In such a fog, it appears to the Court that, regard being had to the necessity of keeping steerage way on a vessel, the rule should be—and it is one suggested by common sense, and, therefore, by good navigation—that the speed should be

moderated to such an extent that the vessel could be stopped dead within the distance those on board could see an approaching object; and if this is a safe rule it suggests the rule mentioned in more than one case, to the effect that vessels in a dense fog, hearing a whistle or horn a-head of them, and not aware whence it proceeded, should not alter the course, but immediately reverse full speed, not waiting until the approaching vessel appeared in sight.

The Court finds therefore, that both vessels were in fault, and decrees that the damage sustained by both, together with that occasioned to the cargo by injury and loss, be added together, and that half such damage be borne by each vessel.

In making this decree, the Court exercises the equitable jurisdiction of a Court of Admiralty, which enables it to do full justice to the parties before it, although in this case there is no counter-claim or cross-action on the part of the defendant. Indeed, it is difficult to see how any counter-claim or cross-action could have been brought under the circumstances—the *Fusing* being Chinese owned, (and therefore not under the jurisdiction of this Court) and the Chinese not having any Courts of Admiralty or rules of Maritime Law; Having voluntarily come into this Court they must be held to abide by the decision of the Court which seeks, after a full hearing of all the facts on both sides, to do justice.

U. S. CONSULATE-GENERAL.

Shanghai, May 24th.

Before Geo. F. Seward, Esq., *Consul-General;* and Messrs. Talbot Olyphant and John Thorne, *Assessors.*

F. H. B. Jenkins *v.* George B. Glover.

Mr. Eames appeared for the plaintiff; and Mr. Wainewright for the defendant.

The action was brought to recover Tls. 6,687 from the defendant, who is Commissioner of the Chinese Imperial Maritime Customs at Shanghai.

Mr. Eames opened the case by reading the plaintiff's

Petition:—

1.—That he is a Citizen of the United States, now resident at Shanghai.

2.—That the defendant is also a Citizen of the United States, and within the jurisdiction of this Court.

3.—That during the year 1866 the plaintiff contracted with a duly authorised Officer of the Chinese Government to cause to be manufactured and imported for the use of said Government certain arms and ammunition specified in the schedule hereunto annexed, for which the officer aforesaid agreed to pay to the plaintiff the sum of Taels 6,687 Shanghai Sycee.

4.—That the plaintiff imported said arms and ammunition under a special permit from the Superintendent of Chinese Customs at Shanghai, and on or about the month of November, 1867, requested the agent of said officer to take delivery thereof, which he refused to do.

5.—That thereafter, to wit, on or about the 21st day of April, 1875, the said arms and ammunition were by order of the plaintiff offered for sale by public auction, at Shanghai, and, but for the interference of the defendant, could and would have been sold as the plaintiff believes, at or near their contract price.

6.—That the defendant by his agent at the time and place of the said auction, publicly and in the presence and hearing of a large number of persons there assembled, protested against the said sale, and in consequence of said protest the persons present were prevented from bidding, and the sale of said arms and ammunition was lost.

7.—That the plaintiff is not at present able to sell or dispose of the said arms and ammunition, except at a merely nominal price.

8.—That by the unwarrantable interference of the defendant as aforesaid, the plaintiff has suffered loss and damage in the sum of Taels 5,000 as he verily belives.

Your Petitioner therefore prays that Judgment may be given against the defendant accordingly, with interest and costs, and that he may have such further or other relief as to your Honorable Court may seem meet.

Schedule of the arms and ammunition above referred to—

275 Revolving Rifles at Tls. 15 each	Tls.	4,125
140,000 Cartridges for do. ,, 1.8.3.....	,,	2,562
	Shanghai Sycee Tls.	6,687

The defendant's original answer ran as follows:—

1.—The allegations contained in the 1st paragraph of the petition are admitted.

2.—The defendant is a citizen of the United States, and is in the employ of His Majesty the Emperor of China, as Commissioner of the Chinese Imperial Customs at Shanghai.

3.—As to the allegations contained in the 3rd and 4th paragraphs of the petition, the defendant is not informed, and leaves the same to be proved.

4.—The defendant admits that the arms and ammunition referred to in the petition were on or about the 21st of April, 1875, offered for sale by public auction at Shanghai, but he denies that he in any way interfered with the sale thereof.

5.—With reference to the allegations contained in the 6th paragraph of the petition, the defendant denies that he either employed, directed or authorised any person to protest against the said sale. If any such protest as is alleged in the petition were made, it was made without the sanction or authority of the defendant. The defendant denies that such protest, if made, had any effect upon the said sale.

6.—The defendant denies the truth of the allegations contained in the 7th und 8th paragraphs of the Petition.

7.—And the defendant further says in answer to the Plaintiff's Petition that the said sale or attempted sale was illegal, inasmuch as it was in violation of the Treaty between the United States of America and the Chinese Empire, signed on the 18th of June, 1858, and of the Customs Rules or Regulations made or in force under or by virtue thereof, or some or one of the said Rules or Regulations, and that it was lawful for the Defendant as such Commissioner of Customs as aforesaid, to endeavour to prevent the said sale by protesting against it in the manner charged in the Petition.

8.—And the defendant further says in answer to the plaintiff's Petition, that the act complained of in the 6th paragraph of the Petition, if done or directed to be done by the defendant, was so done or directed to be done by him within Chinese jurisdiction and in pursuance of his authority as a Chinese Customs' Officer, and in obedience to orders received from the Chinese Government.

The defendant therefore prays that the Petition be dismissed, the petitioner decreed to pay the costs, and that the defendant may have such other or further relief as to the Court may seem meet.

Mr. Eames was proceeding to read the answer, when

Mr. Wainewright said it would perhaps be as well for him to state here, what he had before mentioned privately to the other side, that the defendant withdrew the whole of his answer, except the second and last clauses, which would now constitute the whole defence to the action.

The Court—Then you do not care to call any witnesses?

Mr. Wainewright—We do not. We admit everything alleged in the petition to have been done, and simply rely on the second and last clauses in the answer.

Mr. Eames said that seemed to reduce the case to a very narrow compass. There was one point, however, upon which he should be obliged to offer evidence, as it did not appear to be included in the defendant's admissions. It was with respect to the contract price of the arms.

Mr. Wainewright asked if it would not be better to have the legal question settled first, and afterwards go into the question of value.

The Court thought it would be better to decide the legal question first.

Mr. Eames then went on to say that he understood the defendant meant to rely on the second and last clauses of his answer, whereby the case was rendered a very simple one. The defendant took the ground that, as a public officer, he was not responsible, as he had acted solely under the instructions given to him. That no doubt would be the case at home, but the plaintiff's position was a very curious one—he had no means of redress against the Government of China in this matter. He (Mr. Eames) referred the Court to the case of Gumpach *v.* Hart heard before Sir Edmund Hornby, and reported in the *Gazette*, in which the same point arose,—

Mr. Wainewright said if Mr. Eames was going to quote that case, he had better take the Privy Council ruling, as the case was referred to them.

Mr. Eames said if it was meant that Sir Edmund's judgment was overruled—

Mr. Wainewright did not say that the point upon which Mr. Eames relied was overruled. He had a report of the case before the Privy Council, which he would submit to the Court.

Mr. Eames resumed by saying that the defendant was Commissioner of Customs here, and he (Mr. Eames) contended that his duty ceased when goods were entered and passed. He now stated that he acted, in the manner alleged in the petition, on the part of the Chinese Government.

Mr. Wainewright—He acted as Commissioner of Customs, in pursuance of the orders of the Chinese Government. That is all he says.

Mr. Eames—But not on any special order from the Government. Are you going to put in any evidence on that point?

Mr. Wainewright replied that he was not.

Mr. Eames—Then I contend that the defendant had finished his duty as Commissioner of Customs, when the rifles were received and passed. But supposing he had received a special order to act in the manner he now admitted, then I also contend that the Chinese Government could not give him any such order, for the valid reason that the rifles were imported under the usual permit, for the use of the Chinese Government, according to the regulations promulgated on the 9th June, 1863. That is of course admitted?

Mr. Wainewright—We do not admit anything about the Chinese Government.

Mr. Eames—I understand your sole defence is contained in the second and last clauses of your answer—that the defendant is a servant, was acting under instruction, and is therefore not liable? Now, these rifles were imported to the order of the Chinese Government, and when they arrived, the Government refused to take them, but not from any complaint or default in the arms themselves.

The Court—Neglected to take them?

Mr. Eames—We say that we asked the officer to take delivery of them, and he refused to do so; and here comes up the question—and a rather serious one—The Chinese Government enter into a contract for the importation of these arms, which in this instance were manufactured expressly for them. Their manufacture of course took some time, and when they arrived in China, political circumstances had materially altered, and the Government, as I have said, refused to take them. The plaintiff said, "Very well; then let me sell them elsewhere." They refused him leave to export them, and their sale by auction was also stopped. Now, what is to be done with the arms? They were imported expressly for the Chinese Government, which having refused to take them, I contend they became as any other merchandise for disposal. The plaintiff has no remedy against the Chinese Government, and if he is not permitted to dispose of the rifles by public auction, he cannot do so by private sale. If the one course is illegal, the other is illegal also. The whole case turns on the point whether these rifles, having been properly imported, became merchandise that could be dealt with as any other merchandise. I suppose it is hardly necessary for me to quote any reference on the point that a person having no authority cannot give any authority?

The Court—There is no doubt on that point.

Mr. Eames—No, it has been admitted many years. This case is narrowed to those points. The plaintiff wanted to sell the rifles, and defendant was wrong in stopping the sale. It involved a question of very great importance, though it seemed to him idle to argue it.

The Court—Perhaps you will turn to the Treaty provisions.

Mr. Eames—The Treaty provisions are against the sale of arms, but the proclamation provides for the importation of arms with a proper permit.

The Court—Will you read it?

Mr. Eames read as follows:—

Huang, Supperintendent of Customs, Intendant of Circuit, &c. A Special Proclamation.

"It is laid down in the Regulations appended to the Tariff, that munitions of war are contraband, and that import and export trade therein is prohibited; and thus it is only when specially imported for Chinese Government officers, under Government authorisation, that the contraband character of such commodities is removed.

"Therefore after the dates mentioned below, all munitions of war, brought to Shanghai, will be regarded as, and treated as, contraband, unless the importer has *in the first instance* obtained a *permit to import.* This document will be issued by the Customs, on receipt of instructions from H. E. the Governor; and will state distinctly that a certain merchant is authorised to purchase on behalf of His Imperial Chinese Majesty's Government, at a certain place, a certain quantity of munitions of war.

"All munitions of war brought here, save under this permit to import, will be seized and confiscated, and the plea that they are intended to be eventually taken to Japan or elsewhere will be by no means admitted.

"As, however, the distance between China and the various foreign countries is not uniform, I, on the 4th day of the 4th moon (the 21st May), addressed communications to the Consuls of the Treaty Powers to the effect "that *after the expiry of a term of six weeks* "commencing on the 4th day of the 4th moon, "the date of my communications, munitions "of war for which no Customs permit to "import has been issued, brought to Shanghai "in vessels which have come from Hongkong

"or any Asiatic, or Australian port, or in "vessels, which, coming from other parts of "the world have touched or anchored at "Hongkong, or any Asiatic or Astralian port, "shall be regarded as contraband and seized "and confiscated; and that *after the expiry of "a term of seven months*, munitions of war "brought to Shanghai, in vessels which "coming from any European, American or "African port, have not touched, or anchored "at Hongkong or any Asiatic or Astralian "port, shall be regarded as contraband, and "seized and confiscated."

"In addition to the communications which I have already addressed to the Consuls of the Treaty Powers, I now publish this Proclamation for the information of all whom it may concern.

"T'ung-Chih, 2nd year, 4th moon, 19th day."

Mr. EAMES went on to say—It seems to me that this really makes the importation of these arms legal. They were, I repeat, originally intended for the Chinese Government, who refused to take them, but not from any objection to them. That was not good faith, and they now refuse to allow the plaintiff to dispose of them otherwise. I do not know that I can make the case clearer. The hardship is very apparent.

The COURT—Do you rest your argument on this proclamation, without reference to the Supplementary Treaty?

Mr. EAMES—I rest my argument on everything that applies to it.

The COURT referred Mr. Eames to Rule 3 of the Suplementary Treaty between the United States and China, with relation to contraband goods, and requested him to read it.

By Mr. EAMES accordingly read as follows:—"Import and export trade is alike prohibited in the following articles: gunpowder, shot, cannon, fowling-pieces, rifles, muskets, pistols, and all other munitions of war; and salt.—8th November, 1858." Mr. Eames added that his argument was that the Chinese Government had waived the article in the Supplementary Treaty by the proclamation he had previously read.

Mr. WAINEWRIGHT said he would now call the defendant, and ask him a few questions respecting the authority under which he had acted, reserving his remarks until afterwards.

GEORGE B. GLOVER then deposed—I am Commissioner of the Chinese Imperial Maritime Customs in Shanghai. I hold my appointment from the Inspector-General, Mr. Hart. I am the servant of the Chinese Government. I have read the plaintiff's petition, and know that he alleges that I interfered with the sale of arms. Whatever part I took in the act complained of, was taken by me as Commissioner of Customs. I have directions from time to time from the Chinese Government, through the Inspector-General. The papers produced are part of my instructions, and are placed in my office for my guidance.

Mr. WAINEWRIGHT read the papers in question, which he submitted to the Court as part of Mr. Glover's instructions, upon which he had hitherto conceived he was entitled to act. The effect of them, he (Mr. Wainewright) contended, was that Mr. Glover was not amenable to any Consular Court, he being a servant of the Chinese Government. It was perhaps, somewhat premature to read those papers, but he would now do so.

The COURT—Are they issued as instructions?

Mr. GLOVER—They were received from Mr. Hart.

By Mr. EAMES—What instructions have you as Commissioner of Customs, with respect to the seizure of goods?

Mr. GLOVER—I do not admit your right to put this question to me. I am summoned here as George B. Glover.

The COURT—How is the Court to clearly understand the case, unless you will answer the question? It is competent for the Court to inquire how this act lies within the range of your authority. Otherwise acts of the most extreme kind could be perpetrated by anybody under the plea set up. I am as much disposed to support the authority of the officers of the Chinese Customs as anybody can be, but it must be competent for me to inquire in this case whether you have authority to do what is complained of.

Mr. WAINEWRIGHT said if the Court came to such a decision as that, it would be assuming the position of directing the whole of the Chinese Maritime Customs. His argument was that, as the Court could not summon Prince Kung or any other member of the Chinese Government before it, it had no authority to summon any servant of that Government for an act done under its orders.

Mr. EAMES—Has Mr. Glover received any instructions from the Chinese Government to act as he has done in this case?

Mr. GLOVER—As George B. Glover, I do not know anything of the case—only as Commissioner of Customs, and as a servant of the Chinese Government.

The COURT (to Mr. Glover)—Would it not be better to have this question answered? By the line you are taking, it would seem as if you thought the Court were unwilling to uphold the Chinese authorities.

Mr. WAINEWRIGHT said it was not a question for this Court alone. It was a question whether a Chinese Customs' official of any nationality, can be forced into his Consular Court to justify an act he may do as an employé of the Chinese Government. If an employé of the Chinese Customs could be so forced into his Consular Court, he (Mr. Wainewright) said it would do away with the Foreign branch of the Chinese Customs altogether. It was a question, he repeated, that did not apply to this Court alone, but to all Consular Courts. There was but a small community in Shanghai, but it embraced many nationalities, and several of those nationalities were represented in the Chinese Customs, but he contended they could not be called to account by their Consuls for their action as servants of the Chinese Government.

The COURT—I will make a note of the objection, but I think it better for the witness to answer the question. I must say it is placing me in a false position to call upon me in this way to decide this point. The dignity and position of the Chinese Government or its officers will not suffer at my hands, but I cannot agree with the argument advanced.

Mr. WAINEWRIGHT—If Mr. Glover answers the question, you will take a note that he answers it under protest?

The COURT acquiesced.

Mr. GLOVER then said he received his appointment from Mr. Hart, at Peking, who had given him instructions that he must obey his (Mr. Hart's) orders and his only. Mr. Hart had received his appointment from the Tsungli-yamên, and to the Chinese authorities only was he amenable.

The COURT said the question as put by Mr. Eames, was—Have you had special instructions to stop this sale of arms, or were you acting under general instructions?

Mr. GLOVER was understood to say that he had received special instructions, as Commissioner of Customs, with respect to sales of arms, such as the one in question, and that he was acting in pursuance of those instructions.

Mr. EAMES—But you have instructions to do exactly as you did in this case?

Mr. GLOVER—Yes.

Mr. WAINEWRIGHT resumed by pointing out to the Court that this was a case of enormous importance, because if the Court decided against Mr. Glover, it would be practically a death blow to the employment of foreigners in the Chinese Customs.

The COURT—Not so. It seemed the best way to put the case right before the Court, and get a decision upon it, instead of springing a point which it had never considered, and upon which it was unprepared to decide. If the decision upon the whole case was unsatisfactory, it could be appealed to the District Court of California.

Mr. WAINEWRIGHT hoped the Court would exonerate him from any intention of springing a point, but the vital question was, were foreign officials of the Chinese Imperial Customs to be liable to be dragged up before their Consuls, it may be once a week, to answer for actions done as servants of the Chinese Government? If the Chinese authorities found that was likely to be the case, they would no longer employ foreigners.

The COURT—It is the first time such a case has come before this Court, or any other United States Court. There is no reason, then, to fear that the Customs will be unduly interfered with. Let the whole case go before the Court, and a decision be given, and the Customs may be found relieved from danger of annoyance.

Mr. WAINEWRIGHT submitted that the whole case was before the Court—it was solely as to Mr. Glover's liability. As to going into the whole case, it was of no consequence, because if the Court decided against the defendant on the question of liability, it would alter the whole management of the Chinese Customs. He thought he was entitled in that Court, as in any other, to rely on any one of the pleas advanced, and he relied on the question of liability to be proceeded against in this way. What was done by Mr. Glover, was done by him in his official capacity; he had proved he had acted only in his official capacity; and he contended that he was no more liable for a thing done in his official capacity than was the Chinese Government itself. To put it on any ground would be simply to say that the Chinese Imperial Maritime Customs were subject to the Treaty Consuls. Such a thing would be impossible. The argument addressed to the Court on behalf of the plaintiff would have been a capital one, if the Chinese Government were the defendants. But it was no argument at all where a servant of that Government was the defendant. It might have been most improper to stop this sale of arms, but that was a matter for the Chinese Government itself to answer and not for their servant, who only acted in accordance with his instructions. To make the servant amenable to Consular Courts was not justifiable, and could not be supported. A British subject was not amenable to the British authorities for acts done as a servant of the Chinese Customs. Upon the points he had raised, Mr. Wainewright quoted several authorities, among them, Sir Fitzroy Kelly, Sir W. Hatherton, Messrs. Hannen, Stephen, and Wingrove Cooke.

The COURT said it failed to see the justice of the propositions raised. The Chinese have a perfect right to regulate their revenue matters as they chuse, but why should not the defendant produce his instructions to the Court? If he did not produce his authority, how could the Court know that he was acting under instructions at all?

Mr. WAINEWRIGHT, referring to the case of "Gumpach and Hart," said he thought it did not touch upon the present case at all. If Mr. Hart was held responsible for the acts of all his employés, he would be placed in an unendurable position, because he was responsible to one Court, and his employés at others. It was the first case in which an attempt had been made to fasten liability of this kind, and he contended it could not be supported.

Mr. EAMES, in reply, said there were one or two things he would like to repeat. Firstly, it seemed to him, that the defendant must prove to the Court that he was acting within the scope of his authority. If he could do that he would be exonerated, although other people might have been injured by his act. Secondly, he must show that he was acting under Chinese authority, and that the Chinese Government had power to give him such authority. The next step was that he must show his instructions. Defendant had brought quite a quantity of instructions, but he had left out the most important. In this case, the paper itself was the proper evidence, and ought to be produced, but the defendant had produced no documents from the Chinese authorities showing his authority for the act complained of.

Mr. WAINEWRIGHT said defendant had no power to produce them. He admitted the arms were imported, and of course they were admitted under permit; but what was the nature of the permit he did not say.

The COURT—Then there is no denial on your part that these arms were imported under permit in the usual way, and that the Customs passed them?

Mr. WAINEWRIGHT said that was so.

Mr. EAMES then went on to say that it struck him as being a most curious argument that Mr. Glover could not be proceeded against because his employers could not be touched. So long as Mr. Glover confined himself to the authority given him, he was right, but when he stepped outside of it, he was no longer sheltered by it. To say otherwise would be most monstrous, for if a man was held to be so irresponsible for his acts, he might go and burn a whole city down on a similar plea. In conclusion, Mr. Eames said he would not now go into the question of the value of the arms, because he thought it better to have the legal question settled first.

The Court reserved judgment.

May 26th.

The following judgment was delivered :—

The Petitioner claims that, in 1867, he imported into Shanghai, under contract with an official of the Chinese Government, a lot of arms and ammunition, the agreed price of which was Tls. 6,687 ; that the said goods were landed under an arms permit, drawn in the ordinary form ; that the officer who had contracted to take delivery of the consignment refused to receive it ; that on the 21st of April, 1875, he offered the goods for sale at public auction ; that the Defendant by an agent, publicly at the place of sale, and unwarrantably protested against the sale ; that, but for this act of the Defendant, the goods would have been sold at or near the contract price ; and that he is now unable to sell them excepting at a nominal price. Upon these allegations the Petitioner asks for damages in the sum of 5,000 taels. The Defendant made answer to these allegations, traversing the several points, but at the hearing he amended his pleading by consent. His amended answer set forth simply that he "is in the employ of His Majesty the Emperor of China, as Commissioner of the Chinese Imperial Customs at Shanghai," and that "the act complained of, if done, or directed to be done by the defendant, was so done, or directed to be done, by him within Chinese jurisdiction, and in pursuance of his authority as a Chinese Customs' officer, and in obedience to orders received from the Chinese Government."

I remark in the first place that the Petitioner had, in my opinion, no right to sell the goods in question in the open market. The supplementary Treaty of 1858 provides that :— "Import and Export trade is alike prohibited in the following articles : Gunpowder, Shot, Cannon, Fowling-Pieces, Rifles, Muskets, Pistols, and all other Munitions of War." This means simply that all trade in the articles mentioned is prohibited. The Government of China has, however, provided a system under which purchases of arms, &c., needed by the Government may be made. This system is set forth in a proclamation issued by Hwang, Taotai at Shanghai, in 1863, and officially published at that time in the English language by Mr. H. Tudor Davies, the then Commissioner of Customs. This Proclamation received at the time the approval of the Treaty Consuls, and I am not aware that its provisions have ever been brought into question. The translated proclamation is as follows :—

"Hwang, *Superintendant of Customs, Intendant of Circuit, &c.*

A Special Proclamation.

"It is laid down in the Regulations appended to the Tariff, that Munitions of War are contraband ; and that import and export trade therein is prohibited ; and that it is only when specially imported for Chinese Government Officers, under Government authorization, that the contraband character of such commodities is removed.

"Therefore, after the date mentioned below, all Munitions of War brought to Shanghai, will be regarded as, and treated as contraband, unless the Importer has *in the first instance* obtained *a permit to import*. This document will be issued by the Customs, on receipt of instructions from His Excellency the Governor ; and will distinctly state that a certain merchant is authorized to purchase on behalf of His Imperial Chinese Majesty's Government, at a certain place, a certain quantity of Munitions of War.

"All Munitions of War brought here, save under this permit to import, will be seized and confiscated, and the plea that they are intended to be eventually taken to Japan or elsewhere will be by no means admitted."

The learned Counsel for the Petitioner seems to hold that Munitions of War imported under permits, granted in accordance with the terms of the Proclamation, are freed from their contraband character, and may be sold in the open market. This view entirely leaves out of consideration the fact that the Proclamation is intended to define a procedure under which goods required for the Government may be imported ; and not at all to sanction, under restrictions, a general trade in arms. When, therefore, the Petitioner caused the goods in question to be offered for sale at public auction, he did what he had no right to do, and it was competent for any rightly accredited agent of the Chinese Government to protest against his act.

A second question is—whether the Defendant was entitled, in virtue of his official position and instructions, to protest against the sale.

It might seem that the duties of a Commissioner of Customs cease after goods have passed the Customs in due course, and that the Defendant's interference in this matter was *ultra vires*. There is, however, no violence in the idea that a Commissioner, in virtue of his general oversight of whatever concerns foreign trade, may follow articles which are of a contraband sort, in order to ascertain whether the terms under which they have been imported are complied with, and to prevent any other disposition of them than that contemplated by the Government. But however this may be, there can I think be no doubt that it is competent for the Government to instruct him to take such action. That the Government has given him such an instruction is declared by the Defendant in evidence. I am willing to accept this declaration, and to decide, in view of it, that he was acting within the scope of his authority.

A point was raised by the defence, in objecting to a question put to the Defendant, which is of much interest. It was not pressed, and it was not necessary to make a ruling upon it. This was the more satisfactory, for the reason that neither the Court nor the learned Counsel were prepared, I think, to deal with it, with that extent of information which it deserved. The point, as raised, amounted to a declaration that a citizen of the United States may bar any suit brought against him by pleading that he is an officer of the Chinese Government, and acting within the scope of his authority as such officer, it being in this view beyond the power of the Court to inquire whether the act in issue was or was not beyond the scope of his authority.

With a strong disposition to uphold the Foreign Customs establishment, and a perfect recognition of the very valuable services which it has rendered to native and foreign interests, I find it difficult to assent to so extreme a proposition ; and I trust that, if it be brought up before me again at any time hereafter, it will be done in a formal manner, and with elaborate arguments. I may add that the learned Counsel for the defendant failed to show or to attempt to show that his contention was supported, directly or by implication, in the interesting case of von Gumpach and Hart. My examination of that case indicates that the decision of the Privy Council would not support the contention.

I dismiss the petition, with costs against the petitioner.

POLICE COURT.

Shanghai, May 17th.

Before C. F. R. Allen, Esq., *Actg. Magistrate.*

R. *v.* George MacMurran.

Drunk and Incapable.

Defendant is boatswain of the str. *Antenor*, and late on Sunday night was found drunk and incapable in the Woosung road, Hongkew. In defence, he said he must have been "dosed" (drugged.)

Discharged with a caution.

Assault.

Aaron Arrant, a native of Aden, was charged with assaulting the houseboy and gateman at No. 1, Kiangse Road.

It appeared from the evidence of the complainants that at about 12 o'clock on Sunday night, the defendant went into the compound of the house, and was proceeding to misbehave himself when the gateboy tried to prevent him. He asked who was inside the house, and the gateboy told him he must ask the houseboy. Defendant did so, and was told by the houseboy that he was too busy to attend to him. Defendant then rang the bell, and on its being answered by the houseboy, he struck him, and tore his clothes, doing damage to the extent of $1.25. He next took up two flower pots and threw them at the gateboy, afterwards kicking him. He was then given into custody.

There was no defence, the defendant merely saying that he went to the house to enquire for a gentleman, with whom he had some business.

His Worship said it was, no doubt, a case of drunken assault, and the sentence was that the defendant should pay $2 for each of the assaults, and $1.25 for the damage he had done to the boy's clothing ; in default, ten days' imprisonment.

The money was paid.

May 21st.

R. *v.* John Toleman, 2nd Cook of the S.S. *Antenor.*

Absent without Leave.

In answer to his Worship, prisoner stated that he came on shore about 4.30 p.m. on 17th instant, with the chief cook. On his return to the ship, the chief officer told him that he had no right to leave the ship without permission. He told the mate that he considered the chief steward as his "boss," and that he was going on shore again. The chief mate knocked him off duty.

Randolph S. Campbell, stated—The chief steward reported to me that the chief and second cooks were on shore without leave. On their return, I told them that they had done wrong. The chief cook admitted his fault, but the prisoner set me at defiance, and said that he would go on shore again. I think he was the worse for liquor. He went on shore again that evening.

Captain Jones gave the prisoner a good character.

Fined two days' pay and costs.

May 26th.

Attempt to commit Suicide.

Mathew Jordan, a fireman, unemployed, was charged with the above offence.

In answer to His Worship, prisoner said that he was mad at the time and did not know what he was doing.

Mr. Stripling said that the prisoner had only just returned from Ningpo, where he had been employed as a constable, but had been discharged from the force for drunkenness.

J. Nesbit, sworn, deposed—I am 2nd officer of the S. S. *Europe*. At about 7 p.m. yesterday, my attention was called to the prisoner, who was on the wharf. The prisoner was standing by the stern of the *Europe*, and had a stone tied by two half hitches to his neck. I went on the wharf and took hold of him and undid the rope. I asked him what he meant. He replied that he was tired of life and wanted to make away with himself. The stone was securely fastened to the rope. From the position he was in, I am of opinion that he intended to carry out his purpose. His coat, vest and cap were lying on the wharf. I made him take up his clothes and then took him to the Police Station. I did not consider him the worse for liquor. He walked straight enough, and seemed to have his senses about him.

Mr. G. Rohl, sworn, deposed—At about 7 p.m. on Tuesday evening, I was about 18 yards from the steamer *Europe*, on Hunt's Wharf. My attention was attracted to the prisoner, by seeing him take off his coat, vest and cap and throw them down on the wharf. Thinking he was going to fight some one, I went towards him ; by the time I reached him Mr. Nesbit had untied a rope from his neck. The other end was attached to a stone. I spoke to him. He replied that he was thoroughly ashamed of himself and did not wish to look a European in the face again. He was tired of life and wanted to make away with himself. There are about 20 feet of water at the spot. He told us why he had left Ningpo. He did not appear to me to have been drinking.

His Worship remanded the prisoner until Friday next, in order that he might be examined by a medical man.

PRICE OF THE *NORTH-CHINA HERALD and S. C. & C. GAZETTE.*—Per Annum, Taels 12 ; Six Months, Taels 6.50; Three Months, 3.50 ;—*all payable in advance.* Credit price, Tls. 13.15 per Annum. COMMERCIAL INTELLIGENCE.

SHANGHAI, MAY 28TH, 1875.

ARRIVALS.—From London, the *Forward Ho;* from Hamburg, the *Saturnus;* and from Hongkong, the P. & O. steamer *Zambesi*, with the London mails of 16th ultimo.

TELEGRAMS.—Reuter's latest from London quotes—*Mid. Or. Cotton*, 8⅛d.; 8¼-lb. *Grey Shirtings—Eagle*—9s. 10½d.; *Iron*, £9 10s.; *Lead*, £23 5s.; and reports the export of PLAIN COTTONS to Shanghai as over 11,000,000 yards for the first half of the current month.

PIECE GOODS.—Our Piece Goods market has not experienced any change since this day-week. Extreme quietness has prevailed; and the course of prices—smoothed somewhat by the Auction sales, which again claim attention as comprising the bulk of the week's business—has been downward. At the close there is no life or "go" in the dealers. They have no orders on hand, nor do they look for any until after "settling day," some 12 days hence.

Grey Shirtings.—A thorough collapse. Sales scarcely worth recording. At Public Auction, damages ex *Ulysses—Deucalion*—have sold as follows:—6-lbs. Common, from Tls. 1.16 *a* 1.29 per piece; 7-lbs. *Lion and Flag*—Stewart's—Tls. 1.43 per piece; 8¼-lbs Collie's *Lion on bale*, Tls. 1.65 *a* 1.66 per piece; Green Lion, Tls. 1.66 *a* 1.68¼ per piece, and a better cloth Tls. 1.80 per piece; and some Dewhurst's 9¾-lbs. *Eagles*, rejected because of *mildew*, realised from Tls. 2.52 *a* 2.60 per piece. In the open market best Heavy Shirtings have declined nearly two mace per piece.

White Shirtings.—The transactions reported aggregate only 2,750 pieces of good 66 Reeds, at Tls. 2.12 *a* 2.17 per piece. Eighteen cases of fine counts, in bad order, ex *Ulysses*, were auctioned on Wednesday, and brought from Tls. 2.64 *a* 3.00 per piece.

T-Cloths.—Remarks similar to the foregoing are applicable here. The settlements have been trifling, and a large proportion of these consists of damaged and unmerchantable goods, unsaleable otherwise than by Auction. The range of prices has been for 7-lbs. good Mexicans, from Tls. 1.27½ *a* 1.44¼ per piece, and for 8-lbs. from Tls. 1.40 *a* 1.66½ per piece, some of the goods being very badly chafed and sea-damaged. Privately little has been done, but the few thousand pieces of 7-lbs. Ordinary Mexicans that have changed hands, have been taken at very nearly former rates, and it may not be out of place to mention here that native holders of these classes seem disposed to maintain present rates, anticipating an active market when the settling day is over.

Drills.—14-lbs. English and Dutch have been in frequent enquiry, and have commanded far better prices—relatively—than 15-lbs., of which the bulk of the week's business consists, and which have rather receded in value. About 9,000 pieces have changed ownership on the basis of Tls. 2.50 per piece for Levita and Hudson's best single *Dragon* 15-lbs. cloth. Stocks of the lighter makes are exhausted, and this probably is the cause of their present high favor and position.

Jeans and **Sheetings.**—Still nothing doing in the former, and business in the latter, from want of supply, has been limited to a few best Americans at Tls. 3.72½ per piece.

Fancy Cottons, like every other article, has suffered from the ruling depression. 3,000 dozen *Handkerchiefs* at 0.50 *a* 0.52 per dozen; 250 pieces of 7-lbs. *Gentian Shirtings* at Tls. 2.20 per piece, and 360 pieces *Chintzes*—special—at Tls. 1.47½ per piece, comprise the total settlements reported.

Woollens.—Private sellers still mourn over the absence of demand, and their inability to make sales. They have done next to nothing this week—at least very little appears to their credit in the market book—and some of them seem inclined to follow the tendency of the age, and turn auctioneers. Only, they say their holdings cost considerably higher than what similar goods have been realising at the late Auctions, and they are not yet quite decided on the point of sacrificing. The results of the sales on 25th and 27th instant are as under:—

Metals.—*Nail-Rod Iron.*—No first-hand transactions have taken place, but some business has been done between Natives in M. M. Crown at a decline of 5 candareens per picul. *Lead.*—Rates remain nominally at Tls. 6.05 per picul for L.B. Scarcely any enquiry, and dealers trying hard to supply their little wants within quotations. *Tin.*—While last mail was under despatch, a demand sprang up, and Tls. 19½ for *Fong Hing* was declined. There are no sellers to-day at quotations, but the enquiry is not very strong. *Copper.*—Of Japan there is little here, and best slab could command Tls. 18.75 per picul to-day if on the spot.

QUOTATIONS—Duty Paid.

Freights.—*Foochow*, British steamer, 533 tons, Newchwang to Swatow, 10 lay days—$0.33 per picul; *Oscar Vidal*, British barque, 490 tons, Shanghai to Nicolaefski, 20 lay days—$3,250 in full; *Misti*, French barque, 432, Shanghai to Tientsin, 10 lay days—$0.25 per picul, dead weight; *Misti*, French barque, 432 tons, Shanghai to Tientsin, 10 lay days—$0.40 per picul, light freight.

Cotton.—Only a limited business this week, and nearly all for the Southern ports. Quotations unchanged. The Hongs are very firm. The prevailing drought has already caused no little damage to the young plant, and this strengthens the position of the old crop. The damage, however, is not yet irreparable.

Exchange.—The Exchange market ruled steady during the past week. There has been a fair supply of merchants' paper, which was readily taken at 5s. 9⅞d. *a* 5s. 10⅛d. The demand for Bank Bills continues small, and the bulk of the business was settled at 5s. 9¾d. At the close, however, 5s. 9½d. is the best rate offered. On India, quotations have ruled from Rs. 310½ *a* 312, and a moderate business has been transacted at these rates. The tendency of the market is in favour of buyers. On Hongkong, rates remain at 27½ *a* 27⅝ per cent. discount.

Statement of Imports and Deliveries of Cotton and Woollen Piece Goods, and Metals, for week ending 26th May, 1875, compiled from the "Customs Daily Returns," Nos. 113 to 118, both numbers inclusive.

EXPORTS.

TEA.—Since the 14th May, a very large business has been transacted at Hankow and Kiukiang from day to day, particulars of which up to the latest advices are subjoined :...

Export to date, as compared with that of last season, is:—

To Great Britain—Black	Excess	10,413,153 lbs.
,, ,, —Green	.....	..... ,,
To United States—Black	.....	..... ,,
,, —Green	.....	..... ,,

Shipments to date have gone forward as under :—

To Great Britain (per Steamer)	.....	10,413,153 lbs.
,, ,, (per Sailing Vessel)	.....	..... ,,
To America (per Steamer)	.....	..... ,,
,, (per Sailing Vessel)	.....	..... ,,

Black.—No arrivals of New Teas as yet to this market.

Green.—We hear that buying of leaf in the Teenkai district began on the 15th, at twenty per cent. lower cost than that paid last year, but prices at once advanced about ten per cent. There were 58 Hongs opened as against 65 last season. From Moyune and Fychow no buying had taken place, as a fall of twenty per cent. on last year's rates was not thought sufficient, and a further decline was hoped for. In Hoochow Teas and fine Pingsueys nothing appears to have been done for similar reasons to those given above, but of the coarser kinds of Ningpo leaf some purchases have been made, and the chops are estimated to cost 32 *a* 34 laid down here early next month. Leaf Tea in small lots is daily arriving from Ningpo, and no doubt some Shanghai-packed Teas will soon be on offer; still the heavy continuous losses of the past season have told heavily and we shall see the effects more distinctly later on.

HANKOW AND KIUKIANG.—In our last we were enabled to report the opening of the New Season at Kiukiang on the 9th, and on the 12th first musters arrived at Hankow, from which settlements were at once made, and our advices from day to day have informed us of a continuous large business at very high prices for most descriptions. The demand for Russian orders has been strong, and price has apparently been a secondary consideration in many instances. Bad weather at the first kept back Teas and buyers anxious for an early interest raised prices by their eager competition fully Tls. 2 per picul; latterly arrivals were larger, but rates seem to have been well kept up and the market has been at no time pressed with stock.

The quality of the New Crop, speaking generally, impresses us favorably, and indeed a few of the finest chops of each district are really splendid Teas. As a whole, and so far as we have yet seen, the Ningchows are not equal to those of last Season. Hohows are good and show very fair value. Oopacks and Oonfaas are well made, and we have found many of them strong in water. Prices paid for a few choice Ningchows are fully Tls. 10 per picul higher than ever given before, and it is understood that very large profits have been made here and there by Teamen. Prices paid have been for Ningchows Tls. 32 *a* 63; for finest Oopacks Tls. 33 *a* 42½; for other Oopacks Tls 24 *a* 32½; for Oonahms, Hohows and other classes Tls. 20 *a* 39.

Second chops had begun to arrive and were in some instances very dusty; prices ruled from Tls. 25 *a* 32.

No time has been lost in despatching first Teas, and the *Deucalion* left Woosung on the 18th closely followed by the *Glenartney, Bengal, Glenearn* and *Fleurs Castle,* direct from Hankow.

SILK.—Last public telegrams report the London market quiet but steady, and quote common No. 5 Tsatlee nominally 12s. 6d. @ 13s. 0d., and Hangchow Tsatlee, at 12s. 9d. per lb.

At foot are closing statistics for season 1874-75. The total export has reached 71,996 bales, the largest seen since season 1860-61, when 76,215 bales of Chinas were shipped to Europe and India. *New Season.*—The weather has continued very favorable throughout for the various changes of the silkworms; mulberry leaves have been cheaper than last season, and the cocoons are reported to give a better percentage of silk than for many seasons past. Considering the fact that everything has been so propitious, and taking into account the unanimity of native reports of a largely increased yield, it is impossible to justify the paying of such high rates as those reported to have been given for the first few arrivals, and it is presumed the sellers have shipped them on joint account rather than accept the heavy loss which the offers of nearly all buyers showed. The season is an early one, and the first bale samples of new silk (some mixed with old crop silk) reached this market on the 27th. They compare unfavorably with last year's; although of desirable quality and color, the size is much coarser than has been seen for many years past, and the silk is badly cased with foul skeins. Notwithstanding this inferiority, buyers have been found willing to take the silk at Tls. 270 @ 285 per picul, (13s. 6s. @ 14s. 4d. per lb.) for No. 5; Tls. 250

@ 260 per picul, (12s. 7d. @ 13s. 1d. per lb.) for inferior Tsatlees; Tls. 232½ per picul, (11s. 10d. per lb.) for common 9/12 moss Taysaams: Tls. 262½ per picul, (13s. 4d. per lb.) for No. 3 Hangchow Tsatlees, and Tls. 230 @ 235 per picul (11s. 8d. @ 11s. 11d. per lb.) for common skeins, to the agreeable surprise of the sellers, and the astonishment of the native silkmen generally. The settlements reported to have been made are about 200 bales made by one buyer only as particularized above:—Prices in the interior have already declined from the opening point, and as purchasing is going on to a limited extent only, a further reduction in rates is looked for by the Hongmen who are buying for this market. Should the new crop silk when it arrives in bulk, prove as coarse and foul as the first parcels received, it will destroy all chance of Chinas retaining their partially-regained favor with home consumers. The arrivals of new silk amount to about 650 bales, chiefly Lingho and Sinsze Tsatlee of inferior description. For a small parcel of Yellow Elephant, Tls. 300 are demanded, but *eager* buyers even want the courage to pay such an absurdly high price, in face of the probable export of 80,000 bales.

P.S.—It is reported that Tls. 297½ per picul have been paid for Yellow Elephant.

ESTIMATE OF NATIVE CONSUMPTION OF SILK FOR THE PAST TEN YEARS, WITH A DESCRIPTION OF THE GOODS MANUFACTURED THEREFROM.

Total Bales...	17,000	23,000	23,000	28,000	35,000	36,000	38,000	40,000	45,000	50,000	

N.B.—These figures must be considered merely approximative, as it is impossible to obtain the information from official sources.

In reviewing the silk season just closed, the task is a more pleasant one than that of twelve months ago; although losses have been made, they have not been general, nor have they been on the same serious scale as were experienced during '72 to '73 and '73 to '74; in fact the comparatively low prices which have ruled on this side with some few exceptions throughout the greater part of the season, have given on the average far more satisfactory results to the shippers, than experienced during the previous two years. The Sterling equivalents of the *opening rates* were the lowest seen since the Port was opened:—in 1864 the Season commenced at prices on a basis of Tls. 355 *a* 365 per picul for chop No. 3 Tsatlee, but the rate of Exchange then ruling (7s. 2d. per Tael) increased the laying down cost to 22s. 5d. *a* 23s. 0d. per lb., (London value at same time 21s. 0d.), against 18s. 2d. *a* 20s. 2d. last year. (London value 19s. 0d. *a* 20s. 0d. per lb.) The reported improvement in quality of new crop silks mentioned in my circular of 30th May, was confirmed when new season's produce in bulk arrived on this market, and has been verified by the result given at the Mills, and by the increased deliveries of Chinas both on the Continent and in London. This improvement was the more noticeable in the lower classes of Tsatlees, which owing to their comparative cleanliness, have continued in good demand; and to a certain extent have displaced the better and higher cost grades. On the Continent especially has this proved the case. *Classical chops* have been in limited demand, owing to their absurdly high cost as compared with common silks, and it appears very probable that the consumption of these fancy descriptions will be further decreased, unless their quotations assume a closer and more reasonable range as compared with the lower numbers of Tsatlees, and more especially is this likely to be the case during the coming Season, should the latter grades be equal to or better than last year's supplies. *Market chops*, such as "Gold Lion," "Clouded Dragon," "Ku Kee's," "Blue Elephant," "Red Peacock," and similarly known silks have not lost favor, but have again been eagerly taken at disproportionate prices as compared with market descriptions of Tsatlees. Laeyang skeins and coarse Taysaams, owing to paucity of stocks in Europe, have been freely sold at satisfactory prices to the shippers, but these classes are expected to rule relatively dearer during the coming season, owing to the good demand for Chinese consumption. Re-reeled silks during a greater part of the season, have shown an improvement in preparation, and have been found to contain less percentage of "drug" than for some years past, but late shipments have fallen off very much in quality, and it is to be feared may cause these classes to be looked upon with disfavor owing to their inferiority and being so heavily "weighted."

The total export has reached 71,996 bales, showing an increase of 14,382 bales over last year's, and whereas shipments to the Continent almost double the previous year's, the export to England shows a *falling off* of 1,700 bales. The following figures showing the steady increase of direct supplies to the Continent are interesting and commend themselves to shippers desiring the best market for their silk.

NEW SEASON'S OPENING STATISTICS.

COMMERCIAL POSTSCRIPT.

May 29, 1875.

Arrivals.—(Not reported above.)—May 22nd, British ship *Forward Ho*, from London; German barque *Saturnus*, from Hamburg; 26th, British ship *Norman Court*, from Sydney.

Departures.—(Not reported above.)—May 22nd, British steamer *Glenartney*; British steamer *Bengal*; 25th, British steamer *Fleurs Castle*; 27th, British steamer *Glenearn*, all for London.

The English mail steamer *Hindostan* takes 195 bales of Silk, and 500 tons of Tea.

Exchange.—On London, Bank Bills, 6 months' sight, 5s. 9¼d. First-class Credits to Bank, 5s. 9¾d. First-class to Private buyers, 5s. 9½d. Private and Documentary, 5s. 9⅞d. On Paris, Bank, Frs. 7.27½. Private, Frs. 7.35. On India—Bombay Bank, demand, Rs. 310½ *a* 311. Calcutta Bank, Rs. 310½ *a* 311. On Hongkong, Bank Bills, demand, 27½ per cent. discount. Private, 15 days' sight, 28. Gold Bars, Tls. 171.50. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 73.425 per 100. Carolus dollars, Sh. Tls. 80 per 100. Copper cash, 1,600 per tael.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 29th May :—

Banks.—Still no business reported. A few shares are on offer at 20 % dis.

S. S. N. Co.—A fair business has been done at Tls. 72 *a* 73 cash, and at Tls. 75½ for 31st July. Few, if any, shares are now obtainable at these rates.

Fire Insurance.—A few *Victorias* were placed early in the week at $165, but as the winding up motion was carried unanimously at the meeting on 25th inst., buyers offer $164, without finding sellers. A few *Chinas* are to be got at $142.

Marine Insurance.—*Yangtszes* have been done at Tls. 545 and are still on offer. Rumours of a proposal to wind up the *China & Japan Company* have raised quotations to Tls. 87, at which there are buyers.

S. & H. Wharf Co.—No business reported. There are buyers to a limited extent at Tls 90.

Loans.—*Imperial Bonds* are still wanted, but there are no sellers.

Municipal Debentures 1872, with Interest from 1st May, have been sold at Tls. 102, and 1873 Debentures, with Interest from 1st January—at Tls. 105.

The Weather has been unseasonably hot, the thermometer standing at 87 and 88 daily. Last night, however, heavy rain fell with a strong north-easterly wind, which has somewhat cooled the atmosphere. The thermometer has ranged from 63 to 88.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, JUNE 5, 1875.

WE have now all the correspondence laid before Parliament, regarding the complaints of the Hongkong community against the Blockade; and we are more than ever surprised at the action our officials have taken in the matter. The movement originated with a petition by some Chinese merchants, and we are tempted to quote a proclamation, issued 34 years ago by Sir Charles Elliott, which they take as the basis of their position:—"It is hereby declared "to the merchants and traders of "Canton and all parts of the Empire "that they and their ships have free "permission to resort to and trade at "the port of Hongkong, where they will "receive full protection from the high "officers of the British nation; and "Hongkong being on the shores of the "Chinese Empire, neither will there be "any charges on imports and exports "to the British Government. It is "further clearly declared that there "will be an immediate embargo upon "the port of Canton and all the large "ports of the Empire, if there be the "least obstruction to the freedom of "trade and intercourse with the port "of Hongkong. Persons bringing in- "formation to the British officers which "shall lead to the detection of pirates "will be liberally rewarded, and the "pirates will be taken and delivered "over to the officers of the Chinese "Government for punishment." It is refreshing to hear the ring of decision in this document; and Lord Carnarvon would have done well had he required the present Superintendent of Trade to endorse it, instead of accepting the suicidal suggestion to help the Chinese to choke trade by planting a Chinese Consul in Hongkong. But the art of plain-speaking seems to have been lost of late. Diplomatic language is attenuated till it fails to convey a meaning, at any-rate to a people who regard despatches as playthings and are passed masters in the art of casuistry. The present action of the Canton officials tends to nothing less than a fiscal re-integration of Hongkong in Chinese territory, and the destruction of its status as a free port. There is but one opinion on the subject among all those to whom the petition was referred. A Commission of Enquiry, comprising the Chairman of the Chamber of Commerce, the Harbour-Master, and the Registrar of Chinese, unanimously endorsed the statements of the petition. The accusations of smuggling were unfounded, and the action of the Chinese Revenue cruisers oppressive and injurious. The Attorney-General delivers a formal opinion in the same strain, and the Chamber of Commerce support the case by a lucid memorial to the Foreign Office. The evidence and the argument are in fact all one side. On the other, strangely enough, we find our officials, Sir Brooke Robertson and Sir Arthur Kennedy supporting the Chinese in their encroachment, and Lord Carnarvon misled by their advice.

It was an ingenious idea to attach the term of smuggling to the Hongkong trade, at the outset of the movement. The old adage that "if mud is thrown, some is sure to stick," was never better exemplified. The difficulty that, Hongkong being a free port, its trade cannot be contraband, seems quite overlooked; the term smuggling-depôt is freely bandied about; and, under cover of that epithet, British officials are willing to permit the freedom of the port to be destroyed, and abet the Chinese in an endeavour to constitute it a squeezing-trap. There can be no smuggling so far as Hongkong is concerned.

It is a free port, and the duty of British officers is simple; they should assert and maintain its freedom. The idea of admitting a Chinese officer to levy taxes which we deliberately forego, is one of the most monstrous and suicidal that we have heard broached. Great Britain has constituted Hongkong a free port in order to encourage its trade, and yet British officials are to be found who advocate the admission of a Chinese official to collect a Customs revenue —for the proposed measure would amount to nothing less. As we have proved in another place, the accusation of smuggling is fallacious. Exports from Hongkong are taxed when they reach the mainland, and what the Chinese do by means of their cruisers is to levy a special tax for the benefit of the Canton Customs, to which that institution is by no means entitled. What duties the Chinese wish to collect, let them collect on their own territory —at the port of export if on goods destined for Hongkong; at that of import in the case of goods brought from the island. They are quite able to do this; and it is done effectually. It is true that duties so collected do not go to swell the revenue of the Foreign Customs; but that is a detail of Chinese Customs administration. If the Chinese revenue system is so imperfect that each petty mandarin is left to collect what he can, and his superiors content themselves with accepting a lump sum instead of detailed returns; if the system again is that each province shall deal with its own collections, instead of accounting for them to the Imperial Government, that Government must stand by it. It has no right to try to increase its revenue by poaching on the trade of a British colony. We can well imagine that the Peking officials grasp eagerly at any suggestion for increasing their receipts. They are only too glad that the revenue of the Foreign Customs, of which they do receive a large share, should be swollen, and would be exceptionally pleased that this should happen at the expense of a British Colony; but that is no reason why we should tolerate the interference; and we trust that the matter will not be let rest. Lord Carnarvon's language is rather that of a man over-persuaded than of a man convinced; and we can understand that he finds it difficult to act in the teeth of his local subordinates, whom he must assume to be well-informed. A grave responsibility rests upon those who have so misled him. It is for the Hongkong community to press the case, and to urge with vigour the arguments that lie to their hand. Not only is the matter one of vital importance to the Colony, but the principle is important in our general policy; and we hope to see a renewed effort made to bring back the Colonial Office to the more wholesome views which were impressed upon it by Sir Richard Macdonnell, during his term of office.

Summary of News.

There has been no mail arrival since our last issue.

A homeward mail leaves to-morrow, by the M. M. str. *Djemnah*.

The following Reuter's telegrams have been received during the week :—

The Arctic Expedition sails to-morrow.

Captain Boyton has crossed the Channel.

THE OAKS.

Spinnaway ..... First.
Ladylove ..... Second.
Sister to Musket ..... Third.

Captain Boyton started from Cape Grisnez and reached Dover in 24 hours, only slightly distressed.

The South Wales strike has terminated, a reduction of 12½ being accepted.

General Grant refuses renomination for the Presidentship.

The King and Queen of Sweden are visiting Berlin.

Lord Derby, in replying to Earl Russell, said that Germany recently declared that she might be forced to strike the first blow in consequence of French armaments, but the intervention of England and Russia had averted the danger.

A Destructive Typhoon occurred at Macao on Monday afternoon and night. The Macao steamer *Poyang*, Captain Carroll, was totally lost on her passage to Macao. Only the Chief and Second Engineers and a few passengers were saved.

The meeting of the Victoria Fire Insurance Company, on the 25th May, seems to have been very short. A resolution in favour of winding up the Company was passed unanimously, and Messrs. André and Sassoon were appointed liquidators.

In view of the decision given by the arbitrators in the Yang-king-pang encroachment case, the French Council ask the English Council to join them at once in determining a future bund line. The construction of the Honan road bridge will be at once gone on with. This bridge, it will be remembered, was ordered before the difficulty about propertinate payment arose, and is paid for in equal shares by each Municipality.—A piece of land necessary to widen the Rue du Consulat near the Bund has been bought at the rate of Tls. 5,000 a mow. Another piece near the Rue Montauban has been bought at the rate of Tls. 1,000. The Jesuit Fathers have given up some other portions gratuitously.—The Council have delayed deciding upon Messrs. Butterfield and Swire's application to build a shed on their wharf.—The constitution of an assessment Committee was resolved on, in the manner we mentioned on Friday.—The Council wish to decide on a line of demarcation for the quays on the Hwangpoo off the French Concession, agreeing with the frontage line of the other settlements. The work has been entrusted to Mr. Kingsmill. The plan will be submitted to the Consuls when decided on, with a representation of the necessity for a uniform line being decided on.

The English Council are in correspondence with the Trustees of the General Hospital about plans, site, &c. The knowledge that the lease of the building on the French Bund expires on the 31st December evidently weighs on the Trustees, but it would seem impossible that a new hospital can be built and ready for occupation before that date, so there is no object in deciding hurriedly. An arrangement to continue for a while in the present building, or some other interim arrangement, will have to be made anyhow.—A rather warm correspondence has passed between the two Councils, on the subject of Yang-king-pang bridges. The French Council threaten to "appeal in the proper quarter" to have the discussion as to the proportion of expenditure on the two bridges decided in another manner than that proposed by the Engish Council, which they say is equivalent to trying whose patience will last longest. We do not exactly see where the authority exists, that is to constrain this Municipality to spend more money on bridges than it chooses. The proposal to halve the cost is a strictly fair one, and we presume it will be adhered to. It is unfortunate that the division of the foreign settlement into two municipalities allows such questions to arise.—The Council took the opportunity of Mr. Mitchell's departure from Hongkong, to acknowledge the desire he has always shown to consult the convenience of the community in working the Post office.

The A. D. C. gave their fifth and last performance for the season on Thursday evening; and, with marvellously good luck, hit upon a cool night for the event. On the day the first announcement was made, the thermometer stood at 88. Thanks to the subsequent change of weather, it had fallen to 67, and people could look forward with pleasure to the evening's entertainment. The pieces selected were "Tweedleton's Tail Coat," "Cox and Box," and "My Dress Boots." The first and last were rather trifling pieces, of which we can only say that the most was made by the actors. "Cox and Box" was the great success of the evening and, we think we may say, of the season.

A Naval Court of Enquiry sat at the British Consulate yesterday, to investigate the circumstances attending the wreck of the British brig *Georgina*, on the Blockhouse shoal on the night of the 9th of May. The Court censured Captain Mitchell for running so far up the Yangtsze at night without a pilot; but, taking all the facts into consideration, returned him his certificate of competency. A full report will be given next week.

The magistrate of Quinsan has come down to Shanghai for the purpose of trying the two men concerned in the attack on Mr. Cooper. But owing to the unavoidable absence of Mr. Cooper and others of the witnesses, Mr. Medhurst has arranged with him to let the case lie over till their return, when the magistrate will either come down again, or, if he prefer, try the case in the presence of a Consular officer at Quinsan. The wounded man has also been produced, and was examined on Monday by Dr. Johnston. The Quinsan Magistrate, Mr. Davenport, and Chên the Magistrate of the Mixed Court, were present. The man was led in in the usual Chinese style—when it is thought necessary to make a pretence of grave injury—supported by a bearer under each arm; but we understand that Dr. Johnston's examination quite substantiates Mr.

Cooper's statement. The man had certainly been hit, by about 18 shot; but so slightly that the greater part had either fallen or been picked out. The only one remaining was imbedded skin deep in the neck, and was at once extracted.

We hear that the tea market was opened in Shanghai, on Wednesday—if the term is applicable to what is only a continuation of up-River purchases.

We understand that the Polytechnic Institution has at last succeeded in purchasing a suitable piece of ground, at the top of Canton Road.

News has been received from Hongkong, that the str. *Poyang* had been lost in a typhoon. Only the Chief and Second Engineers and a few passengers were saved. It is reported the China Traders Co. had a $50,000 risk on her; we do not hear that any other local Company was interested in the hull.

We understand that the Japanese Government are negotiating in Europe for the purchase of several iron-clads.

H. M. S. *Vigilant*, with Admiral Ryder and Mr. Wade, left on Monday morning for Ningpo. The intention is, we believe, to proceed afterwards to Foochow and Amoy, and return to Shanghai in about ten days.

The str. *Rajamundhundhur*, which arrived from Glasgow on Monday, brings the sister ship to the S. S. N. Co.'s str. *Chusan* (lately lost off Ardrossan) in sections, to be put together at this port. Some of the sections weigh 26 tons; the total weight being about 900 tons.

The Engineer-in-Chief notifies that the wreck of the *Kiangloong*, off Hen Point, is now entirely under water, and that a red fixed light will be exhibited from a boat placed to mark the wreck. Vessels are, however, cautioned not to depend upon this light, as, owing to the strong current, the boat may not be able to retain its position in rough weather.

We believe the undermentioned dates and time will be found correct, of the Ocean steamers passing the Red Buoy :—

Glenartney, ...	May	21st,	9.00 P.M.
Bengal, ...	,,	22nd,	11.00 P.M.
Fleurs Castle, ...	,,	25th,	1.15 P.M.
Glenearn, ...	,,	27th,	7.00 A.M.
Lotus, ...	,,	31st,	4.00 A.M.
Glenfalloch, ...	June	2nd,	11.00 A.M.
Hankow, ...	,,	3rd,	6.20 A.M.
Russia, (at anchor)	,,	4th,	4.00 P.M.

We are enabled to give a completed list of the teaships dispatched up to the present date, and their progress, so far as can be ascertained from the agents :—The *Deucalion* (Butterfield and Swire) left Woosung on the 21st ult., and arrived at Hongkong on the 25th, since which date her movements have not been chronicled, and will not be known until letters are received from Singapore.—The *Glenartney* (Jardine, Matheson and Co.) cleared at Hankow on the 19th ult., and was reported to have passed the Lightship early on the night of the 21st ult.; she arrived at Singapore at 10.30 a.m. on the 30th, after a quick passage of eight days and a-half from thence, leaving again at five the same afternoon, at which hour the *Deucalion* had not arrived.—The *Bengal* (Drysdale, Ringer & Co.) cleared at Hankow on the 20th ult., and passed the Lightship on the night of the 22nd; she left Singapore at 4 p.m. on the 1st June.—The *Fleurs Castle* (Adamson, Bell & Co.) passed Woosung, from Hankow, on the morning of Tuesday, the 25th ultimo., and left Singapore at noon on the 4th instant.—The *Glenearn* (Jardine, Matheson & Co.) is reported to have passed Woosung on the 27th ult., but no further news has yet been received about her.—The *Lotus* (D. Sassoon, Sons & Co.) cleared at Kiukiang on the 26th ult., and was seen at 8 a.m. on the 1st inst., off Hiachu.—The *Hankow* (Siemssen and Co.) passed the Red Buoy at 6.20 a.m. on the 3rd, and as she goes through to Port Said without calling at either Hongkong or Singapore, it is unlikely that anything more will be heard of her until her arrival at the Canal.—The *Antenor* (Butterfield & Swire) left Shanghai on the 1st inst.—The *Glenfalloch* left Woosung at 11 a.m. on the 2nd, and was spoken off St. Giles' Beacon at 8 a.m. on the 3rd.—The *Russia*, from Hankow, anchored at Red Buoy at 4 p.m. yesterday.—The *Strasburg* was passed at anchor at the Beacon, at 9.45 a.m. on the 4th.

We have been rather interested, in looking through some old volumes of American diplomatic correspondence, to light on a memo. by Mr. Hart on the subject of Tonnage Dues and Coast Lights, which has fresh interest, in view of what has been lately written on the subject. It will be seen that his idea of a rival to Shanghai is no new one. In 1867, the action of individuals and of Municipal Councils was to cause the decay of the port and the growth of a rival elsewhere. Now, it is the imaginary uprising of the Kintoan flats and the closure of the Yangtze opposite Woosung. Then, nothing was to be done to the Woosung bar, until he had got engineers from Holland to inspect it. The engineers were never brought, and the foreign community are at last getting them on their own account. It will be interesting now to look forward to the next excuse. Mr. Hart's expressions about throwing sycee into the mud and walking down Regent street, were familiarly quoted at the time, but they will be new to some of our readers.

We have to acknowledge the thirteenth annual report of the Peking Hospital (for 1874). Dr. Dudgeon always imports into his reports a quantity of information interesting to the general reader, and the present one is no exception to the rule. Of course there is a great deal of detailed medical practice, which is not attractive, but there is a good deal of curious information intermixed, that will well repay perusal. The total number of patients prescribed for during the year was 20,000, of whom 9,000 were new. When we are told that the hospital has been supported by voluntary contributions, and find from the balance sheet that the cost has been only Tls. 365, we have additional reason to congratulate Dr. Dudgeon on the amount of relief afforded. Dr. Dudgeon has just gone home for a well-earned holiday, after eleven years' successful superintendence of the hospital; and Dr. Bushell takes charge during his absence.

We notice that the price of the Chinese Readers' manual has been reduced to $3.

The Acting Post Master General notifies that the New Zealand Post Office has declined to receive mails by the Torres Straits route, and that hence there is no alternative but to forward such correspondence *viâ* Galle. "Persons who are anxious to avail themselves of the Torres Straits steamers to communicate with New Zealand, should address their letters, &c., to the care of an agent at Sydney." The proceeding seems a singularly narrow one on the part of the New Zealand Government. Their object is of course to drive postal revenue into the line which they have subsidised; but the duty of a post office does not begin and end with raising revenue. Its primary object is to accommodate the public by delivering their letters.

Our NEWCHWANG correspondent notes the arrival of the regiment of foreign-drilled Chinese troops, of whose intended departure our Tientsin correspondent gave us information some days ago.—A Peking correspondent informs us that the insurgents with whom they are intended to cope are miners. The Chinese Government has been trying for generations, to repress mining in Manchuria, but the people persist. He adds that Chung-shih, a brother of Chung-how, has been appointed special Commissioner to settle the present difficulty, and is inclined to memorialise in favour of recognising and organising the industry, instead of endeavoring to repress it. It is to be hoped so sensible an idea will be carried out.

Messrs. Spencer and Wolff write from CHINKIANG, on the 2nd June:—"We are at last in a position to report more favorably on our market for Grey goods, which is now fairly brisk for medium to good makes of Shirtings and T.-Cloths. Stocks are light; but in the absence of all activity in the Shanghai market, it is impossible to establish higher rates here."

The FOOCHOW tea market was reported on Wednesday to have been opened at rates somewnat higher than last season. But as several Shanghai firms which expected to be informed have failed to receive the news, it is suspected that the transactions must have been very small, and that the market can hardly yet be considered fairly open.—It is satisfactory to learn that final arrangements have been made for the construction of a telegraph line between Foochow and Amoy. The Chinese undertake to pay the Great Northern Company damages for the injury and loss of material caused by the attack on their works; and the Company is to go on and construct the line for and on behalf of the Government. The latter will pay for its construction, working, and maintenance by the Company, and derive whatever revenue may accrue from its use by the public.

Great disappointment has been caused in HONGKONG, by the receipt of Lord Carnarvon's reply on the blockade question; and some irritation at the successful special pleading on the behalf of the Chinese Customs by Sir Brooke Robertson, which has mainly conduced to mislead him.—Another serious case of interference with the Chinese residents in the Colony, will be found detailed in the summary of Hongkong news, under the usual "Outport" heading.

Editorial Selections.

THE YUNNAN OUTRAGE.

Everyone is asking what is being done in regard to the Yunnan outrage, and everyone is driven to conclude—nothing. It is generally understood that Messrs. Grosvenor and Baber are the officials designated to conduct the investigation, and the Chinaman who has been designated as their escort is here in Shanghai. Why do they not start? The investigation seems a necessary preliminary to any demand for reparation, and promptitude is essential to its success. It is necessary not only to convince the Chinese that we are in earnest, but in order that the enquiry itself may not collapse. The facts are clear enough. There is no doubt that Mr. Margary's murderers and Colonel Browne's assailants were Chinese, and that both crimes originated in the prefectural city of Teng-yueh (Momein.) What we want is to bring home the crime to individuals, in order that we may formularise our demands for reparation; and our Tientsin correspondent's recent letter shows how delay may be prejudicial to this end. Time is invaluable to the officials implicated, to enable them to obliterate traces of their crime. Time will enable them to remove evidence, in the shape of human beings, and to weave the explanatory cobwebs at which the Chinese are adepts. Material changes seem to be already going on in the personnel of the Yunnan officials, and every day will increase the difficulty of finding either evidence or culprits If ever there was a case for prompt action, it is the present one. The crime was revolting; popular feeling is strongly stirred by it in England, and the opportunity is good for such a display of vigour as may recover some of the prestige that has been gradually and surely slipping from us. Delay will not only weaken the enquiry, but will allow the popular impulse to subside; and it is hardly necessary to remark how much the action of Government will depend on that impulse, when the time for action arrives. There may of course be valid reasons for the delay, which it is not vouchsafed to those most interested to know. But it is difficult to conceive that any can exist, of sufficient strength to counterbalance the enormous disadvantages.

In the meantime, while matters seem to be stagnant on the Chinese side, there is excitement enough in Burmah. The suspected complicity of the King in the Yunnan outrage has come to widen the breach which had already been caused by his action with regard to the Karennee frontier. The King himself has entered on military preparations, and something very like a panic seems to have been excited, both in Upper and in British Burmah. The *Rangoon Gazette* of the 7th May says the King appeared then to be accepting more reasonable advice, and that a peaceful solution of all difficulties was being industriously predicated at Mandalay. But this was producing no salutary effect on the Chinese traders, who continue, as opportunities offer, shipping away their goods and families; many of them with the intention of going from Burmah entirely, on to the Straits of Malacca. Their apprehension seems justified by the tone of the Indian Government, which is clearly inclined to reduce the King once for all to his proper position, while he seems infatuated enough to think he can not only resist us, but recover some of his lost territory. Sir Douglas Forsyth's approaching mission will bring matters to a climax, and show us what we may expect. In the meantime, the British Resident seems to have retired from Bhamo under circumstances which will hardly allay the excitement. We are again indebted to *Our Chronicle*,—the newspaper published at Thayetmyo by the 67th Regiment, from which we gathered the first particulars of the Manwein outrage—for particulars of this later incident, which has a very curious interest. A number of Panthays, among whom were the former Governor of Momein and his two sons, fled across the frontier and sought refuge at the British Residency. Protection was accorded them, but the Burmese Governor demanded that they should be given up. Captain Cook refused, knowing that they would be surrendered to the Chinese and find little mercy. The Residency was then surrounded by a number of armed Burmans, and an attack was expected, which active preparations were made to resist. When the news reached Mandalay, the King was wise enough to authorise the removal of both Captain Cook and the Panthays, and an English river steamer was at once despatched to bring them away. The incident will hardly lessen the conviction of the Indian Government that a lesson is needed, which will dissuade Burmese officials from threatening our Residencies in the future; and a further rumour that a Chinese force was marching on Bhamo to capture the Panthays, and was only thirty hours distant when the party was brought away, is not without interest. Altogether, we are glad to think that the clouds are rather gathering than dispersing around Mandalay, and that there is a good prospect of our frontier being extended towards Yunnan. And the very fact that the Government of India is so well disposed to vigorous action, makes us regret the more the apparent inactivity on the side of China.

THE BLOCKADE OF HONGKONG.

Lord Carnarvon has called the native trade between Hongkong and the native ports of China "smuggling," — a term which apparently owes its origin to some over-zealous reports from Commissioners of Customs at Canton, who, annoyed that all the trade did not pass through their hands to swell the Foreign Customs revenue of the port, did not hesitate to make use of this epithet. We have had on several occasions to complain of the misuse of the word in these reports, and our remarks have apparently been so far effective that its use as characteristic of a trade perfectly legitimate, but doubtless not profitable for the Customs Collectorate at Canton, has been dropt out of the published Reports of the Commissioners. To judge from Lord Carnarvon's remarks however, it still, though banished from public notice, holds its own in the confidential and secret communications which seem to be the foundation of the Chinese policy of Great Britain. Now we have heard so much of the "smuggling" of opium by way of Hongkong, that it is really worth while to enquire into the legitimate ways by which the Chinese Government collects its revenue on that article; and fortunately we are not without information of a reliable nature on the subject. We use the term legitimate in contradistinction to the system of black-mail set up by the cruisers.

In the *Reports on Trade* for the year 1873, made by the Customs Commissioners at various of the Treaty ports, there is published one by Mr. Moorhead, on the trade of Swatow, to which we alluded at the time of publication, as carefully and conscientiously drawn up. Mr. Moorhead gives an account of the various routes by which opium intended for consumption in the interior finds its way into the province. Between the years 1848 and 1873, the import of opium at the port of Swatow had gradually risen from 4000 to 9000 chests per annum — in itself a pretty evident proof that no great amount of the so-called smuggling could have occurred. Besides the port of Swatow, other ports not open to Foreign trade have easy and extensive communication with the interior, and through these most of the opium sold at Hongkong found its way. Let us look at the terms under which such opium enters. Swatow is advantageously situated at the mouth of the Han, a considerable river, affording ready access to the Western districts of Fuhkien and, with a short land carriage, to considerable portions of Kiangsi. Hweichow is, for native craft, as advantageously situated on the East river, its port being Sheklung; and it competes in a great measure with Swatow, in its accessibility for Kiangsi. Besides these, the two main ports, Sinhwei, on the Western side of the Canton river delta, imports a considerable amount, its opium going up the valleys of the North and West rivers, and finding its way to the North-west of Kiangsi and Hunan. Mr. Moorhead gives us statistics of the duties collected at Hweichow, as compared with Swatow. Malwa pays as duty, Taels 28.4.5.4 per picul, against Taels 30 at Swatow, while Patna and Benares pay a little in excess of that levied at the Treaty port. The likin

taxes at Hweichow are, however, slightly higher than at Swatow, so that the opium imported by Hweichow, and therefore, according to the statements of the authorities listened to by the British Government, *smuggled*, actually pays more to the Chinese Government than that introduced by way of Swatow! It is quite true that Canton imports but little opium; as it is also true that, as a commercial emporium, Canton does not occupy the rank to which its position naturally entitles it. The reason is not far to seek. In addition to the other charges on opium, the Canton authorities make a levy of Taels 15 per chest over and above the other equally convenient ports.

What is true of opium, is true of other goods. Canton is avoided by trade, because the levies there are so excessive that trade goes to less burdened localities. It is really to extract these excessive taxes out of trade, not to prevent smuggling, that the cruisers infest the waters of Hongkong. Of all the ports open to foreign trade, Canton has been notorious in its infringements of Treaty provisions. No limit has ever been placed on duties levied in excess of treaty stipulations, and all attempts to introduce the Transit Pass system have hitherto been met with a direct refusal. Through its influence, again, the opening of the port of Kiungchow, in Hainan, has been put off from year to year, so that the natural trade of the West coast must perforce go by native vessels; and these are then stigmatised as smugglers, because they prefer the direct road to going up the river to Canton in defiance of all Chinese custom or usage. Again, the cruisers have not contented themselves with vessels proceeding to or from ports in Kwangtung. The memorial contains cases where junks trading with Formosa, in an entirely separate jurisdiction, had black mail levied on them at Canton. It might be pleaded that this is a matter affecting the Imperial Government, and that it would take means to repress such a system. Doubtless, even in Spain, the Central Government would take measures to prevent one province levying taxes at the expense of another; but China is not Spain, and, as we know only too well, in China all is fish that comes into the Imperial net. The Hoppo at Canton has to pay dearly for his post, and interference with him would diminish its market value. It seems, at Peking, a clever thing to squeeze two duties out of one voyage; one for the Intendant at Canton, and another for the Mandarins in Formosa. The practice, then, is to let the trader make the best terms he can. "To keep the trader down," is a tradition in Chinese administration, and if this results in the extinction of Hongkong as a convenient centre, the Government at the capital will not be too curious to enquire what have been the means adopted. It has always been held that duties are leviable not in the port of departure, but on their arrival at their destination. It has remained for the Chinese to levy them on leaving the the waters of a friendly Power, and for Her Majesty's advisers in China and at home to make the discovery that such a thing is legal or expedient. To the levy of duties at ports like Sheklung or Sinhwei, we have no objection to offer, provided they do not exceed tariff stipulations; for it must be remembered that we have as good a Treaty right to have our goods delivered there as in any other portion of the empire. Till, however, the Chinese Government affords us a guarantee that it, on its part, is able and willing to observe its part of the compact, it is little better than suicidal to permit the present state of matters to continue. Provided the practical end of gaining admission for our goods into China at tariff rates is obtained, we are not too careful to scrutinise the means adopted for collecting these rates. But as it is notorious that rates are levied in excess of those stipulated by Treaty, and as the Blockade of Hongkong has the effect of further increasing these charges, we are utterly at a loss to conceive by what process of reason any man can be brought to support a system aimed so directly at our interests and rights.

THE CUSTOMS AND THE MANDARINATE.

TRADITION tells of a certain foreign employé in the Customs service, who having once had occasion to interview the taotai of the port, borrowed the uniform of a friendly naval officer, and with all due attention to Chinese punctiliousness performed before the great man the kotow. Notwithstanding the bizarre accompaniment of the naval officer's uniform, there was some method in the poor assistant's craze. Fancying himself, doubtless, already a Chinese official, and on the road to prospective promotion, there could be no indignity in doing what his predecessors had done for ages before; it would, doubtless, be his turn at some future period to be himself kotowed to; and pictures of this and of the illimitable wealth which would fall to his lot when he had climbed the ladder of Chinese promotion were perhaps sufficient to turn even a stronger head. In those days, a Customs uniform had not been invented; but somehow or other in many peoples minds buttons are mixed up with power, so the only available rig was indented on, probably in the hope that the taotai's attainments in foreign lore did not extend to the minutiæ of naval uniform and oakleaf braid. The fledgling tea-taster from Mincing Lane, who has to go down to the warehouses with a bag on his back, bears in patience the jeers of the unsympathetic street boys, because he knows that generations of chaszes before him have undergone the same penance; and that long after he has himself had the honour of opening the tea market in Far Cathay, to the small content of his constituents, generations of youthful tasters will still enter the profession with the same time-hallowed rites and ceremonies. To have carried the bag is in fact the test of true chasze-ship; to have gained admission by other means is to act the part of the thief and the robber.

Some such liking for the preliminary ceremonies of mandarinhood must have actuated Mr. Twinem, Acting Commissioner of Customs at Tientsin, when presenting himself as the Taotai's deputy in the Court of the United States Consul, to take part in the trial of a collision case between the owner of a Chinese junk and the steamer *Shantung*. Complaint has been frequently made this year of the crowded state of the Peiho, and the want of order among the junks anchoring in it. On a recent trip, the steamer *Shantung* ran into and sunk a grain junk, on behalf of which a suit was instituted at the U. S. Consulate. We are not concerned, however, with the circumstances of the collision, and only mention them to explain the origin of the Court. Now the U. S. Treaty, like others, provides that, "if controversies "arise between citizens of the United "States and subjects of China, which "cannot be amicably settled otherwise, "the same shall be examined and decided "conformably to justice and equity by "the public officers of the two nations, "acting in conjunction." It is generally understood that the Court to be so constituted, is to comprise officials of equal rank; that a Taotai for instance is to sit with a Consul, or a Deputy with a Vice-Consul; and the admission by a Consul of a Taotai's Deputy to sit with him is a pure matter of courtesy and form. In any case, the inference is clear, and the understanding has always been, that the Deputies must be recognised Chinese, American, or English officials as the case may be. In the present instance, the Taotai was enable to attend, and, besides nominating two Chinese deputies to sit with Mr. Sheppard, asked that Mr. Twinem should also be admitted on that footing. Mr. Sheppard refused, on the ground that Mr. Twinem was not a Chinese judicial officer within the meaning of the Treaty; and, leaving all questions of personal position aside, we hold that his refusal was perfectly right. Mr. Sheppard, as Consul, was entitled to expect the Taotai on the bench; and although, for convenience to both parties, it is necessary that power to appoint a deputy should not be absolutely forbidden, it certainly behoves the officer consenting to sit with a deputy, to see that there should be fit and reasonable grounds for the appointment, and that the actual position of the latter should be such as naturally to lead up to his selection. The appointment of a junior Chinese official engaged in the same routine as the Taotai, though it may be in a subordinate

position, would in a case of necessity be open to no objection. If not a Taotai, the junior may hope to be a Taotai some day. He may be only carrying the bag, but the road to the tasting-table is open to him. The case of a Commissioner of Customs is very different. He is not a Chinese official at all; still less is he a Chinese judicial officer; and Mr. Sheppard has been perfectly right in refusing to recognise any attempt by Foreigners in the Chinese Customs service, to stand between Foreign and Chinese officials in the adjustment of international affairs. The position of a Commissioner of Customs in China is a perfectly honourable one, and certainly cannot gain in public respect by such frivolous attempts to shine by reflected light, as that of Mr. Twinem. The very object for which it was founded, namely to act as a check on the irregularities of Chinese revenue officials, should be a guarantee that its members will abstain from complications likely to interfere with their proper independence of action. Without judicial or executive functions, the officers of the service are appointed directly from the head of the department at Peking, to enable them to exercise a more complete supervision over the funds accruing from Foreign trade. In proportion as a commissioner steps beyond these limits, and permits himself to become mixed in local matters, he reduces his ability to properly discharge these functions. As Foreigners, we are largely interested in the integrity of the Customs establishment. We do not wish to see affairs return to what they were before the establishment of the Inspectorate, when each merchant had to make his own private arrangement with the Haikwan, as to the duties and squeezes to be paid. In a game of that sort, dishonesty must come to the front, and it is not advisable that dishonesty should be the ruling principle in trade. We must look with the most extreme suspicion, therefore, on any such complications as would have a tendency to involve the position of Commissioners of Customs with the ordinary functions of the local officials. No man can serve two masters; and in proportion as Commissioners come to make themselves the agents of Taotais or other local officials, so must their use as a check on the abuses to which all revenue matters in China are liable, become less and less distinct.

REVIEWS.

The China Review—Edited by N. B. Dennys. March-April, 1875.

The paper entitled "The last of the Chinese," with which the number opens, is a very interesting sketch of the closing scenes of the Mongol invasion in the 13th century. The effeminacy of the last of the Sung Emperors had enfeebled the whole body politic, when the Khan of the Mongols determined to invade the wealthy Kingdom which lay so temptingly open at his feet. In describing the then capital of the Empire, Hangchow, only eight years before its downfall, Marco Polo says:—

"The people of the land were anything rather than warriors; all their delight was in women, and nought but women; and so it was above all with the king himself, for he took thought of nothing else but women, unless it were charity to the poor. In all his dominion there were no horses, nor were the people ever inured to battle, or arms or military service of any kind. Yet the province of Manji is very strong by nature, and all the cities are compassed by sheets of water of great depth, and more than an arbalast-shot in width; so that the country never would have been lost had the people but been soldiers. But that is just what they were not, so lost it was." The paper before as opens with a graceful tribute, by Mr. Lister, to the memory of Mr. Bowra, from whose History of Kwangtung it appears to have been written by the two gentlemen in concert, some time before the latter's death. It opens with the death of the last Sung Emperor, in the year 1274, and the nomination of a child only four years old to succeed him on a throne already shaken to its foundation by the weakness of its rulers and the imminence of the Mongol attack. An attempt was made by the Empress Dowager to defend Hangchow, but she was embarrassed by traitors, who gave up the city, and was sent with her infant ward to the Mongol capital. The central figure of the succeeding adventures is Wen Ten-tsiang, who alone, among the officers of the fallen Empire, seems to have had honesty or decision of purpose. Before the fall of Hangchow, two of the Emperor's children had fled into the South; and, under the leadership of Wen, the elder of these was proclaimed Emperor, at Foochow, under the Regency of his mother, one of the late Emperor's concubines. Soon, however, they were driven back into Kwangtung, and their adventures during the close of the hopeless struggle maintained by their adherents, are invested by Mr. Bowra's facile pen with an almost romantic interest. After alternatives of victory and defeat, and the final overthrow and capture of Wen Ten-tsiang, they were at length driven to Yaishan, a town on the West coast of Kwangtung, of great natural strength, where a last desperate stand was made. We are tempted to quote at length the description of the final attack and the extinction of the last spark of resistance to the invader:—

As the tide rose, the renegade commander moved up his ships for a grand attack, the final stroke. Expectation of being seconded from the rear lent energy to the traitor's arms, and he succeeded in setting the line of ships on fire in several places, breaking, and throwing it into utter confusion. A tremendous storm of wind and rain came on and added to the horrors of the fight. It befriended the Chinese, in so far as it enabled Chang Shih-chieh to rally a great part of the fleet, to fight his way out, and to effect a retreat to sea. The Queen was in his charge, and, in the confusion, he probably thought that Lu Hsiu-fu was following him with the young Emperor. But Lu Hsiu-fu had fled up the river, nor had he fled far before he met the unexpected Mongol fleet coming down. Defeat and carnage were behind, fresh and unbreathed foes, burning for the fight, before. He was hopelessly hemmed in, and saw nothing before him but capture or death. The slings and arrows of outrageous fortune could be suffered no longer; he took the young prince on his back, and plunged with him into the stream. Chang Shih-chieh sailed on unknowing. Of those who did not get away with him, thousands followed the example of Lu Hsi-fu, and before night the remnant of the squadron was utterly dispersed. A week after more than ten thousand corpses were floating on the river. The Mongols searched everywhere for the body of the Emperor, and offered enormous rewards for its recovery, but they only succeeded in finding his seal, nor does it appear that the body of Lu Hsiu-fu was found. The simple inhabitants of the region never believed that their prince had perished, but, for years after, cherished the vain hope that he would come again. There can, however, be little doubt that both he and Lu Hsiu-fu were drowned.

Henceforth the Mongol rule was supreme, and Wen Ten-tsiang, detained a prisoner at Court, after refusing repeated offers of high employ in the invader's service,—was eventually executed. His name is immortal in Chinese history, literature, and tradition, as an instance of loyalty and constancy.

An interesting paper on Chinese Folk-lore comes next in succession, and promises to be the first only of a series in which the writer contemplates dealing very fully with the subject. We can well fancy that the mine at his disposal is inexhaustible; not only are the Chinese at that stage of civilisation, or semi-civilisation, when superstitution holds full swing, but the art of printing which they have so long possessed has been freely used to perpetuate all kinds of lore which in the West has greatly passed away. The doings of every Chinaman, from Emperor to peasant, are affected and guided by astrological portents, divinations, &c., in which even the more highly educated, who affect to despise them, place a practical trust. And in this lies the distinction between Chinese and European folk-lore. In the one case it is either a matter only of amused indifference or of interested research to all but the lowest classes of the population; in the other it represents an all-pervading system of regulations, believed in or complied with by high and low alike. The writer quotes numerous cases of similarity of belief in China and in the West. For instance—

The Scottish custom of opening the windows of the room in which a person has died, to give the soul free egress, is, in some parts of China, paralleled by the practice of making a hole in the roof. The Lancashire superstition as to the "first foot" on New Year's Day finds its Chinese counterpart in the dislike expressed to meeting a woman or a Buddhist priest under such condition.

It is natural that a matter having such importance in Chinese eyes as the birth of of a child, should be surrounded wth portents, and the writer gives a curious list of practices resorted to with a hundred different objects. We should be tempted to quote largely, but for the fear of expanding our review wearisomely, and must be content with the following:—

A wide-spread superstition exists at home against rocking a "toom," or empty cradle. Now, strangely enough, Chinese nurses in the South of China have precisely the same belief. A little four-year old girl, who is a very intimate acquaintance

of mine, not long ago began rocking the cradle in which her newly-born sister was usually laid to sleep. An amah who saw her, rushed at the child, exclaiming "You no makee rock so fashion! That baby b'long die, s'posie rock." As it happened the infant did die, as was fully expected by the medical attendant: but of course the amah found in the anticipated fact a verification of her prediction, and further enquiry has satisfied me that the superstition is identical with and quite as widespread as our own. The resemblance of belief here certainly seems something more than accidental.

Marriage also affords unlimited scope for allegories and portents. At the marriage of the Empress Ah Lu-tê, whose death has just followed so close on that of her husband, there were among the bridal gifts ten pieces of green and white jade, called *ju-i*—"Heart's delight"

They were of mystic import, being supposed to possess the power of conferring joy and happiness on their owner. The lucky days for the various ceremonies were fixed by the court astrologers, and nothing was done without reference to their predictions.

It would be difficult to select a case that should tend more strongly to dispel the superstition. The misfortunes which befel the young Empress seem to have been great in proportion to the care taken to avert them. But a thousand cases of failure are eclipsed by one—really of coincidence—apparently of success. People don't want to be disabused of the belief in which they have been brought up. They are both disinclined and afraid to get free, and prefer to hug the yoke.—It is curious to find a superstition anent matrimony, for which there is a very similar expression—though we do not know that represents a belief—among ourselves. When the time comes for bride and bridegroom to sit down together, she endeavours to sit on a part of his dress, and the inference, if she succeed, is adverse to the maintenance of lawful supremacy. But if he sits on her skirt, the spell is reversed. One more quotation, and we pass on to the next paper:—

Of the outward symbols of the married state there is, as we all know, a great importance attaching to the wedding ring. Now it is very certain that the Chinese did not take the idea of wearing wedding rings from us. Yet we find that in certain parts of China, and in Java, the custom of sending the "measure of the finger-ring" previous to marriage is well-known. Turning to Chinese annals, we find the preparing of a "united-hearts' finger-ring" mentioned amongst the preliminary ceremonies to marriage. More than that, just as the purchase of the ring is considered by us as having morally bound the intended bridegroom, so in parts of China it affixes *legal* responsibility upon him; a failure to carry out the marriage then subjecting him to the penalties of breach of promise of marriage.

Mr. Allen's translations of "Tales of the Liao Chai Chih Yi" are a somewhat cognate design to the paper we have we have been reviewing. They correspond to the fairly tales which interested us in our childhood, and are curiously illustrative of Chinese manners and modes of thought.

Mr. Hutchinson's account of a trip for "Three weeks in the interior," from Foochow, is rather too full a reprint of his diary, but will repay perusal. Some information regarding the progress of Christianity in the province is given in a more tangible way than in official missionary reports, because we are brought in contact with the converts, and see them talk and act.

Mr. Parker's paper on the Hankow dialect has a purely Sinological interest. Mr. Stent's poem, "The illness, death and funeral obsequies of Mr. Locust, with a slight account of the battle at his grave," is presumably a free translation from the Chinese. It is written in the racy, jingling verse at which Mr. Stent is an adept, and reminds one somewhat in plot of Homer's battle of the Frogs and Mice.—A few notices of literature, and some notes and queries, complete the number.

Seventh Annual Report of the Hospital for Chinese in Hongkew.

We have the seventh annual report of the Hospital for Chinese in the Hongkew Settlement, under the medical charge of Drs. Henderson and Zachariæ. A very large number of patients have been treated during the year, including 272 foreigners. The income of the Hospital during the year has been $1,693, which has covered repairs and working expenses, and left $400 to be set aside as the nucleus of a building fund, with a view to the eventual erection of a new house. The Rev. E. H. Thomson remarks on this head:—

"Some mention has already been made of the improvements in the grounds. This has now been extended to the building. A new ward for female patients has been added, the room for surgical operations has been fitted up and well lighted, all the wards have been newly plastered, and other improvements have been made, which add to the comfort and convenience of the patients. Still, it is the desire of the friends of the institution to have, in time, a new building erected, more thoroughly adapted to the purposes of a Hospital than the present one. It is also thought that a change of location to a short distance back would be both advantageous and agreeable. With this desirable end in view, the Rector has laid by the sum of $400, to be invested, for a time, as the beginning of a building fund, which he feels confident will before long grow to the needed amount.—This Hospital being near the large wharves and the various machine shops of Hongkew, the number of cases arising from accidents is very great, showing the need of such an institution near at hand. The endeavor to place Christian truth before the patients, earnestly, as opportunity occurs, is not neglected; yet care is taken not to weary them with that for which they did not come.—In presenting our thanks to the two medical gentlemen who have given their services to the Hospital, I would add, that the reading of their Report conveys but a faint idea of the amount of work and thought that they have really bestowed upon their charge.—I would add our thanks to Dr. Macgowan, for his kind and ready aid in cases of emergency, when the Surgeons in charge were absent.—The native assistant, "Chu" S. S., has shewn himself efficient in his duties."

Chambers' Index to Next of Kin—4, Cannon Row, London.

We have received a curious book entitled "Index to Next of Kin." It is simply an alphabetical list of people who have been advertised for, as likely "to hear of something to their advantage," and contains no less than 50,000 names of people wanted to come forward and prove their claims to property There is unquestionably a vast amount of property lying unclaimed in England. Heirs are less difficult to find now that communication with the Colonies is rapid and constant, than in the olden days when going abroad often meant more or less complete severance. But even now, the number of advertisements for next of kin, etc., proves that the difficulty often arises. By a return recently presented to the House of Commons, the amount of the suitors' stock and cash standing in the Court of Chancery is £60,425,400, and of this a large sum awaits claimants. There is also an enormous sum standing unclaimed at the Bank of England in the shape of unclaimed dividends; on the National Debt alone the amount was, at the commencement of 1872, nearly £1,000,000. Chambers' "Index to Next of Kin" gives 50,000 names of persons, who have been advertised for during the last 150 years in the *London Gazette*, *Times*, and numerous other London and country newspapers, and giving heirs-at-law, next of kin, legatees, etc., who have gone amissing; and will no doubt prove a valuable means of introducing some of these to the wealth that awaits the asking. The notifications are often unseen at the time of publication by the persons really interested, who perhaps may hear on their return from abroad many years after, that they have been advertised for. They are then naturally anxious to obtain a copy of the advertisement, and the index gives them the opportunity. The form of the index is this: The name of the person advertised for is given opposite a number. Anyone wanting information, has only to copy out the name and number, and send it to the publisher's office, when, on payment of a fee, the copy of the advertisement will be supplied. The Index contains dozens of Shanghai names. We recommend everyone to order out a copy. There is no saying what fortunes, now lying *perdues*, may not be recovered through it.

Outports.

NEWCHWANG.

Yesterday, the C. M. S. Co. steamer *Yungching* arrived from Tientsin with 800 native soldiers, and was followed by the gunboat *Chinhai*, having about 300 on board. On dit that several hundred cavalry are on the road also, and may arrive in the neighbourhood of Newchwang or Moukden in a few days. People were rather surprised to see the two steamers coming up river, with numberless flags flying, and crowded with men. The new Governor of the Province, or Tartar General, whoever is the great man in charge, from all accounts is a very determined fellow, and as many attempts made during the last few years to arrest ringleaders of robbers, rebels, or whatever those may be called who resist the authorities, have signally failed—in some instances the Imperial troops being made to bite the dust by hundreds—Li Hung Chang has been applied to, and the troops just arrived, conjointly with the cavalry on the way, are to thoroughly beat out the freebooters. I don't think foreigners need fear much, unless it be from the soldiers themselves perhaps occasionally upsetting the authority of their officers.

About twenty miles from here—at a comfortable corner of the river—is a village or town called Tien Chuen-tai—and the

people are more or less favorably disposed towards the lawless bands who shelter themselves there—and who have lately resisted the attempts to arrest some of their leaders, and have actually stockaded the place, as a kind of intrenchment in case of attack. On Sunday, three or four hundred soldiers were dispatched by the Taotai to clear out the brigands—and it is a question whether the people prefer these to the others. There is no doubt some tall squeezing is done by both kinds of blackguards—and whatever the result may eventually be, the poor harmless countrypeople are meanwhile great sufferers.

We hear this morning that Tien Chuen-tai is evacuated by the freebooters, so that the troops will be able to prey without fighting. There is no doubt Tsung Chieh (or Shih), the Governor of the Province, has shewn that he is not to be played with, for not only has he executed many robbers, but he has shortened by a head more than one official for receiving bribes, and if the root of the evil is got at thus, there is every chance of matters soon becoming quiet again. Unfortunately every Mandarin has his price, and Tsung will have to cut off many heads, if he deals justice to all. Whether the troops, "foreign-armed and drilled," will assist the Governor as effectually as he requires, depends on the General and officers as much as on the men, and the fact that some of the principal officers are Mahomedans may be a [illegible] Moukden and elsewhere are led by Mahomedans. Many, however, have had to clear out, to band themselves together no doubt, and we shall soon learn the effect in more ways than one, of the rigorous measures lately adopted.

25th May.

TIENTSIN.

If a western traveller had arrived at this place from Europe viâ Russia on the morning of the 21st instant, he would, if he had stood on the Bund at eight o'clock in the morning, when the usual daily gun was fired from the British gunboat and the flag of England hoisted, have been astonished to see the foreign anchorage of the port of Tientsin without a single foreign merchant vessel moored in it, either steamer or sailing vessel; and might, if he had never read of the trade of Tientsin, have naturally jumped to the conclusion that there was very little foreign trade carried on in this part of China. The next morning, at the same hour, the foreign merchant shipping was represented in this port by an American three-masted schooner, laden with Fuhchow wood.

About noon on the 21st instant the Regiment—one thousand strong—of foreign drilled foot soldiers, armed with muzzle-loading Enfields, which had been ordered to Newchwang by the command of the Central Government, marched down the Taku road, situated at the West of the British settlement, for Taku; where it would embark in the C. M. S. N. Co. steamer *Yungching* and the Chinese gunboat *Chinhai*, on the 23rd instant. On the 27th instant, the cavalry, five hundred strong, and the horses of the artillery also left Tientsin for Newchwang, but proceeded there by land through the Shanhai pass, and not by sea. It is stated that the commander of the forces at Tientsin, General Chin, was obliged to enrol, in order to make up the complement called for by the Central Government, a number of the men of the Southern legion, people say about thirty per cent. of the forces going to Newchwang. These are quite the men, from what we have hitherto heard of them, likely to join the insurgents as soon as they can conveniently do so, after reaching the field of action and coming face to face with rebels.

This morning, about seven o'clock, a south-west gale began, and all day since we have had it continue with much local dust. What is now wanted at Tientsin, to make us drink the full cup of bitterness, is an earthquake to shake the roofs of our houses over our heads; after that a change may take place in our favor, to make a residence in Tientsin bearable.

To-day is Her Majesty the Queen's birthday. As the gale we are having has prevented the British gunboat being dressed with her flags; and as the residents near to the men-of-war anchorage have objected to the vessels of war firing salutes, Her Majesty's subjects at Tientsin have had to dispense with any celebration of the day, and to be content with simply knowing that this day is Her Majesty's birthday, and wishing her many returns of it.

24th May.

A correspondent gives us some particulars of a very serious burglary committed about a month ago at the house of Mr. Boad, at Taku, and for which no redress has been yet obtained. It seems that Mrs. Boad was awoke one night, in her husband's absence, by hearing people in the room, and on asking them what they were doing, received the cool reply, "belong rob the house." And two of the burglars forthwith attempted to strangle her. Being a strong woman she was fortunately able [illegible] the robbers decamping with their gains. The case has been reported by Mr. Vice-Consul Middleton, and Li Hung-chang promised Mr. Mongan that he would send orders to have the thieves arrested. Nothing has however yet been done, and it is important that the case should be again urged strongly on the authorities. The Chinese about Taku are a very rowdy lot, and, if they find these ruffians are not arrested, will draw their own conclusions that foreigners are powerless to obtain redress and may be robbed and maltreated with impunity. We ought to insist on the establishing of some better means of keeping order at Taku. The officials, if they can be so called, who are at present charged with the duty, live in places where Shanghai people would not like to see their Chinese servants housed, and have not much better pay than those servants receive. How can they be expected to keep up a fitting position, or to inspire respect among the people? It is no use urging the present case on them; it must be taken higher, and redress be insisted on.

Since last steamer left, I have learnt no political news from Peking. Here, likewise, nothing has taken place of importance to be mentioned in the Press. I am told that altogether two thousand men—foot, horse, and artillery—left this place and Taku for the seat of trouble in Manchuria. The rumour is that some natives of Tientsin are the leaders in the insurrection, and that their forces have up to the present been beating the Imperial forces wherever they have met in the field. They are said to be fully armed with foreign rifles, and even field-pieces of foreign make. The population here have no hopes that the force which has just left here will be able to stand up against the rebels. We shall soon hear, I imagine, of a fresh war-tax being levied to pay for the expenses incurred through an army being sent from China proper to Manchuria.

We are now having hot, damp weather, and which we may consider our usual summer weather. The thermometer generally rises to over 80° Fahr. at present. Summer, according to the Chinese reckoning, began on the 6th inst., so we ought to have hot weather.

26th May.

AMOY.

H. M. S. *Growler* arrived here yesterday, she will remain here four weeks, leave for Formosa and return again, and then be dispatched for Hongkong, which she is expected to reach at the end of July, to remain a few weeks.—The *Braemar Castle* is in our waters and the *State of Virginia* is daily expected.—Report says a new British Consulate Establishment is to replace the present one, at an outlay of $24,000.—Things can go crooked here, as well as at Hongkong and other places. To-day we hear that a native Cotton merchant, Long Sieng, has "cracked up," his liabilities being estimated at 15 to 20,000 dollars.

A curious sort of impromptu Court has been held at Chapel Island, to enquire into a row which took place there some time ago, between two light-house keepers named Naudin (a Frenchman) and Bothelo (a Portuguese.) The Court of Enquiry was held, according to the *Hongkong Times*, "at the instance of the then Acting Commissioner of Customs, Mr. Lord. The members of the Court consisted of Captain Cocker (S.S. *Linfeng*), President; Mr. Maitland, Vice-President, and Mr. D'Arnoux, 3rd Assistant Imperial Customs, and the result was that Mr. Daniels (an Englishman), the Chief, was suspended pending instructions from Peking, Mr. Naudin was reprimanded and transferred to the Foochow Light-house, and Bothelo dismissed the service." The Customs seem inclined to constitute themselves a distinct hierarchy, having even a judicial system of their own.

On Saturday, the 22nd instant, a strike took place among the several boatmen of the Imperial Customs at Amoy, on account of the Commissioner wishing them to pull the punkahs at their leisure, which they declined to do. Only the coxswains of the several boats remained in the service, and they are the only ones who are performing the duties just now.—Mr. Moran, 3rd class Tide-surveyor and Acting Harbor-Master, was threatened with suspension, on account it appears, of the boatmen refusing duty.

On the evening of the 23rd, a thunderstorm of unusual force caused all the junks opposite Messrs. Paseday & Co.'s to get foul of each other, doing considerable damage to the British three masted schooner *Empress of China*, breaking the ends of her fore-yard and her studding sail boom, and carrying away her gangway ladder, besides doing some damage to the other side.—*Hongkong Times.*

FOOCHOW.

H.M.S. *Hornet* has relieved the *Kestrel* on the Foochow station.—The *Foochow Herald* is informed, on very reliable authority, that the Foochow-Amoy telegraph difficulty is completely at an end. The line will be constructed by the Great Northern Telegraph Company, and worked by them for the Provincial Government; but the Company stipulate that the wire shall be open to foreigners at all times, when not absolutely required for Government purposes.—The annual report of the Foochow Chamber of Commerce has been published. A strong opinion is expressed in favour of telegraphic communication with Amoy.—The neglect of the Chinese Authorities in refusing to prevent the plunder of the wrecked steamship *Canton*, is referred to in strong terms.—The question of damage to teas by heating on board steamers is adverted to, and its importance fully recognised.—The *Herald* expresses regret that the increasing spirit of encroachment, and insolent dictation to independent foreign traders, repeatedly manifested by the Tea Guild (and inspired, it believes, by certain Compradores in the employ of leading firms), should be passed over in silence.—An

unusually severe thunder storm passed over Foochow at about 7 p.m. on the evening of the 17th inst. In the Settlement, the residence of Messrs. Silverlock & Co. was struck, and several articles of furniture destroyed in the dining-room. Fortunately, nobody was injured, although it might have been otherwise had the accident occurred about half-an-hour later, when, in all probability, the members of the Hong would have been at dinner, and —as the dining table was completely swept—escape from more or less injury would have been almost impossible. Loss of life occurred in the city and the Southern suburb.—It is so rare that we hear of any effort by Chinese to safe from drowning, that the following case reported by a correspondent of the *Herald*, is worth quoting:—About noon on the 13th, while there was a heavy freshet running, a sampan woman fell off one of the outside boats moored near the "long bridge." She sank at once, but, without a moment's delay, a boatman from another sampan jumped in after her, and when he again appeared on the surface of the water, had the woman in his arms. He evidently had a hard struggle to prevent himself being swept through the arches of the Bridge, as the tide was running like a mill stream, but luckily succeeded in swimming to a sampan, just in time, when he was quickly hauled in with his burden.

HONGKONG.

The most important news from Hongkong is a case of pressure from the mainland, upon a Chinese resident in the Colony, which we give in the words of the *China Mail*:—"One of the most scandalous cases of persecution we have ever yet heard of even in much-oppressed China has, within the past few days, been brought to the knowledge of the Colonial Government. A few months ago a scoundrel named Lee Lum Kwai was sentenced by the Supreme Court of this Colony to terms of imprisonment extending over two lives and a few odd years, for conspiracy to effect the death of a native resident. It now appears that the relations or friends of this double-dyed villain have presented a petition to the Viceroy, accusing the Club compradore of having conspired with the plaintiff in the case (Yeong Amow), to commit piracy and murder, and with having also *conspired to effect the death of Lum-kwai*, the said compradore having been one of the principal witnesses at the trial of that worthy. Now, the Chinese cannot, of course, get hold of the compradore, so the usual pressure has been brought to bear. A body of soldiers has been billeted on the village where his relations reside, and a guard boat has been placed at the entrance of the river leading to it, to maintain strict blockade. It is calculated that the annoyance thus caused to the villagers will make the elders insist on the compradore giving himself up—and those who know how family ties can be availed of to induce natives to appear when wanted, are aware what this pressure means. If the man gives himself up, his life will not be worth a week's purchase. We forbear any comment on this atrocious attempt to put pressure on a resident in this Colony, until we learn what steps the Colonial Government intend taking. We have the fullest confidence in its determination not to put up with it, and may of course hope that the Viceroy will take stringent measures to suppress it." The case is exciting much and deserved interest in the Colony. A correspondent of the *Mail* remarks:—"It does appear to be monstrous that a Chinaman can be told, as the Club Compradore was at Lum Kwai's trial, that he is to speak the truth, and that he need not be afraid, as the Court will protect people who come there to give evidence against criminals, and then that he should find that Court to be perfectly impotent to carry out its promise. Who can blame a Chinaman for lying, and doing his best to prevent the execution of justice, if he knows that, in the event of his doing or saying anything which runs counter to the opinion of some petty mandarin on the mainland, his property may be seized, his father and mother locked up and tortured, and his relations even to the fourth or fifth degree most cruelly abused?" We quite agree, and thoroughly endorse the common-sense remarks made by the *Mail* in an article on the subject which we reprint.

The *Daily Press* says Captain Holcomb, of the schooner *Scotland*, has come down to renew the charter of the vessel. The box of treasure reported to have been recovered, turns out to be a box containing money, probably a Chinese passenger's box. The treasure tank has not been got at yet, there being so much *débris* above it, which fouls the divers' robes and tubes. They expect shortly to be able to reach it, and the *Scotland* will still remain by the wreck.—Some sharp shocks of earthquake have been experienced at Manila, but have done no damage.—H. M. S. *Thalia* has been released from quarantine.—The Queen's birthday was kept as a general holiday in Hongkong. The ships in harbour were gaily decked with flags, &c., and at noon a Royal salute was fired from the Cathedral bells also sending out a merry peal. It had been intended to hold a military review in the afternoon, and to distribute Medals to some of the Engineers who had served in the late Ashantee war, but the pouring rain prevented any such display.—Mr. W. W. Toller has been appointed Crown Solicitor during the absence on leave of Mr. Sharp.—The continued dry weather led to such decrease in the water in the Pokfoolum reservoir, that a notice was published in the Government Gazette urging the necessity for economy in its use. "British, Foreign, and Native householders are earnestly requested to adopt all possible precautions against a lavish use of water obtained through the mains from the Reservoir. They are specially desired to prohibit their servants from procuring water from that source for the irrigation of gardens, which is reported to be done at the European houses along Caine and Bonham roads to the same extent as when the Reservoir was overflowing." The *Daily Press* adds—Happily the long desired rain has come at last, but we trust notwithstanding that this notice will be heeded for the future. We give ourselves a great deal of worry about our water in Shanghai, but we at least have always enough. —The Court held to enquire into the grounding of the *Viking* on the Paracels shoal, has suspended the master's certificate for three months.

The Great Northern Telegraph Co. have brought an action for $15,000 against Messrs. Douglas Lapraik & Co., the owners of the steamer *Yesso*, for damage done to their telegraph cable. The *Yesso* put into the outer harbour at Amoy, on the evening of the 6th April, through stress of weather, while on her voyage to Foochow, and anchored. When the anchor was hove in the morning, the telegraph cable came up, and was cut to free it. The defence is that, there was no notice up indicating the locality of the cable, that it was not recognised as telegraph cable, that every effort was made to get free; and that is was only cut when the ship was in danger of drifting in to the Taitan Shoal. The case is not concluded.—The O. & O. S. S. Co.'s steamer *Oceanic*, destined to ply between China and San Francisco, has arrived, and is favourably spoken of.—The German corvette *Hertha* arrived from Manila on the 27th. The usual salutes were exchanged between her, the commodore's flagship, and the battery.—The burlesque of "Aladdin" has been very successfully performed by the Hongkong A. D. C. The *Mail* says the local hits were very well received by the audience, and were somewhat freer than any which have enlivened previous performances. The China Traders, the late Indo-Chinese Sugar Company, godown charges, the cutting down of directors' fees and numerous other matters which have of late furnished gossip to the Colony, were touched upon in a way that "brought the house down" on each occasion—a sure sign that the state of affairs at present affords abundance of room for "chaff."—Heavy rain has fallen, and has been welcome, both as tending to fill the reservoir, and flush the drains.—A new Government steam-launch was launched from the Kowloon Docks, on the 26th, and was christened by Miss Dods the *Victoria*. The *Mail* says, the dimensions of the boat are 65 feet between the perpendiculars, 12 feet extreme beam, with 7 feet depth of hold. She is being fitted with a high pressure boiler and a double engine of 20 horse power. She is a very pretty and useful little craft, and reflects much credit on her designer and constructor. She is expected to realise a speed of 9½ knots.

COREA.

Japanese Government has despatched two vessels to Corea to reconnoitre, and to acquire information about its coast and harbours. The vessels are to proceed up the river to the capital. Should the Coreans adopt the same hostile policy as that adopted towards the Americans, the chances are that the vessels may be fired on, in which case something serious may arise out of the affair. Some time ago a rumour prevailed that the Coreans were less hostile towards the Japanese than of late years they had been; but the report has lacked confirmation, and the action taken by the Japanese Government would seem to indicate that they either intend to bring affairs to a crisis, or that they expect that the knowledge they seek to gain of the vulnerability of the Corean peninsula will be of use, should hostilities be declared between the two countries."

HIOGO.

The *News* says all those interested in the condition of the harbor will be glad to learn that a nuisance which has existed for four years and a half has at last been removed. On the night of the 11th of October, 1870, the *Hiogo*, (late *Fohkien*) filled and sank at her moorings, and till now there she has remained, cumbering the harbor. An offer to remove the wreck made by Messrs. C. J. Strome & Co. was recently accepted, and with the aid of large charges of gunpowder the work of demolition has been nearly completed. The removal of this wreck will be a great boon to the shipping, insomuch as it renders available for anchorage a portion of the harbor peculiarly well suited for mail and other steamers, of which there are now two regular lines, in addition to the P.M.S.S. Co., plying to and through this port.—Buoys are shortly to be laid down off the Railway pier, which is now nearly ready for vessels to discharge at.—The season for making pilgrimages, together with the present fine weather, is keeping up the Railway receipts to a high average, seven thousand dollars a week having been reached several times lately, and last week returns showing nearly eight thousand. We hope, adds the *News*, that this may continue, for nothing else will so much

impress the Government with the immensity of advantage to be obtained by improving in every way the internal means of communication in the country.—A correspondent, writing of Exhibitions, wonders "why Osaka does not have one—they seem to be all the rage now. On my way to Sakai the other day I stopped at Sumiyoshi, and had a look at the Exhibition which is being held in the grounds of the great temple there. It is a small affair, not much larger than that held at the Kusunoki temple, Kobe, last autumn. Besides the usual minerals, shells, arms, armour, etc., there were, amongst other novelties, a coloured picture of the burning of the *Fuy-maru*, a made up mermaid (price $150) and a set of 'pukkah' pandean pipes, the first I remember to have seen in Japan."

YOKOHAMA.

A large floating iron target is being moored in the bay of Etchu-jima, near the mouth of the Sumida-gawa, Tokio. It is to be used in practising with the big Whitworth and Armstrong guns recently received from England.—Burglaries and robberies of all kinds have again become so frequent in Yokohama, that the *Herald* complains that they are constant proofs of the already well-established fact that the police of Yokohama are inadequate, in point of ability if of the inhabitants from robbery and to detect robbers.—The *Mail* hears that it is intended to send a small detachment of troops to the Loo-choo Islands, avowedly with the view of "protecting the inhabitants."—The *Hochi Shinbun* says that an officer of the Imperial Government is going to China for the purpose of expediting the payment of the remaining portion of the indemnity.—The *Echo* says that the newly-discovered lead mine in Satsuma will yield an inexhaustible supply. A European offered 1,000 yen for 10,000 pounds of the metal.—The *Choya Shinbun* says the engines built for the gunboat *Seiki-Maru*, launched at Yokoska some little while ago, have been found to be too large, and that it will be impossible in consequence to navigate her.—There is a restaurant at Kiyo-bashi, Tokio which is in great favour with the public. It is generally well patronised by four o'clock in the afternoon. This is no doubt owing to a rule which obtains there daily, that when the number of guests exceeds three hundred in that day, the landlord gives a present to every customer, all of whom then greet him with three cheers—not a bad way of advertising.—The *Gazette* states that in March last, Noguchi Masa-aki, the man who first manufactured beer in Japan, made a proposition to *Sa-in*, to the effect that all taxes on goods manufactured in Japan after the European style—instruments and utensils for tradesmen, articles of food, and various drinkables—should be abolished, so that by the natural development of manufactures the export of such goods might be increased and their import diminished. The project is held over for the future consideration of *Sa-in*.—A 6th Class Officer of *Kangiyoriyo* (Section of Industries), has visited Yokohama, to select and approve of exhibits for the American Centennial Exposition. A 9th class officer is to proceed to Melbourne (Australia), as the representative of Japan at the Intercolonial Exhibition there.—On the 11th inst., 10,032 persons patronized an exhibition of wrestling at Yekoin, Tokio.—The Regulations of the Tokio Public Library (the premises formerly used as a Confucian Temple) have been published in the *Nichi-nichi Shinbun*. It is open to both Japanese and foreigners between the hours of 9 a.m. and 5 p.m., every day except national and general holidays. Books cannot be taken from the premises, except by special permission of *Monbu-kiyo* (Minister of Education.) The regulations are altogether ten in number, and are similar to those in force in other countries.—A case of slander—R. S. Livingston *versus* E. Lewis—was heard on the 19th inst., before C. W. Goodwin, Esq., and resulted in a verdict for the plaintiff, for $25 and costs. The defendant had said in public that the plaintiff had been guilty of arson.—On the 15th inst., a Buddhist service for those killed in battle was performed at Uyeno, Tokio. Numbers who had lost relations during the late war attended.

SAIGON.

The *Independant* of Saigon states that the information given in its last number concerning the Annamite treaty has been, tacitly at least, confirmed by a note in the *Journal Officiel*, and it can positively state that the Treaty of Commerce concluded with the Court of Hue only awaits the sanction of the National Assembly to be put into force. M. Regnault de Prémónil, chief of the governor's staff, has left for France, not merely to offer to the President of the Republic the King of Annam's presents, but to smooth away any difficulties which might arise on the subject of the treaty and its sanction by the legislative authority.

A recent number of the *Moniteur de la Flotte* contains a report, under the Marquis [illegible] tally the French Colonies in Cochin-China are alluded to and described as of the first importance in a military, commercial, and political sense, although the most recent acquisitions of France. In 1860, but a handful of soldiers and sailors were established at Saigon, and the experiment of establishing a colony involved an expense of some twenty millions of francs annually. By 1867, the rich provinces of Bien-hoa, Saigon, and Mytho were settled, and shortly afterwards three provinces in lower Cochin-China were acquired. There is now under French rule a population of some two millions, and the country by no means relies like British Burmah upon one staple; the most varied cultivations apparently thriving well there. The port of Saigon has now a trade of the annual value of sixty millions of francs. Sixty inspectors suffice to administer the entire Colony, and the local receipts, which amounted in 1861 to five millions, had risen in 1873 to fourteen millions and a half. All that is required, it appears, is that the income of the country should so far as possible be expended upon its development. Under such conditions, writes Admiral Dupré, "we shall, at no cost to humanity, establish an empire less extended than that of British India, and possibly less brilliant; but which as regards solidity will have no occasion to envy the magnificent establishments of which Calcutta and Batavia are the capitals."

SINGAPORE.

The great prison mutiny murder trial, which has occupied the Supreme Court for some days, has been concluded. There were 42 prisoners in all, arraigned upon two indictments for the murder of Henry Digby Dent, Superintendent of Prisons, on the 13th February last, during the mutiny in the criminal prison. At the outset, eleven of the prisoners pleaded guilty, each in turn declaring he had wilfully done the deed. The other 31 were put upon their trial before a special jury, who then found seven of them guilty on the capital charge, 11 guilty on the lesser counts of the indictment, and acquitted 13. The 11 who pleaded guilty and the 7 found guilty by the jury were sentenced to death; the other prisoners were remanded for sentence. The *Singapore Times* is in favour of commuting the sentence of death passed on the 18 convicts, to penal servitude for life. It urges that the interests of justice and order were avenged by the death of some 20 prisoners at the hands of the Europeans who quelled the outbreak, and shrinks from further sacrifice of life.—Sir William Jervois, the new Governor of this Colony, arrived by the French mail steamer on the 8th inst., and was sworn in by the Chief Justice at the Town Hall on Monday last, the 10th inst. The ceremony, at which the community were fully represented, was presided over by Sir Andrew Clarke, until Sir William Jervois' commission had been read, when he vacated the chair in favour of his successor. After the oaths had been administered, the new and the retiring Governors were lustily cheered, and Sir William Jervois, thanking the public for the warm reception given him, promised to use his best endeavours worthily to follow in the footsteps of his predecessor in office,—an assurance that was received with much satisfaction. Sir William Jervois, as if to lose no time in following in the footsteps of Sir Andrew Clarke with respect to his dealings with the Native States, has despatched Mr. Swettenham in the Colonial steamer *Pluto* to visit the Bandahara of Pahang, and invite him to Singapore to attend a conference, at which the boundaries of the Native States may be definitely settled. This is a question of very great [illegible] may prevent serious misunderstandings, and will remove a fruitful source of disagreement between some of the native rulers.—A somewhat interesting rifle match was contested on the 19th May, between the members of the Singapore Volunteer Corps and the 1/10th Regiment, the contestants having 7 shots at each range of 200 and 400 yards,—the Volunteers using the Snider rifle, and the 1/10th the Henry-Martini. This is, we believe, the first match held in the East in which the two arms have been pitted against each other. Notwithstanding the admitted superiority of the Henry-Martini, the two highest scores were made with the Snider. The results were.—

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

April 26th.—(1) A monthly list of vacated posts issued by the Civil Service Board.

(2) Edict, dealing out sentences of punishment on certain Manchu soldiers, quartered at Yang-chen, for making a disturbance in the Brigadier-General's office. A report of the affair had been laid before the Throne, and the case delegated for investigation to Muh Teng-awe, from whose memorial it appears that the troops, being clamorous for their rice-allowance, crowded into the Yamên, and there caused some damage to the furniture or building; but no fighting is ascertained to have ensued. Two of the soldiers are found guilty of breach of discipline, and sentenced to be transported, flogged, and cangued, and to be dismissed at the expiration of the term of banishment with a final castigation. Several of the officers are further reproved for their inability to maintain discipline.

(3 and 4) The Governor of Shantung, Ting Pao-chên,—also holding rank of Junior Guardian to the Heir apparent, reports on the adjudication of two appeal cases referred to his decision. In one case, the appellant accuses Liu Yuh-tang and others of murdering his sister, Lü-menze. The latter, who had not finished a pair of stockings—in hand for her husband, Liu Pau-chiu—was accused by

him of idleness and beaten about the arms with a hempen rope; she stormed and raged at him in return, and received a further application of the rope about the back. Mortified by the humiliation thus subjected to, she committed suicide by swallowing brine. The husband was bambooed according to law by the Chehsien; but the appellant, suspecting that the father and mother-in-law of the deceased were guilty of beating his sister to death, lodged his accusation accordingly. In the other case, a nephew of the appellant Liu Ting-chi, was stabbed and found dead in the street; and Liu Chi-ting, with whom the deceased had been stopping, was accused of being guilty of the act. Both charges are found by the Governor to be untrue, although the suspicions which prompted the accusations are not without some shadow of reason. The two appellants, by repairing to the capital to lodge false accusations are notwithstanding brought under the penalty of the law relating "to doing that which you ought not to do," and sentenced each to eighty blows of the bamboo. But, in virtue of the Act of Grace of the 15th of 11th Moon of Tung-chi, the sentence was not to be carried into effect.

April 27th.—(1) Edict. Two military officers are reprimanded and deprived of their buttons, for failing to apprehend certain criminals guilty of murdering five individuals and wounding others. A date is further ordered to be fixed within which the said officers will positively be required to produce the prisoners.

(2) Two more edicts—one commanding the Civil Service Board to consider and report on a recommendation that an Under Secretary of the Criminal Board, who has distinguished himself in capturing certain criminals, be promoted. Another, commanding the Governor of Hunan to select an officer to fill the vacant Prefecture of Nan-chang—a post of considerable importance—from the other incumbent prefects under his jurisdiction.

(3) The Commander-in-chief of Kweichow, Chen Tah-wou, reports that he has brought to a satisfactory close the financial troubles connected with the disbanding and payment of the Ts'ou (Honan and Hupeh) forces. "Your slave left the provincial capital of Szechuen, C'heng-tou, on the 21st of the 9th moon of last year, and arrived at Chung-king on the 6th of the following month. With the exception of the rear detachment of the force—three regiments, which had been also ordered on from Kweichow to be disbanded—the various battalions had all arrived, and were encamped at different places in the vicinity of Chung-king. Of the funds ordered to be contributed by Szechuen, Tls. 200,000 had been furnished, and the feelings of the soldiers had been somewhat quieted in consequence. Your slave at once called together the various Generals in command; informed them of the absence of funds in the Provincial Exchequer of Szechuen; that it would be impossible to pay more than 70% of the arrears, and that unless measures could be devised of commuting for the deficiency by the "pau-chuen system," *i.e.* bestowal of honorary distinctions (Note.—報捐 pau-chuen is used for the acceptation, supposed to be willingly, of a "button" in lieu of money due; being really a "get what you can" arrangement), it would be most difficult to fix a date for final settlement. In dismissing them with instructions to carry out these measures, words exhorting them to be inspired by patriotism and disinterestedness were also not omitted, and subsequent reports were received to the effect that the proposition had been successfully carried into effect by each General. The amount of contribution due by Imperial allotment, and still remaining unpaid by Szechuen, amounted to Tls. 940,000—but deducting from this Tls. 119,000 borrowed by the Province from the finance office of Kweichow, which by Imperial assent is not to be returned, the balance at present due stands at Tls. 825,000—while the total sum which the Provincial authorities have on two separate occasions agreed to provide is only Tls. 580,000—to go specially towards liquidating arrears of pay. In addition to this, Tls. 100,000 were payable to meet the monthly expense of feeding the troops after their pay ceased, and while waiting to receive the arrears due to them. Notwithstanding great economy, this latter has been insufficient, and the deficiency has had to be otherwise made good. Without taking this into account, Tls. 240,000 are still required to complete authorizable requirements. As the payments of contributions have come in, your slave has employed the funds in disbanding and paying off first such troops as urgency dictated; the most important being those who have been long in active service, and whose thoughts are strongly directed to their homes. As regards the contributions actually stipulated for by the Szechuen authorities, there is an amount of Tls. 90,000 still to be paid over in monthly instalments by the Fuh-yung finance office. But these instalments run on till the middle of the 4th moon—too late to administer to the pressing needs of the day. Arrangements have therefore been made with the Taotai, Chian Ching-yuen, and the Prefect of Chung-ching, Chui-heng, to obtain the money, by loan, in advance. From the 10th moon of last year, to the commencement of the 1st moon of the present year, your slave, assisted by the various officers in command, has been busily engaged in all the details entailed by the disbanding of the troops—*i.e.*, of issuing pay, receiving back weapons, and of delegating officers to accompany the men in detachments to their respective homes; and, with the exception of the Wu character (武 the last character of the Commander-in-chief's name) battalion, the whole of the Ts'ou force under my control has been disbanded. The Wu battalion men, belonging principally to Hunan, will be taken to I-chang, and there paid off. These arrangements having one after another been satisfactorily made, the uneasiness amongst the troops was thereby allayed, and for the last few months this place has been restored to tranquility." The Commander-in-chief finishes his memorial by announcing that, on the 6th of the 2nd moon, he will proceed with all haste, viâ Hupeh and Honan, to kneel before the Throne and listen to the Imperial will.

(4) A supplementary memorial to the above, setting forth the extremely critical position of affairs when the Ts'ou troops first arrived in Szechuen, owing to the want of funds to pay their arears, and recommending for promotion or honorable mention those officers, civil and military, who distinguished themselves by responding to financial exigencies and by allaying the dissatisfaction of the soldiers.

(5) Another supplementary memorial, giving a brief review of the successful compaigns against the rebels in the various Provinces of China. The many obtacles to overcome, the determined resistance of the rebels at every step; the ravages of disease from malaria during the hot weather, and "the defeat of your enemy before taking your morning rice"-spirit of the troops are all expatiated upon, and the number of soldiers attached to the Commander-in-chief's original corps—afterwards led by Li Yan-won—who succumbed from beginning to end by death in the ranks and disease, is instanced as amounting to 10,500 *a* 10,600 men. Other temples have therefore been erected, at places to which the men principally belonged, in their memory, and the local officials are ordered to repair thither every Spring and Autumn to sacrifice to their manes and thus commemorate their loyalty.

(6) A Chi-shien in Honan had been impeached for being short in the payment of public moneys, and deprived of his button. The Governor now requests that, in virtue of the sum having been made good, his button be returned, to which the Imperial consent is given.

April 28th.—(1) A decree gazetting a long list of promotions.

(2) A memorial from the Cabinet Minister and Governor-General of Chihli, Li Hung-chang, Earl of first grade. An inhabitant of the Yung-cheng district had lodged an accusation at the capital against some tax clerks, Kwoh Pei-cheng and others, for extorting money and being the cause of his father's death, who endeavoured to commit suicide, when confined in prison for not paying his taxes, by piercing himself with a nail. It is found that the father recovered from the injury self-inflicted, and died afterwards from ordinary disease. The appellant is therefore brought under the law of doing that which he ought not to do, *i.e.*, lodging a false plaint, and sentenced to 120 blows of the bamboo. But this, in virtue of the act of grace since the offence, is remitted.

April 29th.—(1) Two Imperial Edicts, commanding two cases of appeal to be investigated and adjudicated upon by the Governor-Generals of the Provinces concerned.

(2) A memorial by the Censor Kwei-ling and others. A member of the Imperial clan Ching-tsing, formerly holding the position of General in the army, was stripped of his rank for certain conduct, but still continued to render assistance as a subordinate. It was in this position that he was killed at the capture of I-li by the rebels in the fourth year of Tung-chi, when fighting manfully on the ramparts; while his entire family—male and female—swallowed poison and sacrificed themselves to preserve their honor. The nephew, En-show, sent a messenger to ascertain the true circumstances of the case, of which he had only heard a rumour; but the road was intercepted by rebels and no information was then procured. Recently a servant, who was at the time in Chang-tsing's employ, has returned and given a full and reliable report of the proceedings. The Imperial assent is therefore craved, in accordance with the law existing on this subject, to graciously allow Chang-tsing to be restored posthumously to his previous honors.

(3) The newly appointed Chief Justice of Shantung, Chen Sz-cha, reports having taken over his seals of office.

(4) The Governor of Honan, Tsien Ting-ming, memoralizes in respect to a Che-shien being found, after his death, to be short of public money to the extent of Tls. 20,800, which the family, in view of the death of the Che-shien, think it not incumbent on them to make good. Orders had been issued to make searching enquiry as to what money was left in the hands of the family, and also to sell any real estate that may be left.

(5) Liu Chong-yin, Governor of Kwang-si, memorialises in regard to official movements within his jurisdiction.

April 30th.—(1) Several nominations of high officials are Gazetted, to personify certain officers sent off to their posts, also to examine into other public affairs. A monthly list of officials nominated in the different provinces also appears.

(2) The Governor of Shen-si, Shan Heng-yi, represents to the Throne that in the case of Lama chiefs from Tibet repairing to the capital to present tribute, or to relieve their countrymen resident there, it is the custom for the local officials to supply them with food en route, and beasts of burden to convey their effects. On passing the border at Szechuen, it is further the rule to depute Chinese officers

to act as escort. But evil practices appear to have sprung from these regulations. The escort officers enter into league with the interpreters, require two or three times more beasts of burden than are necessary, and tout for the conveyance of merchants' cargo at reduced rates. They also trump up false charges, accusing people of stealing the tribute articles, and make this a means to extort money; in fine, "words are insufficient to narrate the way impositions are practiced." Remedial measures, as suggested by two Che-shiens, are proposed; *i.e.*, that when the Lama missions cross the border, a full inventory of the articles conveyed should be at once taken; that the various boxes should be labelled with a list of contents and particulars of weight of each; and that the total number of beasts of burden required should be plainly specified for the information of the officials of each province when passing into their respective jurisdictions. The Imperial command is therefore solicited, to be given to the Governor-General of Szechuen to carry the above suggestions into effect.

(3) A memorial from Shan Heng-yih, Governor of Shen-si, on measures to be taken in his province to render more efficient the working of the "virtue reward office." The morals of the people are represented to be vitally connected with the effective bestowal of posthumous marks of distinction for deeds of heroism, acts of merit, and lives of virtue, &c., &c.; and although the above establishment [illegible] names of civil and military officers, gentry, soldiers and wives and daughters, as worthy of distinguishing marks, it is to be feared that owing to the difficulty of enquiry caused by the devastation of war, there must still be many incidents which have escaped enquiry, *i. e.*, deaths in the ranks when fighting or defending towns, people captured and preferring death to submission to the enemy, and of women dying to preserve their virtue, which time and circumstances have obliterated from memory: and it is desirable that not one of these should be allowed to pass unnoticed. To this end, the merit-reward establishment has been amalgamated with the military or volunteer office, which it is supposed will assist the enquiries to be made. The Imperial assent has been published by the Cabinet.

(4) Another memorial from the same officials wishing to retain a Manchu officer in his former position.

(5) A memorial from Ching Liu Kwei, in charge of affairs beyond the border. A system was inaugurated in the 4th year of Hien-fung, of issuing certificates, classed red and white, to troops, entitling them to certain reward, or payment, of money at a future date, and issued in view of the reduced state of public finance at the moment. During recent years, the Provincial exchequers have been so low as to render the redemption of certain of these certificates impossible, while the condition of the holders is stated to be so poor that they are unable to pay for funeral services and rites to their relatives. The redemption of the red class certificates has been in abeyance by special order since the 4th year of Hien-fung, and the white since the 10th year. It is at present requested that the redemption of the white certificates, issued to the troops under the memorialists' command, be now made.

Rescript: Let the Board consult and report.

May 1st—(1) Edict commanding that pothumous honors be conferred on Fuh Tsi-ou, who fulfilled the post of Governor of Anhwei in Hien-fung's reign, and whose death Li Hung-chang reports.

(2) Two Manchu officials, Tung-sheng and Toh-ko-tuan, memorialise, impeaching certain officers with carelessness and neglect of duty. A previous report of the circumstances connected with the impeachment had already been reported to the Throne, and a narrative, as elicited from the prisoners examined, is again given. The case is one of a very daring attack on the Gaol of How-lan Ting, near Jehol, by a band of over 30 mounted and foot robbers. After making known their intention to the inmates of the prison, they effected their entry during the stillness of a moonlight night, released the fetters of the prisoners, overawed and wounded some of the gaolers, and finally set at liberty over 50 prisoners. Some of these were afterwards captured, and others delivered themselves up; but 43 are still at large. Punishment is requested to be dealt out to the officers who shewed neglect, a time to be fixed for bringing to justice the robbers and escaped prisoners; and the prisoners recaptured are to be dealt with according to law.

May 2nd.—(1) Thanks are returned by several officers for appointments received.

(2) Edict, commanding an examination to be made at the Pau-ho-tien (peace preservation hall), Peking, into the capabilities of the various Examiners before appointing them to the different provinces. (Note.—This is in anticipation of the extra, or act of grace triennial examination, to be held this year in the 8th moon, in virtue of the accession of a new Emperor to the throne.)

(3) The Governor-General of the two Kwangs and Governor of Kiangsu both report on investigations made into the character and capabilities of expectant officials within their jurisdiction.

May 3rd.—(1) A decree commanding [illegible] and direction of military affairs in Chinese Turkestan, and ordering Chin-shun to act as assistant administrator.

(2) Kwei-yuh and Heng-shun memorialise requesting that surplus banner men at Cheng-tu—the provincial capital of Szechuen—be drafted to Nanking. The authorised number of troops at Cheng-tu, entitled to the issue of rations, is two thousand six hundred odd; but, owing to the growth of their families, a large excess of strong hale and intrepid young men exists who are a great burden to those on the roll, and while anxious to serve their country, cause actual want in the encampment. At Nanking, on the other hand, the full complement has not been made good since the ravages of civil strife, and the Imperial consent is craved to allow of 500 cavalry being transferred thither from Cheng-tu. Rescript.—Let it be as desired. The proper Board will take note.

(3) A memorial from the Governor of Shan-si, respecting the filling up of the vacancy caused by the death of a Brigadier General while under commission.

(4) The foregoing Governor, Pau Yuen-shen, reports to the Throne on the virtues displayed by a lady of Shansi, and requests, in deference to an influential petition received from a long list of gentry, that a memorial monument be erected to immortalize her name. The lady Ho was married at eighteen, to Lu Shu-yung, son of a Che-shien. The husband, while living with his parents, was taken ill in the autumn of the 12th year of Tungchi (1873). The disease shewed early symptoms of a dangerous character, but the lady, although occupied every night in secretly burning incense and offering up tearful prayers, maintained during the day a cheerful countenance, that the parents might not be overcome by dejection. For months she changed not her raiments, but devoted herself sedulously to administering to the wants of her husband, and finally as a last recourse she cut from her arm a piece of flesh to mix with the medicine. But her endeavours were of no avail, and her husband succumbed to the disease. The lady Ho was then overcome with grief, and fainting several times was recovered only by medical appliances. But she had already resolved not to outlive her husband, and after privately writing to her sister-in-law to come and attend upon the two parents, already advanced in years—she swallowed a gold ring, and at the age of thirty-four thus sacrificed her life on the altar of conjugal virtue. Rescript.—Let the virtue of the lady Ho be commemorated as desired.

May 4th.—(1) An edict, ordering Ching-shun to be Commander of the forces at Ou-lou-moh-tsi, in Chinese Turkestan—(Note.—Ching-shun was gazetted on the 3rd, to assist Tso Tsung-tang)—and Ching-lien to be commander of the White Banner Chinese force; the latter having to repair at once to the Capital to take up his post.

(2) The Governor of Honan, Tsien Ting-ming, reports on the trial and award of a case of manslaughter, lodged at the Capital and referred to the decision of the provincial authorities. The appellant's father, Li Ting-yung, in 1872, arranged the sale of an ox and an ass to the accused's father, Chau-fuh. Subsequently, an altercation arose on the subject of payment with the buyer's son, Chau-chün. Li Ting-yung struck a blow at Chau-chün, which the latter managed to avoid, but, picking up a vegetable knife to frighten his antagonist, he accidentally stabbed him in the abdomen while making a feint thrust, which caused his death within a short time afterwards. The deceased's son, the appellant, Li Sing-chieh, lodged a charge of murder at the Prefect's yamên, and the case was thence referred to the District Magistrate for adjudication. Here the appellant for some [illegible] about making an appearance. In the meanwhile, his cousin was summoned to the bar, and the appellant, hearing false rumours to the effect that the yamên men had been extorting money, and that his cousin had been subjected to coercion and punishment, thereupon resorted to a higher tribunal—*i.e.*, first to the Provincial Court and lastly to the Capital. The Governor, after a full investigation, finds that the death wound was beyond all doubt given unintentionally, but that, according to the law of "homicide" during an affray, no matter by what means, sentence of strangulation should be passed upon Chau-chün—the said sentence to be carried out in the autumn. In virtue, however, of the act of grace passed since the commission of the crime, the punishment will be commuted to one hundred blows of the bamboo and transportation to a distance of 3000 *li*.

(3) The above Governor presents a further memorial, suggesting that the district of Kau-cheng, now included under the jurisdiction of the Wei-yau Prefecture, should revert again to the Prefecture of Kwei-teh. The change in the course of the Yellow River led to the original transfer; but, in consequence of a subsequent further alteration in the course of the stream, the approach to Kau-cheng from Wei-yau is intercepted by the river, and a re-transfer thus rendered desirable, in the interest of officials as well as the people.—Rescript: Let the Board consult and report.

May 5th.—(1) An Edict degrading several officials in Fungtien (Manchuria) for remissness and suspicious conduct in respect to the banditti in that neighbourhood; also handing over other officials to the Board for investigation and punishment.

(2) Two more Edicts relating to official movements.

(3) A memorial relating to the convalescence of a Brigadier-General, Ou-leh-hing-aw, and to his return to his duties at Ning-kou-tah in Manchuria.

(4) A memorial from Yeh-yung and Yih-ai, high Manchu officers, setting forth that at the recapture by the Imperialists of Ning-kou-tah, which fell to the rebels last year, a general of the left, Yung-lien-yun, and his nephew, a Captain of Artillery, Wen-shuy, are accused by certain of the soldiers and officers of using their influence

to stop the pursuit of the insurgents, and of also escorting some of their number away in safety. The two accused, it appears, were captured by the rebels during their seizure of the town, and their lives were spared only through the entreaties of the resident merchants; their subsequent action being probably actuated by gratitude. Owing to the distance of Ning-kou-tah—some 800 *li* to the East of the Provincial town of Shengching, it had been difficult to summon and procure at once the necessary witnesses; but that officers of the Imperial army should meanly cling to life by the favor of rebels, is already casting disgrace on their cloth, and the Imperial sanction is asked to allow that the two accused be at once stripped of their rank preparatory to a full investigation.

(5) Ting Pao-chen, Governor of Shantung, reports on the marvellous intervention of the River Gods during important works at Chia-chuang. The embankments to be repaired are represented to have been a work of singular difficulty; the hearts of the officers and men engaged were dismayed at the danger to be surmounted, and even the Governor himself could not but confess to feeling considerable trepidation. On 18th of the 2nd moon, while at a total loss as to what measures should be taken, the "Golden Dragon, No. 4 Great King," gloriously revealed Himself to earthly eyes (in the metamorphosed form of a snake.) The Governor, then, with his subordinates—civil and military—all devoutly prayed that divine assistance might be vouchsafed. On the 20th, 21st, and 24th,

The Yellow great King,
,, Vermillion do.
,, Exalted do.
,, Nine Dragon General.
,, Yangsy do.
,, Tang do.
,, Liu do.
,, Tsau do.

all respectively manifested themselves in metamorphosed form, and on the last date mentioned a hurricane suddenly rose up and the force of the waters became abated. That the works were finally completed, is ascribed to the divine assistance thus vouchsafed, but that the Gods should thus intercede in the interest of the country, is doubtless due in great measure to the virtues of their Imperial Majesties, the Dowager Empresses and the Emperor, by whose devoutness the Gods have been influenced. In regard to increased posthumous honors to be conferred on the above Gods, see Imperial edict in *Gazette* of 21st April.

May 6th.—( ) Several Edicts about official movements.

(2) A memorial from the Governor-General of Fukhien and Chekiang, respecting the interchange of officials within his jurisdiction.

(3) Ting Pao-chen, Governor of Shantung, impeaches a magistrate, Chong-yuh-yuen, for failing to carry out instructions in regard to the conservation of the Yellow River. It is requested that he be suspended and that his rank be withheld until the orders given are satisfactorily carried out. The request is assented to.

(4) Ting Pao-cheng charges a Colonel, Wang Hioh-li, who had acquitted himself formerly with credit in the campaign against the rebels, with abandoning himself to lust and opium, and also with making deductions from the pay of the officers under his control. The dismissal of the Colonel, and after-examination, is asked for and assented to.

Several short memorials follow, having reference to civil service changes.

May 7th.—This *Gazette*, as well as a portion of that of the 8th, is taken up with a lengthy report by the grand secretary and secretary of the Board of War, Kwang-shen and Hai Tung-shan, on alleged embezzlements and corrupt practices connected with the Ping-chai-chuh 兵差局—a system of establishments to provide accommodation for troops *en route* throughout the province of Szechuen. In the *Gazette* of 24th April is an Edict having reference to the present report, and embodying the important features of the subject under investigation.

8th May.—Edict. From the commencement of spring, great scarcity of rain has prevailed around the Capital. The "opening of summer" term has now passed, and the fields are in urgent want of the moistening bounties of Heaven. Great solicitude cannot but be felt, and it is fitting that prayers should be devoutly offered up to secure the benign favors required. The Princes of Tun, of Kung, and others, are therefore ordered to repair on the 11th to the various Temples, to perform the necessary ceremonies.

(2) A report from the two foregoing officials, on an investigation instituted into an allegation made by the Cabinet Minister, Kwang-an, respecting affairs in Szechuen. For every one Tael of Imperially fixed land and grain tax, with the ordinary addition for waste, it is alleged that extra collections, to the extent of Tls. 7 *a* 8, are made, which are demanded under all kinds of subtle names—to wit, for difference in scale, packing sycee subscription, &c. The memorialists had made enquiries of the Governor-General, from whom it appears that the land and grain taxes of Szechuen are fixed at a total of Tls. 660,000, to which Tls. 100,000 are added for the ordinary 15 per cent. allowed for expenses; that the nett amount has to be accounted for by officials according to "Treasury scale" and "Treasury touch;" that the scale currently used amongst the people shows a difference of 3 per cent., and that the touch of the silver in circulation is also inferior; for all of which calculation has to be made; further, that in some poor districts, where silver is scarce, *cash* has to be received in payment, and has to be changed into sycee at the wealthier towns. But the collection thus made in varied form is a measure designed to accommodate the people, and no undue demands are made. Apart from this, contributions have been rendered necessary for repairing city walls, banks, bridges and roads, and for attending to the conservation of rivers, &c., all of which are necessary works, while the collections are not made without proper authority. To the charge that exactions are made under the cover of subtle excuses, the Governor-General makes an emphatic denial. The memorialists, in view of the Governor-General's statements, which appear satisfactory, deem it unnecessary to institute further examination into the past, but are of opinion that an addition of 7 *a* 800 per cent. has actually been made to the taxation; and while pointing out that the vitality of the people is likely to be sapped by such burdensome taxation, they recommend that the Governor-General be enjoined to exercise increased vigilance in stopping extortion and malpractices, and in not allowing contributions to be demanded too lightly. "Although there may be a work which, for ten thousand reasons, cannot be avoided, still should full consent be first obtained from the higher authorities before the collections, are authorised?" The Minister, Kwang-an, further suggested that the Szechuen li-kin barriers should be closed. In answer to this it is argued that, although the province is now relieved of internal troubles, precautionary measures cannot be entirely renounced, and that the expense of the troops still retained must as a necessity be met. That, as expediency admits, the surplus soldiers will be disbanded, and that the barriers can be gradually closed as the disbanding takes place. Three barriers are at present to be removed, but 16 others are pointed out which will have to remain for the time.

Official Papers.

MR. HART ON THE WOOSUNG BAR AND THE PORT OF SHANGHAI, IN 1867.

Mr. Burlingame to Mr. Seward.

March 29, 1867.

SIR,—I am happy to enclose a Memo. from Robert Hart, Esquire, Inspector-General of Customs, from which you will learn what great progress the Chinese are making. They have decided to appropriate the entire tonnage dues to the building of lighthouses and for the improvement of harbours on the coast of China.

This result, so creditable to the Chinese and so advantageous to us, is entirely due to the patient and enlightened efforts of Mr. Hart. It is also, with the increase of trade, an indication of the faith of those who believe in reason and kindness more than in brute force.

I have, &c.,

ANSON BURLINGAME.

Extracts from Memorandum Enclosed.

. . . . . Much therefore as the appropriation of funds for the purpose of lighting the coast may do towards insuring against the few dangers that do exist, it may almost be said to have for its object the *convenience* of navigators rather than the security of life and property at sea. . . . .

Since the capture of Nanking, it has gradually become less necessary to divert any portion of the tonnage dues from the purposes for which foreigners hold they ought to be set apart, and the termination of the large payments (for indemnities) may be said to have completely freed the fund in question from all calls for the supply of deficiencies elsewhere.

Mr. Hart then proceeds to enumerate the works which have been done, and what is going to be done at the various ports. With reference to Shanghai he says:

"This, the port most frequented by shipping, is also the one least easy of approach; its difficulties are, however, of a kind which will always demand a good hand in the chains, and attention to both helm and sails. Collisions excepted, steamers come and go in absolute safety, and for sailing vessels it is the tug-boat that is requisite, rather than the light or the buoy. The Saddle Islands and Gutzlaff are sufficient guides to the mouth of the Yangtsi to the south; and the high island, known as Shaweishan, to the north, is a very conspicuous object. With Shaweishan in sight, and a chart on board, nothing but absolute carelessness would run a vessel on the only rocky dangers in the approach to Shanghai, viz., the Amherst and Ariadne Rocks. The real difficulty of the approach is to keep in the channel when once in the river. After leaving the Saddles, Gutzlaff, or Shaweishan, a vessel will make the lightship—a light that has been kept up for the last 10 years—in the vicinity of which a pilot is sure to come on board. From the lightship, the pilot has no great difficulty in taking the vessel far enough up the river to sight the Beacon, a lofty tower on the shore below Woosung; the Beacon passed, Woosung is soon sighted.

Inside Woosung there is a bar in the Shanghai (Hwangpoo) river, but on a flag flying at the house of one of the Harbour-master's staff at Woosung, is always to be seen the number of feet of water on the bar; and, at the bar itself, marks have been put up of a kind to enable vessels of the proper draught to pass in safety. At Shanghai, a

Harbour-master and a large staff are employed, from the employment of whom has resulted much order and regularity in the anchorage, but whose powers require to be defined, and whose office must be respected and supported, in order to—I shall not say the improvement—but the conservation of the harbour; filling at various points to low water mark, and the construction of wharves and jetties along its banks, have tended much to spoil it as an anchorage for ships, and while increasing the temporary value of front lots, have sown the seeds which will produce decay *there* and a rival *elsewhere*.

A lighthouse is now about to be built either on the Ariadne or on one of the Saddles. A light will also be placed on Gutzlaff, one on the Beacon, and another at Woosung. Those lights once placed, the navigation will be as easy, so to speak, as would be a walk down Regent street when the gas is lit.

Before attempting to do anything with the bar inside Woosung, a competent engineer will be brought from Holland, and on his opinion will depend the measures to be proposed . . . . In the absence of the opinion of a man at once scientific and practical, who has made such works his study, my advice to the Chinese is to do nothing rather than to bury sycee in the mud. . . . . .

Having now gone through the ports one by one, I proceed to make a few general remarks bearing on the subject.

Knowing the monetary difficulties of the Government I have now attempted to prevent the authorities from diverting a considerable portion of the tonnage dues from such works as harbour improvements, and lighting of rivers and coasts, to military uses; knowing that temporary pressure alone caused them to avail themselves of that fund, once they began to understand the light in which foreigners viewed it. . . . . .

The suppression of the rebellion, the quieting of the seaboard, the payment of the indemnities, and the authorization at length about to be issued by Imperial decree (which, hoping against hope, I have for more than 5 years been laboring to obtain) allowing and inviting Chinese to build and own vessels of the foreign kind, both steamers and sailing craft, all combine to render easy of execution what a few years ago it would have been almost suicidal to attempt. . . .

The amounts hitherto expended from tonnage dues for harbour improvement, &c. have been small,* but it may now be stated with confidence that the Chinese Government will do its share of the work faithfully and well. It will provide funds and secure the services of first class men, and the only assistance to be asked for is one which treaty powers are, by exterritorial privileges, bound to afford, and that is, to join in the prevention of all acts on the part of foreigners settled at the ports, be they the acts of individuals or of Municipal Councils, pronounced to be of hurtful tendency by the Chinese agents, and to recognize and support those agents in the performance of their duties.

Robert Hart,
I. G. of Customs.

January 31st, 1867.

* Annually, during the last 5 years, about Tls. 45,000, and for special purposes during the same period, lighthouses, beacons, buoys, repairs &c., about Tls. 50,000. The revenue (tonnage dues) for the 5 years has been, say, Tls. 1,000,000; and the expenditure, say, Tls. 275,000, or more than one-fourth.

† Since writing what precedes, I have received official instructions from the Tsungliyamên (board of foreign affairs), authorizing me to carry out all that this memorandum sets forth. The annual collections under the head of tonnage dues are not likely to exceed Taels 300,000 (£100,000), or to fall below Taels 210,000 (£70,000). In order, therefore, to effect as much as possible with the funds at my command, while employing professional men specially educated for special work, I shall endeavour to incorporate the bulk of those employed with the Customs establishment rather than create a new service. * * *

Robert Hart,
I. G. of Customs.

March 16th, 1867.

Public Meetings.

VICTORIA FIRE INSURANCE COMPANY.

An extraordinary meeting of shareholders in the above Company was held at the office, Queen's Road, Hongkong, on the 25th ultimo, to take into consideration a proposition to wind up the Company. There were present:—Messrs. A. André (chairman), F. D. Sassoon, Sands, Hayllar, Q.C., C. P. Chater, Landstein, W. H. Bell, Anton, Wheeler, J. T. Chater, Middleton, Nicaise, H. Cope, J. Greig, H. H. Nelson, Sandeman, McCulloch, J. J. dos Remedios, Kruse, Elwell, Karberg, da Costa, Head, Marafelt, Burrows, Hancock, Joost, Hubbe, &c.

The Chairman, having read the notice calling the meeting, read the following letter which had been received by the directors:—

"Hongkong, 30th April, 1875.

"To the Directors of the Victoria Fire Insurance Company, Limited.

"Gentlemen,—We the undersigned, Shareholders in the Victoria Fire Insurance Company, Limited, have to request, in accordance with No. 51 of the Articles of Association, that you will be good enough to call an Extraordinary Meeting of Shareholders to take into consideration a proposition for voluntarily winding up the said Company, and for appointing Liquidators for said purpose.—We are &c.,

"(Signed) S. E. Burrows,

"and 36 others, representing 500 Shares."

The Chairman then said: Before I request any of the gentlemen who have signed this letter to place a motion to that effect before the meeting, I consider it my duty to express to you the views of the directors in regard to winding up this Company. Owing to the absence of any large conflagrations during late years, the financial position of the Company is at present very satisfactory. On the other hand the directors cannot close their eyes to the fact that the premia account shows a constant decrease, and any disaster coming over us would easily wipe out the profits of one or more years. The directors, on their part, do not wish to advocate any steps either to one side or the other; but they cannot help thinking that if the Company is to be wound up, no better time than the present can be chosen. The shareholders now will get a very fair return for their shares, while the future is uncertain, and it would not be wise to expect that we shall continue to be spared from losses. I have nothing else to say on behalf of the directors, but will be glad to receive a motion from one of the gentlemen who signed the requisition.

Mr. Burrows then proposed that the Company be voluntarily wound up forthwith.

Mr. A. H. Chinoy seconded.

The motion was carried unanimously.

Mr. C. P. Chater proposed

"That Messrs. André and Sassoon be appointed liquidators, and that their remuneration be at the rate of one per cent. on the total amount distributed to the shareholders."

Mr. Hancock seconded, and it was carried unanimously.

The Chairman said there would be another meeting held in a fortnight to confirm the resolution which had just been passed.

Mr. Middleton asked if the confirmatory meeting could not be held sooner?

The Chairman said it could not be held sooner, as the local ordinance required a fortnight.

Mr. C. P. Chater said that, as the proposition to wind up the Company had been carried unanimously, he would suggest that the outstanding risks be reinsured at once.

The Chairman said if that were left in the hands of the liquidators they would see to it.

The meeting then terminated.—*Daily Press.*

CONSEIL D'ADMINISTRATION MUNICIPALE DE LA CONCESSION FRANCAISE.

Résumé des délibérations du Conseil.

Séance du 27 Avril, sous la présidence de M. A. Voisin. Conseillers présents:—M.M. A. Hennequin, F. D. Hitch, E. Leroy, H. Maignan, E. Millot, J. H. Scott, J. F. Seaman; H. Sayn, Secrétaire.

Approbations des propositions émises par le Comité des Finances relatives:

A la remise à faire à M. John Pook de £1.12.2 pour frais d'assurance des pierres lithographiques du plan de la Concession.

A la reponse à donner au directeur du grand théatre du quartier de l'Est, au sujet de sa demande de réduction sur l'impôt locatif Chinois.

Lecture d'une lettre de M. le Consul-Général de France par laquelle il approuve la nomination de M. Voisin comme Président du Conseil, et celle de M. Hennequin comme Vice-Président, et confère à M. Voisin les pouvoirs nécessaires pour remplir les fonctions auxquelles il est appelé.

Communication d'une autre lettre de M. le Consul-Général, informant le Conseil qu'en raison de son départ en congé, le Consulat-Général sera géré provisoirement par M. Lemaire, Consul à Foutchéou, en attendant l'arrivée de M. le Comte de Chappedelaine qui continuera l'intérim pendant son absence.

Communication d'une lettre de M. le Consul-Général, en date du 24 Avril, transmettant au Conseil la sentence arbitrale rendue par M. Medhurst, Consul de S. M. Britannique, et par lui dans la question d'empiètements sur le Yang-kingpang. Le Conseil est heureux de voir que cette sentence, en laissant les choses dans l'état, ménage ainsi les deniers des deux Municipalités et conserve l'usage de quais au public tout en prescrivant, pour l'avenir, une entente qui doit éviter tout malentendu. Dans ce but, et conformement aux termes de la décision des arbitres, le Président est chargé d'écrire à celui du Municipal Council pour lui proposer de faire procéder conjointement à l'étude des lignes de quai nord et sud du Yang-kingpang et pour l'informer, en même temps, que les travaux de reconstruction du pont No. 4 vont être repris sans délai.

Le Président est chargé de conclure avec M. Hanssen, représentant des mineurs Webb, au prix de Taëls 5,000 par mow, fixé par les arbitres, l'acquisition de la parcelle de terrain nécessaire à l'élargissement de la rue du Consulat partant du Bund jusqu'à l'établissement connu sous le nom de North German Home.

Le Président est également chargé de conclure avec les Rds. Perès Jésuites, au prix de Taëls 1,000, l'acquisition d'une parcelle de terrain s'étendant au coin de la rue Montauban et de la rue du Consulat depuis l'établissement dit Hôtel des Colonies rue Montauban, jusqu'à la maison occupée par M.M. Oliveira et Cie., rue du Consulat. Quant aux parcelles placées en avant des maisons occupées par M.M. Baron et Paul compadore, les Rds. Perès Jésuites qui en sont les propriétaires, ayant bien voulu en faire gratuitement l'abandon à la communauté, le Secrétaire est chargé de leur transmettre les remerciements du Conseil.

M. Guidicelli est nommé comptable en remplacement de M. Renucoli décédé. M.

Sauné est nommé percepteur, en remplacement de M. Guidicelli, et M. Babey est nommé expéditionnaire en remplacement de M. Sauné.

Le Conseil renvoie à une prochaine séance l'examen de la demande de M.M. Butterfield et Swire, relative à l'érection d'un hangar en fer sur leur Wharf en avant du quai du Wampoo, et prescrit de faire procéder, dès à présent, à l'étude de la ligne de démarcation que pourraient avoir les quais de la Coucession par rapport à un alignement d'ensemble avec les concessions voisines.

Le Secrétaire est autorisé à faire la commande des registres à souches pour l'éxercice 1875-1876.

Pour procéder à la révision des impôts, le Conseil propose de faire appel à une commission composée des principaux propriétaires d'immeubles sur la Concession et de quatre Conseillers Municipaux ; ainsi que de s'assurer le concours de quatre notables Chinois à même de fournir des renseignements dont cette commission aurait besoin.

Le Conseil trouvant préférable de ramener l'année Municipale dans les limites de l'année ordinaire, decide qu'à l'avenir l'excercice commencera au 1er Janvier pour finir au 31 Décembre de la même année.

Examen des raports des Chefs de Service.

La Séance est levée.

Séance Générale du 12 Mai, sous la présidence de M. A. Voisin. Conseillers présents :—M.M. A. Hennequin, F. D. Hitch, E. Leroy, H. Maignan, E. Millot, J. F. Seaman ; H. Sayn, Secrétaire.

Lecture d'une lettre de M. Lemaire Consul de France à Foutchéou, informant le Président qu'il a pris le service du Consulat-Général de France à Shanghaï à la date du 20 Avril le priant d'en faire part au Vice-Président et aux autres membres du Conseil.

Par sa lettre en date du 29 Avril, le Municipal Council propose au Conseil Municipal, l'augmentation de la taxe sur les Jin-rick-shaws et la mise en vigeur d'un réglement de police plus sévère pour leur circulation.

Le Conseil est d'avis qu'il ne peut émettre son opinion avant d'avoir reçu une communication exacte des modifications proposées.

Conformément à la décision prise relativement à l'étude des lignes du Yang-king-pang, la lettre suivante a été écrite au Municipal Council :—

"MONSIEUR,—Ayant reçu communication de la décision Arbitrale dans l'affaire d'empiètements sur le Yang-king-pang, le Conseil a lu avec plaisir que Messieurs Medhurst et Godeaux recommandent que de part et d'autre les choses soient laissées dans l'état, mais que les deux Conseils concluent pour l'avenir une convention tenant compte à la fois des besoins de la navigation et de ceux de la circulation des quais, laquelle convention, accompagnée d'un plan, serait soumise à l'approbation de l'autorité chinoise, et préciserait, en fixant des points de repère, la largeur à attribuer désormais au Yang-king-pang. Les Arbitres recommandent, en outre, que toute construction de quai ultérieure de chaque côté du Canal, soit l'objet d'un accord préalable entre les deux Municipalités.

"Conformément à ces recommandations, je viens, au nom du Conseil, vous proposer de faire procéder conjointement à l'étude des lignes de quai Nord et Sud du Yang-king-pang, et je m'empresserai de lui transmettre toute proposition que vous pourriez avoir à me faire à ce sujet.

"Me reportant aux termes de votre lettre du 15 Février, 1875, je profite de cette occasion pour vous informer que l'Administration Française va faire procéder sans retard à l'erection du Pont en fer No. 4. Elle désirerait que, de votre côté, les travaux de consolidation de la culée Nord, que vous avez pris à votre charge fussent poussés de telle façon que l'ensemble des travaux ne souffrit pas de retard.

"Veuillez agréer, &a.,

"Le Président du Conseil,

"(Signé) A. VOISIN."

A cette lettre, le Président du Municipal Council a répondu en ces termes :—

"SIR,—Owing to the press of work consequent on the approaching Ratepayers' Meeting, the Council regret they are unable to give your letter of the 29th ult. the very careful consideration it requires.

"As soon as the metting has taken place, as little time as possible shall be lost in addressing you on the subject.

"I am Sir, &c.,

"(Signed) J. G. PURDON,
Chairman."

Le Conseil prescrit en consequence, la mise en place du Pont No. 4, dont les travaux avaient été provisoirement suspendus.

Le Capitaine Roberts ne pouvant s'occuper immédiatement de l'étude de la ligne de quai du Whampoo, le Conseil est d'avis de confier ce travail à M. Kingsmill, et charge le Secrétaire de lui écrire dans ce sens.

Le Conseil décide de soumettre aux Consuls, le résultat du travail fait pour l'étude de la ligne des quais du Wampoo, en leur représentant l'importance qu'il y a pour le port en général et la Concession Française en particulier, à ce qu'une prompte entente ait lieu relativement a la ligne d'ensemble des dits quais.

La réponse à faire à la demande d'érection de Wharfs de M.M. Butterfield et Swire, est donc ajournée.

Autorisation du paiement à M. Henri, d'une somme de Taëls 150, pour le plan du Yang-king-pang du Pont No. 1 au Pont No. 6.

Examen des rapports des chefs de Service.

La Séance est levée.

MUNICIPAL COUNCIL FOR SETTLEMENTS NORTH OF THE YANG-KING-PANG.

Council Meeting of 24th May, 1875.

Present :—Messrs. J. G. Purdon (Chairman), G. J. W. Cowie, J. Hart, W. Kidner, A. A. Krauss, F. W. Lemarchand, R. Mackenzie, S. D. Webb, and the Secretary.

The Summons calling the meeting was taken as read.

The Minutes of the last meeting were read, confirmed and signed.

The Cash State for the 22nd May was laid on the table for inspection.

Appropriation—Widening Nanking Road.—Compensation was authorized to be paid to the Lessee of the old Hongkong and Shanghai Bank premises for loss of space, &c. sustained by the surrender of land to widen the Nanking Road.

General Hospital.—The subjoined letter from the Trustees of the Hospital was considered, and reply as under, agreed to :—

Shanghai, 20th May, 1875.

SIR,—In pursuance of my motion which was passed at the late Ratepayers' Meeting, regarding the General Hospital, I beg to inform you that Mr. Kidner has been requested to lay his plans before the Municipal Council, and to request that you will favor the Trustees with your views on the site and plans, at as early a date as possible, so that, if approved, the building may be begun at once.

The lease of the present building on the French Bund, I may mention, expires on the 31st December next.

(Sd.) W. KESWICK,
Chairman of the Board of Trustees of the Shanghai General Hospital.

J. G. PURDON, Esq.,
Chairman of the Municipal Council for the Foreign Settlements North of the Yang-king-pang.

Shanghai, 25th May, 1875.

W. KESWICK, Esq.,
Chairman Board of Trustees, Shanghai General Hospital.

SIR,—In reply to your letter of 20th instant, the Council desire me to state that they will be glad to be put in possession of the plans of the New Hospital, as also of Estimates or Tenders of Contractors for carrying out the same.

The Board would further be obliged by your informing them as to what sites the Trustees have ever been offered, or have been in treaty for, and the terms ?

Whether the property of the proposed New Hospital is free from any claim whatsoever on the part of Shareholders in the existing Institution ?

Whether any arrangement has been made with the French Municipal Council for their continuing their contribution of Tls. 1,000 per annum, and whether it is likely they will do so for the term over which the debt is to extend ?

A memorandum of the yearly expenditure in detail would also be useful, as there are one or two items in the Report recently published, such as house expenses, etc., about which the Council would like to ask for information.

The Board note that the lease of your present premises expires on 31st December next, and recognize the desirableness of giving the Trustees their views of the scheme under discussion, at the earliest possible date.

They therefore, after receiving and considering your reply to this, propose to invite the Trustees to meet them to discuss any alteration that may seem needful.

(Sd.) JOHN G. PURDON,
Chairman.

Volunteer Corps.—The Election of Sergt. G. J. Yeo as Lieutenant of No. 3 Co., vice Lieut. H. Mylne, resigned, was approved and confirmed.

Bridges Yang-king-pang.—The following letter from the French Municipal Council was read:—

MONSIEUR,—Au nombre des motions proposées par votre Conseil à l'adoption de l'Assemblée des "Ratepayers" se trouve celle-ci :

"Que de nouveaux ponts ne soient pas bâtis et que des réparations ne soient pas faites aux ponts déja existant sur le Yang-king-pang, à moins que la Municipalité Française ne consente à supporter la moitié de la dépense."

Le Conseil Municipal de la Concession Française n'a pas la prétention d'intervenir le moindrement dans vos relations avec vos constituants, mais comme cette motion est contraire aussi bien aux intérêts des quartiers Sud que des quartiers Nord du Yang-king-pang, le Conseil doit s'en préoccuper et il s'étonne de la voir proposée par votre Administration.

Dans le cas où vous y donneriez suite, j'ai mission de vous informer que le Conseil compte faire appel à qui de droit afin que la discussion de la quotité des dépenses des ponts soit réglée d'une autre façon que le moyen proposé par vous qui équivaut à traiter en patients, pour ainsi dire, et à mettre à la question les populations des différentes Concessions afin de faire crier merçi à la moins forte ou la moins patiente.

Je suis également chargé de vous faire remarquer que les deux Conseils en 1874-1875 ont décidé qu'un pont en fer pour remplacer le pont No. 1 était préférable à un pont en bois, et que mes collègues et moi apprennent seulement aujourd'hui, par hasard, en parcourant le rapport de gestion du Municipal Council de 1874-1875, que le Municipal Council a fait figurer au budget la somme simplement suffisante pour un pont en bois. Le Conseil Français est, donc, encore mis dans l'alternative ou d'accepter forcément le changement d'idées de votre Administration, ou de se trouver à nouveau en désaccord avec elle, et devant un non possumus Municipal basé sur les prévisions du budget ; c'est dénier à notre Conseil même le droit d'avoir une opinion.

Veuillez, Monsieur, agréer l'assurance de ma considération très distinguée.

Le Président du Conseil,
A. VOISIN.

Monsieur J. G. PURDON,
Président du Municipal Council.

Shanghai, le 18 Mai, 1875.

[*Translation.*]

SIR,—Among the Resolutions proposed by your Council to the Ratepayers is the following :—

"That no new Bridges be built, nor repairs

be made to existing Bridges across the Yang-king-pang Creek, unless the French Municipality agree to bear half cost of same."

The Municipal Conseil of the French Concession does not presume in the remotest degree to interfere in your relations with your constituents, but as this resolution is equally inimical to the best interests of the dwellers on each side of the Yang-king-pang, this Conseil is forced to give it its consideration, and is astonished that the measure should have been proposed by your Administration.

In the event of your giving effect to it, I am directed to inform you that this Conseil will appeal in the proper quarter so that the question of the division of expenses on the bridges be determined in a different manner than that proposed by yourselves, which makes the residents of the different Settlements, sufferers, and causes them to be pressed till the least strong and the least patient of them cries for mercy.

I am also requested to call your attention to the fact that the two Councils in 1874-75 decided that an iron bridge to replace the No. 1 was preferable to a wooden bridge, but my colleagues and myself only learn to-day, by chance, in looking over the Municipal Budget, that your Council only allow sufficient for a wooden bridge. The French Council is thus again compelled (nolens volens) to accept this change of views on the part of your Administration, or to find itself, for a second time, placed in antagonism to you, and in face of a Municipal non-possumus based on the provisions of the Budget. This is to deny to our Council even the right of having an opinion on the subject.

(Sd.) A. Voisin.

And reply as under agreed upon :—

A. Voisin, Esq.,
The President of the French Council.

Sir,—I have to acknowledge receipt of your letter of 18th inst., in which, after informing me that your Council do not claim to interfere with the relations between this Council and its constituents, you go on to say that you are astonished that we should ask the sanction of our Ratepayers to our bearing only one-half the cost of the Bridges over the Yang-king-pang, and to threaten us that if we give effect to such sanction, you will appeal to some other quarter to have it determined in a different manner. Passing over the fact that this seems to this Council to bear a very close resemblance to interference between them and their constituents, I may point out that in effect your position amounts to this:—you claim the liberty of saying how much you will pay towards maintaining the Bridges, but deny us the same privilege. This Council content themselves with saying they cannot alter the determination to pay only one half of the cost.

They at present bear *all* the expenses of the large and costly bridges over the Soochow and Hongkew Creeks, as well as those over the Defence Creek within this Settlement, all of which are as much of a necessity to residents on your side as the Yang-king-pang Bridges are, and they consider they are acting very liberally in offering to pay in addition, one-half of these latter.

With regard to the change from the proposed iron bridge to a wooden one, at the Bund, you will agree with me no doubt, that it was quite within the province of this Council to obtain the opinion of the Ratepayers before they suggested the change to the French Council, for had that opinion been in favour of the iron one, there would have been no need to suggest any change. As it is, this Council will have the pleasure of placing before you the reasons that induce them to think a wooden one preferable, but as no definite action was taken, this Council consider they are in a position still to agree to an iron one should it appear, after discussion on the subject with you, desirable; and if in the meantime the bearing the half-cost of the bridges is agreed to by your Council.

(Sd.) J. G. Purdon,
Chairman.

Mr. F. W. Mitchell, Postmaster-General, Hongkong.—The following correspondence was ordered to be published :—

9th April, 1875.

F. W. Mitchell, Esq.,
Postmaster-General,
Hongkong.

Sir,—Learning from the public papers of Hongkong that you are about to resign the office of Postmaster-General, and to leave that Colony, I take the opportunity of expressing the thanks of this community for the benefits derived from your able administration of the Hongkong Post-Office and its Shanghai branch. It is true the latter is not connected with the affairs of the Municipality, yet as far the largest part of the correspondence which reaches this port comes through it from your head office, I feel sure that this community owes a great deal to your efficient management; and while many in your position might have been content with the ordinary well working of the Department, you have ever appeared anxious to inaugurate plans that would result in greater facilities to the merchants here, for the dispatch and receipt of their correspondence.

Wishing you a pleasant voyage and continued prosperity.

(Sd.) J. G. Purdon,
Chairman.

Hongkong, 13th April, 1875.

Sir,—I do myself the honor to acknowledge and thank you for your letter of the 9th instant No. 75/320, and to beg the favour of your expressing to the Municipal Council my deep sense of gratitude for the honor conferred upon me by that letter, which I highly value.

I have the honor to be, Sir,
Your most obedient servant,
F. W. Mitchell,
Postmaster-General.

John G. Purdon, Esq.,
Chairman of the Municipal Council,
Shanghai.

Extension of Broadway.—A proposition by Mr. C. E. Kofod, to sell, for the sum of Tls. 500, a portion of his property situated on the other side of the small creek at the East end of the Broadway, so as to permit of that road being carried on in a straight line, was not entertained, the Council being of opinion that the probability of extending the road was very remote.

Reports from Heads of Departments were read and considered.

The Minutes of the last meeting were approved and passed for publication.

Amusements.

THE A. D. C. PERFORMANCE.

"Tweedleton's Tail Coat" is a farcical comedietta of the most attenuated character, depending entirely on the degree of comicality that can be thrown by the actors into a complication of coats. Toby Tweedleton (*Mr. Drinkwater*), invited to dine with Mr. Bracebutton a retired tradesman, can only muster for the occasion an extremely seedy old tail coat once belonging to his grandfather, in which he is making his way to the party, when a servant girl who is brushing her master's (Mr. Pantile) coat at an upper window, lets it fall on Toby's head. He seizes the opportunity to effect an exchange, and hands his own old coat to the girl, when she comes out for the one she let fall. But it chances that Mr. Pantile is also going to this party, and Toby is in an agony of apprehension that he will be discovered and denounced. His efforts to get back the coat to its master, and to get hold of his own again without detection, form the plot of the piece, and involve a ludicrous series of exchanges and misunderstandings. Toby Tweedleton is the central figure, and *Mr. Drinkwater* sustained the part with his accustomed humour. He is always *Mr. Drinkwater*, but he is always humourous, and always has the sympathy of the audience. Evelina (*Miss Castor*), as the retired tradesman's daughter, was charming, as she always is, and the final scene in which Bracebutton consents to her marriage with Toby, was enacted by the two with an extravagant comicality that fairly "fetched" the house. *Mr. Montressor* utterly mistook the character of the young farmer desired by Mr. Bracebutton as a husband for his daughter. Blackberry Thistletop is a yokel no doubt,—that is to say, he is not a gentleman farmer, and has nothing in common with a girl like Evelina. But *Mr. Montressor* made him a ploughman with a dash of the buffoon. Indeed it would be difficult to find a ploughman more broad in accent, more extravagantly awkward in gesture. The part was redeemed here and there by a dash of naturalness—as for instance where he leaves in a passion to rejoin the "honest folk" at Thistletop Farm, and concentrates his disgust in the epithet of "haberdasher" which he hurls at Mr. Bracebutton for a farewell. But the part was on the whole, the least successful we have seen *Mr. Montressor* take up. There was, perhaps, a trace of overacting in the sprightly activity of *Mr. Rewerb* as Bracebutton, but it was very slight, and was quite redeemed by the care with which he acted the rest of the part. Kitty Spruce (*Miss Carpenter*) was a very fair maidservant, and Mr. Pantechnicon Pantile was well personated by *Mr. Barkins*. That the piece was not a success, was not the fault of the actors, but of its own innate feebility.

If the sympathy of the audience was not warmly enlisted by the first piece, however, it was carried by storm by the second. Of "Cox and Box," we have only to say that it was excellent, and to congratulate the A. D. C. on one of the greatest successes they have achieved. We remember only one parallel, in their first representation some years ago of the Nigger Minstrels; and we have heard strong wishes expressed for a repetition of the performance in this case, as in the other. The piece is a difficult one in many ways. It requires good singing, careful accompaniment, word-perfectness in part, and a thorough sympathy between the actors. The plot is so well known that it would be absurd to sketch it; suffice it to say that there are only three people in it, and that they had to act at high pressure without an interval, for over an hour. It is not enough, as in ordinary pieces, that they carry on the scene; a lull in "Cox and Box" would be intolerable; it must be kept going; there is no medium between thorough success and utter failure. We have exceptional pleasure in saying, then, that the three Amateurs who acted it on Thursday achieved unqualified success. The dash of burlesque thrown by *Mr. Francis* into a perfect operatic style, was exquisite,—so faint that it left you in doubt whether you did not imagine it, yet sufficient to convince you that the actor saw the humour of his part. *Mr. Giovannelli's* get up as a journeyman printer was perfect—the pallor, the sleepiness, the general seediness of the man's appearance after having been all night setting a leading article, were typified to the life, and his acting throughout was excellent. The part of Sergeant Bouncer was well-conceived and well sustained by *Mr. Will Honeycomb;* and the pianist's important share in the piece was admirably carried out by an amateur to whom Shanghai audiences have been often indebted. The whole of the music, in fact, vocal as well as instrumental, was well executed; and two of the songs were encored with a determination that expressed the delight of the audience, though, we fear, some want of consideration for the effort entailed on the actors. The piece was frequently and loudly applauded throughout, and the curtain fell amidst a storm of applause which was prolonged until, and after, it had been again raised and dropped.

The entertainment should have closed here. It was a quarter past eleven before the second piece was ended, and people would have gone home thoroughly satisfied with the amusement they had enjoyed. The addition of a third piece was an unnecessary effort on the part of the A. D. C.; and a much better Farce than "My Dress Boots" would have failed to revive the enthusiasm which had been exhausted on "Cox and Box." It is to the credit of the actors that they did succeed in interesting an audience somewhat

blasé by what they had already heard. As in the case of Tweedleton's tail coat, the plot is a mere sketch, to be elaborated or marred by the skill of the actors. The chief burden of it again falls on *Mr. Drinkwater* who, as Marmaduke Mivins, sustained the part of a jealous husband and suspicious father with excellent humour. *Mr. Walbro'* as Tamerlik Brown, resisted the temptation to over-burlesque the professional singer, and *Mr. Honeydew*, as Bob, made a very good representation of a combined boots, ostler, and waiter at a country inn—who has been up all night at a ball with the Mivins' maid servant, Jemima Ann. The latter part was again taken by *Miss Carpenter*, with the care to which the same actor accustomed us in "Pangloss;" and we must not pass on without mentioning that the A. D. C. are indebted to her for coming forward at the last moment, to supply the place of a lady who had been previously cast for the part, but who, a week since, was inopportunely removed to Hankow. Not even the character of Mrs. Anastasia Mivins, a somewhat elderly lady with dyed hair, could suppress the charm of *Miss Castor's* acting, and her nervous anxiety lest her husband should discover the fraud which the loss of hair dye threatened to disclose, was well feigned under somewhat difficult circumstances. There can be no question, however, that the part which most took with the audience was not that which the author had intended to be most prominent. The marvellous get-up of *Miss Julia Brussels*, as Celestina Mivins, inspired with a romantic attachment for Mr. Tamerlik Brown, of which the latter was unconscious; the irresistible absurdity of her soliloquies to his photograph, and her general bearing, elicited such laughter that even the actresses were affected, and the piece was more than once threatened with interruption. The laughter was different certainly, but scarcely less hearty than that elicited by the finished comedy of "Cox and Box." The *taille* itself, of a lady supposed to be pining in unrequited affection, tickled the house at the outset, and the actress's keen enjoyment of her rôle kept up the hilarity.—This was announced as Mr. Drinkwater's last appearance on the Shanghai stage, and he was loudly summoned before the curtain at its close, to receive a warm parting greeting from the friends and spectators whom his acting has so often gratified.

Altogether, the spectators dispersed, at 12.15, well pleased with the evening's entertainment, and feeling indebted to the Shanghai Amateurs for the pains taken to amuse them throughout a successful season.

THE TIENTSIN RACES.

Our races, which took place on the 13th, 14th and 15th inst. were a decided success. The weather was all that could be desired and though the heavy state of our course, abrupt turns and heavy weights, prevented *Tien Kwang's* time being excelled, I should gladly see at least one of our cracks meet yours of the South on level terms. The Ladies' Purse was gracefully presented, and responded to with that amount of brevity characteristic of these occasions. The general arrangements reflect great credit on those on whom the duty devolved. In the Trial Stakes, one of your crack Southern Jockies in his endeavors to show us provincials how to finish on the post, cut it a little too fine, and only got a dead heat for his pains.

FIRST DAY, 13TH MAY.

TSZE-CHUH-LIN STAKES.—½ mile, weight for inches.

Mr. Vapereau's *Croquemitaine*, 153-lbs..... 1
,, Frazer's *Polonaise*, 156-lbs. 2
,, Random's *Spark*, 147-lbs..... 3
,, Newman's *Polaris*, 150-lbs. 0

Time, 1m. 2½s.; won easily.

MAIDEN PLATE.—1 mile, weight for inches.

Mr. Random's *Sulky*, 153-lbs..... 1
,, Frazer's *Punch*, 153-lbs..... 2
,, Count d Imecourt's *Cadet Roussel* 156-lbs 3

Time, 2m. 12s.; won easily.

WELTER STAKES.—Once round, weight 12 stone.

Mr. North's *As-you-like-it*..... 1
,, Mongol's *Mischief* 0
,, Sedroc's *Morning Star* 0

Time, 2m. 44s.—The riders of the last two ponies came to grief.

MERCHANT STEAMERS CUP.—1½ mile, winner of Maiden Plate 7-lbs. extra.

Mr. Random's *Sulky*, 161-lbs. 1
Count d'Imecourt's *Belle Rose*, 153-lbs. 2
Mr. Frazer's *Tyro*, 153-lbs..... 3
,, Sebrof's *Bras de fer*, 152-lbs..... 0

Time, 3m. 26s.

PEIHO STAKES.—¾ mile, winners 7-lbs. extra.

Mr. Vapereau's *Croquemitaine*, 160-lbs..... 1
,, Scandinave's *Surprise*, 153-lbs..... 2
,, Newman's *Polaris*, 150-lbs..... 3
,, Random's *Spark*, 147-lbs. 0

Time, 1m. 36s., won easily.

LADIES' PURSE.—1½ mile, winners 1st race, 7-lbs.; 2nd race, 10-lbs.

Mr. Frazer's *Punch*, 153-lbs..... 1
,, ,, *Tyro*, 163-lbs..... 2
,, Hart's *Blackbird*, 150-lbs..... 4

Time, 3m. 26s., close race.

SECOND DAY. 14TH MAY.

PEKING CUP.—1 mile, winner 7-lbs extra.

Mr. Random's *Sulky*, 160-lbs. 1
,, Vapereau's *Croquemitaine*, 160-lbs 2
,, Scandenave's *Surprise*, 153-lbs. 3

Time, 2m. 15s., won easily.

CHALLENGE CUP.—2 miles.

Mr. Frazer's *Punch* walked over; *Sulky* started to make a race but pulled up.

TAOTAI'S CUP.—1¼ miles, winner, 1st race, 7lb.; 2nd race, 10-lbs.

Mr. Random's *Sulky*, 163-lbs. 1
Count d'Imecourt's *Belle Rose*, 156-lbs..... 2
Mr. Hart's *Blackbird*, 150-lbs..... 3
,, Frazer's *Punch*, 160-lbs..... 0

Punch pulled up. Time, 2m. 49s. won easily.

TRIAL STAKES.—1 mile, weight for inches.

Mr. Random's *Sulky*, 153-lbs..... 1
,, Vapereau's *Croquemitaine*, 153-lbs..... 1
,, Frazer's *Polonais*, 156-lbs..... 3

Dead heat; owners divided. Time, 2m. 11½s.

CONSOLATION STAKES.—1¼ mile.

Count d'Imecourt's *Belle Rose*, 156-lbs..... 1
Mr. Hart's *Blackbird*, 150-lbs..... 2
,, Frazer's *Tyro*, 153-lbs..... 3
,, Newman's *Polaris*, 150-lbs. 0
,, Sedroc's *Morning Star*, 153-lbs..... 3

Time, 2m 49s.

THIRD DAY, 15TH MAY.

VISITORS' CUP.—1¼ mile, winner, 1st race, 7lb.; 2nd race, 10-lbs.

Count d' Imecourt's *Belle Rose*, 160-lbs..... 1
Mr. Frazer's *Punch*, 163-lbs..... 2
,, Hart's *Blackbird*, 150-lbs..... 3
,, Frazer's *Tyro*, 153-lbs. 0

Time, 2m. 47s.

The meeting was wound up with the usual mafoo and sailors' races.

RESIDENT.

Correspondence.

MUNICIPAL AFFAIRS.

To the Editor of the
NORTH-CHINA HERALD.

SIR,—"Kissing goes by favour;" and so I presume does proxy-voting at Ratepayers' meetings, for otherwise it would be difficult to explain the peculiarities of many of the divisions which occasionally take place. Proxy-votes are something like the little pigs which ran about the streets in the olden time, crying "who'll eat me? who'll eat me?" for the great majority of those who are willing to part with their personal right of voting are equally indifferent as to whom they will grant the right to represent them. Municipal government in fact does not much interest the general public, but this is in a great measure to be attributed to the fact that, for the last few years, municipal government has been reduced to a sort of humdrum affair, overshadowed on the one side by the encroachments of the Chinese, and on the other by the immunity of foreign officials. In fact, in the want of interest in the well being of the Settlement, evidenced by the nature of the late undertakings of successive Municipal Councils, and by the apparent apathy of the great body of ratepayers, we see but the reflection of what is taking place elsewhere in China—the dying out of enterprise, and the apparent extinction of that superiority of practical ability which used, till a few years ago, to distinguish the Western from his worn out brother in the Far East. The political revolutions of the last fifty years were, for the most part, an unwholesome development of this spirit of energy, and they have unfortunately produced for their effect such a reduction to a dead uniformity of the whole body politic, that the energy itself which led to them seems to be rapidly dying out under their influence.

The dread of responsibility is one of the strongest and strangest signs of the new reign of mediocrity, and it is curious to remark its influence extending from the highest, through intermediate, to the very lowest ranks. To judge from recent remarks, the dread of responsibility sits as heavily on the head of a modern Municipal Councillor as it does on that of a Minister himself; one and all shiver and come under the vague shadow which they are unable to define, but which sits brooding over their actions like the sphinx over the doomed city. Municipal government, to judge from recent reports, seems to confine itself mainly to the relation of petty squabbles between Council and Council, or between Council and Ratepayers, while the great aim of Municipal government, the wellbeing and good order of the Settlements, and the formation of a solid nucleus of civilising vigour and energy, seems to have entirely and utterly dropt out of mind.

The code of revised Land Regulations submitted by the Committee appointed for the purpose, is not a production of which any one concerned in its composition need be proud. Even looked at as a bare series of instructions for the subsequent formation of a code, it is weak and unsatisfactory. The old code seemed to have erred through a deficient knowledge of the English language; if this have escaped the charge, it has only done so by the substitution of utter weakness for incomprehensibility. Still, though, to judge from their report, the members of the Committee are by no means proud of their bantling, they seem to have had some hope that the very vagueness of the formulæ might have afforded some play for the exercise of discretion to a fairly energetic Council. The remarks of the latter, circulated at the meeting of Tuesday last, show how little hope there is for such an event. Feeble as are the proposed Regulations—and we may say that the force of feebleness could scarcely further go—the remarks of the Council were of a feebler nature still. The Committee, indeed, in its report, seems to have been in favour of a more definite and decisive code, but, with the prevailing dread of reponsibility, to have finally decided on submitting the draft now presented to the Ratepayers, in the hope that they or the Council, influenced by a tittle more energy of spirit, would supply the *vis* so sadly needed. If this were their hope with regard to the Council, they

have probably already seen their mistake. It was hoped that the election of the Councillors by the residents would lead to the choice of energetic men, as opposed to the nominees of absent property-holders. The result has been in strange contradiction to such hopes. As a rule, the members of the Council, under the new Regulations, have been men against whom no objection could be offered. Still we miss the energy which sometimes used to mark the conduct of the Council in the old days, and I am sorry to have to add that the same want of energy seems to attach itself to the debates at the Annual Meetings. Misdirected energy is sometimes better than stagnation, but I fear that at the present time the latter is in the ascendency.

Yours truly,
CITIZEN.

DOLES FROM THE SOUTH.

The man who invented writing took upon himself a rather serious responsibility—fancy what a "pair o' dise" (as our Scotch friends say) this world would be without butchers' bills, billetdoux, I.O.U.'s and effusions such as this—to disturb the happiness of its inhabitants. Yet the "fourth estate" is not without a certain amount of appropriateness and usefulness. When Mr. Hart's predictions have been fulfilled, and a Loochoo Islander, enacting towards Shanghai the rôle that Lord Macaulay has chalked out for his prospective New Zealander—sits on the parapet of Hongkew Bridge, and with a countenance marked with melancholy and marred with betel-nut, meditates over the ruins of palatial Hongs, and the dried-up bed of a once noble river—the Historian of the future will turn to the *North-China Daily News*, filed in the British Museum, and learn what manner of men lived on the banks of the Whangpoo. Continuing his research, he will turn to Mr. Maclean's Circular, also filed at the B. M., and therein find, in language worthy of an Iliad, a record of mercantile transactions from which it will not be difficult to make the deduction that merchants in China in those days bought and sold, but they didn't make gain.

The *Foochow Herald*, a promising literary bantling, not yet quite free from the diseases incidental to infancy, has lately given its readers a treatise on the Tea Trade, replete with a good many aphorisms that were much in vogue in the "Lane" about twenty years ago, when many of us old hands now in China were youthful jobbers—filled with ignorance and arrogance, and quite confident in our own powers of putting things straight in China. —*Veni, vidi*, but didn't *vici*; and the trade has continued, with few exceptions, pretty well ever since in that chronic state of muddle in which it seems to have pleased Providence to place it. The Press is quite right to lift its voice in warning, but the effect produced upon that spirited body of men called ch'a szes (we are indebted to the *Celestial Empire* for this improved orthography) will probably be analogous to pouring water over a duck's back. If the angel Gabriel interested himself in the Tea Trade, and thought proper to blow a blast of warning from his trumpet, he would probably be told irreverently that "tooting his horn" was a mere waste of breath.

The same journal cavils over the recent appointment to the Managership in London, of a local Bank, and, writing perhaps with inspiration, suggests that the selection might have fallen upon one of the Bank's own staff, in which are many men of "well-known ability and experience." Just so; and may be some inquisitive shareholders would like to know whether the "ability and experience, have, during the past year or two, been on "fixed deposit" or only "absent without leave."

The Earl of Carnarvon has been poking fun at us residents in the South. It is all very well for the Foreign Office to make light of public meetings and petitions, and otherwise indulge in official jokelets (they never allow fun to reach maturity in the Foreign Office); but when the head of the department makes game of our wealth, the matter becomes serious. He ought to remember his latin grammar, which taught him, or at least ought to have done, to "*De mortuis nil nisi bonum.*"

PESSIMIST.

Miscellaneous.

THE MESSAGERIES MARITIMES MAIL PACKET "DJEMNAH" (ANGLICE "JUMNA.")

As this magnificent new steamer now in our port on her first voyage, is undoubtedly the finest vessel which has yet visited China, a few notes on her admirable proportions, qualities and arrangements will interest our readers.

The *Djemnah* was constructed at Ciotat between Marseilles and Toulon, 4 or 5 months since, at the establishment of the Messageries Maritimes, at whose works the engines were also built and fitted. The hull, which in form resembles those of the *Irouaddy* and *Anadyr*, is scarcely capable of being improved, as it combines most happily the required qualities of stability, speed, capacity, manageableness and easy motion. To a naval architect, the model is beautiful, the entrance and run hollow and sufficiently, but not too much, prolonged. There is a long floor with an easy rise to give the ship weatherly qualities under steam or sail alone. Indeed, if the machine should become disabled, the vessel could disconnect her screw and complete her voyage expeditiously under canvas alone. We are sorry to say very few steamers which now come to China possess this quality so necessary for safety, and we fear that some day we may hear of dreadful disaster in consequence of the helplessness of vessels when their steam power cannot be applied. As is the case with all the Messageries fleet, the *Djemnah's* hull is built of fine fibrous, well-tempered iron which has a tensile and tranverse strength of about 20 or 25 per cent. greater than that of the material put into most of the vessels now built in North England by the gross. The *Djemnah* has 3 iron decks and enormous longitudinal and diagonal strengthening about one-fifth in excess of the requirement of Lloyds rules for a ship of her size and class. If the ship is kept in good order and regularly painted, there is no reason why the hull should not sustain the wear and tear of 100 years. It is difficult to estimates the endurance of a ship of such admirable material and construction.

The engine is compounded with 1 high-pressure and 2 expansion vertical cylinders and a 3-throw crank. The principle is that of Dupuy de Lome, and is a perfect example of symmetry, simplicity, and strength. The high-pressure steam is cut off in the central cylinder at ¼ of the stroke, and afterwards expanded in 2 cylinders in which the steam is carried to the end of the stroke at about 10 to 11 lbs. pressure, and then passed into the surface condensers which are very large to afford condensing power even in the hot waters of China. There are 3 cylindrical boilers which give an abundant supply of steam at 80 pounds pressure, with an economy of fuel consumption hitherto unknown, for with an expenditure of 28 tons Welsh coal or patent fuel the screw is turned 62 times a minute, by a horse-power of 2,500 effective. The coal consumption of 1 lb. 2 oz. per horse-power effective, has we think never before been equalled in economy; even Holt's steamers, which are the most successful of their class, consume at least 1½ pounds coal per horse-power indicated. The *Djemnah* engine works very easily, and at full speed there is scarcely any noticeable vibration. The stroke is 1.1/10 metre. The screw is a Hirsch 4-bladed of about 7 metres pitch. The vessel was guaranteed to have 14 knots speed loaded with 70 revolutions of the screw, but her performance has exceeded the guarantee. On one occasion during her voyage, she ran 25 miles in 1 hour 35 minutes, without help of sail, and in general terms may be depended on to run with ease 300 knots daily average.

A few details may be interesting. The measurements are in metres of 3 feet 3⅓ inch.

Length	124.90	metres.
Breadth	12.07	,,
Depth	10.00	,,
Draft average	6.20	,,
Decks	3	
Displacement loaded	5,410	tons.
Capacity—cargo	3,500	,,
Coal	510	,,
Stores 4 months for 400 people.		
Screw 4-bladed	4.80	diametre.
Cabins, 45 first-class for 107 passengers.		
,, 10 second do.	45	,,
third do.	36	,,

She has 60 European sailors and officers, 15 engineers and machine staff, 28 stewards and cooks, and a full complement of Asiatic stokers, boatswain and deck hands.

The interior fittings of the saloon are of maple and mahogany, and each cabin has a large gunport fitted with venetian blinds. The fittings of the cabins, bedding &c., are simple but most comfortable, and suitable for hot climates. The bath rooms, 6 in number, are fitted with large marble tanks, and the lavatory and other accommodation is the best we have ever seen. All the saloon arrangements also admirable. On deck there is a large kitchen, in which a banquet for 200 guests could be prepared easily. The upper-deck is of teak, and all the deck fittings are of varnished teak and wrought iron. The vessel is well fitted with fire engines, boats and arms, and is in short the *ne plus ultra* of safety, comfort, speed and seaworthiness.

She has three wooden lower masts, with iron tubular yards. The fore and main lower yards are 26 metres long; double top-sails are fitted, and the ship has a great spread of canvas.

This magnificent ship is commanded by Capt. Flambeau, an experienced officer of the French Navy, assisted by a full staff of excellent officers.

Law Reports.

H. B. M.'s SUPREME COURT.

Shanghai, June 3rd.

Before Sir EDMUND HORNBY, *Chief Judge, sitting in Admiralty.*

THE STEAMER *Fusing v.* THE STEAMER *Ocean. Collision.*

Mr. DRUMMOND and Mr. EAMES appeared for the plaintiffs.

Mr. WAINEWRIGHT (solicitor for Peter Denny, of Dumbarton, Scotland, the owner of the *Ocean*) and Mr. HANNEN, for the defendants.

This was an application on the part of the *Fusing* to amend the petition in the late trial, in order that the decree pronounced by the Court might be similarly amended. The decree ran as follows:—"Upon the hearing of this cause of damage, this Court finds that both the defendant's steamship *Ocean* and the plaintiff's steamship *Fusing* were to blame; and it is this day ordered and decreed that the damages and losses sustained respectively, be added together, and that one-half thereof be borne by each of the said steamships; and that it be referred to the Registrar and Merchants to ascertain and report to the Court the amount of the said damage, the question of costs to be disposed of at the final hearing."

Mr. DRUMMOND said he had to ask his Lordship to amend the petition and the antecedent details of the cause by the insertion certain words, and then to settle the decree in the form in which he had drafted it and submitted it to the Court. The words he asked to be inserted were, "and of the master and crew thereof, and the passengers thereon (or, on board of), for their money, clothes, and private effects." Those words were copied from the Appendix to "Williams and Bruce," p. 104.

Mr. HANNEN said there was nothing there about passengers.

His LORDSHIP asked if the words read by Mr. Drummond had reference to a case of collision?

Mr. DRUMMOND said yes; and the present application was made because the decree as it stood could only be made to apply with regard to those who were parties to the suit. Therefore, if those words were not added, the master, crew, and passengers would be left out entirely.

His LORDSHIP asked if Mr. Hannen could not now make the amendment he had previously suggested. It was very questionable as to whether the persons alluded to in the present application could recover, and he would like to hear it argued. If the authorities were in favour of the application, he could amend his judgment. What he would suggest was, that the pleadings should be amended, which could be done by consent.

Mr. HANNEN thought that course was not absolutely necessary. He could show his Lordship authority for the decree that was given, with very little alteration, in the case of the *Seringapatam*.

Mr. DRUMMOND said there were authorities on the other side, equally strong.

Mr. HANNEN said he thought not. He had looked for some, but could not find any. As for the *Ocean*, they on their side really wanted nothing, and there was therefore no reason why they should consent. He thought they could arrive at an arrangement to allow the plaintiffs to amend their petition in the way they had stated, if they would pay the costs of the day, and upon the understanding that, on the part of the defendant, the application to vary the decree by inserting words to cover the claims of passengers, officers, and crew was not agreed to. Then that question could come on for argument

His LORDSHIP said that what he intended in his previous observations, was that the pleadings should be amended; and then the question would be whether he intended in his judgment to give the master, crew, and passengers their damages. He would like to hear this point argued. It would be better, if the case was going before the Privy Council, that the point should be argued—the question being—Did the Court mean to include in the damages, the effects of the master, crew, and passengers of the *Fusing*? Counsel could then give the Court authorities on the point. Perhaps it would be better, before proceeding further, if Counsel held a consultation, with the view of coming to some understanding as to the amendment to be made in the pleadings.

This suggestion was adopted, and the Court adjourned.

POLICE COURT.

Shanghai, May 28th.

Before C. F. R. ALLEN, Esq., *Acting Magistrate.*

R. *v.* MATTHEW JORDAN.

Attempted Suicide.

The defendant, who had been remanded from Wednesday, on a charge of attempted suicide, the particulars of which have already appeared, was again brought up.

Chief Constable Tyler said that the opinion of the medical officer was that the prisoner was perfectly sane.

Defendant informed the Court, that from May 5 he had been drinking heavily; and that on May 26 he and two other men drank about five bottles of Hollands.

His WORSHIP cautioned the prisoner, and allowed him to depart.

June 1st.

R. *v.* JOHN KENNEY.

Defendant is a sailor-boy, belonging to the *Fire Queen*, and had leave to come ashore on Monday. P.C. Boysen saw him the same day, in Hongkew Village, very drunk, and followed him to a steep landing place, formed with planks, down which he slipped and was nearly falling into the water. The constable then took him to the Police Station, and locked him up for safety.

His WORSHIP said defendant was very young to take to drinking, and would come to no good as a sailor if he persisted in it. He would be discharged this time with the caution that if he was brought up again, he would be punished. His Worship also told Boysen to see that the lad went on board his ship.

MIXED COURT.

Shanghai, June 1st.

Before the Chinese Magistrate, CHEN, and Dr. YATES, U. S. Assessor.

Stealing a Jinriksha.

A native thief, well-known, was charged with stealing a jinriksha, the property of Captain Burr, of Hongkew. The vehicle was kept under a verandah at the house of the prosecutor, and about twelve p.m. on Monday night the prisoner was detected by a native Municipal constable in the act of wheeling it away. In his haste to get it off the premises, he had broken down a gate and some palings. —Chen sentenced him to 100 blows with the bamboo, and a month's cangue.

Robbery from the Person.

A jinriksha coolie, who had been apprehended by the French, and handed over to the English police, was charged with stealing a watch and appendages from the person of a foreigner. The prosecutor did not appear, but it was stated that, on Monday night, being intoxicated, he got into the prisoner's vehicle, but did not know where he was taken. Yesterday morning he found himself still in the vehicle, in the neighbourhood of the Ningpo joss-house, the prisoner being near him. His watch and chain, worth $130, were missing. Prisoner was remanded until Thursday, for the production of evidence.

Larceny.

A coolie was charged with stealing a decanter from the Temperance Hall, on Monday morning. The article was taken from among a number of other things deposited for safety by a former boarder at the Hall, and on being asked why he took it, prisoner said there were more there, and he thought he might take one to put his samshu in. Sentenced to three days' imprisonment.

Charge of Embezzlement.

A shroff, in the employ of a foreigner in Hongkew, stands charged with the above offence. Some days ago, he was sent out to collect accounts, and at one place received Tls. 600. Of this sum he accounted to his master for only Tls. 500. The fact that he had received the full amount came out in a conversation the person had with the prosecutor a day or two afterwards. The prisoner, who was present, made some excuse, and immediately handed over the missing Tls. 100. In the meantime, it was found that the Compradore had absconded, and a hasty investigation of his account showed a deficiency of Tls. 200 or Tls. 300. The case was not further proceeded with to-day, prisoner being remanded.

June 3rd.

Charge of Forgery.

Two Chinese were charged with forging and attempting to pass an order for Tls. 300, on the Hongkong and Shanghai Bank. Sufficient evidence was taken to justify the detention of the accused, and they were remanded for a fortnight, to enable further enquiry to be made.

NAVAL COURT.

Hongkong, 17th May.

Before C. MAY, First Police Magistrate; H. G. THOMSETT, R.N., Harbor Master, &c.; H. L. DALRYMPLE, Un-Official Justice of the Peace; R. H. CAIRNS, Government Marine Surveyor; N. W. HASELWOOD, Commanding P. & O. Steamship *Gwalior*.

The following is the Report of the Marine Court of Inquiry into the grounding of the British steamer *Viking*.

1.—We find, that the British steamer *Viking*, Official Number 71,662, of Glasgow, 1,685 tons register, while on a voyage from Glasgow and London to Hongkong with about 3,000 tons of cargo on board, grounded at 2.30 a.m. of the 14th April, 1875, on the East side of the Bombay Shoal in the Paracels Group, China Sea, remaining there about 57 hours; when, after jettisoning about 500 tons of cargo the vessel floated off the Shoal, and proceeded on her voyage, arriving at Hongkong on the 18th ultimo, with but a small portion of the remaining cargo damaged.

2.—We find, that shaping a course to pass 20 miles Eastward of the Paracels Group was an error of judgment.

3.—We find, that the evidence shews the Captain left the deck at about 10 p.m. of the 13th, the Chief Officer being at that time Officer of the Watch. There is conflicting evidence as to perfect clearness of the horizon during the night of the 13th, but it is certain that no attempt was made to get a star observation, nor was any reference made to the subject when the master and first mate consulted the chart between the hours of 9 and 10 p.m. The Court are of opinion that an effort should have been made to correct the uncertain position of the ship.

4.—We find, that the master, officers and crew behaved in a seamanlike and energetic manner to get the ship afloat, and the Court express their approval of their conduct after the vessel had grounded.

After a due consideration of the circumstances, the Court hereby adjudge that the certificate of competency of Robert Tannock, Number 19,481, be suspended for *Three Months* from this date.

Extracts.

PRESSURE PUT UPON CHINESE IN HONGKONG.

(China Mail.)

A correspondent draws attention to a state of affairs regarding Chinese residents in this Colony which demands the most careful attention on the part of the Government. It appears to be an indisputable fact that the so-called immunity guaranteed to Chinese witnessess in the Hongkong courts is practically a myth. Although the native authorities cannot possibly get hold of an individual residing in this port, they can put in force the pressure so graphically described by our correspondent with immense and often successful effect. The witness himself may indeed remain in personal safety. But his property on the mainland may be seized, his wife, parents, children and relatives imprisoned, tortured, or even killed, and he himself reduced to the verge of beggary. The sole offence for which he suffers is that he has given adverse evidence against some Chinese rascal whose relations have sufficient money and influence to set all the infernal machinery of Chinese procedure in force. Under such circumstances, it is not to be wondered at that testimony such as can be relied upon is difficult to get. The only wonder is that adverse testimony is ever to be got at all in cases where the criminal has the slightest influence or position.—And the natural question suggests itself, How is this to be stopped?

The difficulties in the way are, we know, great, and though we have the utmost confidence in the desire entertained by the Colonial Government to deal effectively with the question, must confess that it has no light task before it. Nothing contained in the Treaty will touch the point. Of course the *ostensible* cause of persecuting a family is never stated to be the evidence given by one of its members in a Hongkong court. Some trifling charge is invariably trumped up, and, despite the most absolute moral certainty that the whole affair is a scandalous outrage, it is almost impossible to prove that the mandarins have not acted upon the most sufficient information. Such questions are in fact gordian-knots which we much fear can only be treated in the same way as that historical puzzle. They must be dealt with by main force, and discretionary power to that effect must be vested in the British official appointed to settle them. In the present case it is of course possible that the Viceroy has given, or will give, orders that the persecution in

question shall be stopped. But if such be not the case, whatever the excuse given, there will, to our view, remain but one course to pursue —*i.e.*, for Her Majesty's Consul at Canton, or the Chief Naval authority here, to dispatch a gunboat to the neighbourhood in which the sufferers reside, with instructions to her commander to release them from the pressure put upon them, and exact heavy security from the elders of the neighbourhood for their remaining in future unmolested. It is all very well to say that this would be making war on China. It would be making war anywhere else, but to say that this reasoning applies out here, is to talk unmitigated rubbish. Residents of a few years back will recollect that British subjects, under the sanction of our own Government, were actually collecting dues on behalf of the Chinese when our troops were marching on Peking! Surely, in a country when such a state of affairs was not long since possible, it is no great anomaly to send a gunboat to enforce our views on a district magistrate while maintaining friendly relations with the Central Government.

The case which has given rise to these remarks—that of the Compradore of the Hongkong Club, whose relatives are being imprisoned at the instigation of the friends of the notorious scoundrel Lee Lum-kwai,—is one of the highest importance to every Chinese resident in this Colony, and the whole of the native community is awaiting the result with the most anxious attention. A failure to secure its just settlement will have the most injurious effect upon the administration of justice in Hongkong, as witnesses possessing families or property in the mainland will in future refrain from placing them or it in jeopardy by adverse evidence against powerful criminals. The greater the rascality of the man charged, the greater will be the difficulty in proving it through native evidence. On the other hand, success not merely in obtaining release of the compradore's friends, but in also obtaining the punishment of their accusers, will mark a new era of Chinese life in Hongkong. Such persecutions as that we record are of constant occurrence on the mainland, but are seldom heard of, for two reasons. Firstly, the victims here are, as a rule, afraid to complain; and secondly, few Chinese are known to so many foreigners as the Club Compradore. An unusual deal of foreign interest has consequently been felt in this case owing to accidental circumstances. We can only express a hope that it will bring forth good fruits, and we are glad to know that, if it does not, it will not be from want of effort on the part of the Colonial authorities.—*China Mail.*

AFFAIRS IN BURMAH.

(Our Chronicle.)

At length the dull monotony of our existence at Thayetmyo is broken, and all of a moment we find ourselves in the midst of stirring events. In our last issue we recorded the return of Colonel Horace Browne's mission, and as much of the circumstances connected with it as we could pick up from what was narrated to us by those who took part in it. Since then Lieut. Adamson paid us a visit when on his way to Mandalay with a despatch to the King of Burmah, from the Governor General of India, announcing that Sir Douglas Forsyth would shortly visit him to arrange a boundary question which had been in abeyance for some time. This question had more especial reference to a mountainous district to the east of Burmah, inhabited by an independent tribe known by the name of Karennes, whose country has been already described at some length in *Our Chronicle.* It appears the Burmese lay claim to the district, and have been lately making inroads into it. The Chief, who has been always on terms of friendship with us, and has given facilities for obtaining the supplies required by our troops at the frontier station of Tonghoo, which adjoins the district, insists upon his independence and looks to us for protection; he has even offered us his territory. If Karenne was an undisputed portion of Burmah proper, the line which we chose to separate British from native Burmah, would run through a portion of it. We maintain that having brought our line to Karenne, it should be deflected so as to admit its partial or complete independence. Our view of the question does not appear to be at all palatable to His Majesty, who appears to be disposed not to yield an inch of what he claims to be his own, and in whom the hope of recovering the lost portion of his dominions has never been absent from his mind, and who shows by passing events that he is disposed to defend his rights to the utmost. Every steamer from Mandalay brings us news that the King is making war preparations on a large scale. Forts were being built here and there along the course of the river Irrawaddy, to dispute the passage. His steamers, of which he has several, were being strengthened and armed with guns for active service. A high hill overlooking Mandalay was being made a sort of Gibraltar of. Everyone thought of the coming war, and spoke of it openly. The Burmese said the King was too good to fight, and when asked why all these preparations for war?—said it was on account of a prince who had rebelled. In Rangoon the excitement was, by all accounts, very great. Trade was at a stand-still. The up country steamers returned with the same cargoes, and others passed up the river, almost empty, to bring back the merchandize they brought up shortly before. On one of these empty steamers there were six Italians, who made no disguise of their military calling, and of their intention to take service under the King.

As time passed on, every one, anxious to hear the news, visited the steamers as they touched at Thayetmyo on their way down the river. They all reported the continuance of the work at the forts, on some of which there were large numbers of people employed. One fort was being built close to the frontier at Minlah. Then there was a rumour of Captain Cook, our political resident at Bhamo, being besieged by an armed force of Burmans in the Residency, along with about one hundred Panthays who had reached the place and sought his protection.

After an absence of a fortnight, Lieutenant Adamson returned to Thayetmyo on his way back to Rangoon. He was received with much outward civility and politeness by the King, who said that he hoped there would not be any war. Altogether, if our worst surmises come true, the King must be a strange compound of amiability and villainy, and he may be under the impression that these two opposites are necessary to hold his own under the peculiar circumstances of his position, or he may be tempted to practice both in a bare-faced manner under the conviction that he possesses consummate skill in making the one combine with the other with impunity; but just as the ordinary cunning trickery of the Burmese character is of the flimsiest kind and easily detected, this double dealing must eventually lead to his ruin.

Then came the news that Sir Douglas Forsyth had deferred his visit to Burmah, and had gone with Colonel H. Browne, who had just arrived at Calcutta, to visit the Governor General at Simla.

The rumour of Captain Cook and the Panthays being besieged in the Residency at Bhamo turned out to be quite true. A few days ago a steamer arrived with the Resident and the Panthays, among whom was the former governor of Momein, Ta Se Kon, and his two sons, who, with his followers, lived among some friendly Kachyeens, since their overthrow in Yunnan. These people, who would have received no mercy from the Chinese on the one hand, nor from the Burmese on the other, appear to have made rather a hazardous venture to reach the Residency. They disguised themselves as Shans, and were nearly detected at Bhamo, on passing a Burman guard, who minutely overhauled them, but it being quite dark—2 o'clock in the morning—they escaped detection. When it came to the knowledge of the Burman Governor of Bhamo, he demanded them from the Resident, who refused to give them up. The Residency, which stands in a large compound or enclosure, was then surrounded by a number of armed Burmans, who for some time showed a disposition to make an attack, and kept every one in the Residency on the alert. To add to the strength of the defence, the arms which had been taken from the Panthays on their entrance into the Residency were given back to them. When the reports reached Mandalay, the King sent a steamer with a number of armed men and some guns to Bhamo, and two days later he gave a mandate authorizing the safe removal of the Resident and Panthays. It was fortunate that a fast steamer, the *Fytche*, was available at Mandalay. Her commander, Capt. Paterson, put on all speed and reached Bhamo before the King's steamer. There was no time lost in getting all on board and steaming down the river again. By all accounts it must have been a welcome sound to those in the Residency when the whistle of the steamer was first heard, as their patience was nearly exhausted, and to add to their anxiety there was a report that a Chinese force, who were despatched to take the Panthays, were marching on Bhamo, and were only thirty hours distant. Thus possibly a second tragic episode was happily averted.

ANOTHER BANK ROBBERY IN YOKOHAMA.

(Japan Daily Herald.)

Scarcely has the excitement caused by the late embezzlement at the Comptoir subsided, when it has become known that another bank robbery has taken place, of which the Deutsche Bank is the victim. Up to the 3rd instant, it was believed that the cash corresponded with the cash account. Periodical examinations have from time to time been made, and the coin and notes shroffed. Next morning, however, the compradore King Yao calmly announced to the astonished accountant that he had taken at various times *satsu* and gold *yen* to the extent of 28,000 *yen*. He was at once given into the custody of the Japanese authorities, and awaits examination. An immediate re-examination of the cash and notes was made, which occupied the entire morning, when it was manifested that in some of the packets supposed to contain gold *yen*, copper coins had been substituted, and packets and part packets of *satsu* had been abstracted from the bags containing them. The amount of the ascertained defalcation corresponded with the compradore's statement. It is supposed that some of the Chinese shroffs in the employment of the bank may have been the confederates of the compradore, but of this nothing certain is known. The culprit says that he has lost the money in speculations. Why he should have voluntarily confessed to the robbery is a mystery, as he might have probably gone on for some time longer without being found out.

On the following day, the whole of the six Chinese shroffs at the Deutsche Bank were given into custody, on the suspicion of their having been in collusion with the compradore. One fact has been ascertained since the discovery of the robbery, which places matters in a rather alarming light. It appears that nearly the entire Chinese community—certainly a large and responsible portion of it—and presumably the Chinese Guild, knew that King Yao was a convicted felon, yet not one word of warning was given to any one, and he was recommended to Mr. Mammelsdorff by two of the most trusted compradores in the place. The defaulting compradore was formerly in the employ of Messrs. Birley & Co., of Hongkong, and it was from them that he committed the robbery which resulted in his condemnation to a term of imprisonment at that place.

In a subsequent leader, the *Herald*, commenting on this robbery and also on that by Messrs. Walsh, Hall & Co.'s compradore (which will be found noticed in another column) say:—"The occurrences of the past few days have given a shock to the confidence hitherto reposed in the compradores in foreign employment; and persons, taking the alarm, are considering whether they had not better endeavour to dispense with such dangerous servants as these, of whose antecedents and character little or nothing can ever be learnt. The members of the Chinese Guild will discover bye-and-bye how very short-sighted their policy has been in tacitly winking at rascals getting into positions of trust, without the Guild putting foreign employers on their guard. At the present time general distrust prevails, and in order that a few scamps may find employment, the whole Chinese community is made to suffer."

The *Gazette* says it appears that King Yao has already served a term of fifteen years in Hongkong, for the embezzlement of no less a sum than $60,000 from a leading firm there, and that immediately on his release he came to Yokohama. How, under such circumstances, he succeeded in obtaining so responsible a position here seems, on the face of it, strange indeed. We believe he has a son employed as compradore in the French Bank,

COMMERCIAL INTELLIGENCE.

SHANGHAI, JUNE 4TH, 1875.

ARRIVALS.—From London, the steamships *Rajanattiannuhar*, *Tartar*, *Tchihatchoff*, *Glenlyon*, *Cheviot* and *Viking*.

TELEGRAM.—No change in the quotations of last week.

PIECE GOODS.—The disposition on the part of the natives to remain idle this week has been very strong, seldom stronger. Rainy weather and "settling day" have been the sedatives. But the auctions have been powerfully instrumental in compelling the traders to do business, and, strange to say, for once, they have neither resented the occasion, nor taken any serious advantage of their friends—the auctioneers. Everything offered—*Long Ells* and *Spanish Stripes*, C.P.H. Scarlet, excepted—brought the prices of 27th ultimo, but *Long Ells* realised a handsome decline, and *Spanish Stripes* are reported to have dropped 2 *a* 3 cands. per yard from the value current in the native market on last mail day.

From this general maintenance of former quotations, private sellers are gleaning encouragement and hope. In their opinion it proves a bare market, and the expectation of a better business when the causes of the prevailing quiet shall have been removed—and, indeed, there are signs of improvement already apparent. At the close there is more enquiry for common 8¼-lb. *Grey Shirtings*, for *Drills*, of which recent sales and re-sales amount to 8,000 pieces, and some of them at better prices, for 7 and 6-lb. ordinary Mexican *T-Cloths*, for English *Sheetings*, for *Chintzes*, and *Turkey Reds* of the lightest weight, for *Velveteens*, *Crapes*, and for 9¾ *a* 10-lb. *Grey Shirtings*, and in each article progress has been made. It is true that *heavy Shirtings* have again receded, but this is perhaps owing to so many rejections for *Mildew* ex late arrivals. Nearly 8,000 pieces of Dewhurst's Eagle in a mildewed state have been put on the market, and resold at rates ranging between Tls. 2.55 *a* 2.60 per piece, which is not so very serious under the circumstances. Sound Goods—Eagle—were parted with early in the week at Tls. 2.70, and for a more ordinary make the dealers, only yesterday, paid Tls. 2.55 *a* 2.57½ per piece. Moreover, buyers are not unwilling to go on moderately at about these latter figures, which argues fairly well for the immediate future. Regarding the other weights of this article, the sales of the week (exclusive of those effected at auction, and which will be found in their usual place) comprise 2,500 pieces 7-lb. Eagles, mildewed, at Tls. 1.50; and 3,000 ordinary at Tls. 1.42 *a* 1.48 per piece; 7,500 pieces 8¼-lbs. Common to Good at Tls. 1.62½ *a* 1.80 per piece; and about the same quantity damaged ex *Ulysses* at Tls. 1.60½ *a* 1.78 per piece; and 7,500 pieces, heavies—sound, at Tls. 2.55 *a* 2.70 per piece.

White Shirtings.—Sales of sound—4,000 pieces of fair to good 64 reeds at Tls. 1.90 *a* 2.00 per piece, and 1,000 damages at Tls. 1.90 *a* 1.91 per piece.

T-Cloths.—A rumoured transaction—7,000 pieces—in Dewhurst's T., to arrive, at Tls. 1.16, has rather shaken confidence, but the cloth is wanted for immediate clearance, while there is scarcely any here. 7-lbs. common Mexicans asked for at Tls. 1.40. Moderate sales at Tls. 1.41 per piece against Tls. 1.42½ per piece three weeks ago. The lower counts are saleable at Tls. 1.28 *a* 1.30 per piece. 8-lbs. special chops still realise fair rates. There has been business at Tls. 1.66 *a* 1.68, and a cloth—at present out of stock—that sold at Tls. 1.72½ during the excitement, is worth to-day Tls. 1.70 per piece.

Drills.—14-lb. English and Dutch continue in request, and 15-lbs. are likewise improving in this respect. The SZECHUEN dealers are the chief buyers, and latterly stocks have been diminished by the exports to Hankow on their account. M.M.D. sea-damaged Drills—(American) have realised at auction Tls. 3.24 *a* 3.26 per piece.

Jeans.—No. business excepting a few pieces damaged ex *Ulysses* at low prices. To-day, 500 pieces of good have found a merchant at Tls. 1.88 per piece.

Sheetings.—Neither has there been anything reported in these, beyond damages. English goods are, however, asked for and the market will probably re-open at or over last quotations. There are few on hand.

Fancy Cottons.—Light *Turkey Reds*, *Cotton Lastings*, and whatever has been going cheap, have found a little favor in the eyes of the Japanese buyers. But that market is evidently in a very bad way and won't stand anything expensive, although—oddly enough—*Muslins* had to be brought over here from Hiogo, raised in value, and then returned to that port for final disposal. YOKOHAMA wants low priced assorted *Chintzes;* and some damaged *blue Chintzes*, and *blue printed T-Cloths* have found their way into Maloo shops to be retailed at Tls. 1.34 and Tls. 2.60 per piece, these rates to cover the local tax, in regard to which and with a view to its abolition, and to the abolition of all local native taxation on foreign merchandise, our Chamber of Commerce has issued a circular to the members soliciting authentic information, so as—presumably—to establish a case for the consideration of the Treaty Consuls. That there is a heavy local taxation and an unjust, most people freely allow. Yet, the matter of substantiation is one attended with great difficulty, inasmuch as scarcely a native dealer will be got to give evidence in its favor, and the probability is that if called upon officially—or if they suspect official interference even, they will—in a body—deny the existence of the evil, or will say that it does not in any way hurt them. It is needless to give the reason here.

Woollens.—Scarcely anything has transpired beyond what has been sold at the Auctions. The results of these tell their own tale. They are as follows :—

COTTON.—The market continues quiet, but the little demand for export, in the face of the very limited receipts from the country, enables the hongs to command very full rates. At the present time—the country people being all so busily engaged in gathering the old and planting the new cereals—supplies of cotton do not exceed 300 bales a-week, and the bulk of them consists of inferior quality.

EXCHANGE.—Just before the departure of last mail, Sterling rates experienced a further decline and at the close 5s. 9¼d. was the best rate quoted for Bank paper. For this mail, the market opened with a strong demand for merchants' bills at 5s. 9⅜d., and subsequently Credits were placed at 5s. 9⅝d *a* 5s. 9½d. At the same time, Bank paper was to be had at 5s. 9⅜d. The market has since improved, and rates are firm at quotations. On India, a fair amount of business was done early in the week at Rs. 310½, and later on at Rs. 311½ and 312. Buyers are now holding for higher rates. On Hongkong, very little has been done, and the rate remains as last quoted.

Bar Silver.—998 Touch or 17½ Betterness, Tls. 111.25 Shanghai Currency per 100 Taels, Canton weight.
Copper Cash.—1,590 per Tael.

EXPORTS.

TEA.—Business on this market has not yet fairly commenced, but only two small parcels of Ningchow have been purchased at about 33 Taels, and it is said that offers up to Tls. 22 for Shontam kinds have been declined.

Teas are coming down very slowly at present, the stock on offer being only about 8,000 chests, and composed chiefly of common low grades of Oonam and undesirable parcels of Ningchow, which have been neglected in Hankow.

SILK.—The last public telegram dated London, 1st instant, reports the silk market quiet, and quotes Red Peacock, 14s. 6d.; mid. No. 4½ Tsatlee, 13s. 9d.; fair No. 5 Tsatlee, 13s., and common No. 5 Tsatlee, 12s. 6d. per lb.

Settlements since the English mail are about 1,100 Bales, the silk being eagerly competed for on arrival at slightly higher prices. The supplies have been chiefly common Tsatlees and coarse Taysaams and Skeins; only a few parcels of well-known or chop silks having yet been placed on the market. The chief purchases have been made by Continental houses, and the following prices are reported to have been paid:—

	Per picul.	Per lb.	Per kilo.
Gold Lion, Nos. 3, and 4	Tls. 330 & 310	Ex. 5/10—16/6 & 15/6 *a* T. 7.35	Frs. 45.92 and 43.20

Tsing-chan-kee "Van-yuen"	Tls. 290	14/6	Frs. 40.48
Market No. 4½	Tls. 300 *a* 310	15/0 *a* 15/6	Frs. 41.84 *a* 43.20
Market No. 5 Tsatlee	Tls. 280 *a* 290	14/0 *a* 14/6	Frs. 39.12 *a* 40.48
Common Tsatlee	Tls. 250 *a* 270	12/7 *a* 13/6	Frs. 35.03 *a* 37.75
Coarse Taysaam	Tls. 235 *a* 245	11/10 *a* 12/4	Frs. 32.99 *a* 34.35
Market Skeins (Laeyang)	Tls. 232½ *a* 245	11/ 8 *a* 12/4	Frs. 32.65 *a* 34.35

The wet weather which was experienced after the departure of last mail prevented supplies arriving, but during the past day or two arrivals having increased, the unsold stock is put at 500 bales.

Statement of Imports and Deliveries of Cotton and Woollen Piece Goods, and Metals, for week ending 2nd June, 1875, compiled from the "Customs Daily Returns," Nos. 119 @ 124, both numbers inclusive.

The North-China Herald.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, JUNE 12, 1875.

THE experiences on the part of the British and Chinese Governments which led up to the wars of 1842 and 1858, seem to have very readily dropped out of the recollection of both parties. On the part of the British we find the same absurd yielding to one encroachment after another, and on the part of the Chinese the same insensate desire, having gained one point by obstructiveness, instantly to push it so as eventually to produce cause for a rupture. At present, the energies of the native Government of Kwangtung are being turned to the practical extinction of Hongkong as a port; and the British Minister in China, and more strangely still the British Authorities in the Colony, as well as the Ministry at home, fail to perceive what is really the drift of the matter. A certain sympathy with the Chinese officials at Canton, induced by long residence and many social amenities, induced the British Consul, in an evil hour, to listen to certain propositions on the part of the native Government, the ulterior object of which was evidently concealed from him. We have little wish to run down a Consul like Sir Brookes Robertson, whose urbanity and conscientious discharge of what he considered to be his duty, have earned him the respect of his fellow-countrymen, as well as of the native authorities. While, however, we feel a little surprise that he should have failed to see the drift of the propositions to which he unluckily lent the influence of his name and position, we must find room for something like indignation against those who, without being exposed to the peculiar influences with which Sir Brookes Robertson was thrown in contact, have been only too ready, not only to endorse

but actually to go beyond his suggestions. The question at Hongkong is not merely a matter of whether or not junks sailing from the Colony should submit to what we have learned for the first time are the "Revenue Laws" of China; but whether, in the first instance, junks hailing for the British Colony could be subjected to interferences and exactions from which, as craft pursuing their avocations, they would ordinarily be free; and in the second, whether, while the Chinese are allowed to treat as waste paper all the given clauses of the treaties, we are further to help them in establishing a system of espionage and extortion which must eventually end in the extinction of all legitimate trade with the Colony. When the Colony was established, it was expressly notified by Sir Charles Elliott that no interference with the legitimate trade of the new port would be permitted, and that protection would be extended to such native merchants as found it to their interest to settle there. Such a notification seemed so natural to the Chinese authorities that it was not till recent years that any serious attempts were made to interfere with the development of the trade of the place.

The proceedings of certain cruisers, more or less connected with the Foreign Customs establishment at Canton, led, about the end of the year 1865, to certain remonstrances being made, which were met by the issue of a proclamation by the Viceroy, who had not then thrown in his lot with the Hoppo's schemes, denouncing these vessels as pirates. Unluckily, the Colonial Authorities seem to have gone to sleep after this very explicit declaration of the true position of affairs; for, notwithstanding the gloss attempted to be put on the proclamation, and to which unfortunately Sir Brookes Robertson has allowed his name to be attached, there is no doubt that these cruisers, acting under the authority of the Haikwan and the Foreign inspectorate, were really alluded to. Seeing the success attending this first serious interference with the trade of the Colony, and doubtless influenced by the prospective increase of Revenue to be obtained by an extension of the system, as well as by the evident apathy on the part of the Colonial Government, which promised immunity from any consequences likely to be unpleasant, we next find the Haikwan cruisers in some measure identified with the Viceroy's establishment; and later on we discover that the system which, under some over-zealous Foreign commissioners, had been commenced with the object of harassing small native craft plying about the internal waters of the Canton river, was extended into a practical levying of black-mail on all native craft which had the temerity to make use of the British harbour of Hongkong. It was natural that the officials at Canton, whose exactions were driving away all trade, native as well as foreign, from the provincial capital, should look with envy at the comparative prosperity of Hongkong. It was not natural that they should take the proper measures to remove the inequality between the two—namely, to remove those exactions which were ruining alike their own revenue and the prosperity of their port. Had Sir Brookes Robertson, in the first instance, pointed out to them the causes of the decadence of trade and, in consequence, of their own revenues, it is likely that we should have heard no more of the Blockade question. Unfortunately he did not do so; and more unfortunately still, those to whom he was immediately responsible, or with whom he came officially in contact, failed to see the drift that matters were taking. It never occurred to the British Consul that there was no valid reason why a junk sailing from Hongkong should labour under greater disabilities than one from any of the ports, say, of Siam, Annam, or even of the coast of Kwangtung itself. The premisses were accepted without the slightest enquiry, and with them all the arguments which Chinese casuists and their foreign advisers could heap up on such insecure foundations. By persistently shutting their eyes to the real points at issue, and listening to irrelevant discussions on smuggling and revenue laws, so effectual a cloud was raised that, under its cover, one encroachment after another was made, till practically, while setting aside the treaties in the open ports, the Chinese authorities have succeeded in likewise persuading us to stand by and see our native trade as coolly extinguished.

Finding that so far their exertions to effect the ruin of the Colony were meeting with unanticipated success, Chinese would not be Chinese did they not advance one step further. Hitherto the Courts of law at Hongkong have been respected, and those who, in pursuance of the promises held out in Sir Charles Elliott's proclamation, committed the grievous sin of settling on alien soil, had been allowed to do so without punishment. But Chinese Mandarins have now taken to review the decisions of the Supreme Court. The Colonial Government found it necessary to sentence to a long term of imprisonment a notorious scoundrel named Lee Lum-kuai. The said scoundrel had friends, however, amongst the Mandarins; and, unluckily, under the jurisdiction of those friends lives the family of one of the principal witnesses in the case. So good an opportunity of interference with the Colony was not lightly to be lost sight of. Previous encroachments having been permitted with impunity, it was naturally concluded, and as yet apparently with perfect justice, that no serious opposition would be encountered in carrying the inroad against the Colony a step further. The trade of the Colony had already been effectually reduced, but so long as Chinese were afforded protection, and were enabled to live under just and equal laws, it would not be utterly extinguished. If Hongkong were made uninhabitable for Chinese, the much desired result would, however, doubtless be arrived at. To set at nought the decisions of the tribunals, and to hinder all attempts at punishing or discovering crime, was aiming a blow at what was felt to be one of its most sensitive points. So a battalion of soldiers is quartered on the village where the aforesaid witness' family reside, and it seems to be doubted in Hongkong whether the man will not be persuaded to give himself up, in order to remove this pressure from his relatives. We look with interest to see what course will be taken in this conjuncture. That marked out by Sir Charles Elliott is perfectly clear, and is the only feasible way of meeting such an attempt; but previous experience tells us that casuistry will be again at work; and that, meanwhile, it will be inferred amongst the natives at Hongkong, that neither our laws nor our troops are of any avail when matched against the machinations of the Provincial officials. More seriously, in the interests of Foreign trade, than even the public opinion of Hongkong, have we protested against the apathy which has allowed matters to drift into their present position. So far as the influence of Shanghai can be exerted—and that, unluckily, in the present state of matters is but small,—we are willing to exert it on behalf of the sister port in the South. We suffer from much the same evils, though modified in detail, and are oppressed with an apathy scarcely less dense than that which broods over the Colony.

Summary of News.

The American mail of the 1st May arrived on Saturday, by the *Nevada*.

The French mail of the 23rd April arrived on the 8th, by the *Tigre*.

The English mail of the 30th arrived on the 9th, by the *Nizam*.

A homeward mail leaves to-morrow by the *Zambesi*.

Several matters of interest were discussed at the meeting of Treaty Consuls on the 3rd instant. An endeavour will be made to have the foreign settlements of Shanghai constituted a separate judicial district.—The Dutch Engineers engaged to survey the Woosung bar are unable to come for the present.—The Taotai is issuing further proclamations in regard to the protection of telegraph cables.—The desired alterations in the Land Regulations, regarding Proxy voting and the change in time of holding the annual meeting of Ratepayers, were approved.—The Consuls will assist in obtaining land for the new roads from the Cemetery to Au Chalet and from Markham's road into the Jessfield Road.

The French Municipal Council purpose erecting rails on the Sikaway Road where the narrowness of the road renders this

desirable, and widening the 4th bridge.—Mr. Kingsmill is engaged in surveying the foreshore; as soon as the work is finished, the Consuls will be urged to have the new bund line authoritatively recognised.—The contract with the Gas Company is to be submitted to the Consul-General, to ask whether he considers there is ground for an appeal to arbitration on the question of the Council's demand for a reduction in price.—An explanation of negociations which preceded the Yang-king-pang Arbitration, will hardly interest people now the matter has ended. What they cared about, was whether the encroachment opposite Honan Road was to remain or be removed. It is to remain, and there the matter ends; we don't want to recur to preliminary details.

Ratepayers will be gratified to learn that the Municipal Cash State has again been laid on the Council table for inspection, and that the summons calling the meeting (to inspect it) was taken as read. Mr. Camajee has agreed to sell the land required for Seward Road; the terms are not mentioned.—It is thought that a jetty would be useful at the end of Honan Road.—The Hongkew Wharf seems to have been encroaching on the road; it is requested to rectify the error.—Messrs. Oliver and Henry are appointed on behalf of the two Councils to consider the question of a future bund line for the Yang-king-pang, and a mean height for the bridges. The latter vary at present from 5ft. 3in. to 9ft. 1¼in., the lower level neutralising the height of the more elevated.

The new iron bridge to be placed opposite Honan Road has been placed on board a pontoon at the Old Dock, and will be towed to its destination shortly. The pontoon itself, the hull of the *Horatio*, is also intended to be moored in the place of one condemned, at Messrs. Butterfield & Swire's wharves.

A meeting of the Asiatic Society was held on Monday evening. Dr. Macgowan presented a work, describing the various kinds of wood found in Japan and giving illustrations of various industries—which had been handed to him, for the Society, by the Japanese Commissioner of Agriculture.—An interesting paper by the Rev. C. Holcombe, describing the provinces of Shense and Shanse, through which he has been lately travelling, was read.—Dr. Macgowan then read a short paper on the characteristics of Shanghai water, drawing a conclusion in favour of Yangtze water (and therefore the Yangtze-poo site for Water Works), as against Lunghwa.

The operetta of "Cox and Box" was successfully repeated at the Lyceum on Thursday evening, together with the one-act comedietta entitled "A Cup of Tea."

H. M. S. *Vigilant*, with Admiral Ryder and Mr. Wade on board, visited Keelung on the 3rd inst. They inspected the coal mines at Coal Harbour and Keelung. The *Vigilant* left on the 4th, bound for Foochow, but in all probability would call at Tamsui on her way.

The *Courier* has reported a serious burglary which was committed on the morning of the 8th June, near the West Gate. Two rice shops were broken into, two of the inmates badly hurt, and some $200 and other money, and various other property carried off. Some forty soldiers are stationed at a guard-house 200 yards off, but failed to put in an appearance till the robbers had decamped.—The Che-hsien has been actively investigating the occurrence, but the thieves have not yet been discovered. The *onus* of catching them has been more especially laid upon the officer in command of the soldiers who proved such an inefficient guard. It is suggested that the robbery was most likely committed by some disbanded soldiers on their way down the Yangtze, and the inmates of the shops say they recognised their dialect as Northern. It is thought likely they may be still hanging about the neighbouring villages, and be detected. It is curious that one of the pictures of the Tientsin massacre, which were so current in 1870, was found inside one of the books in the house. Of course it is not suggested that this has anything to do with the robbers. It is only curious to find the pictures in such free circulation, as to turn up nearly five years afterwards in a village rice-shop.

The body of a Chinese was found floating in the river near Hongkew Creek Wednesday morning, and was taken charge of by the Life-boat Association.

A sampan used by a washerman was upset, owing to the strength of the tide and mismanagement, alongside H.M.S. *Modeste* on Monday morning. The men were rescued by some other sampanmen, but the contents of the boat, including a large basket of linen, were lost.

A serious case of cutting and wounding occurred on board the P. & O. steamer *Zambesi*, about one o'clock on Sunday morning. Some of the men had returned from leave ashore, amongst them being two firemen, one of whom was a native of Bombay. The Bombay fireman was drunk, and the other did his best to get him on board quietly. He succeeded in doing so, and they afterwards went into the forecastle. This man had gone to the opposite side of the forecastle, and was lying on a box, when the Bombay man went to him, and with a razor or other sharp instrument, cut him several times very severely about the right arm. An alarm was raised, and the rascal secured; the wounded man being attended by the surgeon of the ship.

Yesterday, in H.B.M.'s Consular Court, before W. H. Medhurst, Esq., Consul, and Sung, the Taotai of Shanghai; A. Davenport, Esq., Vice-Consul, and Chen, the Mixed Court Magistrate, being also on the Bench—a suit was commenced against Capt. Brown, the master of the British steamer *Ocean*, on behalf of the relatives of 63 persons drowned in the collision of the *Fusing* with that vessel on the 4th April. The damages were laid at Tls. 63,000. The Court stands adjourned till Friday next.

The case of the "steamship *Fusing v.* the steamship *Ocean*," was again before Sir Edmund Hornby at the Supreme Court on Thursday, for the purpose of hearing arguments on an application on the part of the plaintiffs to amend the petition by altering the opening paragraph as follows:—"The petition of Tong King-sing, of Shanghai, merchant, or behalf of himself and others, owners of the Chinese steamship or vessel called the *Fusing*, and of the cargo on board thereof, and of the master and crew thereof, and of the passengers thereon, for their money, clothes, and private effects."—Messrs. Wainewright and Hannen, for the *Ocean*, opposed the application, but after an hour's argument, consented to accept the amended petition on condition that the answer should be also be amended, as subjoined:—In clause 5, by the addition of the words, "The *Ocean* herself sustained extensive injury by reason of the said collision;" and in clause 9, "The owners of the said steamship (*Fusing*) are Chinese, and are not within the jurisdiction of the honourable Court."—The pleadings being thus amended, the next question to be argued was whether the words, "and of the master and crew thereof, and the passengers thereon (the *Fusing*) for their money, clothes and private effects," should be inserted in the decree of the Court, on the further application of Messrs. Drummond and Eames on behalf of the plaintiffs.—Mr. Hannen, *contra*, contended that no case whatever had been cited on the other side, showing that the officers, crew and passengers, were entitled to any remedy in a case where both ships were held to blame. He had taken care to look into the cases bearing on the point, but there was not a single case in any of the books which made the concession in favour of the officers and crew, where both ships were to blame, and with regard to the passengers they must be dealt with by Common Law, and not by Admiralty Rule. In support of this contention, he referred the Court to a number of cases.—Mr. Drummond, in reply, said the real point of the case seemed to be that there were four parties concerned—the owners of the *Fusing*, the owners of cargo, the passengers, and the officers and crew. The application now made was that the owners, the passengers, and crew should have their damages added together and entered in the decree to go before the Registrar and Merchants. If the owners of the cargo were entitled to recover by Admiralty Rule, he contended that the passengers, who stood in similar relation to the ship, were equally entitled, and that these claims must be settled by Admiralty Rule, and not by Common Law. With respect to the crew, they were in the same position as the owners of the ship. The gist of the whole question was as to the contributory negligence of the plaintiffs; for contributory negligence, although a bar at Common Law, was not so in Admiralty. He submitted that the decree should be settled in the way he had now presented it to the Court, when any question arose upon it could come on at a future stage—on appeal, perhaps, from the Registrar and Merchants. At the close of a lengthy, but strictly legal argument, the Court took time to consider the points raised.

On Wednesday, in the Supreme Court, before Sir Edmund Hornby, an unusual case was heard—"Norman Hill *v.* E. A. Reynolds." It was a claim, in equity, for settlement of partnership account in one-fourth share of the steamer *Iron Prince*. The circumstances upon which the suit was based occurred so far back as the years 1862 and 1863; and the plaintiff and two witnesses being now resident in England, a commission was issued to take their evidence for transmission in the usual way to Shanghai. The present suit was commenced in September last, Mr. Wainewright appearing for the plaintiff. Mr. Eames was retained for the defendant only on Saturday last. The plaintiff in his petition alleged that in July, 1862, the defendant and himself purchased from Adam Scott & Co., of Hongkong, a moiety or half-share of a small auxiliary screw steamer, of which Scott was sole owner, for $12,000. The plaintiff and defendant each paid half the purchase money in equal shares, whereby each of them became the owner of one-fourth part of the steamer, the object of the purchase being a resale at a profit. Scott retained the other half-share. A large sum was expended in repairs, and it was afterwards resolved to sell the vessel if possible in Nagasaki, to which port she was sent for that purpose. She waited for some time in the vain hope of finding a purchaser, and then returned to Hongkong. The defendant went with the vessel to Nagasaki, his name having been substituted for that of the plaintiff in the register, as sole owner. On her return to Hongkong, the vessel was restored to the management of Scott. The plaintiff left Shanghai for England, on the 9th of December, 1863, and before leaving settled all accounts with respect to the vessel with the defendant up to April, 1863, the month in which Scott resumed the management. The vessel was sent by Scott on the 6th July, 1864, to Hakodate, consigned in the plaintiff's name to Mr. Alfred Howell, Messrs. Dent & Co.'s agent, for the purpose of being sold. On the 6th of October, 1864, Scott was in England, and wrote to the plaintiff there a letter enclosing copy of account, dated Hongkong, July 7th, 1864, which showed a balance due to Scott & Co., in respect of receipts and disbursements on account of the ship, of $12,803.73, of which $1,083.92 had been incurred previous to the 3rd July, 1862, the date at which the purchase of the one-half share by the plaintiff and defendant took place. On the 5th of April, 1865, plaintiff paid to Scott £532.17.9, being his proportion of the losses incured as shown by the account rendered, and on the 20th June, 1865, Scott sent to plaintiff a further account of receipts and expenditure, made up to the 31st December, 1864, and showing a further loss of $2,670.28. But this included various items of sums said to have been expended in Japan, and for which no vouchers were sent. The amount of these was $2,320.41, which being deducted from the amount before named, left a balance of $357.87, the defendant's share of this being $89.48, which was paid by the plaintiff to Scott, on the 12th March, 1866. The vessel was ultimately sold for $1,054, and Messrs. Dent's disbursements on her account, after deducting that sum, amounted to $4,995.72, which was paid by the plaintiff, who subsequently received one-half of the amount from Scott in respect of his half-share. In February, 1871, Scott filed a bill in Chancery against the plaintiff, which the plaintiff compromised by the advice of counsel, and paid to Scott £1,050, in full satisfaction of his claim; with £194 5*s.* 9*d.* for costs, the two amounts being paid in respect of the joint interest of the plaintiff and defendant in the vessel, and the former now claimed a total balance from the defendant of $5,121.—Mr. Eames, on the part of the defendant, submitted no answer to the petition, resting his case solely on the Court's sense of equity and justice, with a denial that a partnership had existed between the three—Scott, Hill, and Reynolds. He also contended that the plaintiff had failed to prove that Reynolds was considered a partner by Scott, and that the defendant had never authorised the plaintiff to pay any money, settle any matters, or make any arrangements on his account, in respect of the *Iron Prince*.—The case was argued at considerable length by Mr. Wainewright. Mr. Eames declined to address the Court, simply calling attention to the length of time that had elapsed since the date of the occurrence, and the consequent staleness of the cause of action, though he was precluded pleading the Statute of Limitations.—The Chief Judge took time to consider his decision.

The barque *Westbury*, from Freemantle, Western Australia, has brought a consignment of six horses; a seventh died during the passage, which was a lengthy one of 84 days.

A correspondent suggests, in view of the success of the Flower Show, that another Exhibition should be got up of Meat, Poultry, Vegetables, etc., to be held in December next—"for instance, 1st prize, best surloin of Beef; do., best round do. For the best Shanghai bred and fed Turkey; do., Goose; pair of Fowls; Southern bred do., but fed at Shanghai. Best loin of Pork, English breed; do. leg best fed Chinese Pork. The exhibitor to state age and time of feeding, and where fed, and so on. The vegetables in season—viz., Cauliflower, Savoy Cabbage, Kale Cabbage, Parsnips, Carrots, etc., etc. All the above can be produced with a little care, in time for the 'Xmas dinner. Let a subscription list be got out at once,—all European exhibitors to be subscribers, and Chinese *gratis*. This will cause the last named to strive for a 1st-class prize, and be the cause of our getting better meat, etc., at that festive season. If the thing is started now, there is ample time to get a first-class show; and I do not see why we should not do here what is successfully done in the old country. There are a number of gentlemen now having gardens round Shanghai, who would take part and interest in such a show."—Our correspondent's suggestion seems a very feasible one, and we should like to see it carried out. The meat we get in Shanghai will stand comparison with English beef and mutton; but the quality of the vegetables and poultry—especially the latter, is very inferior. Anything that would tend to stimulate more careful rearing in the one case, and cultivation in the other, is to be advocated.

Shen Pao-chen, the late Special Commissioner to Formosa, is to be Viceroy of Nanking.

Messrs. Spencer and Wolff write from Chinkiang on the 9th June:—"During the early part of the week now under review, an active business was done in Piece Goods, but the heavy rain of the last few days has checked clearances. The demand however continues good, and so soon as the dealers are enabled to move off their late purchases to the interior, there is every prospect of business being resumed with spirit.

The latest news of the Hankow tea market will be found in our commercial pages. Settlements have been going on actively. Musters of second crop are expected on the 15th. The export to date is 22,238,315 lbs., against 15,359,271 at the same period last year, exclusive of an increase of some 2,400,000 lbs. in re-exports. Eight steamers have left for London, two for Russia, and one is loading.

There has been a serious outbreak by smugglers in Foochow. There seems to be a village near the Pagoda Anchorage, whose business is opium smuggling. A Customs officer lately seized a quantity. Vengeance was sworn, a reward offered for the heads of several Customs employés, and an attack on the Customs premises organised. This seems to have been deranged, but an affray occurred between snake-boats and the steamer *Namoa*, in which a Foreigner was shot. It is said the Viceroy has detailed a force to burn down the offending village.

The *Foochow Herald* has advices from Formosa, of a heavy engagement between the Imperialists and Aborigines, resulting in the abandonment of an entrenched position by the former. With characteristic veracity, the Chinese claim a victory. The *Herald* hears of extensive preparations on the part of the Imperialists, and mentions a rumour that the foreign drilled troops under the command of Captain MacMahon, are expecting orders to proceed to Formosa for service. Shen Pao-chen, the Imperial Commissioner in Formosa, is about to relinquish his office. The Footai of Fuhkien will give his special attention to the Government of the Island.—From Tamsui, the tea crop is reported to be very inferior, owing to the heavy rain experienced during the picking.

There has been a heavy gale in Hongkong and neighborhood, by which much damage was done. Particulars will be found elsewhere.

Canton does not seem to have suffered very badly, though Whampoa was nearly destroyed.

The gale was felt with the utmost severity at Macao. Hundreds of junks and small boats were seen keel upwards or smashed up—consequently the loss of life must again have been very great. Much damage was also done to property in the city, and the Governor's house was half blown down. The *Chen Jui* (Chinese revenue cruiser) went ashore, but came off the next day.

Editorial Selections.

SIR ANDREW CLARKE'S POLICY IN THE STRAITS.

Two years is not a long time to effect a practical amelioration in government; yet less than two years under Sir Andrew Clarke at Singapore has had the effect of drawing from the Chinese residents a high testimonial as to the amount of good effected by a vigorous and impartial policy. Under the rule of the previous governor, trade had languished; its practical avenues had been closed by a feeble and vacillating policy; Sumatra had been given up tied and bound to Holland; and every petty headman on the Malayan peninsula had been allowed to exercise exactions at his own discretion. It was in fact becoming a China on a small scale. The residents appealed time after time to the home Government against this position of matters, but ineffectually; and the Chinese residents followed with a petition at once quaint and practical. "In former times," said the petitioners, "the governors of the Settlements were as fathers, and the rajahs of each Malay state as their children." All this had, however, been changed—no supervision was exercised, no redress for injury granted; the stereotyped answer given to each complainant was, that he undertook to carry on trade on his own responsibility and he must take the consequence. It is, therefore, satisfactory to find, within two years later, the same people coming forward and willingly testifying to the effect produced by a change in the system of government. The Chinese at Penang take the opportunity of Sir Andrew Clarke leaving the Government of the Straits' Settlements, to present him with an address. They had had occasion in their dealings with the native headmen, to appeal to the new Governor. Fortunately, they found him made of different stuff from his predecessor. "Through the superior, searching and exhaustive way in which your Excellency has undertaken to restore these territories to tranquility, they now assume a very probable and propitious aspect of flourishing again with respect to trade." Sir Andrew Clarke, on first taking office, found that the apathy of his predecessors in office had rendered the use of some degree of physical force necessary. Once people were convinced, however, that the new governor was in earnest, affairs very soon assumed a settled aspect; and we believe that, so far from needing any undue interference with the native rulers, the tenure of office of the late Governor was marked by fewer hostile displays than that of his predecessors in office. Undeniably, the first to advantage by this new state of affairs were the very rajahs themselves. It is idle to expect that semi-barbarian tribes can be got to look beyond the mere interest of the moment, to develope a settled policy. A headman at Laroot will, if permitted, plunder a trader because he gets an immediate benefit. He will always, or for a long time, fail to see that he is thereby injuring his own future. In a case like this, the Government which takes a firm stand and makes itself respected is but fulfilling its duties, not only towards its own people, but to those towards whom for the moment it is compelled to use coercive measures. There are so many instances in the world of the evils brought on by misgovernment, that it is a pleasure to be able to bring forward so practical a case of the improvement capable of being effected by sound administration. In every quarter of the globe we can see nations capable of occupying a distinguished a place in the history of the world, utterly ruined by a corrupt and feeble administration. The government of the rajahs of the Malayan peninsula is not very different from what we see in countries like China or Persia. In dealing with States reduced to this level, the firmest policy is ultimately the most satisfactory for both parties. We have not heard that Sir Andrew Clarke has incurred the enmity of the rajahs whose eccentricities he kept in check. It is more consonant with human nature to suppose he has gained their respect, if not affection. In a political sense, no policy can be worse than one of vacillation. It is sure to lead to mutual distrust and, with inferior races, to intensify the tendency to duplicity which is the great obstacle to improved intercourse.

BURMAH TRIBUTARY TO CHINA.

It would be interesting to have a direct translation from the original of the letter from the King of Burmah to the Emperor, which is published in the *Peking Gazette* of the 15th May. We know that China claims a kind of suzerainty over the neighboring States; but we have also seen that these States do not always recognise her claim; and it would be interesting to know how far the tone attributed to the King is justified by the Burmese text of his petition. We remember, some years ago, a similar memorial from the Governor of Fohkien, relating how the King of Siam had begged to be allowed to send tribute, and forwarding a petition fully equal in humility to that of the King of Burmah, begging for a renewal of the relations which had been interrupted. The memorial set forth how the sovereigns of Siam had from generation to generation been invested by the Celestial sovereigns, and paid tribute without intermission; and wound up by saying that the present ruler, having lately ascended the throne, was anxious to pay tribute as customary and begged directions how to proceed. The Fohkien authorities remarked upon the document, that Siam was a small and insignificant spot in a remote corner of the Ocean, from which tribute has been forwarded through successive generations; and submitted it to the Throne. Nothing could have been more decorous and grandiloquent. But a few months after, came a letter from the Regent of Siam, addressed to the *N.-C. Herald*, disclaiming any idea of tribute, and declaring that presents were sent only in order to maintain friendly relations and secure facilities for trade. It was true that Siam wished to send an embassy; but she wished to do so by way of Tientsin as other nations do, provided it would be treated somewhat in the same way as those of Western nations. But the Chinese insisted that it should follow the old overland route through Canton; and so the matter had dropped until they should be willing to receive it in what Siam conceived to be a proper manner.

Now this document rather staggers our belief in the tributary anxiety of the "outer nations," and suggests a doubt whether the King of Burmah has used quite the servile language which the Chinese translation conveys. According to it, the King designates himself by a term less than even the Ministers of China adopt, in memorials to the Throne, and addresses the Emperor in a strain of adulation and self-depreciation, which could hardly be excelled if the petition came from the meanest slave in his dominions. Oriental imagery and Oriental hyperbole tolerate much, but a doubt will arise whether even the Court of Mandalay would use language so absolutely grovelling as that of the present document. However, that Burmah is in some sense tributary to China seems beyond doubt. The Yunnan Governor's allegation in regard to the decennial presentation of tribute, finds curious confirmation in the very reclamation from Siam, to which we referred at the outset. In reviewing the relations of China with her neighbours, the Regent remarks that Burmah made war against China in the last century, to get rid of the obligation; but in 1867, 8 and 9, the Chinese sent successive armies into the country, and the Burmese eventually "yielded and begged to pay tribute once in ten years as before." The Governor of Yunnan now tells us that, for eighteen years, the practice has been interrupted, owing to the Mahomedan rebellion; but in 1872, after the restoration of Imperial rule, a Burmese officer came to the provincial capital to ask for instructions as to the matter of tribute. The Governor commanded him to act in accordance with the established custom; and now at last we have the result. There seems little doubt that this Embassy is the one which preceded Colonel Browne's expedition, and thereby strengthened the suspicion, in India, that the Court of Mandalay was privy to the attack. There seems to have been nothing so unusual in the event as to entail that inference, though it is

quite likely to be true. Whether the facts will ever be unravelled, prophecy only could foretell. That they had an independent object, is no reason why the Ambassadors should not have talked about current events; and the time of their journey was opportune for a conspiracy, if such did really exist. However this may be, we learn now that they reached the frontier on the 1st February, with five elephants and a quantity of presents destined as tribute for Peking, and had reached no farther than the Provincial capital, by the 1st of April following. They must, therefore, have been in the district of Momein at the very time of the outrage; it would be interesting to read the reports on the incident, which will have been sent back by them to Mandalay. The Mission is now well on its way to the Capital, and the next we shall probably hear of it will be an announcement in the *Gazette* that the Emperor has received it in audience, as he received the European Tributaries in 1872, and probably in the same building.

CHINESE COOLIES IN PERU.

Mr. Clements R. Markham, C.B., reviews, in the December number of the *Geographical Magazine*, a memorial presented to the Congress of Peru by the Minister of State. The review is written in a friendly spirit, and from Mr. Markham's personal knowledge of the country, we may be assured that this friendliness is not without foundation. The abuses of the coolie trade from Macao had turned the minds of all right principled men against the continuance of a traffic which led to the undoubted enormities we have so frequently had to chronicle. We pointed out, all through, that these abuses were inseparable from a system of contract emigration, and that the very need of introducing such a system seemed to prove there was something essentially wrong at the foundation. Mr. Markham's paper will remove many misconceptions, and probably enable us the better to arrive at an understanding of the circumstances whose abuse led to the undeniable atrocities of the Macao coolie trade. So many conflicting statements have at various times appeared, as to the treatment of the Chinese emigrants in Peru, that an authoritative statement like that put forward by Mr. Markham cannot but be received with satisfaction. On the one hand we had the statements of those who told us of the miseries and injustice to which the emigrant Chinese were subjected; on the other, we were told of the ease and comfort which awaited the emigrant in his new home. It is possible that both were founded equally on truth, and yet that both were equally likely to lead to a false impression. Mr. Markham's paper, while possibly painting the lot of the Chinese coolie settled in Peru in rather too glowing terms, shows what steps have been taken by the Peruvian Government to ameliorate his position, and what are really the ordinary feelings of the Peruvians themselves—on the subject of contract labour. He points out that Peru, of its own motion, took an early and independent action in the abolition of slavery; that the country no sooner had gained its own independence than it adopted a scheme for the gradual abolition of slavery; and this was before such a project was seriously discussed even in the Parliament of Great Britain. The emancipation, it wisely considered, should be gradual, and of this policy it never lost sight, one step being taken after another till, in 1855, the emancipation of slaves became complete and entire. The disposition of the cultivators in Peru has been of a like nature with that of the body of the State. As a rule, they are kindly and considerate employers of labour, a fact which probably accounts for the possibility of gradual emancipation, which elsewhere has been found almost if not quite impossible. The Peruvian Government, actuated by these principles, has provided machinery for the suppression of any attempts at cruelty or oppression towards the emigrant coolies;—and, altogether, one is left with a feeling of surprise that so much wrong should have been done, under the shadow of so many precautions for good.

It is not denied, however, that abuses of a grave kind have taken place with regard to the introduction of emigrants from Macao, and Mr. Markham does not attempt to free the Government from blame. He however points out what were the defects in the system, and as these seem to be understood, and were about to be acted on by the Peruvian Government, it may be hoped that in future a wholesome emigration may be established. Great Britain has found it necessary to jealously supervise all systems purporting to introduce labour into the several colonies. Such cases as that of the notorious *Carl* prove that no nationality can trust such matters to private hands. The Peruvian Government must have been for many years aware of the abuses which were being enacted apparently with its full sanction; but public feeling does not appear to have sufficiently aroused itself to the necessity of getting rid of the imputations thereby cast on the policy of the Government, till the case of the *Maria Luz* drew the attention of the world to the position of affairs. It must be remembered that, for years previously, the attention of the two Governments of Peru and Portugal had been drawn to the abuses of the traffic, but that remonstrances had been vain in procuring a diminution of the objectionable element of making contracts with private individuals for the supply of labour. It is the remembrance of the indifference with which all such representations were treated by the two Governments concerned, which induces on our side a little hesitancy as to the full acceptance of the very favourable report of Mr. Markham, as to the happiness and prosperity of the Chinese emigrants. However, out of the *Maria Luz* case much good did come. It induced the Peruvian Government to send a mission to China, under an able officer, Captain Garcia of the Peruvian navy. The irritation which the conduct of the Japanese Government undoubtedly caused in Peru seemed to show that, of many of the worst details of the system of emigration till then in vogue, the Peruvian Government was ignorant. Captain Garcia's mission probably enlightened him, as well as his Government, as to the true condition of affairs, and his proceedings in Japan and China reflect credit on his judgment and ability. It is equally to his credit, and to that of his Government, that in the face of the prejudices which had grown up strongly against him and them, he was able to negotiate the Peruvian treaty with China. We have already spoken in approving terms of the conditions of that treaty, and Mr. Markham's paper affords us some hope that, in the conditions provided for the well-being of the Chinese emigrants, the Peruvian Government have been actuated by motives of sound and consistent policy. Free emigration between China and Peru cannot fail to be of great mutual advantage; if the Peruvian Government will undertake to carry it on in proper vessels and under proper supervision, it cannot but meet the approval of all. The example of the British Colonies in the West Indies shows that, in the practical carrying out of such a system, difficulties will arise; but, doubtless, Peru has advantages for the bonâ fide emigrant not possessed by Demarara or the other West India Colonies; and the example of San Francisco shows that a passenger traffic once started will continue to maintain itself, if left unfettered.

THE MIXED COURT.

A correspondent calls attention to a case lately tried at the Mixed Court, during which Chên informed the defendant (a Chinese) that he was anxious to assist him against the plaintiff (a foreigner); and asks whether it is not time that a Magistrate who so openly avows partiality were —promoted. We doubt whether anything would be gained by the process. The next Magistrate might be more guarded in his expressions, but he would equally incline to take the Chinaman's side in any case where Chinaman and Foreigner were at issue. What is wanted is a complete re-organisation of the Court, on the basis laid down by Art. XVII of the Tientsin Treaty. It is not there contemplated that an Englishman, having complaint against a Chinaman, is to sue him before a Chinese Court with a foreigner sitting helplessly by; but before a really Mixed Court, comprising a British as well as a Chinese official. Of course it is hopeless

to get justice in a Court where the Magistrate openly confesses that he takes the side of his countryman. The only result could be that the Foreign co-judge would pull the other way, and then a compromise might be arrived at. But even to do this effectually the Foreigner needs some power, whereas the whole power is at present in the hands of the Chinese Magistrate; and when a case is so glaring that he cannot escape from it otherwise, Chen declares this power to be insufficient and passes it on to the Che-hsien. There is no doubt however that his power is often insufficient; and Foreign Ministers should insist on the Foreign Settlements of Shanghai being made a separate district; but then Foreign Ministers never insist on anything now-a-days. As matters stand, the Foreign Associate may induce the Chinese magistrate to pass a sentence of 1,000 blows, but may also rest assured that the man will not get one inflicted, unless in a police case, when the police can be required to stay and witness the flogging. Civilly, all the power is in the hands of the Chinese Magistrate. Supposing that the Assessor concusses the Magistrate into giving a decision favorable to the foreigner, how is he to get it executed? As a last resource he may get the defendant imprisoned, but alas! two days afterwards, the poor defendant is seized with prison cholera and has to be bailed out. Seeing then, that both actually and nominally all the power of the Court is in the hands of the Chinese Magistrate, what hope is there for Foreign suitors when the latter declares in open Court, that he is on the side of his own countrymen? It is a notorious fact that, never since the Court was established, have Foreign suitors ever obtained the whole of their claims presented at the first hearing. And this is what we are content to accept as "deciding equitably," according to treaty.

The reports on the working and power of the Mixed Court, which we publish on another page, will be read with much interest. Before taking steps to endeavour to improve the Court, the Treaty Consuls very rightly asked for reports from the officials who had had opportunity of observing its working. It will be seen that Messrs. Alabaster, Haas, and Yates concur in advocating that the Settlements should be erected into a separate jurisdiction. Mr. Alabaster, in the course of his elaborate and interesting report, adds a suggestion that the office of Foreign Assessor should be a permanent one; and we quite agree with his argument.

REVIEW.

Thirteenth Annual Report of the Peking Hospital—1874.

WE always glance with interest through the pages of a Chinese Hospital Report, and through none with greater interest than that of the Peking Hospital under the care of Dr. Dudgeon. Apart from the interest attaching to Mission Hospital work—and there is none done in China that is so well calculated to conciliate a liking for foreigners—the Practitioner in charge of such a Hospital, understanding as he generally does the Chinese language and brought in contact with all classes of people, is in a position to pick up much quaint information with which to lighten the pages of his report. And Dr. Dudgeon is *facile princeps* in this direction. It may be doubted whether any other foreigner in China comes so much in contact with Chinese of all grades of society, as he does. Besides the thousands of the lower class who attend the hospital, he tells us that he is often consulted by mandarins of rank, from whom he has had gratifying marks of appreciation. He himself remarks:—

It is generally believed that the Chinese are destitute of gratitude, or at all events that they fail to express their thankfulness for benefits conferred upon them; that gratuitous medical work among them is especially a thankless one, and that time, money, labour, and skill spent in this way are unrequited. This charge, it seems to me, is entirely without foundation. I have experienced kindness and have had marked politeness and gratitude manifested in words and looks, exhibited in the Dispensary and on the public street by virtue entirely of the hospital work. Other foreigners too have reaped advantage, or have had kindness and politeness shown them by virtue of their connection or supposed connection with the foreign Doctor. Places of interest, officially barred at times against foreigners, through some wanton injury committed by Southern visitors on the persons or places, have been opened to the doctor and his friends, in person or by card, by grateful patients. The same connection has carried the writer and friends through crowds not favorably disposed to foreigners, when the brickbat or the opprobrious epithet or the cry for life in times of excitement, were hurled at one.

Located at the Capital, and therefore in a nest of mandarins, supported probably in some measure by his honorary connexion with the Legation, and speaking Chinese with fluency, Dr. Dudgeon has no doubt had rare opportunities of intercourse with officials; and we can well believe that the result has been favourable. Prejudices, superstitions, and unfriendliness are more readily removed by means of the foreign medical practice among the Chinese, than by any other cause. We cannot follow Dr. Dudgeon through the details he gives of the direct and tangible proofs of gratitude shown by his patients. They have taken every form, from thanks and kotows, to the more tangible ones of fruit, scrolls, tablets and money. One high official, cured of a serious ailment which the Chinese practitioners were utterly powerless to affect,

"presented several pieces of handsome silk, boxes of tea, cakes, fruit, jars of wine, handsome scrolls and a small honorarium or honorific trifle. not worth mentioning, and sent merely as necklaces (pin money as it were) to the writer's daughters, viz. 100 taels; another sent a present of 15 taels; and a third of 10 taels, all which are acknowledged in the proper place in the Report. One reigning Prince, the descendant of the celebrated Prince of the Tourgouth Tartars, sent 100 catties of rice, and on another occasion,—and this last is by no means uncommon,—a Chinese dinner, served up in innumerable little dishes. The same Prince is preparing a handsome wooden tablet for erection in the hospital. He has been cured of opium-smoking, and the thousand ills that some times follow in its train."

The quaint incidents which Dr. Dudgeon introduces into his surgical statistics are legion. We take at hazard the case of a man who came complaining of aches and pains, sleeplessness, visions, want of appetite, &c., which he attributed entirely to a fox having passed him in the public street:—

The fox, according to the Chinese, is strategetic and full of suspicions; the fox cries like a child; his smell is disagreeable; his superior magical or demoniacal power is such that the very evil spirits fear him; he is said to have three virtues, fine hair, of which garments can be made; he is small in front and large behind; and when he dies, he selects a suitable place for a grave; he has so quick an ear that he can hear ice freezing, and will put his ear to it to test it before he ventures to cross water upon it; in his interior he has a pearl; and it is by means of this that he exercises his talismanic influence over people, and is able to transform himself into a man or woman. When he lives one hundred years, he worships the North star; by striking his tail on the ground at night he can produce fire; he is afraid of dogs; when a thousand years old, his deception and tricks can be discovered by burning a piece of wood of equal age before his face; or if a rhinoceros bone be thrown into his den, he will not enter it. In some places, the foxes have nine tails and will eat human beings.

Dr. Dudgeon notes a remarkable increase in the number of ague patients, "not from its intrinsic importance, but from its universal prevalence in Peking, a circumstance almost unknown a few years ago." And it is curious to take in connexion with this, a remark by the Rev. J. Gilmour, the missionary for the London Missionary Society in Mongolia:—"Ague is not common, but not altogether unknown. It greatly alarmed part of a tribe once by spreading itself among them. The lamas did not know what to make of it, and at last concluded that it was a contagious disease introduced into the country by the Mongol soldiers who had gone on Government duty into China."—Six cases of attempts at suicide by opium were treated during the year, of which five recovered. Dr. Dudgeon specially notes that he did not use atropine, which is curious, considering the marked advantage Dr. Johnston has found from its use in similar cases in Shanghai. There was also a case of death by gold poisoning, and on this Dr. Dudgeon remarks:—

It is difficult to explain cases of poisoning by gold. It is frequently practised in China and with success. Some suppose it is by suffocation, the gold leaf obstructing the larynx. In some Chinese books it is asserted that crude gold is poisonous, but not the prepared article; and the latter, they say, comes from the Corea and foreign countries; elsewhere the great Herbal is contradicted, and it is stated that it is not poisonous, that the workmen employed in digging for the metal frequently swallow it; also that gold leaf is used medicinally and is free from poison, and that it may be taken for palpitation. They have had recourse to various theories to account for its supposed poisonous property;—one, that the serpent left his teeth in the stones from which the metal is dug;—a third, that it is the dung of a poisonous bird deposited on the stone. The widespread opinion in China, and doubtless the result of numerous observations, must have some basis. The official work on Medical Jurisprudence states that, in gold poisoning, the bones are yellow. Oily substances are recommended as antidotal.

It would have delighted Thackeray to learn that "family jars with mothers-in-law" are fruitful causes of the wounds which come in for treatment.—Some curious particulars are given of the Emperor's illness. As is well-known, he was attacked on the 9th December, the day of the transit of Venus, and the Chinese mind at once drew a parallel and a connexion between the incidents. As the natural sun was obscured by a dark spot, so the Emperor's face was darkened by the eruption of the "heavenly flowers." He appeared to get better for a time, and "on the 24th December, the 15th day of the disease, the most extensive and expensive offerings were made to the goddess of small-pox, the burning of paper, etc., taking place in front of the South gate of the palace. It is reported that as much as two or three hundred thousand taels were spent in this frivolous and superstitious ceremony. A relapse took place, and on the 6th January he was not expected to recover. He sank and died on the 12th. Rumours of all kinds were afloat regarding his illness, but without better evidence than has yet come to our knowledge, it would be rash perhaps to deviate from the original and published diagnosis. It was said he had small-pox when a child at Jehol. His illness has at least demonstrated the fallacy of the opinion, that only children are subject to it. Regarding the nature of the disease, it may be said however that there was much in many of the symptoms to excite suspicion; and the banishment of several eunuchs afterwards, as being accessory to the Emperor's death, lent a colour to these doubts. Very shortly after this event, the Emperor's sister and the only remaining child of the Emperor Hien-feng, died also, having given birth to a premature child. Both brother and sister seem to have inherited very weak constitutions. It is said the sister died also of small-pox, caught during her confinement, the same two medical men having charge also of the princess."

The present Emperor has been vaccinated.—Among other matters, Dr. Dudgeon remarks on the great age of some of the patients whom he has visited. Instancing the case of man aged 73, whose mother was 92 and in the enjoyment of all her senses, he adds that he has found, in many cases, patients between sixty and seventy years of age had their mothers alive and in good health. He has been lately attending the mother of one of the highest officials in the Empire, aged 84. And he draws from such figures a natural inference as to the healthiness of the Peking climate.

Adjoining the Hospital is a little shop "for the sale of anti-opium pills and diffusion of knowledge." The admixture is a curious one, but the idea seems to work well in practice. Dr. Dudgeon at any rate found so may literary persons congregated there, that he started a reading room in connexion with it, and obtained for it from the President of the Board of Civil office, the sanction of his name and a Tablet. Much interest seems to be taken in the books offered; a number of copies having been sold of various translations of scientific works, besides 7,000 anti-opium pills, during the year. Dr. Dudgeon believes greatly in the Peking Magazine, to which he attributes a very beneficial and wide-spread influence. Indeed he is more enthusiastic generally, as to the spread of foreign ideas, than his countrymen in China are inclined to be. Certainly we can see very little practical result from the process of education which the Chinese are said to be undergoing. But we are able to agree with him in believing in to the beneficial influence of Hospitals, and repeat that his report is an interesting one in very many ways. There are appended to it, some "Notes on Mongol practice," by the Rev. J. Gilmour, which have literary as well as medical interest, and to which we may perhaps revert at another time.

Outports.

NEWCHWANG.

The soldiers who arrived per *Yung Ching* steamer, left a few days ago for the scene of operations near Takushan, five hundred *li* from this, where the cavalry will meet them from Tientsin overland. If I hear of any fighting, you shall know in due course.

We hear that Captain Crowell has to make room for another commander on cheaper pay, and that we shall not have him next trip. It does not seem that the S. S. N. Co. will get the shares up to par by reducing the earnings of well-tried and popular men like Captain Crowell, but it is probably the beginning of a general reduction, and people must meet the times, as the storekeepers say when they charge a dollar for a tooth brush instead of a tael as in better days. The community are raising a testimonial to Captain Crowell, who well deserves whatever good can be laid to the charge of any one.

1st June.

TIENTSIN.

Li Chaou-tang, the new Customs Taotai at this port, arrived here yesterday morning in the steam-lighter *Lee Hang*, having the day before come to Taku from Shanghai in the C. M. steamer *Leeyuen*.

Sun-sze-ta, the Acting Customs Taotai, wrote to the Consuls to-day, informing them that he will to-morrow morning hand over the seals of office to his successor; and after that that he will cease transacting the business of the Customs at this port. As Sun-sze-ta has had considerable experience with the transaction of diplomatic business at the Tsung-li yamên at Peking and at Tientsin, it is thought by some people here that Li Hung-chang may retain him on his staff, to assist in the transaction of Foreign affairs at this port. Other people say he will leave soon for Shanghai.

Some time ago I was told that Chin-kin, who ceased holding the post of Customs Taotai at this port last July, died at his native place in Shantung, shortly after his reaching there at the beginning of last winter. I have been told again to-day that he really died at the time mentioned. He did not, then, live long to enjoy, in his native valley, the large fortune he made at Tientsin.

The weather is now hot during the day time, the thermometer rising yesterday to 86° Fahrenheit. We are much in want of rain, and the Emperor has lately been praying for rain to fall in the North of China.

31st May.

About six o'clock this morning, Li Chaou-tang, the new Customs Taotai at this port, formally took over the seals of office from Sun-sze-ta, who had been acting Customs Taotai for the past eleven months. There were present, besides these two officials, Ma, the prefect of Tientsin-foo, and Jin, the magistrate of the Tientsin-heen, and a number of petty officials belonging to the Customs. During the previous two days Li Chaou-tang had called upon Li Hung-chang, the Governor-General, and the principal Chinese territorial and other functionaries stationed at this city. Proclamations have been issued, notifying to the Chinese public that Li Chaou-tang had taken office as Customs Taotai at this port.

Weather hot. The thermometer rose to-day to 88° Fahrenheit. It stood at 62° at daylight this morning. For several days back the difference between the min. and max. has been 26° Fahrenheit. The country around here is much in want of rain.

1st June.

The new Customs Taotai, Lee Chaou-tang, yesterday morning early, sent despatches to the Consuls of the port, acquainting them that he had, on the 1st instant, taken over charge of the Foreign Customs at Tientsin as Taotai.

Chinese rumour says that the proceedings of the Sultan of Kashgar, in Eastern Turkestan, are causing the Peking Cabinet and Tsung-le yamên great uneasiness. The intelligence which was conveyed to the public in China in the *North-China Daily News* of 22nd May, to the effect "that the envoy of the Khan of Kashgar had arrived in Constantinople," will not tend to make them more easy regarding the state of affairs; for no doubt their foreign employés at Peking did not fail to inform the Yamên that the Sultan of Turkey is regarded as a chief of the Mussulmans; and has in his army many experienced Mahomedan officers, who are fully competent to teach the forces of the Sultan of Kashgar European military drill and tactics, which would render them formidable opponents in the field. I have always understood that the language spoken by the Mahomedan population in Eastern Turkestan was the same as that spoken by the Turkish population in Asiatic and European Turkey. This fact, added to both peoples being Mussulmans, will bind them together more closely. Should the object then, of the Ameer, in sending an Envoy to Constantinople, be to obtain the physical support of the Sultan by the aid of experienced military officers, China may make up her mind to lose, ere long, the whole of Eastern Turkestan. From everything we have all along heard, the Mahomedans in Kashgar will easily obtain ample supplies of munitions of war from the Russian merchants who trade with the people of Central Asia. We shall no doubt, before long, learn some news more definite, through the Chinese, and also Russian officials, regarding the actual state of affairs in Eastern Turkestan, that will enable us to form a more accurate conception of them than we at this moment possess; and guide us to a clear idea as to the probable course which events will take by the Sultan of Kashgar going to war with China.

To-day, in a completely shaded place in the verandah, and out of the wind, the thermometer at 4 P.M. stood at 96° Fahrenheit. There is a hot south-west wind blowing, which accounts for it rising so very high. At daylight, the thermometer stood at 63° Fahrenheit.

In the Peking *Gazette* of the 30th May there is an Edict appointing Shên-paou-chen 沈寶楨 (at present High Commissioner to Formosa), Governor-General of the provinces of Keang-suh, Keangse, and

An-hwuy (Leang-Keang Tsung-tuh) and High Commissioner for Foreign affairs in the South of China. Lew Kwan-yeh has been commanded to remain in charge at Nanking as acting Governor-General till the arrival of Shen Paou-chen.

PURITAN.

3rd June.

FOOCHOW.

A Foochow Correspondent writes :—Admiral Ryder arrived on the 3rd. There are five British men-of-war and one German corvette in port. The *Herald* suggests that the opportunity of Admiral Ryder's visit should be taken by the Chamber of Commerce, to point out the expediency of affording the British community of Foochow a more ample naval protection throughout the year. Amoy, a place of far less consequence so far as British interests are concerned, is the rendezvous of one or more gunboats all the year round ; while we are deprived of naval protection for nearly half that period. Recent events at the Pagoda Anchorage have sufficiently demonstrated the folly of indulging in any kind of belief in the power or willingness of the Native authorities to afford adequate protection to the persons and property of foreigners.—Mr. James Hart (the present Commissioner of Customs at Foochow) is to be transferred to Shanghai.—The Mandarin in charge of the gun foundry has been called on to pay Tls. 1,000 compensation to the family of the man who was recently killed by the bursting of a gun !—A review of the bow-and-arrow troops in garrison commenced on the 29th ultimo at the South Camp, and was continued on the following day. As a semi-theatrical display, it was somewhat imposing. As a military effort, supremely ridiculous.—The coolies employed in the matting of tea packages were on strike a few days ago. Their demand for an increase (nearly cent. per cent.) of wages was, the *Herald* understands, promptly acceded to by certain foreign hongs. Strikes are not unknown out of China, but a sweeping demand for double wages—in a country where all the necessaries of life are uncommonly cheap—is a serious matter, even in these golden days.—The *Herald* waxes facetious about the opening of the Hankow tea market. Referring to comments by Shanghai papers, it says, "the undue haste shewn in opening the season's business was, no doubt, foolish, and deserving of condemnation ; but our contemporaries apparently lose sight of the important fact that profits on Tea are not looked for now-a-days, and that, consequently, nobody is disappointed."—A meeting of the Race Club was held on the 24th ultimo. The accounts showed $1491 in hand. Messrs. Paterson, Tennant, Hart, Pomeroy, Sheppard, Tatham, and Walkinshaw were elected stewards for the current year.—The *Herald* publishes details of the agreement come to in regard to the Amoy telegraph line. They agree with what we stated to be the case last week.—The *Herald* relates a bold attack by smugglers upon the Customs' establishment at Pagoda Anchorage. A short time ago, two chests of Opium were smuggled from one of the steamers in port, and landed in a village at the back of Nan-tai. The Customs' officer in charge of the steamer obtained information which led to the discovery of the smugglers, and subsequent confiscation of the drug—a result by no means pleasing to the contrabandists—who, Chinese fashion, immediately set to work to discover the informers. Suspicion was fastened on a sampan man in the employ of the Customs : and on Saturday night (22nd) about 10 o'clock, an armed snake boat pulled up to the Customs House jetty, attacked the sampan in question, wounded the boatman's wife, and carried off their son—a lad of fifteen. On the night of the 27th ultimo—between 1 and 2 a.m.—an armed snake boat went alongside the steamer *Douglas*. It was evident that the men were there for an unlawful purpose, and the Customs' officer in charge of the steamer (Mr. Blacklock) ordered them off ; they however refused to go, whereupon Mr. Blacklock fired into them ; the fire was immediately returned, and Mr. Blacklock was killed on the spot. The officers of the steamer were by this time roused, and all the available fire arms on board were brought to bear against the crew of the snake boat, with, it is believed, considerable effect. The smugglers now retreated, and immediate assistance was rendered to Mr. Blacklock, but all was unavailing, as his death must have been instantaneous. The Native Authorities were again appealed to for assistance, and responded, this time, to the extent of sending a guard to the Custom House—a necessary proceeding in view of the fact that the entire foreign staff were now threatened. The miscreants are still at large, but we believe that the Authorities *are meditating* an attack upon the village—the inhabitants of which are, it is stated, in open revolt.

The Foochow Market Report of the 28th May says :—The new season's Pehlings began to arrive in quantity on the 14th instant, and about 15,000 boxes, costing Tls. 31 *a* Tls. 33½, and consisting principally of contract chops, were sent forward by the English mail leaving Hongkong on the 22nd instant. The earlier settlements shew an advance upon last year's opening rates of about two taels, and since then about 54,000 boxes have been settled at at Tls. 24 *a* Tls. 37, which owing to the competition among buyers shew a further advance of from two to three taels. Generally the teas are inferior in make to last year's, though about equal in cup. About 100,000 chests of country teas have been placed on the market, the quality of which is generally considered to be decidedly inferior to last year's crop, those from some districts appearing to have suffered from the unfavourable weather which has prevailed during the picking.—The steamers *Glenfinlas, Braemar Castle,* and *State of Virginia* are the only vessels now on the berth for London, and have been circulated to load at £4.10 per 40 cubic feet. Expected, for London, steamers *Montgomeryshire, Agamemnon, Statesman,* and *City of Baltimore* ; sailing vessels, *Nyassa, Thermopylae,* and *Black Prince* ; for Australia—*Nautilus* and *J. H. Jessen.*

AMOY.

H. B. M.'s Birthday was the occasion of the usual display of bunting by the vessels in harbour and the Consular Flagstaves, but no salutes were fired, as the local representative of Her Majesty's fleet is below saluting power. The subscription Ball at the Club, in the evening, was a great success. The Committee had spared no pains in the preparations to ensure the comfort of the dancers. The Ball room was covered with stretched canvas, and was tastefully decorated with flags, while the temperature was kept moderately low with the aid of punkahs and ice.—We are no longer dependant on Foochow, by the bye, for our supplies of this article, for Dr. Jones, whom the community has to thank already for so many contributions to its comfort, has built an ice machine that turns out beautifully clear slabs about two inches thick.—The supper was all that could be desired, and particular attention was paid to the *Champagne frappé*, whose hissing and gurgling down the parched throats of the dancers was delightful music. The party dispersed after a very enjoyable evening at 3 a.m.—We have lately been visited with some terrific squalls from the N.E., of wind and rain, accompanied by thunder and lightning. These squalls are very sudden, and are first observed in the form of a dense black mass of cloud, with forked lightning darting to and fro in its midst. This cloud steadily advances till it is overhead, when the gale bursts in all its strength, and blinding torrents of rain fall that obscure everything a yard ahead. During a recent squall of this description, the *Growler* dragged her anchors and touched slightly the mud bank, and several junks broke away from their moorings. The sampans take timely warning and mostly haul up, or the loss of life would be very great.

A Regatta took place on the 29th, and, like most regattas, was not very exciting, and gave more pleasure perhaps from affording a holiday than from any merits of its own. The day was very fine, but very hot, and it seemed almost sinful to allow Europeans to pull under such a scorching sun. The *Ling-fêng* was hauled up to Messrs. Douglas Lapraik's buoy to act as Flag-ship, and all the races were started and won between her and the Koolang-soo shore.

After the races came the pig at the end of the greasy pole, the wash-tub race and all the other minor accessories of Regattas. Four pigs were captured, and the wash-tub race afforded a deal of amusement.—The *Growler* left the same evening for Foochow in pursuance of telegraphic instructions.—*China Mail.*

30th May.

CANTON.

The gale on Monday night at Canton was terrific, the river is filled with wreckage, and nearly all the houses at Whampoa are blown down. The barometer at Canton fell till one o'clock, when it registered 29.32 ; it then began to rise again. The steamer *Bombay* which was in the Canton River the whole of Monday night, and arrived here yesterday morning, seems to have encountered the full force of the hurricane. There was a large quantity of wreckage in the river, and she was successful in picking up no less than twenty men, women, and children, who were floating on spars and wrecked sampans.—Messrs. Deacon & Co.'s Market Report, of 3rd June, says :—In Tea, a large business has been transacted during the past fortnight, and prices have generally ruled in favor of buyers.—It is difficult to arrive at settlements of New Silk since the market was opened ten days ago. 700/800 bales are reported to have changed hands, but it is probable that there are further dealings under contract, which have not transpired. Purchases were made, prior to departure of last French Mail, on a basis of $320 *a* $325 per picul for No. 4 Tsatlee, but prices have since advanced, and $335 is now the figure for that classification, and the tendency is upward. Nos. 4, 4½, and 5 qualities have been chiefly in demand. The Silk is an improvement on ordinary first yields, and shows tolerably clean thread, of very fair quality. It is too soon to speculate regarding second crop, but advices from the country are to the effect that the worms are favorably progressing. —*(Daily Press.)*

HONGKONG.

A heavy gale occurred in Hongkong on the 31st ulto., during which the str. *Poyang* was wrecked near Macao, with the loss of many lives. No serious injury seems to have been sustained by the foreign shipping in harbour, though several vessels were more or less damaged. Several junks foundered. On shore, two or three houses were blown down, and others damaged. A number of trees were blown down, and the Public Gardens have again unfortunately come in

for a large share of harm, just as they were beginning to recover from the effects of the typhoon of last autumn. The *Daily Press* gives the following readings of the barometer, taken at Messrs. G. Falconer and Co.'s :—

9 A.M.	29.892	8 P.M.	29.684
1 P.M.	29.808	9 ,,	29.630
5 ,,	29.740	10 ,,	29.600
6 ,,	29.728	11 ,,	29.586
7 ,,	29.720	11.30 ,,	29.600

The French mail steamer experienced fine weather throughout, and it is therefore evident the storm did not extend far in a southerly direction.

The *Daily Press* says :—The Chinese prophecy that on the 10th day of their sixth month—that is, 12th July—a much larger typhoon than that witnessed last year is to visit the Colony, and unless the main force of it is spent outside, it will undoubtedly ruin Hongkong. — Colonel Browne arrived on the 3rd in the *Thales*. —A tiffin has been given on board the P. & O. steamer *Oceanic*, which seems to be creating a sensation in Hongkong.—The *Daily Press* says that the services of Mr. Manning, the well-known diver, who recently arrived in the steamer *Statesman*, have been secured to aid in the recovering of the treasure from the wreck of the P.M. steamship *Japan*. He left in the *Hailoong* for Swatow on Wednesday. In addition to the schooner *Scotland*, the American schooner *Lizzie* and a large steam launch are rendering assistance at the wreck.—A revivalistic effort, inaugurated by the visit of the Rev. Sholto D. Campbell Douglas, B.A., of Derby, is going on in the colony. Circulars signed by the various ministers of religion have been sent round, asking attendance at special services to be held at half-past five o'clock every afternoon, from to-day to Saturday inclusive. "After mutual deliberation, says this document, it has been determined that the Chancel of the Cathedral is, for the convenience of all, the best place for holding these services in. Called by different names in the Church of Christ, we yet unite in entreating you all to attend these services.

* * * * * *

The hour at which you are asked to attend is, we know, one usually devoted to purposes of health, so important in a climate like this. We venture, however, considering the great object at stake, to beg you for a few days to forego your usual occupations that you may think of the health of your souls.

Soldiers, policemen, and other officials who may be free to come at the hour mentioned and stay for a longer or shorter time, are earnestly invited to attend."

The invitation bears the signatures of the Bishop, the Colonial Chaplain, the Revs. James Lamont, A. B. Hutchinson, E. Klitzke, E. J. Eitel, and J. C. Edge.—The Danish steamer *Asia*, from Saigon, lost her propeller outside, and was towed into harbour by the S. S. *Riga*, which put back for that purpose, having left Hongkong on the [illegible].

It is so rarely that we hear of an attempt by Chinese to save from drowning, that we have pleasure in quoting from the *Daily Press* a case brought to light last week at Hongkong :—"A little girl about eleven years of age, attempted to commit suicide by jumping into the sea near the Harbour Master's office. Strange to say a boatwoman jumped into the sea at the risk of her own life and saved her. The girl was taken to the station, and at the Police Court she said she had often been severely beaten by her mistress, and in consequence she determined to end her existence by drowning. After enquiring into the case, which he ended by sending the girl to the Convent, the Magistrate sent for the boatwoman, and told her that she had committed an act she ought to be proud of all her life. It is not generally the custom of the Chinese to save life when they see people drowning ; this was a meritorious exception to the bad rule, and she had risked her own life to do it. He would mention the circumstances to H. E. the Administrator." We lately noticed a similar instance of humanity at Foochow, where a Chinaman saved a woman from drowning at the risk of his own life. But in contrast to the above, we find a case recorded in Hongkong on the following day, when a totally different course was pursued. "Three gentlemen started in a sampan for a sail across to Kowloon, but finding the wind rather too strong against them turned back when they had accomplished about half the distance. They then told the boatman to take in a sail, but he replied that he knew his "pidgin" and paid no further attention to the order. Almost immediately after, the boat suddenly capsized, and the occupants were struggling in the water. Captain Drewes, of the steamer *Amoy*, who witnessed the accident, lost no time in getting out his gig and proceeding to the rescue. Happily he was successful in his attempt, though one member of the party had a very narrow escape. A sampan steering directly towards the spot, altered its course when the occupants were aware of the occurrence. This is, we regret to say, a characteristic of the Chinese boat-people, and one that does not redound to their credit."

MACAO.

Another terrible and destructive typhoon has visited this unfortunate place, causing great damage to property and considerable loss of life on the water, though happily nothing like so disastrous in its general effects as that which occurred on the 23rd September last—an ever memorable date here.

The weather began to grow rough and boisterous on the evening of the 30th ultimo, and it continued so until the next day, blowing hard all the time from the East. At about one o'clock p.m. the wind increased considerably in violence, and was accompanied by rain. This was followed by occasional squalls. The barometer was steady up to the hour just mentioned, but after that time began to fall gradually until 11 o'clock p.m., when it had gone down to 28.80, and subsequently rose gradually until the gale abated, about 3 o'clock the following morning. The destruction at sea amongst the native craft is reported to be very great, and the loss of life serious, but no definite particulars have yet been received. A Chinese revenue cruiser is ashore, and great numbers of junks and hundreds of sampans are floating about bottom upwards or broken up.

On shore the damage done is also extensive, more especially in the inner harbour. At the Praya Grande, the chief sufferer from the fury of the typhoon was the Government House. This is almost a wreck ; the greater part of it came down with a frightful crash, burying about eleven persons in its ruins. The aide-de-camp of His Excellency the Governor was much injured, and was carried to the Military Hospital of St. Januario. His Excellency the Governor himself had a very narrow escape from being overwhelmed in the falling mass. A soldier fortunately saved him, but only just in time. His Excellency intends removing with his family to the premises of the Viscount do Cercal as soon as practicable.

Numbers of other buildings have sustained more or less damage, by being partially unroofed, windows broken, verandahs destroyed, and venetians carried away. Some of the roads are also in a deplorable condition, and the trees, as usual, have fared ill in the storm. The roads and pathways were after the typhoon thickly strewn with branches, and littered with broken tiles and rubbish. I cannot stay now to particularise, but am glad to say that although the injury is widespread, fortunately in most cases it has not been very serious—*Daily Press*.

NAGASAKI.

The *Rising Sun* says Royal salutes of 21 guns were fired by the United States corvette *Ashuelot*, and from the Japanese fort at Desima, on the occasion of Her Majesty's birth-day ; the English gun-vessel *Curlew*, carrying less than the regulation number of ten guns, was prohibited joining in the token of respect. She, however, dressed ship along with the other men-of-war in harbour.—A Corean, one of a number who have recently visited Nagasaki, while walking the streets a few mornings ago, took a fancy to a cake exhibited for sale ; but having no money to purchase it, he pocketed it without, as he thought, being observed. But the vendor was on the *qui vive* and raised an alarm. The culprit made off, with a policeman after him, who finally succeeding in overtaking him. The Corean, however, showed fight, and wresting the policeman's baton out of his hand, commenced to chastise the officer for daring to arrest him. Another policeman coming up at the time, the Corean found that resistance was useless against odds, and allowed himself to be captured. What was done with him afterwards, is not stated.

HIOGO.

The Queen's birthday was well observed in this Settlement, but there being no British man-of-war in port ranking as a saluting vessel, the day passed over, says the *News*, with the quietness which is normal in Kobe. H.B.M.S. *Challenger* and *Mosquito*, however, "dressed ship," and in the evening A. A. Annesley, Esq., H.B.M.'s Acting Consul, gave a ball and supper in honor of the occasion, to a large party of residents, the officers of H.B.M.'s ships, and the gentlemen attached to the scientific department of the "*Challenger*" expedition. H.B.M.'s Consulate was tastfully decorated with bunting and lanterns, the Band of the *Challenger* (by kind permission of Captain Thomson and the officers) attended, and dancing was kept up to a late hour.—A serious fray occurred on the 24th ulto, between two Japanese lately working in partnership in a stevedoring establishment. It is supposed that, owing to some difficulty in arranging the dissolution of partnership, ill-will arose. However that may be, one of them rushed on the other and inflicted a cut on the arm with a short sword ; following this up, when the victim tried to escape, by a deep slash on the shoulder, which nearly severed the arm from the body. The aggressor, after his victim was gone, appears to have had some idea of disembowelling himself, but only just cut the outer skin of his stomach.—It is intended to open an Exhibition and Museum at Osaka, the former to be open one hundred consecutive days in each year, and the latter on certain specified days in each month all the year round. The scheme includes the exhibition of all articles of foreign and native trade, is laid out to have a nine years' existence, and is avowedly in furtherance of commerce.

YOKOHAMA.

The Queen's birthday was observed here as a general holiday. The Banks were closed, the newspapers were not published, and, at noon, most of the men-of-war in harbour, with the Kanagawa forts, fired salutes of twenty-one guns each. Nearly all the ships in the bay, men-of-war and and merchant vessels, dressed ship. The weather was beautiful, continuing fine, with a fresh breeze blowing from the S.W.,

throughout the day, and amongst the amusements arranged were a sailing race for open boats and a yacht race. The former was won by Mr. Timothy's *Anonyma*, beating six others, and the same boat won another match in the afternoon. The yacht race was won by the *Tantivy*, beating the *Torment*, *Hibernia*, and U.S.S. *Monocacy's* cutter.—On Wednesday, the 26th ultimo, Sir Harry Parkes gave an official dinner in honour of the Queen's birthday. After dinner, Lady Parkes had a *soirée*, which was attended by many Japanese and foreign officials of distinction, and by a large number of ladies and gentlemen of the Yedo community. The band of the Imperial Japanese Marines performed during the evening.—A Flower and Vegetable Show, held at the Grand Hotel on the 22nd and 23rd ultimo, was highly successful, so far as foreigners were concerned, but the Japanese did not, says the *Gazette*, show up in force, there being only one who exhibited any quantity of plants. There were, however, plenty of visitors, both native and foreign, for whose additional enjoyment the band of the French ironclad *Montcalm* played some choice selections of music.—The torpedo-boat constructed for the Japanese Government by Messrs. Whitfield and Dowson, whilst being conveyed to Yokoska for the purpose of being put to the proof, was struck by a severe squall and sank, the steam-tender towing her narrowly escaping the same fate. She was raised two days afterwards, and found to have sustained no material damage.—Early on the morning of the 23rd ultimo, four Chinese were detected, by the Custom House Officials at the English Hatoba, in the act of smuggling opium. They were given into custody, and taken to the police-station.—It is said that the Mitsu Bishi Steam-ship Company have established a line of steamers to run between Yokohama and Hakodate.—34,385 persons paid for admission to the wrestling exhibition at Yeko-in, Riogoku, during 10 days. The interest felt in the national sport seems to have by no means abated.—A case, in which it was alleged that a Japanese junk was sunk by the P.M.S.S, *Oregonian*, on the morning of the 23rd February, has been heard in the U. S. Consular Court. Judgment was reserved.—The *Echo du Japon* states that, in view of the complaints which are current in Italy as to the bad quality of the Japanese silk-worms' eggs, the Italian Government has instructed Sig. Castelli, Consul at this port, to institute an enquiry into the cause of this deterioration, and to ascertain if the eggs are really attacked with the disease which has committed such ravages in Europe.

SINGAPORE.

Before leaving Singapore, Sir Andrew Clarke was presented with two more addresses couched in warm terms, one from the Singapore Chamber of Commerce, which was signed by all the leading mercantile firms in the colony, and one from the Eurasian community, bearing 98 signatures. Sir Andrew, in return, expressed his gratification at these expressions of friendly feeling, and tendered his warmest thanks for them. Sir Andrew and Lady Clarke left Singapore on the 26th ult. in Messrs. Apcar & Co.'s steamer *China*. The *Singapore Times* says that, notwithstanding a heavy downpour of rain that set in shortly before noon, there was a goodly attendance at Johnston's Pier to witness the embarkation and bid farewell to the late Governor. H. E. Sir William Jervois, H. H. the Maharajah of Johore, and all the military and civil officers, and many of the residents, were present; and a great many ladies braved the weather to show their respect and esteem for the departing Governor and Lady Clarke. The covered portion of the pier was handsomely draped with flags and evergreens, and Messrs. A. L. Johnston & Co's. verandah, which was filled with spectators, was decorated with flags. A guard of honour of the 1/10th was in attendance, but after getting thoroughly drenched they were withdrawn. Sir Andrew and Lady Clarke arrived somewhat late, having been detained doubtless by the heavy rain, and after a great many leave-takings, stepped on board the fine steam launch belonging to the P. & O. Co., which was kindly placed at their disposal by Captain Caldbeck, the Agent of the Company. Three hearty cheers were given for Sir Andrew Clarke, and three more for Lady Clarke, after which the launch moved rapidly off towards the steamer, which lay far out in the roadstead; the company stood watching her for a long way out, straining their eyes to catch a last glimpse, and many would not leave their positions until the Ensign, hoisted at the steamer's foremast, signalled their arrival on board.

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

May 9th.—(1) Several official appointments are gazetted.

(2) Kwang-sheu and Hia-tung, of the Board of War, in a long memorial extending over two *Gazettes*, report on further investigation made into Szechuen affairs. On the 9th of the first moon they had reached the Kwang-yun district in Szechuen, when they received en route a despatch from the Ministers of the Cabinet to the effect that, on the 23rd of the 12th moon, the Imperial command had been received stating that information had been received of a disturbance amongst the "Tah" character garrison troops in Szechuen, who, in order to intimidate their officers into paying their arrears, had forced an entry into and taken up their quarters in the Prefectural town. The case was, therefore, delegated for enquiry to the two Commissioners. The troops in question were on garrison duty in the Prefecture of Sü-chew 叙州. The arrears due had accumulated to the extent of 18 months' pay, and many of the soldiers being anxious to return home, made importunate demands in person on the paymaster, Hia Teh-ying. The latter having no funds wherewith to meet the claims, fled to avoid danger. Hereupon, the troops left their encampment, and took up their quarters within the city of Sü-chew. The Governor-General hearing of the affair, at once degraded Hia Teh-ying, reprimanded and deprived of his peacock's feather the commanding officer, Ching Hioh-teh, and appointed other civil and military officers to proceed to the spot, and take such measures as expediency might require. Subsequently, funds were forwarded to the Prefecture. The troops received their arrears, and discipline was restored. Statements are referred to, of the soldiers having fired off guns within the city, and of the people having been exhorted not to leave the place: but it appears to have been found by the Commissioners that the troops comported themselves quietly during the reign of confusion in the city, no acts of violence having been committed. The result of the investigation is that the Commander, Ching Hioh-teh, having proved himself incompetent to maintain discipline, his conduct should have been reported for punishment, a mere reprimand from the Governor, accompanied with the stripping him of his peacock feather, being a correction inadequate to the gravity of the occasion. The Imperial command is therefore asked, requiring that Ching Hioh-teh be handed over to the Board to be dealt with according to the merits of the case. The Governor-General, Ou-tang, is also charged with undue laxity in not impeaching the commander; and the case is also asked to be referred to the consideration of the Board. The two Commissioners further report on several subsidiary cases brought under their cognisance, *i.e.*:—

(1) In the District of Ee-piu, owing to the large requirement by Government officials and troops *en route* for horses and beasts of burden, consent had been obtained by the magistrate through the various channels up to the Governor General's yamên, to increase the contribution demandable from the local people. Although he found that no embezzlement was made of the funds thus collected, it was the duty of the magistrate in terms of the application made, to render a monthly account of incomings to the Prefect. Having failed to do this, the magistrate is guilty of misdemeanour, and his conduct is desired to be referred to the Board.

(2) An ex-magistrate of the Canton province, Hwang, was summoned before the magistrate of Pa-shan to answer to an accusation respecting the ownership of land. Hwang displayed some temper in Court, and was beaten on the palm of the hand by order of the presiding magistrate. After being bailed out, fearing to be subjected to further disgrace if he appeared again, he committed suicide by swallowing poison. The infliction of corporal punishment on an official in a trivial case arising from a suit about land, is declared to be a violation against established regulations, and the action of the Pa-shan magistrate is impeached.

(3) A dismissed magistrate, Sung-yün, also holding the literary degree of Tsinsz, was accused by an elder brother, by whom he was supported and educated during his youth, of renouncing all paternal claims, in fact, of treating his brother as a stranger. The case was tried, and Sung-yün, being very obstreperous and insolent in Court, corporeal punishment on the hand was also administered, and the accused further kept in confinement. After his release, he died within a short time. Sung-yün, although dismissed from his magistracy, had it appears been re-appointed in an acting capacity to other duties, and the application of corporeal punishment was rendered by such reason unjustifiable. The officials implicated are therefore reported for punishment by the Board.

The above concludes the personal investigations of the two Commissioners in Szechuen, who report that they propose returning with their subordinates to the capital.

May 10th.—*Gazette* is taken up principally by the conclusion of the foregoing report; it contains besides—

(1) An Edict dismissing a Prefect in Kwangsi, for resorting to artful and low expedients to make a name for himself.

(2) Another memorial from Kwang-cheu and Hia-tung respecting the abolishment of establishments in Szechuen for providing quarters and beasts of burden to officials, etc., *en route* through the province; and for particulars in respect to which see edict in a previous *Gazette*.

May 11th.—(1) An edict from the Dowager Empresses, in reference to repairs to the "Wei" Imperial sepulchre.

(2) The Minister, Li Hung-chang, and others, on their knees memorialise in reply to the Imperial command made known as follows:—"Her late Majesty, Meen-chia-shun, a lady of perfect virtue and of a family elevated by its refined breeding, was affianced to His late Majesty, and became Queen Consort of the 'Central' Palace; her benevolence suffused itself throughout the Court. The fountain head of the 'female element,' and the first symbol thus of the earth, she centred around her an atmosphere of virtue illimitable in extent, and responded to the divine scheme of nature by co-operating with and assisting the 'male

principle.' Her gentleness and excellence formed a pattern for study, and her strict rectitude exerted influence throughout the six Palaces. Her comportment was retiring and modest, and for the three years that she graced the Court, while making manifest the excellence of her rule over 'inner' affairs, she further shared in the anxieties and toils attending the administration of Government. As successor to their Majesties the Empresses Dowager, she further displayed her filial devotion by her attractive and winning ways; and the many feminine qualities thus illustriously exhibited have been evident to every inmate of the Palace. In conformity with the regulations handed down by our ancestors, it is fitting that a glorious epitaph and posthumous title be selected for Her departed Majesty; and the Ministry is hereby commanded to examine and carefully note the records and ceremonial canons, and to respectfully make a suitable selection. The Ministers, while paying additional tribute to the memory of Her departed Majesty, remark with the greatest humility that where the virtues (of an Emperor and his consort) harmonise, the effect may be compared to the sun and moon beautifying the Heavens—(Note: the sun is another emblem of the male and the moon of the female principle)—and that where the two natures accord, the female acts in unison with the male and the scheme of nature is thus carried out. In obedience to the Imperial command, the Ministers submit two selections of epitaphs, each 12 characters, and both embodying the two characters of the deceased Queen's life-title of Chia-shun 嘉順 "excellent" and "yielding." In reply to the memorial, the following 12 characters have been marked out by the vermillion pencil:—

孝哲嘉順淑慎賢明憲天彰聖(毅皇后.)

"(Queen Ee—Ee, the posthumous term of "the late Emperor) the filial, wise, excellent, yielding, chaste, careful, virtuous, "and intelligent, who governed her actions "by the laws of Heaven, and whose life "added lustre to the teachings of the "Sages."

(3) A memorial, in reference to repairs required to public granaries, which, owing to the want of funds, have fallen into a state of great dilapidation. It is suggested that they need not all be repaired at once, but that Tls. 2,000 to 3,000 should be allowed annually, and the work done gradually. It is also recommended that the long process of memorialising in each trivial instance should be dispensed with.—Rescript: noted.

(4) Another memorial, respecting the disposal of a surplus of 2,000 to 3,000 piculs of old stores of wheat, which it is feared, if left longer, will rot and become perfectly useless.

(5) A memorial, from Li Han-chang, Governor-General of Hupeh and Honan, in reference to exception being taken at the appointment of a Taotai within his jurisdiction, and which was stated to be not *en règle*.

May 12th.—(1) An edict, promoting several officers who distinguished themselves in suppressing an outbreak, in the 10th moon of last year, at a place in Szechuen called O-pien.

(2) Tso Tsung-tang, Governor-General of Shensi and Kansuh, reports on the reconsideration of and re-investigation into the heroic conduct of a former Acting-Prefect of Kwei-teh, Chen-shun, and his family and subordinates, all now deceased. Chen-shun entered into his duties on the 8th moon of the first year of Tung-chi (1862), just at the time when the Mahommedans raised the standard of rebellion. All the neighbouring towns fell, one after another, to the fury of the insurgents, but Kwei-teh, owing to the energetic and gallant defence of Chen-shun, held out bravely for six years. Forlorn and unassisted, the hearts of the people were strengthened to resistance by the exertions of their Prefect; but during the night of the 16th of the 2nd Moon of the 6th year of Tung-chi, the rebel chiefs, with over 1,000 followers, surprised the town. Cheng-shun ascended the battlement and fought manfully—hurling down a rain of stones on the enemy; but treachery had already shewn itself within the walls. The gates were opened and the rebels poured in. Chen-shun now gathered together his followers, and with sword and knives fought hand to hand in the streets. Seventeen of the rebels had fallen before them, when a band attacked them in the rear, and Cheng-shun was felled to the ground by a stone hurled at his head. The insurgents crowded around him, but Cheng-shun railed at them in a furious tone. They cut off his left arm, and he railed with increased vehemence. Finally, they cut off his right foot and quartered him. Cheng-shun's two brothers then led their mother to the scene of his death, and the three, while weeping with grief and abusing the perpetrators, were despatched by their spears. Valour of so rare a character should be specially commemorated, and the mark of honor previously conferred by the Throne on Cheng-shun is considered to be inadequate. It is now suggested that higher posthumous distinctions should be granted, and that the Imperial consent should in addition be given to the dedication of a temple to the memory of Cheng-shun and his family.

(3) A memorial, by the former Governor-General of Shensi and Kansuh, Yang Yuh-ou, who had repaired to the Capital on a visit of condolence at the death of the late Emperor, to be allowed to return to his native place and attend upon his parents during their declining years.

May 13th.—(1) A fine of 6 months' stipend imposed on a president of the Criminal Board, Ts'ung-shih, is remitted.

(2) A memorial requesting that the distribution of rice from the various relief depôts in the capital be prolonged for two months beyond the usual date. An edict granting the request has already appeared. The number of recipients of charity at all the depôts is here stated to be seven to eight hundred, or perhaps over one thousand individuals.

(3) A Manchu official, Fung Săn-toh, memorialises the Throne recommending a marine, Wang Liang-min, for Imperial mark of favor. Wang Liang-min is represented to be seventy six years of age and, including and counting from himself, five generations are at present in existence, *i.e.*, "together in the family hall." The memorialist himself summoned before him and witnessed—1, the Patriarch Wang: 2, his son: 3, three grand children: 4, six great grand children: and 5, one great great grand child—all of them in different degrees of health and vigour, *i.e.*, the old man still hale and cheerful, others in full manly strength and the little fellow with his corner tufts of hair looking brave and hopeful. So remarkable an instance of family felicity is represented to be due to the fostering care of the "one man" (the Emperor) for his children, the people, to whom prosperity and long life are thus vouchsafed; and it is deemed fitting that this happy example should be brought before the Imperial notice.—Rescript: Referred to the Board of Rites.

(4) An account of the disturbance amongst the Banner soldiers quartered at Yangchow, by Muh Teng-au—referred to recently in an Imperial edict. The pay of these troops has, according to custom, been provided for out-grain contributions due by the district of Tantu, and discontent arose amongst the soldiers owing to the money-value paid, *i.e.*, 2,400 *cash* per sheh, being under the market price. The magistrate had applied for orders as to what action should be taken, and delay consequently arose in the issue of the pay. Beyond the trampling down and injury of a few articles in the yamên, no violence was committed.

May 14th.—(1) Edict appointing Shuy-chang to the Intendantship of Shaoshing in Chekiang.

(2) A memorial from the Governor of Kwang-tung and also Acting Governor-General of the two Kwangs, respecting the result of military measures taken to repress brigandage in the Districts of An-ping and Kai-ping. The disorder and lawlessness existing previously in these localities were sufficient to cause fear of graver difficulties. In the 9th moon of 1873, the Customs' station of Kai-ping was looted, and two guards killed and wounded. In the 10th moon, an acting Colonel, while escorting his family, was attacked, and some of his soldiers wounded at An-ping; and other cases of daring robbery were daily cropping up. Accordingly, during the 10th moon following, a Taotai, Ho Ying-chi, who had had every experience in military affairs, and Colonel Hwang Tseng-teng, were despatched at the head of 400 men to root out and destroy all the lawless people of the place. The mountainous and inaccessible character of the country, and the shelter and means of escape afforded by the neighbouring islands, are brought forward as offering great obstacles to the action of the troops; but good service was performed, and the robbers, of whom twenty-two were executed on the spot, were thoroughly extripated and subdued. After settlement of the affairs of the two Districts in question, 400 soldiers were told off on the 19th of the 4th moon of last year to proceed to Kwang-ning, and there enquire into a feud fight and reprisals long going on, between two clans—Sie Chung-kwan and Chun Chung-ling. Here great difficulties had to be surmounted, and it was found necessary to enlist 300 soldiers to act as guides and render general assistance in the cause; it was also necessary to burn and clear away the trees and bamboos of a certain mountain, in order to deprive the insurgents of shelter. After much hard work and the further execution of fifty-seven malefactors, order was restored, and the Governor finishes up his memorial by requesting that a suitable reward be conferred on the officers in charge of the expedition.

May 15th.—(1) Edict. Yih-siang, a member of the Imperial family petitions to the effect that it will take time to recover from his illness, and desiring that his salary be suspended. Yih-siang is hereby allowed to renounce his official duties but, as a mark of especial favor, to continue in receipt of his previous emoluments.

(2) The Governor of Yunnan, Chen Yoh-ying, also holding the acting post of Governor-General of Yunnan and Kwei-chow, memorialises the Throne in respect to an envoy having been despatched from Burmah to present tribute to China. Burmah, it is represented, has long since been ranked among the tributary allies of China (外藩), and it has been an established regulation that the Yunnan authorities should on the decennial presentation of tribute, appoint officers to convey the mission through Chinese territory to the Capital. But during the sixth year of Hien-fung (1856) internal troubles commenced in Yunnan. All the dependencies of the Teng-yeh Ting, 騰越廳 (Momein), in the Prefecture of Yung-chong 永昌府, and bordering on Burmah, fell into the possession of the rebels. Communication with that country was thus intercepted, and the presentation of tribute to the Court of China was in consequence suspended for eighteen years. In the 11th year of Tung-chi (1872), after the defeat by the memorialist of the Tou 杜 Rebels of 大理 Ta-li-fou, a Bur-

mese officer Tien-i-ya-sah-ua-erh-ta came to the camp on a mission of enquiry; and, after the re-capture, in the following year of the Shun-yun 順雲, and Teng-yeh cities, by which the entire Province was again brought under Imperial rule, the aboriginal prefect of Meng-ting 孟定土, Han-chung-pang 罕忠邦, subject to the jurisdiction of the Imperial Prefecture of Yung-chong, escorted a Burmese officer Ma-han-tso-ting-yah-jü-yah-ta to the Provincial capital to ask for instructions as to the matter of tribute. The Governor therefore commanded him to act in accordance with the established custom, and the circumstances were at the time submitted by memorial to the Throne, as shewn by records existing. During last year the Governor received instructions from the Imperial Guard Office to buy some elephants for Court requirements, and instructions were forthwith sent to the Prefect of Yung-chong, Chu-peh-wei 朱百梅 and the sub-Prefect Ou Chi-liang 吳啟亮 to despatch messengers to purchase the elephants in Burmese territory. The King of Burmah, on hearing of the circumstance, and desirous of shewing his friendly feeling, sent officers with two tame elephants to the capital of Yunnan, which they reached on the 27th of the 11th moon of last year, and requested that the animals might be forwarded to Peking. Information was also given to the effect that articles of tribute, according to custom, were in course of preparation and would be shortly offered. But, owing to it being then mid-winter and the line of road covered with snow, it was arranged, as reported to the Throne, that escort officers should not be sent to the frontier to meet the mission until the season became milder. Subsequently, the acting garrison commander at Teng-yeh, Tsiang Tsung-han 蔣宗漢, and the acting sub-Prefect of Teng-yeh, Ou Chi-liang, petitioned stating that on the 15th of the 12th moon (1st Feb.), the Burmese mission had arrived on the border at Teng-yeh, consisting of the chief tribute-envoy Chih-yeh-to-chi-mun-tso-mun-tien-tsou-sou with an assistant envoy, interpreters, servants and elephant-slaves, in all, over fifty individuals, in charge of five elephants and a quantity of tribute presents. Orders were at once issued to depute officers to meet and escort the mission; which latter arrived at the Provincial capital on the 25th of the 2nd moon (1st April). A copy of the letter from King Meng-tun 孟頓, of Burmah, with a list—all in Burmese—of the names of the envoys and of the articles brought, were then received and duly examined. The Governor here alludes to instructions received at the death of the late Emperor, to stop all tribute offerings for the period of three years; but the preparations made by Burmah in this instance were commenced before the receipt of the news of his late Majesty's death and, moreover, the length of time Burmah has been precluded from offering tribute is considered to offer sufficient ground to justify a departure from the orders received. The mission had therefore been sent on, and a list of officers charged with its escort to the capital is given.

Appended is a translation of the King of Burmah's letter and of the list of tribute offerings, running as follow :—

King's Letter.

Meng-tun, King of Burmah, respectfully lays a petition before the Throne of the great Emperor of the Heavenly dynasty.—Your vassal (here 臣, the same character as that employed by Ministers of the Chinese Government, to designate themselves in their memorials, is used, with the addition of *Siao* 小 —small—before it) would, with all humility, set forth that under the universal sway of his Holiness the "streams and hills" are all objects of his fostering care, the kingdoms of the distant ocean become converted to his civilising rule, and as the sunflower bows before the sun, so does all mankind turn with adoration towards the Imperial person. Succeeding to your barren and far off dependency of Burmah, your vassal is impressed with the deep favors conferred by your Heavenly Dynasty when permitting his country to be enrolled amongst the territory of Yu 禹 (the founder of the Hia Dynasty); and, in offering up according to rule the tribute prescribed, the land of Burmah is thus included under the heaven of Yau 堯 and all within the Realm join with one voice in the Sung 嵩 cry to His Imperial Majesty. (Note.—Sung is a mountain where an echo supposed to proceed from the spirits of the Hill was audible, crying out "happiness! long life! male issue!!") Recently, owing to war and rapine on the borders, communication has long been intercepted; but the horrors of strife are now happily ended, and the universe returned to tranquility. It is fitting, therefore, that your humble vassal should at once offer tribute. This letter has, consequently, been respectfully drawn up in letters of gold, and is accompanied by an image of the God of Longevity, five tame elephants and with articles of manufacture and productions of the country. These are sent under the care of an Envoy (name as above), as representative of your vassal; who is charged to respectfully convey them to the palace gate, and to humbly crave that his great Majesty, the Emperor, will deign to receive the offerings and will further graciously lend ear to the feelings of obedience, respect and submission entertained by your vassal. While writing this letter your vassal is overcome with pleasurable feelings of extreme gratitude, and in concluding his petition he humbly wishes his great Imperial Majesty long life for ten thousand; for ten thousand thousand years.

List of Presents:

One Letter in Gold.
A Burmese stone image of the God of Longevity.
Five tame elephants.
A pair of ivory tusks, weighing 90 catties.
Three jade stone articles, weighing 210 catties.
Eight gilt framed and inlaid mirrors.
Two red jewel gold rings.
Two gold rings set with "Ya-tsing."
Eight pieces of yellow, red and green Spanish Stripes.
Ten pieces of thick heavy Shirtings.
Ten pieces Foreign Crape.
Ten fine Handkerchiefs.
Twenty foreign Carpet Rugs.
10,000 sheets of Gold Leaf.
Do. do. Silver do.
Eight catties of Sandal Wood.
Nine Do. red do.
Ten bottles scent.
Ten bottles pomade.
Four No. 4 size ornamented boxes.
Fifty No. 5 do.
Five Pictures of elephants.
Fifteen Peacock's tails.

(3) A memorial from the same Governor in reference to carrying out the Imperial order and causing two officials within his jurisdiction, whose names comprise the character 活, the last character in the name of the present Emperor, 載活, Tsai-tien, to remove a stroke, *i.e.*, the bottom one of the right compound 舌 which thus stands as 舌.

Official Papers.

CHINESE ADDRESS TO SIR ANDREW CLARKE.

The following address was presented to H.E. Sir Andrew Clarke, late Governor of the Straits Settlements, by the Chinese inhabitants of Penang :—

To His Excellency Sir Andrew Clarke, Companion of the most honourable order of the Bath, Knight Commander of the most distinguished order of Saint Michael and Saint George, Colonel in the Army, Governor, Commander in-Chief, and Vice-Admiral of the Straits Settlements, &c., &c.

Humbly sheweth,

That we the undersigned Chinese inhabitants of Penang being aware of the eve of your Excellency's departure from the shores of the Straits Settlements, probably for ever, to assume a more important office in India, feel anxious to give expression to the feeling which exists among us, created by our observation of the manner in which your Excellency has discharged the duties of your high and sublime office of Governor of the said Settlements during the period of your Excellency's Governorship, since November, 1873, until now.

The people who had during your Excellency's Government, appealed and sought redress from Your Excellency, were principally, we may say, ourselves, who by our business connections in trade at Perak and Laroot were very frequently compelled to appeal to Your Excellency, anent the injustice we suffered from the hands of the Native Chiefs of these places, but through Your Excellency's superior, searching, and exhaustive way in which Your Excellency has undertaken to restore those territories to tranquillity, they now assume a very probable and propitious aspect of flourishing again with respect to trade. The efforts and achievements of Your Excellency's labours in this matter cannot therefore be too highly appreciated by us, as well as that done by your Excellency at Siam and Klang.

Feeling anxious that your Excellency should take away from our shores a token of our real respect, esteem, and good feeling in which we the undersigned Chinese Inhabitants of Penang hold you, among whom you have administered with such remarkable impartiality, independence and good judgment which has obtained for your decisions the respect and esteem of the public in general, we now present Your Excellency with this address, and hope that it may now and again remind Your Excellency of our shores, with lively and kind feelings of the time spent by Your Excellency as Governor among its people.

We now with regret beg to take leave of Your Excellency, with fervent wishes for the prosperity and happiness of your Excellency and Your Excellency's family, and we subscribe ourselves at Penang on this eighth day of May, A. D., 1875.

125 Signatures.

Public Meetings.

MEETING OF TREATY CONSULS.

Minutes of a Meeting of Consuls held at Shanghai, on Thursday, the 3rd June, 1875.

Present, the Consular Representatives for Austria-Hungary, France, Great Britian, Japan, Netherlands, Spain and the United States.

A letter from Mr. Vignale expressing his inability to attend the Meeting, was placed on the table.

A copy of the Harbor Regulations as amended at the last meeting, and printed by the Harbor Master, was approved.

The reports * of Messrs. Alabaster, Haas, and Yates on the system of punishments at the Mixed Court and the power of the Court were considered. It was the opinion of the meeting that as a first step an effort should be made to have the foreign settlement constituted an independent judicial district, as recommended in the several reports. Mr. Medhurst was asked to bring the subject before the Taotai, in order to secure if possible his support of this proposal. Upon receipt of his report, the several Consuls will address their respective superiors at Peking on the matter.

Letters from Messrs. Escher and Ryke, the Dutch Engineers in the Japanese service, and from the Consul for Japan inclosing a letter from the Superintendent of the Department of Architecture in Japan, were read. The Engineers by their first letter accept the offer made to them, and state that they will leave for Shanghai in about three weeks to make a report upon the Bar. In their second letter they state that the Government has unexpectedly concluded to enter upon certain works which will require their personal attention, but offer to make a report upon the basis of existing surveys and certain further *data* which may be prepared and transmitted to them. The Superintendent of Architecture expresses his regret that the application for the the Engineers has not come sooner, and states that it may be possible to give the services of one or more of the number in the course of the next winter. Messrs. Medhurst and Seward were asked to write to the Engineers, and the Japanese Consul to his Government, that the survey will be deferred until the Engineers can be given leave, reserving however to the Consular Body the option of withdrawing from the matter if steps shall be taken by the Chinese Government, or the survey can be accomplished in any other way, at an earlier moment.

The Committee having in charge negotiations with the Chinese Authorities for the more perfect protection of telegraph cables, submitted a correspondence with the Taotai, in which he states that he has given orders for the issue of further proclamations by the officials near the Yangtsze Cape and upon the island of Tsung Ming, and transmits copies of certain proclamations. Also a correspondence in regard to recent interruptions of the cable near the Beacon below Woosung.

Letters from the Municipal Council, dated the 21st April and published with their Annual Report, in reference to Wharfage Dues, were considered, and Messrs. Medhurst and Seward were appointed a Committee to confer with the Council and the Authorities in regard to the same.

In this connection a letter from the Council dated the 22nd May was considered. This letter transmits the usual quarterly statement of the Taotai's Commutation of Wharfage Dues, and asks that it be transmitted to the Taotai, if negotiations in regard to the general question do not make it desirable to withhold the claim in favor of the increased claim urged in the letters of 21st April. It was the opinion of the Meeting that the settlement of the general question will require much time, and the Senior Consul was asked to transmit this account as presented.

Letters from the Council, dated the 21st and 22nd May, asking the Consular Body to consider and approve the Resolutions passed at the recent Ratepayers' Meeting :—1st, to Amend Article XIX of the Land Regulations (in regard to Proxy Voting), and 2nd, to Amend certain Articles, as stated, in order to change the time of holding the Municipal Elections and Annual Meeting, were considered. The proposed amendments were approved by the Meeting, and the Senior Consul was asked to submit them to the Consuls not present at the Meeting, for their action.

A letter from the Council, dated the 25th May, asking the support of the Consuls for the Council's efforts to procure land for roads from the New Cemetery to Au Chalet, and from Markham's road to Jessfield road, was approved, and Mr. Haas was authorized to act in the matter on behalf of the Consular Body.

Certain detail correspondence in regard to the postponement of the Ratepayers' Meeting, and to petty difficulties with the people along the line of the Yang-tze-poo road, was laid on the table.

---

* The following are the reports from Messrs. Alabaster, Haas and Yates, on the working of the Mixed Court, referred to above :—

Shanghai, 15th Feb., 1875.

To

Arthur Davenport, Esq.,
Vice-Consul for Great Britain ;
Joseph Haas, Esq.,
Vice-Consul for Austria-Hungary; and
Dr. M. T. Yates,
U. S. Vice-Consul General.

Gentlemen,—At a Meeting of Consuls held on the 12th inst., the questions were raised:—

1st.—Whether the system of punishment at the Mixed Court is satisfactory ? and

2nd.—Whether the powers of the Court are adequate ?

It was decided to ask your opinions upon these questions, the Consuls believing that, from your connection with the Court, you are well able to deal with them.

The Consuls in asking your views would point out that it is desirable for you to consult in this connection informally with the Magistrate of the Court, and that pains should be taken to reach conclusions which may be of practical value. They would also point out that the Court upon its criminal side is to be considered as essentially a Chinese Court, and that any improvements in it may best take a course in consonance with the Chinese judicial system. Upon the civil side, the Consuls would ask you to keep in view the ruling recently made in the British Supreme Court, in regard to the trial of mixed cases. It is not to be undertood however that the Consular Body is committed to this ruling.

(Signed) George F. Seward,
Consul-General and Senior Consul.

Dr. Yates' Report.

Shanghai, 10th March, 1875.

I have had the honour to receive your dispatch of February 15th, 1875, addressed, &c.

* * * * *

I have no hesitation in saying that the powers of the Magistrate are inadequate.

The Magistrate is now a Wei Yuen or deputy, and as such is disinclined to deal with the graver criminal cases, which come before the Court, and prefers to refer them to the District Magistrate. This is unsatisfactory because there is no provision for the presence of assessors in the Court of the latter, or for the appearance of foreign prosecutors. Offenders who have been sent to him for trial and punishment, and against whom the evidence has seemed clear, have often been seen in the street after two or three days.

Again, the Mixed Court Magistrate appears to be unable, or to fear, to bring to bear in important civil cases any means to enforce his judgments, excepting persuasion, the promotion of compositions between the parties, and the imprisonment of the judgment debtor. Such a thing as the seizure and sale of a debtor's property is almost unknown in his Court.

In my opinion the Mixed Court should be made a Foo Ming Tong Chi Yamên, with jurisdiction over the three settlements. The full title would then be 上海租界會審撫民同知衙門. French cases could be tried at the present office, or the Magistrate could sit periodically at a place provided in the French Settlement.

These changes would give the Mixed Court Magistrate the judicial authority of a District Magistrate, for the district comprised within the settlements, and as a consequence do away with many of the vexatious difficulties which are now met.

The system of punishment is essentially Chinese. I do not see how it can readily be changed, and I am not sure that any change which could be proposed would be beneficial. Hardened offenders would not care for the chain gang, or for solitary imprisonment so much as for the bamboo. For those not hardened the cangue and bamboo answer very well.

I think that appeals from the Mixed Court should go to the Taotai and Consuls, as at present.

Mr. Haas' Report.

Shanghai, 13th April, 1875.

Sir,—I beg to acknowledge receipt of your circular letter of the 15th February last, and I beg to apologise for not having replied earlier, but the task devolved upon me by you and the other members of the Consular body is of such a difficult and delicate nature that it was beyond my power to answer your questions in a proper manner at once.

Even now it it is impossible for me to give a detailed report. I beg to make at present a short resumé of my report which I shall have the honour to deliver as soon as finished.

The first question of your above mentioned letter is :

"Whether the system of punishments at the Mixed Court is satisfactory ?"

I think not, as the regulations at present in force—"Regulations for the office to be established in the Yang-king-pang," in 10 articles—are vague, and give nearly no power to the Chinese Magistrate.

I propose that the "Proposed Regulations for a Chinese Court within the foreign quarter in Shanghai," as drawn up by Mr. Alabaster, should be accepted, these being clearer and more distinct. But whatever the regulations should be, they ought to be made known to the public, and especially to the Foreign Assessors, Municipal Employés, to the Heads of the native guilds, and to the Tipaos.

As regards the second question, viz., "whether the powers of the Court are adequate ?" —I think not.

The reasons are :

The actual position of the Chinese Magistrate is not the one of a real Magistrate, but of a Delegate of the Taotai. I do not think, as long as he is a delegate of an Intendant, that a promotion in his rank will give him more power, whether he is a red or gold button mandarin. His title should be changed instead of "Delegate" to the one of "Tung-chi" (同治). Once having this title, it is understood that he will have also the powers of a Tung-chi, which will be sufficient for his position. An increase in his salary for keeping a better and more numerous staff will also in some way increase his powers. I take this opportunity to draw attention to the actual state of the Mixed Court Yamên. As far as its position is concerned, it is too far from the centre of the settlements, it is besides an old, therefore dirty, but also an extremely small place. There are now two prisons, in each of which sometimes, even in summer, at 90-100° Fahrenheit, are crowded from 25 to 30 people. This state must cease. And I think it would be opportune to have for Hongkew a branch of the Mixed Court under the superintendence of his Honour Chen.

In the present condition of Mixed Court affairs the system of sending prisoners into the city must be abandoned. The City Magistrate, if necessary, should come in the Mixed Court, and judge and punish there. The prisoners once in the city are beyond any police or Consular control. This city-sending system is no doubt a degradation for the

Chinese Magistrate as well for the foreign Assessor.

Last but not least, let the Municipal Council insist that the Inspector of Police should learn Chinese ; or if this measure is too late, let the Council engage an interpreter. There is at present not one foreigner who understands the language of 50,000 natives ! The native detectives may be good, but even of those we had quite lately some instances in which they have abused their powers.

Mr. ALABASTER'S REPORT.

Shanghai, March 1875.

In reporting on the Mixed Court it is necessary to consider it separately as a Criminal and Civil Court, the two jurisdictions being utterly distinct, though they happen to be exercised by the same officials. As a Criminal Court, although in taking the place of the system under which in old days thieves, &c., taken up by the Municipal Police were sent into the City with the charge and summary of evidence only, and tried in the absence of witnesses and even prosecutor, the Mixed Court has been productive of immense advantage—it must be admitted that it is very far from perfect, and I think chiefly from the following reasons :—

I.—The absence of a definite Code of Law.
II.—The nature of its Punishments ; and
III.—The want of permanence in the officers attached to it ; and perhaps in a lesser degree the dependent position of its Chinese Magistrate.

So long as the law to be administered is left entirely to the Judges as in the Mixed Court is practically the case, there must be too glaring inequality in the sentences for satisfactory results. No Judge can carry in his head the exact punishment he meted out in the hundred previous similar cases he has dealt with. No Judge is so superior to temper that he shall always view the same circumstances as in any way of equal gravity.

A Code indeed will merely render the punishments approximately equal ; but without one, the observer must necessarily be scandalized, as he is in the Mixed Court, by a robbery being one day punished with a sentence ridiculously light, while the next a petty theft is visited with the punishment of burglary. Without a Code, and with continually changing Judges, there can be no pretence even of fair and even justice.

The readiest mode of meeting the difficulty would appear to be to direct Judges of the Mixed Court to administer the provisions of the elaborate Penal Code the Chinese Government have published, save in those cases where to remedy the difference of Eastern and Western habits of thought and manner of viewing crime, special provision may have been made by agreement between the authorities of the various Nations interested in the settlement.

But when you come to look into the matter, so different are the views entertained by Chinese and Europeans of the most ordinary offences, that the Code, suited to the conditions of ordinary Chinese life, must fail utterly in a mixed community like that of the settlement.

To instance,—wrecking, an offence we, as a maritime nation, treat with great severity, the Chinese thinks quite justifiable ;—forgery, which used with us to be a capital offence, they regard as venial ; and receiving stolen property as no offence at all ; while petty assault leading to a scratched face or the effusion of a drop of blood, they visit almost as aggravated manslaughter : in short, their law is as solely directed to the repression of personal violence, as ours is to the protection of property once acquired.

It would seem better therefore if possible, and I cannot think that this is not so, to induce the Chinese to adopt the Code Napoleon, or better still the Indian Criminal Code, as the bases of the Classification of crime and the measure of its punishment. I say the Indian Criminal Code, in preference to the Code of Napoleon, not only because it is of later date, but because it has been drawn up with special reference to oriental conditions.

In any case, whether a foreign Code be formally adopted or not, a difference should be drawn between petty police offences and graver crimes, and while the former must be left as now to be dealt with summarily, the graver cases should tried more formally and deliberately, with the care and deliberation the infliction of any but trifling punishment renders desirable, the prisoner being as in European Countries committed for trial, and the exact nature of the charge to be brought against him, and the precise issues to be determined, carefully weighed and considered, before he is put on his trial. It is not fair to Judge, prisoner, or public that important cases should be disposed of in the hurried way they are at present.

But an even graver objection to the Court, as it at present exists, is the nature of its punishments, which it is scarcely too strong language to say, reflect discredit on all concerned, whether the authorities who authorize them, the officers who inflict them, or the public who permit them.

As a satisfaction to men's vindictive feelings torture may answer a purpose, but although in the old Jewish times this consideration might have weighed, the more advanced intelligence of the present dispensation would rather consider it an argument against a system of justice that it had this effect ; we no longer hold punishment to be a conpensation on the part of the criminal to the sufferer. We go further and condemn as vile, revengeful, and unchristian, the feelings that would prompt people to desire such compensation.

As a deterrent. as a means of striking terror, and so preventing other persons committing similar offences, the punishments inflicted in the Mixed Court have been to a certain extent effectual in regard to certain classes of crime.

Receiving stolen property is not by any means the common offence it was before some of the chief offenders were sent to the chain gang ; house boys do not venture to rob so unblushingly, now they are cangued when caught ; and the fearful floggings in the Beacon case certainly had an effect in increasing the respect felt for foreign life in the country round ; it may even be said that the fear of cangue or flogging does prevent a considerable amount of casual crime, but its effect on crime generally is admittedly insufficient, while in regard to hardened offenders, to the professional thieves and criminals, the punishments are utterly ineffective. Petty thieves are brought up and flogged weekly, and burglars come back to the cangue so regularly that there is a general complaint the Court is no good whatever.

Nor do I think the proposed panacea of the reintroduction of the chain gang calculated to be more than to a certain and limited extent effective ; it is better than canguing, it is better than flogging, for it is neither purposeless nor brutal torture, it appeals to the sense of shame, and to a certain extent enforces the moral lessons that enforced labour hard and disagreeable, that loss of liberty, chains and slavery, follow the commission of those actions which society disallows ; but the very severity of the sentence renders it applicable in certain classes of crime only ; for no one could seriously uphold the sending his fellow creatures to the chain gang for any but the most serious offences. But there is another objection to the chain gang, that so far we have not discovered in Shanghai, how to carry out the system with that regard for the health of the prisoners which humanity requires. When tried before, it had to be given up in consequence of the death of several of the convicts, and the Judges of the Mixed Court would no more than they did then, continue to sentence prisoners to a punishment which seemed to involve the risk of life.

In the higher sense in which alone it would appear that punishment is really justifiable at all, the hope of thereby reforming the criminal, and returning him to the world a useful member of society, the system breaks down altogether ; there is no possibility of its working good, for the moral side of the criminal is never even appealed to ; he does not even appear to be frightened out of his evil courses, but a disgraced and broken man, his mind full of passions against the tyrants who have so brutally ill-used him, he goes back to the world to thieve more cunningly but less reluctantly than before. Nor, unless machinery can be provided by which long terms of imprisonment can be awarded, and some such system as has been established in the Alipore and other Indian jails be instituted, is there possibility of the Mixed Court being in this way effective.

In the jails I refer to, two which I have personally had opportunities of studying, the criminal is considered simply as a subject for a course of treatment under which the energies which are ruining him and injuring society may be so directed that he become a valuable member of the world from which his conduct has caused him to be temporarily relegated, and by a well regulated system of classification the habit of acting rightly is nurtured in the criminal, whose status in prison is made to vary with his behaviour. Before he leaves even he has risen to a position of considerable responsibility, is accustomed to find others respect him and to respect himself, and more than free before his term has expired, he goes back to the world with some useful trade acquired, able to earn a livelihood, with some small capital in hand to help him on, and with the courage to seek employment ; not that shame is dead within him, but that he has worked himself clear of his disgrace.

It is hopeless to expect that such a well organized system could be at once established ; it needs an enthusiast to take the matter in hand, and only through repeated failure could the necessary experience be attained ; but it might be held in view, and waiting until the time comes when it could be carried out, steps might be taken to substitute imprisonment and hard labour for the brutal punishments of bambooing and the cangue, even if at first confinement in a Chinese jail and the rough and unsatisfactory machinery of the chain gang were put in their place.

It is unnecessary to go into, here, the arguments which in Europe have led to the abandonment of the pillory and whipping post. Suffice to say that flogging within proper limits has little or no effect, and that when carried out in a way to act as a deterrent, it is so brutalizing to all concerned, Judge, victim, or assistants, that the evil far outweighs the good, and though the system which we could institute in its place would be at first most imperfect, it would be far in advance of that at present existing.

Eventually the Municipality or the Chinese Government must have a jail, and if arrangements could be made for getting that erected by H. M.'s Government, the system of imprisonment might be tried,—care being taken to remember that the selection of the head jailer, whitewash, drill and discipline, admirable although in their way they may be, do not constitute the end sought, or the best means of its attainment ; for the reformation of the prisoner you require a man of such intelligence that he can enter into and follow their thoughts and feelings, a man of as much culture and ability as is needed for the higher dignity of Judge of the Court.

As a matter of expense at first, the institution of a jail, even if H. M.'s Government were willing now, as they were once, to give the building they possess here for a nominal sum, would cause considerable outlay ; at first every restraining power would have to be free and paid ; but as the system got into work, the expenses of supervision would almost disappear, the higher class prisoners guarding and controlling, as is done at Alipore, those less advanced, while the industrial arts practised by the prisoners would in time make the institution almost if not entirely self-supporting.

In any case, and however imperfectly the system be carried out, it is worth the while to try if we cannot deal with crime without brutality, and it will make many breathe the more freely that the instruments of torture, the bamboo and cangue, are even only temporarily banished from the settlement.

The third point in which I think the Mixed Court is deficient is in the want of permanence in the Foreign Assessors ; constantly changed, they have neither time to learn their business or gain the influence they should exercise over the Chinese Magistrate, much less to acquire that acquaintance with the conditions of the place and people which can alone shew them what is just and what expedient. With the exception of myself, I do not know a single English Assessor who has sat in the Court two years, and I can remember when four succeeded each other in rapid succession within a month. With a well defined Code of Law, with a well ascertained procedure, with their own countrymen alone to deal with, a Judge may be replaced without serious inconvenience ; but in a Court which has not only to administer but to build up a system of Law, which has to gain strength and authority as it goes on, in short which

needs to create everything out of nothing, and bring order out of chaos, change in the personnel is fatal; for perfect knowledge of the past history of the Court, a definite prevision of its future, as well as simple ability to deal with the present circumstances, must be united in the officer who directs it before any satisfactory result can be attained. The Assessor should look forward to it as his career in life, and then, and then alone, would there be ground for hope of seeing some consistent plan perfectly carried out.

The most natural way to secure this permanency would appear to be for either the Chinese Government, the various foreign Governments, or the Municipal Council to appoint a permanent Foreign Assessor, removable only in the case of grave misconduct; his salary being met by contribution from the Chinese, the community, and the various foreign Governments who now each pay a special Assessor for the Court, and although the salary of the Assessor were calculated on the liberal basis which would be necessary to secure efficiency and independence, it would be a saving to the various Governments concerned, supposing them to appoint and pay him, as it would be an advantage either to the Chinese Government or to the Municipality to have such an officer in their pay.

As regards the fourth point, the necessity of making the Chinese Magistrate more independent than he is at present, and the giving him more extensive powers, than he at present posseses, there is no doubt that it is most desirable that the present conflict of jurisdiction between the Magistrate of the Mixed Court and the District Magistrate of Shanghai should be set definitely at rest; and this it would appear can only be done by erecting the settlements into a distinct Chinese jurisdiction, and for many reasons it would be better that there should be machinery within the settlement for dealing with all cases arising within it, which could only be done by giving the Mixed Court Magistrate more extensive powers; but the mere nominal right to do justice, the mere apparent jurisdiction, will not materially effect the state of crime in the settlements unless the administration be given the strength which only comes from permanency, and unless it is supplied with the machinery for carrying out its labours. Without a Code of Criminal Law, without defined precedure, without a sensible system of punishment, the simply changing the Magistrate from a Taotai's deputy as he is at present, into a pucka Sub-Prefect and the making the settlements into a Sub-Prefecture or even a Prefecture, Circuit, or Province, will be practically of but small utility.

As regards the special point submitted, the best means of dealing with the increase in petty theft which is said to have become noticeable, the only scheme I can think of as likely to be effective is that of the establishment of the Municipal Jail and system of industrial reform already suggested.

The causes which lead to the offence are misery and idleness, and until means are found to give the hundreds who live by petty theft habits of industry and means of making an honest living, there is no possibility of stopping it.

As the habitual criminals are known to the police, it would perhaps seem possible to some to keep them out of the settlements by arresting and flogging them whenever found within the limits, but to a great extent this has been tried and failed; thieves are continually sentenced to deportation involving their arrest and punishment if found hereafter within Municipal jurisdiction, and entirely without effect. Nor is the other plan which has been suggested, of stationing policemen at every bridge and preventing their entry into the settlement, more practicable; the settlements are too large and their conditions too peculiar to admit of any attempt even to introduce the system, for not only would the restriction of free ingress and egress which it would involve be intolerable to a community like that of Shanghai, but the system of espionage to which it might easily give rise, and the increase of police power it would necessitate, would be unendurable.

I do not say that even a perfect system of reformatory imprisonment would extirpate crime, but every criminal redeemed would represent a real diminution of the evil from which we suffer, whereas so far as I have seen all other systems, amounting merely to harassing and worrying the criminals, do not in any way affect the prevalence of crime. It may gratify the authorities and occupy the police to make criminals continually move on, it may even satisfy the public who imagine something is being done for their benefit, but circulating felony is as obnoxious as when left undisturbed, perhaps even more so.

CONSEIL D'ADMINISTRATION MUNICIPALE DE LA CONCESSION FRANCAISE.

Résumé des délibérations du Conseil.

Séance du 18 Mai, sous la présidence de M. A. Voisin. Conseillers présents M.M. E. Leroy, H. Maignan, E. Millot, J. H. Scott, J. F. Seaman; H. Sayn, Secrétaire.

M.M. Hennequin et Hitch, empêchés n'ont pu assister à la séance.

Approbation des propositions émises par le Comité des Travaux et de la Police, relatives

A l'exhaussement de la rue des Pères et des terrains en contre-bas du quartier Ouest de la Concession après l'époque des fortes chaleurs; au remplacement d'un candélabre à gaz rue du Weikwé par une console, ainsi que l'installation de trois nouvelles lanternes à gaz dans cette rue et rue Palikao.

A l'établissement de barrières en bois sur la route de Sikaway aux endroits où cette précaution est nécessitée par le peu de largeur de la voie et à l'élargissement du pont No. 4 sur cette route; à la réparation d'un éboulement du quai de la Pagode et à la pose sur ce quai et celui du Wampoo, aux abords du pont de pierres, des chaines qui servaient de garde-fou sur le quai du Yang-king-pang.

A l'achat de 100,000 briques, au prix de $45 les dix mille.

A la construction d'un corps de dépendances pour la Garde Municipale, dépense estimée à Tls. 1,800; à l'achat de briques cassées et granit pour l'entretien des rues.

Au prolongement du drain de la rue de l'Est.

Et enfin, à la transformation du perron de l'Hôtel Municipal et de la tour de l'horloge, dépense estimée à Tls. 1,100, environ.

Informé que M. Kingsmill à bien voulu se charger de faire l'étude d'une ligne de démarcation des quais du Wampoo, le Conseil décide qu'aussitôt que cette étude sera terminée des démarches pressantes devront être faites prés des Consuls pour arriver à faire reconnaître par les autorités compétents la nouvelle ligne de quais.

Examen d'une réclamation de M. Nail tendant à rendre l'Administration responsable d'un accident qui lui est arrivé rue du Consulat, par suite d'une tranchée ouverte pour la construction d'un drain. Les mesures nécessaires paraissant avoir été prises pour empêcher les accidents, le Conseil décline toute responsabilité.

Pour la convenance de certains habitants du quai du Yang-king-pang, le Conseil décide de ménager au garde-fou en fer qui doit être installé sur ce quai entre les ponts 3 and 4, l'ouverture de deux portes.

Le Conseil décide de soumettre à M. le Consul de France le contrat passé avec la Compagnie du Gaz, en le priant de décider si d'après les clauses qu'il contient il y a lieu de recourir à une interpretation arbitrale pour obtenir une solution à la demande de reduction dans le prix du gaz fourni à l'Administration.

Le Conseil pense que l'attitude prise par l'Administration Française dans la question d'empiètements sur le Yang-king-pang n'a pas été représentée, telle qu'elle a été, par l'exposé qui en a été fait dans le compte rendu de la gestion du Municipal Council distribué aux Ratepayers.

Le Conseil, en effet, a fait tout ce qu'il a pu pour répondre au désir du Municipal Council exprimé par ses délégués pour précipiter la solution de la question avant l'assemblée de ses Landrenters et par conséquent avant le départ de M. Godeaux arbitre du Conseil Français. Ce dernier a même bien voulu retarder son départ pour permettre aux Conseils de terminer leurs mèmoires.

Celui du Municipal Council était annoncé et en préparation depuis deux ans, tandisque celui du Conseil a dû être fait à la hâte au moment où la clôture de l'exercice impose le plus de travail à l'administration.

Le Municipal Council avait été prévenu le 3 Mars par les délégués du Conseil et le 24 Mars par lettre posant les points à soumettre aux arbitres, qu'une contre réclamation basée sur *des* empiètements et non *un* empiètement, serait et était introduite par la Municipalité Française. Or, la décision des arbitres n'a eu lieu que le 23 Avril.

Enfin le plan qui a été placé devant les arbitres a été dressé par M. Henry, d'après des plans mêmes envoyés autrefois par la Municipalité Nord et existant encore dans ses bureaux. De plus M. Henry a fait connaître sans restriction, pendant le cours de son travail, au personnel du bureau des travaux du Municipal Council, les empiètements qu'il constatait sur les deux rives, et a même soumis le relevé de son plan à l'Ingénieur du Municipal Council, qui aurait, de son côté mis la plus grande courtoisie dans la communication de plans et renseignements dont M. Henry avait besoin. Enfin devant les arbitres le President a été l'interprète des vues conciliantes du Conseil en accédant sans difficulté à la demande du Président du Municipal Council, à l'effet de poser une nouvelle question aux arbitres, pour savoir si les travaux reconnus des empiètements doivent être détruits, et en n'insistant pas pour maintenir cette question lorsqu' après réflexion le Président du Municipal Council ne voulût plus que cette question fut posée.

Les explications sont provoquées par la manière dont les faits sont représentés par le compte-rendu du Municipal Council, et le Conseil désire qu'elles soient rendues publiques afin de dissiper l'impression qui pourrait exister qu'il n'a pas mis le plus grand empressement à accepter l'arbitrage dans la question d'empiètements sur le Yang-king-pang, et ses conséquences, ou qu'il a pris au dépourvu le Municipal Council en faisant presque à son insu une contre-réclamation pour des empiètements importants commis sur la rive Nord.

La Séance est levée.

MUNICIPAL COUNCIL FOR SETTLEMENTS NORTH OF THE YANG-KING-PANG.

Council Meeting of 31st May, 1875.

Present:—Messrs. J. G. Purdon (Chairman), G. J. W. Cowie, J. Hart, F. E. Heyden, W. Kidner, A. A. Krauss, F. W. Lemarchand, R. Mackenzie, and the Secretary.

The Summons calling the meeting was taken as read.

The Minutes of the last meeting were read, confirmed and signed.

The Cash State for the 29th May was laid on the table for inspection.

Appropriation. — The Chairman read letter of 24th May from Mr. Camajee, in which the latter offered to sell the portion of his land required from the Canton Garden; and also that portion of the Bund southwards from the Seward Road to the end of Mr. Camajee's lot.

Plan, showing what the Council were paying for, was laid on the table.

The Appropriation required was then voted.

Staff.—It was decided to engage Mr. W. S. Percival during the absence of Messrs. Pond and Jones.

Yang-king-pang Creek. — The following correspondence with the French Municipal Council was read:—

Shanghaï, 26 Mai, 1875.

MONSIEUR,—J'ai soumis au Conseil la lettre que vous m'avez écrite le 20 de ce mois, pour me prévenir que le Municipal Council, proposait, pour arriver à déterminer la largeur qui devrait être conservée à l'avenir au Yang-king-pang, d'en faire d'abord faire l'étude par les Ingénieurs des deux Municipalités qui communiqueraient à leurs administrations respectives le résultat de leurs travaux.

J'ai l'honneur de vous informer que le Conseil, entrant dans les vues de votre administration, a chargé M. Henry du travail spécial que l'étude de la ligne future de quais de Yang-king-pang nécessitera. Le Conseil met à la disposition de votre Ingénieur et de M. Henry tous les documents, ayant trait à cette question, appartenant aux archives municipales, et il espère que votre administration voudra bien de son côté, faciliter les recherches nécessaires à l'étude que ces messieurs seront chargés de faire. Votre lettre, au reste, répond à une proposition de ce Conseil exprimée dans la lettre que le Président a eu l'honneur d'adresser le 29 Avril dernier à son collègue du Municipal Council, mais elle ne répond pas à une autre partie de sa lettre. En effet, il informait le Président du Municipal Council que l'Administration Française allait faire procèder sans retard à l'erection du pont en fer No. 4 et qu'elle priait votre Administration de faire pousser, de son côté, les travaux de la culée Nord de façon à ce qu'il n'y eût aucun délai apporté à la pose du dit pont. Cette partie de la lettre du Président n'a pas reçu de réponse.

Relativement à la culée Nord il serait utile de savoir si votre Administration entend la renforcer en lui laissant la même inclinaison ou en lui donnant une inclinaison plus prononcée pour augmenter sa force, tout en laissant la base de la culée dans la position où elle se trouve placée.

Je suis aussi chargé de vous faire remarquer que les ponts du Yang-king-pang présentent des hauteurs différentes au dessus du niveau de l'eau, ainsi que vous pouvez le remarquer dans le relevé suivant.

Hauteur à haute marée ordinaire.

		Metres.		Pieds et pouces anglais.
Pont No.	1	2.47	=	8.1
,, ,,	2	2.50		8.2
,, ,,	3	2.70		9.0½
,, ,,	4	2.78		9.1¼
,, ,,	5	1.67		5.5½
,, ,,	6	2.18		7.0½
,, ,,	7	1.85		6.1
,, ,,	8	1.61		5.3

Le peu d'élévation de certains de ces ponts annihile l'avantage pour la navigation que présentent les ponts les plus élevés. Le Conseil pense qu'il serait bon qu'une hauteur fixe fut déterminée pour chaque pont par les deux administrations, et serait d'avis que si quelques ponts sont trop bas, le pont No. 4, en revanche, le plus élevé de tous, présente peut-être une trop grande élévation au dessus de l'eau si l'on tient compte de la position en contre bas des abords Sud et Nord du pont.

Espérant, Monsieur, que vous voudrez bien me transmettre une réponse aussitôt qu'il vous sera loisible de le faire, je vous prie d'agréer l'assurance de ma considération la plus distinguée.

Le Secrétaire,
H. SAYN.

Monsieur E. B. SOUPER,
Secrétaire du Municipal Council.

[*Translation.*]

Shanghai, May 26th, 1875.

SIR,—I have submitted to the Conseil the letter which you wrote me under date of 20th inst., informing me that the Municipal Council proposed,—in order to definitely fix upon a width which should be observed in future for the Yang-king-pang,—to have a survey made by the Engineers of the two Municipalities, who would communicate the results obtained to their respective Boards.

I have the honour to inform you, that in pursuance of your views, this Council has directed M. Henry to carry out the work which the study of the line for the future width will entail. This Council also places at the disposal of your Engineer, as well as of M. Henry, all documents bearing upon the case and at present in the Municipal archives, and hopes that your Council will, on its part, help in every way possible, the work with which these gentlemen are entrusted.

Your letter in effect replies to a proposition of this Council as explained in the letter of the 29th April, which our President had the honour to address to his colleague of your Council,—but it does not reply to another part of said letter. Indeed, it informed the Chairman of the Municipal Council that the French Administration would proceed without delay to the erection of the iron bridge No. 4, and it begged that your Administration would do its utmost to hasten the work of the Northern abutment, so that no delay may be caused in placing the bridge in position. This portion of our President's letter has received no reply. Respecting this Northern abutment, it would be useful to know whether your administration intents to strengthen, while leaving it the same inclination, or by giving it additional inclination to thereby increase its strength, always leaving the base of the abutment in the same position as at present.

I am also directed to call your attention to the fact that the bridges of the Yang-king-pang are of different height above the water, as you can judge from the following memorandum :

Height at ordinary high tide.

		Metres.		Feet & inches (English.)
Bridge No.	1	1.47	=	8.1
,, ,,	2	2.50		8.2
,, ,,	3	2.76		9.0½
,, ,,	4	2.78		9.1¼
,, ,,	5	1.67		5.5½
,, ,,	6	2.18		7.0½
,, ,,	7	1.85		6.1
,, ,,	8	1.61		5.3

The small elevation of some of these bridges counteracts all the advantages to navigation which the higher ones offer. This Council thinks it would be well to determine upon a height for each bridge, and that moreover if some are too *low*, No. 4 is perhaps too *high*, especially if the position of the approaches on each side, be taken into consideration.

Hoping, Sir, that you will give me an answer so soon as convenient, I am,

&c.

28th May.

Line of Yang-king-pang Creek.

SIR,—I have submitted your letter of the 25th inst. to the Works' Committee, and, in reply, they direct me to convey their best thanks for your offer of any documents which may assist Messrs. Henry and Oliver in defining a line for the Yang-king-pang Creek and fixing a convenient height for the Bridges. Mr. Oliver has been instructed to communicate with Mr. Henry, and you may rely on everything being done by the Council which will tend to facilitate these gentlemen's labours.

On receipt of their report, the Council will have much pleasure in discussing it with you.

The Council's letter of 20th instant was not intended as a reply to yours of 29th April, the Ratepayers' meeting prevented the Council giving it the early attention it called for, but that as little time as possible might be lost in settling the Yang-king-pang bund line, they considered that Mr. Oliver and Mr. Henry might in the meantime be usefully engaged in discussing the best scheme.

Bridge No. 4.—The Engineer has been directed to strengthen the abutment on the North side of the Creek, so as to admit of the bridge being completed.

I am, Sir,
Your obedient Servant,

EDWARD B. SOUPER,
Secretary.

H. SAYN, Esq.,
Secretary,
French Municipal Council.

Landing Accommodation—Jetty—Honan Road.—The Works Committee were requested to see if a jetty could not be built is this neighbourhood to facilitate the landing and shipping of cargo.

Roads—Chaou-foong Road—Encroachment by the Shanghai and Hongkew Wharf.—It was decided to write to the Manager of the wharf, requesting him to replace the M. C. R. Stones and to move back the fence now encroaching on the road. The road having been 30 feet wide at the time Hongkew became incorporated with the Municipality, the Council could not give up possession of land which had thus been used by the public for a number of years.

The Minutes of the last Meeting were approved and passed for publication

Reports from Heads of Departments were read and considered.

ANNUAL MEETING OF THE FOOCHOW CHAMBER OF COMMERCE.

Present.—Peter G. Laurie, Esq., Chairman; Messrs. Hales, Haslam, Krohn, Leith, Harton, Hickling, Bathgate, Smith, Dermer, Tatham, Lübbes, and Mitford (Secretary.)

The Secretary read the notice convening the meeting.

The following Report was then read by the Chairman :—

REPORT.

"The Committee have now the pleasure to present to the members the usual Annual Report.

"*Market Telegrams to Shanghai Chamber.*—During the past season the Committee have supplied the Shanghai Chamber with bi-weekly telegraphic Market Reports, the latter Chamber defraying the cost of the telegrams and two-thirds of the subscriptions to the Amoy-Foochow line of Couriers. Your Committee only considered it necessary to request the Shanghai Chamber to reciprocate when anything of more than ordinary importance occurred.

"*Telegraphs.*—In accordance with the resolution passed at the last Annual General Meeting of the Chamber, the Committee placed themselves in communication with the various Treaty Consuls on the subject of the establishment of a telegraph line between the Settlement and the Pagoda Anchorage, and they are happy to say the concession was granted without any demur on the part of the Authorities, and promptly placed in the hands of the Great Northern Telegraph Company, who lost no time in carrying out the project. No difficulties were met with in the establishment of the line, and although the officials at one time made some trouble, owing to a few of the poles at this end of the line having to be placed in paddy fields (it being originally proposed that the posts were to be placed between high and low water marks) the villagers and country people themselves offered no objections, and the poles have remained standing ever since.

"The Great Northern Telegraph Company subsequently made an effort to establish telegraphic communication between this port and Amoy, and for some time received the support and co-operation of the Chinese Authorities. Owing, however, apparently to the termination of the Japanese difficulty and to instructions received from Peking, the officials subsequently interposed, placing every impediment in the way of the carrying out of the project, and troubles ensued which for a time have compelled the Company to postpone their operations. The establishment of a telegraph line between this place and Amoy, thereby placing the community in immediate direct communication with both Hongkong and Shanghai, is a consummation much to be desired, and this Chamber cannot sufficiently express the importance and value which it attaches to the carrying out of the project.

"*Pilot Regulations.*—The Committee are happy to say that during the past year the dissatisfaction which was at one time displayed by the pilots has not been renewed, and matters appear to have worked satisfactorily.

"*Wreck of the Steamer 'Canton.'*—This vessel was wrecked on the Min Reef on the 7th August last, and intelligence of the disaster reached the Settlement the following afternoon, Messrs. Siemssen & Co., the Agents of the vessel, in company with Messrs. Gilman & Co., Lloyd's Agents, at once placing themselves in communication with H.B.M.'s Consul, begging that assistance might be sent to the wreck, to stop the wholesale plunder which is usual in China on such occasions. No English gunboat being in port at the time, the Chinese Authorities were requested to provide the requisite protection and aid, but, notwithstanding the fact that they had three foreign built gunboats lying idle at the Anchorage at the time, no steps whatever were taken to protect either life or property. At a meeting of the Committee of this Chamber, at which the Agents of the local insurance offices were

invited to attend, the following resolution was passed, viz :—

"'That a communication be addressed to H.M.'s Consul, formally protesting against the inaction and supineness displayed by the Chinese Authorities in neglecting to afford protection to the wreck of the steamer *Canton*, thereby causing the unnecessary loss of much valuable property. Also, that H.M.'s Consul be requested to urge upon the Naval Authorities the desirability of always having a gunboat on the spot for the protection of shipping and commercial interests.'

"A correspondence with H.B.M.'s Consul upon the subject ensued, which was published at the time for the information of those interested. As might have been expected, no direct results were obtained from this protest, the Chinese simply meeting the subject with their usual evasiveness ; but it is to be hoped that the notice taken of the matter upon this occasion may not be without its advantage and influence hereafter.

"With regard to the latter portion of the above resolution, having reference to the desirability of always having a British gunboat on the station, Vice-Admiral Sir Chas. Shadwell replied it was impossible that this suggestion could be complied with, owing to the amount of Naval Force allotted by H.M.'s Government for service on the China Station not being sufficient to allow of a vessel being exclusively stationed at Foochow.

"*Conveyance of Mails.*—The regularity with which the steamers of Messrs. Douglas Lapraik & Co. have recently been plying—starting upon fixed days both from this side and from Hongkong—has proved a great boon to this community, which cannot sufficiently express its recognition of the promptitude and courtesy displayed by the owners in thus making arrangements for the regular conveyance of its mails. The Chamber feels that it would be wanting in its duty were it to pass over this matter without acknowledgment, and without expressing a hope that ere long some arrangement may be made by the Post Office Authorities by which Messrs. Douglas Lapraik & Co. may receive some more tangible recognition of their services in this repect than the mere verbal expression of the thanks of this community.

"*Damages to Teas by heating.*—A considerable amount of attention has recently been drawn to this subject, which is one of great importance to this community. There cannot be a doubt that teas stowed near the engine room of a steamer are liable to get damaged and injured by the great heat which is thrown out. So completely was this recognised, that only a few years ago the opinion was freely expressed that teas would not bear shipment by steamer ; and that the supply of the leaf, notwithstanding the inroads of steam, would still continue to go forward by sailing vessels. This has not proved the case, and we have now to find the remedy for the evil complained of. Of course it would be very easy for shippers to stipulate that their teas are not to be stowed in the neighbourhood of the engines, but such stipulation, even if made, is liable to evasion, as the steamers would have to sacrifice a very considerable cargo space in accepting such an understanding. Captain Saunders, who is Marine Surveyor to many of our local offices, has suggested as a remedy that steamers should be provided with a false deck in the neighbourhood of the engine-room, leaving a clear unoccupied space of say 10 to 12 inches between the main deck and the proposed false deck, and a similar clear unoccupied space at the side round the iron bulk heads of the engine-room, and that the through current of air and ventilation so caused would in a great measure tend to obviate the evil. The proposition is worthy of consideration, and may perhaps be the means of producing some further suggestions from those interested in the subject.

"*Freight Engagements.*—A case, which has recently been before the Court in Shanghai with reference to the subject of freight engagements, renders it desirable, with a view to avoiding disputes, that a clear understanding should exist on this point. It has always been understood to be a custom in Foochow that in the event of a vessel reducing its rate of freight, all prior shippers are entitled to the benefit of the reduction, and it rests with this Chamber to decide if this rule is to be understood as binding in Foochow for the future.

"*Members.*—Messrs. Piatkoff, Molchonoff & Co., and Tokmakoff, Sheveleff & Co. and Mr. M. W. Greig have been elected provisionally members of the Chamber, subject to confirmation by the present meeting. The following members have resigned during the past year, Messrs. Ivanoff & Co., Messrs Augustine Heard & Co., and Mr. Latham.

"*Committee.*—The term of office of the present Committee having now expired it will be incumbent on this meeting, under the provisions of Clause VIII. of the Rules, to elect a new Committee for current year.

"*The Chamber's Circular*—Continues to meet with the support of the mercantile community, and its circulation increases slightly every year ; receipts for the circular during the past season shewing an increase of $18 upon those of the previous year.

"*Funds.*—From the Secretary's account current for the year ending 31st instant, which has been audited by Mr. Masfen, it will be seen that the finances of the Chamber are in a satisfactory condition, there being a credit balance of $335.75 against a similar balance at the same time last year of $69.14.

"In consideration of the increase of work in the secretary's department, the Committee considered it expedient to raise that gentleman's salary to $600 per annum, and they trust that this will meet with the approval of the members."

Mr. Dermer enquired whether the Chamber proposed to take any action relative to the placing of bulkheads round the engine room, with a view to prevent the damage to teas by heating.

The Chairman repied that he did not think that the Chamber could take any action in the matter, but it had been referred to in the Report with a view to eliciting discussion, and possibly some further suggestions on the subject.

Mr. Dermer said that Captains might object to making any alterations in their vessels.

The Chairman said in that case shippers had the remedy in their own hands. He did not think that either Captains or owners would object to any reasonable alterations, if they secured freight more readily. He had only that morning received a letter from the Captain of the *Glenfinlas*, who informed him that he was having alterations made in his vessel with a view to remedying the evil complained of.

Mr. Haslam asked if the proposed alterations could be carried out here.

The Chairman said he believed they could be carried out without any difficulty. The matter had merely been put forward in the form of a suggestion at present.

The Chairman then called attention to the question of freight engagements, remarking that the recent decision of the Judge of the Supreme Court in Shanghai rendered it desirable to have a clear understanding on this point. Some discussion ensued, the sense of the meeting apparently being that the matter would find its own remedy, Mr. Hickling remarking that any one who departed from the existing custom would simply lose all future support from shippers.

It was then proposed by Mr. Tatham, and seconded by Mr. Hickling, that the Report and statement of accounts for the past year be passed, and this was carried unanimously.

The following gentlemen were then elected to form the Committee for the ensuing year, viz :—Messrs. Paterson, Haslam, Pim, Young, and Walkinshaw.

After some complaint in regard to the amount of shipping information obtained through the Courier service with Amoy,

The proceedings terminated with a vote of thanks to the Chairman.—*Foochow Herald.*

Miscellaneous.

THE TRAGEDY AT FOOCHOW.

We have been favoured with the following extract from a private letter from Foochow (dated 2nd June), written by a gentleman who recently left Shanghai :—

"We arrived in due time on Tuesday morning, to find the Pagoda Anchorage Custom-house in a state of siege. It appears that when the *Quantung* was here some weeks ago, one of the Customs officers, Mr. Le Bretton, seized about $1,800 worth of smuggled opium. The smugglers swore vengeance, and when the *Douglas* arrived last Thursday, Mr. Blacklock was put on board to keep watch, with instructions to allow no boats to come alongside during the night. About one in the morning, two or three snake boats went alongside the *Douglas*, and were ordered by Mr. Blacklock to keep away. They refused to do so, and he went to get his revolver. He fired one chamber over the heads of those in the boats, when the fire was instantly returned. He fired three other chambers, killing one man and wounding another. The engineer of the *Douglas* came out to see what the firing was about, and was just in time to see Blacklock fall stone dead, shot through the heart. Captain Burnie, the chief mate, and the engineer then became alarmed for the safety of the ship, and went for their firearms, with which they fired right in to the crews of the boats, killing some and wounding others. The boats then went away, and the men landed to attack the Custom-house, but a body of natives led by Europeans repulsed them. At the present moment, the Custom-house is guarded by several hundred men, all in a state of excitement. The smugglers have offered $600 for Le Bretton's head, $400 for that of a friend of his, and $5,000 for Captain Bisbee's, the harbour-master."

Mr. Le Bretton, who is now in Shanghai, confirms the statements contained in the above letter, and says that, on its becoming known that Tls. 500 were offered for his life, Mr. Hart considered it prudent to send him away as soon as possible, although he protested against it. He adds that the boy captured by the smugglers out of the sampan, was kept captive until the day after Blacklock was shot, when he was sent back to his parents unharmed. He says the smugglers questioned him a good deal, and asked him if he thought if Le Bretton were taken, he could pay the value of the opium he had seized, $1800, as a ransom. The instructions given by the Viceroy to the Tetai commanding the 3,000 troops sent to guard the Custom-house and punish the smugglers, were to destroy their village, and convert the site into paddy fields. No news of this having been done had, however, been received when the *Dragon* left. Before the arrival of the troops, the Arsenal authorities despatched Mr. Harwood, the instructor of gunnery, with twenty armed seamen of the Chinese corvette *Yanghoo*, and nine Mandarin gunboats, to assist in protecting the Custom-house, an attack on which was hourly expected. On the same night as the affray between the snakeboats and the *Douglas*, ten on twelve other snakeboats were seen making for a water-pass, a sort of wide creek, leading up to the smugglers' village, and it was openly stated to be their intention to muster 1,000 men, and then return to the attack of the Custom house. They ascertained, however, the precautions taken for its security and deferred their intention, the arrival of the soldiers afterwards effectually putting a stop to it. That the promptitude with which the troops were despatched to the scene prevented further bloodshed seems

beyond doubt, for on the afternoon following Mr. Blacklock's death, a strong party of the smugglers occupied a small village in the rear of the Custom-house, and to this place messengers were sent to borrow spears from the villagers to help in the defence of the building. The villagers were, however, too much afraid of their formidable visitors to lend the spears, and the messengers returned in haste to report the failure of their mission and that the village was occupied by the contrabandists. Their presence there was evidently to create a diversion by falling on the rear, while the real attack was made in front. Another incident tends to show that the whole affair was premeditated. On the night of the fatal occurrence with Blacklock, a great disturbance was heard at the back of the Custom-house, and Mr. Sanderson, tide-surveyor, and Mr. Stevens, examiner, who were on duty, went to see what it was about. It ceased as suddenly as it commenced, and on their return, they heard the reports and saw the flashes of the revolvers alongside the *Douglas*. The disturbance was beyond doubt got up to distract the attention of the officers from the snake-boats just on the point of setting out for the ship. In addition to the snake-boat that closed in with the *Douglas*, two others lay a little distance off, and in the nearest creek were several others, all full of men, and armed. What the precise object of the attack on the ship was, can only be imagined.

WRECK OF THE STR. "POYANG."

The following particulars are extracted from Hongkong papers, of the wreck of the Hongkong, Canton and Macao Co.'s str. "*Poyang*:—

We have to report, with much regret, the loss of the Company's steamer *Poyang*, which left Hongkong at two o'clock, on her return to Macao, on Monday, May 31st. Finding the violence of the wind too strong to turn back, and the sea making a clear sweep of the deck, Capt. Carroll was compelled to anchor off the "Nine Islands," about 6 p.m., about seven miles from Macao, and about 11 o'clock p.m., she heeled over and went down. On the news reaching Macao the authorities endeavoured to get boats to put off, but not one could be obtained, all being damaged. H.E. the Governor was asked about the gunboat, and the *Camoens* was sent out at once.

The survivors, Mr. Murphy, chief engineer; Captain Wade (Chen Jui), passenger; Mr. White, second engineer; two watchmen, two pilots, four sailors, three firemen, Captain's boy, and Chinese passenger—in all 16 in number—were picked up by a fishing boat and brought to Macao at 9 a.m., yesterday. Amongst those drowned we deeply regret to record Captain Carroll, for whom every one had a kind word; Mr. Drummond (chief officer), Mr. Colah (merchant, Macao). We believe the *Poyang* had its usual number of native passengers—report says, but not accurately known as yet—about 130.

As soon as the loss became known—bad news flies quickly—the Canton Wharf was besieged by the Chinese, in the hope, anticipating the return of relatives and friends, that they were not numbered with the lost. When the survivors were made known, the scene was most afflicting.

Mr. Murphy, the chief engineer, with the other survivors, were saved by clinging to the walking beam.

Among the passengers were the Captain and officers (Europeans) of a Portuguese vessel recently sold at Penang.

The Captain wore a live-preserver when he was drowned; and everything was done that could be done to safe life. Passengers would not take to the boats, but preferred to remain and take their chance on board the steamer.

The cargo was but trifling, some 18 chests of opium and 50 slabs of tin. The *Poyang* was insured for 35,000 dollars.

Subsequently accounts, however, show that the loss of life was not so great as first supposed; several other survivors have come in, and there is room for hope that others will yet be found. The *Mail* says—of the crew, all of whom were at first supposed to be drowned, three (2 Portuguese and 1 Manila man) arrived on the 2nd June, in a fishing junk, which had picked them up floating on planks or spars. They report that they saw a junk picking up others, and some hopes remain that others may have thus been saved. It is also said that 11 men have been landed at Aberdeen from junks, but whether picked up from the *Poyang* or from native craft is not yet certain. Amongst those board are said to have been several of the gold diggers brought up by the *Namoa*, returning with their hard-earned gains. H.M. gunboat *Ringdove* has proceeded to the scene of the wreck. The *Daily Press* mentions a rumour that another junk is on her way to Hongkong, having on board a European, supposed by some to be Captain Carroll. "It is feared the supposition is without any reasonable foundation; but as the junk has lost one mast, it will be some time before she reaches Hongkong, and nothing definite will be known till then." Captain Nunes, lately of the *Santa Sancha*, arrived on the 2nd instant at Macao from Ty-ho, an island about 20 miles distant from the place where the steamer *Poyang* foundered, and towards which he and four of his crew drifted, swimming occasionally. They were in the water over 20 hours. Several Portuguese residents in Hongkong have received intelligence from relatives in Macao, that a small junk has arrived at that port with the news that over forty of the passengers and crew of the ill-fated *Poyang* have been saved, and were on an island some distance to the leeward of the Nine Islands, where the *Poyang* foundered. Amongst them is said to be Mr. Ribeiro, the purser. The *Chen Jui*, driven on shore on the gale, came off at the high water on the 2nd, and proceeded to Canton slightly damaged. The *Peng-chao-hai*, between Lantao and the Nine Islands, picked up a Chinaman, insensible, floating on a junk's hatchway. He is supposed to have belonged to some fishing junk wrecked in the storm. The junk said by some Chinamen to have been seen with a European on board has not turned up, and the probabilities are that there was little or no foundation for the story.—The *Mail* repeats a rumour that "two stout foreigners" are on one of the Islands, and asks: Can these be Captain Carroll and Mr. Favacho? A gunboat might well be sent down to ascertain if the rumour seems to be fairly well founded. In the meantime a committee of four, consisting of Messrs. Ryrie, Hayllar, O'Brien and Russell, have undertaken to receive and apply any subscriptions which may be raised for the benefit of Captain Carroll's wife and son.

H. M. SHIP "CURLEW'S" TRIP TO THE GOTO ISLANDS.

Her Majesty's ship *Curlew* left Nagasaki for a cruise on Tuesday, the 18th ultimo, for the purpose of firing her quarterly ammunition as well as to exercise her ship's company at sea. During her absence she visited the harbour of Tama No Ura, in the Island of Fukoye, the Southernmost of the Goto group. This splendid harbour, 6 miles in length, has the disadvantage of carrying an inconvenient depth of water decreasing from 32 fathoms to 16 at the head of the harbour; but from there an inlet runs for nearly a mile to the N.E. where the *Curlew* anchored in 7 fathoms—(mud-bottom), this secluded anchorage will contain 4 or 5 ships easily. The harbour abounds with fish and parties went away seineing, but owing to the rocks were not so successful as they had anticipated. The *Curlew* was visited by crowds of the natives, who seemed very well disposed; in former years they bore a very different character. On leaving Tama No Ura the *Curlew* shaped course to the Northward and returned by the Kuga Channel, arriving at Nagasaki on Saturday, the 22nd ultimo. The Island of Kugasima is covered with cultivation, and the assemblage of natives collected here and there along the shore showed that the presence of a man-of-war steaming through their waters was an unusual excitement for them. If these Channels through the Goto Islands were surveyed they would probably be constantly used by ships proceeding to Chefoo and Tientsin, especially steamers.—*Rising Sun.*

Extracts.

THE AMOY-FOOCHOW TELEGRAPH.

(Foochow Herald.)

The agreement now arrived at between the Company and the Chinese Government was signed and sealed on the 21st instant. The contract has been signed by the Imperial Commissioner Shen Pao-chen, the Governor-General of the Province, the Manchu Commander, and the Governor of the Province—under instructions from the Tsung-li Yamên. It is a noteworthy fact that these high officials were represented throughout the negotiations now concluded, by the President of the Tung Shang-chü, or Foreign Trade Committee, the successor in office to Loo—whose powers the high authorities vainly endeavoured to repudiate when the first difficulty cropped up. The payment of an ample indemnity, and the purchase of the accumulated material is assented to by the Chinese officials as the two principles forming the basis of the agreement. As regards the agreement itself, we are authorised to publish the following authentic details, viz.:—

First.—The Great Northern Telegraph Company undertake to construct, for the Chinese Government, an overland telegraph between Foochow and Amoy (160 miles) furnishing all the necessary material, wire, cables and instruments; and to construct stations at Foochow, Hing-wha-foo, Chin-chau-foo, and Amoy; and to hand over the line in good working order, and constructed in a substantial manner (this was one of the Company's original propositions.)

Second.—The Chinese Authorities give full protection to the Company's staff, and will protect the material required for the construction of the line. The Chinese Authorities are responsible for theft of the Company's property, or violence to any of the Company's staff.

Third.—The Company shall be enabled to commence the line not later than 15th August of this year, but earlier if found practicable; and shall, when commenced, complete the work with reasonable despatch.

Fourth.—The Chinese Authorities are responsible that no delay is occasioned through unlawful interference on the part of the inhabitants, or others.

Fifth.—In consideration of the Company carrying out this agreement, the Chinese Authorities undertake to pay to the Company the sum $154,500—part of which to be paid on signing the contract; part when the line is completed; and the balance in two half-yearly instalments. It is further agreed that the Company shall work the line for account of the Chinese Government, and teach Chinese pupils the art of telegraphy—on conditions to be specially agreed upon hereafter.

Sixth.—The Company retains the Pagoda Anchorage line, for the present.

Seventh.—The Agreement is written and signed in the English and Chinese languages; and the English text shall be accepted, by both parties, as the original and authentic version, in the event of any dispute arising.

The above, we are informed, constitute the principal clauses of the Agreement arrived at. The Great Northern Telegraph Company are entitled to our congratulations upon having gained their end in such a satisfactory manner. The introduction of the telegraph

into this Province is an event the importance of which will be fully recognized in due time. Let us express a hope that other desirable improvements will quickly follow.

THE LOSS OF THE "HONGKONG."

The inquiry into the circumstances of the wreck of the steamer *Hongkong* in the Gulf of Aden on the 22nd of February last has been concluded, at Greenwich Police Court, before Mr. Patteson, migistrate, and Captain Hight, nautical assessor. Mr. Hamel conducted the inquiry; Mr. Coryton attending for the master of the vessel, Captain Cowley; and Mr. Woods, solicitor, as representative of the relatives of Mrs. Walton and her five children, who were, with six of the crew, drowned on the occasion. The loss of the vessel was attributed to the striking of the ship on what was alleged to be a coral reef, formed between four and five miles from the coast of the island of Abd ul Kuri, not recorded in the Admiralty chart made in 1847. It was contended that there must have been, at least, fifty fathoms of water at the place where the vessel disappeared.

The following is the judgment of the Court: —"After a careful consideration of the whole of the evidence, the Court cannot satisfactorily determine whether, as is alleged, the vessel struck on the sunken rock more than three miles from the shore, or on the reef shown on the chart, and, under these circumstances, the Court is desirous to give the master the benefit of the doubt, and therefore acquit him of any wrongful default for the loss of the ship. At the same time, the Court must observe as to the evils of running and imprudence of going so near to land as even four or five miles for the purpose of correcting chronometers. The Court is glad to find that the discipline of officers and crew was most praiseworthy on this trying occasion, and the conduct of the master after the ship struck was most exemplary. Bearing in mind the importance of the doubts of an undiscovered danger existing in the track of a daily increasing traffic, the Court will recommend that measures should be taken to ascertain the position of this alleged danger, if it exists." The proceedings then terminated, it being intimated that, as the captain's certificate had been lost in the ship, application would have to be made to the Board of Trade for its renewal.

HOUSE OF COMMONS.

Mr. Hanbury asked the Under-Secretary of State for Foreign Affairs if it was true, as stated in a telegram of the 22nd inst., that "the Chinese Government have appointed a person of inferior position as Commissioner to investigate" the circumstances connected with the murder of Mr. Margary; when the despatches of Her Majesty's Minister at Peking, in reference to this subject, are expected, and whether he will take an early opportunity of laying them on the table of the House. Mr. Bourke said no confirmation had been received from Mr. Wade of the statement contained in the Reuter's telegram that the Chinese Government had appointed a person of inferior position to investigate the circumstances connected with the murder. Mr. Wade's despatches were not expected for four or five weeks; and when they arrived, if they could be produced without injury to the public interests, they should be laid on the table without delay.

22nd April.

In answer to Mr. Wait,

Mr. Disraeli said: The telegram in the *Times* newspaper quoted by my hon. friend respecting the unfortunate events which ended in the death of Mr. Margary is of the 10th and not of the 8th instant. On the 4th of this month we sent by telegraph instructions to Mr. Wade to call upon the Chinese Government to make strict investigation into the circumstances of the unfortunate case. Mr. Wade has communicated by telegraph to us that he has made certain demands in consequence upon the Chinese Government. We have reason to believe that these demands (hear) have been acceded to; but, in the absence of details, it is better for the public interest that I should not at present enter any further into the nature of these communications.

AFFAIRS IN BURMAH.

Rangoon Gazette.

The mission of Sir Douglas Forsyth must not be a farce like all the missions which preceded it. Sir Douglas must not humbly kow-tow and petition for leave to beg to be allowed to know the royal wishes in order the better to respect and obey them. We have had too much of that sort of thing in the past. Politeness, tact, a tender regard for other people's feelings, are all very good and proper between civilized, enlightened and refined men. But when dealing with such proud, deceitful and mannerless savages as the Burmese, we ought in justice to ourselves and mercy to the people of this land, simply and briefly to tell them: "We will stand no further nonsense. Such and such are our wishes; we give you twenty-four hours to say whether you will attend to them." Above all, let the arrangements be capped with a certain pledge or guarantee that they will not remain a dead letter like the previous arrangements with weak or vain-minded Chief Commissioner. We must have a gunboat and a full regiment of British troops kept at Mandalay, under the orders of our Resident, but paid by the King of Burmah. All the royal monopolies must be blown to the winds. Above all, a preponderating voice in the King's Council should be given to our Resident, with power to establish a system of administration which will accord with justice and promote the interests of the people *on both sides of the frontier*. We should not stand now upon any delicate notion of the King's supposed rights. By a long course of misadministration he has forfeited all claims to being treated any longer as an independent King. If we do not, at present, mend matters for good finally; if we remain satisfied with an atom of wisdom to a caskful of inanity; if we are going to be soft, gentle, and humble again, because of the royal fool saying at the last moment: "I will deign not to do it again," and thus cause the terrible state of poverty and uncertainty which has existed for so long in Upper Burmah to go on for one or two more generations, we shall deserve to be execrated by that of our own people and despised by that of Upper Burmah. We have only to wish for it, and a world of good will be done at once and for ever. We ought to hesitate the less, as the King has neither right nor might to confront us.

Speaking of Bhamo, however morally certain here the generality of the people are that the Burmese were opposed to the object of the expedition, it will be difficult to bring its disaster home to the King. The best thing we could do in the matter would be to give *ourselves* the benefit of the doubt, and oblige the King to make a tramway between Bhamo and his extreme Northern frontier, and guarantee us the safety of the traffic the whole way within his dominions. With gunboats in Chinese waters, and a Palmerstonian spirit in the language and acts of our representative at Peking, we could not fail to render secure, as well, the way for our caravans on the Chinese side. Then, truly, the merchants of Rangoon, and their correspondents all over the world would see glorious times. Knight of Yarkand, we look to you to open up for us this, certainly the healthiest and wealthiest country under the sun.

(Civil & Military Gazette.)

The King of Burmah has for some time past meditated hostilities against the British Government, and, when strong enough to do so, intended to pick a quarrel on the question of the Karennee boundary, and our protection of the provinces so named.

Our military readers have only to inspect the map of British and Independent Burmah to convince themselves of the strategical importance of Karennee with its natural boundary—the Salween River, which connects it with the sea and British Ports. At present, this province, or district, is occupied by a race who have for years been under British protection, and the fact of the Thayetmyo frontier line not having been continued or demarcated till it reached the banks of the Salween river in no way obliterated or altered the original boundaries of Karennee, which passed under British protection with that Province.

The object of the Court of Ava (Mandalay) to secure possession of Karennee is very evident. Mandalay, Umarapoora and Ava are hopelessly cut off from the sea by the British holding Thayetmyo. If therefore, by cajolery, diplomacy, or armed force, Karennee could be taken possession of, the Burmese King, with his Court and entire army, would speedily establish themselves at the new capital (Karennee), and, having the Salween open to the sea, Martaban and the British possessions could at any time be attacked; and as the inland portion of Karennee (*i. e.* the province), is miles within the Thayetmyo frontier line, the Burmese army would actually be separated from the heart of British territory by a bamboo fence or pine-apple hedge only, as might be most convenient to the Golden Foot.

The deplorable murder of Mr. Margary has unexpectedly disclosed important Burmese State secrets, and, by placing us on our guard, has done much towards defeating the hostile schemes of the last despotic ruler of Burmah.

The season is now too far advanced for troops to take the field; but not a moment should be lost in arming the Karens (especially all those who have embraced the Christian religion) with Enfield rifles, ammunition and suitable clothing; pay and provisions being provided for the Christian militia of Karennee.

THE BLOCKADE QUESTION.

(Overland Trade Report.)

But the cases (of Hongkong and Gibraltar) are widely different. Hongkong is a free port, dependent on its commerce for existence; Gibraltar is a fortress, garrisoned and maintained for no earthly reason but to enable the British Government to keep the door of the Mediterranean always open to her ships. Nor is it likely we can treat China as we treat Spain. She will not treat us as an equal, and every Treaty we have made with her has been wrung from her at the sword's point. Lord Carnarvon admits that many excesses and abuses have been committed under colour of this right of search, but in another paragraph he asserts it is our duty, as a friendly power, to make concessions even though unimposed by international duty. This sort of talk is all very well when uttered about a nation that is both civilised and friendly; but most of the residents out here are inclined to think, judging from the actions of the Peking Government, that they are by no means cordially disposed towards the foreigner, and that their policy lacks the enlightenment and liberality that should signalise a civilised state. For this reason we are not inclined to look with much favour upon the appointment of a Consul for China in Hongkong, whether he be a native or of alien nationality, believing that the authority with which he would be invested might, if he were a native, be greatly abused, and, if he were an alien, the Chinese traders might not regard him with much confidence; while in either case the appointment might be construed by the Chinese people as a concession extorted from our fears. The action of Lord Carnarvon is extremely unsatisfactory altogether, and is eminently calculated to impair our credit and damage our prestige in the East. At the same time, it is a tacit encouragement to the Canton Authorities to persevere in their career of plunder, extortion, and oppression. We cannot hope for any abatement of their arbitrary and defiant proceedings after being thus snubbed by our own Government, and it will not be great matter for surprise if in future the cruisers carry on their squeezing operations inside the harbour.

THE GALE AT HONGKONG.

(Daily Press.)

The gale alluded to in our yesterday's issue continued on Monday night to increase in violence. It could not be said to be a typhoon, but there was every appearance of one blowing very close to us. The squalls were, however, exceedingly heavy, and by midnight the storm was at its height. The gale first commenced at N.E. and veered round to the S.W. through W. The rain accompanying it was terrific between 10 and 11 o'clock. The steamship *Ningpo* sheared off clear of the *Achilles*, and steamed out to the Eastward of the men-of-war ground without any damage to either. The American bark *Edward James* lost her mizenmast in one of the squalls in the course of the day. She was lying over at

the Kowloon Docks, having a new mainmast fitted in. The stays of the mizenmast having been loosened from the mainmast, it took very little to cause it to be blown over the side. At 11.30 p.m. the British bark, *St. Andrew's Castle*, lying off the Sailors' Home without ballast or cargo, was in great danger of capsizing, and to save her it was found necessary to cut away the main and mizen-masts. The German bark *Sudan*, lying out in the middle of the harbour abreast of the Canton wharf, was at 12.30 in the same predicament, and to save the vessel, her main and mizenmasts had to be cut away. At West Point several cargo boats and sampans were broken up, and three junks foundered. Several boat people have been missing, but as yet only the body of one child has been picked up near where one of the junks foundered. The *Kinshan* did not start for Canton yesterday morning till eleven o'clock.

The damage done on shore, though widespread, was happily not very serious. The water in the harbour seems to have been up on the Praya, but very little injury has resulted. The houses facing the harbour, with one or two exceptions, seem to have escaped. Before midnight, the front of the house known as the "Empire Tavern," No. 262, Queen's Road, also the next house, No. 260, and part of the front of house No. 258, came down with a crash into the street, nearly killing a woman and two children who were lying down inside. This is not much to be wondered at, as the walls are stated to be only one brick thick, and the houses are three storeys high. The tenants have, we believe, complained of this fact, and expressed their opinion that the fronts were giving out and would fall in the next storm. No heed seems to have been taken of the notice, and the results are as stated. The front of the house known as the "Liverpool Arms" is also in a dangerous state, being bulged out, and the cross stone propped up with a piece of wood. The roofs of a row of houses in the Queen's Road, next to the P. & O. Coal Godowns, have been completely blown away. The fronts of two three-storied houses, next to the Novelty Iron Works, also came down with a run. One very large tree next to the No. 7 Police Station was torn up by the roots, and completely blocked up the Pokfullum Road. Passing along the streets in Taipingshan, numbers of venetians, etc., were seen to have been blown down, but this was all. In Hollywood Road a great many branches of trees were lying about, and some of the houses in the same locality were more or less injured. The verandah of No. 24 was unroofed, and one or two of the adjoining houses lost a great many of their tiles. Part of the front wall of No. 11, Elgin Street, gave way to the gale, but the breach is only slight. Caine Road for some distance was strewn with branches, but the residences along it were not much harmed. A fine tree near Dr. Clouth's gateway, in Castle Road, was very much mutilated. Some railings at West Terrace were blown down, and several small trees laid prostrate. A tree inside Sir John Smale's gateway was also destroyed. Standing at the water tank in Caine road and looking down on Taipingshan, a number of Chinese houses could be seen more or less injured. The Sing Ping Theatre roof was pretty well stripped on one side. An out-building at Baxter House was partly blown down, but the house itself escaped. All the bamboo sheds at Captain Sands' Patent Slip at West Point have been blown down. Mosque Terrace and Seymour Terrace were uninjured, with the exception of the loss of a few tiles and a venetian here and there. The water at Old Bailey Street seems to have rushed down with great force, as a part of the road at the top has been washed away, leaving several very deep ruts and laying the gas pipe bare. A verandah at the back of one of the houses in Arbuthnot Road was blown down and the roof damaged. The Public Gardens have again, we are sorry to say, come in for their share of disaster. A number of the trees and shrubs have been either broken or uprooted altogether, and many of the flowers in pots have been completely destroyed. This is all the more to be regretted, because the gardens were just beginning to recover their wonted appearance after the injury sustained last September. A number of trees outside the Gardens, and several in the grounds of Government House, were also destroyed. Government House itself, although well exposed to the fury of the gale, was not damaged. The Cathedral was equally fortunate. The City Hall fared rather worse, many of the windows and some of the venetians were broken. The garden wall of General Whitfeild's late residence was blown down in several parts. The Murray Barracks escaped, but a number of trees in the vicinity were stripped of their branches. Several of the buildings in the Naval Yard sustained some injury, one especially being considerably damaged in the roof. The destruction at Wanchi has not been very extensive. Several trees about St. Paul's College and Wyndham Street were also very much broken. Many of the verandahs of the houses in Wyndham Street facing the harbour were unroofed, and the servants' quarters were also much damaged.

At the Peak there appears to have been considerable damage done. The signalman's house, which was thought capable of standing almost any storm, sustained severe injury. The signal mast and yard escaped harm this time, as the topmast had been struck in the afternoon.

Law Reports.

CIVIL SUMMARY COURT.

Shanghai, June 7th.

Before R. A. MOWAT, Esq.

TING HO-MING *v.* W. WYLES.

Plaintiff sued defendant to recover $77.25, or the return of certain goods. He had also summoned the same defendant for assaulting him while on the voyage from Shanghai to Hankow, but the charge, as will be seen below, was not pressed. The case presented some peculiar features. Heding acted as interpreter.

Defendant is chief officer of the *Peking*, and the plaintiff is a lamp-trimmer on board the same ship; in reply to his HONOUR, the former admitted that he held in his possession a chest, $6, a watch, and a clock, the property of the plaintiff.

The HONOUR asked why defendant held possession of the property?

Defendant replied that plaintiff had deserted from the ship. He was entered on the articles, and his time would not be up for two months.

Plaintiff acknowledged that he had no permission to leave the vessel,—he left because he had been beaten, and was afraid of being beaten again.

His HONOUR said if plaintiff left his ship without permission, the captain or officers could detain his things until his return. He appeared to have entered for a certain time—why did he not return?

Plaintiff replied that he had entered for four months, and had served that time. He was not told to put his name down again, and did not agree to serve for any time afterwards.

His HONOUR asked to see the ship's articles.

The CAPTAIN (who was also present in Court) said plaintiff's name was entered as A-qua.

His HONOUR, on referring to the articles, said the plaintiff appeared to have signed for four months from the 30th March.

Plaintiff said he knew nothing about it.

His HONOUR asked whether the articles were signed at the Consulate Shipping Office?

Defendant replied they were signed on board the ship. Plaintiff deserted on the 1st June, having served two months under the articles the second time.

His HONOUR said plaintiff must know that in English ships, seamen entering were required to sign their names.

Plaintiff said he was not called upon to sign, and he was not able to write.

His HONOUR, referring to the articles again, said it was clear the same person had made the same mark for all the crew.

The CAPTAIN said each man touched the pen while the mark being made.

His HONOUR said it would be just as well, in all cases, for each man to make his own mark as to touch the pen.

Plaintiff was then examined as to why he deserted, and said, when he left Shanghai he had some salt fish and some mushrooms which the mate threw overboard. He had also a handkerchief, which the mate, finding some foreign letters upon it, accused him of stealing, and beat him four or five times with a rope while on the voyage to Hankow. When the ship got to Hankow, his (plaintiff's) friends complained of that treatment, and the mate was summoned to appear at the English Consulate, but no decision was given.

His HONOUR (to the defendant)—What is your version of that?

Defendant said it was the Captain who was summoned for assaulting the plaintiff, and he was fined $20. The plaintiff deserted the same night, and came down the river in the steamer *Nanking*.

His HONOUR—He charged you with assaulting him. Was the Captain fined for the assault you committed?

The CAPTAIN interposed by saying—I gave the mate orders to flog him.

Defendant said the plaintiff was always in possession of smuggled goods on board the ship,—salt and other things. He (defendant) had thrown overboard 26 bags of salt which the plaintiff had brought on board on the voyage in question.

Plaintiff said he did not know the Captain was fined $20 for assaulting him. He was told by the Consulate authorities to go back to the ship, but did not go. The Captain told the chief mate he was to do able seaman's work, which he could not do, and so was afraid to go back.

The CAPTAIN said that that order was for only one day. Another man was put to do plaintiff's work as a lamp-trimmer, for the time he was away at Court, and he was to have gone back to his own duty the following morning.

His HONOUR said plaintiff must go back to his ship now. He need not be afraid the Captain was going to beat him again and get fined $20 for it. How many bags of salt had the defendant thrown overboard?

Defendant replied 26, 12 of them having been taken out of the plaintiff's chest.

Plaintiff said the bags did not contain salt, but mushrooms.

His HONOUR said if plaintiff, when he went back to his ship, would attend only to his lamp-trimming, there would be nothing the matter. It had been found that plaintiff had charged the Captain with assaulting him, and he had been fined $20; but the Captain said he had given the mate orders to flog him, and that was the assault now complained of. Did plaintiff want the mate punished as well?

Plaintiff said his only wish was not to work in the ship any more.

His HONOUR asked the Captain if he wanted the man back again?

The CAPTAIN replied that he did.

His HONOUR said he must then send him back. If he had heard the charge of assault, he should, in this case, have only ordered the defendant to pay costs. The defendant was nevertheless liable, as well as the Captain, for the assault on the plaintiff. The defendant must of course obey all lawful orders of his Captain, but an order to commit an assault was not a lawful order. The plaintiff, however, did not appear desirous of pressing the charge, and the summons would be dropped. Plaintiff must pay the costs in the civil summary case, but the costs in the criminal case, $1.50, would be returned to him. He must also go back to his ship, do his duty, and he would not be beaten again. He was not entitled to have his property returned to him until he had completed his term of service.

The judgment was explained to the plaintiff, and the parties left the Court.

POLICE COURT.

Shanghai, June 5th.

Before Sir EDMUND HORNBY.

R. *v.* J. F. PRICE

Wilfully breaking a Jinriksha.

Defendant in this case was described on the charge sheet as an unemployed clerk, and was charged with wilfully damaging a Jinriksha to the extent of $1.00.

The coolie said the defendant hired him about 6 p.m. yesterday in the Foochow road, and told him to go to Hongkew. From there he went to the French settlement, and back to the English settlement. Being tired he stopped at the corner of the Szechuen and Canton roads, and asked for his fare. Defendant became very angry, threatened to strike him, and then kicked the vehicle and damaged it to the extent named.

Defendant said it was quite true that he engaged the man. There were two coolies, and the one pushing behind tried to take the contents from his pockets, at which he was angry, and as they did not take him to where he wished to go, he got out and refused to pay the hire; a scuffle ensued, during which the Jinriksha was slightly damaged.

P. C. Trebble deposed—At half past two o'clock this morning, I heard a disturbance in the Canton road, and going to the spot, I found the defendant and a Jinriksha coolie scuffling. The coolie demanded his fare, which the defendant refused to pay, and accused another coolie with attempting to rob him. I took defendant to the Station.

His Lordship said it seemed very strange that the defendant did not give the coolie into custody for attempted robbery; as he had not done so, he could scarcely reconcile the idea that there was any truth in his statement. Defendant to pay $1 for the damage, 200 cash for the hire, and further to pay the costs, or be imprisoned for ten days.

Defendant could not pay, and was therefore taken to prison.

June 7th.

Before R. A. Mowat, Esq.

R. *v.* J. Meehan Walker.

Drunkenness.

Defendant appeared, in answer to his bail, on a charge of drunkenness. He denied that he was drunk, and said he was subject to apoplectic fits.

Police-sergeant Mackie deposed—At half-past eight on Sunday morning, I saw the defendant in a jinriksha, in the Honan road. The coolies in charge of the vehicle did not appear to know in what direction to go. I went to them, and then saw the defendant was unconscious through drink. I tried to rouse him, but could not do so, and then took him to the Central Station.

His Worship—Do you think you could have mistaken his condition,—that it was not an apoplectic attack?

Witness—No, sir; he smelt strongly of drink.

His Worship—Are you sure he was drunk?

Witness—Yes, sir; he recovered his senses in about half-an-hour, but there was no doubt he was drunk.

Defendant wished to say that during the past week he had had several apoplectic fits.

His Worship—Caused by drink, I suppose.

Defendant—I do not know that, Dr. Little knows best about it.

His Worship—I shall send you to prison for a week.

Defendant was then removed in custody.

June 8th.

R. (Mabrook Feroze) *v.* Sheik Cassim.

Cutting and Wounding.

Both men belong to the P. & O. steamer *Zambesi*, and the prisoner was charged with cutting and wounding the prosecutor on board that ship, about midnight on Sunday last.

Deighton acted as interpreter of Hindostani. The prisoner denied the charge.

Prosecutor deposed—I am a fireman on board the *Zambesi*. Prisoner is also a fireman. On Sunday night, about twelve o'clock, I was in the forecastle, lying on the top of a box. The prisoner was in his berth in the forecastle; he was drunk and making a noise. I told him to go to sleep and be quiet. On that he came down from his bunk, came up to me, lifted my blanket, and cut me with a razor. I saw the razor in his hand. He cut me on the arm. I called out for assistance, and some other men came. Prisoner went back into his bunk. He threw the razor overboard, through an open port in his berth. I went to the doctor, and had my arm dressed. The wounds bled a good deal. I was sober at the time.

Mr. Stripling explained why the prosecutor was lying on the box instead of in his berth. The prisoner and he had quarrelled, and he went to the box to get away from the prisoner. In the forecastle of the *Zambesi*, the firemen's berths are on one side and seamen's on the other, and the prosecutor went over to the seamen's side where the box was.

Prisoner, on being questioned, at first said the prosecutor's statement was false. He afterwards stated that the prosecutor took him on shore on the Sunday and made him drunk. He did not know who got him on board, and admitted that he had no knowledge whether he wounded the prosecutor or not.

Prosecutor denied that he was on shore on Sunday with the prisoner.

Mabrook Narub, a coal trimmer, confirmed the prosecutor's statement in every particular.

Dr. Wells, of the *Zambesi*, said the prosecutor came to him between a quarter and half-past one on Monday morning. He had four clean cuts on his arm, severing the skin, and exposing the muscles. They were about an eighth of an inch deep and two inches long. The man did not lose much blood; and would be fit for duty in about seven days.

The Chief Officer, in reply to the Court, said both men joined the ship early in May. He did not know much of them, as they belonged to the engineer's department, but on deck they seemed quiet and well behaved.

His Worship said he hoped the case would be one of warning to the prisoner and all other men on board the steamer, to avoid drinking: if it had not been for the drink, the occurrence would not have taken place. It appeared that the prisoner was so drunk that he did not know what had happened. But, on the other hand—and his Worship could not overlook the fact—if he had not been so drunk, the injuries to the prosecutor would probably have been greater. As it was, the prisoner had inflicted four clean cuts on the man's arm, though fortunately only skin deep. He must go to prison for a month's hard labour, and pay the costs of the case.

R. (Captain Hansen) *v.* six Chinese, crew of *Oscar Vidal*.

Absent without leave.

One of the defendants was boatswain, and the other five able seamen of the *Oscar Vidal*. The evidence of the captain and chief mate showed that on Wednesday last leave was given to any three of the men to go ashore, and that all went leaving only one man (who should have been on watch, but was found asleep in his berth) and the officers on board the barque.

His Worship, having with some difficulty caused the three who left first to be distinguished from the rest, said there was of course no case against them.

The boatswain, on behalf of himself and the other two, endeavoured, through Heding, the interpreter, to show that they had also received leave, but his statement was contradicted by the Captain and chief mate.

His Worship ordered the defendants to forfeit two days' wages each, and to pay the cost of the summons, $1.50 each. In the case of the three who were proved to have had leave, the Captain must pay costs.

Neglect of Duty.

The man who was found asleep in his berth, as above-mentioned, and another who was found similarly neglectful on Thursday last, were mulcted in six days' wages each, and to pay costs.

NAVAL COURT OF ENQUIRY.

Shanghai, June 4th.

A. Davenport, Esq., *Vice-Consul, President.*
Lieut. J. J. Pipon, H. M. S. *Modeste.*
Nav.-Lieut. Pownal Aplin, ,,
G. F. Cates, Esq., Master, P. & O. steamer *Zambesi.*
J. M. Whyte, Esq., Master, British ship *Black Adder,*
W. C. Gillies, Esq., Assistant-Paymaster, H.M.S. *Modeste, Clerk of the Court.*

The Court sat at the British Consulate, to enquire into the circumstances attending the stranding of the British brig *Georgina*, on the night of the 9th of May, on the Blockhouse shoal, and her subsequent abandonment by the master and crew. A narrative of the incidents leading to the wreck was handed in by Captain Mitchell, which it is unnecessary to publish, as the whole of the facts contained in it are included in the subjoined evidence:—

James Alexander Mitchell, examined by the Court, deposed—I was master of the *Georgina*. I have no complaint to make against any officer or man for his conduct on the occasion of the wreck. I passed the Lightship at about half-past eleven on the night of the 9th May. The weather was gloomy and overcast—clear on the horizon, with heavy scud coming up from the S. E. The *Georgina* was drawing 12ft. 5in. at most. There was no pilot on board. I am not a licensed pilot. I have frequently taken the *Georgina* up and down the river myself. I did not consider there was any particular danger, from weather or other causes, in my doing so on the 9th of May. The brig's draught was about a foot lighter than usual. All sail was set, and she was going about four knots. When I passed the Lightship, the tide was nearly half flood. The precautions I took on going up the river were to keep the lead going, station a good look out, and make allowance for the tide. When I let go my anchor, Kintoan Beacon bore S.W. by W. ½ W., westerly, distant about 2½ or 2¾ miles. There is no deviation in my compasses. I have taken no means to ascertain that. I know how to find deviation. When the water first shoaled, the brig was running before the wind, the tide setting N. W., and the wind S. E. When we passed the Lightship, the tide was running about W. ½ S. I know that by the Lightship and another vessel lying near her. The lead was going from the time of our passing the Lightship to coming to an anchor. I have been in charge of the *Georgina* ten months, running from Shanghai. I had the latest Admiralty charts of the river—large scale. I anchored about half past one o'clock a.m., and it was then nearly high water. The tide must have fallen a little at five o'clock, when I tried to get underweigh, but as near as I could judge it was high water. The stream was still running up. The brig dragged her anchor after letting go, and previous to shortening in at five o'clock. It was before the sails were furled that she dragged her anchor. I had to let go my anchor before the vessel had time to get head to tide. I expected I was on the extreme S.E. end of the Blockhouse shoal It was because there was immediate danger that I let go my anchor then. I cannot account for the position I was in—the tide must have been stronger than I thought it was. The last master of the brig told me there was no deviation in the compasses, and the *Georgina* being a wooden vessel, I judged there was none. I have run the vessel up and down the river before with the same compasses. I expected at low water she would take the ground. The sails were furled when I began to shorten in the cable. It was blowing half-a-gale of wind,—having increased gradually from the time I brought up. On finding the water shoaling, I rounded to, and let go the anchor immediately. I did not haul my wind to the southward, because I thought I should run on the Blockhouse shoal. I rounded-to, to the southward. I thought by anchoring there, that if the weather moderated in the morning, I could get away. It was blowing too hard to get away next morning, and the brig drove further up the bank as the tide rose. I commenced to shorten in at 5 a.m. I began to shorten in, to try to get my anchor, before the vessel took the ground. The water had fallen so much before I got my anchor, that she took the ground at about 6.10. I consider it safe for a vessel of the *Georgina's* draught to anchor in three fathoms at low water. The rise and fall of the tide at the place where she struck was about six or seven feet. I could have taken soundings in a boat, before the brig struck, but I did not think it necessary. I knew by the chart and the bearings taken where I was. I have taken a ship up and down the Yangtsze about 20 times. It has occurred to me that the Blockhouse shoal has extended to the southward and eastward, but not to such an extent as it actually has done. I thought it had extended about a mile. I did not see the buoy on the S. E. extremity of the shoal when I was steering up the river. I saw it at daylight, before the brig struck. It bore S. W., about a mile distant, as near as I can remember. I knew the position of the Blockhouse shoal, when the water shallowed. I thought I was in the Channel by the soundings that I had taken before, and by bearings. I did not try if the water was the same depth all the time the brig was at anchor. I tried just before anchoring and shortening-in, and found it three fathoms each time.

Edward Syvres was next called, and deposed—I was boatswain of the *Georgina.*

At about twelve o'clock, on the night of the 9th May, I was called to relieve the watch, and the Captain sent me to the wheel. The brig was then steering N. W. by W. ½ W. I steered the same course till about one o'clock, when the Captain altered the course to W. N. W. The Captain was heaving the lead, and about half past one he found the depth of water was three fathoms. I was then told to port the helm, but before the helm was up, the Captain told me to starboard, and he then ran forward and let go the anchor. The lead was going continually. It was usual for the Captain to heave the lead. He occasionally went below to look at the chart. I have been up the river in the *Georgina* about three or four times. I and the mate usually hove the lead. The Captain expressed no anxiety to me about the position of the brig. He gave me the course N. W. by W. ½ W. when I went to the wheel, and I never altered it until one o'clock. When I ported the helm, the brig did not fall off at all; there was no time for her to fall off before the order was given to starboard. I could see the big Kintoan Beacon when I was steering. It bore four or four and-a-half points on the port bow. The Captain was in the forechains, heaving the lead. He did not mention to me that there was shoal water on his starboard side.

JAMES ALEXANDER MITCHELL recalled, deposed—There were 12 hands on board, all told. On first striking, I tried to get her off with anchor and sails. The anchor came home to within a few fathoms. I was lying five hours with only a few fathoms out. At the expiration of that time a gale set in, and was driving the vessel a-top of her port anchor. I hove that up, and let go the starboard, the weather, anchor. The brig was aground at the time, but lifting with the sea. I first tried to kedge her off two days and a half afterwards, when the weather moderated. On the morning of the third day, I left the vessel. All that time she was bumping and driving further up the bank. I tried to lighten her as soon as I could procure boats. I came up to see the agents, and they made the arrangements for boats, but none came for two days after I got back to the brig It would not have been advisable to discharge cargo overboard, because the neap tides had set in, and it was as well to keep it on board, as the brig had to lie there all the while neap tides lasted. With all the cargo out, the brig would have drawn about 8 ft. 7 in. A tugboat stood towards the brig on the 13th May, the day the chain parted, but she got on shore. No tugboat could come near me, where I was—they all draw, with one exception, more water than the brig did. When the gale subsided, there was at high water about 10½ ft. with a N.E. wind, and 8½ ft. with a southerly wind. The vessel was embedded two feet then. I attempted to weigh at flood tide, because the vessel would have taken the ground before the ebb tide made down. I shortened in cable to 15 fathoms. I let go my starboard anchor before weighing the port, with 20 fathoms of chain at the water's edge. I applied for cargo boats to the agents, Messrs. Morris, Lewis & Co.; my compradore, Jack Ayoung; and the charterer, Nechong. I do not know why boats did not come. I could not stay in Shanghai, as I had to go and look after the vessel. No assistance was offered me. I had only my own resources to depend on. There was only one boat, 15ft. long. I did not cut away my masts. I only sent down the yards, unbent the sails, &c. I do not know if the brig is broken up now. Her back was broken before I left her. I have reported the wreck to the Customs.

WILLIAM KIRBY, master of the tug *Fokelin*, examined by Captain Mitchell, deposed—The brig was well inside the buoy, on the Blockhouse spit, and the wind was blowing very fresh. I saw the *Georgina* swing round suddenly, I think to the northward, but cannot say positively. I saw the crew setting all her after sail, to bring her head round, and the No. 1 flag hoisted—the call for a tug. I steamed towards the vessel, but got on shore. I do not think any tug boat in Shanghai could have got near her. The *Fokelin* was drawing 12 feet or 12 feet 3 in. The sea broke on board of us when we got on shore.

By the COURT—I could not get sufficiently near to send a hawser on board the *Georgina* —we were nearly a mile off. I came to Woosung for shelter. I could not communicate with Captain Mitchell because of the bad weather. I had heard there was a vessel ashore, and went to see what I could do. The crew seemed to be doing all they could to get the brig off into deep water. It is impossible for me to say if they would have succeeded in getting her off, if it had not been for the strength of the wind—the tide is so strong and the ground so uneven there.

The Court was then cleared, and on its being reopened, the Clerk read the following

Decision.:—

The Court, pursuant to an order from Alexander Buller, Esq., Captain of H. M. S. *Modeste*, and Senior Naval Officer, proceeded to investigate the circumstances attending the abandonment of the British brig *Georgina*, official number 64,106, which took place on the 24th May, 1875; and having read the protest of the master and officers of the said brig, and considerately weighed and considered the evidence brought before it, is of opinion that the loss of the said brig *Georgina* was caused by her driving on shore on the Blockhouse shoal in a gale of wind.—That her proximity to the shoal was owing to the master not having known her exact position, and being unaware of the strength and set of the tide.—That the master was imprudent in running so far up the river at night, without a pilot, and is therefore deserving of censure.—The Court is, however, of opinion that after the brig got on shore, every exertion appears to have been made by the master and crew to save the vessel and cargo; and that the abandonment of the vessel was justifiable.—The Court therefore think fit to return the master his certificate of competency.—The costs of the Court to be borne by the owners of the said brig, amounting to Tls. 15 to the clerk and one dollar to the orderly.

Dated at the British Consulate at Shanghai, the 14th June, 1875.

MIXED COURT.

Shanghai, June 7th.

Before the Chinese Magistrate CHEN, and A. DAVENPORT, Esq., British Assessor.

House Robbery.

Two well-known native burglars were charged with the above-named offence. The mafoo at a foreign establishment in the Peking road, went out from his quarters on Saturday night, locking the door with a padlock. On his return, he found the door had been forced open, and two of his boxes placed ready to be taken away. He raised an alarm, and with a native constable, who was luckily close at hand, went up stairs, where they found the two thieves—one under the bedstead and the other trying to get through a window, which he had smashed with a chisel. The remainder of the mafoo's cloths, and also his bedding, were in the room, packed ready for removal. Both prisoners were sentenced to 300 blows with the bamboo, and three months' cangue.

The Hawker Nuisance.

Frequent complaints having been made of the annoyance occasioned by native hawkers and beggars beating gongs and making other noises in the foreign part of the Settlement, the police have for some time past endeavoured to check the nuisance. Ordinary means proving useless, six of the more pertinacious of the tribe were captured on Saturday and Sunday, and this morning brought before Chen, who sentenced them to an additional day's imprisonment.

Serious Assault.

Four native carpenters were brought up, charged with being concerned in assaulting and injuring a native gas-fitter in the employ of the Shanghai Gas Company. The men were all engaged on the same building in the Hankow road, and a dispute arose between them respecting some food. The four carpenters assaulted the gas-fitter, and one of them struck him heavily on the top of the head with a hammer, or other implement, inflicting a severe wound. The sufferer was taken to the native hospital in Shantung road, where he still remains. The prisoners were all taken into custody soon after the affair, and were now remanded until Friday.

Clippings.

Colonel Browne, who we see, is to proceed to Peking, will probably, in conjunction with our Minister there, make such representations as will induce the Chinese Government to adopt only one line of action—and that will be to promptly punish the murderers of Mr. Margary. In the event of all reparation being refused for the catastrophe at Manwyne, it is possible we may enter on another Chinese war. We have had so many small affairs lately, Abyssinia, Ashantee, the Nagas, the Dufflas, &c., &c., that something on a larger scale for "our own reporter" to make a fuss about, would be an agreeable change.—*Rangoon Gazette.*

During a recent visit to the Pehling district, we observed a very marked increase in the number of Tea plantations. Large patches of ground that were fallow twelve months ago, are now planted; and still larger tracts are being prepared for the reception of the shrub. Those who have not already seen this charming disirict would do well to visit it. The journey occupies about five hours on foot, or by chair, involving rather a stiff climb up the mountain side; but the tourist will be amply rewarded by the almost unrivalled magnificence of the scenery, the luxuriant vegetation of the country, and the bracing mountain air. Visitors will find the usual amount of accommodation at a small "Joss" House about five miles from the summit.—*Foochow Herald.*

A native paper, quoted by the *Gazette*, says:—On the 5th inst., about 11 a.m., persons living in the neighbourhood of Kawa-guchi, Osaka, were surprised to see a black black cloud rising from the south end of Furúkawa-bashi, near the Foreign Concession. Numbers ran to the spot, from all directions, thinking there was a fire; but it was soon discovered that the dense clouds were caused by a whirlwind, which travelled in a northerly direction, laying everything waste. Tiles and stones were taken so high that they remained aloft about four minutes, or as long as a man could walk the distance of two *cho*. Houses out of its immediate track were unhurt.

The custom of preventing the bride's feet from touching the threshold of the bridegroom's house obtains in China as in Europe. Usually the entrance is covered with red cloth for this purpose. "In some parts of the country she is lifted out of the sedan, over a pan of charcoal placed in the court and carried to her chamber." Amongst the ancient Romans, "fire and water being placed on the threshold, the bride touched both; but starting back from the door she refused to enter, till she at length passed it, being careful to step over it without touching it." (A wedding usage in Yorkshire, by the way, is to pour a kettle-full of boiling water over the door-step just after the bride has left her old home. Without their having any apparent connection, the coincidence of usages is curious.) The ancient superstition mentioned in *Popular Antiquities* was that the bride was not to step over the threshold on entering the bridegroom's house, but was to be lifted over by her nearest relations.—*Folklore—in China Review.*

The community will be pleased to learn that the Municipal Officials have, since the 29th of April last, been doing all in their power to compel owners of jinrikshas plying for hire, to keep the vehicles in a cleanly condition. Persuasion having proved useless, gentle force is now applied in the shape of depriving unclean vehicles of their "number plate," without which it is not lawful for them to ply. Since the date above given, the streets have been cleared of nearly 200 such, and it is to be hoped that the screw will not be slackened until something approaching the cleanly, if not ornamental, appearance of the jinrikshas common in Japan, is attained.

COMMERCIAL INTELLIGENCE.

SHANGHAI, JUNE 11TH, 1875.

Arrivals.—From London, the *Deerhound;* from Liverpool, the steamship *Achilles;* from Marseilles, the M. M. steamer *Tigre*, with the London mails of 23rd April; and from Hongkong, the P. & O. steamer *Nizam*, with those of the 30th idem.

Telegram.—9s. 9d. is the latest quotation for 8¼-lbs. *Grey Shirtings*—Dewhurst's Eagle; *Cotton Mid. Or.*, 8⅛d.; *Lead*, £23 5s., and *Iron*, £9 10s.

PIECE GOODS.—Inactivity—to a great extent enforced by "settling day" and bad weather—has been the prevailing order of things this week, and holders again are largely indebted to the Auctions for their knowledge of the course of business. At the same time, the signs of improvement—alluded to in my last Report—and the disposition of the natives to resume purchases, on the general market, have become more marked, and the dealers speak—with apparent confidence—of extensive operations when they have had time, after the squaring of accounts, to hear from their principals in the interior. Moreover, they aver that present currencies are likely to be maintained,—and go the length even of naming sundry articles that are almost safe to advance in value. Chief amongst these are *T-Cloths, Drills, Sheetings, Long Ells*, and *Camlets*, and the desire to be interested in the cheaper descriptions of those is an earnest of their belief in their own dicta.

At the Auction held on 8th instant—"settling day"—Scarlet *Long Ells* showed a rise of over 2m. 5c. per piece, while Scarlet, Gentian, and Dark Blue *Camlets* were sold at 3 *a* 5 mace per piece improvement, and *Spanish Stripes* at 2c. per yard or so; and 8¼-lbs. *Peacock Grey Shirtings*, which were disposed of on 3rd instant at Tls. 1.60 *a* 1.60½, realised, on the 8th and 10th, Tls. 1.61 *a* 1.61½ per piece; and so with the other goods exposed for sale, *Mahommedan Cloths, White Shirtings* and *Jeans* being the only fabrics which did not bring full prices.

Privately.

Long Ells—assorted—have been asked for, but stocks are held by a few, who refuse to sell on the basis of the improved quotations noted below.

Camlets.—For these also some enquiry has prevailed, but good chops are likewise held for nearer cost.

Spanish Stripes and **Medium Cloths**—Higher offers for the commoner qualities of both articles have been declined,—for the latter principally, because long clearance was an accompaniment.

Figured Orleans.—Sales of inferior, to extent of 3,000 pieces at Tls. 2.80 *a* 3.00, reported. Market weak.

Lastings.—Steady demand for good to best black. Tls. 11.55 *a* 11.60 per piece tendered, against Tls. 11.72—the holders' price.

Grey Shirtings.—9½ *a* 10 lbs. These are evidently still yielding profits, and the fortunate importers are neither grasping nor unreasonable. Their motto seems to be "live and let live," and the motto is by no means a bad one; only, it is not at all times acceptable to such as wish "to make hay while the sun shines," and hence one or two of the transactions booked since last mail day have not given general satisfaction. However, prices have been fairly upheld. But the fact is, the natives, by reason of their heavy engagements "to arrive" cannot afford to let the market fall, and until their contracts are completed, rates are not likely to go much below what they now are. Dewhurst's *Eagle* has been resold at Tls. 2.60, while sales of more ordinary cloths have been effected on former terms. 6-lbs. good common—free from damage or mildew—have been wanted at Tls. 1.25 *a* 1.27 per piece—business small. 7-lbs. of the commoner makes have likewise been asked for occasionally, but the offers have not been liberal enough to produce much effect on sellers. 8¼-lbs. In the absence of country orders, the Auction sales of sound and damaged goods have almost sufficed to meet all requirements. Beyond these, demand for special chops only has been experienced, and Mendel's *Pillar* being one of the favored, has realised Tls. 1.77½ per piece.

White Shirtings.—For finest reeds there is still a market at about previous rates, but 56 *a* 64 Reeds meet with no attention.

T-Cloths.—Ordinary Mexican, as well as the lower counts of 6 and 7-lbs. have been in steady request, and the settlements booked give the following values—viz., 6.lbs.—Common, Tls. 1.15 *a* 1.18; Mexican, Tls. 1.28 *a* 1.30 per piece; and 7-lbs. Common Dewhurst's T., Tls. 1.31; other chops, Tls. 1.25 *a* 1.30 per piece; and Mexican, Tls. 1.39 *a* 1.43 per piece. At Auction, damages of all weights have sold comparatively well. Estimated business, 35,000 *a* 40,000 pieces.

Drills.—The remarks in my last Report are applicable to-day. Both 14 and 15-lbs. have been, and still are wanted, and would command better prices; but they are difficult to be met with. Damaged American Drills at Auction have again realised full values.

Sheetings.—English. Small sales of Godown cargo at a slight improvement; and business projected in goods to arrive per *Glaucus*. The booking of it remains with the importer. Fair offers are in his hands.

Jeans.—No change.

Fancy Cottons.—Light Turkey Reds wanted, 2½ *a* 3-lbs. being almost unsaleable. In the other kinds of Fancies there is little or no movement to chronicle.

METALS.—*Nail Rod Iron.*—Business in *Nail Rods* during the week has been small, a lot of 2,400 bundles Dawes' best at Tls. 3, and one of 2,000 bundles Rodgers & Son's M. M. at Tls. 2.80, to arrive, being the only transactions recorded. Stocks of best are becoming heavy, and holders would willingly go on selling at undernoted rates. *Lead.*—Unchanged. Scarcely any enquiry from native sources. *Tin.*—Lower again with a quiet market. *Copper.*—Demand for *Slab* hardly so strong, but some few sales of *Ore* at quotations have taken place between natives.

QUOTATIONS—DUTY PAID.

FREIGHTS and COALS.—Messrs. Wheelock & Co., in their Circular of to-day, state—there has been little doing in either of these markets during the past fortnight.

And more particularly with reference to the former.

Actually no employment offering for the Newchwang, Chefoo and Swatow traders, and rates purely nominal. For Tea to London, the s.s. *Achilles* is loading at £4, being engaged principally with freight through from HANKOW. Sailing-vessel's rate hence is £3 10s. per ton of 50 feet.

And in regard to COALS, "The demand has been limited," at the following quotations. CARDIFF from Godown, Tls. 9. AUSTRALIA—*Bulli*—1,700 Tons in Godown, at Tls. 6.50. *New Castle*, Tls. 7 per ton. *Anthracite*—AMERICAN.—Stocks held by one native who manages to sell little lots at Tls. 10.50. Cargoes afloat are slow of sale, however, at Tls. 9.00 per ton. KEELUNG and JAPAN nominally worth Tls. 5, and Tls. 4.50 *a* 5.25 per ton.

COTTON.—The market remains in the same condition as last reported. Trifling demand, with supplies scarcely equal to wants.

EXCHANGE.—The sterling market opened at 5*s.* 9¼d. for Bank bills, with a demand at the same time, for Merchants' paper at 5*s.* 9½d. *a* 5*s.* 9⅝d. Later on, Private paper was offered rather freely, and rates steadily advanced. The Banks are now prepared to draw at 5*s.* 9⅝d. *a* 5*s.* 9¾d., and Private bills cannot be placed under 5*s.* 10¼d. *a* 5*s.* 10½d. On India, early in the week, transactions took place at Rs. 315½, and subsequently at Rs. 315 *a* 314. There is not much disposition to draw at quotations. On Hongkong, there are sellers at 27¾, but the demand is small.

NOON.

* Exclusive of import cargoes ex *Rajanattiamuhar, Tartar, Cheviot, Tchihatchoff, Viking, Glenlyon, Antenor, Galatea, Craigforth, Djemnah, Saturnus, Zambesi, Tigre, Nizam, Achilles, Deerhound,* several Coasters, and of sundry re-exports.

EXPORTS.

TEA.—It may be noted that the excess of Export over that of last season is due entirely to the earlier opening of the market at Hankow and Kiukiang.

Export to date, as compared with that of last season, is:—

To Great Britain—Black	Excess	12,066,365	lbs.
,, ,, —Green	.....	.....	,,
To United States—Black	Excess	93,523	,,
,, —Green	.....	.....	,,

Shipments to date have gone forward as under :—

To Great Britain (per Steamer)	23,001,050	lbs.
,, ,, (per Sailing Vessel)	.....	,,
To America (per Steamer)	93,523	,,
,, (per Sailing Vessel)	.....	,,

Black.—Tea has arrived to this market in moderate quantities during the past week, and chiefly from the Hohow and Ningchow districts; very few Hankow Teas have as yet been sent down. The business done here so far has been extremely small, and an attempt by the Teamen to enforce an oppressive change in the mode of payment has had some effect in holding buyers aloof. For such small purchases as have been effected, we consider prices are rather lower than those paid at up river. A few Shongtam Teas are offered but are held for very high rates. Prices paid for Hohows range from Tls. 23 *a* 33, and for Ningchows Tls. 31 *a* 40, but the market is decidedly weak.

Settlements and Shipments, 4,500 chests. Stock (against 11,100 chests last year), 22,000 chests.

The following prices have been paid—

	Exchange, 5/9¾.	Freight, £4 per steamer	Against 1874.
Oopacks, etc.	.....	=	= ..... per lb.
Oonhams and Oonfaas	Tls. 24	= 1/4½	= 1/1½ *a* 1/6 ,,
Hohows and Ningchows	Tls. 23 *a* 40½	= 1/4 *a* 2/2¼	= 1/5¾ *a* 1/6¾ ,,

Green.—There is but little to add to last report; the season generally will be later than that of last year, but musters of Fychows and Ningpo packed Pingsueys are expected in about a week, and Teenkais towards the middle of July.

HANKOW.—An active demand has existed throughout and most teas have been taken at full rates as soon as offered.

Settlements and Shipments—

To date	244.145	chests.	Against in 1874.....188.654 chests.
Stock	25.000	,,	,, ,, ... 50.000 ,,
Do. Ningchows	124.574 ½-chests.		Against in 1874..... ..... 95.975 ½-chests.

Export to Great Britain is as under :—

	1875-76.	1874-75.	1873-74.
BLACK	23,001,050 lbs.	10,934,685 lbs.	11,395,132 lbs.
GREEN	..... ,,	..... ,,	13,912 ,,
	23,001,050 lbs.	10,934,685 lbs.	11,409,044 lbs.
Export to United States and Canada—			
BLACK	93,523 lbs.	..... lbs.	..... lbs.

Chin Yuen Sing's "Gna Ling" ..	Tls. 312½	15/8	Frs. 43.68
Do. "Kin Ling" ..	Tls. 287½	14/4	Frs. 40.22
Tze Che Yuen's "Kin Ling"	Tls. 280	14/0	Frs. 39.25

The greater proportion of silk shown thus far, compares unfavorably with last year's; being much coarser in size and very nibby, especially noticeable in the lower classes of Tsatlees. Coarse Taysaams are cleaner and of better color than last season's. Small parcels of Koo-fong-sing's "Water mark" chop No. 3, and of Red Peacock have been placed on the market, but as yet have found no buyers; for the former Tls. 400 @ 405 per picul are demanded, and Tls. 320 are asked for latter.

The unsold stock is estimated at 4,000 bales.

EXPORT OF TEAS FROM SHANGHAI AND RIVER PORTS,—SEASON 1875-6.

COMMERCIAL POSTSCRIPT.

June 12, 1875.

Arrivals.—(Not reported above.)—June 9th, British barque *Westbury*, from Freemantle; British barque *William Manson*, from Sydney; 10th, British ship *Tamerlane*, from Sydney.

Departures.—(Not reported above.)—June 4th, Russian steamer *Russia*; 8th, British steamer *Gordon Castle*, both for London; 7th, British barque *Grasmere*, for New York.

The English mail steamer *Zambesi* takes about 2,300 bales of Silk, and 1,000 tons of Tea.

Exchange.—On London, Bank Bills, 6 months' sight, 5s. 9⅝d. First-class Credits to Bank, 5s. 10d. *a* 5s. 10⅛d. First-class to Private buyers, 5s. 9⅞d. Private and Documentary, 5s. 10⅛d. *a* 5s. 10¼d. On Paris, Bank, Frs. 7.35. Private, Frs. 7.40 *a* 7.42½. On India—Bombay Bank, demand, Rs. 314 *a* 315½. Calcutta Bank, Rs. 314 *a* 315½. On Hongkong, Bank Bills, demand, 27¾ per cent. discount. Private, 15 days' sight, 28¼. Gold Bars, Tls. 172.00. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 73.225 per 100. Carolus dollars, Sh. Tls. 80.00 per 100. Copper cash, 1,590 per tael.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 12th June:—

Banks.—Immediately after our last report, a sale was made at 24 % dis. (the only transaction reported since 28th April), and the quotation has since been nominally the same, with no sellers, and no buyers except at a considerable reduction.

S. S. N. Co.—The market opened with sellers at Tls. 71, but has since improved—the latest transaction reported being at Tls. 75 for 31st July.

Fire Insurance.—*Chinas* opened with some small transactions at $140 and 141, and closes with buyers—but no sellers—at $142. *Hongkongs* have been in request, but the only business reported is a private sale at $480, $485 can now be got.

Marine Insurance.—*China & Japans*, after being somewhat weaker on the 9th instant—when sales were made at Tls. 91 and 92 for 30th instant, close firm with buyers at Tls. 92 cash. *Yangtszes* are firmer, sales having been made at Tls. 542 and 545 cash. Buyers now offer Tls. 547½.

Shanghai Gas Shares have been placed at Tls. 137.

Land.—A lot of land in Hongkew, north of Hanbury road, with frontage on the Hongkew Creek of about 240 feet, and containing as per title deed 7 *mow* 8 *fun* 9 *li* 6 *haou*; together with 24 two-storied houses and 50 one-storied houses thereon, the present rental of which is about $70 per month, and a timber-yard, leased at Tls. 150 per annum—has been sold at auction for Tls. 4,500.

The Weather has been variable. Heavy rain fell again on Sunday and Monday, with a strong Easterly wind, which drove the temperature down to 69 (max.) Wednesday and Thursday were fine and warm. Yesterday was again wet. To-day is fine and warm. The thermometer has ranged between 80 and 62.

TERMS FOR ADVERTISING.—Ten Lines and under, *One Tael*; each additional line *One Mace*. One-half of these charges for repetitions. Contracts may be made for 3 months, or longer, *payable in advance*.

HANKOW.

Messrs. Gordon Bros.' Circular of the 8th June says, the past week has been an entire blank so far as transactions in Piece Goods are concerned; dealers will probably resume business to-morrow, their dragon festival ending to-day.

TEA.—The past fortnight has been one of continued activity, and but for supplies coming to hand slowly the settlements, judging by the competition displayed, would probably be the largest on record.

The weather has again to a certain extent delayed the arrival of the Teas, but we incline to think that a combination on the part of Teamen to feed the market gradually and thus maintain prices has a good deal to do with the small supplies arriving at one time.

The chief settlements since our last circular have been for the London market, all classes of Tea attracting attention.

As to prices, the quotations given below speak for themselves and render criticism unnecessary; we would however again call attention to the more than usual difference of opinion existing as to the quality of the crop and the comparative values obtained, we ourselves seeing no cause to alter our previously expressed views on either point.

The lowest price paid so far for Teas for England is Tls. 17.5 per picul, or 1s. 3¼d. per lb. laid down in London, and this only for 520 half-chests Seangtam Leaf.

Shipments to Shanghai are now commencing, but so far, only the lowest descriptions of Hankow Teas have been forwarded to that market.

Arrivals since the 5th inst. have been on a larger scale, but no decline in prices has as yet taken place.

The stock of Kiukiang Teas in all but exhausted, and supplies of these will now be forwarded to the Shanghai market. Prices for Ningchows have ruled from Tls. 26 *a* 60, and for Ho Hows Tls. 21 *a* 33 per picul.

Musters of 2nd crops are expected to reach this market about the 15th inst.

The following figures indicate the entire business to date (inclusive of Kiukiang Teas) as contracted with the same number of days from commencement of last season.

	1875.		1874.			1875.	
For England.....	211,750	chests.*	189,230	chests.†	Increase.....	22,520	chests.
,, Russia	101,260	,, *	74,970	,, †	,, ...	26,290	,,
,, Shanghai ...	5,090	,,	25,980	,,	Decrease	20,890	,,
	318,100	chests.	290,180	chests.			

* 147,460 half-chests Kiukiang Tea included. † 118,000 half-chests Kiukiang Tea included.

The total export to date is 6,879,044 lbs. over that at same date last year, and Re-exports likewise shew an increase of 2,401,877 lbs.

The following are the departures for London:—

As per last circular.....	9,193,478	lbs.
May 27th.—*Lotus*	2,097,137	,,
30th.—*Glenfalloch*	2,393,184	,,
30th.—*Hankow*	2,786,918	,,
June 5th.—*Gordon Castle*	2,284,056	,,
	18,754,773	lbs.
Against.....	14,664,140	lbs. last year.

The *Strasburg* left on the 1st inst. with 2,692,101 lbs., and the *Russia* on the 2nd with 2,147,902 lbs. The latter cleared for Odessa, and the former for Port Said, for orders.

FREIGHTS.—The *Venice* is loading for London at £4 5s. per ton. The through rate per P. & O. steamer is £4 10s.; per Holt's line £4 per ton. The rate under through B/Lading by ship from Shanghai is £4 per ton of 50 feet.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, JUNE 19, 1875.

THE murder of Margary bears some resemblance to that of Stoddart and Connolly in Bokhara, inasmuch as in both cases the victims were British officers, duly accredited by their Government. Poor Margary's is by so much the worse that it was committed, we might say, under the very nose of our Indian Administration, and at a time when our prestige stood as high as it has done for the last half century; while that of Stoddart and Connolly took place upwards of a thousand miles from our frontier, in a wild and proverbially lawless country; and at a time when our disasters in Afghanistan had not only blocked our way to obtain redress, but seemed to the fanatics of Central Asia to have once and for all shattered our power to hurt. The murder of the two officers in Bokhara, though never directly punished by the British Government, has, however, been but one link in a chain which has brought down on its perpetrators a condign revenge. If it has, up to the present day, shut off Bokhara from communication with England, it has all the more served to hand over the Khanates, tied and bound, to the all-absorbing power of Russia. More or less inspired by Russian influence, Persia had made one of her customary attacks on Herat, which seemed to us sufficiently important to make arrangements for sending an army into Afghanistan. The Persians withdrew; but for the sake of a demonstration, our troops unluckily were ordered to advance. Badly handled, they were treacherously cut to pieces; and though we amply revenged the deed, the remembrance of the defeat at the Khyber Pass has since sat like an incubus on the Indian Government. While apparently successful, our officers had been sent into Central Asia to open communication with the Khanates. The Russian Government had many causes of complaint against the Turkoman rulers of Central Asia. Their caravans were plundered, their territories harrassed, and their people made slaves. It was evident that such a state of things could not last. Sooner or later Russia would seize the opportunity of taking her revenge, unless matters were put on a more satisfactory footing. We were well established at Herat, and from thence to Bokhara was seemingly but a little way. Stoddart, to whom afterwards was joined Connolly, was to endeavour to persuade the Ameer to give up the Russian prisoners, and to abstain from such exactions on trade as were giving them the needed pretext for eventual war. For a time all went well, till the disaster in Cabul determined the Ameer to get rid of his unprotected guests. A Russian embassy at the same time nearly shared their fate; but, more fortunate—as Russia looked nearer than did England at the time—were finally allowed to depart, but without succeeding in the design of their mission. The Ameer having by these deeds cut himself off from all communication with the outer world, the Khanates from year to year became more fanatic, more unbearable in their conduct toward their neighbours, and, like thieves left to themselves, more prone to internal dissensions. The advice given by Stoddart was set at nought, and Russia and Persia—the two nearest countries—were impartially made the objects of constant raids. Unfortunately, Persia was pretty nearly as much torn by disorders as the Khanates themselves; so, finally, on Russia fell the lot of punishing the States which had made themselves notorious over the world. The Ameer endeavoured at various times to correct the political error of the murder of the British officers. So dire an offence could, however, not be pardoned. We could not help with our counsel the ruler who had in cold blood murdered our Resident; so, particle by particle, and bit by bit, the Khanates have become absorbed in the ever-growing Empire of Russia.

As we have said above, the murder of Margary, inasmuch as he was

an officer of Her Majesty's service, and at the time travelling in the employ of the Government, bore some resemblance to the other tragedy. It has, however, this grave and marked difference—that, while the one was committed at a distance, and almost, so to speak, beyond the sphere of our natural influence, the other was done close to our own frontier; and by the agents of powers over whom we have only our own vacillating policy to blame, for having lost our wholesome influence. Eight years ago, the coalescence of China and Burmah to stop the road of an English Envoy would have been a matter which would not have entered into the minds of either. The jealousy of intrusion, similar to that which prompted the tragedy at Bokhara, doubtless existed—strongly developed—in both quarters; but respect, or its near neighbour, fear, would have prevented it taking the form it did. Now even that the deed has been committed, we miss any proof that it is being taken up as it deserves. Day passes after day, and month after month. Yet no step is taken to make even preliminary enquiry. In the meantime we have, from the Governor of Yunnan, a foretaste of the spirit in which the Chinese are likely to meet the enquiry. In reply, apparently to enquiries from Peking, the Governor professes entire ignorance of the matter—the first intimation of which, he says, reached him from Peking! He has appointed the General commanding at Tali-fu, and the Taotai of the Yunnan circuit, to enquire into the case, and no doubt their report will be a marvel of Chinese ingenuity. If it is not proved to a demonstration, as the *Spectator* suggests, "that no such person as Mr. "Margary ever existed, or that he "was killed by a tiger, or that he killed "himself,"—we may be sure it will be proved that Chinese officials are blameless. Either the outrage will have been perpetrated by uncontrollable hillmen, or will have been excited by some misdeed of Mr. Margary among people instinctively hostile to foreigners; or some equally plausible tale will be invented by the provincial authorities in Council; and the Commission will write their report backwards, to make the facts square with the conclusion. What object the British Government and its Representative in China can have, in giving the Chinese time to arrange these preliminaries, and efface, as far as possible, traces of the crime—is a mystery we fail to fathom. We can only wait, and hope that they will do at last what they might have done at first—act on their own conviction and on the circumstantial evidence of the case. In the meantime, it is curious to note that Li Sze-tai, the Chen-kwo-jui apparently of the outrage, has gone to Burmah—no doubt for the purpose of arranging with his fellow-conspirators a plan of action for escaping from the trouble they have raised.

Summary of News.

The French mail of the 7th June arrived yesterday, by the M. M. str. *Ava*.

The American mail of the 15th May arrived on the 14th instant, by the P. M. str. *Costa Rica*.

A mail left for America on the 16th, by the P. M. str. *Costa Rica*.

A mail leaves to-morrow for Europe, by the M. M. str. *Tigre*.

The following Reuter's telegrams have been received during the week:—

THE ASCOT HUNT CUP.

Thurmgrian (? Thuringian)..	First.
Prance	Second.
Whitebait.....	Third.

THE GOLD CUP.

Doncaster.....	First.
Adventuriere	Second.
Nongat	Third.

The Sultan of Zanzibar has arrived in London.

The Sassoon Wet Dock at Bombay was successfully opened on the 8th, and a steamer entered.

The steamer *Carrisbrooke* has been seized on the coast of Hainan by the Chinese gunboat *Penchaohai*, which suspected smuggling.

Alexander Collie, of London and Manchester, have suspended. The liabilities are three millions.

Robert Benson & Co., Kings Arms Yard; and Rainbow, Holberton & Co., St. Helen's Place, have suspended payment. Further failures are expected. Money tighter.

A Concordat between Russia and the Vatican, announced by *L'Univers*, is contradicted, only reapproachment (?)

A meeting of shareholders in the Hongkew Wharf Co. was held on Tuesday, to confirm the proposal of amalgamating with Hunt's and Heard's Wharves, which had been agreed to at the meeting in April last. —The necessary alterations in the Deed of Settlement were agreed to, and a revised draft of terms of agreement was passed.

The Municipal Council seems to have been chiefly occupied with the Yang-king-pang bridge question, on which a rather warm correspondence has been exchanged between the two Councils.—The iron bridge over the Hongkew creek has been lowered, and was opened on Saturday. The alteration is a great improvement.

The French Council meeting of the 2nd June seems to have been occupied chiefly with public works. Negociations are to be entered into to get the cession of a strip of land off the French Consular compound, required for widening the Rue du Consulat.—The French Foreign Office decline to lease the Bund in front of the Consulate for the location of a public pontoon.—The meeting of the 10th June settled the Yang-king-pang bridge question. —The tax on jinrickshas is to be raised from Tl. 0.20 to Tl. 0.25 per month.

Mr. Medhurst's Lecture before the Temperance Society, on Tuesday evening, attracted nearly all the Chinese scholars of the Settlement, the subject being "Chinese Poetry." The lecturer succeeded in rendering his subject interesting alike to sinologues and to his auditors generally. Admiral Ryder occupied the chair. Mr. Wade made the motion of thanks; and after expressing his interest in the Society, made some off hand, but lucid, and even eloquent remarks on the poetry of the Middle Kingdom.

We print on another page the short lecture delivered by Dr. MacGowan at the last meeting of the Asiatic Society.

Favoured by dry, if not very pleasant weather, M. Soulié's benefit came off at the Circus on Tuesday night; but we regret to say that, financially, it was hardly any benefit, the attendance being comparatively scanty. The Shanghai Volunteers had accorded their patronage on the occasion, and a goodly number of the officers and men of the corps were present, only two of the latter, however, donning the uniform. The feats of climbing, balancing, &c., of the Japanese troupe were, as usual, simply astounding, and drew forth rounds of applause. Among the more noticeable feats, were what are called "the pyramid of boxes," "the fox screen," and "the broken ladder," which, for skill and cool daring, could scarcely be excelled. The performances throughout are well worth seeing.

The adjourned hearing of the case against Captain Brown, for compensation to the families of the Chinese drowned in the *Fusing*, was again postponed yesterday, in consequence of Mr. Medhurst's departure for Chinkeang. A full report of the first day's proceedings will be found on another page.

Two Ningpo men charged with attempting to utter a forged cheque for Tls. 300 on the Hongkong and Shanghai Bank, were taken before Chên and Dr. Yates, at the Mixed Court, on Tuesday. The prisoners had been remanded for a fortnight to permit enquiries to be made, the result being the discovery that the cheque-form was found to be one that had by accident become detached from the book in possession of a foreigner. It was found by his dog-coolie, and by him taken to the other man, who filled in the body in something like pidgin English, so that the attempted fraud was at once seen. Chên seemed at first disposed to send the prisoners before the city authorities; but he yielded to the representation that the case called for immediate punishment, and passed severe sentences on both prisoners—the dog-coolie to receive forty blows with the heavy bamboo, with three months' cangue; and his accomplice two hundred blows with the light bamboo, with two months' cangue.

At the Supreme Court, Wednesday, the case of the "*Fusing* v. *Ocean*" was taken before the Registrar and Merchants, on reference, to assess the value of the first named steamer, the cargo she had on board, and also the effects of the Captain, officers, crew, and passengers, at the time of the collision. The Court was composed of R. A. Mowat, Esq., Registrar, and Messrs. J. Thorne and G. W. Coutts, Merchant Assessors. Mr. Drummond appeared for the *Fusing*, and Mr. Wainewright for the *Ocean*. The Court was numerously attended by Chinese interested in the investigation. The amount claimed for the ship alone was Tls. 101,000, and for the cargo Tls. 51,000; that for the private effects of the persons on board is not yet set down. The entire day was occupied in the examination of witnesses as to the value of the ship and

cargo, which portion of the case was not concluded when the Court rose.

H. M. despatch vessel *Vigilant* returned to Shanghai Monday, having on board H.E. T. F. Wade, C.B., Colonel Browne, Mr. Grosvenor, and Mr. W. F. Mayers. The party landed in the forenoon, and proceeded to the British Consulate.

H. M. corvette *Modeste* left on the 14th instant for Hongkong. Her place will be filled by the *Thalia*, which came up the river on Saturday morning.

H. M. ship *Thalia*, in steaming up to her anchorage off the Settlement, was fouled off the Pacific Mail Wharf by a large junk, carrying away the foremost port quarter boat davit and damaging the boat. The junk's stern was also much damaged and her mizen mast knocked over the side. The cause of the collision was that the junk Captain, fearing he would not clear the *Thalia*, let go an anchor which turned the junk round to the strong ebb that was running.

We hear by a private telegram, that Senör J. F. Elmore, LL.D., Minister for Peru, is passenger for this port per *Oregonian*, due to-morrow. As we have mentioned in another place, Dr. Elmore is *en route* for Peking, to ratify the Treaty with China.

We learn that Admiral Ryder contemplates leaving this port for Yokohama, in H.M.S. *Vigilant*, about the 18th inst., and that His Excellency will be accompanied by Colonel Horace Browne and Mr. Mayers, of Her Majesty's Legation. The immediate object of Admiral Ryder's visit to Japan is understood to be the completion of the arrangements entailed by the removal of the Marine Battalion from Yokohama; but it seems unlikely that the head of the late exploring party in Yünnan and the Chinese Secretary of Her Majesty's Legation at Peking can have anything to do with these arrangements. If Colonel Browne and Mr. Mayers were going westwards instead of eastwards, their movements would appear less strange, under all the circumstances. The British Minister has once more taken up his abode in the Settlement, and with the Yünnan question "in the air," as it seems to be left, we can see no earthly reason why His Excellency should not, as our evening contemporary facetiously suggests, be devoting his energies to a new edition of the *Tzu Erh Chi*, instead of the unprofitable task of Peking diplomacy.

It is currently reported that a memorial from Tsen, the Governor of Yünnan, with reference to the murder of Mr. Margary, has at length been received by the Peking Government. As might have been expected, the provincial authorities profess entire ignorance of the matter, the first intimation of which they represent as having reached them from Peking. The step they are said to have taken is to appoint General Yang, commanding at Tali Fu, and a Taotai named Chén, to institute an enquiry into the facts of the case. We presume, however, that the Commission of Enquiry thus constituted will be regarded in no other light than that of a simple preliminary. The natural consequence of its report should be the removal of the officials whom it must inculpate, to stand their trial at Peking. Meanwhile, it appears from recent telegrams that the active agent in the crime, Li See, otherwise known as Li Chen-kwoh, has paid a visit to the capital of Burmah, as bearer of a despatch from the Chinese Government to the King. The purport of such a communication, at such a juncture, and by such a hand, it is not difficult to surmise. In the meantime, the following pithy paragraph from the *Spectator* seems accurately to describe the situation :—"It is stated "that Mr. Wade, the British representative "at Peking, has insisted on an enquiry "into the recent murder of Mr. Margary "in Western China. The Chinese Govern- "ment has yielded 'under pressure,' and "two British officers are to accompany a "Chinese official to Yünnan, the province "where the murder occurred. Of course, "every facility will be given to the officers, "and every needful hint to the people, "and it will be proved to a demonstration "either that no such person as Mr. Mar- "gary ever existed, or that he was killed "by a tiger, or that he killed himself."

The Mandarins are apparently beginning to find out that Lekin taxes are oppressive. A few days ago, the *Peking Gazette* contained a document, recognising that it was desirable to reduce them in Szechuen. The *Gazette* of the 23rd May contains a report in the same sense from the Governor of Kiangsu. The theory, however, is being very hardly carried into practice. Taxes are only taken off one or two minor articles of food in this province. Those on commerce generally, remain untouched.

A PEKING correspondent writes on the 4th June :—No rain here yet. Thermometer for last five days ranging from 68 to 101 maximum. Prince Kung and his brothers are praying for rain, but none comes. From Paouting Foo, where an American Missionary is located, we hear that a foolish report has sprung up in the town, that the Missionary has a dwarf from Kansuh, which he keeps in a box. Quite a number of people, apparently of good standing and intelligence, have called to ask about the truth of the report, which they are evidently not inclined to disbelieve. Meantime no harm has come of the rumour.

A serious riot has occurred at CHINKEANG. Some braves insulted the American Consul and his wife. Two of them were arrested by the British Consular constable. Their comrades and an immense crowd of Chinese attacked the Consulate and endeavoured to force the gates. Eventually the riot was quelled by the arrival of the military mandarins. Mr. Baber, who is in charge of H. M.'s Consulate, is given much praise for the coolness and courage he showed. Mr. Seward and Mr. Medhurst went up to Chinkeang yesterday to insist on the punishment of the rioters. H.M.S. *Thalia* and the U.S. gunboat *Palos* have left for the same destination.—Messrs. Spencer and Wolff write from Chinkeang on the 16th June :—"There is a fairly active demand for Grey Cottons, but the continued wet weather still checks clearances and prevents dealers from operating so freely as they otherwise would.—Woollen and Fancy Goods are almost entirely neglected."

The FOOCHOW *Herald* of the 10th June says—No further disturbances have been caused by the gang of smugglers, referred to in our last issue; but a feeling of uneasiness still prevails. A body of about 200 Native troops are now encamped on the hill near the Custom House at the Pagoda Anchorage.—H.B.M.S. *Hornet* returned from Tamsui on the 5th instant. The *Herald* trusts she will remain in port during the height of the Tea shipping season, at all events. "As it is evident that the native authorities will do little in the way of protecting us against the lawlessness of their people, we should endeavour to impress upon our own officials the desirableness of furnishing us with more ample means of defence."—Another addition to the Arsenal Fleet—the *Yüan Kai* —was successfully launched on the 4th instant. She is 202 feet in length, has a beam of 33 feet, and a depth of 17 feet. Her gross tonnage is 1391, and her engines are of 150 horse-power. She is intended for the transport service, and is the sixteenth vessel launched at the Pagoda Anchorage Arsenal. We understand that the keel of a steam gun-vessel was laid on the same day.—Negociations for the purchase of the Pagoda Anchorage telegraph line are nearly concluded. As in the case of the Amoy line, the wire will be worked by the Great Northern Telegraph Company—under contract.—Messrs. Douglas Lapraik & Co.'s S.S. *Namoa* has been chartered to load Tea at Foochow for the Australian Colonies.—On Sunday and Monday last, more than the usual amount of excitement and din prevailed amongst the boat population. The festival of the "Dragon Boats" was the excuse for creating a disturbance on the river, worthy of the infernal regions. —The Foochow Market Report of the 11th instant says :—A large business has been transacted in Tea during the week, and although Teamen have submitted to a slight decline for some kinds latterly, there has been more doing, and taking quality into consideration opening rates have been fully maintained. Sterling exchange being lower this season the laying down cost compares favourably with the same period last year. The total export to date is 711,160-lbs., against 598,485 last year.—The *Glenfinlas* (s.s.), with the first of the new season's teas for London left on the 6th instant, followed on the 9th instant by the *Braemar Castle*, and on the 10th instant by the *State of Virginia*; the *Agamemnon* (s.s.), is leaving to-day. The steamer *Montgomeryshire* is on the berth for London at £3.10, and the steamers *Statesman* (full), *City of Baltimore*, *Glenlyon*, and *Viking* at £4; the sailing vessels *Nyassa*, *Thermopylæ*, and *Forward Ho!* at £3.10 per 50 cubic feet. Expected—*Glamis Castle*, (s.s.). For Australia, the following vessels are loading:—*J. H. Jessen*, *Minna*, *Nautilus* and *Empress of China*. Expected—*Canton* and *Namoa* (s.s.)

HONGKONG news will be found on another page. No more lives have been saved from the *Poyang*.

News about TONQUIN differs according as it comes from an official or unofficial source. The *China Mail* correspondent does not take a bright view of French policy there. The Saigon official newspaper says it is all right.

Ratifications of the Peruvian treaty have been exchanged at YEDDO, where a grand entertainment was given by Dr. Elmore on the occasion.

Editorial Selections.

RIOT AT CHINKEANG.

A RIOT has occurred at Chinkeang, which seems to have very narrowly stopped short of having serious consequences. For some time past Foreigners have suffered occasional annoyance from the rudeness of the native soldiery, a large number of whom are quartered in the neighborhood; but no collision has happened until Monday last, when a very serious outbreak occurred. The American Consul, Mr. Colby, and his wife, were entering the Settlement on their return from an afternoon walk, when they were greatly annoyed by some soldiers, who roughly hustled them, at the same time using very disgusting language. A Municipal policeman expostulated with them, and told them it was the American Consul and his wife whom they were insulting. Instead of desisting, however, they turned upon the policeman, and were using him very roughly, when the British Consular constable come up to the rescue, arrested two of the rowdies, and carried them off to the Consular jail. A large crowd, among whom were many soldiers, at once began to assemble, and endeavoured to force the gates of the Consulate, which were however defended by Mr. Baber, the Interpreter in charge of the Consulate, and the Constable. As news of the affair spread, thousands of Chinese crowded on the hill, the few British residents also making their way to the Consulate, to stand by their Representative. Some soldiers had in the meantime gone off to the barracks to summon their comrades in force; and Mr. Baber, on his part, sent in to the Taotai, to request assistance. Shouts of "Ta yang kwei-tze"—(kill the foreign devils) were loud; and matters looked very awkward, when a military Mandarin rode up and, using a club freely among the rioters, drove them back from the gates. This was the turning point of the riot; other military mandarins arrived, and shortly after a posse of officers from the Taotai's yamên. Mr. Baber now insisted on handing over the prisoners to the custody of the latter, who at first refused, but afterwards consented, to receive them and took them into the city. The crowd began now to disperse under the influence of the officials. A guard was placed at the approach to the Consulate, and order has not been since disturbed.

It is evident, however, that the matter cannot be allowed to rest here. Such offences as insult to the Consul of one nation, and an attack on the Consulate of another need severe treatment; and we are glad to learn that the infliction of adequate punishment will be insisted on. This was demanded by the British and American representatives at the port; but the Authorities appear to have hesitated so far, to treat the case with the severity it requires. The demand will, therefore, have to be supported, and Messrs. Medhurst and Seward have gone up in the *Nanking*, and will be immediately followed by H.M.S. *Thalia* and the U.S.S. *Palos*. The gravity of such cases can hardly be measured by the actual offence, though that is sufficiently great; unless punished with a strong hand, the ruffians who commit them are encouraged to further aggressions; and they acquire, therefore, a political importance beyond the actual crime. At a place like Chinkeang, where the community is small, and a number of soldiers are always in garrison, besides those continually passing through, the residents would never be safe from insult unless the case is pressed against the prisoners who were fortunately arrested, and against the ringleaders of the attack on the Consulate, whom the Authorities can no doubt identify if they choose. The Chinese brave is the most rowdy and impertinent specimen of his race. A correspondent, writing from Chinkeang in regard to the present affair, says instances are not uncommon of their walking upstairs in a Foreigner's house; only recently, in Shanghai, we had to complain of the Viceroy's guard intruding into the grounds of foreign houses on the Soochow Creek. People do not take notice of such cases, to avoid the appearance of causing needless trouble. But they all go to swell the aggregate of annoyance, and to render the necessity for stern punishment more urgent, when a really flagrant case occurs. It would be well to take the opportunity of insisting that Chinese soldiers should be kept altogether away from the neighborhood of Foreign Settlements. It is fair to remark that the military mandarins appear to have acted well at Chinkeang in striving to quell the riot. Neither should a tribute be omitted to the coolness and courage shown by Mr. Baber, in face of the actual attack and the serious prospect that at one time threatened.

CHINA AS A MILITARY POWER.

WE have often expressed our doubts as to the practical utility of the steps being taken by China to strengthen the military power of the Empire. In fact, we have pointed out that, in some particulars, and notoriously in that of self-respect, the Chinese of to-day are really weaker than they were when as yet their old military system was untried against the warlike arts of the West. Various causes have been at work to produce this unsatisfactory result; notoriously, the utter corruption of the Empire has found a fine field for its exercise in the new and, to China, untried field of military preparations. Independently of this evident source, there is another equally powerful, and that is the inability of the Chinese mind to grasp the long series of inductive processes which have led up to the present state of Western science. To imitate what is before him, without thought as to the reasons of its existence, is the natural limit of the Chinese intellect; and this is no less marked in military than in civil arts. It is thus that external form takes the place of internal organisation. The means are confounded with the end; and a battalion which under a drill sergeant can contrive to "face about" and "form fours," is supposed to be capable of doing effective work in the field, even when placed under command of an officer to whom all systems of drill are alike unknown. When, early in the present century, we desired to make an effective barrier of Persia against Russian encroachment, we not only granted a subsidy from the Indian Government, but did our best to introduce European military science into the armies of the Shah. The result is thus described by a competent authority, Major-General Sir H. Rawlinson:—"It can be proved, we think, that whatever benefit Persia may have derived, as far as regards centralization of the power of her monarch, from the introduction into her armies of European discipline, she has been, as a substantive power, progressively weakened by the change, and rendered less capable of sustaining a pressure from without; and it follows, therefore, that if she had been in danger of absorption by Russia under the old system, she must long ere this have ceased to exist under the new. It would detain us too long to explain the seeming paradox of discipline engendering weakness. If it be remembered, however, that when the system is affected with chronic paralysis, the attempt is vain to restore any particular member to a healthy action, it will be understood that, to a nation devoid of organisation in every other department of government, a regular army was impossible. It thus happened that, notwithstanding the admirable material for soldiery which was offered by the hardy peasantry of Azerbijan, and the still hardier mountaineers of Kermanshah,—notwithstanding that a due proportion of physical courage appertained generally to the men—the disciplined forces of Persia, considered as an army, and for the purpose of national defence, were from the epoch of their first creation contemptible. Beyond drill and exercise they never had everything in common with the regular armies of Europe and India. System was entirely wanting,—whether in regard to pay, clothing, food, carriage, equipage, commissariat, promotion or command, and under a lath and plaster government like that of Persia, such must inevitably have been the case."—Substituting China for Persia, we have in the above a not inapt description of the present state of affairs here. In one respect, probably, China is in advance of Persia, as

possessing a more settled government; in others, as in the quality of the troops, it is vastly inferior. What could not be accomplished by one, we may rest assured cannot be done by the other, and if the preparations for war of the more Western State have really proved a source of weakness rather than of strength, there is no reason to doubt a similar result in the more Eastern. In this, however, China is only following in the wake of European experience. An army, or the spirit which creates an army, cannot be called forth in one generation. How many were necessary for the formation of a really indigenous Russian army, history can relate. Yet Russia, wiser in her generation than China, bound to herself those foreign officers whom she had induced to enter her service; and to the present day the armies of the Czar are largely officered by captains whose names hand down the reminiscence of the original home of their ancestors. The Chinese, full of conceit in military as in other affairs, imagine that once they have caught hold of the mere externals of an organisation, they can dispense with the services of those who have helped them on. It is thus that the Arsenals have fallen from the efficiency to which they had attained under their first organisation, and it is thus that the levies of troops which, under the command of a general like Gordon, proved themselves a serviceable if not a very formidable enemy, have degenerated to such battalions as those which, in Formosa, find themselves unable to cope with the native tribes. Indeed, the whole progress of the difficulty with Japan went to show how utterly incapable the Government of China was of grasping the real requirements of the case. Money was expended sufficient to have inaugurated an important campaign, and the sole result to be seen is the few battalions of semi-drilled troops more dangerous to their friends than their enemies, which are now to be found in the island of Formosa. The forts on the Yangtsze and at Woosung have absorbed sums of money wholly out of proportion to their efficiency. In fact, it is doubtful if the old forts which endeavoured to stop the passage of the British fleet in 1842, were not more effective than the mock iron-clad batteries which now line at intervals the banks of the Yangtsze. Yet it is for works like these that China has been content to run her exchequer bankrupt, and has overtaxed her people till taxation is killing the commerce on which it is levied. Trade has been fettered, till trade has refused to respond more to the calls made on it; and not content with this practical illustration of the impolicy of the course adopted, attempts have been made to coerce individual merchants. The fancies which in other Asiatic countries impel individual despots, in China affect the whole Government; so that it matters little to the subject whether he suffer under the irresponsible will of a single despot, or under the no less oppressive, but more certain grip of a corrupt oligarchy.

RUSSIA AND TURKESTAN.

THE wish is often father to the thought, and so we must accept with a great deal of reservation Russian accounts of proceedings in Eastern Turkestan. Still there seems to be some evidence that, for good or evil, China is about to commit herself to an attack on the Ameer of Kashgar, which, whether she is successful or not, will almost certainly result in her own discomfiture. The statements made on Russian authority are so manifestly self-contradictory, that we wonder at any credence being placed in them in Europe. First, we have strange accounts of the British embassy to Kashgar, the untruth of which is too manifest to need contradiction. That mission is said to have consisted of 300 members!—150 of whom were left behind at Kashgar and Yarkand, to assist in manufacturing arms for the Ameer! We have then an account of growing dissatisfaction against the Ameer's rule, which, read by the light of the experiences of the British Embassy, seems strange. We are told in one paragraph that the Tunganees enjoy most of the Ameer's confidence; several of his officers are of that race, and he has further strengthened himself by marriages with the families of the chiefs. Next we are told that the Tunganees are deeply disaffected, owing to the extortions of the Kashgarese. Thirdly, again, these oppressed Tunganees are governed under the Ameer by chiefs of their own, and at Manassi and Urumtsi, the ports occupied by Kuli Beg last year, enjoy perfect peace. Fourthly, these Tunganees who enjoy the confidence of the Ameer, are but a sorry lot, possessing no regular army, and armed only with cudgels, spears, a few matchlocks, and a little powder brought from Kamil (we presume our authority has forgotten the 150 British whom he left in Turkestan manufacturing arms). The affair would be absurd, were it not that greater absurdities have been readily seized at St. Petersburg as a plea for further extensions of territory. After these absurdities comes, however, the pith of the matter. These poor, miserable, peaceable, unarmed, hostile Tunganees, enjoying the confidence of, but deeply dissatisfied with, the Ameer, have been undertaking foraging excursions against the Kalmuks in the North. No less than 6,000 (!) of them arrived at Tokhtarun, on this object intent. They plundered the Kalmuks, and on their return were absolved by Yakoob Bey on payment of a sum of money. Curiously enough, though the occupation of Urumtsi has effectually cut them off from China, they are anxious to emigrate, to escape from the constantly threatening Chinese. More curiously still, these oppressed and disaffected Tunganees chose as their place of settlement Kashgar itself (very like jumping, we should have reasoned, from the frying pan into the fire) or Kuedju. A note on the border station of Shikho, where are entrenched camps, commanded by Chinese of utterly incomprehensible names, follows. The Chinese are stated to be desirous of interfering with the Buddhist Kalmuks, and knowing the ridiculous obstinacy of the Chinese character, when it is bent on a wrong course, we can readily believe any folly on its part. They are said to be anxious to recommence warlike operations. The troops at Barkul and Kamil (Hami) are to advance towards Kashgar, while those from the guard at Yarbagatai are to march on Urumtsi. This statement seems to tally with recent notices in the *Peking Gazette*. King-lien, Tu-tung of Urumtsi, was, in August last, appointed Imperial Commissioner, with Kin-shun as his second. The *Gazette* of May 3rd orders Tso Tsung-tang to take up the former office, while King-lien is to return to Peking. Kin-shun, directed on May 3rd to assist Tso, is the next day appointed commandant at Urumtsi, in King-lien's place. These changes probably indicate the intention of the Chinese to prosecute the war. Our own opinion has always been that such a policy is suicidal. Not only are the resources of the Empire taxed beyond endurance for the accomplishment of an end which would, in the case of success, prove a constant drain and source of weakness; but an opportunity is afforded to Russia of interference. The latter power has been watching eagerly the progress of events in Eastern Turkestan, and has alternately been urging on each side to a contest, sure to weaken both. The British Minister, doubtless, did good service when his advice prevented war between China and Japan. However annoying such a war would temporarily have been, its effects would not have been so serious as are likely to result from the contest in Central Asia. We have no great desire for the discomfiture of the Chinese, but at the same time we cannot but think that the most fortunate thing for the Empire would be the effectual defeat of their troops by the Ameer, and the formation of a really strong kingdom at Kashgar.

LOCAL SQUEEZES.

A SERIOUS effort is at last likely to be made, to combat the system of local taxation which weighs on trade of all kinds in the Settlement. Very few of our readers probably know how comprehensive that system is, how complete the organisation by which it is worked, nor how minute the details to which it condescends. There is, in the first place, a sort of Petty office for Foreign affairs (局捕會), in Hankow Road, which seems not to collect taxes, but to keep a certain control over the Runners

—especially the opium men—who do that work. This is presided over by the same Magistrate who sits in the Mixed Court in the French Concession. For the actual collection of taxes, there are a variety of offices, each having cognisance of a particular class of goods. The head Opium office, for instance, is inside the South Gate; and to it used to be taken all the men caught "smuggling" in the Settlements, before preliminary consignment to the Mixed Court was agreed on in order to preserve a better check on the Runners' proceedings. There is, we believe, no branch of this office in the Foreign Settlements; its does its work by means of the Runners—whose exactions were lately condemned by Sir Edmund Hornby as distinctly contravening the Treaty. Not the least startling fact elicited at that trial, was that these men have been so far recognised as to have warrants granted them by the British Consul and by the Municipal Council. The practice has been given up for some years, so far as the Consulate is concerned; but the Council continue it. The warrants do not amount to much, certainly; they simply recognise that the men are agents of the Opium tax office; but this recognition of an illegal tax is objectionable; we have more than once said that we hold the duty of the Council rather to be to resist it; and we hope a first effect of the present discussion will be to prevent the issue of any more such documents. It is noteworthy that Sir Edmund's judgment seems already to have had an effect. It was no doubt translated in the City yamêns, and we hear that no cases of arrest by the Runners have since come under the cognisance of the Police; though the usual taxes are of course persisted in, where they can be quietly levied.

The squeeze which most directly affects Foreign interests is on Piece Goods. The (所公貨洋) Foreign Goods office, which honours this branch of trade with its attention, is located in the Shanse Road; and we believe the following tariff will be found a strictly accurate one, of the duties which are levied under its auspices :—

	Pcs.	Tls.		Tls.
Grey Shirtings, per bale of	50	2.31	on a val. of	1.85
White Shirtings, per case of	50	2.43	,,	1.95
White Brocades,	50	3.00	,,	2.40
White Spots,	50	1.80	,,	2.25
Dyed Brocades,	50	3.75	,,	3.00
Dyed Spots & Gen. Shrtgs.,	50	3.00	,,	2.40
Chintzes,	50	1.87½	,,	1.50
Dyed Damasks,	40	4.00	,,	4.00
Velvets or Velveteens,	24	2.52	,,	5.00
Turkey Reds,	50	3.00	,,	2.40
Muslins,	100	3.00	,,	1.20
Dimities,	100	3.75	,,	1.50
Blue Mottles,	60	3.45	,,	2.30
Handkerchiefs, dozen	200	2.50	,,	0.50
T-Cloths,	50	1.62½	,,	1.30
Sheetings,	30	1.87½	,,	2.50
Jeans,	30	1.57½	,,	2.10
Drills, American,	15	1.05	,,	2.80
Do. English,	30	1.72½	,,	2.30
Span. Stripes & Med. Cloths	6	2.76	,,	20.00
Dutch Camlets,	10	4.60	,,	20.00
English Do.,	10	4.15	,,	18.00
Long Ells,	20	2.76	,,	6.00
Lastings,	20	5.52	,,	12.00
Lustres—Fig., Plain, &c.,	50	5.75	,,	5.00

This office has agents at every bridge leading into the English Settlement, and at each crossing along the Honan —which thus justifies its old name of "Barrier"—road. Every Chinese shop-keeper who desires to purchase and remove a bale of Shirtings from a Foreign Merchant's godown to his own premises, must obtain from the Yang-poo Koong-sze a permit, which is checked by its agents *en route*. No doubt a little evasion goes on. Although directly accountable to the Taotai, the office receives no pay. And probably three bales are let pass under a permit for two, on the understanding that a small present is given which goes into the pocket and towards the expenses of the petty mandarin in charge. There is no disguise about it; any one can walk into the office and see the tariff list hung up. Of the Defence Tax office (局防籌), which is at the back of the Foreign Customs, we had occasion to speak recently. Then there is an office for taxing Straits Produce, located near the East Gate; and every article of Native Produce is similarly afflicted by officers detailed in all directions for the purpose. The following are a few of the rates so levied :—

	T.m.c.c.	
White Sugar	0.2.2.5	per picul.
Brown Sugar	1.3.5	,,
Sapan Wood	2.0.0	,,
Flints	0.4.0	,,
Sandal-wood	2.5.0	,,
White Wax	3.6.0.0	,,
Gypsum	80 cash.	

Not even a couple of ducks can be sold in the Maloo without contributing their quota to the official maw. Every ham that is sold in any petty shop in a back street has paid its tax, and a heavy one, to the local mandarins. Such matters, however, are too small for special offices; they are farmed out by tender. A large dealer in ducks or hams pays a lump sum to the Taotai, and recoups himself with a margin from his co-dealers, as he best can.

As we have said before, there is no mystery in the matter, the offices are there for every one to see; even the farmer of the tax on ducks has a paper posted in his shop, conferring on him the authority. A man in Smith's market used to have the privilege; probably he has still. And as the books of every individual dealer are at the mercy of the officials, there is no chance of evasion. All that can be done is to compromise, and a certain amount of relief is no doubt obtained by this process. The relief, however, is small, and the impression left on one's mind is of wonder how trade can exist at all under the exactions with which it is saddled. As we said at the outset, we are glad to know there is hope of a determined effort being made to shake off at least such levies as are palpably opposed to Treaty stipulations. Our course, so far at least, is logical and clear. Neither can we see any reason why a further effort should not be made to fight the whole question. The petty taxes used not be levied, and there is no reason why they should be so at present. Let us cease asking the Taotai for contributions to anything whatsoever, and request him to refrain from levying any taxes whatever within our limits.

THE YANG-KING-PANG BRIDGES.

A rather warm correspondence has passed between the French and English Councils on the Yang-king-pang bridge question. It opens with a petulant letter from the French Council, which rather exceeds the limits of official remonstrance and is founded moreover on strange misconceptions of the constitution of the English and American Settlements. Our readers however will form their own opinion of its contents. We only purpose noting two points. 1°—The French Council find a grievance against the English Council, on account of a resolution passed by the Ratepayers' Meeting in June last year, in favour of amalgamating the two Settlements. Now that resolution was proposed by Mr. W. H. Carter, and the English Council had nothing to do with it. It was a simple expression of opinion by the Ratepayers, that amalgamation would be desirable. It was not in the power of the Council to stop the vote, and they expressed no opinion either for or against it; and it follows, as the Council point out, that the insinuation that they were influenced in their action regarding the bridges, by a desire to promote that amalgamation, is as far-fetched as it is incorrect. 2°—In view of the English Council's distinct refusal to pay more than half the cost of the bridges over the Yang-king-pang, M. Voisin concludes his letter by stating that the Consul for France has been requested to place that matter before the Consular body! Now we would not be thought wanting in respect to the Consular body; but we cannot help asking what on earth they have to do, or can have to do, with the matter? Of course we cannot pretend to say what view the Treaty Consuls hold of the precise point at issue; but we can venture to conceive their answer—that they have no power whatever to control the expenditure of the Ratepayers in this Concession; that if they (the Ratepayers) decline to pay more than half of the cost of repairing the bridges, no power exists to make them pay more, and that if they prefer to let the bridges fall down these will have to fall. We repeat that the French Council evidently misunderstand the "constitution" of the Northern Settlement. We quite agree with the tone of Mr. Purdon's reply, and need only add that the Council have been thoroughly supported throughout, by the general opinion of the Ratepayers.

However, we are delighted to learn that the difficulty is at last terminated, and hope the Minutes of the respective Councils will now subside to a normal size and condition. The arrangement come to seems a fair one; what is regrettable is, that, though the English Council suggested it long ago, the French Council appear to have overlooked it—otherwise the whole polemic, including the futile appeal to the Consuls, might have been avoided. It will be remembered that the trouble began about wheelbarrows. Seeing that

the English and American Settlements contain a vastly greater mileage of roadway than the French, the principle of halving the total wheelbarrow fees between the two Settlements was objected to as unfair, and ⅔ and ⅓ suggested as a fair partition. The French Council replied that if they were only to get ⅓ of the fees, they would only pay ⅓ cost of the bridges over the Yang-king-pang, instead of ½ as hitherto. Seeing that the bridges are quite as necessary to the French as to the English Settlement, the English Council very rightly refused to build or repair another bridge on these terms—and hence the deadlock. The French Council proposed arbitration, but the alternative was declined; the English Council feeling, we presume, so strongly that they were right, as to decline admitting the doubt arbitration might imply. The French Council then appealed to M. de Chappedelaine, to induce the Treaty Consuls to interfere; but the Treaty Consuls had nothing whatever to do with the matter. The Ratepayers in this Concession regulate their own finances, and if they decline to pay more than Tls. 15, no power exists to make them pay Tls. 20. At last, after all this excitement, the English Council chance to recapitulate, in a letter of the 7th June, the negociations which have taken place, and mention among others a suggestion once made by their delegates at a conference held to seek for a solution. This was, that wheelbarrows be placed on the same footing as jinrickshas; that is, that a maximum number of vehicles be agreed on, that each Council be empowered to issue licenses for half, and keep what fees it gets. It is to be regretted that the proposal was overlooked when it was first made, but the French Council now take it up and accept it as a fair and equitable solution. The origin of the difference being thus removed, the offshoots disappear also. Each Council will collect its own license fees, each will pay half the cost of the bridges, and we shall not have to wade across the Yang-king-pang.

REVIEW.

The Ethics of Spiritualism. —F. H. Balfour.

We have received an interesting little pamphlet, by Mr. Frederic H. Balfour, entitled "The Ethics of Spiritualism." The pamphlet is a reprint of a paper which appeared in the *Celestial Empire* of the 5th instant, suggested no doubt by the increasing attraction which the subject has for some persons in Shanghai. We confess that we are not among the number, and cannot pretend to review critically the interesting essay which Mr. Balfour has compiled. We cordially agree in his disgust at spirits who "play a fiddle in "the dark and then shy it across the room; "slap peoples' faces when the unfortunate "dupes have been put upon their honor not "to touch their hands; almost rival con- "jurors in their clever tying and untying "of ropes; cause huge tables to indulge in "elephantine gambols, and inspire smaller "tables to try their hardest to get up the "chimney." We share his difficulty in understanding why "spirits" should usually talk such wretched twaddle; and are generally repelled by the charlatanry with which "spiritualism" is surrounded. Still, it is difficult to discredit the mass of testimony that there exists some ill-understood force, by which certain peculiar results are attained, and Sergeant Cox's theory of Psychic Force seems to contain the most likely explanation. We cannot do better than quote a few passages from Mr. Balfour's précis of this doctrine, and leave our readers to draw their own conclusions:—

Those in whom it abounds most copiously, are those in whom clairvoyance is most highly developed, and in whom the marvellous but by no means supernatural gift of thought-reading is brought to its greatest perfection. The so-called medium between the mortal and the spiritual is thus the subject of Unconscious Cerebration, and, self-deceived, is the prolific though unintentional means of duping others. Serjeant Cox attributes the movement and levitation of inanimate objects solely to this electric force emitted unconsciously from the highly-charged frame of the Psychic, and entering the object thus acted upon. * * * * When the Psychic is in a state of trance, the strange power of brain-sympathy or thought-reading is brought into play; and, believing himself to be the medium of spiritual intercourse, he *unconsciously reflects the impressions existing in the brain of his interlocutor.* This theory is illustrated most strikingly by Serjeant Cox; and we cannot make it half so plain by enlarging upon it as we can by giving a few of the remarkable instances in which he put it to the test. It is a well-known fact that an atheistic medium will talk atheism, that a Christian medium will wax eloquent upon Christianity, and a Mahometan medium will strenuously uphold the pretensions of the Prophet. This looks suspicious, to say the least of it. But bring that medium into intimate *rapport* with the brain of the enquirer, and a still stranger result will ensue. Two worthy ministers, a Baptist and an Independent, once had a great argument, like many other worthy ministers of those persuasions, upon the proper mode of administering the sacrament of Baptism. At length they agreed to refer the question to the spirit of a deceased friend. The Baptist opened the colloquy; and addressing the communicator with much solemnity, asked which was the correct method. "By immersion," was the prompt reply. Charmed by this corroboration of his own views, he hastened to his Independent friend and related what had passed. But the Independent thought he would like to hear the doctrine first-hand, and he, too, asked the spirit the same question. "By sprinkling," came the answer back. This was the old story of the travellers and the chameleon, and great was the perplexity of the controversialists; but it was brought to a climax when a Universalist minister appeared upon the scene, in answer to whose enquiries the spirit manifested the most utter indifference to the administration of Baptism at all!

* * * * *

Another test was also applied. The same enquirer asked a spirit its Christian name: knowing at the time that the name of the person in life had been, say, Edward. But in putting the question he forced upon himself the conviction of another name—say Thomas—which he kept uppermost in his imagination and repeated diligently to himself; and sure enough, Thomas was the name rapped out. The same result followed when the age was demanded; the true age at death having been twenty-five, and the false age of thirty-two, imagined by the interlocutor, being faithfully given back by the entranced Psychic. To such a catch-question as—Do you remember breaking your arm on such-and-such a day?—the answer 'yes' has often been elicited, when no such accident had ever happened at all. A friend of our own who was once at a spirit-circle, getting rather impatient, got up and walked to the window. 'Can the spirit tell me what is now going on just underneath?' he asked. 'Yes' was the reply; 'your carriage is being brought round to the front-door from the stable;' an unlucky hit, for he hadn't a carriage at all, but was going to walk. Such blunders as these, and such remarkable coincidences between what is passing in the brain of the interlocutor and the answer given by the Psychic, all point to the conclusion that the power lies *within the circle,* and does not come from anything or anybody outside of it.

Outports.

TIENTSIN.

On the 4th instant, the Chinese gunboat *Chin Hae* returned to this port from Manchuria; but I have heard no particular news by her, with the exception of her having brought down six rebels, or insurgents, or robbers. On the 5th instant, the late acting Customs Taoutai, Sun Szeta, made his farewell calls on the Consuls of the port; and I understand that he will leave here with his family for Shanghai by one of the early steamers. At 9 o'clock on the 6th instant, H. E. Li Hung-chang came to the foreign anchorage off the Settlement in his sedan, to the residence of the China Merchants' Steam Navigation Company, and inspected the Company's new steamer *How Sâng.* He was, as usual, accompanied by the Territorial and Customs functionaries; and the gunboat *Chin Hae* fired the usual salutes. On the 5th instant, the new Customs Taoutai, Lee Chaou-tang, sent a note to the Consuls informing them that the 8th instant being the Twan-yang, term day, the Customs offices would be closed for public business; hence no business is being transacted there to-day.

Yesterday and to-day we had thunderstorms with rain, and the weather at present is in consequence cool and pleasant for this season of the year. The peasantry around here, however, still call out for more rain. On the 5th instant, the *Peking Gazette* announces that the Princes Kung and Tun had prayed for rain.

I hear that the German and Dutch Ministers are each looking for one man-of-war in the North, soon—the former the *Elizabeth* and the latter the *Curaçao.*

8th June.

CHINKEANG.

Our usually quiet and peaceful little port was on Monday last unpleasantly aroused by a disturbance that was likely to have terminated most disastrously. For some time past foreigners have been put to occasional annoyance through the rudeness of native soldiery, some thousands of whom are stationed in the neighbourhood; but their general conduct being orderly, and every allowance made for the difficulty of keeping so large a force quiet, no particular notice was taken. To proceed with Monday's troubles: Mr. and Mrs. Colby, our American Consul and his wife, were returning from an afternoon walk, and had just reached the settlement when they were considerably inconvenienced by the rude behaviour of some soldiers, who, not content with satisfying their curiosity by looking at the foreign lady, roughly hustled her, at the same time using most disgusting language. A native Municipal policeman expostulated with the rowdies, and told them that they were insulting the American Consul and would get into trouble if they did not desist. Upon this, they turned upon the constable and would

undoubtedly have inflicted serious bodily harm, had not Mr. Constable Nunn came to the rescue. Two of the soldiers were taken prisoners to the British Consulate jail, when their comrades immediately rushed to their place of confinment and endeavoured by force to get their release; the gates, however, were quickly closed, and before they could attain their object, the greater part of the Foreign community had arrived at the Consulate. It was astonishing to see the rapidity in which a crowd of some thousands was collected; the whole face of the hill behind the British Consulate was in a few minutes covered with an excited mob, and the shouts of "Ta, ta, Yang Kwei-tze" were anything but pleasant to the ears of the few for whom they were meant. Some soldiers soon left the gates, saying that it was their intention to proceed to the barracks and return with a body of men sufficient to force an entrance and kill all the foreigners. In the meantime, Mr. Baber, interpreter in charge, sent a courier into the City, and shortly some mandarins arrived and gave assurance that they had taken means to keep the mob down. At about 8.30 P.M., we were enabled to leave the Consulate, a native guard having been placed there for the night. I feel that I have already taken up an undue space in your columns; and some of your readers may, possibly, think this is much a-do about nothing; but as an old resident in China, somewhat familiar with similar outbreaks, and not likely to be unnecessarily alarmed about trifles, I may be believed when I state that at one time the slightest thing would have caused a general outbreak, and the result must have been very disastrous. I cannot close without mentioning the admirable coolness and good judgment displayed by Mr. Baber.

16th June.

AMOY.

There is a great dearth of general news in Amoy. Everything appears to be at a stand-still and under the influence of the great heat. The *Esmeralda* is delayed on account of the coolies declining to leave till after the Dragon festival, which takes place to-morrow. The British Consulate and Custom House are to be pulled down shortly and rebuilt. The master and chief officer of a Spanish steamer here have got themselves into trouble for most inhumanly coal-tarring a poor wretch of a coolie who was straying on board. I may mention that the effect of such treatment is almost equivalent to flaying a man alive, as the tar acts as a powerful caustic. The unfortunate victim of this brutal assault presented himself at the Chinese Hospital in a most pitiable state, and was well looked after by the doctors.—*China Mail.*

CANTON.

The typhoon of the 31st ultimo, while causing great destruction to the smaller craft in the river, also did severe damage to the larger vessels, several trading junks in the river trade having foundered with their cargoes. A passage boat that plied between Canton and Sunooy sailed for the latter place, and when it was sighted, the squalls increased in violence. The passengers were so alarmed that they requested to be landed at the nearest point. This was reluctantly consented to by the captain, but no sooner had the passangers landed than the wind blew with great violence, so that the boat became unmanageable, drifted down the river and was smashed against a rock. A gunner on board was crushed to death by the occurrence.—A boat was seen on the 29th ultimo, going down the river with the tide, having on board eight dead bodies. On enquiry it was found that a rice boat belonging to the Chik Nai Hü village was attacked, and that some of the robbers were caught. The villagers executed summary justice on them, and their bodies were placed in a boat for exposure that people might take warning. —A woman in the Poonyü district was found to have poisoned her aunt, murdered her own son, and tyrannised over her second husband. She was arrested and taken before the gentry of the place. They held a mock trial and passed sentence of death on her. The mode in which the judgment was carried out was equally barbarous. They nailed her hands and feet first to a board, stripped her, placed her in a large tub, and pitched her into the water, with a placard fixed over her setting forth her crimes.—*China Mail.*

HONGKONG.

The case of the Club compradore is still unsettled, and the *Mail* has another very sensible article on the subject, which we reprint and fully endorse. As part of a system of interference with the Colony, the case has grave political importance, and should be summarily dealt with. —A meeting of the Victoria Fire Insurance Company was held on the 8th inst. The resolutions passed at the previous meeting for winding up the Company, were confirmed. Arrangements have been made with the Hongkong and China Fire Insurance Companies to re-insure the Company's risks.—The Chinese Dragon-boat festival was duly observed on the same day.—There were some indications of another gale on the 7th, but they passed off.—The *Daily Press* understands that the Chinese boatwoman who the other day saved the life of a little girl who threw herself into the sea, has been granted a free boat license for the remainder of her life.—Nothing has been heard of any further lives saved from the *Poyang*. Capt. Sands, the Superintendent of the Company, has visited the wreck and made arrangements for saving the machinery, &c. The Committee for raising a subscription for the wife and son of the late Captain Carroll, has been enlarged, and now comprises Hon. P. Ryrie, Messrs. Deacon, André, Magniac, J. J. dos Remedios, Hughes, Cairns, Hayllar, Q.C., and Dr. O'Brien. The H. K. C. and M. S. B. Co. heads the list with $500, and the Directors and Committee make up the sum to about $1,400. H. M. S. *Ringdove* reports that the *Poyang* is going to pieces, and that there are a great many dead Chinese floating about. A junk, with five or six armed Portuguese on board, is now guarding the wreck.—As an illustration of the force of the late typhoon, the *Mail* mentions that a small village near Macao, containing about 100 souls, was struck by a tidal wave, greater even than that during the typhoon of last September. Ninety of the people were killed, the rest escaping with difficulty.—The rumour that Mr. Ribeiro, the purser of the late steamer *Poyang*, with forty others, had been found on an island to the leeward of the Nine Islands is not true. The rumour that Captain Carroll had been saved on an island near the spot has also received no confirmation. It is said that the rumour about Captain Carroll was first brought by the arrival of a small junk of questionable character at Macao, with two sharpers on board, who thought to make a good thing out of the job by spreading the report about first, to make it feasible, and then going to Mrs. Carroll, informing her that they knew where Captain Carroll was, and if she gave them $100 down they would fetch him in their junk. Mrs. Carroll, to make sure of her husband's return, offered $500 if they would bring him back, and was about to advance $100 of it at once to the fellows, but was prevented by her friends, who had them arrested and taken before the Court there and questioned, when their character was ascertained.—An inquest was held in Hongkong on the 9th inst., on the body of a European found on the beach at Lantau, among a quantity of wreckage of the *Poyang*. It was at first thought to be that of Captain Carroll, but the evidence at the inquest convinced the Jury otherwise. It was much decomposed. All hope seems now to have been abandoned that Captain Carroll can have been saved.—It is reported that the Chinese Government have applied, through the regular diplomatic channel, for the admission into the English navy of a number of Chinese cadets.

MACAO.

We learn from the Macao *Independente* that during the last typhoon a Chinese boat laden with timber was wrecked at a place called *Tay-tiu*, near the Monkey Island. The villagers, Chinese custom, took possession of the timber as well as of the wreck, and demanded $600 from the owners, who applied for the restitution of their property. Complaints having been lodged at the Portuguese fort of Taypa, a few soldiers were despatched to the village, but the villagers turned out and opened fire on the soldiers, who were obliged to return to the fort. On the 7th inst., the gunboat *Camões*, having on board twenty-five soldiers and an Ensign, proceeded to the scene of the robbery, and on their landing they had also a hot reception. The soldiers opened fire, two Chinese were killed, the village became deserted, and the owners of the timber recovered all their property.—*Hongkong Times.*

TONQUIN.

The humiliations the French suffered at Hué, when going there for the ratification of the treaty, have already produced their consequences in Tonquin. As I told you before, the Annamites have been picking up all the bandits they were able to find on the Coasts of China to augment the number of "black flags" (*pavillons noirs*), now in their pay, who killed Lieut. Garnier and those poor fellows of the Dupuis' expedition who were prevented from rejoining the main body of their comrades. The Annamites' aim is to try to cut off the trade with Yunnan, and they now keep the river from Hanoi to Lao-kai.—The troopship (? transport) *Indre*, arrived from Tonquin on the 17th instant. The news she brought is to the effect that for some time back (*i. e.*, since the humiliation of the French at Hué above referred to) the Annamese Mandarins in Tonquin have spread the information (*bruit*) all over the country that they are going to finish the French, that the "black flags" are coming down against them, and that the pirates will attack them with their junks from the numerous creeks at the seaside; the poor French, taken between two fires, will all perish.

All this, however, does not signify much, but the poor people (the Tonquinese) suffer much by this state of affairs.

What is certain, is, that the Annamites are trying to enlist the Chinese pirates, who are on the Coasts, for the purpose of making them fight against the French. The Annamites' intention is to frighten the French and prevent the opening of trade.

A note from Tonquin was received by the *Indre*, penned as the transport left. It runs thus:—"At the very last moment Father Dumoulin tells me that Commander Dujardin has just been informed (*prévenu*) of a plot, which has for its aim taking the 'poate' at Hai Phang between two fires. When I say two fires, I am wrong. I mean two ridiculous traps, but the Annamites are not very particular (?) (n'y regardent pas de si près.)

The result of all this is, that they are doing their best to enlist at this moment as

many bandits as possible. These monsters, once in the interior of the country, commit all kinds of atrocities on the people. The Annamese Mandarins let them do so ; they even order them to do so, in order to take revenge for the sympathies the people showed the Dupuis' expedition and the European cause.—*China Mail.*

Saigon, 22nd May.

NAGASAKI.

The *Rising Sun* says H. M. S. *Audacious* arrived on the 31st ulto., and left on the following morning for Yokohama.—The U.S.S. *Ashuelot* was to leave in a few days for Shanghai ; she having repaired damages. It will be remembered that her cylinder head cracked as she was starting some weeks ago.—The *Kearsage* was about leaving for Yokohama.—An insurrection is reported as having broken out at Köchi *Ken* in Tosa. Manabe, an officer of the *Ken*, has proceeded there from Yedo for quelling the riot and investigating the grievances of the husbandmen.—General Tom Thumb has a rival turned up in Nagasaki. A few days since an intelligent Japanese about 3 feet in height paid Nagasaki a visit. Some native speculators soon conceived the idea that if they could only secure the person of this little gentleman, a good sum might be made by exhibiting him. Negociations were entered into, and the Japanese public may anticipate the joy of shortly beholding a "dwarf."

HIOGO.

There is very little news worth quoting in Hiogo papers. Captain F. T. Thomson, Professor Wyville Thomson, the Officers and Members of the Scientific Staff of H.M.S. *Challenger*, gave an afternoon dance on the 4th to a party of residents, on board that vessel, which was made as comfortable as possible by the aid of awnings and bunting. Boats were in attendance at the Custom-house landing from half-past one o'clock, and dancing was kept up till six.—The K. R. & A. C. have gallantly placed their Bathing Establishment at the service of the ladies during the summer, from 8 a.m. till noon. —Some great native festival has been going on, one of the most attractive features of which seems to have been a salamander. The animal, however, according to the *News*, had "a decided objection to confinement and to being made a show of. The diameter of the tub in which he was confined was not so long as himself, so he stepped out of it and walked down into an adjoining paddyfield, with his owners in hot chase. By the time he was caught, he and the men were covered with mud from head to foot. Once in the tub again, he was surrounded with a net, and then revenged himself by splashing all the water over the visitors. When he had got rid of nearly all the water, he took the sulks, and refused to eat the small fish given him by the visitors. He has since been sold to a foreigner, and has left in the *Challenger*." —Another article on exhibition is a sun fish —A scratch regatta was held on the 5th.—H.M.S. *Audacious* arrived in harbour on the 8th.

YOKOHAMA.

The only sensation in Yokohama seems to have been the exchange of ratifications of the Peruvian treaty. Senor Benavides, the new Secretary of Legation for Peru at Yeddo, arrived by the *City of Tokio*, bringing the ratifications of the Treaties between Peru and Japan and China. Senor J. F. Elmore received by the same hands the news of his permanent appointment as *Chargé d'Affaires* in Japan and China, and of his having been designated plenipotentiary for the exchange of the ratifications of both the treaties. The 17th May was fixed for the ceremony in Yeddo, and on that day accordingly Dr. Elmore, accompanied by the officers of his Legation, was received at the *Gaimu-sho* by H. E. Terashima Munenori, *Gaimu-kiyo*, the Plenipotentiary specially appointed by H. M. the Tenno, and after the customary ceremonies the Ratifications of the Treaty between Japan and Peru were duly exchanged. We learn that Dr. Elmore will leave for Peking early in the ensuing month, to carry out an identically similar mission, viz., the exchange of the Ratifications of the Treaty between China and Peru.—The *Japan Gazette* gives the following account of a banquet which took place on the evening of 29th ultimo, at the Peruvian Legation, and which was offered by Senor Elmore to the Japanese Cabinet and Foreign Representatives, to celebrate the exchange of the ratifications of the Treaty between Peru and Japan. Their Excellencies, Sanjo, the Prime Minister, Iwakura, *U-daijin*, Terashima, Minister of Foreign Affairs, Okubo, Minister of the Interior, Ito, Minister of Public Works, Kido, *Sangi*, and other Ministers and *Sanyi*, with the members of the Diplomatic Corps, attended the *fête*. The interior of the Legation was tastefully adorned with flowers and rare plants, and brilliantly lighted. The entrance to the residence and the garden (which is famous in Tokio for its beauty) were illuminated by six hundred lanterns, each representing the Japanese and Peruvian flags. —After the dinner had been discussed, Mr. Elmore rose and proposed the toast of "The health of H. M. the Emperor of Japan, and the increasing progress of the Japanese Empire." This was responded to by H. E. Sanjo, who proposed, "The health of H. E. the President of Peru, and the prosperity of the Peruvian Republic." In thanking the Foreign Ministers for their presence, referring to the Peruvian Treaty, the last made by Japan and the second with an American nation, the host afterwards gave "The health of the Sovereigns and Presidents of the several States represented, and the prosperity of their respective nations." Sir Harry S. Parkes, K.C.B., as the *Doyen* of the *Corps Diplomatique*, in reply expressed the thanks of the Foreign Ministers for the courtesy of the Peruvian *Chargé d'Affaires*, and spoke of the pleasure with which they had all seen Peru take her place among the Treaty Powers, and the manner in which she was so honorably represented. The evening passed off most pleasantly, the Band of the Naval Department, composed of thirty-two musicians, playing at intervals. The entertainment concluded with a splendid display of fireworks, in the garden and on the lake.—The *Japan Mail* says—A review of the Imperial troops by H. I. M. the Mikado took place in the neighbourhood of Narashino Hara on the 31st instant. A small body of cavalry manœuvred, and some excellent practice was made by the artillery. His Majesty returned to Yedo on the following day.—The Government has issued orders that, in view of the boisterous weather which prevails on the coasts of the island of Yezo, all vessels which exceed 74 tons burthen shall in future be constructed in the European fashion.—Another notification announces that all native-owned vessels, built after the foreign model, are permitted to carry firearms for the protection of their crews and passengers.—The news of the complete cession of Saghalien to Russia appears to be doubted in certain Japanese circles, and is even disputed by some of the native newspapers ; but the *Mail* is amply assured of its authenticity. —The Cremation grounds at Senji, Yedo, have once more come into use, in consequence of the withdrawal of the prohibition of this mode of disposing of the dead. —The *Nichi Nichi Shimbun* of the 26th instant, reports the occurrence of an unusually severe hailstorm in the neighbourhood of Hachoji. The country for some 12 miles square was covered, the crops have been totally lost, and the mulcereal berry trees severely damaged.

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

May 16th.—Edict punishing an official in Manchuria for laxity in his duties.

(2) Two memorials from Ying-kwei, reporting two appeal cases lodged at the capital by inhabitants respectively of Sze-chuen and Honan. In the one case the appellant's family house was attacked and set fire to by the respondents, and one of the attacking party being killed, a relative of the appellant's was charged with murdering him in broad day, and subsequently died under the infliction of torture in prison. In the other, a younger brother of the appellant's was engaged to be married to a certain young lady, but one of the gentry took a liking to the lady, and the brother being enticed to the house of his affianced was there murdered to smooth the way for his rival—a richer man. A judicial enquiry is asked to be instituted into both cases.

(3) Ching-fuh reports having taken over his duties as Intendant of Newchang, Chingchew and Fung-tien.

(4) Several official changes are reported with his jurisdiction, by the Governor of Yunnan.

May 17th.—(1) An Edict setting forth that the prayers offered up for rain on the 7th of the 4th moon had not been responded to by Heaven, and commanding the Prince of Kung and other of the nobility to repair on the 15th to various Temples, mentioned, to repeat the prayer.

(2) Li Hung-chang, Governor-General of Chihli, makes five representations to the Throne. One, that Fou-tsi, deceased, should be posthumously restored to his original rank of General. Two, an account of repairs to the Yung-ting river during the spring freshets. Three, that a newly appointed Salt Commissioner had taken over the seals of office. Four, removing a Mongolian officer from command over Chinese soldiers, owing to incompetency. Five, recommending four ex-officials for early employment.

May 18th.—(1) The office of commandant of Peking reports the capture of forty-one robbers, and requests that the prisoners be taken over by the Criminal Board.

(2) A decree referring a case of appeal by a woman, Fung-lin, to Tan Chung-liu for adjudication.

(3) The Governor-General of Hu-Kwang, Li Han-chang, and Governor of Hupeh, Eng Tsung-tsioh, report on a conspiracy entered into between a dismissed deputy district magistrate, Sü Cheng-shu, and certain Yamun underlings, Wang-liu and others, to incite the people of Lau-hoken—in the district of Kwang-hwa—to close shops and stop trade. Prohibitory regulations had been put into force to stop the use of spurious cash, and Sü Cheng-shu, being enraged at seizures of false cash made by a Lieutenant-Colonel, Chen Yu-tsuen, resorted to every expedient to create disaffection amongst the people. He first, in conjunction with his confederates, issued written notice to all the shops instigating them to close their shutters, and seeing that this had no effect, on the 11th of the 3rd moon of last year he further hired forty to fifty miserable lads to go about the streets and throw stones into the shops. He further caused one Fung Ma-tsy to collect together sixty or seventy chair-coolies to pass through the town and frighten the people with loud cries. The result was that the residents finally closed their doors ; the salt establishment under charge of Chen Yu-tsuen forming an

exception, Hung Ma-tz led his followers into the place; threw about the salt, and generally looted the establishment. He afterwards proceeded to the camp to create further disturbance, but resistance was here offered; Hung was killed, and his confederates all decamped. The ringleaders, Sü Cheng-shu and Wang-liu were summarily decapitated by special orders at the time, and, after investigation into the affair, several accomplices were sentenced to be strangled, and others to be bambooed and transported. The Magistrate of the locality and the Lieutenant-Colonel are both impeached by separate memorial, for failing to preserve order—the former having first been removed from his post.

May 19th.—(1) Three edicts, in reference to the appointment of a Prefect to an investigation to be held in the Imperial Library, into the capabilities of applicants for Examinership, relating to the approaching examination; and to the division of Kansuh from Shensi, in reference to examination proceedings.

(2) A memorial from the high officials of Kweichow, praying that, in view of the approaching examinations, Examiners be appointed for the province, and the number of degrees to be bestowed be fixed.

(3) Another, from the Governor of the above province, requesting that, in accordance with the established custom requiring the province of Szechuen to provide two million catties of white copper, towards the expenses of the Kweichow examinations; orders be now issued to the said province to furnish, as first instalment, one million catties. The metal is said to be worth Tls. 2.80 per picul.

(4) The Manchu Commander of Chihli recommends various officials, who distinguished themselves in the capture of notorious banditti, for promotion.

May 20th.—(1) The Governor-General of Chekiang, and Governor of Fuhkien, memorialise the Throne, recommending a certain official to the post of Magistrate of Chang-hwa, in Formosa—a position stated to be of great importance.

(2) The above officials further report on an investigation into the escape of felons from the gaol of Tung-tsiang, in the Changpou district, particulars of which had been previously laid before the Throne. Owing to heavy wind and rain, the walls of the prison fell in during the night. The keepers were fast asleep at the time, and the watchman was, further, seeking shelter from the inclemency of the weather, and the prisoners were thus able to make their escape. The gaolers, it is found, were not in collusion with the felons; but for remissness in keeping watch, they are sentenced to one hundred blows each, the punishment being rendered lighter in virtue of the recent Act of grace. The Magistrate, although absent on public duties on the occasion, is still held answerable for not taking proper precautions; and has been dismissed from office.

May 21st.—(1) Several official movements and promotions are gazetted.

(2) Tsung-shih reports on investigations made into affairs at Moukden, in obedience to the Imperial command transmitted on the 17th of the 3rd moon. The rifeness of brigandage in the province is imputed to the laxity and supineness of the officials generally, while several names of important officers are pointed out as being the objects of popular indignation, and whose conduct subjects them to dismissal and disgrace. Referring to an understood regulation, that in no district should more than 20 % of acting officials be allowed, the number of acting posts held is alleged to be far exceeding this limit; and officials are retained in office beyond the prescribed period, owing to an absence of expectant-officials, from whom to draw successors. As a flagrant instance of the effeteness of the Government, a clerk, Hwang Mo-shien, in the Yamên of Moukden, is reported to have exercised for over ten years control over the affairs of the entire province, and under whose evil influence the machinery of Government has become deranged, and the interests of the people completely neglected. The salaries of some of the officials are reported to have been cut down to too low a scale, and as a remedial measure towards stopping corruption and malpractice, a higher scale of pay is deemed necessary. The memorialist here goes on to specify the delinquencies of several officials, with the request that they be degraded and punished, and finishes by the statement that, owing to the utter demoralisation existing, it is actually inexpedient to look too closely for the present into the misdeeds of all the various officials, as complete disorganisation would be the result. He recommends, however, that expectant-officials should be drafted to the province from other quarters, to await employment, and that affairs should be gradually brought to order.

May 22nd.—(1) Several official movements are gazetted.

(2) The Governor of Shansi, Pau Yuen-shun, memorialises at some length, requesting leave to enable him to recruit his health.—Rescript: Pau Yuen-shun is allowed one month.

(3) Ou-tang, Governor-General of Szechuen, memorialises respecting official movements in his province.

(4) The remainder of the *Gazette* is taken up with reports as to Civil Service changes.

May 23rd.—(1) Several reductions and promotions in the Civil Service are gazetted.

(2) The Governor of Anwei reports the completion of a temple erected in obedience to the Imperial will to the memory of a Major-General Chang, who fell while fighting against the Rebels in Hupeh, and requests that the edifice be enrolled in the State list of sacrificial temples; also that the local officials be required every spring and autumn to repair thither, to offer prayers at the altar. The temple is erected at the native town of the deceased—Hohpa, in the prefecture of Loucheu, and is also to be dedicated to the names of his subordinates who fell in the same campaign.

(3) The same Governor further reports that he had removed the Magistrate, Chau Chë-ho, of Hwai-ning, from his post. Chau is stated to be over sixty years of age, and, although his administration of magisterial duties is marked by honesty, care and diligence, his mental vigour has recently been observed to have become somewhat impaired by age. No miscarriage in his conduct of affairs has yet been discovered, but it is deemed expedient, in the public interest, to replace him by an official of a more able and energetic character.

(4) Peng Yu-ling, formerly vice-president of the Board of War, referring to the deep obligations he is under in having been graciously permitted to lay aside the regular cares of office, and, with the exception of a yearly tour of inspection up the Yangtze, to spend his time attending to his health, reports that owing to increasing years — being now past sixty—his constitution is gradually becoming enfeebled, and that, to his other ailments, has been recently added the vomiting of blood. But reflecting on the present reduced condition of the people, on the many embarrassments of the present Government and of the cares of State devolving, by reason of the minority of the present Emperor, on their Majesties the Dowager Empresses, the memorialist deems it the duty of every public servant to be prepared to sacrifice his last drop of blood to the country's weal; and with such views, notwithstanding his present infirm state of health, he purposes to start from Chekiang on the 24th of the 3rd moon on his up-river tour, when he will inspect and make a sweeping enquiry into the state of all the garrison and naval stations along the line.

(5) The Governor of Kiangsu, Wu Yuen-ping, reports on action taken in respect to lessening and abolishing *Li-kin* imposts within his jurisdiction. In view of the still remaining effects of the late ravages of civil war, all measures calculated to foster the resources of the people are deemed to be of the highest importance. An investigation in the various districts of Kiangsu proves that much misery, squalor and depopulation yet exist and, although ten years of peace and tranquility have elapsed, the country has not yet returned to its normal state of prosperity. A consideration of the cause at work points at once to the heavy *Li-kin* duties—higher than in any other province—as the root of the evil, prices of all articles being thereby raised to a high level, and the people finding it difficult to earn sufficient for their subsistence. But the multitudinous and heavy requirements of the Government have to be provided for and met, and any sudden fiscal change becomes a matter of grave difficulty. The only course open is to abolish firstly such imposts as circumstances admit and urgency requires, in order to afford the gradual relief required. Already has the previous Governor repealed, as reported to the Throne, the *Li-kin* on "Keng-shan" rice; and the present memorialist, in view of the theory that "the people are the root of the country, and food the heaven of the people," has deemed it desirable to remove the impost on "Tsung" rice (a glutinous rice not generally used at meals), and other minor edibles. The duty collected on these is further represented to be unimportant, while the benefit to the people will be great. But after consultation with the Intendant of *li-kin* stations, one exception has been made—in the article of yellow peas. The production of these in the province is not large, while the greater portion is exported to Shantung and Manchuria for the purpose of making oil. Their connection with the question of food is of less moment, and the amount of tax collected thereon is also relatively large. In regard to other *li-kin* duties, their gradual abolition will be effected as time and circumstances admit. In the meanwhile, instructions as to the "Tsung" rice and minor edibles have been given to the Soochow and Shanghai *likin* offices—to be further transmitted to all their dependencies.

May 24th.—(1) Several official changes are reported.

(2) The Governor of Honan, Tsien Teng-ming, reports on the trial and award of a case appealed at the Capital. The appellant, a woman, Chang-ee, charged Chang Tung-ming and others with the murder of her husband Chang Peh-chung. Subsequent to a quarrel between the deceased and the respondents, the former's house was entered during the night by a gang of men and the deceased carried away by force. Search was afterwards made by the wife, and the body of her husband found at the bottom of a pond attached by rope to a stone. The wife, owing to the previous quarrel and also to a report given, suspected the respondents of the act, and, failing to gain a conviction, lodged her accusation at the Censorate in Peking. But by a searching trial and investigation made, it is found by the Governor that no suspicion attaches to the respondents, who distinctly proved an *alibi*—being engaged at the time on business elsewhere. The appellant is found guilty of misdemeanour for lodging a false accusation; but the punishment is not to be carried out by reason of the recent Act of grace, and the woman is merely to be placed in charge of her relatives.

(3) Two memorials from the above Governor in respect to official changes within his jurisdiction.

(4) The Examiner of Honan reports on regulations relating to the approaching examination for Chü-jin. Accommodation has been provided in the examination hall for 1,400 candidates. Preliminary examinations are made to weed out the less competent, and thus reduce the number of candidates to the accommodation.

May 25th.—(1) An edict, proclaiming that two successive prayers for rain have resulted in but a few light showers, and commanding that prayers be again reverently offered up on a large scale. The assistance of Tauist and Buddhist priests is to be enlisted on this occasion. A long list of temples which the Princes are respectively to repair to, is given.

(2) A memorial from the Governor-General of Szechuen, respecting the filling up of the post of a colonelcy rendered vacant by death.

(3) Ming-an memorialises that, on the 4th of the first moon of this year, he received a command, through the Board of Rites, to convey the late Emperor's testamentary proclamation to Corea. Subsequently, on the 9th of the second moon, he received another command to convey a manifesto relating to the enthronement, on the 20th of the first moon, of the present Emperor. In obedience to these orders, the memorialist announces that he will start from Sheng-ching (Manchuria), in company with the assistant-envoy, for Corea on the 15th of the third moon.

(4) A memorial from Toh-hua, requesting leave for two months.

(5) Ee-shi memorialises as to resuming sacrificial ceremonies to the Sea Gods of Mongolia, and to assembling and giving a banquet to all the Mongolian alliance-chiefs. These proceedings have been in abeyance for 6 years, owing to disturbance at Si-ning 西甯 and the route being intercepted; and it is now proposed to start during the autumn to follow up and carry into force old regulations. (Note.—The Sea Gods are said to pertain to a sea originally existing in Mongolia, and now dried up.)

May 26th—(1) The Imperial assent to several promotions or appointments is recorded.

(2) The remainder of the *Gazette* is taken up by two reports from Shui-lien in reference to the selection and appointment of two magistrates to posts beyond the border, and also with another in regard to the instalment of a garrison commander in Kwangtung.

May 27th—(1) An Edict announcing the arrival in the capital of the remains of the late Viceroy at Canton, Juy-ling, and appointing a Manchu noble, Tsai-cheng, to go with 10 officers of the Imperial Guard, to offer an oblation before the coffin—that the Imperial regard for old and trustworthy ministers be thereby manifested.

(2) The commander at the Shan-hai barrier reports having captured a suspicious character, Chang-ta, who was under sentence of banishment at Ping-hiang, and had been found outside the limits prescribed.

(3) Shuy-lien reports having despatched an official to continue the survey and partition amongst the banner battalions, of ground comprised in the Imperial hunting grounds. The survey had been interrupted by cold weather. The amount of land already portioned out to the white banner battalion is stated to be over 200 ching, *i.e.*, 20,000 *mow*.

(4) Another report from Shuy-lien respecting measures taken to centralise the authority over affairs in the Imperial hunting grounds.

(5) A memorial in regard to prolonging the term of office of one of the custodians of the Imperial tombs.

May 28th—(1). Edict degrading an expectant sub-Prefect, Sung Kwang-liang, for being short in certain military stores and equipments, and precluding him from ever rejoining the service.

(2) A report from Ee-chen, now engaged at the works of the Mausoleum for the late Emperor, "The ten thousand years happy ground of the valley of universal felicity"—stating that in obedience to commands conveyed, he had deputed another officer to undertake repairs to the "Eastern sepulchre of filial piety," a schedule of the expenses of which will be submitted to the Throne.

(3) A vice-President of the Board of Revenue of Sheng-ching, Kung-tang, reports that his yamun caught fire, several rooms being burnt, but having been promptly extinguished no public records had been sacrificed to the flames. The expenses of rebuilding he will himself disburse; but, conscious of want of management in allowing such a cotastrophe to occur, he desires to be handed over to the Board for punishment.

(4) The new Governor-General of the two Kwangs, Ying-ü, reports having arrived at his port and returns thanks for the bountiful mark of heavenly (royal) favor of which he is the object. After giving up the seals of office of the Governorship of An.wei, he hastened to prostrate himself at the Imperial gate to receive on his knees the royal command. Devine grace suffised itself from above. The heavenly words were replete with wisdom and penetration. Your slave cannot express the respectful emotions by which he was overcome. In obedience thereto he at once quitted the capital and went with all speed to Kwang-tung, by sea route. On the 24th of the 2nd moon he reached the Provincial Capital, where the Governor and also acting Governor-General Chang Chau-tung had deputed the Prefect of Kwang-chow and the acting brigadier-general of the centre of the Provincial army to convey to and hand over 1°, the seal of the Governor-General, 2° the sealed patent of the salt service, and 3° the Imperial flag warrant and various documents. Your slave thereupon reverently placed before himself on incense-altar, and with his face towards the Imperial palace, prostrated his head to the ground and devoutly entered into the duties of office. The Governor-General here refers to the many important duties to be attended to, and his determination to administer affairs with a firm and determined hand. In concluding, he takes the oppotunity to remark that while passing through Tientsin, Shanghai, &c. he observed that the young wheat was sprouting luxuriantly, that rains had been seasonable and equitable, and that the people were peaceful and happy. As such circumstances must be gratifying to the Imperial feelings of solicitude for the national welfare, he deems it fitting to embody the fact in his memorial.

(5) Tsai Kang Yung-eh reports that he had inspected certain trees presented and planted around the Imperial Graves. The trees were a gift of an officer of the Imperial household and a Major-General, and consist of 2,500 and 1,041 cypress trees planted respectively about two of the graves The cost at the regulation price Tls. 1.45 per tree is stated to amount to Tls. 5,158.1.7.4.8 besides on account of Tls. 1,322.10 for removing bricks and planting. The donors had already expressed a wish that their names should not be put forward as expectants of reward, but the memorialist decrees that such acts should not be passed over without notice, and accordingly recommends them both as objects for Imperial mark of favor.—Rescript: Let the Board deliberate, and deal with the case munificently.

Public Meetings.

SHANGHAI AND HONGKEW WHARF COMPANY.

An extraordinary general meeting of shareholders in the above Company was held on the 15th June, to consider the proposed agreement with Messrs. Jardine, Matheson & Co. for the combined working of the Company's wharves with Hunt and Heard's wharves. The chair was taken by C. J. King, Esq., and there were also present, Messrs. J. H. Bromley, A. Hennequin, H. Sutherland, G. H. Noetzli, J. F. Rodewald, J. B. Tootal, R. S. Gundry, J. P. Bisset, F. B. Johnson, W. Kidner, J. Macgregor (Provand & Co.), F. A. Groom, A. Thurburn, F. Nissen, A. Little, H. A. Laurence, and C. L. Simpson.

The CHAIRMAN, after waiting nearly half-an-hour, and no other shareholder appearing, said there were now a sufficient number present to carry out the business of the meeting, which was to vote certain alterations in the Company's deed of settlement, to enable the directors to carry out the proposed agreement with Messrs. Jardine, Matheson and Co. The alterations in the deed of settlement had been drawn up, after consultation, by their legal adviser, Mr. Drummond, and he (the Chairman) would now read them as follows:—In Clause 29, after the words "superintendence of the Board," it was proposed to introduce the words—"within two months of the said 30th June and 30th September."

The next alteration was in Clause 53, at the end of which it was proposed to add

"Provided that it shall be competent to the Board, under any agreement approved by any general meeting or extraordinary meeting of the Company for the working of other Wharves in connection with their own Wharves, to grant to the owners of such other Wharves for the period of such agreement, the power from time to time by a memorandum in writing, to be left at the office of the Company, to elect and appoint to the office of Directors and Chairman of the Company the senior representative for the time being of the firm of such owners in Shanghai, and the person so appointed shall therefore be and become Director and Chairman accordingly, notwithstanding any want of qualification, or any other rule of the Company to the contrary notwithstanding."

The meeting would understand that that was in connection with the senior partner of Jardine, Matheson & Co. being the Chairman of the Company. To Clause 64, it was proposed to add a 6th article, to this effect,—

It may enter into and take steps necessary for carrying out and making binding any agreement approved by any general meeting or extraordinary meeting of the Company for the working of other wharves in connection with those of the Company, and may appoint the owners or agents of such other wharves general agents and treasurers of the Company for the period of any such agreement, and make all arrangements necessary or proper for carrying out any such agreement.

Those alterations had been considered sufficient to enable the Company to carry out the proposed agreement, and he would, therefore put them to the meeting.

Only two hands were held up in disfavour, and the alterations were declared carried.

The CHAIRMAN said that was the whole business of the first meeting, and it being now half-past three o'clock, they would proceed with that of the second meeting. He had only to call attention to the circular which had been circulated among the shareholders that morning, which was a redraft of the former proposed agreement, by Mr. Drummond, in better form than the original appeared to them. The directors would, therefore, ask the shareholders to adopt the redraft as the sense of the previous draft, which they passed at a former meeting, and he would put the matter to them in the form of a resolution:—

That the redraft of the agreement of this date, now submitted to this meeting, be adopted; and that the Board of Directors of

the Company be hereby empowered and instructed to carry out the said agreement.

The meeting had just before enabled the Directors to do so, and what he now asked was for them to empower the Directors to act upon the alterations, and give effect to the proposals.

Mr. Bromley seconded, and the resolution was carried with only the same two dissentients.

The following is the Memorandum of agreement, as re-drafted :—

I.—That Hunt's and Heard's Wharves shall be worked by the Shanghai and Hongkew Wharf Company in conjunction with the Shanghai and Hongkew Wharf.

II.—That Messrs. Jardine, Matheson and Company shall be appointed General Agents and Treasurers of the Shanghai and Hongkew Wharf Company under the Rules of the Company, but to hold office during the continuance of this Agreement, and shall regularly and properly perform under the directions of the Board and the Rules of the Company the duties of those offices, and as such General Agents shall have, subject to the approval of the Board of Directors of the Company, the power of appointing and removing the Managers and other officers and employés of the Wharves.

III.—That Messrs. Jardine, Matheson and Company shall from time to time during the continuance of this Agreement, name and appoint to the office of Director and Chairman of the said Company the Senior representative for the time being of their firm in Shanghai.

IV.—That the joint annual net earnings of the Wharves (if any) up to Tls. 54,200 Shanghai Sycee shall be divided and appropriated in the proportion of Tls. 30,000 Shanghai Sycee to Hunt's and Heard's Wharves and Tls. 24,200 Shanghai Sycee to Shanghai and Hongkew Wharf, and beyond that sum in equal moieties.

V.—That the General Working Account of the Wharves shall be debited with the expenses necessary to the business, such as Coolie Hire, General Disbursements, Office Charges, Fire Insurance, Municipal Taxes, the Rent of the Sailors' Home frontage, Directors' Fees, Commissions, and all ordinary and necessary repairs to the Wharves and premises of the character usually borne by Tenants, as well as the repair of existing wooden structures.

VI.—That all buildings shall be put in an efficient and serviceable state of repair (to the satisfaction of a surveyor if required) by the parties to whom they respectively belong, on this arrangement being decided upon and made binding.

VII.—That out of the profits divided between them, Messrs. Jardine, Matheson and Company as representing Hunt's and Heard's Wharves on the one part, and the Shanghai and Hongkew Wharf Company on the other part, shall each severally and separately pay the expenses that are usually borne by Landlords, the maintenance of existing accommodation, the reconstruction of old buildings otherwise than of wood, and the cost of dredging or otherwise keeping deep and serviceable the water in front of their respective properties, or of extending by the aid of pontoons or otherwise the landing stages as far as necessary.

VIII.—That in case of any expenditure required for the construction of New Buildings (not the re-erection of old buildings) upon either of the properties respectively, or for the extension of the accommodation of the respective Wharves, the sums expended shall be provided by the respective owners of the Wharf on which the same is to be expended, and interest at the rate of 15 per cent. per annum shall be paid on all sums so expended and such interest shall be debited in the General Working Account, and be paid to Messrs. Jardine, Matheson and Company or the Shanghai and Hongkew Wharf Company as the case may be.

IX.—That it being desirable to retain no more land than is amply sufficient for all Wharf purposes, keeping in view the probable extension of business and the prudence of reserving abundant accommodation to meet it, the surrender is agreed upon of land 200 feet in depth along the Hongkew Road frontage of Heard's Wharf (about 6½ *mow*) to Messrs. Jardine, Matheson & Co.; 100 feet in depth along the Broadway frontage East of late Olyphant's Wharf to the "Chaou Fung" road, and 275 feet in depth along the Broadway frontage of Ranlet's land (in all about 24 *mow*) to the shareholders of the Shanghai and Hongkew Wharf Company, whenever either party desires to take advantage of such arrangement ; as well as any other portions of the respective properties as may hereafter be mutually agreed upon, so long as the withdrawal of all or any portion of such land is not detrimental to the interest of the combined Wharves. Buildings affected by the surrender of any land are to be replaced by equivalent accommodation on the front or other part of the respective properties, at the separate cost of the party to whom such surrender is made.

X.—That if it shall at any time appear, on taking the Profit and Loss Account of the said Wharves up to the 30th June in any year, that there is such an amount of profits actually realized and standing to the credit of the said account, as would suffice for the payment of an interim dividend, the Board shall forthwith set apart such amount up to, but not exceeding, Tls. 27,100 Shanghai Sycee and divide and appropriate it between the Wharves in the proportions in which profits are herein agreed to be divided.

XI.—That on the First day of February in each year, or within one month of that date, the accounts of the Wharves shall be made out and balanced to the Thirty-first day of December then last past.

XII.—That Messrs. Jardine, Matheson and Company as General Agents for the Wharves shall charge 5 per cent. commission on the gross earnings of the combined Wharves in full of all charges for the General Management.

XIII.—That the Agreement between Messrs. Jardine, Matheson and Company as representing Hunt's and Heard's Wharves, and the Shanghai and Hongkew Wharf Company, shall extend to the 30th day of June 1887, when it shall terminate, unless otherwise arranged ; but in the event of the silting up of the river, rendering the frontage of the respective properties useless for the berthing of vessels, or other circumstances rendering the respective Wharves unavailable for their intended purposes, it shall be competent for either party to retire from the Agreement on giving 12 months' notice in writing to that effect.

XIV.—That this Agreement shall commence and take effect upon and from the 1st day of July 1875.

XV.—Whenever any difference shall arise between the Company and Messrs. Jardine, Matheson and Company as Owners of Hunt's and Heard's Wharves touching this arrangement or any matter arising thereunder, such difference shall be referred to arbitration under the 74th and subsequent Rules of the Company. Provided that no Director or Chairman nominated by Messrs. Jardine, Matheson and Company shall vote at the Board nominating the arbitrator to act on behalf of the Company.

The Chairman said it had just occurred to him to say a word on another subject. The Directors, in conjunction with Messrs. Jardine, Matheson & Co. had not quite come to the conclusion whether it would be desirable or not in any way to alter the name of the Shanghai and Hongkew Wharf Company. It had been suggested that it might be styled in the Warrants, the "Associated Wharves," but, as he had said, nothing had been decided.

No observation followed, and the Chairman announced that the business was terminated.

MUNICIPAL COUNCIL FOR SETTLEMENTS NORTH OF THE YANG-KING-PANG.

Council Meeting of 7th June, 1875.

Present :—Messrs. J. G. Purdon (Chairman), G. J. W. Cowie, J. Hart, W. Kidner, A. A. Krauss, F. W. Lemarchand, R. Mackenzie, and the Secretary.

The Summons calling the meeting was taken as read.

The Minutes of the last meeting were read, confirmed and signed.

The Cash State for the 5th instant was laid on the table for inspection.

Land Tax.—Read letter from Messrs. Fogg & Co., handing cheque for Tls. 350 in payment of Land tax due by Mr. W. H. Fogg, for which judgment had been given in the United States Consular Court.

Bridges — Yang-king-pang. — Read the following letter from the French Municipal Council :—

(Translation.)

Shanghai, 3rd June, 1875.

Sir,—Before replying in a direct manner to the letter you did me the honor to address to me on the 24th May, I would ask your permission to first draw your attention both to the standing of the "Conseil Municipal" of the French Concession amongst the foreign community of Shanghai, and to the nature of their relations with the Municipal Council.

The Municipal autonomy of the Concession has been acknowledged by means of a convention signed at Peking, on the 24th of September, 1869, by the representatives of Foreign Powers. The Municipal Administration presiding over the destinies of the amalgamated English and American Concessions have also seen their regulations confirmed by the same convention. The two Municipalities, whose Chairmen you and I have the honor to be, having been born under the auspices of the Representatives of Foreign Powers, who are their protectors, have consequently the same origin, and, in case of contest, they must be brought back by those representatives to the co-operative principle of their origin.

Placed side by side, and though having separate Administrations, the two Municipalities had, during a long time, given the salutary sight of good harmony and "entente cordiale." Little preoccupation was consequently evinced till now, as to who should be the judges to decide administrative differences that might arise. It is impossible, however, to ignore the existence of such judges ; and it is but logical to think that they are the representatives of Foreign Powers. Not to admit of any would be a denial of the principle of all societies, which always gives the right of appeal to the party who thinks himself wronged ; and, not to recognize as judges those who have brought about the existence of the two Municipalities, and who are consequently their guardians would, by this very fact, almost amount to ignoring their existence.

It is quite certain that, as to any action only concerning its own Municipality, each Board is answerable to its constituents, and can appeal to them as to its line of conduct ; but as to any action implicating the co-operation or the responsibility of the two Municipalities, one alone cannot pretend to force the votes of its constituents upon the other Municipality. To admit such a possibility, would be tantamount to countenancing an illegality, as one of the fundamental principles of the two Municipalities consists in the sanction by the Foreign Powers of their separate existence. Any subversive act of this constituting principle of the right held by the French Concession to exist with a separate administration is, therefore, illegal and unconstitutional.

Nevertheless, the Municipality North of the Yang-king-pang, trusting to a vote of its Electors, declares that unless the Southern Municipality yield to its financial claim, it would see their dividing bridges fall to ruins ; then, still trusting to a vote of its Electors, the Northern Municipality takes necessary steps to annex the Southern Municipality, under pretence that the Administrative system would thereby be simplified, more economical, and would avoid all differences of opinion.

Does not this amount to setting aside the conventions sanctioning the separate existence of the two Municipalities ?

These attempts to modify the constitution of the French Concession naturally bring about the overthrow of its "Conseil Municipal." As entertained by the Municipal Council, they are, to say the least and to use the most benign term, an anomaly, as the two Councils derive their existence, such as it is to-day, from the same convention. These attempts are, besides, a painful burden to the Municipal Council, as they have thrust upon it the odd part of taking steps to suppress the principle to which the French Municipal Administration owes its existence, at the same time transacting business and giving assurances of its spirit of conciliation, and of its desire to maintain amicable relations—giving a friendly shake of one hand and hitting with the other. Such was the painful situation

thrust upon the Municipal Council on the day it undertook, at the instance of its electors, at the meeting of June, 1874, to take the necessary steps to bring about the amalgamation of the Municipalities.

It cannot of course be contended that the Electors or Landrenters have not the right to submit directly to the Consular Body any modification they may see fit to propose, but is it to be admitted that the Municipal Council receive and accept the authorization to request the Consular Body to suppress its colleague and co-operator, whose existence is guaranteed by that body itself?

It cannot be denied that the French Board evinced great moderation in not taking offence at the manner its existence was discussed, but this moderation originated, perhaps, from the confidence it reposed in its privileges, and consequently in its vitality, for, it is time to say it, the stir which has been set in motion for the last year against the homogeneity of the French Concession, which has been a cause of contention to be regretted,—is without object. It is without object, as the amalgamation of the French Concession could only take place with the consent of the French Government, who, in a quite recent despatch addressed to the Consul-General for France at Shanghai, rejected the idea in a most distinct manner.

The French Concession having established its right to a separate existence, the duty of its Board is quite clear; it is to maintain this state of things, and to apply to the French Consul whenever they are attacked.

It is for that reason, Sir, that, thinking the Municipal Council has deviated from the convention regulating the separate existence of the two Municipalities, in undertaking the necessary steps to destroy the French Concession and refusing its Board to co-operate, even temporarily, in works of public interest unless it endorsed the views of the Municipal Council with respect to the expenses,—my colleagues and myself have resolved to apply to whom it may concern, in order that the principle to which we owe our origin may be respected.

That cannot be considered as a threat, and it is to be regretted such a word should have occurred in your letter of 24th May, as such is neither intended by this Board, nor contained in the terms of the letter I was directed to write, to inform you of the defensive measure this Board intended to pursue in order to protect the Municipality they represent, and which you sought to annihilate. The main object of this Board is to settle once for all, which is the superior tribunal supposed to judge the divergencies of opinion between the two Municipal Councils, in order that misunderstandings, as little profitable to our constituents as painful to ourselves (such as those which have but too often sprung up for the last year), may not recur.

This Council has been astonished in the utmost at the manner in which you misrepresent their attitude in the matter of the *quota* for outlay in bridges to be ascribed to each Municipality, as nothing in their correspondence authorizes you to say this:—"In effect your position amounts to this: You claim the liberty of saying how much you will pay towards-maintaining the bridges, but deny us the same privilege."

I am rather embarrassed to answer negatively to such an assertion, to which I can but oppose, without any attenuation whatever, the exact views of the "Conseil," abstracted from their letter I had the honor to forward to you on 29th March, and which contained their views expressed at length:

"The wish of the French Municipality is to share the expenses for maintaining the bridges only according to what they think a fair proportion . . . . . The existence of bridges is of a necessity not to be discussed; what *can* be, is the share of expenses to be borne by each Municipality. . . . . . The "Conseil" has consented to an order made by the Municipal Council for an iron bridge intended to replace the present wooden (No. 1) bridge. We think it indispensable that this order be forwarded without delay, and that each Municipality's *quota* towards its expense be ultimately settled, if your own Board consent to it, by an arbitration based on facts and figures, and stating in a general way in what proportion the expenses for maintaining the Yang-king-pang Bridges ought to be equitably assessed, so that the one's exchequer may not be protected to the detriment of the others. I have no doubt such can only be the desire of the Municipal Council and it is simply this Board's. . . . . "Should your Administration forward the order, this Board is quite prepared to pay, meantime, either a third or half the outlay, on the condition that a reimbursement shall be effected by the Municipality which, according to the decision of the Arbitrators, should have paid more than its share of expenses and maintenance towards the Yang-king-pang Bridges." . . . . . .

The summing up of those quotations shows that this Board only expressed a belief, a wish, and simply made a proposal. They think the share assigned to each Municipality open to argument. They wish to arrive at an equitable settlement, in order that one Municipality's exchequer may not be protected to the detriment of the other's. And lastly, they propose to have recourse to Arbitrators before whom your Board could, without any doubt, have exposed their reasons.

That is far from resembling the tyrannical and puerile pretensions you imputed to our Board, in the sentence you took the trouble to underline.

This Council, although regretting a conflict it was not in their power to prevent, can only deplore their misfortune in finding your Board opposed, to-day, to a mode of settlement you, yourselves, proposed yesterday, and which you succeeded in inducing the French Council to adopt.

It is noticeable, indeed, that so soon as the Consular Body had advised the two Councils to have recourse to arbitration for the settlement of encroachments on the Yang-king-pang, the French Council, at the request of your Board, hastened to consent to their indications; whereas, in the present discussion, resulting from the division of expenses for bridges, the Municipal Council rejects, without even discussing it, a similar mode of settlement by arbitration proposed, this time, by the French Administration.

Nothing is, therefore, left to this Council, but to appeal to the Consular Body in order to stop the execution of motion No. 3, proposed by the meeting of Landrenters, and I have the honor to inform you that I have just requested the Consul for France to place the matter before the Consular Body.

(Signed) A. VOISIN.

J. G. PURDON, Esq.,
Chairman Municipal Council.

While the Board regretted the French Council should have used the tone they have, they thought it best only to acknowledge the letter, protesting, however, against the light in which the French Council placed the matter. A draft reply to this effect was read, when it was decided to add to it a resumé of the matter. The Board were of opinion that while a question relating to a boundary or width of a watercourse belonging to Chinese between the Settlements might be a fair subject for arbitration, they did not think the amount Ratepayers must expend on bridges was, and fail to see how stating their willingness to pay what they consider a fair and liberal share towards the bridges can be construed into a desire to suppress the neighbouring Municipality.

It would be preferable in the opinion of this Board to propose to the Ratepayers that they should bear all the cost of the Bridges, for the sake of peace and good relations with the French Council, than to propose they should bear 2/3rds on the ground that it is a just and fair proportion. It is a matter in the discretion of the Ratepayers how much they will vote for maintaining the bridges.

The following reply was agreed upon:—

A. VOISIN, Esq., Chairman,
French Municipal Council.

SIR,—I am in receipt of your letter of 3rd inst., in which you inform me that you have taken steps to have the matter of the division of the cost of bridges over the Yang-king-pang placed before the Consular Body.

This Council are of opinion that no good can arise from any further correspondence, and would therefore simply acknowledge receipt of your letter, did they not feel compelled in justice to themselves to put on record their earnest objection to your way of treating the subject.

They deny that it is they who have taken the initiative, or who have acted in the aggressive in this matter, or that they are those on whom the responsibility of the difficulty must rest—on the contrary, it was your Council who declared they would not bear more than one-third of the expenses of the cost of the bridges, and as this Council are of opinion that that is not a fair proportion, and that the Ratepayers on this side ought not to be taxed for the full cost of all other bridges, and then for two-thirds of the Yang-king-pang bridges, they simply replied they could not bear more than one-half the cost. They consider they have the same right to say this as your Council have to say they will not bear but one-third; to deny this seems to this Council, as I have already said, to claim the liberty of declaring how much you will bear, but to deny us the same privilege; and as they did not inaugurate the change, any difficulty which arises must rest with those who did. It was not until after this, when the result of your step became apparent, that you proposed arbitration at Peking, but for reasons given this Council did not approve of it.

Although it will extend this letter to a much greater length than first intended, the Council consider that perhaps it will be as well to state here what has taken place.

There was an arrangement in 1871, between the two Municipalities, regarding the division of the taxes on wheelbarrows, which was made subject to any alteration experience might point out, and either party were at all times at liberty to withdraw from it. This Council as far back as 1872 informed yours they wished to do so, and substitute a more equitable one, as they believe yours would have done had it borne as unequally against your Municipality as it did against this. Your Council objected, and, without suggesting any other mode of settlement, replied, if the arrangement was not carried on, our wheelbarrows would be interdicted on your Settlement. This Council, always anxious to maintain amicable relations, allowed the division as it was to continue, stating distinctly they reserved to themselves the right to re-consider the question. Accordingly, by the next year, when this inequality was becoming greater, they again referred to the matter, and, in consequence, gave notice that they could not go on with it as before, expressing their willingness to consider any other proposition your Council might make, and suggesting to divide the fees in the proportion of two-thirds to this, and one-third for your Settlement, or that each Municipality should retain the fees derived from its own licences; and, verbally, at a meeting of delegates, proposed to place wheelbarrows on the same footing as jinrikshas—that is, each Council to issue its own licences,—the number and rate to be equal for both Settlements, and limited; and they are still willing to come to an arrangement on any of these bases.

Nothing, this Council consider could be fairer than this, but to this your Council replied that if we did not continue the arrangement as to the tax in question, you would not bear one-half of the cost of bridges. With these facts before them, this Council is at a loss to understand the tone of your letter, which would imply that this Council had assumed an aggressive and arbitrary position.

If there is any forcing of votes of one Municipality on the other, or of cutting off one Settlement from the other, it is assuredly not the work of this Council.

This Council believe there is no more proper quarter to appeal to than the sense of right and fairness that exists in a large community—they do not believe the public would sanction any act of injustice that would bring in conflict the two Settlements, and it is with the knowledge of accountability to the community, coupled with their sincere belief in the justness of their cause, that has ever been before the Council in their action.

Finally, they repudiate one and all most distinctly the insinuation that they have been in the slightest influenced in their action by the resolution of June 1874, regarding the amalgamation of the Municipalities North and South of the Yang-king-pang, to which you refer; they did not accept that resolution, nor

had they anything to do with it, and they deeply regret that you should have allowed yourself to so intimate, and to bring into the correspondence an element that cannot but do harm.

I delay replying to your other letter of same date until the main question is settled.

I have the honor to be,
Sir,
Your obedient servant,
John G. Purdon,
Chairman.

Removal of Free Ferry — Cleaning out Soochow Creek.—Draft letter to the Consular Body was read and approved.

Yuen-Fong Road.—Determined to communicate with the owners of the gate which has been placed across this road, regarding its removal.

General Hospital. — Consideration of matters connected with the General Hospital was deferred to a special meeting.

Reports from Heads of Departments were laid on the table.

The Minutes of the last Meeting were approved, and passed for publication

---

CONSEIL D'ADMINISTRATION MUNICIPALE DE LA CONCESSION FRANCAISE.

Résumé des délibérations du Conseil.

Séance du 25 Mai, sous la présidence de M. A. Voisin. Conseillers présents :— MM. Hennequin, F. D. Hitch, E. Leroy, H. Maignan, E. Millot, J. H. Scott ; H. Sayn, Secrétaire.

M. Seaman, absent de Shanghaï, n'a pu assister à la séance.

Lecture est donnée d'une lettre du Secrétaire du Municipal Council, ainsi conçue :—

Shanghai, 20th May, 1875.

H. Sayn, Esq.,
Secy., French Municipal Council.

Sir,—As a preliminary step towards agreeing upon a width for the Yang-king-pang Creek, to be observed in future by each Municipality, the Council would suggest that the Engineers of the two Councils should meet and discuss the line they would recommend, each reporting the result to his respective Council.—I am, Sir, &c.

Edward B. Souper,
Secretary.

La réponse suivante présentant les vues du Conseil sera faite par le Secrétaire :—

Shanghaï, 26 Mai, 1875.

Monsieur,—J'ai soumis au Conseil la lettre que vous m'avez écrite le 20 de ce mois, pour me prévenir que le Municipal Council, proposait, pour arriver à déterminer la largeur qui devrait être conservée à l'avenir au Yang-king-pang, d'en faire d'abord faire l'étude par les Ingénieurs des deux Municipalités qui communiqueraient à leurs administrations respectives le résultat de leurs travaux.

J'ai l'honneur de vous informer que le Conseil, entrant dans les vues de votre administration, a chargé M. Henry du travail spécial que l'étude de la ligne future de quais de Yang-king-pang nécessitera. Le Conseil met à la disposition de votre Ingénieur et de M. Henry tous les documents, ayant trait à cette question, appartenant aux archives municipales, et il espère que votre administration voudra bien de son côté, faciliter les recherches nécessaires à l'étude que ces messieurs seront chargés de faire. Votre lettre, au reste, répond à une proposition de ce Conseil exprimée dans la lettre que le Président a eu l'honneur d'adresser le 29 Avril dernier à son collègue du Municipal Council, mais elle ne répond pas à une autre partie de sa lettre. En effet, il informait le Président du Municipal Council que l'Administration Française allait faire procèder sans retard à l'erection du pont en fer No. 4 et qu'elle priait votre Administration de faire pousser, de son côté, les travaux de la culée Nord de façon à ce qu'il n'y eût aucun délai apporté à la pose du dit pont. Cette partie de la lettre du Président n'a pas reçu de réponse.

Relativement à la culée Nord il serait utile de savoir si votre Administration entend la renforcer en lui laissant la même inclinaison ou en lui donnant une inclinaison plus prononcée pour augmenter sa force, tout en laissant la base de la culée dans la position où elle se trouve placée.

Je suis aussi chargé de vous faire remarquer que les ponts du Yang-king-pang présentent des hauteurs différentes au dessus du niveau de l'eau, ainsi que vous pouvez le remarquer dans le relevé suivant.

Hauteur à haute marée ordinaire.

		Metres.		Pieds et pouces anglais.
Pont No.	1	2.47	=	8.1
,, ,,	2	2.50		8.2
,, ,,	3	2.70		9.0½
,, ,,	4	2.78		9.1¼
,, ,,	5	1.67		5.5½
,, ,,	6	2.18		7.0½
,, ,,	7	1.85		6.1
,, ,,	8	1.61		5.3

Le peu d'élévation de certains de ces ponts annihile l'avantage pour la navigation que présentent les ponts les plus élevés. Le Conseil pense qu'il serait bon qu'une hauteur fixe fut déterminée pour chaque pont par les deux administrations, et serait d'avis que si quelques ponts sont trop bas, le pont No. 4, en revanche, le plus élevé de tous, présente peut-être une trop grande élévation au dessus de l'eau si l'on tient compte de la position en contre bas des abords Sud et Nord du pont.

Espérant, Monsieur, que vous voudrez bien me transmettre une réponse aussitôt qu'il vous sera loisible de le faire, je vous prie d'agréer l'assurance de ma considération la plus distinguée.

Le Secrétaire,
H. Sayn.

Monsieur E. B. Souper,
Secrétaire du Municipal Council.

Lecture est donnée de la lettre suivante du Président du Municipal Council.

"A. Voisin, Esq.,
" President of the French Council.

"Sir,—I have to acknowledge receipt of your letter of the 18th inst., in which, after informing me that your Council do not claim to interefere with the relations between this Council and its constituents, you go on to say that you are astonished that we should ask the sanction of our Ratepayers to our bearing only one-half the cost of the Bridges over the Yang-king-pang, and threaten us that if we give effect to such sanction, you will appeal to some other quarter to have it determined in a different manner.

"Passing over the fact that this seems to this Council to bear a very close resemblance to interference between them and their constituents, I may point out that in effect your position amounts to this : *You claim the liberty of saying how much you will pay towards maintaining the Bridges, but deny us the same privilege.*

" This Council content themselves with saying they cannot alter the determination to pay only one-half of the cost.

"They at present bear *all* the expenses of the large and costly Bridges over the Soochow and Hongkew Creeks, as well as those over the Defence Creek, within this Settlement, all of which are as much of a necessity to residents on your side as the Yang-king-pang Bridges are, and they consider they are acting very liberally in offering to pay, in addition, one-half of these latter.

" With regard to the change from the proposed iron bridge to a wooden one at the Bund, you will agree with me no doubt, that it was quite within the province of this Council to obtain the opinion of the Ratepayers before they suggested the change to the French Council, for had that opinion been in favour of the iron one, there would have been no need to suggest any change. As it is, this Council will have the pleasure of placing before you the reasons that induce them to think a wooden one preferable ; but as no definite action was taken, this Council consider they are in a position still to agree to an iron one, should it appear, after discussion on the subject with you, desirable ; and if in the meantime, the bearing the half cost of the Bridges is agreed to by your Council.—I am, Sir, &c.

" J. G. Purdon,
" *Chairman.*"

Le Conseil décide que les réponses suivantes seront faites a cette lettre :—

Shanghai, le 3 Juin 1875.

Monsieur.—Avant de répondre d'une facon directe à la lettre que vous m'avez fait l'honneur de m'écrire le 24 Mai, je vous demanderai la permission d'attirer, d' abord, votre attention tant sur la position du Conseil Municipal de la Concession française dans la communauté étrangère à Shanghai, que sur la nature de ses relations avec le Municipal Council.

L'autonomie Municipale de la Concession a été reconnue par une convention signée à Pékin le 23 Septembre, 1869, par les représentants des puissances étrangères. De son côté l'administration municipale qui préside aux destinées des concessions anglaises et américaines fusionnées a été confirmée dans ses réglements par la même convention. Les deux municipalités, dont vous et moi, avons l'honneur d'être présidents, étant nées sous les auspices des représentants des puissances étrangères qui sont leurs protecteurs, ont, donc, la même origine, et, en cas de lutte, doivent être ramenés par eux au principe coopératif de leur origine.

Placées à côté, tout en ayant des administrations séparées, les deux municipalités avaient donné pendant longtemps le spectacle de la bonne harmonie et de l'entente cordiale. Aussi, s'était-on peu préoccupé, jusqu'ici, de savoir quels seraient les juges des différents administratifs qui pourraient surgir ; il est impossible, cependant, d'admettre qu'il n'en existe pas, et il est logique de penser que ces juges sont les représentants des puissances étrangères. N'en pas admettre serait nier le principe de toute société qui donne toujours le droit d'appel à celui qui se croit lésé, et ne pas reconnaître pour juges ceux qui ont crée l'existence séparée des deux municipalités, et en sont par conséquent les garants, serait presque nier par celà même cette existence.

Il est bien certain que pour toute action n'engageant que sa propre municipalité, chaque Conseil se trouve vis-à-vis de ses constituants et peut leur demander de lui prescrire une ligne de conduite ; mais, pour toute action qui entraine la coopération ou la responsabilité des deux municipalités, une d'elles ne peut prétendre imposer le vote de ses constituants à l'autre municipalité. Admettre cette possibilité c'est chevaucher dans le domaine de l'illégalité, puisque l'un des principes fondamentaux des deux municipalités est la consécration par les puissances étrangères de l'existence séparée de ces municipalités ; tout acte subversif de ce principe constituant du droit de la Concession française d'exister avec une administration séparée est donc illegal ou inconstitutionnel.

Cependant la Municipalité nord du Yang-king-pang se faisant appuyer d'un vote de ses Electeurs déclare que si la Municipalité sud ne cède pas à ses exigences financières elle laissera tomber en ruines les ponts mitoyens ; puis, toujours appuyée d'un vote de ses Electeurs, la Municipalité Nord fait les demarches nécessaires pour englober la Municipalité sud, sous prétexte que cela rendrait le systeme administratif plus simple, plus économique et éviterait toute divergence d'opinion.

N'est-ce pas là se mettre au dessus des conventions qui ont sanctionné les existences séparées des deux municipalités ?

Les demandes de modifications de la constitution de la Concession française entrainent naturellement la destruction de son Conseil Municipal. Entretenus par le Municipal Council, elles sont pour le moins une anomalie, pour user le terme le plus bénin, puisque le Municipal Council et le Conseil Français dérivent leur existence, telle qu'elle apparait aujourd'hui, de la même convention. Elles sont, en outre, une pénible charge pour le Municipal Council car elles lui ont imposé le rôle étrange de faire des démarches pour supprimer le principe d'après lequel l'administration municipale française existe, pendant qu'il traite avec elle les affaires journalières en l'assurant de sa conciliation et du désir de maintenir des relations amicales. Serrer amicalement d'une main et frapper de l'autre, voilà la pénible situation qui fut faite au Municipal Council le jour où il accepta de ses Electeurs, dans l'assemblée de Juin, 1874, de faire les démarches nécessaires pour amener l'amalgamation des municipalités.

Ce n'est pas certainement, qu'on puisse prétendre que les Electeurs ou Landrenters n'aient pas le droit de faire entendre directement au Corps consulaire telle demande de modification qu'il leur semble convenable de formuler, mais est-il admissible que le Municipal Council puisse être chargé et accepter charge de demander au corps consulaire la suppression de son collégue et coopérateur

ont l'existence a été garantie par le corps onsulaire lui même.

On ne peut nier que le Conseil Français, e. ne prenant point offence à la manière dont o. discutait son existence à donné la preuve dine grande modération, mais, peut être, cette modération a-t-elle été puisée dans la confiance de son droit et par consequent de sa vialité, car, il est temps de le dire, le mouvemnt qui se fait, depuis un an, contre l'existence homogène de la Concession Française, source regrettable d'agitation, est sans but. Il est sans but, puisque ce n'est qu'avec le consentement du gouvernement Français que l'analgamation de la Concession Française pourrait avoir lieu, et que dans une dépêche encore toute récente, adressée à M. le Consul Général de France à Shanghai, le gouvernment Français en repousse l'idée de la façon la plus explicite.

L'existence séparée de la Municipilité Française et ses droits étant bien établis, le devoir du Conseil est tout tracé ; c'est de les maintenir et de faire appel au Consul de France quand on les attaque.

C'est pour celà, Monsieur, que, croyant que le Municipal Council s'est mis au dessus de la convention qui régit les existences séparées des deux municipalités en acceptant de faire les démarches nécessaires pour détruire l'existence de la Concession Française et en refusant à son Conseil Municipal de coopérer, même provisoirement, à un travail d'intérêt public à moins que ce Conseil n'ait au préalable accepté les vues du Municipal Council sur le partage de la dépense, mes collègues et moi avons résolu de nous adresser à qui de droit pour faire respecter le principe anquel nous devons notre origine. Il n'y a là ancune menace, et il est regrettable que ce mot soit venu sous votre plume dans votre lettre du 24 Mai, car il n'est ni dans les intentions du Conseil ni dans les termes de la lettre que j'ai eu mission de vous écrire pour vous informer de la mesure défensive que le Conseil entendait prendre pour protéger la municipalité qu'il représente et que vous avez cherché à faire détruire. Le principal but que le Conseil entend poursuivre, c'est d'arriver à faire déterminer, une fois pour toutes, un tribunal supérieur juge de toute divergence de vues entre les deux administrations municipales, afin que des malentendus aussi peu profitables à nos constituants que pénibles pour nous (tels que ceux qui se presentent trops souvent depuis un an), ne puissent plus avoir lieu.

Le Conseil a été on ne peut plus étonné de la facon dont vous dénaturez l'attitude, prise par lui dans ce débat de la quotité à incomber à chaque municipalité dans la dépense des ponts, car rien dans sa correspondance ne vous autorise à nous écrire ceci :

"*En effet, votre position se traduit ainsi ; vous réclamez la liberté de dire combien vous paierez pour le maintien des ponts, mais vous nous refusez le même privilege.*"

Pour répondre négativement à une semblable affirmation je me sens mal a l'aise, et je n'ai d'autre ressource que d'opposer à votre assertion, sans atténuation aucune, les idées mêmes du Conseil qui sont extraites de la lettre dans laquelle j'ai eu l'honneur, le 29 Mars, de vous les exprimer dans leur entier.

. . . . . "Le désir de la Municipalité Française de ne supporter, que dans ce qu'elle croit être une juste proportion, les dépenses d'entretien des ponts." . . . . . "L'existence des ponts est une necéssité indiscutable ; ce qui est discutable, c'est le montant de la part contributive dans les dépenses que doit supporter chaque Municipalité."

. . . . "Le Conseil a donné son consentement à la commande, par les soins du Municipal Council, d'un pont en fer destiné à remplacer le pont actuel en bois No. 1. Il croit qu'il est indispensable de faire sans retard cette commande, et que la part contributive de chaque Municipalité dans la dépense qu'elle entrainerait pourrait être déterminée ultérieurement, si votre Adminstration y consent, par un arbitrage portant sur des faits et des chiffres et statuant d'une manière générale dans quelles proportions les dépenses d'entretien des ponts du Yang-king-pang doivent, en bonne equité, grèver le budget de chaque municipalité de façon à ce que les finances de l'une ne puissent paraître être protégées aux dépens de celles de l'autre. Cést, je n'en puis douter, cette fin que peut désirer le Municipal Council et c'est simplement celle que veut le Conseil Français." . . . . . "Dans le cas d'une commande faite par votre administration, le Conseil est tout disposé à payer, provisoirement, soit un tiers, soit moitié des dépenses, sous la condition qu'un reversement sera fait par l'une des municipalités à celle qui, d'après les conclusions des arbitres, se trouverait avoir payé plus que sa part des dépenses d'entretien des ponts du Yang-king-pang." . . . .

Pour résumer ces citations, le Conseil n'y émet qu'une croyance, qu'un désir et ne formule qu'une proposition.

Il croit que la part contributive de chaque municipalité est discutable.

Il désire qu'on arrive à une solution équitable qui ne protège pas les finances d'une municipalité aux dépens de celles de l'autre.

Et enfin, il propose de recourir à une décision par des arbitres devant lesquels votre Conseil eût, nul doute, pu faire valoir toutes ses raisons.

Il y a loin de là aux prétentions tyranniques et puériles que vous prétez à notre conseil dans la phrase que vous avez pris la peine de souligner.

Le Conseil, en regrettant un conflit qu'il n'a pas tenu à lui d'empêcher, ne peut que déplorer d'avoir la mauvaise fortune de trouver le Municipal Council opposé aujourd'hui à un mode de réglement qu'il proposait lui même hier et faisait adopter au Conseil français.

Il est à remarquer, en effet, qu'aussitôt que le Corps consulaire à recommandé aux deux Conseils un Arbitrage pour régler la question d'empiètements sur le Yang-king-pang, le Conseil Français s'est empressé de souscrire à ces indications, sur la requête du Municipal Council, tandis que, pour le différend actuel résultant du partage des dépenses des ponts le Municipal Council repousse, sans même le discuter, le même mode de réglement par arbitrage proposé cette fois par l'administration française.

Il ne reste donc au Conseil qu'à faire un appel au corps consulaire pour arrêter l'effet de la motion No. 3 proposée à l'assemblée des Landrenters, et j'ai l'honneur de vous informer que je viens de prier M. le Consul de France de vouloir bien en saisir le Corps Consulaire.

Veuillez agréer, Monsieur, l'assurance de ma considération très distinguée.

Le President du Conseil,
(Signé,) A. VOISIN.

Shanghaï, 3 Juin, 1875.

Monsieur J. G. PURDON,
President du Municipal Council.

MONSIEUR,—J'ai eu l'honneur de vous faire observer que votre Conseil, en faisant figurer dans son budget une dépense de Taëls 2,000 pour un pont en bois au lieu de Taëls 5,000 pour un pont en fer dont la construction pour remplacer le pont No. 1 sur le Yang-king-pang avait été discutée et arrêtée en principe par les deux Conseils, semblait ne tenir ancun compte de l'opinion du Conseil Français.

Cette observation vous avait été addressée parceque le Conseil avait remarqué que dans la séance des Landrenters, à propos de cet article du budget, aucune mention n'avait été faite des pourparlers qui avaient déjà eu lieu entre les deux Conseils et de leur opinion favorable à une construction en fer, et parcequ'il croyait qu'après avoir fait voter une somme de Taëls 2,000 pour un pont en bois, vous ne pouviez dépenser Taëls 5,000 pour un pont en fer.

A celà vous voulez bien me répondre dans une lettre datée 24 Mai que c'était le droit de votre Conseil d'obtenir l'opinion des Ratepayers avant de nous proposer un changement ; et que si cette opinion avait été favorable au pont en fer il n'eut pas été nécessaire de faire un changement. Vous ajoutez que comme rien de défiué n'est intervenu, le Municipal Council se croit encore en position de se prononcer en faveur d'un pont en fer, sous des conditions que vous spécifierez.

Le Conseil ne peut que prendre acte des explications que vous avez bien voulu me donner.

Veuillez agréer, &c.

Le Président du Conseil
(Signé), A. VOISIN.

(Translation.)

Shanghai, 3rd June, 1875.

SIR,—I have had the honor to call your attention to the fact that your Board, in placing on their Budget an outlay of Tls. 2,000 for a wooden bridge, instead of Tls. 5,000 for an iron one, which it was agreed and originally settled should replace the Yang-king-pang Bridge No. 1, did not seem to take any heed of the French Council's opinion.

Your attention had been called to the matter, as the Conseil had noticed, that, at the meeting of Landrenters, and with reference to that part of your Budget, no mention had been made of the correspondence which had been exchanged between the two Councils, of their opinion in favor of an iron structure, and because, after having had Tls. 2,000 voted for a wooden bridge, you could not lay out Tls. 5,000 for an iron one.

You are pleased to reply to this, in a letter dated 24th May, that it was within the province of your Council to obtain the opinion of the Ratepayers before suggesting the change to us, for had that opinion been in favor of an iron bridge, there would have been no need to suggest any change. You add that, as no definite action was taken, your Council consider they are in a position still to agree to an iron one under conditions you propose to specify.

This Council can but take a note of the explanations you have been pleased to send me.

(Signed) A. VOISIN,
Président du Conseil.

J. G. PURDON, Esq.,
Chairman Municipal Council.

Le Conseil charge M. Hennequin de convoquer les personnes qui ont gracieusement consenti a faire partie de la Commission de révision des impôts, afin de s'entendre avec elles sur la manière de procéder à l'exécution de ce travail.

Le Conseil décide la distribution aux électeurs du compte rendu de la gestion 1874-1875.

Examen des rapports des chefs de service.

La séance est levée.

Séance du 2 Juin, sous la présidence de M. A. Voisin. Conseillers présents :—M.M. A. Hennequin, H. Maignan, E. Millot, J. H. Scott ; H. Sayn, Secrétaire.

M.M. Hitch et Leroy empêchés, et M. Seaman absent de Shanghai, n'ont pu assister à la séance.

Approbation des propositions émises par le Comité des Travaux et de la Police relatives :

A l'ajournement du projet d'élargissement ou de reconstruction du pont de pierres situé à l'embouchure du Canal de la Pagode, jusqu'à ce que l'alignement des quais du Wampoo ait été définitivement arrêté.

A la construction d'un bout de muraille en vieux matériaux pour raccorder provisoirement le quai de la Pagode au quai de France.

A l'étude et à la définition des réparations intérieures de l'Hôtel Municipal.

A l'achat des matériaux nécessaires au rechargement des rues de Saigon et de Palikao.

Au drainage de la rue du Weikwé dans la partie comprise entre la rue des Perès et la limite ouest de la Concession.

A la confection de quatre nouveaux bancs pour le quai du Wampoo.

Et enfin aux démarches à faire auprès de M. le Consul de France pour obtenir du Département des Affaires Etrangères la cession d'une bande de terrain du Consulat de France nécessaire à l'élargissement de la rue du Consulat.

Communications de deux lettres, l'une de M. Lemaire, annonçant au Conseil qu'il remet le service du Consulat-Général à M. le Comte de Chappedelaine, et l'autre, de M. le Comte de Chappedelaine, informant également le Conseil qu'ayant été appelé par décision Ministérielle du 8 Avril, à gérer le Consulat-Général pendant l'absence du titulaire, M. Lemaire, qui remplissait ces fonctions à titre provisoire, lui a remis le service du Consulat à la date du 26 Avril.

Lecture de la lettre suivante de Secrétaire du Municipal Council :—

Line of Yang-king-pang.

Shanghai, 28th May, 1875.

"SIR,—I have submitted your letter of 26th instant to the Works' Committee, and in

reply, they direct me to convey their best thanks for your offer of any documents which may assist Messrs. Henry and Oliver in defining a line for the Yang-king-pang Creek, and fixing a convenient height for the bridges.

"Mr. Oliver has been instructed to communicate with Mr. Henry, and you may rely on everything being done by the Council which will tend to facilitate these gentlemen's labor.

"On receipt of their report, the Council will have much pleasure in discussing it with you.

"The Council's letter of 2nd instant was not intended as a reply to yours of the 29th April; the Ratepayers' meeting prevented the Council giving it that early attention it called for, but that as little time as possible might be lost in settling the Yang-king-pang bund line, they considered that Mr. Oliver and Mr. Henry might, in the meantime, be usefully engaged in discussing the best scheme.

"Bridge No. 4.—The Engineer has been directed to strengthen the abutment of the North side of the Creek, so as to admit of the bridge being completed.

"I am, Sir,
"&c."

Communication d'une lettre de M. le Consul de France informant le Conseil que le département des affaires Etrangères n'accepte pas l'offre faite par la Municipalité relativement à l'affermage du frontage du Consulat-Général pour établir un débarcadère public.

Le Comité des Travaux est chargé de voir si l'Administration aurait avantage à acquérir le terrain sur lequel est construit le poste de police de l'Est.

Renvoi à l'examen et à la décision du Comité des Travaux d'une demande d'indemnité formulée par M. Grenot, pour une portion de terrain cédée à la voie publique.

Examen des rapports des chefs de service.

Examen du rapport de l'Inspecteur des marchés.

La Séance est levée.

Séance du 10 Juin, sour la presidence de M. A. Voisin. Conseillers Presents :—M.M. F. D. Hitch, E. Leroy, H. Maignan, E. Millot, J. H. Scott; H. Sayn, Secrétaire.

M. Hennequin, empêché, et M. Seaman, absent de Shanghai, n'ont pu assister a la Séance.

Lecture est donnée de la lettre suivante du Président du Municipal Council.

[The letter is the one published yesterday among the minutes of the English Municipal Council.]

"Le Conseil, heureux de voir par les termes de cette lettre que le Municipal Council abandonne l'idée qu'il avait manifestée de ne plus partager par moitié le produit des taxes prelevées sur les brouettes, déclare n'avoir plus de motif pour maintenir, de son côté, la résolution qu'il avait prise de ne plus partager par moitié les dépenses des ponts sur le Yang-king-pang, et il charge le Président de faire connaître ses intentions au Municipal Council par la lettre suivante :—

"Monsieur,—J'ai soumis la lettre que vous m'avez fait l'honneur de m'écrire le 8 Mai, au Conseil qui croit toujours que la responsabilité de notre fâcheux différend reste avec celui des Conseils qui, le premier, a détruit l'entente en rompant l'accord du partage par moitié, des taxes sur brouettes et a, ainsi, amené l'autre à refuser le partage par moitié des dépenses des ponts.

"Revenir sur le refus de partage égal des recettes ferait, donc, disparaître la seule raison pour laquelle ce Conseil a refusé, à son tour, le partage égal des depenses. Aussi, c'est avec plaisir que le Conseil degage de l'ensemble de votre lettre une proposition d'arrangement qui lui semble devoir mettre fin à toute polémique, et que je vous demande de transcrire ici, afin d'eviter tout malentendu.

"Le Municipal Council est disposé à arriver à un arrangement sur les bases suivantes; placer les brouettes sur le même pied que les Jin-rick-shaws, c'est-à-dire que chaque Conseil delivrerait ses propres licences dont la taxe et le nombre seraient egaux pour les deux Concessions et limités aussi pour les deux Concessions.

"A ce propos, vous faites remarquer que rien ne parait être plus juste qu'un semblable arrangement; c'est aussi l'avis du Conseil qui est tout prêt à l'accepter puisque, en lui donnant la possibilité de perçevoir la moitié des recettes faites sur les brouettes, cet arrangement fait disparaître tout motif pour lui de refuser de partager par moitié les dépenses des ponts du Yang-king-pang.

"Le débat regrettable qui vient d'avoir lieu entre les deux administrations ne fut jamais né, si ce Conseil avait été informé par écrit, avant ce jour, de la proposition que vous m'écrivez avoir été faite verbalement à ses délégués. En effet, le Conseil n'a pu la connaître qu'aujourd'hui, car, par une fatalité inexplicable, aucun de ses délégués ne se souvient d'avoir entendu votre proposition, qui est si équitable et si conforme aux idées et aux prétentions de ce Conseil, qu'elle eut été acceptée par lui aussitôt que connue. Mais, si le débat n'a pu être évité, au moins le voici terminé puis que le Municipal Council à bien voulu répéter sa proposition d'arrangement et que ce Conseil s'impresse d'y souscrire.

"Trop heureux de cette solution, le Conseil met fin à une polémique qui lui à toujours répugné, et il espère que vous et vos collégues apprécierez les motifs de convenance pour lesquels il s'abstient de répondre d'une autre façon à votre lettre, qu'en exprimant l'espoir et le désir que de ses efforts pour coopérer cordialement avec vous au développement des intérêts publics et des bonnes dispositions que vous exprimez pour la Concession Française renaîtront des relations amicales entre les deux administrations municipales.

"Heureux de ce que les circonstances me font aujourd'hui l'interprète de ces sentiments du Conseil, je vous prie d'agréer, Monsieur, l'assurance de ma consideration très distinguée."

Le Président du Conseil,
(Signé), A. Voisin.

M. Purdon,
Président du Municipal Council.

Approbation des modifications proprosées par le Municipal Council, relativement à la taxe des jinrickshaws et à l'emission des licences autorisant la circulation de ces véhicules. La taxe est portée de Tls. 0.20 á Tls. 0.25 par mois, et des licences seront délivrées, jusqu'à concurrence du nombre déjà fixé, à toute personne qui en fera la demande et qui présentera ses voitures à l'inspection de la Police.

Transfert de licence pour débit de boissons.

Examen du rapport du médecin.

Examen des rapports des chefs de service.

La Séance est levée.

Amusements.

S. V. C. RIFLE MEETING.

The tie for the Chaasze Cup, which was left undecided at the late Prize Meeting, was shot off yesterday morning at 600 yards, the result being :—

Priv. Wyatt .....(3) 1st Prize.
,, Sharp .....(2) 2nd ,,

TEMPERANCE SOCIETY LECTURE.

A most interesting lecture was delivered at the Masonic Hall, on Tuesday evening, by Her Britannic Majesty's Consul, W. H. Medhurst, Esq., as the last of the series of lectures for the season. The audience was somewhat smaller than we have observed on other occasions, but was highly appreciative of the rich store of information supplied, on the interesting subject of "Chinese Poetry," by one so well qualified to enlighten his hearers as the lecturer of the evening. H.E. Vice-Admiral Ryder occupied the chair, and His Excellency T. F. Wade, Esq., C.B., Her Majesty's Minister, was also present.

Mr. Medhurst began by defining what in Chinese is considered to be poetry. The language, he remarked, contains a term which precisely corresponds to the English word "verse,"—*i.e.* words arranged in metrical order, according to certain recognised rules; and metrical compositions in China regarded as an essential acquirement of the educated man. The geneal superficial, or rather mechanical, analogy between Chinese and European ideas of the art of poesy having been traced to a certain stage, the lecturer proceeded to point out the more radical forms of divergeme. Chinese verse is so hampered by rigid and complex rules of prosody and construction, that the spirit of poetry has not had air play. Poetry in China is consequently but a cramped and stunted representative of the sister art in other countries. The basis of Chinese verse-making, it was shewn, is the system of "tones" or vocal inflections. In regular verse, the monosyllables or "feet" of which the verse consists must not only be assigned each to a particular tone, but the tones of the words or characters making up each line must stand in a definite relation one toward the other. Chinese stanzas are usually in verses of five or seven feet each, and the construction was exemplified by combining the monosyllables *yes* and *no* to form the following stanza *à la Chinoise* :

1. No, no ; yes, yes, no.
2. Yes, yes ; no, no, yes.
3. Yes, yes ; yes, no, no.
4. No, no ; no, yes, yes.

A regular alternation, line for line, will be here observed, and the same rule holds good with verses of seven feet or characters. A pause or *cæsura* in each line is an essential element of Chinese versification, falling in pentameters after the second and in heptameters after the fourth syllable. The peculiar arrangement of the tones in Chinese verse is thought by Sir John Davis, whose valuable treatise on Chinese poetry was becomingly referred to by the lecturer, to have been adopted with a view of avoiding the too frequent recurrence of the same tone in ensuing lines. The antitheses and parallelisms which go so far to make up the distinctive style of Chinese poetry were further expatiated upon, and their resemblance to similar characteristics of Hebrew verse, as exemplified in the Psalms of David, was illustrated with numerous examples from both languages. In conclusion, it was observed that, with all reservations, both taste and imagination must be admitted to be shewn in abundance in Chinese poetry, and it was suggested that thoughts and imagery present themselves in this field which even our own writers might study with advantage. At the same time, the actual impossibility of rendering the peculiar graces of Chinese versification in an English dress, with any resemblance to the original, was demonstrated.

At the conclusion of the lecture, which was warmly applauded, the thanks of the audience to Mr. Medhurst were invited by the Chairman, in a few well-chosen remarks.

Mr. Wade, rising next, said that he had great satisfaction in supporting this motion, having himself listened with great pleasure to Mr. Medhurst's lecture. Although he had no intention of addressing the audience at length on the subject, being entirely unprepared to do so, he nevertheless thought it due to Mr. Medhurst to say a few words on the subject he had selected. He differed to some extent from the lecturer in his appreciation of Chinese poetry, which he considered of too purely mechanical a type to deserve any high degree of praise. The limited scope within which a Chinese writer's imagination and diction are confined, debars him from reaching those heights of epic grandeur and lyric passion which constitute the glories of European verse; and the absence of all reference to any higher sphere than that of man himself—to the Creator as well as the created—marks also a striking contrast between our own and the poetry of the Chinese. As regards the mechanism of the verse itself, the stringency of the rule of Chinese

prosody was observed to be no greater than that which governs the acknowledged masterpieces of European poetry, the odes and lyrics of the Greek and Roman writers; but in Chinese poetry form is cultivated at the expense of substance.

We regret our inability to do justice in this brief report to the elegance and learning which united, to characterise the extempore address with which Mr. Wade arrested the attention of the audience. As a commentary on Mr. Medhurst's lecture it was no less instructive than it was gratifying to all who listened to it; and the thanks of the audience were expressed at its close, to both the lecturer and Mr. Wade, with unmistakeable heartiness.

Miscellaneous.

SHANGHAI WATER SUPPLY HYGIENICALLY CONSIDERED.

Shanghai has two sources of potable water supply which are unlimited, and two limited sources of supply of that material. Let us first consider the most bountiful—viz., the waters that drain a portion of the plain of Kiangsu, and those that roll up at every tide from the river Yangtsze. The questions now before us as a community are—which of these shall be selected? and which point shall be selected for the in-take?

Apart from the engineering and financial considerations that are involved, and apart from the inferences which chemical analysis has suggested, there are facts of hygienic interest which merit consideration before coming to a decision on the subject.

In a general way, it may be stated that the Kiangsu waters are charged with organic matter—animal and vegetable; while the waters of the Great River hold suspended a large amount of mineral matter.

This rich alluvial plain is permeated by a net-work of navigable water-courses, some of which are so sluggish as to be almost stagnant. The soil is noted for its fertility, and, according to the Pun-tsau, teems with insect life above all other regions. Professor Frankland detected, in an analysis of water taken a short distance above Shanghai, numerous bacteria and vibrios, indicating previous contact with putrescent organic matter, probably of animal origin; but failed to detect any in the waters of the adjacent inosculating creek. It would require, however, a large amount of negative testimony like this to prove that the Soochow Creek was less polluted than the Whangpoo river. These particular impurities might not be found beyond the area over which the sewerage of the Settlement is scattered, which area is almost wholly above the city. However that may be, organic matter generally abounds in the waters of the central and lower portion of the plain. A striking evidence of the prevalence of impurities in these waters is afforded by the boilers of the harbor tug-boats. What is called "priming" or "foaming" is due, when these are not faulty, to impurities in the water; water that has been condensed from steam, for example, never exhibits the phenomenon of priming. Now, it is a fact that this priming is most observable when the water of our harbor is clearest, and when the waters of the Yangtsze in our harbor are at the minimum; or in other words—paradoxical as it may seem—the water is purest when most muddy, decreasing in purity as it increases in limpidity, the mineral matter being visible,—the organic matter being to a great extent invisible.

Besides the organic matter that is brought down from that catchment area, or water-shed, which is drained by the Whangpoo and its affluents, the rich soil affords another source of impurity, which although almost infinitesimal in amount, merits consideration. Spectroscopic analysis would undoubtedly disclose traces of arsenic in those waters.

The *Ta Tsing Lih Li*—Penal Code, in referring to an arsenic poisoning case, states incidentally that the arsenic employed was on hand for manure, and in the port catalogues of the Chinese Customs collection at the Vienna Exhibition, it is stated by the Commissioners of Customs of Shanghai, Canton and Hankow, that arsenic is employed for manuring purposes. I am loath to impugn the accuracy of an Imperial jurist, whose statements are sustained by ripe sinologues, but in view of experiments that have been made, demonstrating the virulence of arsenic as a poison to plants, I cannot believe in it as a fertiliser of soil. The fact that, when it is employed by agriculturists, it is mixed with ashes, may have caused the compost to be styled manure. However that may be, it is certain that the red sulphate of arsenic is extensively employed to destroy the insects that frequently menace the crops. Experience has taught the farmer to graduate the dose, so that, while it acts as an insecticide, it shall not injure the plants. Roughly estimated, it would appear that about a ton of the crude mineral in powder is scattered over an area of three square miles. It so happens that this use of arsenic obtains when water is less pure than usual; that is in drouth. Ordinarily, frogs are sufficiently numerous to check excessive increase of animal life, but the balance becomes disturbed when those amphibians are reduced in numbers, as in drouths; hence it is that magistrates so often issue proclamations interdicting their use as food.

The Chinese, up-country, whose waters are not discolored by mud, use alum for clarifying by precipitation, as is done at Shanghai, and besides that, they place in their water-jars bits of lakawood (*Tanarius major*, which sink to the bottom) as an antidote against the supposed noxious properties which they attribute to their water.

One more fact remains to be considered before we dismiss this up-country water. It is this: that, while the atmosphere conveys from place to place the germinal matter of zymotic and choleraic disease, water which is charged with organic matter, like that under consideration, receives and *reproduces* this germinal matter, while water that is free of organic matter like that of the Yangtsze, affords no nidus for those sources of typhoid and cholera.

A word of explanation may not be out of place respecting the protista which Professor Frankland found in our up-country water. The bacteria and vibrios are regarded by many as the cause of endemic and specific contagious diseases; on the other hand, however, the fact that active putrefaction may take place in absence of bacteria, and that bacteria may be present in abundance without giving rise to putrefaction, shows that undue importance has probably been attached to these lowest forms of organism as sources of disease.

I do not wish to be understood as representing the waters of the plain which find their way to this Settlement as unwholesome. The experience of countless generations of inhabitants is conclusive on this point. I am aware that the mountain streams which first reach the plain are remarkably pure and delicious. Opium shopsigns often announce that water from these sources is employed in preparing the drug. My intention is merely to express a preference for the Yangtsze water, and the grounds for that preference. The almost total absence of animal and vegetable substances in the water of that river affords *à priori* evidence of its superiority over the waters of the plain,* and this evidence is confirmed by impirical testimony. A native philosopher once made numerous experiments on the relative value of certain waters for infusing tea. He found Yangtsze water to be superior to all others for making the national beverage. A thousand years later, we find an Englishman at Hongkew praises the use of the same water for making *his* national beverage, and beer drinkers from every land endorse the brewer's opinion. If I might record my private opinion here, I should say that brewing is a subtle method of adulteration of the fittest beverage for gods and men.

What I have said respecting the supply of potable water from the Yangtsze as unlimited, requires modification: there are times when the supply is scant. During strong winds from south-west, particularly at neaptides, the stream from up-country flows so rapidly as to neutralise the tides—so much so, that vessels do not swing for days together. Before the era of tow-boats, vessels, at such periods, were unable to ascend the river; a brig that once accomplished that feat in eighteen days did as much as could be expected of any vessel under like circumstances. The same cause kept back the waters of the Great River, and the result was clean water, but brackish, and brackishness means diarrhœa to those unaccustomed to its use. Besides, that brackishness extends higher up the country than any of the places that are proposed for intake. Nor is the failure of Yangtsze water (more marked of course when that river is low) the only cause of occasional salinity of the Whampoo; an overflow of sea water at Hangchow Bay, from defective dykes, affects all the intermediate region, least of all, however, Soochow Creek. With regard to the point for intake, the proposed site below Hongkew seems to be the best; the next is the present location of the Pootung Works,—Lungwha being the least desirable. In any case the infiltration should be that which is known as the magnetic carbide.

It would seem, then, that those sources of water supply which are unlimited as regards quantity, though well adapted to meet the wants of the Fire Department, bathing, flushing drains, sprinkling streets and the like, do not exactly meet potable requirements. This leads me to the consideration of those sources of supply which, though limited in amount, are unexceptionable for drinking purposes. There are extensive regions on the coast where the inhabitants depend wholly on rain-water for drinking, as at Ningpo and the adjacent country, where it is collected and preserved in capacious jars for that purpose. For potable purposes, the rain-fall at Shanghai is ample. This heaven-distilled beverage is unquestionably the best of all drinks. There are residents here of a lifetime, who have drank no other. Generally there is sufficient space about each house for storing the fall. It requires only to be covered to preserve its purity. Properly constructed cisterns are a desideratum; there should be two on each lot, to allow time for æration.

Another source of supply is well-water. It is only necessary to dig 20 feet or less to procure, in nine cases out of ten, excellent water, superior, the natives say, to that of the Whangpoo. From some peculiar property which it possesses, silversmiths employ it to the exclusion of all other for silver washing.

To render this rapid survey of our water supply more comprehensive, a word should be added on Artesian wells. A former resident of Shanghai, well known for his public spirit, attempted the experiment of boring for water—an enterprise, however, which he was compelled to abandon before two hundred feet had been attained, owing to the want of skilled labour. I should commend to our Municipality a renewal of the experiment, but for the fact that the Arsenal authorities

* An analysis made in London for Messrs. Evans & Co., of water taken off Pootung Point at half flood, was found to abound in animalculæ, which either had an up country origin or contained germs which were developed under the new conditions to which it was subjected.

have lately happened to come into the possession of the requisite appliances, and to their enterprise we naturally look for another effort, which can hardly fail to prove valuable,—interesting it would most certainly prove.

Law Reports.

H. B. M.'s CONSULAR COURT.

Shanghai, 11th June.

Before W. H. Medhurst, Esq., *H. B. M.'s Consul*, and Fung Tsien-Kwang, *Taotai of Shanghai*; A. Davenport, Esq., and Chen Futchan, *Magistrate of Mixed Court*. being present.

The representatives of Chinese drowned by collision of S. S. *Fusing* with *Ocean, v.* Captain Brown of the *Ocean*.

Mr. Drummond and Mr. Eames for the plaintiffs.

Mr. Wainewright and Mr. Hannen, for the defendant.

This was a suit to recover Tls. 63,000, as compensation, at the rate of Tls. 1,000 each, to the families and representatives of the 63 persons drowned in the collision between the steamship above-named on the 4th April last. The Court was filled with Chinese men, women, and children interested in the case.

Mr. Drummond having stated that Mr. Eames and himself appeared on behalf of the plaintiffs,

Mr. Wainewright said that Capt. Brown, in compliance with the Consul's direction or request, had appeared there to-day. But he had come before the Consul, simply as Consul, and not acknowledging any jurisdiction on the Consul's part to hear these claims. He came there to contend that the Consul had no jurisdiction to hear the case in the way proposed. He (Mr Wainewright) did not know whether this was the time to put in his protest, but if it was, he would do it very shortly.

The Consul having intimated that he would hear the grounds of protest,

Mr. Wainewright went on to say that Captain Brown contended that by Section 4 of the Order in Council for 1865, the Court had no jurisdiction over him. The section ran:—"All Her Majesty's jurisdiction exerciseable in China or in Japan for the judicial hearing and determination of matters in difference between British subjects, or between foreigners and British subjects,—or for the administration or control of the property or persons of British subjects,—or for the repression or punishment of crimes or offences committed by British subjects,—or for the maintenance of order among British subjects, — shall be exercised under and according to the provisions of this Order, and not otherwise." Then came Section 5, which said:—"Subject to the other provisions of this Order, the civil and criminal jurisdiction aforesaid shall, as far as circumstances admit, be exercised upon the principles of and in conformity with the Common Law, the Rules of Equity, the Statute Law, and other Law for the time being in force in and for England, and with the powers vested in and according to the course of procedure and practice observed by and before Courts of Justice and Justices of the Peace in England, according to their respective jurisdictions and authorities." Therefore, the first proposition was that the whole of Her Majesty's jurisdiction, civil and criminal, over British subjects, was to be by the Order in Council. He would next read Sections 7 and 9:—"There shall be a Court styled Her Britannic Majesty's Supreme Court for China and Japan."—"There shall be one Judge of the Supreme Court. He shall be appointed by Her Majesty, by warrant under Her Royal sign manual." Section 36 provided:—"All Her Majesty's jurisdiction, civil and criminal, exerciseable in China, beyond the district of the Consulate of Shanghai and not under this Order vested exclusively in the Supreme Court,—and all Her Majesty's jurisdiction, civil and criminal, exerciseable in Japan and not under this Order vested exclusively in the Supreme Court,—shall, to the extent and in the manner provided by this Order, be vested in the Provincial Courts, each for and within its own district." The Order expressly took away from H. M's. Consul at Shanghai all his civil and criminal jurisdiction, for Section 35 provided:—"All Her Majesty's jurisdiction, civil and criminal, exerciseable in China, shall, for and within the district of the Consulate of Shanghai, be vested exclusively in the Supreme Court as its ordinary original jurisdiction." Therefore, it was quite clear, as between one foreigner and another at any rate, that all her Majesty's jurisdiction in Shanghai was vested in the Supreme Court. Then came the question,—Did it apply where the plaintiff was a Chinese subject? On that point, he would refer the Court to Section 117, which provided:—"Where a foreigner desires to institute or take any suit or proceeding of a civil nature against a British subject, the Supreme or other Court, according to its jurisdiction, may entertain the same, and where any such suit or proceeding is entertained shall hear and determine it according to the provisions of this Order, and the Rules made under it applicable in the case." Then upon the question whether "a foreigner" included a subject of the Emperor of China, he would refer the Court to Section 3:—"The provisions of this Order relating to British subjects apply to all subjects of Her Majesty, whether by birth or by naturalization. The provision of this Order relating to foreigners apply to subjects of the Emperor of China and of the Tycoon of Japan respectively, and subjects or citizens of any State other than China or Japan (not being enemies of Her Majesty." He, therefore, contended that Chinamen were, for all purposes of the Order in Council, to be regarded as foreigners, that they could only sue in the Supreme Court, and that all Consular authority in such cases was taken away and transferred to that Court. Of course, on the other side, he knew that Article 17 of the Treaty of Tientsin might be adduced in opposition to that argument, and that the Order in Council might be deemed inconsistent on the point, but that he (Mr. Wainewright) contended was not a question that the Consular Court could decide. A Consul was a servant of the Crown, acting under the direction of the Crown, and, in Shanghai, all his jurisdiction had been quite distinctly, and in most unmistakeable terms, taken away as between the Crown and Chinese. Therefore the defendant denied the authority of the Consular Court to sit in this case to award damages as it might be.

The Consul—Then you put in as answer that the defendant appears under protest?

Mr. Wainewright said yes, and he would submit his grounds in writing if the Court chose.

The Consul said he would prefer them in writing.

Mr. Wainewright said it could be done at some future time.

The Consul (to Mr. Drummond)—Will you put in the petition in the case?

Mr. Drummond said he would put in his authority to act on behalf of the claimants. It was under the Chehsien's seal, and stated his reasons for granting it.

Mr. Hannen said he must make a formal objection—that it did not give any authority on the part of the plaintiffs themselves.

The Consul said the Chehsien, in his position as Magistrate of this district, appeared to authorise Mr. Drummond to appear for the relatives and friends of the deceased.

Mr. Hannen said he would read the letter of authority from the Chehsien, which was as follows:—

Authority:—

Sung. Title of the 3rd Rank, Expecting Taotai, Acting Prefect, Chehsien of Shanghai, gives this letter of instruction:

Whereas the sinking of the Chinese steamer *Fusing* by the British steamer *Ocean* had caused Quai Kwang-lih and other 63 persons in all to lose their lives, and whereas the relatives of the deceased persons have petitioned the Authorities for redress, now I, the said Chehsien whose duty is to protect the lives of the people, am bound to see that due redress be obtained from the Master of the said steamship *Ocean* or any other persons concerned, for the damage by loss sustained by them; and as this is a case between Chinese and Foreigners, it ought to be dealt with in accordance to Treaty stipulations. Having already requested H. E. the Taotai to hold a Mixed Court in conjunction with H. B. M.'s Consul to hear the case, it appears to me that W. V. Drummond, Esq., Barrister at law, knows the English law thoroughly, and is a qualified person to petition on behalf of the relatives of the deceased. I, therefore, instruct you, the said Barrister at law, to file immediately a petition in H. B. M.'s Consular Court to recover such redress for the damage by loss sustained by the persons whose names are set forth in the following schedule. The said case to be heard and decided by H. E. the Taotai in conjunction with H. B. M.'s Consul.—Given under my hand and seal, this the 9th June, 1875.

Mr. Hannen went on to say that, firstly, they had no proof that it was the Chehsien's authority; and secondly, it was an instruction to file a petition in H.B.M.'s Consular Court, and this was not a Consular Court.

The Consul said he would note both objections.

Mr. Drummond resumed by saying that Tong King Sing had seen the relatives of the deceased persons, and had also consulted him (Mr. Drummond) on their behalf. That would, perhaps, meet the objections raised. The case now being before the Court, he would read the petition of the plaintiff, as follows:—

The petition of W. V. Drummond, Counsel for the relatives and representatives of the several Chinese officers and persons whose names and descriptions are stated in the schedule hereunto annexed, respectfully represents as follows:—

1st.—On or about the 4th day of April, in this present year, the British steamship called the *Ocean*, commanded by William Brown, came into collision with the Chinese steamship called the *Fusing*, in consequence whereof the said steamship *Fusing* sank in a few minutes after said collision, and the Chinese officers and persons named and described in the schedule aforesaid were drowned.

2nd.—The said collision and the loss of life consequent thereon were wholly or partly attributable to the fault and misconduct of Captain William Brown, or of some other person or persons on board and having the control and management of the said steamship *Ocean*.

3rd.—By reason of the deaths of the officers and other persons mentioned in the said schedule, their families have been left without support, and have suffered grievous loss and damage.

4th.—The relatives and representatives of the parties mentioned in the said schedule, have applied to Captain Brown, master of the said steamship *Ocean*, for compensation for the said loss of life, in the sum of one thousand taels for each life so lost as aforesaid, but he has refused or neglected to pay the same.

The said W. V. Drummond, as Counsel as aforesaid, therefore prays that your Honor, in conjunction with the proper Chinese officer, will cause enquiry to be made as to the amount due on account of the said loss of life, and condemn Captain Brown, the said steamship *Ocean*, and the owner or owners thereof, in the amount of the said loss and damage.

And your petitioner will ever pray.

The Consul said, as regarded the petition, he must call notice to the fact that neither the steamship *Ocean* nor her owners were under his jurisdiction. Therefore, the Court could only hear the case as against Captain Brown, who was charged with misconduct and neglect.

Mr Drummond said the owners were put in the petition simply because the plaintiffs had put in all whom they thought had done them an injury, and for no other reason. With that view, he had inserted those people, and made them nominally parties to the suit. He would now refer very briefly to the statements that had been made on behalf of Captain Brown as to the jurisdiction of the Court. Under the 17th Article of the Treaty of Tientsin, the plaintiffs had applied to Captain Brown for compensation, and having failed to obtain it, they now applied to the Consul for redress. They supposed the proper steps had been taken to bring the case before the Court, but with those steps they had nothing to do. The case was now before the Court, which would say whether the British subject complained of ought to make any redress, and, if so, what redress, to the families of those who were drowned in the collision. He would submit in evidence a copy of the notes made by the Chief Judge at previous hearings of the case. The copy had

been made by the clerk of the Court, and was verified and sealed. He would now put in the copy.

The CONSUL suggested it would save time to take that evidence as it stood.

Mr. WAINEWRIGHT asked if it was intended to examine the witnesses again?

Mr. DRUMMOND said he would put them in the box, and ask them a few questions upon the points bearing on the present case.

The CONSUL said he had no objection, if the other side had not.

Mr. HANNEN—We do not consent and we do not object.

The documentary evidence was then submitted to the Court, and the proceeding was interpreted to the Taotai, who made no objection.

Mr. DRUMMOND said that would cover the greater part of the ground in the case as regarded the collision. The witnesses could be brought before the Court to answer any questions that might be put to them. The Court was of course a Mixed Court.

The CONSUL.—You cannot call this a Mixed Court. It is a Court called under the 17th Article of the Treaty of Tientsin.

Mr. HANNEN.—I understand, then, that this is a Consular Court that you, yourself, are holding, and that the Taotai does not have any jurisdiction?

Mr. WAINEWRIGHT.—Have you equal powers, that is the question?

The CONSUL—I find some difficulty in giving a direct answer to the question. We are here by virtue of the Article in the Treaty. I do not say it is a Mixed Court, like that in the Maloo; it is a Consular Court, but I rule that subject to the correction of my superiors. It is practically a Court to go into certain claims against a British subject, and I sit as Consul. Not being able of myself to settle the matter satisfactorily, I have called in the assistance of the Chinese authority.

Mr. DRUMMOND said the reason why he used the term Mixed Court, was because the Chinese authorities were present in person.

The CONSUL suggested that the point should remain over. He would take a note of the protest.

Mr. HANNEN said, on behalf of the defendant, they ought to know what Court they were before—what Court they were protesting in.

The CONSUL repeated it was a Consular Court, called under the direction of an Article in the Treaty. If there was any doubt in the matter, it rather strengthened the defendant's case.

Mr. DRUMMOND thought it was not incumbent on the Consul to give a name to the Court. It was sufficient to know that the Court was held under an Article of the Treaty.

The CONSUL said he was not bound to find a name for the Court. It was simply a Consular Court, held under Treaty, to decide equitably in the matter brought before it.

Mr. DRUMMOND said he had referred to the matter to avoid any confusion that might arise. He held that this Court was not bound by any decision or rule of law in England or elsewhere, but that the Court would deduce from the authorities that would be brought before it what it might deem to be an equitable settlement of this case. That being the case, he would cite some of the authorities of English law, which would show how the case would have rested had it been taken in an English Court. There was first Lord Campbell's act, and next, the 27 and 28 Vic., cap. 95, the latter being an amendment, allowing the representatives of persons, where there were no executors, to bring an action, they being beneficially interested. That was the basis on which such cases were brought in English Courts, and which had become a most common procedure in those Courts against railway companies, there being also many cases against ships. With regard to the rule of law which was to be applied in this case, there would no doubt be a little difficulty, because there were some cases in which Common Law applied, and in others Admiralty rule. It was a question that remained open in England to the present date, whether Admiralty rule would apply in such a case. But still he thought it would be for this Court to decide whether it would be guided by Admiralty rule or by Common Law. There had been two decisions already in this case, one in the Naval Court and the other in the Court of Admiralty. Those decisions went to show the cause of the collision and who was to blame. The present Court was familiar with the fact that both vessels were held to blame, and the question now would be, how far the *Fusing*, on board of which the plaintiffs' relatives were, contributed by neglect to the collision. If this Court found that the collision was caused by the fault of the *Ocean* alone, there could then be no contributory negligence on the part of the plaintiffs in this suit. But if this Court should arrive at the same decision as the Court of Admiralty, that both ships were to blame, it would then have to decide how far the *Fusing* was to blame, so as to preclude the plaintiffs from recovering. He would submit that the proper rule to be adopted in this case, in equity, was the Admiralty rule, and not that of Common Law. In support of this argument, he referred the Court to the Judicature Act of 1873, which would give a very important authority as to the proper rule to be adopted in this case; but as he had before said, there was nothing binding on this Court, except what was binding on the conscience. The Court would have to steer its way through any law that might be brought before it, and therefore the Judicature Act had just as much authority as Lord Campbell's Act or any other. It was for the Court to make up its mind whether it would follow Admiralty rule or Common Law. The opinion as to which was best was clearly expressed in the Judicature Act, in cases where the two rules were in conflict, and both ships being to blame. It was the very latest, and very best, expression of opinion, that the Admiralty rule was the best to follow in such cases, and would in future be followed in English Courts. The cases he would refer the Court to, were the *Colfax* (2, Ad. and Eccles., 229); the *Explorer*, (3, Ad. and Eccles., 289); the *Beta*, (2, P.C., 447); the *Milan* (Lushington), and the *Rona* and *Ava*; and that of "Armstrong *v.* the Lancashire and Yorkshire Railway." If the Court arrived at the conclusion that Admiralty rule alone was to apply in this case, it would be relieved of all difficulty with regard to Common Law. Those were the only authorities he would refer to at present, and he would now proceed to call evidence. He would first call

TONG-KING-SING, who, declared, deposed—I am manager of the C. M. S. N. Company. They were the owners of the *Fusing*. Her last voyage was to Tientsin. She left here on the 27th day, second moon (3rd April). There were 66 passengers on board in all. They were all Chinese. (Handed in list in Chinese.) Those are the names of the persons who were drowned—63 in all, one of them being a foreigner, the third engineer of the ship. I have seen the relatives of a good number of those who were drowned. I have had letters from others whom I have not seen. They have authorised me to take steps to seek redress on their account—I have been authorised by all with whom I have been in communication. I have also been in communication with the Taotai on the subject. It is with his consent, and with the consent of the families of those who were drowned, that I have instructed you to take proceedings. I have informed the Taotai and the relations of those drowned as to the steps I have taken from time to time. They have agreed to those steps. Before bringing this case I wrote a letter to Captain Brown, claiming compensation on behalf of the families of the deceased. I have received no reply from Captain Brown, besides his initials in the chit-book. I know, as regards the sailors, that they have left families, widows and children, without support; some of the officials who were passengers, as far as I know, have also left wives and children, and they have written me to say they have no means even to come to Shanghai. Many of the officials had not been in office for some years, which will account for their poverty. They were all in the employment of the Government, but in a minor capacity—not actually in office. When an official dies in the service of the Government, the Government does something for his family. In the list I have put in, I have stated the rank of the persons drowned, and also the names of the crew and passengers who were saved.

By Mr. WAINEWRIGHT—When the *Fusing* started on her voyage, there were 66 passengers exclusive of crew—22 officials of Kiangsu, 3 officials, members of the Rice Committee, 1 official of Chekiang, 18 ordinary passengers, not officials, and 22 servants of officials and passengers. That makes the 66. I got that information from our ticket book. Out of those 66 passengers—19 out of the 22, the three officials, the official from Chekiang, nine out of the 18 ordinary passengers, and 13 of the servants were drowned, in all 45 out of the 66. Five of the compradore's staff were drowned, 12 of the crew, and the foreigner. I made out the list from the information given by the people who came back. There were 116 on board all together—50 besides the passengers. These consisted of eleven compradores, 33 sailors and firemen, and six Europeans. I saw everyone who came back. Everybody I did not see I put down as drowned. (The witness was then examined as to the mode of his communication with the deceased's relatives, the latter's relationship to the deceased, and the authority they had given him to take proceedings on their behalf. The result showed that authority was given, as regards the 22 officials, in two cases by brothers personally, in all the other officials' cases by writing addressed to the C.M.S.N. Company collectively.) I can produce all the letters received on the subject. There are six claimants whose names are unknown—two passengers and four servants. I have not communicated with their relatives. There were nine unknown at the time the suit was brought, but we have discovered three of them since.

The CONSUL said it would be necessary to have distinct information as to the families to be compensated.

Mr. WAINEWRIGT said that was desirable, in order to ascertain who, if any, were entitled to compensation.

Witness resumed—The servants are included in the masters' families. We wrote to them singly, and they replied to us in a body. There were seven passengers whose names were unknown, but we have communicated with their relatives by letter. I can produce these letters—to and fro. I have communicated personally with the representatives of the compradores' staff, and also with those of the sailors. I kept them all acquainted from time to time with what I had done. I had the information printed and circulated among them. I cannot now furnish a correct list of the persons on whose account I am claiming. I might be able to do so by further reference to Soochow. I believe the three servants who are here can give more information as to the families than I can.

The CONSUL said there must be a definite list of the families somewhere.

The question was referred to the Taotai, who said there was no such list, and, in the case of those who were unrepresented, it might be that the Government would have to find descendants for them.

Mr. WAINEWRIGHT said that was an amendment of Lord Campbell's Act not previously contemplated.

Witness resumed—As far as I know, no application has been made to the Chinese Government for pecuniary help to these families. I have known lots of cases in which compensation has been awarded by the Government to the families of those who had been killed in service. It is done in different ways, sometimes by money, and at others by the bestowal of office to the survivors, and sometimes by posthumous honours only. I cannot say what the compensation would be for an official of the 6th rank. It would be more than Tls. 100. Cannot say if it would be Tls. 500. Such a man's relations might have office and rank conferred upon them worth thousands of taels. I do not know any case in which a payment in hard cash has been made. I know there have been such cases.

Re-examined by Mr. DRUMMOND—According to Chinese custom, the Chehsien is the proper person to authorise proceedings like these.

Mr. HANNEN objected that the witness could not be received as an expert on Chinese law.

Mr. WAINEWRIGHT said he had not asked a question as to the Chehsien, and he did not know how it could arise in re-examination. If it were persisted in, he should have to cross-examine on it.

The CONSUL said he accepted the Chehsien's authority, as being in accordance with Chinese custom.

Mr. HANNEN—Then it is the ruling of the Court that, in all cases, the Chehsien has authority to represent the families of deceased persons.

The CONSUL said, as far as he was concerned,

in the present case he was content to accept the Chehsien's authority, and to rule that Mr. Drummond was duly authorised to appear for him.

Mr. Wainewright—And we protest against it.

The Consul—I will note the protest.

Mr. Drummond said he would waive the point, and not re-examine further upon it.

Re-examination resumed—I left the *Fusing* a quarter of an hour before she started. I saw most of the persons mentioned in the list. I went to see them off, and had conversation with many of them. I was on board about an hour. I produce the counterfoils of the tickets taken by the officers. We issue tickets to ordinary passengers, but do not insert their names. There are here altogether 25 tickets for officials—from 18 to 42—one of them carrying 17 officials and 14 servants on one ticket; but the servants' names are not given. Some of the single tickets also carry servants. The tickets from 18 to 42, inclusive, carry 60 passengers. The other 6 might have gone on board with free tickets.

Mr. Wainewright—How does he know there were six others, if there are no tickets to show?

Witness resumed (after a patient reference to his book)—We always number the tickets—from No. 1 each trip. In this case, 15 tickets were applied for, but cancelled. No. 16 was for one official and servant; No. 17 was also for one official and servant, who did not go. That makes up the number to 62. The remainder may have gone on board free, or paid their passage on board, which is often the case. Ching keeps the list. The number of passengers is always put on the freight list. I can produce it. It will only show those passengers who left Shanghai. The compradore receives the money of those who come on board to pay their passage. The first compradore would probably have had the list. He was drowned, and all the books were lost with the ship.

Mr. Wainewright—Do you still adhere to the statement that there were 66 passengers?

Witness—Yes. The second compradore was saved, and gave me the number of the passengers roughly, in pencil, on his arrival at Shanghai. His name is Wong Ching-fook. He is now away on board the *Yessing*, but will be back in three or four days. Three of the officials who came back gave me information about the others; the captain and a quartermaster told me about the seamen. The three officials are all gone to Tientsin, and will not return here until the autumn. The Captain and quartermaster are both here.

By the Consul—I do not know if any money has been given by the Government to the families and representatives of the deceased. The Company has supported the families of the poorer portion of the crew. We have given some $10 and some $15 gratuities. I have a list of the names to whom we have given (produced). The *Fusing* had sufficient boats. She had four, for the 116 people on board. Very often, coasting steamers, with a greater number of people, have only four boats. The *Fusing* was in collision at Tientsin, and came back to Shanghai for repairs. There was a survey report made both before and after the work was done.

It was said the Tientsin report had not been put in evidence yet.

Witness said he could produce it from Tientsin, if required, and added that the Shanghai report had already been before the Supreme Court. The Chinese Government, as far as I know, are not holding us responsible for the loss of these lives. They have made no claim upon us.

The Court then adjourned till the afternoon.

The Court resumed at 3 p.m.

Tong King-sing, recalled—I produce copies of the reports made at Tientsin which the Court referred to this morning, one before and one after repairs were executed. Three officials paid their passage on board—the 5th and 6th on the list, and the last but one, also three persons unknown. That makes a total of 66. The names of these 6 were not on the list, but they were among the persons drowned. [Asked by the Court how he knew these men were on board, as their names were not on the ticket.] I saw the last but one on board. I did not take notice of the other two. Their names were included in the list handed to us by the the Taotai, as among the officers drowned. That is all.

To Mr. Wainewright—I have stated that 53 on board the *Fusing* were saved. These comprised the Captain, 1st and 2nd mate, chief and 2nd engineers, 21 crew, including firemen, cooks, sailors, quartermasters, sampan men, carpenter and cabin servants, 6 compradore's staff, 9 passengers, 9 servants, 3 officials. I recollect an application being made to me to get return of a coat lent on board the *Ocean*, to one of the passengers saved. The passenger referred to was the first of those I have named before. The monthly wages of the sailors were $17 to $18 a month, the same as in other steamers. The compradore got $90 a month, and paid his staff. There were eleven on his staff, including himself. I imagine the four who were drowned got $10 or $12 a month each. As far as wages are concerned, I doubt if the official servants would get more than $4 or $5 a month, but they get perquisities. Probably $100 a year would represent their actual income.

Robert Morton Andrews—I was Captain of the *Fusing* at the time of her loss. I have already given evidence on the loss of the steamer, in the case tried in the Admiralty Court. When we left Shanghai we had some quantity of passengers on board. They were all Chinese. I could not say how many. I had nothing to do with the keeping of the accounts or the tickets, or anything affecting the passengers alone. I do not know the names of the Chinese saved. The only Europeans saved were Frederick Wallace, chief officer; H. B. Rose, 2nd mate; James Ferrier, chief engineer; James Shearer, 2nd engineer; and myself. I dont know the names of the crew saved. There were 39 saved, that would leave 13 lost. I cannot say how many passengers and others were lost. It is the compradore's business to know that; he was drowned, and all books and accounts were lost with the ship. All who were saved were brought back by the *Ocean*. I saw the *Fusing* go down. It was impossible for any others to have been saved except those who were brought to Shanghai in the *Ocean*. Only one of the *Fusing's* boats got clear; she saved 26 lives. None of the other boats got clear, this one only got free by floating out when the ship went from under. There was no time to get out any boats, the ship sank so rapidly. The boats and all appliances for saving life were in proper order at the time of collision. Every step was taken that could be taken, for the purpose of saving the lives of those on board. The ship herself was, so far I know, in thoroughly good order at the time.

To Mr. Hannen—The other appliances besides the boats were the life-buoys. We had two. We had out two of the boats lost, on the last voyage, at Tientsin. I did not inspect them at Shanghai before starting. The boats were not slung, but were resting on chocks on the top of the house. We always lift up the boats when we paint them. The chocks where the boat rests are not painted. The boat is painted where it rests on the chock. The boat saved was one of the two larger ones. It was a calm day with a smooth rolling sea, no breaking water. I think our boat could have saved more, but it was nearly half full of water. The other could have saved the same number. The others were not much smaller. They would have saved nearly as many. All those who were saved were brought back by the *Ocean*. The following is a list of the persons saved:—captain 1, mates 2, engineers 2, firemen 8, sailors 3, quartermasters 3, sampanmen 2, cooks 3, cabin servants 5, compradores 5, barber 1, carpenter 1, total 36; and 19 passangers. I mean there were 19 at the time when we counted them, one died afterwards. 18 were brought to Shanghai.

To Mr. Drummond—The boats were never put back on the chocks when the paint was wet. There was nothing to prevent the boats being put in the water for saving life as rapidly as on any other occasion. Our boats are supplied with masts, sails, oars, buckets, water beakers, rudder, tiller, and boat-hook. All these things were in the boats on the occasion. If the *Fusing* had remained afloat long enough, we could have saved nearly all those on board by our boats. The rest we might have saved by other means.

To the Taotai—I consider the collision was caused by the steering of the *Ocean*. I do not consider it was caused by our speed or her speed. I did not alter our course before the collision.

To H. M. Consul—I should recognise a great number of the crew we brought back. I do not think I could recognise any of the passengers. I might recognise three who were in the saloon.

James Ferrier—I was chief engineer of the *Fusing*. I was on board on the last voyage when she was lost. There were 3 engineers and 9 firemen in my department. 8 of the firemen were saved and one was lost. I knew nothing of the passengers who were on board. I said all that I knew in regard to the collision, in the recent case in the Admiralty Court. The engines and everything in my department were in perfectly good order.

Witness was not cross-examined.

H. B. Rose, 2nd officer of the steamer *Fusing*—I gave in evidence all that I knew of the collision, in the recent Admiralty Court. I have nothing to add to it.

To Mr. Hannen—The boats were placed on the chocks on the top of the houses. There were davits and ropes attached to the davits, so as to sling them out if necessary. These blocks and hooks hooked into the tackle. They were always kept ready. They were all ready hooked. [Asked, if they were all hooked, how was it one floated clear]? It was not necessarily an accident that one floated clear. It may have been unhooked. I don't know how it did get clear. I had not time to get my boat clear. It does not follow that the one saved was not hooked on at the time of the collision. I unhooked some of the fastenings of my own boat. The boats had covers on up to the time of the collision. They were fastened on with a lacing, which goes under small nails which are round the gunwale of the boat.

Re-examined by Mr. Drummond—The cover can be got rid off in a few seconds by a sailor's knife or by unlacing. The covers were all taken off directly, in a few seconds. I saw them off. The boats were carried in the usual way in which they are always carried in coasting steamers. There was no obstruction, to my knowledge, to prevent their being launched as rapidly as boats can be launched.

To the Taotai—It was I who first heard the whistle of the *Ocean*. I estimated she was about ½ mile to 1 mile from us at the time. It was only a guess. She struck us on our starboard bow.

To H. M. Consul—It would take about 4 minutes to lower any one of the *Fusing's* boats; that is the longest time.

Frederick Wallace, chief officer of the *Fusing*—I know nothing of the passengers on board. I gave all that I knew of the collision in evidence in the recent Admiralty suit. The boats were in perfectly good working order in every respect. The reason only one boat got free was because the passengers wouldn't keep clear of them till they were off the chocks. They would crowd in, 10 or 12 into a boat. We could have got them out if there had been sufficient time. From the suddenness with which the ship went down, we had no opportunity of doing so. I know of nothing that we could have done, that would have improved our chance of saving more lives.

Witness was not cross-examined.

To H.M. Consul—I do not know how many passengers there were. It was not part of my duty to know. That is all left to the compradore.

James Shearer, 2nd Engineer—I gave my evidence fully in this case in the late Admiralty Court, and have nothing to add.

Witness was not cross-examined.

Chun A-kun, quartermaster on board the *Fusing*—I gave my evidence the other day in the Admiralty Court.

To H.M. Consul—All I said before is true. I was in the water, and was picked up. If the ship had not gone down so quickly, the boats were ready and could have been got out. I had seen them taken out before. They were easily got out.

Witness was not cross-examined.

Mr. Drummond said this closed the list of the witnesses who had been previously examined, and suggested that the time was opportune for an adjourment. What fresh evidence he had to offer had better be gone into separately. He purposed producing some of the passengers who had been saved, and then giving what evidence he could with regard to the effects that had been lost.

In reply to a question from the Court, Tong King-sing said only three or four of the passengers saved were in Shanghai. The officials had all gone to Tientsin.

After some conversation on the subject, the Taotai said the families of the officials could not be brought forward. The

families of the sailors could be so, if it were wished. But if the Court were prepared to take the word of the Mandarins in regard to the families of the officials who were lost, he did not see why their word could not also be taken in regard to the sailors.

Mr. DRUMMOND submitted that the Court should be satisfied to a reasonable extent that there are families, and that the Chehsien is acting on their behalf. He would leave it to the Court to ask for what evidence it would like.

The TAOTAI said, the action was not brought so much to decide the question of compensation as of liability; if the decision were in favour of the plaintiffs, the officials would probably not take the compensation. With the families of the sailors, it was of course different.

Mr. HANNEN said if the other side would undertake to say they only wanted nominal damages, he would be content that evidence as to the effects should not be called. However, there were no doubt many points which H. M. Consul would have to discuss with the Taotai, and which Mr. Drummond would have to think over. It would be better to leave the matter for the present.

Some conversation followed as to the adjournment. H. M. Consul named Friday, but the Taotai objected because the *Ocean* was likely to go away on that day. He was told that the Captain would remain here, and that the present action had nothing whatever to do with the ship; but he maintained his wish that the case should be brought on earlier. Eventually Friday was named, subject to possible alteration of which notice would be given.

June 18th.

The case was again postponed in consequence of Mr. Medhurst's absence at Chinkeang.

CIVIL SUMMARY COURT.

Shanghai, June 11th.

Before R. A. MOWAT, Esq.

F. H. BALFOUR *v.* J. D. BISHOP.

This was a claim for subscription $5, and postage $1.50, for the *Celestial Empire*, from March 1st to June 5th. Defendant denied his liability.

Mr. T. MARSHALL appeared to prove the debt, and deposed—When Mr. Balfour purchased the goodwill and plant of the *Evening Courier* and *Weekly Budget*, the defendant's name appeared on the books of that journal as a subscriber to the *Budget*, posted to the address of Mrs. Bishop, in England. In March last an advertisement appeared in the papers, stating that the *Budget* would henceforth be incorporated with the *Celestial Empire*, and the name changed. The paper had been sent to Mrs. Bishop's address from the 1st March to the 5th June.

In answer to His HONOUR, witness replied, there was no authority given by the defendant to us to supply the paper. As a matter of fact, I cannot say whether he knew it was being supplied or not. But if he did not wish it sent, he should have notified us to that effect.

His HONOUR—He was not bound to do so.

J. D. BISHOP, sworn, deposed—I never gave any order for the *Celestial Empire* to be sent to my address. The first I knew of the fact was a bill being sent to me, which I refused to pay. I have seen an advertisement, but I cannot say if it is the same now pointed out.

His HONOUR said there did not appear to be any contract between the plaintiff and defendant, and he could not see any liability on defendant's part. He may not have known the paper was being sent.

Plaintiff—But he must have seen the advertisement.

His HONOUR—Possibly he may have seen it. He was not bound to take the *Celestial Empire* in lieu of the *Budget*, neither was he bound to write concerning it. The contract was between Mr. Lang and the defendant. It was plaintiff's duty to ascertain, in a business manner, what subscribers were willing to receive the *Celestial Empire*, and not to infer that a person was a subscriber because he did not go out of his way to write that he didn't want it.

Judgment for defendant with costs.

June 14th.

Before R. A. MOWAT, Esq.

SING-CHONG *v.* W. PECK.

Both parties are butchers, and the claim was for $38.99 for goods sold delivered.

Plaintiff produced an account rendered, and a pass-book from which it had been copied. The book had been kept by a man named Thompson, and showed that the transactions between the parties had extended over several months.

Defendant denied that he was indebted, as a person named Wheelwright had taken over his business and accounts connected with it, and if he (defendant) were made to pay this claim, he would be paying twice over. He could not deny having had the meat, but it was supplied on the security of Wheelwright.

His HONOUR, who was at considerable pains to unravel a complicated form of dealing between the parties, pointed out to the defendant that he was liable for the goods—they were supplied to him by the plaintiff, who could not be expected to look to a third person for payment.

Defendant said he had received a chit from Wheelwright to get what meat he wanted from the plaintiff, as the plaintiff was obtaining stock from him. Wheelwright was, however, gone away, and the chit was lost. "It's like this, your Honour," said the plaintiff, "suppose you were to become my security for a month or two's board and lodging, and then went away, and left me to pay for it." (Laughter.)

The plaintiff acknowledged the transactions with Wheelwright, and also that he had afterwards permitted the defendant to get deeper in his debt. He did not sue the defendant before, because he had promised to pay when his business became more prosperous.

His HONOUR said he had no doubt whatever that defendant had had the goods, but he said he had no money, and he (his Honour) had reason to believe he had none. When he became possessed of some, he must pay the amount. His Honour had no sympathy with the plaintiff for supplying goods on a second transaction, when a large amount was due to him on a previous one.

POLICE COURT.

Shanghai, June 11th.

Before R. A. MOWAT, Esq.

R. *v.* ASSAM.

Larceny.

A Malay seaman of the barque *Catherine Marden*, was charged with taking two plated spoons from a house in Hongkew.

Mr. STRIPLING said that as far as he could understand the matter, it appeared that the prisoner went to visit another Malay in Hongkew, and they were drinking together. The prisoner took two spoons, but on the other Malay asking for them and making a noise, he gave them up to the owner.

Prisoner said that prosecutor had given them to him, which statement was denied.

His WORSHIP sent the prisoner to gaol for one week.

June 14th.

R. *v.* KETTIEL, or KETCHELL.

Charge of Felony, and attempting to Stab.

Prisoner, a Malay seaman, was brought up in custody of the police, charged with the above offences. The property alleged to have been stolen was a sailor's outfit, comprising many articles of wearing aparel and other things. They were said to be the property of Mustapha, quartermaster of the steamer *Appin*, now away on a voyage.

Mr. STRIPLING stated the facts of the combined cases, and

His HONOUR said that as the alleged owner of the clothing was not present, he would hear the other charge first.

THOMAS DEIGHTON, then deposed—I keep a Malay boarding-house. Prisoner had lived with me for two or three months. On Sunday morning, two men came to my house with a bundle of clothes found in the prisoner's possession. They said they belonged to Mustapha, quartermaster of the *Appin*. I locked the clothes up to keep them safe. In a quarter of an hour the prisoner and some men came to my room. He demanded the clothes, saying they belonged to him. I told him to wait until the *Appin* came back, and if they were his, I would then give them to him. He said he would not wait, and began to curse and swear, and stamp about. I told him to leave the room, and he would not go. I went to push him out, when he drew the sheath-knife produced from his belt. I closed with him, and he wrestled with me. Somebody, I do not know who, took the knife from him while we were wrestling. My wife gave me the knife afterwards. I believe he meant to stab me, if he had not been prevented. I then sent for a policeman.

Prisoner said he could not understand all that had been said by the prosecutor.

The serang of the *Chinkiang*, who was in Court, said he knew English, and was asked by the Court to interpret the proceedings.

Prisoner said he did not unsheath the knife—he did not have it in his hand. The clothes belonged to his brother, who told him to take them to Hongkong, and as he was short of money he might pawn any of them or do what he liked with them.

His WORSHIP asked if the quartermaster of the *Appin* had made any charge against the prisoner.

Mr. STRIPLING said he had not made any charge, because he was gone away on a voyage. There were witnesses, however, who could prove that prisoner had no clothes of his own.

His WORSHIP said the prisoner's statement as to the clothes might be true.

Two witnesses, Malays, living in the house, corroborated the prosecutor's evidence. Both thought the prisoner meant to stab the prosecutor, one of them adding that he made a blow at him, the point of the knife striking the table.

His WORSHIP said, supposing the clothes were given to prisoner by his brother to do what he liked with (which he thought very unlikely), and Deighton refused to give them up to him, he ought to have laid a complaint before Deighton's Consul, and not have gone to the house and acted in the way he did. The punishment he (his Worship) would inflict for the offence of drawing the knife, which he had no doubt about, would depend very much upon the truth of prisoner's statement that the clothes were given him. If they were given him, as he had said, he could easily understand that a man like the prisoner—an Asiatic—would become excited, and probably be induced to draw the knife, and he should not under those circumstances, punish the prisoner so severely for that offence; but if his statement was shown to be untrue, he should not only punish him severely for it, but also for the theft of the clothes. He would not sentence him now, but remand him for fourteen days, or until the return of the *Appin*. If she returned before that time, the prosecutor would inform the Court.

June 15th.

R. *v.* BENJAMIN BENLAND, cook of the steamer *Ægean*.

Drunk and using Threatening Language.

Prisoner was arrested by a warrant, and in answer to his Worship, said that he had no recollection of having been abusive.

JAMES C. FARMER, sworn, deposed—I am chief officer of the steamer. Prisoner is the cook. At 8 a.m. yesterday, there was no one in the galley, and no signs of any breakfast being made ready for the crew or officers. I sent the steward into the galley. I found the cook drunk and very noisy; he threatened to smash my face, when I told him to go to his work. He then squared-up at me and wanted me to strike him. As he was very violent, he was put into irons, and a constable was sent for. He threatened that he would "do for us"—meaning the Captain and myself, when he got out of irons.

Prisoner asked if he could have any witnesses from the crew to prove whether all this occurred as represented. He had been 10 years in the Naval reserve, and never had a scratch of pen against him before.

The Chief Officer said that prisoner had transgressed before, and had been left behind at Hongkong, having gone on shore without leave. He was sent up here to rejoin the ship, and had promised not to misbehave again.

Captain SPOWART corroborated the evidence of the chief officer.

His WORSHIP said that he did not think there was any necessity to call any witnesses;

there was the fact that prisoner was drunk, and the evidence of the captain and officer; therefore he should send him to prison for seven days, to pay the costs of the Court and his maintenance in gaol.

R. (W. H. Robinson) *v.* W. Thompson, A.B. of the barque *Deerhound.*

Assault and using Threatening Language.

W. H. Robinson, sworn, deposed—I am 2nd officer of the *Deerhound.* This morning we were washing decks; I threw some water and a little went on the prisoner. He made a great fuss about it, threatened to strike me, and challenged me to fight. At last I said, "Well you had better do it." He took hold of my hair and struck me on the back of the head, scratched my face, butted me, threw me down, and said he would murder me. The Captain assisted by the sailmaker, interfered and took him away from me. He then picked up a billet of wood and threatened.

Prisoner said that what the second mate had stated about the water was true; but that the second mate challenged him to fight first, and said that he did not want any more talk from him, he had had quite enough. He told him to go aft and he would give him all he wanted.

Richard Grainger, called, deposed that he heard a disturbance and saw a scuffle, but no blows. When he got there, they had hold of one another. Both parties were inclined to fight. Prisoner did pick up the piece of plank, but he cannot say if he intended to strike the second mate with it.

His Worship said that he did not think there was any necessity to hear any more of the case. He wondered that the second officer had so far forgotten himself as to challenge a sailor to fight, and, when accepted, to bring the matter into Court. It shewed a most disgraceful state of affairs in the discipline on board.

Case dismissed.

U. S. CONSULATE GENERAL.

Shanghai, 15th June.

Before Geo. F. Seward, Esq., *Consul-General.*

R. W. Cowell *v.* J. H. Wills.

The plaintiff, a British subject, sued the defendant, an American citizen, to recover $20 for wages, and also, under an agreement, board for fifteen days, at $1 per day, and for the use of a small carriage, fifteen days at $1 per day. Plaintiff further claimed the delivery of certain goods and property detained by the defendant. A bill of sale of property, a livery stable, from Cowell to Wills, was produced, and attached to it was a a schedule of the articles sold. It appeared upon examination that the parties had not taken pains to ascertain the articles actually transferred, to see whether they agreed with the list. In respect to this part of the case, the Court directed the parties to go over the stock-in-trade together, the defendant to deliver to plaintiff any articles on the premises not included in the inventory. With regard to the money claim, the defendant alleged that plaintiff had collected a sum in excess of the amount named in his petition, which amount, as collected, the defendant claimed under the terms of the bill of sale. Upon reference to the bill of sale, it was found that the plaintiff had sold to the defendant all debts due and owing to him on account of the business, while he himself agreed to pay all claims against the concern. It seemed, in this connection, that the plaintiff had misunderstood the terms of the bill of sale, believing that he had a right to collect the back debts, and to apply them to pay claims against the business. The amount so collected being in excess of the plaintiff's claim against the defendant, the Court dismissed the summons, and directed plaintiff to pay costs.

MIXED COURT.

Shanghai, June 17th.

Before the Chinese Magistrate, Chen, and Dr. Yates, U. S. Assessor.

Theft from a Ship.

A native, charged with stealing seven sheets of copper from the barque *Zephyrus,* was convicted and sentenced to receive 100 blows with the bamboo and to undergo a fortnight's cangue.

Obstruction.

A jinrickshaw coolie was brought up by the Municipal Police, for obstructing the Bund opposite the Shanghai Club, and was sentenced to a day's imprisonment, and to find security for his future good behaviour.

Shop Robbery.

A thief, charged with stealing nine steel rings and two blocks from shop No. 5, Honan road, was sentenced to 100 blows and imprisonment (time not stated.)

Extracts.

PRESSURE UPON CHINESE IN HONGKONG.

China Mail.

No one will be much surprised to hear that a very strong feeling exists on the part of the natives in this Colony, regarding the case of the Club Compradore whose relatives are now tasting the sweets of Chinese "justice" at the instigation of the friends of Lee Lum Kwai. From all we can ascertain, it appears that the case has from the first had the anxious attention of the local Government. Directly it was brought to the knowledge of the Colonial Secretary, a despatch was addressed to H. B. M. Consul at Canton, who at once sent a communication to the Viceroy. No notice being taken of this, the Government again pressed the case, and further despatches went in to the Viceroy. That official however, it would appear, is sheltering himself under the orders from Peking respecting mourning for the late Empress; or more probably his subordinates are keeping from him all despatches whatever, under the plea that no official work need at present be done. Of course all this is very annoying both to the Government and the Consul, but it is difficult to say what is to be done. It will not do to declare war against Canton on such a pretext, and yet the excuse which would we suspect be raised would utterly defeat any peaceful diplomacy whatever. On the other hand, we are day by day "losing face" before the native inhabitants of Hongkong. If our boasted power, and our solemn promise to the witness are insufficient to bear him (through his family) harmless of consequences for giving evidence which helped to convict a notorious scoundrel, how can we expect that much respect will be felt either for our status or our word? "Hongkong can do nothing when the Viceroy so chooses," say the natives, and they are really saying the truth. It is of no use telling them that our promise of immunity and protection was never meant to extend to indirect pressure through their families or property on the mainland. They say such a promise would be nonsense if capable of any other construction; and to some extent they are right.

The question is, what should be done. And as the only possible answer, we would again urge upon the authorities the course we have before indicated—the sending a gunboat to the place molested, and the seizure of some of the principal inhabitants as hostages. As to this meaning "war," no one who knows China will contend any such thing. On the other hand it will at once bring about explanations. It matters very little where the hostages are seized. As soon as they understand that they are to be held in pawn for the compradore's family, they will fast enough make their complaints known, and we should of course take every precaution to give them facilities for communicating with Canton. We are quite aware that we are recommending an utterly irregular proceeding, but it is the only one open to us. The question lies between our being successfully snubbed by the Chinese under the guise of politeness and routine, and a consequent loss of prestige in native eyes, and a tolerably harmless (if internationally illegal) way of bringing the matter to a head, and so obtaining both practical justice and a restoration of our position in native eyes—no small matter, in view of the enormous disproportion of nationalities in this Colony. We are expressing the views of a large number of residents, both foreign and Chinese, in urging this action on the Government, and we trust it will be taken. One sharp lesson will stop this sort of persecution for some time to come, and it is time the lesson were given.

Clippings.

The negotiations opened some two years ago between the Governments of Japan and Peru have had a more auspicious termination than might have been anticipated from the circumstances attending their commencement. A treaty of friendship and commerce between the two countries was signed some little time back, and, after ratification, was exchanged on the 17th inst. at the hands of Senor J. F. Elmore, L.L.D. on the side of Peru, and H. E. Terashima Munenori, specially appointed by H.M. the Mikado Plenipotentiary *ad hoc.* Senor Elmore has been appointed in perma nent mission in Japan and China, and has received full powers for the exchange and ratification of both the Chinese and Japanese treaties. His staff, consisting of a Secretary of Legation and an *Attaché* have arrived. Having concluded part of these preliminary duties here, he leaves shortly and temporarily for Peking for a similar purpose in China, after the accomplishment of which he will reside in this country. We trust that the intercourse which Senor Elmore has been instrumental in placing on its present footing will be one of increasing friendship and advantage to the respective countries interested in these negotiations.—*Japan Mail.*

That the unfortunate Mr. Margary's expedition was regarded by impartial outsiders as far more dangerous than he himself appeared to think it, is evident from a letter recently written by the Rev. Father Fenouil, Pro-vicar of the province of Yunnan and residing at Yunnanfoo. Under date of February 17, he says:—"In the month of November last, we saw an Englishman pass through here, making his way towards Tali-foo to join an English Expedition coming from Burmah. The mandarins did not seem very satisfied, and persons of high position assured me that he would be killed on this adventurous expedition, either by the savages or the robbers infesting these parts of the country; since then we have had no news about the Expedition, and we are asking ourselves what has become of it." It is, therefore, obvious that Mr. Margary's death was expected, and it is not improbable that this tone was adopted so as to lead to the belief that he had met his death from persons beyond Government control, should the true facts never come to light. Fortunately the details of the tragedy are known, and it is possible—we dare not say probable—that the guilty parties will meet their due punishment.—*China Mail.*

All recent travellers represent the traffic betweed Otz (this end of the Biwa Lake) and Kioto as enormous. A perpetual stream of wheeled vehicles, pack-horses and pedestrians, some free, some laden, flows along the road between the two places. When the line of railway from Osaka to Kioto is open, this traffic will certainly increase considerably, and there is actual danger of the road being choked, although it is one of the broadest in the country. The cost of carriage is such that, on a moderate computation, three-fourths of it would be saved were the traffic carried by rail, and it is probable that even at these rates the cost of the line could be repaid within five years—the time is estimated by competent authorities at far less than this. The Japanese ought by this time to have got over the heavy expense which first experiments always entail in whatever direction they are made, and this section of railway—it is not more than nine or ten miles—might be constructed far more cheaply in proportion than the two lines already completed. It is true that there are two ranges of hills over, or under, which the line must pass, but there is not one really formidable difficulty presented by the scheme. If the communication is left in its present state, it will be as if there were a railway from London to Manchester and no line from Manchester to Liverpool. Surely the Government ought not to hesitate about giving immediate orders for beginning *and finishing* this line with all possible despatch.—*Japan Mail.*

A native named Shozaburo living at Yedo has been fined 3 *yen* and 75 *sens* in commutation of fifty days' imprisonment for the offence of having failed to rescue his grand-step-mother (?) from a fire.

The *L. & C. Express* mentions that the steamer *Chusan*, from Glasgow for Shanghai, which sank at Ardrossan on October 21st, 1874, was floated on the 5th May, and removed to Horse Island.

The *Hochi Shimbum* relates that a Japanese junk manned by 12 hands, from the Yamaguchi *ken*, was discovered in a sinking condition in mid-ocean by an American merchant ship. The crew were taken from her and carried to San Francisco.

Nothing definite has transpired as to the course that Government intend to pursue in regard to the late attack on the Western China Expedition, but it is tolerably certain that no fresh movement will be made until next year, by which time the responsibility of the late attack will probably be fixed on the Chinese Government and satisfaction obtained. Opinion gains ground that the King of Burmah was not implicated. Our relations with Burmah are now undergoing a thorough revision, and may end in including his territory under British Rule.—*L. & C. Express.*

The *Straits Times* gives the following reasons for the popularity of Sir Andrew Clarke—"No orator, he possesses tact, command of temper and courtesy of manner in an eminent degree, and hence his popularity. With no crotchets of his own to force upon an unwilling community, yet with a will of his own, he listens to all entitled to speak upon any matter, and his decision, not given hastily, satisfies everybody. This was exemplified more than once during his Governorship of these Settlements. Next to his Native Policy, we rank as one of the greatest benefits of his rule here, that he "established cordial relations between the Executive and the community," and succeeded, as he sought to do, in "engaging public interest and enlisting the sympathies of the public in the conduct of public affairs." Never attitudinizing as Governor and Commander-in-chief, he took no manner of pride in showing his personal power by issuing innumerable regulations and turning out endless Ordinances, passed to be either forgotten or amended and re-amended. A foe to useless and hurtful restrictions to trade, his sole object seemed to be to develope trade by encouraging "the men who live by it" in every way in his power. And so he gained the confidence of all classes of the community, from Prince to peasant, Europeans, Chinese, Malays, Arabs, and Klings, who, on his departure, united in addressing to him their thanks and regrets, and good wishes for his health and prosperity in the new sphere to which Providence has called him.

About forty guests assembled on board the O. &. O. S. S. *Oceanic* at an informal tiffin given by the Company, and included the United States Consul, the Harbour Master, the Assistant Harbour Master, and several leading merchants and residents. The *menu* was an excellent one, and was done ample justice to by those present. After the viands had been cleared away, several toasts were given. Mr. Bailey, the U. S. Consul, proposed the O. & O. S. S. Company. This toast was greeted with loud cheers and responded to by Captain Jennings, commander of the *Oceanic*, who hoped the new company would give satisfaction to the public. The health of the General Agent of the O. & O. S. S. Company was next given and responded to. The Harbour Master, in complimentary terms, proposed the health of the Local Agent, who made a suitable reply. Before resuming his seat, Mr. Emory proposed the health of the Captain, officers and crew of the *Oceanic*. Captain Jennings acknowledged the compliment, and gave the health of Mr. Waddell, the Superintendent Engineer of the new Company, who is at present on board. Mr. Waddell responded, and shortly afterwards the company separated. Every one present expressed great admiration for this fine steamer, which is most elegantly fitted, contains every comfort, and is certainly unsurpassed in these waters—*Daily Press.*

With the Burmese King on the one side and the Peking Government on the other, each willing to shuffle off all responsibility on wild border tribes, owing a very doubtful allegiance to either, what satisfaction can be expected? At best, an offer of money indemnity to the relatives of those who have been killed, and some kind of diplomatic formula of regret, with perhaps the illusory punishment of some inferior official. That ought not to suffice; nor should we lose a great opportunity of placing important interests, which have been too long allowed to be in abeyance, on a satisfactory footing; nor should we, by acquiescing in repulse and injury, bring the English Power into contempt not only among Asiatics but Europeans. It is not a question of war, however, we are happy to think, but of resolution and firmness. The time has arrived when we may fitly insist upon the removal of hostile restrictions on our intercourse and trade with a friendly Power. They cannot be defended in principle, and should not be permitted to exist in practice. The Chinese Government should be convinced of our determination no longer to submit to the obstructive policy hitherto adopted, and of the necessity of renouncing it without delay. When the official news of the attack on the party of Colonel Browne reached Peking (as we learn by a telegram from Shanghai received a few days ago) it excited a feeling of anxiety and alarm in the official mind. It is not our business to prove to them that all such anxiety is groundless.—*Pall Mall Gazette.*

There is a singular religious ceremony in Mongolia which is prophylactic in its meaning. The Mongol name for the performance of the ceremony is S'awr Jalena. A triangular pyramid is made of dough, on a wood frame. The dough is coloured red and moulded rather prettily. On the top is the representation of a skull. In the forenoon it stands in the temple, while a service is being held, and, before it is carried out, old and young pass under it. When the preliminaries are completed, the head lama of the temple, in his most impressive robes, heads a solemn procession and leads the way to an erection of bushes, or other inflammable material, prepared and set up on the plain a short distance from the temple. The procession moves slowly along to the sound of two immense trumpets ten or twelve feet long. In addition to the chief lama, there is a number of men in masks, hideous representations of the heads of deer, and other animals, and clad in showy garments. The worshippers assembled for the occasion bring up the rear and usually make a large company. Arrived at the spot selected, the chief lama takes his stand; the other performers crowd around; the rest of the lamas and the spectators generally close up behind, and quite a little service of chanting prayers and blowing trumpets is gone through. Sometimes a part of the service consists of the chief lama waving a black handkerchief towards the skull-crowned pyramid. Sometimes this part of the ceremony is not performed. After some time, at a signal from the chief lama, the pile of brushwood is lighted. As it blazes up, the pyramid is thrown headlong into it, a man who has been standing ready with gun in hand fires off his piece at it, the attendant lamas go three times round their chief to congratutate him; he replies "*It has become fortunate for the many,*" and the whole crowd of lamas and spectators, without waiting to see the doomed structure consumed, hurry off back to the temple as fast as they can. The ceremony is impressive, but there is only one step from the sublime to the ridiculous. While the others are hurrying back to the temple, a single lama may be seen poking about the fire. He is trying to rescue from the flames the few inches of board on which the structure stood, in the hope that it may serve again on the next occasion. The exact meaning of the ceremony is a little difficult to get at, because Mongols, when questioned, are in the habit of giving answers utterly unreliable, and those whom I have questioned on this point have given disagreeing accounts of it. It seems, as far as I can gather, to be meant to ward off evil in the future.—*Report of the Peking Hospital.*

BIRTH.

At Shanghai, on the 14th instant, Mrs. J. J. BUCHHEISTER, of a daughter.

DEATH.

At New York, on the 1st May, EDWARD C. WHEELOCK, aged 43 years.

PASSENGERS.

DEPARTED.—Per str. *Niigata Maru*, for Nagasaki—Messrs. P. P. Hyver, S. P. Morris, J. Poveiwa, M. Tashiw. Steerage—One Japanese Lady; eight Chinese. For Hiogo—Messrs. K. Makashimo, F. Beasley, W. Buscot and E. L. Reed. For Yokohama—M. M. Satow, and Aug. Thomas. Steerage—Five Chinese. Per P. M. str. *Costa Rica*, for Hiogo—Mr. W. Kidner. For Yokohama—Lady Howard de Walden, the Hon. Miss Ellis, Mr. E. H. Ellis, Miss Annette de Stockinger, and Mr. R. Caldwell. For San Francisco—Miss Josie J. Mansfield.

ARRIVED.—Per str. *Takasago Maru*, from Yokohama—Mr. Ascherberg, Steerage—One Japanese; one Chinese. From Hiogo—Four Chinese. From Nagasaki—Messrs. W. J. Lawrie, M. C. Adams and servant, and Hoverbs. Steerage—One Japanese lady; 11 Chinese. Per str. *Chinkiang*, from Hongkong—Mr. J. Locke; 65 Chinese. Per str. *Hirado*—One French Missionary. Per P. M. str. *Costa Rica*, from Japan—Messrs. J. B. Irving, C. J. Ashley, A. F. Thompson, J. S. Fearon, Julian de Cordova, R. H. Bruce, A. Morton, J. Crofts, C. Hagen, A. Reddelieu, M. Amade, H. Moriss, W. H. Godenvert, M. Shea, L. Mouthan, and Dr. McMurtrie, U.S.N. Steerage—Japanese Lady and servant; 18 Chinese. Per str. *Europe*, from Tientsin—Mr. Brown; 29 Chinese. Per str. *Shingking*, from Tientsin—Lady Howard de Walden, the Hon. Miss Ellis, Mr. Ellis. Per str. *Consolation*, from Amoy—Nine Chinese. Per str. *China*, from Hongkong—21 Chinese. Per str. *Glaucus*—Mrs. Davis, and Mr. Ludwick. Per str. *Haining*, from Peking—Mr. MacKean. From Tientsin—Mr. Blow. Per str. *Peking*, from Hankow—Mr. Drysdale. From Kiukiang—Mr. Roberts. From Chinkiang—Mr. Davis. Per M.M. str. *Ava*, from Marseilles—Madame Hiram and servant, Six Sisters of Charity, and Rev. Mr. Delabord. From Hongkong—Mr. Crawford and servant, and Mr. Gaston Jaulin. Per str. *Taku*, from Foochow—Mr. and Mrs. Carroll and two children, Messrs. Lowe and Jensen; 31 Chinese. Per str. *Amoy*, from Hongkong—44 Chinese.

LEAVING.—Per M. M. str. *Tigre*, for Hongkong—H.E. Sen, Taotai; two Chinese Ladies. For Marseilles—Messrs. A. J. Vickers and J. Fernier.

COMMERCIAL INTELLIGENCE.

SHANGHAI, JUNE 18TH, 1875.

ARRIVALS.—From Liverpool, the steamship *Glaucus;* and from Marseilles, with the London mails of the 7th ultimo, the M. M. steamer *Ava.*

TELEGRAM.—London, 15th June, *Cotton Mid. Or.*, 7 7/8d., quiet; *Grey Shirtings*, 8¼-lb. *Eagle*, 9s. 9d., steady; *Iron*, £9 10s., and W.B. *Lead*, £23 per ton.

PIECE GOODS.—Dealers have evinced some inclination to do business in the articles enumerated in the preamble to Report of 11th instant, but most of them have been kept at home by almost incessant heavy rains; consequently transactions have been few, and of little moment beyond that they may be said to establish quotations.

The expected orders have not yet come from the interior, but prospects at HANKOW seem rather brighter, and the letters from CHINKIANG, received by each successive steamer during the week, have reported a fair business in PLAIN COTTONS, and are altogether more cheerful in tone than they have been for weeks past. On the other hand, the latest TIENTSIN advices are most discouraging; scarcely any trade going on; prices lower, and generally nominal; and the JAPANESE requirements—in PIECE GOODS—are now about as trifling as they well can be.

At the last auctions some articles gave way slightly in value, while others commanded full prices, and even shewed a tendency to advance. Among the former, *Long Ells* and 6-lb. *T-Cloths* take station; and 8¼-lb. *Grey Shirtings*, *Lastings* and *Spanish Stripes* appear amongst the latter; and this is the more inexplicable, as the experience of private sellers of these imports has been just the reverse. They have sold the first named at better prices than were previously current, but have signally failed to make any progress with *Shirtings* or *Lastings*, excepting in isolated instances, and where they were willing to submit to a decline. Private sales of U. U. *Long Ells*, of the usual assortment, were booked at Tls. 6.80 and Tls. 6.85 per piece, and a clean 14 × 15 square 6-lb. *T-Cloth* realised Tls. 1.18 *a* 1.22 per piece; but the holders of medium to good chops of 8¼-lb. *Grey Shirtings* have had difficulty in getting so much as an offer, notwithstanding that many of them have expressed willingness to entertain any reasonable tender. The commoner to commonest makes of this weight and cloth, however, have been asked for, and so have similar standards of 6 and 7-lbs., but buyers are very hard to please, and are most careful to offer only rates that they deem absolutely safe. Their caution may or may not be inspired by misgivings as to the immediate future standard of value. At all events it has, thus far, proved a serious obstacle to trade, for sellers, as a rule, have hesitated at the figures named, and hence but few of the required classes have changed hands since last mail left. 8¼-lb. Dewhurst's *Eagle* has been sold at Tls. 1.96, Collie's *Green Lion* at Tls. 1.80, some medium quality at Tls. 1.75, and the commonest at Tls. 1.61½ *a* 1.65 per piece. 7-lbs.—Mildews of Dewhurst's *Eagle* have been asked for at Tls. 1.50 per piece—"inside," and sales of common chops at Tls. 1.40 *a* 1.43 are registered. 6lbs.—Mildew rejections to extent of 4,500 pieces have been resold for local distribution at Tls. 1.26 *a* 1.27, and sound cargo has been placed at Tls. 1.29 *a* 1.31 per piece. *Heavy Shirtings* have continued in moderate request, and the last sales of them evidence a strengthening market.

White Shirtings.—A limited enquiry for 56 and 64 Reeds has been supplied to the full out of former settlements, and the market closes quietly with sellers at quotations.

T-Cloths.—Small sales of all weights. Prices rather irregular, ranging from Tls. 1.14 *a* 1.22 for low counts of 6-lbs.; Tls. 1.28 *a* 1.32 for 7-lbs. of similar standard, and Tls. 1.39 *a* 1.47½ for ordinary to good Mexicans; and Tls. 1.62 *a* 1.67 for 8-lbs. The classes that have engaged attention have been in fairly steady demand, and the attempts by buyers to reduce values have been in more cases than one not unsuccessfully resisted.

Drills.—The continued scarcity of 14-lbs. Cloth and the firmness of the few holders is still forcing the trade in the lower makes of 15-lbs.; and small sales of these are recorded at Tls. 2.43 *a* 2.45 per piece. At these rates dealers are open to buy, but they neglect the better qualities at what importers consider their relative values.

Sheetings.—The lot ex *Glaucus*—2,000 pieces—has been disposed of at an improvement upon the offers of last week. No other sale reported.

Jeans.—No transaction, and not wanted.

Fancy Cottons.—No change to note. The market has been and still is very dull. Little lots of *Chintzes*, blue and as sorted; *Handkerchiefs; Dyed Brocades; Damasks;* printed *Twills*, and *Muslins* find a local market; and 2 *a* 2¼ lb. *Turkey Reds*, and cheap *Lawns* are occasionally asked after by the Japanese traders, but the amount of business passing is barely sufficient to establish quotations.

Woollens.—In addition to the private business alluded to above, and to what was done at the Auctions—given below—there have been some trifling transactions in *Camlets*—resales chiefly; a continuance of the demand for *Medium Cloths*, with sales of nearly 300 pieces fine quality, at Tls. 1.27 per yard, the article being in favor at the close; and also an enquiry for *Spanish Stripes*, which have been taken to extent of 800 pieces on the basis of Tls. 0.61 per yard for H.H. For best black *Lastings*, Tls. 11.60 is still refused, but *Figured Orleans* would be parted with on rather easier terms, if any reasonable concession were likely to induce contracts.

METALS.—*Nail Rod Iron.*—Lower prices have brought about a fair amount of business during the last week, the decline being more marked in makes of the best description. Stocks of Dawes' best have been considerably augmented, and buyers demand a farther concession.—Sales estimated at about 12,000 bundles at Tls. 2.60 *a* 2.85 per picul. *Lead.*—Notwithstanding that stocks have been very much reduced by the recent re-exports to Foochow, Ningpo, and up river, there has not been any business done here, and there does not seem any disposition to buy on the part of our natives. Prices therefore are entirely nominal. *Tin.*—No market. Quotations lower, and *Quicksilver* has declined about Tls. 10 within the week.

QUOTATIONS—Duty Paid.

COTTON.—A further rise of 2 mace per picul on fine to finest staple has been demanded and paid in some instances. Demand is still trifling, but the receipts are scarcely equal to it, small although it be. When the rains cease, and the demands for field labour are less imperative, we shall probably have more liberal supplies of cotton, but for a short time only, as the season is fast drawing to its close.

EXCHANGE.—The market has been fairly active and a considerable amount of paper changed hands during the week. Immediately after the departure of last mail, Bank bills were offered at 5s. 9¾d., but at the same time there was a strong demand for Merchants' paper at 5s. 10d. 5s. 10¼d. Subsequently rates declined to 5s. 9½d. for Bank, and 5s. 9⅞ *a* 5s. 10d. for Private paper. The bulk of the business for the week was transacted at these quotations. On India the business reported has been small. Transactions have passed at Rs. 315 on demand, and Rs. 317 for 30 days' sight. There are buyers at quotations. On Hongkong rates have ruled steady at 27¾ per cent. discount.

EXPORTS.

SILK.—Public telegrams from London dated the 15th inst. report the silk market "quiet, but steady; and quote Cock and Worm No. 3½, 15s. 6d.; Blue Elephant, 15s.; Kukee's "Kin Hock," 14s. 9d.; Red Peacock, 14s. 6d.; Fair No. 5 Tsatlee, 13s. 3d., and Hangchow Tsatlee, 13s. per lb."

A large business has been transacted in silk during the past week, and settlements are estimated at fully 4,000 bales, making total to date 8,000 bales. The greater proportion has again been taken by the Continental buyers at prices which must be considered *very full ones*, in face of above advices from London, and considering the willingness evinced by holders to realize.

Arrivals are increasing and the unsold stock is estimated at 12,000 bales.

TEA.—There has been more business doing during the past week, though our market continues to be only sparingly supplied. Arrivals have consisted almost entirely of Teas from the Hohow and Ningchow districts, only a few chops of Shontam and Oonfaa having been received from Hankow. One or two good parcels of the latter class have been sold at Tls. 31½ *a* 32½. Quotations on the whole are about the same as last week.

The first crop is now nearly finished, and the market closes quiet with only a small available stock. Prices paid have been—

Hohows & Ningchows	Tls.	20½ *a* 40.	Settlements...	15,092 chests.	Stock.

COMMERCIAL POSTSCRIPT.

June 19, 1875.

Arrivals.—(Not reported above.)—June 15th, American schooner *Almatia*, from Singapore; 18th, German schooner *San Francisco*, from Singapore; British ship *Ascalon*, from Sydney.

Departures.—(Not reported above.)—June 16th, British steamer *Achilles*, for London.

The French mail steamer *Tigre* takes about 4,000 bales of Silk.

Exchange.—On London, Bank Bills, 6 months' sight, 5s. 9d. *a* 5s. 9¼d. First-class Credits to Bank, 5s. 9⅝d. First-class to Private buyers, 5s. 9½d. Private and Documentary, 5s. 9⅜d. *a* 5s. 9⅝d. On Paris, Bank, Frs. 7.30. Private, Frs. 7.37½ *a* 7.40. On India—Bombay Bank, demand, Rs. 314½. Calcutta Bank, Rs. 314½. On Hongkong, Bank Bills, demand, 27⅝ per cent. discount. Private, 15 days' sight, 28¼. Gold Bars, Tls. 172.00. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 73.025 per 100. Carolus dollars, Sh. Tls. 80.15 per 100. Copper cash, 1,590 per tael.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 19th June:—

Banks.—The market has been irregular—shares having been bought in Hongkong, for Shanghai account, immediately after our last, at 26½ % dis.; and shares were bought here yesterday, for Hongkong account, at 23 % dis.

S. S. N. Co.—On the afternoon of the 12th, business was done at Tls. 73½ cash and Tls. 75 for 30th inst., and a fair amount of business has since been done at Tls. 74 *a* 75 cash, Tls. 75½ for 30th inst., and Tls. 76 for 31st July. Very few shares are now to be got at Tls. 75 cash.

Fire Insurance.—*Chinas* have been wanted at $142, but few shares have been settled, holders wanting higher rates. *Hongkongs* have been placed to a limited extent at $495 cash, and equivalent rates for time.

Marine Insurance.—A fair business has been done in *China & Japans* at Tls. 92 *a* 92½ cash—the market closing with buyers at Tls. 93, and sellers at Tls. 94. *Yangtszes* have been placed at Tls. 522½ for 31st July *ex June dividend*, and at Tls. 557½ cash *cum div.* Holders now ask much higher rates.

Wharf Shares have been placed at Tls. 90 cash, and Tls. 95 for 31st December.

Imperial Loan Bonds are now wanted at £102.

Very heavy rain set in on Sunday and continued during the early days of the week. A strong N.-Easterly wind during Wednesday night cleared the atmosphere somewhat, and Friday and to-day have been dry, but cloudy and threatening, with a Northerly breeze.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, JUNE 26, 1875.

THE bi-monthly Table which we publish on another page, showing the fluctuation in shares quoted in the Shanghai Share Market between July 1873 and the present time, is a document from which much may be learnt. The result, that the aggregate market value of stocks usually quoted in the market here, has depreciated within two years by an amount exceeding Five Millions of Taels, is sufficiently startling to need some explanation. An analysis of the more serious items of loss is scarcely more reassuring, while the fact that the depreciation in the share market is only one part in a chain of similar depression and loss, lends to the review a still wider interest. It is noteworthy that the principal losses have been in Steam Companies and Banks—*i.e.* those institutions most nearly connected with the prosperity of trade; and no one, unfortunately, can deny the patent inference, that trade has been bad. Still, it would be wrong to attribute the depreciation in value of these shares entirely to that influence. There have been other causes also at work. In the first place, competition has increased; rates of freight have been reduced, and the freight itself is distributed among a larger number of ships. These would in themselves be reasons why the shares should stand at a less value than they did in 1873; but it would not account for depression to the present limit; an exaggerated apprehension of the probable influence of the C. M. S. N. Co., and absence of demand, arising indirectly from depression of trade and consequent dearth of money, will go far to explain the extra fall. Coincidently again with the depression of trade, may be quoted an allegation based on the Customs Returns, that there is an actual falling off in the amount of goods to be transported. The statistics of the last three years show a steady decrease in the gross value of the trade of Shanghai, from Tls. 131,364,000, in 1872, to 124,438,000 in 1873, and Tls. 117,178,000 in 1874. But decrease in value has [illegible] as decrease in quantity, and we are not disposed to think a material reason for the depreciation at least of Steamer shares,

is to be found here. In the case of Bank shares it is otherwise. Bad management, which has encouraged inflated schemes and inflated speculation, has been a material factor; but the general depression of trade and consequent diminution of profits have exercised a disastrous influence, both directly and indirectly. Wharf and Marine Insurance shares stand next in point of depression, while Fire insurance shares and domestic institutions show comparatively little loss.

We believe, however, that if the table were extended to include all the joint-stock institutions connected with China, the depreciation would be found to be more serious then even the local share list seems to prove. Certainly if it were carried further back a couple of years it would show a still heavier loss, but the comparison would be less fair because it would include a period of abnormal inflation, just as present prices exhibit abnormal depression. Nor do proofs of the present unsatisfactory condition of affairs in China end with share lists, or even with the list of insolvencies which have been chronicled in our columns of late. They penetrate to the accounts of such institutions as the Colonial Post-Office at Hongkong. We find the Postmaster-General lamenting a loss of five thousand dollars on his customary revenue, and though a certain amount of this is to be accounted for by the more frequent use of telegraphic communication, there is still a margin which can only be explained by the decreased activity of trade. It is noteworthy, too, that at the present moment a commission is sitting in Hongkong to take into consideration the necessity of reduction in the ground-rents payable under lease to the local government. It is notorious that buildings are standing idle in the middle of Victoria, because they cannot be let at rates sufficient to cover the ground-rent; and though a similar state of affairs cannot happen at Shanghai, it is already felt that the last Municipal valuation, made within two years, is far in excess of present rates. Nor is the present depression confined to Foreigners alone. The Chinese themselves have been sufferers. Whatever may be said about the eagerness of competition, which prevents silk and tea falling to profitable rates, the competition has at least not been to the general profit of the Chinese merchant. The recovery of European silk crops, competition of Indian tea, increased shipments from China in both cases, and other causes into which it would be too long to enter, have caused a fall in the market value of these great staples of the China trade, of which even the consumer seems hardly yet to have reaped the benefit. Over-shipments of Piece Goods again depreciated the market in China to an extent from which it has never recovered, and the oppressive taxation which weighs here on every article of commerce, checks the increased consumption which would be the natural and certain remedy, if trade were less impeded and hampered by exactions. To judge from external events, China should now be entering on a career of prosperity; yet the contrary is the fact. Choked by barrier taxes and local squeezes, trade seems to be actually falling off instead of developing. And the blind policy of the Government prevents the exploitation of the mineral wealth which would in itself be a new source of prosperity. Year by year the returns of the Foreign Customs show a diminution, and so far as we can learn, were any accounts to be kept at the Native establishments, the results would be still more startling. The junk trade of Hongkong is in a fair way to extinction, without any corresponding revival taking place at Canton or elsewhere; things are in fact pretty nearly as bad as bad can be. We often hear the hope expressed that "when things come to the worst they will begin to mend;" and in this hope people have lingered on. Milton tells us of "in the lowest depth a deeper still," and there are causes which seems to justify the belief in a perpetual decadence. Persia, some twenty years ago, was thought to have attained to such an unsatisfactory condition that nothing lower was possible, but we believe that bad government has succeeded even there in making matters worse. Burmah seems to be following in the same track, though, thanks to its position, there is some faint hope of the government of the King getting hauled up with a tight knot. Singapore has been, for the present at least, rescued from a similar fate through the energy of Sir Andrew Clarke; but, judging from the present turn of affairs, the Chinese trade is to be allowed to drift helplessly into stagnation. Every abuse and every burden placed upon trade by the government of China seems to meet with the approval of Her Majesty's advisers, while remonstrances, whether from Foreign or Native traders, are either consigned to oblivion, or replied to in studiously offensive language. The British Government seems to forget that it was on the faith of its own promises that British capital has been largely invested in the China trade, and fails in its duty when it allows its Representatives to ignore commercial interests.

Summary of News.

The English mail of the 14th May arrived Wednesday, by the P. & O. str. *Venetia*.

A mail leaves to-morrow for Europe, by the P. & O. str. *Nizam*.

The following Reuter's telegrams have been received during the week:—

The suspension of the following firms is announced:—

Young Borhwich & Co., Bill Brokers; John Strachan & Co., Bishopsgate Street; J. Fowlie, Leadenhall Street; John Anderson & Co., Philpot Lane; J. P. Westhead & Co., Manchester. There are also other minor failures.

Malcolm, Hudson & Co., Crosby Square, have suspended payment.

The German Government in a note cordially thanks Belgium for the investigation into the Duchesne affair, and for the supplementary legislation to which it gave rise.

The Public Powers Bill has been read a second time in the Assembly.

The Burmah difficulty is settled.

Hongkong, 23rd June, 1875.

The steamer *Japan*, being towed to Wanchi to discharge cargo of coal, went on the rocks and after-compartment filled with water; efforts are being made to float her.

It is reported that the steamer *Carisbrooke* is to be released, security being given for the value of the ship, pending reference to Peking.

Messrs. Russell & Co.'s offices were destroyed by fire on the night of the 22nd. The fire commenced in the stables belonging to Messrs. Melchers & Co., part of whose premises was also burnt.

Obituary—Mr. W. D. Harrison, on the morning of the 23rd.

At an extraordinary meeting of the China Traders' Insurance Co., held in Hongkong Monday, the shareholders resolved unanimously in favour of a call of $500 per share. This will strengthen the Company considerably, and sets at rest all doubt as to whether it would continue in operation after its recent losses. We may take the opportunity, bye-the-bye, while speaking of losses, to mention that the Co.'s loss on the *Poyang* was only $15,000 instead of $50,000 as reported when the news first came up. We presume that every institution must expect its stroke of adversity, and certainly the China Traders' has had a cruel one. But having successfully weathered it, we have no doubt the Company will, under the new arrangements, recover all its former prosperity.

Beyond giving a further batch of correspondence about wheelbarrows and bridges, the Municipal minutes we publish elsewhere tell us absolutely nothing but that all the medical men in Shanghai had been invited to attend a certain meeting, that six of them responded, and that "the time of the "meeting was taken up with matters con-"nected with the proposed new Hospital." Not a word as to what passed; yet one would think it could hardly be inconvenient to the Council to take the public into their confidence and elicit comment on the discussion as it proceeds. We have no doubt whatever the community will be, sooner or later, given such a full statement of the case as they are entitled to have; but we can see no reason why they should not have a minute sketch of what is passing, as it passes.—"After the Doctors had withdrawn," the letter from the French Council which we published a week ago, was read, accepting the jin-rik-sha arrangement as a basis for arranging the wheelbarrow licence difficulty; and a reply specifying more in detail the nature of the proposal, was agreed on:—1° That the number of wheelbarrows allowed to run in both Settlements shall be restricted 6,000. The present number licenced is, we believe, about 3,000, of which rather

more than ⅔ are licensed in this, and rather less than ⅓ in the French Concession, that a liberal margin is allowed for increase. 2°—That every wheelbarrow allowed to run shall be licensed by one or other of the Councils. 3°—That each Council shall have the right to issue 3,000 licenses and no more, 4°—keeping for itself what fees it takes. 5°—The license fee to be the same in both Settlements. 6°—The arrangement to be terminable at six months' notice. 7°—Regulations affecting the control of the traffic, to be agreed upon by the Councils, and to be uniform. The conclusion of the two letters rather reminds us of the correspondence between the editor and the contributors to *Punch's* novel, "Chikkin Hazard," — "and, now gentlemen, the editor does hope," &c., &c. However, we cordially endorse the wishes expressed by the two Presidents. It still remains for the Councils to approve in detail the proposition which they accepted in principle; and we have no doubt the two Municipalities will then work together more amicably than ever, after their rather sharp skirmish.

In the case Norman Hill *v.* Reynolds, tried before the Supreme Court on the 9th inst., Sir Edmund Hornby delivered judgment on Saturday, in favour of Defendant.

Sir Edmund Hornby delivered judgment Saturday, on the question that was argued before him on the 10th inst., as to whether the master, crew and passengers of the *Fusing* should recover for the loss of their effects on the same principle as the owners of the ship and cargo. In an elaborate and rather interesting decree, the Chief Judge decides in favour of the crew and passengers, but against the master. From the decision that both vessels were in fault, it follows that he was one of the two real delinquents, "and ought not to recover from his innocent owners or the equally innocent owners of the *Ocean* (their so-called guilt being only an inference at law) in respect of loss brought about in part by his own act."

An enquiry was commenced at the Mixed Court Wednesday afternoon, into the assault on Mr. W. Cooper, near Quinsan, on the 29th April last. The Court was composed of Fan, district magistrate of Quinsan, and Chên, the Mixed Court magistrate, with Wong, interpreter to the Taotai of Shanghai; Mr. A. Davenport, H. B. M.'s Vice-Consul, being present as British Assessor, The charge involved an attempt at murder, with the addition of that of robbery. The proceedings, so far as they went, were thoroughly insatisfactory. No prisoners were at first produced, and it was not until after Mr. Davenport's repeated remonstrance, that the two ringleaders captured and brought to Shanghai by Mr. Cooper and his friends were placed at the bar—if so distinctive a word can be used with reference to a Chinese Court. It then transpired that no efforts had been made by the Chinese authorities to capture any more of the offenders, though these were numbered by hundreds; and [illegible] a question whether any [illegible] was instituted into the circumstances of the attack. Mr. Davenport, after an hour and a half's [illegible] time had been in a measure wasted, suggested a remand until some others of the score or more of ringleaders were apprehended; and this being acquiesced in by the Court, the proceedings terminated for the time. A full report appears elsewhere.

The behaviour of the Mandarins in this case is on a par with their conduct generally. Their efforts are directed to encroachment and the evasion of lawful responsibility. A feeling of irritation more intense than finds expression in printed words, prevails among foreigners at the present state of affairs in China. We have yielded and yielded, while the Chinese have encroached and encroached, till people are beginning to believe that nothing short of war will re-establish our prestige, and replace our intercourse on a tolerable footing. In defiance of all previous experience, culminating in two wars, the British Government has elected to believe that the Chinese were a civilised people who could be treated with on an equality and trusted to do right. For the third time now, a series of contrary evidence is accumulating that must eventually force upon it an opposite conviction, and which is, in the meantime, creating a sense of irritation among those who are on the spot and well informed, that is becoming well-nigh intolerable. H. B. M.'s Representative may have gathered some faint idea of this feeling, during his stay in Shanghai, but he has not the opportunity of learning its full strength. We cannot but think that the circumstances which so strongly affect a community not altogether unintelligent, must have an effect on the Foreign Ministers, and we have therefore some hope that the point of endurance has been nearly reached. The action which is being taken in the Chinkeang affair seems to be a foretaste of better things.

A Reuter's telegram says the Burmese difficulty is settled. That is, we presume, the King has given up the Karennee frontier question and promised to behave better in future. Will it be too much to hope that something may now be done in the Yunnan affair?

As our readers will have noticed, Dr. Elmore, the Peruvian Chargé d'Affaires, arrived by the *Oregonian* on Sunday, on his way to Peking, to exchange the ratifications of the Peruvian treaty with China. Dr. Elmore sent in his card to the Taotai on arrival, and the latter called on him Tuesday at the Astor House, and stayed some time in conversation.

The recent heavy rains have caused an unusually strong current in the Hwangpoo. The *Hoyen* was nearly an hour later than usual in arriving from Woosung on Tuesday.

An alarm of fire was rung through the Settlements last evening, between eight and nine o'clock, and the various fire brigades and ladder companies turned out in force with commendable alacrity. The fire was said to be in the French Settlement, and thither the firemen, accompanied by large crowds of [illegible] and Chinese dragged their [illegible] through mud and mire, only to find the alarm was a false one. [illegible] enquiry [illegible] ascertained [illegible] how the alarm was rang. At the French Police Station, M. Barbe and his subordinates were confident it came to them from the Central Police Station; while Superintendent Penfold, Inspector Fowler, and Sergeant Mackie were equally sure it came from the French side—Hongkew, being disconnected, having nothing to do with the mystery. That the telegraph alarm bell rang in both the Central and French Police Stations there can be no doubt, but how, is a mystery. No one could explain it, and it is therefore left for the electricians to decide.

We draw attention to the list of bi-monthly values of Shares as given in the share lists, from July 1873 to the end of May this year, which we publish on our commercial pages. The total depreciation of the total stocks as stated in the foot note, appears to be over five millions of taels.

The Engineer-in-chief notifies that a ship's mast-head light will henceforth be exhibited over the lorcha *Chinhai*, sunk on the sand-bank opposite the upper end of Gravener Island.

The police made a successful raid on a native gambling house in the Szechuen road, on Saturday night. The place had been discovered only a little while before, and was apparently newly set up. Inspector Fowler, with some native constables, went to the house, and found about thirty gamblers assembled. They immediately attempted to escape, and ran in all directions, some scaling walls, others climbing to the adjoining roofs, or dropping from windows, and making themselves scarce with the agility of cats. Nine were, however, captured, and will be taken to the Mixed Court this morning. A magazine of gambling apparatus was also seized, showing that the proprietors were adepts at their art.

The *Courier* gives the following particulars of the capture of some men supposed to have been concerned in the West Gate robbery:—About half way between Shanghai and Sung-kiang is a village named Chu-le-ding, blessed with a barrier Customs house on the creek, but otherwise unimportant. To the Tepao of this ordinarily quiet spot came a scared countryman the other day, saying that a band of desperadoes, between fifty and a hundred strong, had taken possession of a joss-house in the vicinity. The Tepao repaired to Sung-kiang in all haste, and obtained thence some soldiers; but not thinking these sufficient, he also came and requested succour from Shanghai. About forty soldiers were therefore sent, and a native creek-gunboat. To these the Che-hsien added about the same number of his police; and after a long fight, they succeeded in taking eight of the band prisoners. The rest, making about forty in all, managed to escape. The head messenger, we hear, with bitter remembrance of his thrashings, has been examining the captives himself, after the Chinese fashion, *i.e.* by torture; and has extorted confessions of several other robberies besides the West Gate affair. They will be brought before the Che-hsien for trial to-night. It is stated that most of them are former soldiers of the forces of Fang Kwang-yen.

A PEKING correspondent mentions a report that Li Hung-chang is going to buy a number of large Armstrong guns.

The *Peking Gazette* of the 29th May contains an edict directing that the Grand Canal be repaired, and fitted for the conveyance of tribute rice to the north. The conveyance of the rice by sea is spoken of as a temporary measure; and all the high officials of the districts bordering on the Canal are ordered to consult and devise measures for deepening the channel, and re-establishing through communication.

The *Gazette* of the 30th May contains a memorial from the Governor of Chekeang, reporting the collision between the *Ocean* and *Fusing*, and the loss of the latter with 65 lives. The C. M. S. N. Co. appear to have been held responsible for the rice lost, as it is reported that they have purchased sufficient to make it good. A mark of Imperial favour is solicited on behalf of the officer in charge, Shih Shi-hsien, who was drowned. Occasion is taken to remark that, although junks have been lost through stress of weather, no considerable number of individuals has at any time been drowned. We wonder if this accident has anything to do with the edict about the Grand Canal. It is just possible it *may* have given a handle to the strong party which has always been opposed to the C. M. S. N. Co.

The *Gazette* of the 1st June contains a memorial from the Governor of Kiangsu, reporting the loss of the *Fusing*. The memorial contains nothing of special interest.

The Peking *Gazette* of the 4th June contains one of the frequent utterances which find place there, condemning laxity and extortion, exhorting to energy and probity, and requiring the vigorous punishment of unworthy officials. These documents are so common and so notoriously inefficacious, that they are seldom worth notice otherwise than as literary curiosities. The present edict is perhaps worth more, because it is prompted by a man who has the reputation of being strictly upright. Perhaps the term Naval Inspector of the Yangtsze will convey an idea of Peng Yuh-ling's office. It is one which leaves opening enough for peculation, but his reputation is said to be spotless, and his name a terror to evil-doers. A memorial from him, denouncing corruption, would have undoubted weight; and to judge from the précis given in the edict, he appears to have submitted an able and exhaustive one. It can at least not be alleged in excuse for misgovernment that the Capital is uninformed. The avarice of the officials, the excessive taxation, the peculation of underlings, and the distress of the people under all these inflictions, are forcibly stated; and the edict issued in consequence is all that could be desired in tone and theory. But we have so often seen edicts to the same effect, without the slightest good ensuing, that we cannot find much hope in the present one. Still, Peng's name will have weight, and there is the chance that such utterances as his, coming among the mass of complaints that have been lately addressed to the Throne, will persuade the Government that things are in a bad way, and impel them to essay some action for their own safety, if from no higher motive.

Our TIENTSIN correspondent writes that the Chinese gunboat *Chinhae* left early on the 18th for Newchwang, with a fresh supply of munitions of war for the Imperial forces in Manchuria. There was a rumour amongst the Chinese in Tientsin, that the troops lately sent there had been attacked by a body of rebels unexpectedly, and suffered considerable loss. The fact of further supplies of powder, shot and shell being so quickly required does look as though affairs had not gone on well.—Ting Jih-chang, formerly Taotai of Shanghai, and since Governor of Kiangsu, has been appointed Assistant-Commissioner of Foreign Affairs in North-China. Our correspondent protests against the appointment, as designed to give Li an excuse for withdrawing from intercourse with Foreign officials, who will be handed over to an inferior. We are rather inclined to think it is a move towards preparing Ting for the Viceroyalty, in case Li is obliged to retire into mourning on account of his mother's death, which is likely to occur very shortly. —Sun Szeta, the late Acting Customs Taotai, left for Shanghai in the *Hochung*. The deadlock he succeeded lately in causing, does not appear to have injured him much in the eyes of Foreigners; for our correspondent speaks of him highly, and several Foreign officials appear to have come down to wish him good-bye.

By the steamer *Fychow*, we learn that the recent heavy rains have caused the river to swell unusually. On the 19th inst., the high-water mark at HANKOW was 37ft. 7in., and the water rising about 7 inches daily. The banks were covered, and the country was flooded in many places, especially in the neighbourhood of the Poyang Lake.—As will be seen from the extracts which we give on our fourth page, from Messrs. Gordon Bros'. Circular, apprehensions are entertained of a flood again, this year, at Hankow. Nearly as heavy rain seems to have fallen up the River, as in Shanghai.

H.M.S. *Thalia* arrived at CHINKEANG at 8 a.m. on Saturday, and the *Palos* at 8 a.m. on Sunday. The two men arrested at the beginning of the riot were tried in the presence of Mr. Seward and Mr. Medhurst, and sentenced to 50 blows each and a month's cangue. This accounts for the men concerned in the insult to the American Consul and his wife. But it remains to punish the attack on the British Consulate. And so far Mr. Medhurst has failed to obtain from the Military authorities any satisfaction for this outrage. He has therefore gone on to Nanking to press the matter on the Viceroy. The Civil Mandarins appeared well-disposed, but said they could do no more with regard to any further measures than press the case on the Military Mandarins. There has been no farther disturbance, nor does there seem to be any feeling of insecurity at Chinkeang. But such offences as those committed cannot be allowed to pass, and it is satisfactory that the opportunity is being taken to make a demonstration, and press the case on the Authorities, with a view to prevent further troubles.—Mr. Seward returned by the *Hankow*.

Messrs. Spencer, Wolff & Co. write from Chinkeang on the 23rd June:—Notwithstanding the almost incessant rain of the past week, and the depressing nature of advices received from Shanghai, a lively business has been conducted in Plain Cottons: medium to fair 8¼-lbs. *Grey Shirtings* have commanded most of the attention of our dealers, *T-Cloths* being in only moderate request, but holders are not anxious to press sales of these goods, as they look for an advance on present rates.

Our readers will remember the sketch we gave very lately, of a memorial said to have been addressed to Peking by the Governor of YUNNAN, disclaiming all knowledge of the murder of Mr. Margary or of the attack on Colonel Browne. That may have been a genuine document, designed to conceal official complicity, or it may have been written "for publication." We now hear it is reported in well-informed native quarters, that the Governor has also written a memorial to the Emperor, telling of his own prowess in beating back Col. Browne's expedition, and offering to keep the frontier clear of all foreigners, no matter of what nation. We give the report as we have heard it from our correspondent, who, while not vouching for its entire truth, says he has every reason to believe it is substantially correct.

We notice that an effort is being made in AMOY to establish a reading-room for Chinese, on a small scale, in imitation of the institution which has been created in Shanghai, under the impulse of H.B.M.'s Consul, Mr. Medhurst. It is not, at first, intended to do more than rent a small house, in a convenient place, on the Amoy side, furnish it in a simple Chinese way, take in the native newspapers of Shanghai and Hongkong, and a few periodicals (*Peking Magazine, Shun Pao, Monthly Wan Kuo Kung Pao,*) and purchase such books, translations of foreign works, as the fund subscribed will allow. The prospectus is signed by H.M. Acting-Consul, Mr. Phillips, Messrs. Kleinwachter, Pye, and Budler. About $150 have been already subscribed.

We are informed by the United States Consul-General, that the U. S. Consul at Amoy advises him that the export duty on coal shipped from FORMOSA has been reduced from $1 to one mace per ton.

HONGKONG news is unusually important. Not satisfied with harassing to death the Hongkong junk trade, the Chinese have now ventured a step further, and seized a British steamer which was landing passengers on the coast of Hainan. Particulars of the incident will be found elsewhere. A Court, consisting apparently of the Haikwan and H. M. Consul, has been held to investigate the case, but they appears to have been unable to agree on a decision, as the case is to be referred to Peking.—Messrs. Russell & Co.'s offices on the Praya at Hongkong, were burned down Wednesday morning; the books and papers were saved. A private telegram names the Hongkong Fire Insurance as a probable loser of $20,000 by the accident, and the China Fire of $15,000.—It is said to be very probable that Dr. Legge, the well-known missionary, of Hongkong, will be appointed to the professorship of Chinese at Oxford.

of the working of the new jail system, are all necessary preliminaries. We all know the saying uttered first by a little man and approved by a great one—"the very worst use to which you can put a man is to hang him." Surely it is nearly as bad to condemn a man to weeks or months of inutility—to leave him to brood over his past in sullen gloom, and to punish a citizen for offending society by keeping him under conditions where he must learn to hate it. We hope therefore, some day, to see this admirable suggestion carried out, and a jail with its European and Chinese sides conducted on a reformatory plan. But we fear, for the reasons we have stated, the prospect is not near at hand. However that may be, a permanent Foreign Assessor would be the only person who could undertake to carry out these extensive and beneficial changes, and we trust the first effort will be directed to having such an officer appointed to the Mixed Court.

THE CUSTOMS AND THE MANDARINATE.

We took occasion, some weeks ago, to comment on an incident arising out of a late collision case at Tientsin, when the Commissioner of Customs sought to sit, in a Mixed Court, as representative of the Taotai. A correspondent objects to our criticism, without, however, bringing forward any new feature. The case is a very simple one. Art. XXVIII. of the U. S. Treaty provides that controversies between citizens of the United States and subjects of China "shall be examined and decided conformably to justice and equity by the public officers of the two nations, acting in conjunction." A Commissioner of Customs is not a public officer of China in the sense here implied. He is an employé of the Chinese Government, or of Mr. Hart, as the case may be, but he is not a Chinese official; and there can be no question that what the treaty means is—American officials and Chinese officials. It is not suggested that any particular harm could have ensued to either party in the present case, from Mr. Twinem's presence on the bench. The question was one of principle; and we consider Mr. Sheppard was entirely right in the course he took. If the case should come before the Ministers, as "A. B. C." suggests, we imagine they will know how to reply; but we do not think the Chinese are so anxious in the matter. It is rumoured, indeed, that the Taotai at once acquiesced in Mr. Sheppard's objection, when stated before the trial, and that Mr. Twinem's persistance in open Court was of his own motion. Unless, then, it is urged on by the members of the service on whose behalf our correspondent disclaims a desire to arrogate mandarinal functions, we feel pretty sure we shall hear no more of the matter. This however is not to say that we rely greatly on our correspondent's disclaimer. On the contrary, it would be consistent with the spirit which has inspired Mr. Hart's policy, to push the question before the Ministers; and he seems to have found in Mr. Twinem a gentleman willing to supply him with the needful data. We are told that the rather painful scene which occurred in the *Shantung* collision case, was repeated on the occasion of a more recent enquiry into a collision by the *Chihli*, and that all the firmness of the Court was evoked by the occasion. If we could see that the Chinese could be got to employ foreigners as permanent judges in Mixed Court cases, we would be glad to help along so desirable a result; but we see nothing in the present case which points that way; and we repeat the opinion we previously expressed, that Mr. Sheppard is perfectly right in refusing to recognise any attempt by Foreigners in the Chinese Customs service to stand between Foreign and Chinese Officials in the adjustment of international affairs.

SEIZURE OF THE BR. STR. "CARISBROOKE."

From the *Daily Press* of the 16th June, we extract a full account of the capture of the British steamer *Carisbrooke* by a Chinese gunboat, off the coast of Hainan. The *Carisbrooke* was on her voyage from Singapore to Hongkong, and had on board a number of passengers for Hainan whom she was stopping to land, when the Chinese gunboat *Peng-chao-hai* came in sight and ordered the master to steer for Canton, and to keep her company. He obeyed until nearing Hongkong waters, when he repented of his acquiescence, and put his helm for Hongkong. After vainly repeating the summons to accompany her, the *Peng-chao-hai* fired, and completely carried away the *Carisbrooke's* rudder and rudder post. She then took charge and conveyed her up the Canton river to Tiger Island, some two miles from Canton. It is said that for some time past the Canton authorities have been in receipt of information to the effect that passengers, well stocked with opium, had been landed on the East Coast of Hainan, close to where the P. & O. steamship *Gwalior* had to anchor when she recently broke down. And on the present occasion, it is understood that a telegram was received from Singapore, stating that a steamer had left that port, and would call at Hainan, and the *Peng-chao-hai* was promptly despatched to that locality. It does not seem however that the *Carisbrooke* was the vessel of which she was in search. She was come upon incidentally, and "bagged" out of hand.

The action against the *Carisbrooke* is of course taken under articles XLVII and XLVIII of the Tientsin treaty. But it is denied on the part of the *Carisbrooke* that there was any intention of smuggling in this case. She had on board a number of passengers for Hainan, and a few bales of piece goods and 12 chests of opium belonging to them. But it has been a common practice for steamers plying between Singapore and Hongkong to land passengers off Hainan, and the idea of calling the proceeding smuggling, in the ordinary sense of the term, is ridiculous. It may not be in strict accordance with the letter of the treaty, but it is a very long way from coming under the spirit of the clauses which talk of confiscation. So far from there having been any "clandestine" design, the *Carisbrooke* cleared from Singapore for "Hainan" and Hongkong. She may thus claim that she had official recognition of her intended proceeding, and that if the Chinese have any thing to say, it is to the Straits Government they must say it. Yangtze Steamers stop to land passengers off various ports other than Chinkeang and Kiukiang, on their way to Hankow; are they to consider themselves liable to be fired into, and taken to Wuchang?

A strong point is made by the *China Mail* on Art. XI of the Tientsin Treaty, which runs as follows:—

"In addition to the cities and towns of Canton, Amoy, Foochow, Ningpo, and Shanghai, opened by the Treaty of Nanking, it is agreed that British subjects may frequent the cities and ports of New-Chwang, Tang-Chow, Tai-Wan, (Formosa), Chau-Chow (Swatow), *Kiung-Chow (Hainan)*.

They are permitted to carry on trade with whomsoever they please, and to proceed to and fro at pleasure with their vessels and merchandize."

Literally, therefore, according to the Treaty, the *Carisbrooke* was perfectly justified in visiting Hainan. It must be observed that the wording is not "*may be* allowed to frequent," or "*will be* permitted to trade." In such a case the unfulfilled action would allow of prohibitory construction until certain arrangements had been made. But the words are MAY *frequent* and ARE *permitted to trade*. We have certainly submitted with characteristic tameness, to have obstructions thrown in the way of a formal opening. But no obstructiveness can alter the fact that, by treaty, Hainan *is* open.

The *Daily Press* says that the *Peng-chao-hai*, after leaving the *Carisbrooke* at Canton, came down the river again, and was seen the same evening, with another gunboat in her company, dodging about near Green Island. A large junk coming up from the West Coast was pounced on before she could get into Hongkong waters. The junk showed fight, but was captured and taken to Canton. It will be remembered that the *Peng-chao-hai* was in search of another steamer when she dropped upon the *Carisbrooke*; and the *Press* says another gunboat has gone down to complete that errand. It is some satisfaction to hear it reported that H. M. S. *Egeria* has gone to watch the actions of the latter; and that a British gunboat from Singapore has been sent up in company with other steamers cleared for the Treaty port of Hainan and for Hongkong. At any rate, the *Egeria* left port on the 17th under sealed orders; and H. M. S. *Ringdove* has gone to Canton.—In the meantime, as if the capture of the *Carisbrooke* were not a tolerably bold experiment in itself, for the result of which the Customs might be content to wait without aggravating it in detail, the *Daily Press* tells us that the passengers on board the *Carisbrooke*, who were bound for Hongkong, had their luggage searched on arrival at Canton, and all goods liable to duty in that port, but not

dutiable in Hongkong, whither they were bound, were seized and confiscated :

"It is difficult to reconcile this act with any "principle of law or equity, It seems to "us a flagrant violation of them all. The "passengers were bound for Hongkong "and not for Canton ; their effects could, "therefore, on no possible pretence, be re-"garded as destined for Canton. Even "supposing the Customs Officials there had "reason to believe that these passengers "intended ultimately to smuggle the goods "into Canton from Hongkong, they had "still no proof, and therefore had no "right to presuppose the offence. This "confiscation, if true, and there is small "doubt of that, is a high-handed and "arbitrary proceeding, for which there is "no sufficient justification, and for which "it is to be hoped the Canton authorities "will be induced to make compensation. "Whatever justification they may have "had for the capture of the vessel and "cargo, we can find none for the seizure of "the passengers' goods, and they may rest "assured that they have imported an "element of weakness into their case by "this illegal and unjust proceeding. It is "the desire of this community, we feel "convinced, that the course of law and "justice should have its way in the whole "matter ; but this particular act is so "utterly irreconcileable with the commonest "notions of equity, that it can only be re-"garded with indignation and displeasure."

But there seems no end at all, to the extraordinary proceedings that are going on in the South. The inquiry into the seizure of the *Carisbrooke* was heard with closed doors ! reporters sent up from Hongkong being refused admission. We are surprised beyond measure to learn that Sir Brooke Robertson consented to such a course, and emphatically endorse the assertion of the *China Mail*, that "the action which excluded the defendant's counsel, the representatives of the Hongkong journals, and the general public, from being present at an enquiry of this nature, was most unwarrantable, justified neither by regulation nor good policy." The *Mail* declares that the Custom-house officials were anxious that no veil of secrecy should be cast over the proceedings which took place. "The responsibility of denying publicity lies between the Chinese and British Consular officials ; and if, as alleged, the former requested that this course might be adopted, it was the business of the latter to emphatically refuse their consent." The *Mail* has, however, been able to obtain a sketch of the proceedings at the first day's trial, including a statement read by the master of the *Carisbrooke*, which we regret that we have not space to re-print. The Court seems to have been composed of the Haikwan, who sat in the middle, with Mr. Tong Yin-sing, the Canton agent of the C. M. S. S. Co. at his side, to watch the interpretation ; and Mr. Wright, Commissioner of Customs, beyond ; while on the left of the Haikwan sat H. B. M.'s Consul, with Mr. Gardner, who acted as interpreter, at his side. It would have seemed more natural that a British Consul would occupy the chief position, in a Court where a British ship or a British subject was to be tried ; but we believe some peculiar regulations on the subject have emanated from Peking, which yield the *pas* to the Chinese in this as in most other respects. Mr. T. M. Brown, Deputy-Commissioner of Canton, was first examined, and stated the facts of the seizure pretty nearly as they have been described in our columns. Captain Palmer, of the *Peng-chao-hai*, and his chief officer confirmed the testimony. Captain Scott, when called on for his defence, said—There were twelve chests of opium on board for Hainan and seven packages of piece goods, all belonging to the passengers, of whom there 140 for Hainan, some from Penang, and some from Singapore, the former paying $8.50 each, the latter $6. The freight for the opium was $15 a chest from Penang, and $12 from Singapore. The amount of freight for Hainan was $1,635 altogether. Captain Scott then read a very straightforward defence, raising various contentions against the legality of the seizure. He denied that the ship had the slightest idea of smuggling ; was it likely a vessel worth $140,000 would risk confiscation for the sake of $1,600 freight? Ships were in the habit of calling at Hainan, as he had done, and he did not dream he would be interfered with, even when he saw the gunboat approach. Kiungchow was open by treaty. He was anchored more than three miles from the shore, and any ship had a right to tranship cargo at sea. If there were reason to interfere with anything, all the *Peng-chao-hai* could touch was the junks, into which she was transhipping, &c., &c. "Of course," Captain Scott concluded, "I cannot pass by the consideration that the goods which these passengers for Hainan had, viz., 12 chests of opium and 6 cases of piece goods, were goods on which, when landed, duties were leviable, and that it may be urged against the ship that she was concerned in a scheme assisting these passengers to smuggle. On my own part, I can emphatically say that I had no such intention. I did not know then, nor do I know now, what arrangements have been made by the Chinese authorities for the collection of their duties at Hainan, but that there are Customs stations established there I have never had reason to doubt. The exceedingly small interest which the ship had in the matter is sufficient proof that she did not intend to risk any offence against the revenue laws of China. Moreover, if the Court should hold that the ship was, under the circumstances, to however slight an extent, "concerned in smuggling," within the meaning of Art. XLVIII. of the Treaty, that goes no further than to condemn to confiscation the contraband goods, and does not extend to the ship or the innocent portion of the cargo, which was not intended for Hainan. I must, therefore, ask the Court clearly to sever in their minds the offences which may or may not have been committed against Arts. 47 and 48 of the Treaty respectively. The two things are, and even clearly meant to be, distinct. The "trade" mentioned in Art. 47 is neither more nor less a breach of it, because the goods carried happened to be subject to duties. The former Article was meant and solely meant to preserve to the Chinese Empire the exclusiveness to which it has elected to lay claim, and differs, *toto cœlo*, from the article which is meant to protect its revenues. For the protection of its revenues one scale of penalties has been deemed sufficient ; for the protection of its exclusiveness, another. In construing a clause in a Treaty so exceptional and peculiar as this, the marked distinction made in the Treaty between the two classes of offences cannot be too distinctly preserved. In the one case the punishment is made to fall on the right persons—viz., those who own the goods and choose to run the risk ; in the other, it may, and probably must, be to a great extent vicarious. The owners of ship and cargo cannot, I submit, be reasonably made responsible for any possibly illegal acts on the part of the passengers over which they had no control."

We learn by telegram that the *Carisbrooke* is to be released under security, pending reference to Peking. It is to be presumed, therefore, that the Consul and the Haikwan have been unable to agree in their judgment.

Outports.

NEWCHWANG.

A Newchwang correspondent writes :—The rumours you get as to a rebellion in this part, are not reliable. Brigands are plentiful enough, and there is or has been a corrupt executive. The new military Governor seems disposed to put an end to such conditions ; hence a stirring up of mud which attracts attention.—Messrs. Bush Bros., writing from Newchwang on the 16th June, say,—Business has not much improved. 8¼-lb. *Shirtings* are quoted Tls. 1.65.—*Produce* remains dear for want of rain, and we quote : Beancake, Tls. 3.80 per 10 ps. ; Peas, Tls. 2.32 per 300 ; Oil, Tls. 2.48 per picul. The demand for tonnage, except at low rates, is small, but we look for a revival with a change in the weather.

TIENTSIN.

H. E. General Raasloff, the Danish Minister, would, I understand, leave Peking, for Shanghai, on the 15th instant ; and I suppose he will reach Tientsin in time to leave by the S. S. N. Co.'s steamer *Chihli*, which has been notified to start on the morning of the 18th instant.

We hear here from Chang-kea-kow and Koo-pe-kow, that rain has not fallen in the country around these towns in quantity to preserve the wheat crops ; and the consequence has been that they have all failed. Locusts have already appeared in several parts of the north and west of this province. Four days back, one of my people brought to my place several catties of locusts to feed my young turkeys with. In all parts around us, but more especially in the country lying to the north and west from Tientsin, rain is greatly required to preserve the millet crops.

The late acting Customs Taotai, Sun Szeta, leaves to-morrow, in the Chinese merchants' steamer *Hochung*, for Shanghai. He has held office as acting Customs Taotai for ten months. During the course of a long residence in China, I have come officially into contact with a number of Chinese officials of high and low degree, and I am thus in a position to be able to make a comparison between Sun Szeta and the others. I can bear testimony that Sun Szeta has stood very favorably, as respects ability, in the discharge of his international duties and, as respects courteousness, in his personal intercourse with the Foreign functionaries at this port. If you addressed him on an official matter in the forenoon, you would, ere the day expired, even as late as eleven o'clock in the evening, receive a reply. If you wrote that you wished to call on him on business at a particular hour, it would be strange indeed if he did not promptly reply that he would be ready to see you. In respect to the new regulations for this river, he gave himself considerable trouble to arrange and establish them on a sensible basis. He last winter addressed all the Consuls of the port on the subject, requesting them to furnish him with their views as to the establishing of new river regulations, to avoid in future, as far as practicable, injury to the grain junks coming to this port. He, besides, through the Commissioner of Customs, obtained the views of the Foreign river pilots on the best places for mooring the junks—views which were

based on daily practical experience of the navigation of the river in their steam-tug and lighter crafts; and at their suggestion, he put up pyramids at the extremities of the places where junks should moor. He had likewise a map-chart made of the river, shewing the mooring places. There was also, by his orders, a Foreigner, speaking Chinese, detailed from the staff of the Customs service to preserve order in the mooring of the junks. In short, Sun Szeta did everything possible on his part to establish and carry out proper river regulations. It must, however, be borne in mind by your readers that the grain junks have at times to move up and down the river on their business as well as the Foreign steamers; and consequently there are times when they will be moving, and not lying in the mooring places assigned to them. Hence, and taking it for granted that the new regulations are properly carried out, when accidents have since occurred, it is quite possible that the new river regulations of Sun Szeta had no power in preventing them. To close, it is my opinion that Sun Szeta has on the whole left a favorable impression on the Foreign officials of this port; and that the Sovereign of China has in him an able servant.

It must not, however, be supposed that I am not perfectly aware that Sun Szeta is at the same time what Foreigners call "a Chinese Mandarin;" but Foreign officials who are in the habit of meeting "Chinese Mandarins" on international business, know that there is an immense difference between the different men. Then, on the principle of speaking well of the bridge which has carried us over, let us honestly speak truth of Sun Szeta.

This afternoon, soon after Sun Szeta had reached the residence of the Chinese Merchants' Steamer Company, to go on board their steamer *Hochung*, which was lying off their offices, the Consuls of the port, the territorial functionaries—the Taotai, the Chefoo, and the Cheheen; the Customs and the Salt Taotais, and the high Military Mandarins stationed at Tientsin, all called upon him to bid him good-bye, and to wish him a pleasant passage to Shanghai. The *Hochung* was dressed with all her flags for the occasion.

16th June.

In the *N.-C. Herald* of the 5th inst., I read the following paragraph in regard to the Yunnan outrage:—"It is generally "understood that Messrs. Grosvenor and "Baber are the officials designated to con- "duct the investigations, and the China- "man who has been designated as their "escort is here in Shanghai. Why do "they not start?"

I have, in consequence of this announcement, considered it my duty to again approach, with your permission, the subject of the Yunnan investigations, with the view of laying before the British public the following observations; and I trust my countrymen will attribute my doing so purely to an earnest desire to aid, as far as such may lie within my limited sphere of knowledge of China and Chinese, in the effectual carrying out of the intended investigations.

I have hitherto stated it as my opinion that in China, when a British subject has any charge, either of a civil or a criminal nature brought against him by Chinese, the British Consul ought alone to be the judge of the Court; Chinese officials—Cheheen, Chefoo or Taotai—being, however, at the same time at perfect liberty to come into Court, sit at one side (not on the bench) [illegible] to ask, through the Consul, the witnesses questions, and to produce or call for witnesses. On the other hand, in order to be strictly just, I have hitherto stated it as my opinion that, when a Chinese subject in China has any charge, either of a civil or criminal nature, brought against him by a British subject, the Chinese District Magistrate ought alone to be the judge of the Court, the British Consul being, however, while the investigations are going on, at perfect liberty to go into Court, sit at one side (not on the Bench) and watch the proceedings, ask, through the Magistrate, the witnesses questions, and produce or call for witnesses.

In the Yunnan case, the British Government are the plaintiffs, and charge several Yunnan officers with having caused, either as principals, or as abettors, or as accessories, the assassination of a British officer and his servants, while travelling under a passport bearing the seals of Great Britain and China, in a province in the Empire of China; and with having caused, either as principals, or as abettors, or as accessories, a military attack on a British officer and his escort, while similarly travelling under a passport bearing the seals of Great Britain and China, within the Empire of China. I have, for certain reasons which I have already stated in a former letter, given it as my opinion that, in carrying out the investigations on the spot, and holding the trials of the accused in this Yunnan case, a High Chinese official, or in other words an Imperial Commissioner, just such a man as the Central Government lately appointed to Formosa (Shun Pao-chen) and to Manchuria (Chung-shih,) should be the judge; and that the British officers deputed by Her Majesty's Envoy should be present at all the investigations, examinations and trials, to watch proceedings, to point out to the judge when necessary any witnesses who ought to be interrogated; and finally when the examinations have been concluded, in an address to the court, to demand on the part of the British Government that justice be strictly and honestly meted out. Should the British officers be in the end thoroughly convinced that the judge, notwithstanding clear evidence and the logic of facts, has decided unjustly, they will hand in a written protest against such a proceeding; and after that make it their duty to lay before Mr. Wade, H. M. Minister, a complete statement of the case, and their views on the action of the judge; leaving it to the patriotic feelings of Mr. Wade, as an Englishman to take justice by the sword, to teach the Chinese government that in China a British subject and his servants cannot be murdered with impunity.

It must, it appears to me, under all the circumstances, be clearly manifest to every Englishman who chooses to take the trouble to give the subject any consideration, that the duties demanded by England of the British officers are of the gravest international importance; and that it is incumbent on Mr. Wade to adopt beforehand, every measure and precaution likely to prevent the investigations, so far as the British officers are concerned, becoming abortive.

I have now to make the observation that, no matter who the British officers may be, whom Mr. Wade may send to Yunnan, they will have to encounter there a climate to which their constitutions have hitherto not been accustomed; and as they will, undoubtedly, have to undergo many physical hardships and mental vexations, daily, such will try their healths; and tend to make them from time to time quite unfit to carry out *effectually* the duties incumbent on them and the objects of their journey. We are told that Mr. Wade intends to send only two officers to Yunnan—Mr. Grosvenor, as chief of the mission, and Mr. [illegible] as the interpreter. Should Mr. [illegible] on his arrival at Yunnan-fu fall ill and [illegible] and Mr. Grosvenor take ill and [illegible] on [illegible] the [illegible] of the [illegible] when [illegible] I ask, will the British nation see the Yunnan investigations *effectually* carried out; and see justice done for the assassination of Mr. Margary and his servants?

In the London *Daily News* of 17th March, in the House of Commons, I find the following in regard to the massacre of Mr. Margary:—

"Mr. Wait asked the first Lord of the "Treasury whether it was the intention "of the Government to demand the punish- "ment of the perpetrators of the treacher- "ous massacre of Mr. Margary and his five "servants at Manwein.

"Mr. Disraeli—We have sent instructions "to Mr. Wade, her Majesty's able Minister "at Peking—for it is impossible to speak too "highly of his qualification—to call upon the "Chinese Government to make a strict in- "vestigation into all the circumstances con- "nected with this deplorable affair, and until "we receive his report, it will be of course "out of our power to decide upon the steps "that we will take. The death of Mr. Mar- "gary is a public calamity."

Mr. Wade first received tidings of the assassination of Mr. Margary on the 11th March, now over three months ago; and the only progress which has been made, as far as the British public in China are aware, "into a strict investigation into all the "circumstances connected with this de- "plorable affair," has been Mr. Wade's removal from his residence in Peking to a residence in Shanghai; and the selection by him of Messrs. Grosvenor and Baber as the British officers to go to Yunnan, accompanied by Sung Paou-hwa, appointed by Li Hung-chang the Governor-General of the province of Chihli, to be present when the Chinese Government shall be making a strict investigation into the Yunnan outrage. Mr. Wade's policy has been, we can see, to wait till Colonel Browne came to him. Causes, however, arose which prevented Colonel Browne coming to China at once; hence Mr. Wade has had to spend the time literally doing nothing in the south of China. I should have acted very differently, on the principle of "Faint heart ne'er won fair lady." I would have handed, the day after receipt of the news of the Yunnan outrage, in Chinese, the account to the Tsung-li Yamen, and told them at the same time to stay all investigations or trials till I could have British officers present; but that, before doing so, as the affair also concerned the Indian Government, I must go to India to consult with the Governor-General. I should after that have hurried to India and seen the Governor-General and Col. Browne together; come to a calm decision as to the course to be pursued; after which I should have rapidly returned to Shanghai, prepared for all eventualities; and commenced action in regard to the despatching of the mission to Yunnan. Instead of two British officers, I should have deputed two chief officers and ten interpreters. The three Northern Consulates could easily spare the gentlemen filling the position of intepreters at them; and the Consuls could—as "England expects every man to do his duty," and on an important occasion something more—perform the duties of interpreter for three months besides that of Consul, the performance of which, in the hot summer weather, is I beg to say exceedingly healthful exercise. The other Consulates in the South could also furnish their quota to the Mission; and in this manner the proper number of officials could be raised, which, in my opinion, is required to effectually carry out the Yunnan investigations. If half-a-dozen of these gentlemen should unfortunately be on the sick list, the nation has six offi- [illegible]

AMOY.

The light-house on Fisher Island is very shortly to be commenced. The *Ling Feng* leaves at an early date for the Pescadores, taking Mr. Beazeley—Customs' Engineer and successor to Mr Bryson—to superintend the operations.—A pamphlet has been published here by the Missionaries, announcing the establishment of a "Union Church of Amoy," which is to embrace Christians of all denominations — English Churchmen, Presbyterians, Unitarians, Catholics, Unsectarians, and, in fact, members of all Churches, who are to sit down and worship together. The scheme sounds very well, but the reverend promoters seem over sanguine.—The Club Committee have decided to erect a new Club House, near the site of the old one. It is to be two-storied, and is to contain, amongst other things, a theatre hall.—*Foochow Herald.*

FORMOSA.

According to late and private information from Formosa, the Imperialists seem to be gaining ground. On the 20th ulto., General Tang, the Imperial Generall commanding about 7,000 soldiers, encamped at Che-tong-ka, gained a signal victory over the savage tribe Sai-to 獅頭. Early in the morning of the day in question, General Tang with 4,000 soldiers attacked the fortified position held by 2,000 savages. The latter, after a determined resistance, retreated further into hills, with the loss of 200 killed and ten made prisoners. The position evacuated by the savages has been transformed into an entrenched camp occupied by Imperial troops. The casualties amongst the Chinese amounted to a few men killed and a number of soldiers slightly wounded. The savages made prisoners were taken to the head-quarters at Che-tong-ka, and there beheaded on the sea-beach. It is more than probable that now the main body of the troops will be withdrawn, as, from the outset, the expedition was only intended to punish the savage tribe above referred to, for having killed a number of inhabitants and soldiers at the commencement of the present year.—*China Mail.*

HONGKONG.

Hongkong papers contain particulars of the capture of the Br. str. *Carisbrooke*, by the Chinese gunboat *Peng-chao-hai*, off Hainan. She was on her way from Singapore, and the charge seems to be that she was landing passengers who were smuggling opium. —Discussion on the blockade question is continued in the local papers, and the *Daily Press* repeats, with reference to a late article in the *Pall Mall Budget*, a truth which has been urged in China, till repetition has been almost given up in despair :—
"The *Pall Mall* institutes a comparison by "fancying the Isle of Wight in the possession of France or the United States, and "Cowes converted into a free port, from "which goods could be poured into the "country by 'a swarm of bold and adventurous smugglers.' It considers it very "doubtful 'whether any British Government would willingly submit to a "perpetuation of the evil.' There is no "doubt at all that in such a case the British Government would look very sharp "indeed after its Customs Revenues ; but "it is also very unlikely that there would "be the same abuses of power to complain "of. Home journals too frequently forget, when writing on Chinese questions, "that the circumstances are wholly "different from what they would be if "China was a Western and Christian "state. China is at best but a semi-civilised power not at all remarkable for "keeping good faith with foreigners, "known to be hostile to them and to "their admission into the Empire ; unwilling to recognise them as equals ; and "desirous at every turn to overreach and "betray trust. The Chinese system of "levying and collecting taxes and duties "is also essentially different from that "prevailing in the civilised countries of "Europe ; and the corruptness of officials, "the arbitrary powers with which they are "entrusted, and the exactions under which "Chinese commerce is laid, render the case "wholly different to the one supposed." The *China Mail* remarks, on the same subject, "that the fate which has overtaken the relatives of the Club Compradore, is not likely to encourage native residents to come forward and give evidence on the Blockade matter. There is no doubt that our chief difficulty as regards both legal and commercial matters with the native community, arises from this abominable course of action on the part of the mandarins. We have already stated the only course which seems open to us in cases like these. If that cannot be adopted, and the Chinese refuse satisfaction, we must simply put up with the outrage,—and accept our true place behind China in the scale of nations!"—Bad weather having prevented the usual boating performances on the real day of the Dragon boat festival, they were held on the 14th, when two boats, each containing about 80 men, engaged in a race.—A. M. Vertelli and Madame Eugénie are giving some performances in which tight rope walking seems to be prominent. Vertelli walked the length of the rope with a soldier on his back.—A snake of the boa species, measuring some 10 feet long, and 10½ inches in circumference, has been caught in the Colony.—News has reached Hongkong by telegram, that the new Indian 4 per cent. Public Works' loan was allotted on the 17th instant, at Rs. 102.—The *Jornal de Macao* places the number of native boats and junks lost in the late typhoon at 139, of an approximate value of $160,000.—The following is the record at the Peak of three heavy days of rain, in succession :—

Wednesday, June	9,	5 hours rain,	quantity fallen	2.64
Thursday, "	10, 12	"	"	1.28
Friday, "	11, 11	"	"	2.97
	28			6.89

Among the passengers to Hongkong by the Messageries Maritimes str. *Ava*, was Mr. Augustine Heard.—The *Zambesi* ran down a junk on her way into harbour and some lives were lost. A Marine Court of Enquiry is sitting, and an inquest will be held.—The opium farmer of Hongkong has made a considerable haul. Hearing that a large quantity of prepared opium was being smuggled away from the colony on board the P. M. S. S. *Great Republic*, for San Francisco, without first paying him duty, with his detective and others in his employ, he went on board and seized 267 brass canisters filled with prepared opium, each canister worth about $3—the total worth about $800.—The *Belgic*, the second steamer of the new Occidental and Oriental Line of Steamers from San Francisco to China and Japan, arrived on the 19th. The *Gaelic* was to follow in about a fortnight.—The *Galley of Lorne*, from London, passed Singapore on the 16th.—The *Hankow*, from Hankow, with teas, passed through that port on the 11th instant, *en route* to London, merely slowing down for news and letters, after a passage of 8 days 4 hours 40m. from Woosung.

CANTON.

The destruction to life and property by the typhoon of the 31st ultimo was greater than most people would believe. On land the effects were not so great, but to craft that happened to be on the water, either to or from the port, the result was fearful. A passage boat having started to return to Tung-koon with a very large number of passengers, chiefly of scholars who were returning after having passed their examination at Canton. The boat capsized and over 40 scholars were drowned.—A few days after the typhoon, a boat-woman picked up a box in the water, and was agreeably surprised to find that it contained over 20 taels in silver, a packet of pills and a few account books, also a set of opium-smoking apparatus. No doubt the box was the property of some one whose ship was wrecked in the typhoon.—The native papers are full of accounts of casualties from the typhoon, and one of the most noticeable was the capsizing of a boat in which some robbers were being conveyed to the Provincial city for trial. They committed depredations on a certain village, and were caught. Several of the villages escorted them to Canton, but on the way their boat was wrecked, and all of them were drowned.—The typhoon seems to have travelled as far north as Waichow. A yamen was blown down there and two military officers were killed. The boating population also suffered terribly. Among the craft destroyed were two Lekin-tax Guard-boats, and their commander was among the drowned.—On the 1st instant, a singular phenomenon took place at Canton. There was no flood tide at all throughout this day. This was regarded as remarkable, as a similar occurrence had not taken place since the 6th year of Hienfung (1856).—The Provincial Treasurer has issued a proclamation announcing that on and after the 28th June, all officials are at liberty to shave their heads, the mourning for the Empress expiring at the end of the 5th moon.—A rumour is in circulation that the Viceroy intends demolishing the Bogue Forts so far as their reconstruction has been at present accomplished, and rebuilding them entirely on more solid principles. This is said to be in consequence of the frequent complaints in the native papers published here, the *Chinese Mail* having been loudest in its denunciations.

Messrs. Deacon & Co's Market Report, dated 17th June, says :—

A quiet tone has pervaded our Tea market since last mail, and though native reports show a fair extent of business, yet most of the settlements were booked in the previous fortnight. Buyers, in the face of the large shipments of Scented Teas already made, and with the knowledge that of previous purchases there is still some quantity to go forward, have generally held aloof, unless tempted by fine and fancy parcels, or compelled to operate in completion of special orders.

Considering the continued unsatisfactory accounts regarding the state of the London market, and prices current here, a fair demand has existed for Silk during the past two weeks, and in some instances a slight advance on former rates has been paid. For last French mail 500 bales were taken, and since then 200 bales have been added to the settlements. Almost all classes of Silk have been dealt in, and speaking relatively, the finer grades appear to be better value than the more common sorts.

Second crop samples are now arriving. The late heavy rains have tended to impair the quality, which is not equal to that of previous yield, and there is said to be a preponderance of yellow thread. About 2,000 bales Tsatlee are looked for.—*China Mail.*

YOKOHAMA.

The *Gazette* says cock-fighting seems to be rapidly becoming a favorite amusement among Japanese. On the 4th inst., about forty men were arrested at Koishikawa, Tokio, for indulging in that pastime.—Owing to the illness of Mr. F. W. Marks, solicitor for the prosecution in the case of Regina *versus* C. Adds, for complicity in the recent embezzlement from the Comptoir

d'Exemple de Paris, the trial was postponed until the 17th instant.—The same paper mentions a specimen of the new postal-card, value one *sen*, just issued by the postal department. It is noticeable only from the fact that the paper of which it is made is the produce of the Wardlaw Paper Mills, Mita, Tokio, which are now in successful operation, under the direction of Mr. W. H. Doyle.—The magnificent steamer *Oceanic*, the first of the Occidental and Oriental S. S. Co.'s fleet to reach Yokohama, entered the Bay at a late hour on the night of the 10th inst., after a remarkably fast passage from Hongkong of 4 days, 23 hours, being the quickest on record. —A large bath-house is about to be erected at Sanjikenbori, Tokio, in the European style, the promoter of the project being one Takaragi Matabei, of Kakigara-cho, Ichome, Tokio. The building is to be a three-storied one, and, contrary to the present system, each person is to have a separate bath-room. The furniture is to be brought from Austria, and the earthen-ware from Owari. The cost is estimated at $20,000.—A destructive fire has occurred at a place named Motomachi Nihonmatsa, Iwashiro, by which 700 houses were consumed, and 100 godowns and four large temples were totally destroyed. Twenty persons were hurt, and 6 were burned to death in a shocking manner.—The *Herald* reports at length the trial of Archibald King, a British subject, in the service of the Japanese Government, employed in the Engineering College, for a rape on a Japanese girl aged 13 years and eight months. The evidence, so far, is rather contradictory. The trial has occupied two days, and was again adjourned.—The plant, etc., of the defunct *Bulletin* has been sold at auction, and realised the sum of $750.—A miscellaneous entertainment was given on the evening of the 10th instant, in the Temperance Hall. The band of H.M.S. *Challenger* was in attendance. The audience was large, and a very pleasant evening was spent.—The half-yearly meeting of the Société Suisse de Tir has been held, and was very successful. Three prizes were offered, one of which was won by M. Hurliman and the other two by M. Favre Brandt.—Burglaries by armed thieves continue in undiminished numbers, and the *Herald* says, "as the Japanese police are so evidently inefficient and unreliable, we see no way out of the difficulty but the adoption of a system which will place the protection of the lives and property of foreign settlers in the hands of foreigners themselves." —The *Echo du Japon* contains a translation of a petition addressed by a samurai named Katsou Yamamoto to the Mikado, against four of the leading Ministers—Okuma, Okuro, Kido, and Iwakura. The principal complaint against them appears to be their predilection for European customs and civilisation ; but another charge is that all the former gradations of rank have been swept away, and that whilst the ancient nobles and samurai are being ousted from every position of trust and confidence, the present ministers, two of whom the petitioner describes as being of a very low class of society, have formed an irresponsible bureaucracy, which is monopolising all the power in the country. The petition calmly winds up by requesting the degradation and death of the four ministers named.

Peking Gazettes.

ABSTRACT OF PEKING GAZETTES.

May 29th.—(1) An official monthly list of appointments.

(2) An Edict, in reference to a case of considerable present public interest at Hangchow. Information has been tendered by memorial by a certain person, that, at a re-trial of an important case, the judges sitting have been guilty of connivance and condonement. The informant states that a woman, Koh-pi, poisoned her husband, Koh-ping, and falsely accused a Chü-jin (2nd literary degree), Yang Nai-ou, of being party to the crime, from adulterous intentions. The Governor, Yang Chong-yuh, deputed an official to re-hear the case, when she made a true deposition, acknowledged the accusation to be false ; but, severe torture being applied, she was coerced into repeating in Court her original accusation ; that the woman still firmly declares Yang Nai-ou had no concern with the murder, and that she was induced by others, who had an enmity with Yang Nai-ou to involve him, by an unfounded statement, &c., &c. The circumstances of this case are of the greatest gravity, and it behoves that a sifting investigation be made, in order to procure a just verdict, and that an innocent man be cleared of an injurious charge. Wu Shui-chien is hereby commanded to arraign before him the parties to and witnesses in the case, and with justness and severity to investigate the real circumstances. "As the water falls the stone will appear." Let there be no shelter given to colleagues in office. And let not the case be patched up, and the sitting judge thereby render himself guilty of misdemeanour.

(3) Edict.—The Censor Liu Shun-chi petitions, requesting that the scheme of repairing the Grand Canal be considered, and that the conveyance of Government grain by canal be resumed. In consequence of communication by the canal having been intercepted, grain from the south has been conveyed to Tung-chow, by sea route ; but this has been a temporary measure of expediency only ; and the remarks by the Censor to the effect that it is to be feared that with the canal conveyance stopped, the silting-up of the channel will be allowed to go on unchecked ; that it should be at once deepened and attended to, &c., &c., are not without reason. We, therefore, command the Viceroys and Governors of Chihli, the Two Kiangs, Shantung and Kiangsu, also the Commissioner-General of Grain Transit, and the Governor-General of the east division of the Yellow River, to examine in concert into the general state of the entire canal, and to consider what measures should be taken to deepen the canal channel, and establish through communication—that the grain transit be thereby facilitated. Let satisfactory measures he devised and a report he sent in. Respect this.

The remainder of the *Gazette* is taken up by Provincial reports respecting official movements, and in one case the erection of a temple to the memory of an official who distinguished himself some years since during the rebellion.

May 30th.—(1) A monthly list of appointments of officers of instruction throughout the Provinces.

(2) Edict, appointing Shun Pao-chun 沈葆楨 (recently Imperial Commissioner to Formosa) to be Governor-General of the Two Kiangs and Minister for the direction of Foreign Trade. Liu Kun-yih is still to continue in the acting post until the new Governor-General's arrival.

(3) Memorial from the Governor of Honan—also temporarily Acting-Inspector of the Eastern division of the Yellow River—respecting works completed and attention given generally to the question.

(4) The Governor of Chekiang, Yang Chong-sing, on his knees, respectfully presents a memorial reporting that in consequence of the loss of a C. M. S. N. Co.'s steamer at sea by collision, while engaged in the transport of Government grain, arrangements have been required to make good the grain lost ; and request is made that marks of Imperial regard be bestowed on a deputy-official lost by the catastrophe. He would humbly set forth that, by regulations laid down and reported to the Throne, the Government import-grain pertaining to last year was decided to be conveyed to Tientsin during the present year, partially by the steamers of the said Company. According to report made by the Intendant of Grain Transit of Chekiang, the fourth shipment of import-grain, consisting of 7,270 *shehs*, was sent forward in the steamer *Fusing* from Shanghai. That on the morning of 28th of 2nd moon, while approaching the "Black water" sea, dura thick fog, she was run into by a steamer, the *Ocean*, belonging to the E-wo foreign Hong. The steamer immediately sank ; all the grain was lost, and, including deputy-officers belonging to the Chekiang jurisdiction, and general passengers and sailors, 65 persons in all perished with the vessel. In respect to the grain lost, a communication had been received from the C. M. S. N. Co. to the effect that they had made purchases to make good the loss, and that the quantity would be sent forward to Tientsin ; but, in regard to the special service, (or duty) officer in charge of the Tientsin establishment, Shih Shï-shen, who had lost his life while engaged in the public service, it is prayed that a memorial be made to the Throne, asking for an Imperial mark of regard, &c., &c. The Governor here goes on to say that, since the tranquilisation of affairs in Chekiang, rice has been conveyed to the North for ten years by sea route, on which for three years steamers have been partially employed. In the case of merchant boats (junks), although losses have occurred from stress of weather, still means have generally been taken to avoid loss of life, and no considerable number of individuals have at any time been drowned ; at the same time, it is to be assumed that, owing to the collision arising from the fog, and to the sudden foundering of the *Fusing*, human power was insufficient to cope with the emergency. The grain lost will be made good by the Company, and the arrangement is satisfactory ; but the case of the official, Shih Shï-shen, leaves much to be deplored. Imperial marks of favor on his behalf are therefore craved.

(5) The foregoing Governor reports that the shipment of the total quantity of Chekiang import grain for last year by sea route had been completed. The total quantity of grain contributable by Chekiang—from three Prefectures—is set down at over 435,000 *shehs*. This, according to report from the Shanghai forwarding office, had been sent on by sea in three instalments. The shipment of the first instalment, 164,000 *shehs*, was commenced on the 20th of the first moon, as already reported to the Throne ; of the second, 142,700 *shehs*, 45,300 *shehs* were, on the 15th of second moon, handed over to the C. M. S. N. Co. for conveyance by steamer, and the balance, 97,400 *shehs*, were divided amongst 39 junks, which sailed at different dates. Of the third instalment of 127,700 *shehs*, 51,300 *shehs* were deputed to the C. M. S. N. Co., and the balance to junks —32 in number.

May 31st.—This *Gazette* is filled up by provincial reports as to the movements and appointments of officials, principally by Liu Kun-yih, Governor of Kiangsi and Acting-Governor-General of the Two Kiangs. In one case, a vacancy is caused by an assistant-major in the army, who committed suicide by cutting his throat when being carried in his chair. A strict investigation was instituted to ascertain whether or not the account of his death was *bonâ fide*, or whether he might have been influenced to commit the act by being the victim of injustice. The depositions taken prove that he was observed to be absent-minded and dejected before he got into the chair ; but no reason can be discovered to account for the circumstances.

June 1st.—(1) Several official appointments are gazetted.

(2) The Ministers of the Civil Service Board, in reference to the disorganisation of affairs in Moukden (which have been reported on by Tsung-shi, after a special committee of investigation), and in accordance with the Imperial command (contained in a previous *Gazette*,) record the sentence arrived at by the Board against the officials whose conduct was impeached. A long list of degradations and dismissals from office follow.

(3) The Governor of Kiangsu also reports to the Throne on the loss of the *Fusing* steamer. A list of special-service officials, varying in rank from expectant sub-prefects downwards—altogether twenty-three in number—had been drafted by the Government Grain Service Transport Office of Kiangsu, to repair on duty to Tientsin and Tungchow; and these, with another official charged with the convoy of the rice, having arrived at different times at Shanghai, took passage, with their servants, by the *Fusing* which happened to be leaving for the North, with Chekiang province rice. The vessel had proceeded to within 100 *li* of the "Black Water" sea, and, during a dense fog, rendering it impossible to discern the length of the ship, she was run into by the E-wo foreign hong's English steamer *Ocean*, which struck her on the starboard bow. The side of the ship was crushed in; the water rushed into the hold, and all the people on board scrambled for the boats. But in the hurry of the moment only one boat could be cleared and lowered (*lit.* could cut the tackle off). The ropes of the remaining three boats could not be unfastened in time, and, in the short space of three minutes, these and the large vessel were all immersed in the watery deep. Of the officials belonging to the jurisdiction of Kiangsu, only three, with seven of their servants, were saved and brought back in the *Ocean* to Shanghai. The Governor then goes on to say that the case of these officers—meeting with so unexpected a fate while engaged on public duty—is much to be deplored, and he therefore craves that instructions be given to the Board to confer posthumous honors on the deceased, in order that their souls be comforted in the other world. He also states that funds would be additionally provided to assist their families.—Rescript, made known through the Cabinet: Noted.

(4) Tsing-pao-chen reports that he had returned to his seat of Government in the capital of Shantung, after personal supervision of river works at Chia-chwang.

June 2nd.—(1) Edicts. Shun Ping-cheng (formerly Taotai of Shanghai) is transferred to the Chief Justiceship of Szechuen, and Fou Sheu-tan will fill up the Chief Justiceship, vacated, of Honan. The Intendant of Canton Customs, Wen-tien, is commanded to continue in his post.

(3) An Edict commanding that a charge of violent assault lodged by one Mau-lau, of Tientsin, be investigated and severe punishment dealt out.

(4) Ying Kwei memorialises the throne in reference to the case of the widow of a Hanlin, Fung, resident in Shen-si, who had been oppressed, assaulted and coerced by her brother-in-law to re-marry, that he might thereby come into the possession of certain property. The case had been referred to the local court, but bribery is declared to have been used to prevent justice. The case, considered in respect to its bearing on public morality, is deemed by the memorialist to be one of great gravity; and it is desired that the Imperial order be given to have the circumstances thoroughly investigated.

(5) The Viceroy of Shansi and Kansuh, referring to the recent regulation abrogating the previous amalgamation of the examinations in the two provinces, requests (according to custom) that the Kansuh province being free from disorder, Chief and Assistant-Examiners be appointed for the approaching autumn. Minor details as to the number of candidates to be admitted, are also entered into.

June 3rd.—(1) A memorial, collectively signed by the authorities of Fuhkien, and headed by Shun Pao-chun reporting that a certain sea god in Koh-ma-lan had vouchsafed divine assistance, and praying that the Imperial assent be given to erect a temple in token of gratitude. Last year, General Lo Fa-chun was stationed there with his troops. Owing to rapid currents and to heavy winds, boats conveying the army provisions found it extremely dangerous to anchor in the cove, and considerable anxiety as to supplies was the result. Accordingly, on the 23rd of the 8th moon, the General drew up, in writing, a form of prayer, and reverently prayed for the intervention of the sea gods. Before a month had elapsed, a sandbank suddenly formed. The strength of the tide was diminished, and a harbour constituted, which afforded excellent and safe anchorage to boats of over 100 shehs tonnage, as also to small steamers. The boatmen and residents all joined in praise of the divine response thus made, and the memorialists deem it their duty, in deference to the wishes of the people, to pray for the erection of a temple in honor of the sea gods of the locality.—Rescript: Let it be as desired. The Board will take note.

(2) Shun Pao-chun reports on the falling in of and repairs to the city wall of Tai-wan-fu. Owing to violent and heavy torrents of rain during the 6th moon of last year, over one thousand changs of the wall collapsed, and in obedience to the Imperial command given at the time, repairs were immediately commenced. These were finished by the end of last year, and the work is represented to have been substantially carried out. The Imperial Commissioner further reports on the erection of a powder manufactory, and a military store yard at Tai-wan. The former, consisting of 33 houses, &c., and surrounded by an outer wall of 102 changs in length, has been constructed after Foreign designs and with the aid of Foreign mechanics. The latter, comprising 42 houses, enclosed by a wall 85 changs in circumference, is designed to afford shelter to the Foreign rifles, cannon, and military equipments purchased last year—to the storage and preservation of which care should be given.

(3) Shuy-lien prays that certain officials engaged in capturing and bringing to justice, a notorious robber chief, Chang-mao, in the Tung-kwang locality, be promoted for their success. Chang-mao, it appears, has been at large and an object of pursuit for years past. About the 8th or 9th year of last reign, he collected around him a numerous band of associates, whom he organised into a force for the purpose of loot and robbery. Many of the chiefs acting with him, and their followers, have from time to time been exterminated, but all efforts to capture Chang-mao have hitherto been unavailing. Eventually, according to official report received on 8th of the 2nd moon, a detachment of soldiers was sent to Chi-lin, where Chang-mao was ascertained to be in hiding, and it was not till a battle, extending over a day and night, had been fought—Chang-mao having the audacity even to fire off cannon—that he was at length, after a most determined resistance, taken prisoner. The capture, under such difficult circumstances, of so dangerous a criminal, and the benefit thereby accruing to the public, is considered to entitle the officials engaged to promotion or reward.

(4) Other matter of local and minor importance follows.

June 4th.—(1) Imperial edict. Peng Yuh-ling memorialises as to the necessity of purifying official administration, of improving the dicipline of the army, of lightening the burdens of the people, and of giving a proper direction to the minds of the literary classes. The measures advocated are of vital concern to the well-being of the country, and many valuable suggestions are comprised in the memorial. Prefects and magistrates are the officials placed in closest contact with the people. If a wrong selection be made, calamity to the inhabitants of the locality is the result. The avaricious and unprincipled should, therefore, be impeached and dismissed; and, in the punishment of official delinquencies, no leniency should be shewn. To the incompetent and worthless, also, no indulgence should be extended; and the Governors and Governor-Generals will throw off all considerations of friendship, and keep rigid check over their subordinates. They will likewise, in the matter of reorganisation, look facts in the face and take action accordingly. Recently the expectant officials attached to each province have been in excess of the usual number, and a desire of equalising the bestowal of terms of office amongst them has led to vacant magistracies, &c., being filled up successively by acting incumbents. Official posts have thus come to be regarded as temporary sinecures. The welfare of the people is set at nought, and a greater injury to the interest of the nation cannot be conceived. Henceforth, let the Governors and Governor-Generals be careful in their selection, and allow each official to remain longer in his post. No partizanship or hastiness in appointing acting incumbents will be permitted.

To the reform of the military organisation of each province, immediate and close attention shall be given. All the high authorities will hold periodical reviews, and see that special care is devoted to the instruction and drill of the troops. Should any of the officers in command make deductions from the soldiers' pay, or be addicted to idleness or opium-smoking, it is commanded that they be brought to task and severely punished.

Colleges are institutions devoted to the nurture and development of talent. To rectify the disposition of man, a proper direction should be given to the habits and course of the student. If the officers of instruction be not men of parts, and of unblemished character, they cannot be patterns for imitation. The Governors and Governor-Generals and Literary Chancellors will, therefore, institute from time to time investigation. To the worthy they will hold out reward. The unworthy they will deal with according to their deserts.

Since the ravages of internal war in the various provinces, the people have not regained their normal condition of prosperity; and the authorities will accord every consideration to their welfare. The memorialist states that, in addition to the collection of the ordinary revenves, heavy exactions are made, and the people thereby are unable to gain sufficient for their subsistence, or to put by savings; that legal cases are suffered to linger on, and are, in some instances, never concluded; that unprincipled and rapacious yamên underlings are allowed to extort from and live upon the country-people; and that one visit by one of them to a village means the ruin of several families. Such condition of affairs is truly abominable; and all the local authorities are hereby commanded to issue instructions to their subordinates requiring that such practices be at once suppressed. Should any unworthy official be found making light of the rights of the people, and embarrassing and oppressing them at their pleasure, let them be forthwith reported and rigorously punished.

In those districts recently devastated by war, large uncultivated tracts still exist. The Governors and Governor-Generals will enquire into the circumstances, and, as expediency may suggest, issue instructions for their recultivation. In order to encourage immigration, they are authorised to remit the taxes on the land.—Respect this.

(2) Pih Pau-li and Chang Tsing-hwa are appointed respectively to the Chief and Assistant-Examinership of Kwei-chow, and Chang Kai-chu and Wang Yüen-kwan are also appointed for Yunnan

(3) The Governor of Shantung, Ting Pao-chun, reports on the progress of repairs decided upon for the present to the Yellow River, and also that satisfactory arrangement had been made as to their continuation. The sums received and disbursed to date amount to Tls. 987,954.6.9.8, being Tls. 200,000 under the reduced estimate made last year. The original scheme laid down was to raise banks on the North and South sides of the river—aggregating a length of over 500 *li*—to cost, as per subsequently reduced estimate, Tls. 1,500,000 to 1,600,000. But, owing to the land on the North being relatively higher, it was subsequently determined to leave the raising of the bank on that side to a future period, and to devote attention first to the South bank. The works now under way comprise 190 *li* in the Ho-tseh district, in Shantung; 43 *li* in the Tungming district, in Chihli; 108 *li* to be continued at Li-lien, also in Tung-ming—being a total in the two provinces of over 250 *li*. The land in Shantung is comparatively low, and the banks are decided to be made relatively higher—*i.e.* 14 feet in height—being 100 feet wide at the base and 30 feet at the summit. For this the people are paid at the rate of Tls. 2,400 per *li*; extra allowance being made where piling is required. In Chihli, the banks are being made 12 feet high, 80 feet wide at the base and 20 feet wide at the top—for which Tls. 1,600 per *li* are paid. The province of Chihli having been unable to pay for its share of expenses, the money has been provided by Shantung. Of the above works, 30 to 40 per cent. had already been finished by the middle of the 4th moon, and the entire completion will be reportable by the end of the 4th moon. Some temporary measures in regard to the North bank are referred to; also the necessity of requiring the local officials to be on the alert, in case of exigencies; to obtain the assistance of the people to make necessary repairs from time to time, and also to have material at hand. The money for the above uncompleted portion of the works has been disbursed to the local officials.

4.—The same Governor hands in a supplementary memorial in regard to the above works. The amount expended is represented to be extremely moderate, and much less than would have been required by many River Works' Commissioners. In instance of this, he cites the fact that he was originally in correspondence with the former River Commissioner, Chian Sung-nien, who estimated that about Tls. 700,000 would be required; and it was out of deference to his experience that the Governor was in excess in his original estimate. It is asked that the statutory form of schedule of expenses be not required, and that an ordinary account (based on actual prices) of the total cost only be rendered. (Note.—In the regulation schedule all material bought, and work done has to be rendered at established prices, and not at market rates; hence the regulation schedule requires much manipulation and "cooking.")

Public Meetings.

MUNICIPAL COUNCIL FOR SETTLEMENTS NORTH OF THE YANG-KING-PANG.

Council Meeting of 14th June, 1875.

Present:—Messrs. J. G. Purdon (Chairman), G. J. W. Cowie, J. Hart, F. E. Heyden, W. Kidner, A. A. Krauss, F. W. Lemarchand, R. Mackenzie, and S. D. Webb.

Of the resident Medical men practising in Shanghai, to all of whom invitations had been sent to attend, the following were present:—Dr. G. K. Barton, Dr. D. J. Macgowan, Dr. E. Henderson, Dr. R. A. Jamieson, Dr. J. Johnston, Dr. L. S. Little.

The time of the meeting was taken up in discussing matters connected with the proposed new Hospital.—After the Doctors had withdrawn, ordinary business was resumed.

The *Wheelbarrow fees.*—The subjoined letter from the French Municipal Council was read.

[The French text was published last week, with the Minutes of the French Council of the 10th June.]

[*Translation.*]

10th June, 1875.

SIR,—I have submitted your letter of the 8th May, to the Conseil, who still consider that the responsibility of our unfortunate difference rests with the Council, who in the first instance destroyed the *entente*, by breaking the agreement for the half division of wheelbarrow fees, and thus caused the other to refuse the half division of expenses of the bridges.

To withdraw your refusal to divide the receipts (of wheelbarrows) equally, would then do away with the only reason on which this Conseil has refused on its part to divide the expenses (of bridges) equally. Also, it is with pleasure that the Consel see in your letter a proposal for an arrangement which seems to them should put an end to all difficulty, and which I beg to transcribe here, so as to avoid all misunderstanding:—

"The Municipal Council is disposed to "come to an arrangement on the following "basis—To place wheelbarrows on the same "footing as jinrickshas—that is to say, that "each Council issues its own licenses, of "which the tax and the number will be equal "for the two Settlements, and will also be "limited for the two Settlements."

Regarding this proposal, you remark that nothing can be more just than such an arrangement.

This is also the opinion of the Conseil, who hasten to accept it, seeing that, by giving them the opportunity of receiving the half of the receipts from wheelbarrows, this arrangement does away with all reasons for refusing to bear an equal share of the expenses of the Yang-king-pang bridges.

The regrettable discussion which has taken place between the two Municipalities would never have occurred, if this Conseil had been informed in writing before this of the proposition which you write me was made verbally to their delegates.

In fact, the Conseil have learnt it to-day, only; as by an unaccountable accident, none of their delegates remember having heard your proposition, which is so fair, and in conformity with the ideas and claims of the Conseil, that it would have been accepted by them at once. However, if the dispute was unavoidable, at least it ends here, as the Municipal Council have been good enough to again submit the basis of arrangement, which this Conseil accept with pleasure.

Too happy of this settlement, the Conseil put an end to a dispute which has always been repugnant to them, and trust that you and your colleagues will appreciate the reasons for abstaining from answering your letter otherwise than by expressing the hope and the wish that, from their endeavors to co-operate cordially with you in the advancement of public interests, and the good feeling you express towards the French Concession, amicable relations between the two Municipalities will be re-established.

Accept, &c.,
(Signed), A. VOISIN,
Chairman.

And the following reply was agreed to:—

14th June, 1857.

SIR,—I have the honor to acknowledge receipt of your letter of 10th instant.

The Council wish again to disclaim the responsibility of the question of the bridges, as they have always maintained, and still maintain, that it has no necessary connection whatever with the question of wheelbarrows.

They also wish to remark that they never refused to apportion the receipts from wheelbarrows fairly—that their whole contention has been that the division was unfair, and it was for this reason and no other they desired a change.

The plan of each Municipality taking one half the fees of the whole number of licenses issued, and which were unlimited, was at the beginning looked upon as an equal division, and so spoken of and agreed to temporarily, because it was supposed the number of licenses would be as nearly as possible the same on each side; but when it proved that we issued nearly three times as many as you, and yet received only one half of the fees, it was evident the apportionment was not at all fair. This disproportion might have increased, until we issued five or ten times as many as you, and yet we would have to give you half the fees.

This Council have always been ready to make an arrangement by which a fair division should be made, and they regret that the proposition to put wheelbarrows on the same footing as jinrickshas, made to your delegates, should have escaped their memory. The reason it was not put in writing was that you had, in a letter received just before the delegates met, written that your Council could not alter their determination, already expressed, and the delegates from this Council prefaced their remarks by saying that this almost debarred them from alluding to the subject; but, nevertheless, they would like to submit two propositions—of which this was one; but they understood your delegates distinctly to decline altering the previously expressed determination of your Council.

That this Council had no reason to believe that such an arrangement would be acceptable to you, might also further be inferred from the fact that, when invited to suggest an arrangement, you never proposed this one which was a most natural one, as the jinrikshas were already under it.

But the Council are greatly pleased that you agree with them that it is a fair and just arrangement; and, to prevent any misunderstanding, the Council beg leave to repeat more in detail what it is:—

1st.—That the number of wheelbarrows allowed to run in both Settlements shall be limited to six thousand.

2nd.—That every wheelbarrow should be licensed to run in either or both Settlements.

3rd.—That each Council shall have the right to issue one half the whole number of licenses—say 3,000 for each Council.

4th.—That each Council shall collect and retain the fees from its own licenses.

5th.—That the tax or fee for the licenses shall be fixed at the same rate for both Settlements.

6th.—That either Council shall be at liberty to withdraw from this arrangement whenever they see fit, giving six months' notice of such intention to the other Council.

7th.—That in future, should it be necessary to make any police regulations regarding wheelbarrows, such as carrying lights, having stands, &c., such regulations shall be agreed upon by the two Councils and made uniform for the two Settlements.

In conclusion, this Council are pleased to see you consent to paying half the cost of Bridges; and trust that, now these questions are satisfactorily settled, it will be long ere again any cause of disagreement between the two Councils will arise.

(Sd.) J. G. PURDON,
Chairman.

A. VOISIN, Esq.,
Chairman, French Municipal Council.

The Minutes of the last meeting were passed for publication, and the meeting then adjourned.

Miscellaneous.

ORDINATION OF A NATIVE DEACON IN THE NINGPO MISSION.

The important step of admitting a Chinese Christian to holy orders has, for the first time in the Cheh-kiang Mission, been taken by Bishop Russell. For years has this event been desired both by friends at home and by brethren in the field; but although the candidate was ready long ago, the ordination was for various reasons deferred.

This first native ordination in the Church of England Cheh-kiang Mission, took place on the second Sunday after Trinity, June 6. Two Sundays before, the Bishop had, by the invitation of the Incumbent and Trustees of Trinity Church, Shanghai, set apart that Church as the cathedral for his diocese in North China, and had there and then been installed.

Thus recognised by the British community as head of the Church of England in North China, it was highly fitting and proper that Bishop Russell, as a Missionary Bishop, should immediately after exercise his highest episcopal functions in connection with the Native Church, illustrating thereby in his own person and procedure the subject of one of his discourses on the day of installation—"the Unity of the Church"—as perhaps no other Bishop in this country had before been able to illustrate it.

The two great events, occurring so closely together, bind the Church of the West with the Church of the East under one Chief Pastor in a very marked and memorable manner.

The Chinese Christian admitted to the sacred ministry of the Church by Bishop Russell, is a native of Ningpo, by name Sing Eng-teh—Sing being his surname, and Eng-teh (grace and virtue) his baptismal name. He is a thin wiry man, about fifty years of age, of very active habits, and possesses much natural eloquence. For nearly twenty years past he had been a paid evangelist or catechist of the C. M. S. Mission; and of late years has been located in the district of San-poh; residing at the small walled town of Kwun-hoe-we, a short distance from the sea coast, and about 35 miles due north from Ningpo. In this place and neighbourhood, a mission was opened by the Bishop (then Mr. Russell), upwards of twenty years ago, in the face of much opposition, and even at the risk of life,—for the natives of the district have the character of being a fierce and independent people. Mr. Gough also devoted much evangelistic labour to this field during the earlier years of his missionary course. A year or two after the commencement of the mission, the first convert was baptized; and since that time, chiefly under the fostering care of the Brothers Moule, the mission has been extended further and further, and converts have been added from year to year, so that now, in connection with the Kwun-hoe-we church, there are (including the outlying branch-stations) a hundred and fifty Christians. There is a pretty church, with native parsonage and missionary's lodge at the back, and also a flourishing day school for boys.

Over this church and congregation the Rev. Sing Eng-teh has been called to preside.

On the day of ordination, the Bishop, the Rev. G. E. Moule of Hangchow, the Rev. A. E. Moule of Ningpo, and the Rev. J. D. Valentine of Shaouhing, were present; together with Mrs. Russell, Mrs. Valentine, and Miss Laurence, Superintendent of the Ningpo Girls' Boarding School. The Native congregation at morning service numbered about one hundred and seventy; probably there would have been a much larger assembly if the weather had not been, as it was, excessively wet. In the forenoon there were two services—the first consisting of morning prayer and hymns only; and the second of sermon, ordination service, and the Holy Communion. The ordination sermon was preached by the Rev. G. E. Moule, who took for his text II. Cor., xii., 9., and pointed out at length the weakness of human agents in sustaining the immense resposibilities of the ministerial office. The newly-ordained Native Deacon read the Gospel, habited in surplice and stole, which Foreign friends had presented to him; and also took part in the administration of the Lord's Supper, when 50 Chinese and 7 English Christians communicated.

At the afternoon service, there was a large attendance of heathen, as well as a good number of Christians. After Mr. Valentine had read prayers, and Mr. A. E. Moule the Lessons, the Rev. Sing Eng-teh delivered an earnest discourse from the words "We preach Christ crucified" (I. Cor., i., 23), in the course of which he showed how the preaching of Christ's cross was a stumbling-block to the Jew and to the Chinaman alike; but how, after St. Paul's conversion, it was what he delighted in; and he concluded by telling his hearers that, though his fear was greater than his pleasure at being called to the office of the Ministry, yet that, as in the past, so in the future, he should always endeavour to set before them Christ only and Him crucified. Late in the day the Native Christians, some of whom had travelled for miles to be present at the interesting service, had to return home in the drenching rain.

SEIZURE OF THE BRITISH STEAMER "CARISBROOKE" BY THE CHINESE GUNBOAT "PENG-CHAO-HAI."

(Daily Press.)

On the morning of the 12th instant, at daylight, the *Carisbrooke* anchored off the East Coast of Hainan, about three miles from shore, abreast of Chin-lan river, to allow passengers and their luggage to leave the ship. A short time after anchoring, two Chinese Revenue gunboats (one of which was the *Peng-chao-hai*) anchored alongside. Captain Palmer and Mr. Commissioner Brown boarded the *Carisbrooke*, and asked Captain Scott what he was doing on the coast of Hainan, as there was not a Treaty Port there. Captain Scott replied that he had passengers from Singapore for Hainan, and that he had called there so that they might land. He was then asked if he had any cargo on board, and they requested to see his manifest. This was shown them, but the captain was not certain if it was correct, as he had not time to look over it. He told them this, and then showed them the ship's papers and port clearance from Singapore for Hainan, Hongkong, and Amoy. Captain Scott was then told that he was breaking the law of China in anchoring at the place, and was requested to accompany the *Peng-chao-hai* in his steamer to Whampoa, and have the matter settled there. They asked if he was willing to go, and he replied that if there was no other alternative he supposed he would be obliged to do so. It was not till after getting out to sea and thinking the matter over, that Captain Scott came to the conclusion that the Chinese Authorities had no power or right to make him accompany the gunboat to Whampoa, and that he was perfectly justified in taking the vessel, under his own command, to Hongkong. After the Captain of the *Carisbrooke* had been told that he was breaking the law of China, Captain Palmer asked him if he would allow the chief officer and three European quartermasters of the *Peng-chao-hai* to go on board the *Carisbrooke* to represent the Chinese Customs Authorities. Captain Scott replied that he would, and shortly afterwards these men went on board the *Carisbrooke*. Captain Scott then gave orders that they were to be made as comfortable as circumstances would permit, as the *Carisbrooke* was crowded with passengers. Captain Scott then wrote a note to Mr. Brown, asking him if the Hainan passengers could land, and he replied that they could, provided that the boats first went alongside the *Peng-chao-hai* to have their luggage searched. Shortly after this all the Hainan passengers left the ship, and Capt. Scott told them to go alongside the gunboat before going on shore. When all the passengers had left the *Carisbrooke*, Captain Scott gave orders to get under weigh, which was accordingly done, the *Peng-chao-hai* getting under weigh at the same time. This was about half past ten o'clock in the morning. As the course from Chin-lan to Hongkong and Whampoa is the same after the Taya Islands are cleared, both vessels were steering near abreast till about two o'clock in the afternoon. At this time the Captain came to the conclusion to proceed direct to Hongkong and land the passengers and mails, and bring the matter before the authorities there. Late in the afternoon, the *Peng-chao-hai* signalled to the *Carisbrooke* to alter her course, at the same time telling her to follow the gunboat. Captain Scott answered that he could not do this, that he was bound to Hongkong, to land his passengers and mails, and that after doing this he would then, if it was necessary, go to Whampoa to answer for his actions. He then shaped his course direct for Hongkong. The whole of Saturday night the *Peng-chao-hai* followed closely in the wake of the *Carisbrooke*. On the following morning (Sunday, the 13th) at six o'clock, the *Peng-chao-hai* sheered close up alongside the *Carisbrooke*, and signalled the latter to steer N.E. by N. Captain Scott replied that he could not do so. He was then asked to follow them. He again answered that he must proceed to Hongkong to land his passengers and mails. They then signalled him again to announce that they would be compelled to use force if he did not follow them. He rejoined that if they did so it was on their own responsibility, and not his. They once more requested him to accompany them, but he still refused. Captain Scott was then told that he was not acting honourably, and asked if he would stop his ship and allow a boat to come alongside. He answered that he would not; they had already boarded the *Carisbrooke* and placed their representatives on board; and that he was now going to proceed to Hongkong. The *Peng-chao-hai* then fired at the *Carisbrooke*. The first shot appeared to be blank, but the second was supposed to have taken some effect. Thinking of the lives of his passengers, and finding that the ship had made two feet of water aft, he requested the Captain of the gunboat to come a little closer, and said that he wished to speak to him. The *Peng-chao-hai* then came nearer, and he told Mr. Brown and Captain Palmer that he would not follow them to Whampoa, but that he would give up the vessel to their control if they persisted in demanding it, sooner than risk the lives of those on board and the safety of his vessel. Captain Scott asked them at the same time to write him a letter stating that they had taken possession of the *Carisbrooke* and her cargo. They acceded to this request, and Captain Scott gave up the *Carisbrooke* to Mr. Brown in about Lat. 21.29 N. Long 113.26 E., Cowlan Island bearing N.N.W., Wycamp W. ½ N. This was at half-past eight in the morning. The *Carisbrooke* has sustained serious injury, although to what extent it is difficult to say until a survey is made.

Correspondence.

THE CUSTOMS AND THE MANDARINATE.

To the Editor of the

NORTH-CHINA HERALD.

SIR,—I have read the article in your issue of the 5th instant, under the head of "The Customs and the Mandarinate," the substance of which is that there is a tendency on the part of the foreigners in the Chinese Customs' employ to arrogate to themselves the functions of Chinese Magistrates. In support of your views, or rather as a text for your article, you quote two cases. One occurred in the infancy of the Customs in days long gone by. The popular report of what really

¶ Tls. 50 returned. * Tls. 85 paid-up. α x. bonus.

occurred in that instance is a great exaggeration of the real state of the case, the facts of which could prove to an unprejudiced critic nothing more than that the Customs' service has had—perhaps has—in it, as every other service may have, a certain proportion of silly men. In the second case, without entirely disagreeing with the general conclusions of your article, I must take exception to many of your remarks on the *Shantung* case.

You must know that, in addition to the article of the U.S. Treaty which you quote, there is another (Art. XI. of the 1862 treaty) saying that all citizens of the United States "shall be punished only by the Consul or other public functionary thereto authorised according to the laws of the United States." From this I infer that had the Taotai himself sat on the bench with Mr. Sheppard, it would only be to examine witnesses, to express his views on evidence, and to generally aid in bringing forward a fair exposition of the Chinaman's side of the case, and to so endeavour to assist Mr. Sheppard in arriving at a decision conformable to "justice and equity." As a judge in the case, by the article referred to, his power is *nil*. Now if in such a case the Taotai cannot himself attend, custom permits him to send a deputy, a man of a rank inferior to his own and to that accorded to the Consul by Treaty, which deputy the Consul, as a rule, in ordinary cases does not object to receive as his Chinese Assessor, and presumably by doing so lets it be understood that he does not consider his dignity or the dignity of his Court lessened thereby. This was evidently Mr. Sheppard's idea, for he made no objection to sit with the Taotai's *wei yuens*, of whom there were two. He might have objected to receive more than one, but, having allowed that number to be exceeded, there seems no reason why he should not as readily receive three as two. This, however, is unimportant, as it is not the ground of objection to Mr. Twinem which he appears to have taken. The *wei yuens* were very small people indeed. Had he permitted Mr. Twinem to sit with him, he would have been sitting with the Taotai's colleague—from a Chinese point of view his equal, not his subordinate. In fact it seems from the Taotai's having asked Mr. Twinem to act for him, that he considered the case a difficult one, and that it would be only the correct thing to have a representative on the Court of position commensurate with the importance of the case. In such a case, I can see no reason why the Consul should have objected to receive Mr. Twinem, considering that the judicial decision was solely in his own hands; while, as to arriving at a just and equitable judgment (which the article in the Treaty says is the object of the Chinese official being present, and which is, or should be, the object of every Court), one would imagine that a fluent Chinese-speaking foreigner, accustomed to Western laws, capable of sifting evidence, and of generally aiding to bring the Chinaman's side of the case honestly and fairly before the Court, and preventing the native from suffering from ignorance of the procedure of a foreign tribunal, would have been found by Mr. Sheppard a more useful assessor than any small mandarin could be. Presumably, Mr. Sheppard thought so too, for if what one hears is true, though he refused to let Mr. Twinem sit with him, he did not object to his being present and actively bringing forward the case in Court, and the Taotai or the Emperor of China himself would have been debarred by treaty from doing any more.

It must be remembered that Mr. Twinem took no steps of his own originating towards constituting himself a magistrate, that he assumed or professed to assume no judicial authority as a Chinese official in this or any other case, and that he appeared in the present suit merely as the representative of the Taotai in a case in which the latter must himself have known that he had no legal power,—(it was not merely an arbitration case, the question of negligence was raised)—and that he, Mr. Twinem, never pressed the question of his right to sit or not beyond making a formal protest on the Taotai's, more than on his own behalf, that the latter might have grounds to refer the matter, if he chose, to higher authority. I hope I have made it clear that even the appearance of assuming authority was not of Mr. Twinem's originating, and that there was no actual assumption at all. As far as I can see Mr. Twinem did not, and I believe the Customs' service generally do not, want to arrogate to themselves mandarinal, any more than they do archidiaconal, functions. I should be sorry to criticise the acts of a man of Mr. Sheppard's ability and knowledge, but I think, as a humble individual, that he might have done worse than accept the Taotai's nomination of Mr. Twinem. His decision has done nothing towards settling the question as to whether Mr. Twinem is a Chinese official or not. Had he agreed to Mr. Twinem's sitting, he could have done so under protest, and civilly objected after the case was over, for I imagine no one would say that Mr. Twinem's sitting would have done any harm. By doing so he would have avoided raising the suspicion, which is sure to be raised, in the Chinese mind, that, having refused to receive a foreign assessor, there must have been something it was intended he should not know or something that should not be seen; consequently, the Chinese would have less belief in the decision. Had he afterwards addressed a protest to his own superiors, and left the question as to foreigners to be settled between the Tsung-li yamên and the American Minister, aided perhaps by the representative of Mr. Twinem's nationality, whatever that may be, then there would be no reason why the Chinese officials should not yield any point that might be presented to them without feeling any loss of face. Now the question will probably be submitted to the same authorities on a Chinese initiative; and if, as is quite on the cards, backed up by the weight of the Viceroy of Chihli, the Tsung-li yamên, in defence of the action of its own officials, has to take the side of its foreign employés and contest their status with their countries' representatives, it will either crow over a victory should the Ministers yield the point, or, should they differ from and decide against the Chinese view, the yamên will accept the decision with a bad grace, and will put it down as one more example of foreign dictatorialism, or, as one of your correspondents inelegantly termed it "the-jump-on-the-nigger" policy; and so another point of friction between Chinese and foreigners will be made, and the general tenor of the way made less smooth.

I should like to go further into the general question of Chinese official position as held by foreigners, and perhaps may do so at a future time, but apologising for the length of my present communication, and assuring you that I have written it in no carping or unfriendly spirit—for I agree in much of what your article says, I remain,

Yours obediently,

A. B. C.

11th June.

SHANGHAI WATER SUPPLY.

To the Editor of the
NORTH-CHINA HERALD.

SIR,—Nearly a month has now elapsed since the last Landrenters' Meeting, at which the Municipal Council was authorised to take steps for obtaining the opinion of an Engineer upon the estimates for the construction of Works for affording the Foreign Settlements under their jurisdiction an adequate Water Supply. In spite of this long interval, the public are still without any information as to the course, if any, which has been decided upon for giving effect to this resolution; and it is to be feared that the consideration on a comprehensive basis of a subject of such vital importance may eventually be deferred until a disastrous epidemic re-awakens the slumbering energies of the community and its representatives. While deprecating on the one hand anything which may tend to create groundless and dangerous alarm, yet on the other I would draw the attention of the community to the dangers which further delay in the final settlement of this question may produce. It cannot be doubted that the absence hitherto of any serious outbreak of typhoid, cholera, or other zymotic disease in the Foreign Settlements, has been in spite of, and not in consequence of, the insalubrious conditions which prevail in our midst. The water-logged state of the subsoil, and the consequent excessive humidity of the atmosphere, doubtless contribute in no small degree to the amount of disease at times prevalent, but the most serious item of all is no doubt to be found in the fact of our notoriously insufficient and dangerous Water-supply,—insufficient not only in quantity, on account of the circumstances affecting and limiting its carriage, but dangerous in the very nature of the supply thus obtained. The plain, unvarnished Annual Reports of the Health Officer to the Municipal Council, and the equally valuable Reports of Dr. Jamieson to the Customs Authorities, teem with allusions to the manner in which our present supply is drawn from the river and the creeks, and both these authorities agree in condemning the system of relying upon the offices of native servants for the proper purification of the water, foul though it be. It is, therefore, needless to expatiate further on this point; and indeed, the question may fairly be said to have passed from one of expediency to one of ways and means.

A retrospect of past proceedings shews us that the Municipal Council, after due consideration of the information collected by Mr. Oliver, their Engineer, and utilised by him in the preparation of alternative schemes and estimates, decided in 1872 that the execution of the necessary works by the Municipality was not feasible, and thus the whole matter remained *in statu quo* until within the last few months. Briefly, the present state of things is, that three sources of supply have, in that period, been proposed,—viz., the river Whangpoo below the Settlements, the river Whangpoo above the junction of the Pagoda Creek, and the Soochow Creek near Batt's bungalow. This much has, therefore, been attained, that the matter has been reduced to within a much smaller compass than at the time when waters were collected for analysis from all conceivable places, including the distant lakes. It may now be asserted, that water, if brought to the Settlement at all, will be taken from a point not more distant than the remotest of these three named, and, lest be it objected that this is but little as the result of three years' waiting, I would remind objectors that the value of this limitation is still considerable. The samples of water analysed by Dr. Frankland were not selected with reference to any distinct scheme or schemes, and it was, therefore, impossible to devote such attention to the selection of these specified samples as would now be practicable. Thus, in taking samples now, we should be confined to these three sources, and would take such at all states of tide, settling, amongst other moot points, the theory of arsenical and sewage contamination of the Whangpoo above the Settlements. This is a chief reason for

advocating, as I now do, the re-analysis of these waters.

The object of the Council's recent motion was rightly explained by their Chairman to be the definite settlement of this long-vexed question, and all will agree with him that this is a most desirable object to be attained, even at a larger expenditure than that mentioned by him. In a matter involving such a large outlay of possibly public money, nothing should be left undone to render permanent steps the right ones, and I believe it will be found that nothing short of consulting an eminent English engineer, whose speciality lies in Water Works, will succeed in bringing about this much-to-be-desired consummation. Lest there be any misconception as to the means of doing this, I am enabled to state that it would not be necessary that the Engineer consulted should either visit Shanghai personally or send one of his assistants here. A Commission, consisting of, say, two members of the Council, their Engineer, and any others, such as medical men, whom these should decide on admitting to their deliberations, would be able to draw up such information and plans, as, placed in the hands of the consulting Engineer chosen, would enable him to arrive at a decisive conclusion on the questions submitted to him; Mr. Purdon suggested at the Landrenters' Meeting that perhaps it might not be necessary to go beyond Shanghai to find an Engineer capable of reporting on this matter; but, without in any way wishing to depreciate the talents of those Engineers who form part of our community, I would only urge that our present want is the opinion of an *authority* on this subject—of one whose name carries sufficient weight to render further cavilling and delay needless, and upon whose opinion the Council could decide whether to carry out the work themselves or allow private enterprise to take up and execute what they have already once declined to do. The opinion which I thus venture to advance is supported by the fact that, after three years' possession of the detailed Reports of the Municipal Engineer, who has practically exhausted the question as far as can be done by any one in Shanghai, we are still but little nearer the end towards which he and others have aimed. Some other element is, therefore, evidently wanting, and I believe that the course pointed out above would supply this. Every successive failure in endeavouring to promote this object will have the effect of discouraging future effort; there is thus all the more reason why the present action of the Council should not be rendered abortive by the inefficiency of the means adopted.

I will conclude, what I fear has already become a long letter, by pointing out that great misapprehension seems to exist with regard to the existence of a Water Company in these Settlements. The argument has often been advanced that such a Company would eventually become a dangerous monopoly, charge what they like for their water, and so forth—on which I would merely remark, that these fears arise from simple ignorance of the real facts of the case. It will be perfectly open to the Council, in the event of a Company performing what most people rightly think are the duties of a Municipal Council, to make such conditions with that Company as will effectually prevent the latter from exercising its functions in any manner at variance with the general well-being and convenience of the community. Mr. Kingsmill pointed this out at the Landrenters' Meeting, but the erroneous idea still seems to linger.

Apologising for this lengthy trespass on your space.

I am, Sir,

AQUEDUCT.

Law Reports.

H. B. M.'s SUPREME COURT.

Shanghai, June 19th.

Before Sir EDMUND HORNBY, *Chief Judge.*

NORMAN HILL *v.* E. A. REYNOLDS.

Mr. WAINEWRIGHT for the plaintiff.
Mr. EAMES for the defendant.

His LORDSHIP, in this case, to-day delivered the following

Judgment:—

In this case, the plaintiff seeks a declaration from this Court, that he is entitled to recover from the defendant so much as still remains unpaid to the plaintiff of ½-share of the disbursements and payments made on account of the steamship *Iron Prince* since the 3rd July, 1862, together with interest thereon, due allowance being made for the earnings and the proceeds of the sale of the said steamship; and that an account may be taken on the footing of such declaration; and also that it be certified what sum is due to the plaintiff from the defendant.

The facts appear to be as follows:—In 1862, the plaintiff suggested the purchase of a steamship called the *Iron Prince*, to the defendant, on joint account. The defendant said that he had already tried to purchase the steamship, but the owner did not wish to sell it entirely; and, defendant declining to be a joint-owner with him, the negotiation had gone off; but he was willing to purchase in conjunction with plaintiff. Upon this understanding, the plaintiff attempted to purchase the steamer, but, the owner objecting to part with the whole of his interest, plaintiff only purchased a half share from him. The defendant hearing that negotiations were going on for the purchase of the steamship, and being under the belief that he was buying the whole of the ship on joint account, sent him funds to pay his, the defendant's half share, *i. e.* $12,000, *i. e.* Tls. 8,000, the balance, to be paid by Captain Lane. On the plaintiff, however, informing him that he had only succeeded in purchasing half the interest in the steamship, and that consequently the defendant only had a quarter share, the defendant does not appear to have done more than write to the effect he was sorry the plaintiff had not bought the whole of the vessel, inasmuch as he objected to having anything to do with the owner. He, however, did not object to the portion of the funds sent down being expended on the purchase, on his behalf, of a quarter share, and he did, during a portion of the time the ship ran on the coast, contribute his quarter share of the expenses. The ship was registered in the name of the plaintiff only. I do not, however, think that this constitutes any point in the case, as it is not unusual to register a ship in the name of one owner only, and in this case it was probably done for convenience. The speculation turned out a bad one—the vessel was temporarily, but only in form, transferred to the defendant's name, to enable him to sell her, but he was unable to do so, and she was afterwards retransferred into the plaintiff's name, or rather, the transfer never having been legally effected, it is more correct perhaps to say the vessel remained in the plaintiff's name, and was by him placed in the hands of the original owner for him to do what he could with her. He sent her to the plaintiff's agents at Hakodadi for sale, representing the plaintiff as having with himself a half share in her; and before she was sold, the defendant was asked if he would agree to the sale. He (see Mr. Hanssen's evidence) refused, saying he would have nothing to do with her, as he would have nothing to do with the original owner, who he considered was injudiciously using her. She was subsequently sold—on the sale there was a great loss. The original owner's *firm* sent an account of the amount due to them in respect of half the loss to the plaintiff, and at the same time sent it to the defendant, saying that as they understood he had a quarter share in it, he ought to pay his quarter's loss. The defendant did not reply to this communication.

Many years afterwards, the plaintiff being in England, the original owner, being also in England, conjointly with other members of his firm, filed a Bill in Chancery against the plaintiff, setting forth his joint ownership with himself, and asking for a decree ordering the plaintiff to pay his half share of the losses. The plaintiff replied that he only owned a ¼ of the ship, the present defendant owning the other ¼, and that the defendant ought to be held responsible for his ¼ share. Upon this, the plaintiff amended his Bill by denying that he ever heard of the defendant's joint-ownership, or had anything to do with him. The suit never came on for hearing, but was compromised by the present plaintiff paying to the original owner of the steamship (the plaintiff in the Chancery suit), a sum of money by way of compromise, and in settlement of the Chancery suit. He now brings the present claim. The defendant has not answered—the effect of this is, accordingly to the rules of this Court, the same as if he denied all the material allegations in the petition. When the case came on for hearing, the defendant first employed Counsel, who applied for leave to plead the Statute of Limitations. I refused to allow this on the ground, 1st, that he was out of time; and, 2nd, that he ought to have applied before the plaintiff's Counsel applied for a commission to examine witnesses (in which commission defendant did not join, although he had full notice of it, and was asked to join in it.)

I have now to ascertain whether the plaintiff has any right to come to this Court for the relief he asks.

The evidence of the plaintiff, taken under the commission, substantially comfirms the statements in the petition; and there is also the evidence of the original owner, who certainly *now* admits that he heard that the defendant had a ¼-share in the vessel; there is, however, the owner's amended Bill in evidence, in which he as distinctly says that he had no knowledge of the defendant's ¼ ownership, that he had nothing to do with him, and did not consider him as part-owner, and in confirmation of this, it appears in his evidence that his firm began a suit against Mr. Reynolds, in Shanghai, to recover from the defendant on Captain Hill's account, but they had no case. Now the first question that occurs to me is this:—

Admitting that the defendant thought himself a partner or joint owner in the steamship with the original owner and the plaintiff—is he so liable, when, if the allegations of the original owner of the steamship are true, it would appear that the plaintiff never actually placed him in the position of co-partner with himself and the original owner, who still retained his interest in the vessel to the extent of one-half. In other words, can he now apply to this Court for the equitable relief he prays, not having done that which the defendant, however much he disliked it, thought he had done—namely, constituted him a partner to the extent of one-fourth of the ship with the plaintiff and original owner. If he has not been put in this position by the plaintiff, can the plaintiff simply assert that he, the defendant, is in that position, and that he always thought himself in that position—simply to enable him (the plaintiff) to make the defendant contribute to the losses which have been since incurred.

I think I must take it for granted, looking at the amended Bill in Chancery, that the original owner did not know that the defendant was a co-owner with himself, and looking at the fact of the compromise of the suit by the plaintiff, notwithstanding his answer and his evidence under the Commission—that this compromise was effected because the plaintiff felt he could not make out and establish the partnership in the steam-vessel, of the defendant, and felt also that he was liable to the plaintiff in the suit (*i.e.*, the original owner) for his *half* share of the losses, and could not successfully resist the suit.

Now, I take it to be a rule of Equity that a suitor cannot claim Equity unless not only he is prepared to do Equity, but has throughout the transaction done Equity.

It is also a rule of Equity Courts (apart from any question of their being within the jurisdiction of the Court) that all partners ought to be joined in a petition for an account, on the principle laid down in Hill *v.* Nash, (Lindley on Part., vol. 2, p. 913)—where a Bill was filed by one partner against the Executors of a deceased partner, to obtain the proportion of loss due from the estate of the deceased, the whole of the loss having

been paid by the plaintiff, and all the other partners having been settled with, and where it was held that the other partners ought nevertheless to have been partners to the suit, for as no settlement had been come to which was binding as between them and the defendants, so no decree in the suit as framed, would be binding on the absent partners, and they, notwithstanding the decree and their settlement with the plaintiffs, would have a right to institute another suit against the defendants to settle the proportion of their respective contributions.

If this is so, and there can be no doubt about it—no decree, in the Chancery suit against the present plaintiff, even if it had been made, which it was not, would have been binding as between the then plaintiff to that suit and the present defendant; and certainly where there was no decree no compromise would be so binding—and the defendant would be exposed to a suit at the suit of his alleged partner, the original owner of the vessel.

It is now said that the present defendant was not within the jurisdiction of the Court of Chancery at the time the Chancery suit was brought, and that the original owner is not within the jurisdiction of this Court, but there are no allegations of this kind on the face either of the proceedings in England or on those now before this Court, and there is certainly nothing in either proceedings to show that any attempt has ever been made to bring either of the parties within the jurisdiction, either by asking them, or by obliging them.

To go back to the principle I alluded to—it appears to me that the plaintiff has failed to make out the to be implied statement in his petition, that the defendant was a part owner of the steamship *Iron Prince* with the original owner and himself. That he thought himself so, has nothing do with the question, which really is reduced to this: Did the plaintiff *really make* him a partner with himself and the original owner—if he did, then he might be liable, but then he ought to have been made a defendant in the original suit, and the original owner ought also to be made a defendant or plaintiff in this suit; at any rate something ought to have been done to have made the decree or compromise binding, so as to have estopped the original owner bringing a suit against him, which on the assumption that he is a partner of his, it is even now open for him to do. But did the plaintiff make him a partner with himself and the original owner? The original owner disavows it, however much he may have sought before the Commission to take evidence, for the purpose of assisting the plaintiff,—to modify the statement made in his Bill; and the only evidence is therefore that of the plaintiff, but, after all, that evidence only amounts to this, that he intended to make him a partner, thought he had done so, and that the defendant thought and acted as if he was a partner. But would either or any of these allegations have availed the defendant, supposing it had been necessary for him to have filed a similar application to the present against the original owner of the steamship; or would they have availed him in a suit against the original owner, who had set off any profits which the steamship might have earned against any monies which the present plaintiff might have owed him; would any of these allegations have been proof of partnership sufficient as against the original owner, who flatly contradicted them, to have enabled the present defendant to have recovered his proportion of profits in respect of his quarter-share—notwithstanding the original owner had credited the plaintiff with the whole of the profits due on his half-share? Certainly not, and if they would not, then it is difficult to see how the plaintiff can be said to have made out that he ever constituted a partnership between the original owner, himself, and the defendant. He in fact never put the defendant in a position to receive the benefit of his position as a partner against the original owner of the steamship, and not having done this, it is too late now to come to this Court and ask him to bear the losses consequent on a position which he never filled. I am far from saying that the plaintiff improperly or fraudulently neglected to put the defendant in this position; it is sufficient to disentitle him to the relief he now asks, to say that he did not put him in that position. And this consideration becomes important with reference to a statement in the plaintiff's sworn answer, to the effect, "It also appeared from the said account, and I believe it to be the fact, that plaintiff, A. Scott, or his firm of A. Scott & Co., had throughout the year 1863, and until her departure for Japan in 1864, chartered the ship in conjunction with other persons to carry passengers and goods to and from the west coast of China, and that considerable loss had thereby been occasioned. I have since been informed and believe that the said plaintiff or his firm of A. Scott & Co., made a large profit on the goods and passengers thus carried by the vessel, and I contend that he or his said firm ought to account to *me* for *my* share of such profit."

But it is argued that whether there was a partnership between the three, there was at any rate a partnership between the two, *i. e.*, the plaintiff and defendant, and upon this ground he is entitled to an account and a decree. No doubt there was a partnership as regards a half share in this vessel between the parties to this suit, inasmuch as a partnership between three involves a partnership between two; but to grant the decree prayed for would be to declare a partnership different from that which really existed and which was sought to be declared by the suit in Chancery, and to settle the accounts between the two partners now before the Court, and not to settle them as between all the co-owners of the steamship, and to leave them as between the defendant and his third partner—the original owner—unsettled and open to litigation, which a Court of Equity will not do. On the whole, and for the reasons given, I think the plaintiff has failed to make out the case disclosed in his petition, and is not entitled to the relief he asks.

Although it has not weighed with me in coming to the conclusion which I have come to with regard to this case, I would observe that ten years has elapsed since the vessel, the earnings and losses of which are the subject of this suit, was sold, during which time, until 1871, no settlement was come to between the plaintiff and the original owner, and it was only late in 1874 that the present suit was commenced. It is impossible to say to what extent the present defendant may have been damnified by these delays. I do not, however, say that he has been. I shall not give costs, as I think the defendant should, as he certainly ought in his own interests to have done, answered the petition—pleaded the Statute of Limitations, and thus have in all probability saved the plaintiff from the expenses he has thus uselessly incurred.

In Admiralty.

THE STEAMER *Fusing v.* THE STEAMER *Ocean.*

Collision.

Mr. DRUMMOND and Mr. EAMES appeared for the plaintiffs.

Mr. WAINEWRIGHT (solicitor for Peter Denny, of Dumbarton, Scotland, the owner of the *Ocean*) and Mr. HANNEN, for the defendants.

His LORDSHIP to-day made the following

Decree.

The question of whether or not the master, crew, and passengers of the *Fusing* can recover damages against the owners of the *Ocean* in respect of the loss of their effects, was by consent argued before me after the trial of the cause, on motion as to the form of the decree. At the trial, the Court came to the conclusion that those in charge of both vessels were to blame, and decreed that the damage to *ships and cargo* should be borne equally by both ships. The question I have now to decide is whether the *master, crew, and passengers* of the lost vessel, or any of them, are entitled to be put upon the same footing as the owners of ships and cargo, and have their damages assessed and defrayed in equal proportion by the two vessels.

I have in vain looked in the text-books and reports for any distinct authority for the proposition that, *where both vessels are to blame*, any of these parties would be so entitled. In the absence of any such authority, therefore, I must look to the principles which have guided the Courts of Admiralty and Common Law in the decision of cases in any way similar to the present. I shall first refer to those decided in the Common Law Courts, and then endeavour to see how far the authority of these cases has been recognized by Courts of Admiralty, or departed from. And I shall deal, first, with the case of the passengers, and next, with that of the master and crew.

First, as to the passengers.

The Common Law rule as to these may be gathered from the two cases of *Thorogood* v. *Bryan* (18 L.J., C.P., 336) and *Armstrong* v. *L. and Y. Railway Co.* (10 L.R., Ex., 47). In the former of these cases, a passenger was held disentitled to recover for injuries sustained in a collision caused by the joint negligence of the defendant's servant (an omnibus-driver) and of the driver of the omnibus in which he himself was conveyed. In the latter, a passenger by rail (who was also a servant of the railway company), was similarly—and on the authority of the case just cited—held unable to recover against the defendant railway company, because the collision which caused the damage sued for, was attributable to the joint negligence of the servants of the two companies. It is true that in these cases what was claimed was compensation for *personal injuries*, but I see no distinction in principle between the loss of luggage and the loss of an arm.

Now what is the rule in Courts of Admiralty? Direct authority there is, as I have stated, none; but it is impossible to read the reasons given by Dr. Lushington in the case of the *Milan* (31 L.J., Adm., 105), for upholding the right of the owners of cargo to recover one-half of their loss from the one of two delinquent ships in which their goods were not carried, without recognizing their equal applicability to the case of the effects of passengers. That learned judge says (p. 111)—"It is abundantly clear that the owner of the cargo cannot, on any supposition, have contributed to the loss,—certainly not by himself personally—certainly not by his agents, for masters and crew are in no respect under his control; it is difficult to conceive upon what principle it can be contended that he is *particeps criminis*, when he is not so either as principal or agent. But it is said that he shall be so considered, and deprived of his remedy, by reason that he himself or his agent selected the ships by which his goods were carried. Now, how by such selection of the ship he could, by any refinement of reasoning, be the cause, in part or in whole, of any collision, it is beyond any understanding to discover. There are, in my judgment, in the mere selection of the ship for the conveyance of his cargo, none of the ingredients which can constitute responsibility for a collision; for I cannot conceive a responsibility for an act done where the individual has no power of action, interference or control—where, indeed, he has nothing whatsoever to do with the management or navigation of the vessel."

Every word of this passage seems to me to apply with equal force to the case of passengers' effects, and as no reason was suggested, and none has occurred to me, why passengers should be put in a worse position than owners of cargo, I feel bound to give them also the benefit of the decree I made in favour of the latter—that is, that they recover one moiety of their damage from the *Ocean* and the other moiety from the *Fusing*. For, though for this portion of the relief given there is as little direct authority as there is for the other, it seems to me to be only in consonance with those equitable principles which govern Admiralty Courts, that each wrongdoer should be made to compensate the innocent sufferer in his fair yet full proportion of the damage that he has contributed to cause. My former decree secured this so far as the owners of cargo were concerned, and I am now but extending the same measure of relief to the passengers. In the present instance, though the *Fusing* is not within my jurisdiction, I am fortunately able to secure that my decree will be complied with by her in the matter of her half contribution to the whole damage, because I shall direct the Registrar, if need be, to pay out of the monies that otherwise would be paid over in full to her owners in respect of her loss by the owners of the *Ocean*, her moiety of the claims of passengers and owners of cargo. Her owners having come into a Court of Justice, I assume that they are ready and willing to do justice: if it should be that in this, or in any similar case that may arise in the future, they are not, then, where it is in my power, I shall see that even-handed justice is done.

At the same time, however, as I so decide,

I am not without grave doubts as to the correctness of the conclusions to which I have come. Suppose that, in the contract of carriage, the owners of the *Fusing* had stipulated that they would not be responsible for the loss of baggage unless paid for as cargo, or any losses or damage to the effects of passengers carried gratuitously, or for any loss in respect of private effects above the value of £10. How far would a Court of Admiralty consider these stipulations as protecting the owners of the *Fusing* in a case like the present? If the Court were to admit the validity of these protecting clauses, it would in fact be recognising in favour of the owners of the *Fusing*, a rule of the Common Law as well as of Equity Law, which prevents a man recovering that which by a special contract he has estopped himself from claiming—while at the same time it would be refusing to recognise another principle of the Common Law, which limits the liability of owners in the position of the owners of the *Ocean*.

Moreover it strikes me as strange that when the Common Law limits the liability of persons in the position of the owners of the *Fusing*, from recovering such articles as, for instance, valuable jewels, under any express or implied contract to carry with reasonable care personal baggage or effects,—a Court of Admiralty should refuse to limit the liability of persons in the position of the owners of the *Ocean*. Thus, apart from any express limitation on the contract of carriage, a Common Law Court would not allow a passenger to recover under the head of personal effects or baggage, a valuable diamond which he carried in his waistcoat pocket or in his portmanteau. But it would seem that a Court of Admiralty would enable him to recover its value, simply because it would refuse to enter into any question relating to the contract of carriage between the passengers and the owners of the vessel in which he was traveling.

Second,—I have now to consider the position of the master and crew of the *Fusing* as against the owners of the *Ocean*, and impliedly also (for the reason already given), as against their own owners; and I confess I am fairly puzzled. If I allow the losses claimed, I am disregarding the well-known rule of Common Law, and introducing a rule in Admiralty, but I am at least consistent, and am only giving to the officers and crew what I have given, and for the same reasons, to the owners of cargo and to passengers. All three classes of claimants are identified with the ship in exactly the same way; all equally selected the ship — the one to send his goods by, the other to convey himself and his baggage in, the third to serve in. The same rule of the Common Law is applicable to all,—none of them, under the circumstances which occurred in this case, could recover. Admiralty Law like Equity Law, however, has apparently stepped in, and in what is called a milder spirit relieves them from the consequences of the harsher rule of Common Law. This is at any rate true of the owners of cargo, if the decision of Dr. Lushington is good law, and the reasoning by which he supports that decision seems to me to be applicable to the case of the officers and crew at least. The captain's I consider a different case; he is one of the two real delinquents, and ought not to be allowed to recover from his innocent owners or the equally innocent owners of the *Ocean* (their so-called guilt being only an inference of law) anything in respect of a loss that was brought about in part by his own act. The officers and crew I distinguish from the captain on the simple ground that, being merely the instruments in the hands of the captain to navigate the vessel, and bound by law to obey his orders, however imprudent or foolish, they are in no sense responsible for the loss that was caused. The officers and crew, then, will have their damages assessed and borne like the passengers' damages, by the two ships in equal moieties. The Registrar will take the same precaution in the matter of these claims as in the matter of the others, to see that the *Fusing* contributes equally with the *Ocean* to the satisfaction of the various claims.

I have thus, to the best of my ability, and after considerable thought, disposed of the questions submitted to my decision. Still I do not pretend to be satisfied either with Dr. Lushington's judgment or my own, and if there is any fault to be found it arises from the absurdity of having two rules of law, one contradictory of the other,—for no other reason, as it appears to me, than that there happens to be two Courts which can, to the inconvenience of all parties, administer different systems of law. If the Common Law is harsh, the obvious duty of the Legislation is to alter it. If the Admiralty is foolishly weak and sentimental upon such matters, it ought to be restrained; but there can be no reason why there should not be one law obligatory in all Courts, and that law need neither be harsh on the one hand, or weak or sentimental on the other.

I find that I have omitted to say anything on the subject of costs. The order I shall make on this head is the usual one where both ships are in fault—that each party bears his own costs; and this will apply as well to the first hearing as to this subsidiary one.

Shanghai, June 21st.

F. H. Balfour *v.* J. D. Bishop.

Mr. Hannen appeared for the plaintiff.

Defendant appeared in person.

This was a re-hearing, on the application of the plaintiff, of a case heard in the Court below, on the 11th instant, to recover $6.50, subscription to the *Celestial Empire* newspaper, with which is incorporated the *Shanghai Budget*,—the question at issue being whether the contract for the supply of the paper terminated at the end of 1874.

Mr. Hannen, in opening, said he fancied it was just possible that all he required in the way of further evidence, the defendant would admit. He would, therefore, before going further, ask him if he admitted, 1,—"That the *Celestial Empire* contains all that the *Budget* did, with the addition of other matter; that its staff of correspondents, contributors, sub-editor, are the same, with the addition of others; that its advertisements and subscribers are substantially the same, the only difference being that Mr. Balfour edits it in the place of the late Mr. Lang.—2, That subscriptions to newspapers here, are "till further notice."

His Lordship said he did not think it was possible for defendant to do that, nor did he see how it affected the issue of the case.

Mr. Hannen did not wish defendant to admit it, unless he chose to do so.

His Lordship—It is immaterial.

Defendant, on the question being put to him, said, as far as he was concerned, he did not admit it.

Mr. Hannen said he must then prove it. He called

Harold Howell, who deposed—I am sub-editor of the *Shanghai Courier and China Gazette*, and also of the *Celestial Empire and Budget*. I was sub-editor of the *Shanghai Courier*. The correspondents of the present *Shanghai Courier and China Gazette*, at the outports, are the same, with additions, who contributed to the *Shanghai Courier* under Mr. Lang's editorship. Most of the persons who contributed various articles then, still contribute. The type and plant are still used, with additions; and in fact the only change is in the editorship—that of Mr. Balfour in the place of the late Mr. Lang. The *Budget* was a collection of articles and items of news from the *Courier*, and the *Celestial Empire* is such a collection from the *Shanghai Courier and China Gazette*. Some of the advertisements that now appear, also appeared in the old *Courier*. I have been about eighteen months connected with the management of newspapers in Shanghai. Subscriptions to newspapers here are until further notice, unless some other agreement is made. The transfer of the paper to Mr. Balfour was made during the currency of a quarter, and the subscribers who had paid their subscription in advance, were supplied free of charge during the remainder of the quarter by Mr. Balfour, with the *Celestial Empire*, in consideration of their subscription to the *Budget*. All the subscribers to the *Budget*, with the exception of the defendant, treated the *Celestial Empire* as a continuation of the *Budget*—at least, all that I am aware of. Mrs. Lang, as executrix of Mr. Lang, collected any outstanding accounts due on the *Budget* account.

By Defendant—I cannot recollect all who were contributors to the *Budget*, nor all who were subscribers. I know that some of those who contributed to the *Budget*, do so still to the *Celestial Empire*. I know of one who does not. There have been changes in the subscribers. Some have written to say they wished to withdraw their subscription. They were supplied with the *Celestial Empire* in consideration of their having been subscribers to the *Budget*. Some persons who had received the *Budget* free, now subscribe to the *Celestial Empire*.

Defendant, addressing the Court, said he did not understand that plaintiff was going to employ legal advice, or he would perhaps have done so himself. He must say he did not feel called upon to pay for the *Celestial Empire*, because there was no reason why it should have been sent; but if the account had been asked for in a polite manner, he would have paid it willingly. He had heard nothing of the office with which Mr. Balfour was connected since October last, and when the account was sent in to him (defendant), he sent it back saying he knew nothing about it. It was returned to him, with a wrapper attached—the same Mr. Lang used to send. He then wrote to them to say the account was for the *Celestial Empire* and not for the *Budget*, and that he did not want the *Celestial Empire*, and it was not to be sent to him again. He had refused to pay, because he thought one man should not make another reponsible for anything until he ordered it. He never ordered the paper. The late Mr. Lang was a personal friend of his, and one morning when he dropped in to breakfast, he (defendant) consented that the *Budget* should be sent to Mrs. Bishop, who was then in England. She went home in September last. He (defendant) subscribed to the *Courier* to the end of 1874, and then told Mr. Lang he did not want it any longer, but Mr. Lang said Mrs. Bishop would like to see the Shanghai news while she was away, and said, "Let the *Budget* be sent to her in England." He (defendant) had been a contributor to the paper, and thought it was meant to be supplied free after the end of the year.

His Lordship—The claim against you is from the 1st of April to the 1st of June.

It was explained that for one month of the quarter ending June, the *Celestial Empire* was supplied gratis to those who had previously received the *Budget*.

His Lordship asked defendant if the paper was sent to his wife after January?

Defendant replied that he did not know, but probably it was, because Mr. Lang was a friend of his, and might have continued to send it; but he (defendant) only paid until the end of last year. He never received any request from Mr. Balfour to subscribe to either of the papers. He had known Mr. Balfour as editor of the *Evening Gazette*, because he was himself interested in it; but did not think he had any right to charge him for the *Celestial Empire*, as he had never ordered it, and did not want it.

Mr. Hannen said part of the statement just made by defendant amounted to fresh evidence. Nothing had been stated at the first hearing as to the specific arrangement with the late Mr. Lang. He asked if defendant was on his oath?

Defendant was then sworn, and, questioned by Mr. Hannen, repeated the main facts of his preceding statement. He distinctly recollected that it was arranged his subscription should cease at the end of the year.

Mr. Hannen said the defendant had taken up quite new ground.

His Lordship said it was one of the inconveniences of a rehearing.

Defendant, in reply to his Lordship, said—I am most positive that no claim was sent to me for payment of the March quarter subscription.

His Lordship here said he would adjourn the case for the production of Mr. Lang's books. It was an important point, for, if the bill was sent in for the March quarter, it would be evidence that the contract had not ceased.

Mr. Hannen said perhaps it would be as well to reserve the question until the Court had heard what he had to say on other points—it would save time.

His Lordship acquiesced, and asked who collected the March bills?

Mr. Howell said they were to be collected by Mrs. Lang or her agents.

Mr. Hannen then addressed the Court on the plaintiff's case. He said the case was of the nature of a claim for goods sold and delivered to the defendant, and not so much of the

nature of a contract. Posting a newspaper was delivery of it, and if his Lordship asked for mention of any authority in support of that argument, he would refer him to Lord Abinger's decision in "Gibson *v.* Carruthers" (11, L. J., Ex. 146.) Then the question of course arose,—There being a delivery of goods in accordance with an order from Mr. Bishop, and there being no offer to return the goods, was the defendant entitled to refuse payment on the ground that the person supplying them is not the person to whom he gave the order? Plaintiff said if defendant had notice of the transfer, if he saw the advertisement notifying the transfer, then he was liable to the person supplying the goods. (Boulton *v.* Jones, 27, L.J., Ex. 117.) Mr. Bishop's evidence showed that he saw the advertisement relating to the transfer, and that was notice to him. The only point upon which the inference from Boulton and Jones could be rebutted, was that the present case fell within the line of cases referred to by Baron Bramwell,—where personal skill is called in question. Mr. Lang's editorship was no doubt of great value, but it was not of the essence of the contract. The test was, could the defendant have refused payment in the lifetime of Mr. Lang, on proof of his having been absent during the time the contract was to exist, and that he did not contribute to the paper in any way. Clearly not,—therefore it was not of the essence of the contract. The plaintiff now said the *Celestial Empire* is in fact the *Shanghai Budget*, the only difference being that it is edited by Mr. Balfour and not by Mr. Lang. But if the Court held that Mr. Lang's editorship and contributions were of the essence of the contract, it would follow that every time a correspondent or regular contributor died, or ceased to correspond or contribute, the subscribers could refuse to pay for the paper. That might, in such a case, have been done with respect to the *North-China Herald*, during Mr. Gundry's absence in Europe. If it could be, it would give rise to very serious results. Such a thing could not arise at home, where editors and sub-editors were not generally known, but in a small place like Shanghai—

His LORDSHIP said in this case, the contract was with the proprietor, and not with the editor—the contract passed to the person who purchased the business.

Mr. HANNEN would next refer the Court to the fact that Benjamin, in his work on the sale of personal property, included the case of "Boulton *v.* Jones" under the head of "mistake of person contracted with," but also showed that the mistake must prejudice the buyer. Here there was no mistake, for defendant could not have thought the *Budget* itself was being sent; and if there was any prejudice, it remained for the defendant to prove it. *Prima facié*, he had got more for his money than he contracted for. Further, he (Mr. Hannen) thought it would be seen that the defendant was estopped from saying that there was no contract for the supply of any newspaper except one called the *Shanghai Budget* edited by Mr. Lang. He had no right to assume that the parties taking it over were not going to complete the contract. He knew that the proprietors of the *Celestial Empire* were going on, that they were supplying it to the subscribers to the *Budget*, and, in his case, expending money in postage, yet he allowed them to continue, and was therefore estopped from denying the contract, they, the proprietors of the *Celestial Empire*, assumed to exist. That doctrine was one that had been laid down by Lord Denman; but without troubling the Court further, he would just mention that the converse of the present case had arisen and been decided in "Weatherby *v.* Banham" (*Fisher's Digest*, p. 5,983). In that case, Banham might have refused to pay on the ground suggested by the Court below—that there was no contract between the plaintiff and defendant, and that the defendant was not bound to write and stop the delivery, but he was held liable for goods sold and delivered. He thought he need not say any more on the point; but with regard to the express agreement with Mr. Lang, he (Mr. Hannen) must contend that it was an afterthought on the part of the defendant,—that it was not thought of at the first hearing. The defendant ought to have seen that a specific agreement was made, and he ought to have sent a notification to Mrs. Lang to stop the paper, whereas it had been said that in Mr. Lang's books there was an entry that the paper was to be supplied until further notice.

His LORDSHIP said there was strong evidence that defendant was not asked for the March quarter's subscription. They kept on supplying the paper, and it might be that, being a contributor, he thought he was entitled to receive a copy. Mrs. Bishop went home in September, and defendant did not want the daily paper sent to him, but, he said, the weekly one was, by arrangement with Mr. Lang, sent to Mrs. Bishop in England until December, up to which time it was paid for, and he knew nothing about it afterwards.

Mr. HANNEN said, but defendant afterwards allowed Mr. Balfour to go on sending the paper to England, and paying the postage for it, making no attempt to stop him. Upon the grounds he had stated, he should now ask that the judgment of the Court below should be overruled.

His LORDSHIP said as far as the law of the case went, he was clearly of opinion, whether it might be on an original order or not, that articles sold and delivered must be paid for. In this case, he could not make any difference between the paper being sent to Mrs. Bishop in England or to Mr. Bishop here. But if there was no evidence forthcoming to rebut the defendant's statement as to the termination of his contract with Mr. Lang, there must be a verdict for the defendant.

Mr. HANNEN asked if he understood his Lordship correctly—That the case was left open for the production of evidence as to the March quarter?

His LORDSHIP said that was what he meant.

Mr. HANNEN said perhaps his Lordship would leave it open to the plaintiff to bring any evidence he could get on the point.

His LORDSHIP acquiesced, and

The Court adjourned.

CIVIL SUMMARY COURT.

Shanghai, June 23rd.

Before R. A. MOWAT, Esq.

SINDAH *v.* E. H. GORE-BOOTH.

Plaintiff claimed $42.50, for work done and materials supplied. It appeared that, in Sept. last, an arrangement was made between the parties to paint and re-cushion defendant's trap, and to make two new wheels for it. Defendant, while admitting $17.50 of the sum claimed, disputed the remainder on the ground that the plaintiff had not put in two new bushes, the consequence being that, on the trap being again brought into use, the wheels rattled as much as before, causing the pony to take fright. A collision with a trap of Mr. Charrier's ensued; the pony, continuing its career, ran into the native city, defendant's trap being smashed, and damage done to the amount of Tls. 50. Before the accident happened, defendant told plaintiff that he would not pay him for the wheels unless he put in new bushes.—Plaintiff denied that he was instructed to put in new bushes, and asserted on the contrary that it was arranged at the time that the old bushes were to be made use of in the new wheels,—adding that if new bushes had been put in, a new axle would have been required. The charge he had made was for wheels only, Tls. 16; two new bushes would cost Tls. 10 more, and a new axle about Tls. 5.—Defendant contended that a new axle was not necessary, and he clearly understood that new bushes were to be provided.—The hearing was ultimately adjourned, in order to ascertain if plaintiff's charge for the wheels, minus the bushes, was a fair one, or whether the bushes should have been included in the charge.

June 24th.

C. E. HENRICH *v.* Captain COWIE.

Claim Tls. 62 for Pilotage.

Plaintiff, a pilot, sworn, stated—I piloted the *Cawdor Castle* in November, 1874. I claim from Captain Cowie Tls. 62 for my services, he having been then in command of that vessel. The charge made is according to the tariff. I have applied for payment, but have been refused.

By defendant—I was in charge of the ship. I gave orders from the bridge to "let go the anchor." The chief officer on the forecastle, replied: "Don't let go the anchor." I asked you to stop on the bridge and attend to the telegraph. I went forward and gave the order a second time to "let go the anchor." He then pushed so that I had to jump on the main deck, and said it was not necessary to let go the anchor. A collision occured with a brig (*St. François*) lying at the wharf, within two minutes afterwards. It was impossible in my opinion to avoid the same if my orders were not acted upon. After the collision, the Captain entrusted me with the duty of taking the ship alongside the wharf.

Capt. COWIE, sworn, deposed—I was master of the *Cawdor Castle*. The pilot was on the forecastle as he has described. I was on the bridge and superintended his directions. I suggested that he should go upon the forecastle as he could see better. I heard an argument between the pilot and the chief officer. The chief officer called out to me that "I had better go ahead." I saw then that the ship was getting near to a vessel at the wharf. I answered "we are getting near, shall we go astern?" I had no reply. I jumped off the bridge and went forward. As soon as I got close to the forecastle, I called out "full speed astern." It was too late, and we struck the brig immediately afterwards. The anchor was then let go by my orders. I then took charge of the ship, and took her alongside of the wharf myself. The pilot remained on the forecastle.

By Plaintiff—I swear positively that I did not give you charge of the ship. I told you that I would take the vessel alongside the wharf myself. I do not remember making any statement in presence of witnesses, that I did not blame you for the collision.

In answer to His HONOR, Capt. Cowie replied—That the proper orders would not pass through him, he being on the bridge. He heard no order given to "let go the anchor." He heard loud talking, and the words by the chief officer, "you had better go ahead and she will clear."

The case was then adjourned until 11 a.m. to-day.

POLICE COURT.

Shanghai, June 24th.

Before R. A. MOWAT, Esq.

R. *v.* KETTEL.

The prisoner was charged some time ago with being in unlawful possession of some clothes and threatening to use a knife.

MUSTAPHA, accused's brother, appeared in Court, and corroborated the prisoner's statement that the clothes were given him by witness. The charge of theft was accordingly dismissed. On the other charge, of drawing a knife, his Worship thought that prisoner had been sufficiently punished by his confinement under remand, and therefore discharged him.

R. (SEE FONG) *v.* CADAR ALLEE.

Assault.

SEE-FONG declared, stated—I am the defendant's wife. On Sunday last I wanted some money, and asked my husband for some. He refused and beat me with a rattan on the legs, arms and hands. He then threatened me with a pistol at another time, saying that if he shot me he would only be in prison for three years. I was frightened, and later on took the pistol to the Police Station.

Defendant denied that he had flogged her or made any threats whatever. He had grumbled because when he returned from his business his "chow" was not ready.

His WORSHIP—Are you really married to this woman? (The defendant is a Mahomedan and the complainant a Chinese).

Defendant—Sir, in the Mahomedan style. I allow her $15, her mother $2, and the boy $2 per month, for chow-chow for myself and them.

His WORSHIP—What wages do you receive?

Defendant—$45 a month, I am engineer in one of the customs steam-launches.

Complainant said that she did not wish to live with her husband any longer. He did not give her any money so she had to pawn some things, for which he had beaten her.

His WORSHIP said, according to defendant's statement in Court, he would in future pay her $15 per month, $5 to her mother and $4 to the two servants, and as they have been married one year he thought that they should not separate now. Costs against defendant.

MIXED COURT.

Shanghai, June 23rd.

Before Fan 范, Magistrate of Quinsan; Wong Yung Woo 王永和, Interpreter to the Taotai of Shanghai; and Chen 陳, Local Magistrate; with Mr. A. Davenport, British Assessor.

Yang Heding acted as Court Interpreter.

The Quinsan Outrage.—Charge of Attempted Murder.

Four Chinese, from the neighbourhood of Quinsan, named Kung-ah-Qwang, 孔阿廣; Kung-lin-Qwang, 孔林廣; Chên-yuen-Kwon, 陳雲光; and Chên-woo-Kwon, 陳和光, were charged by Mr. W. Cooper with being concerned, in conjunction with others, in the attempt to murder him by strangling, and also with stealing his house-boat and other property, on the 24th April last.

Prosecutor, examined by the Court, deposed—I was at Quinsan on the 24th April. I arrived at an island near there, about three o'clock in the afternoon. I went on to the island, shooting. I saw no one near. There were some men with buffaloes about a quarter of a mile away. As soon as I had fired, a Chinaman jumped up from among the barley, and put his hand to his head to show he was hurt. I asked him to come to the boat. He came, and I and Mr. Hague, who was with me, examined him. We saw he was but very little hurt. There were three shots in his cheek, only one of which entered the skin—two sticking in it. There were not eighteen shots. The shot could not have hurt him, as he was 60 yards away. I saw by the newspaper that the man has been examined here. None of the man's household folks came to me. I gave him a dollar, and he went away perfectly satisfied. A rabble came in about an hour and a half to two hours afterwards. I do not know if any of them were members of his family. The man walked away from the boat as well as I could. After he had gone, I crossed over to the small joss house, at the opposite corner, and went out shooting. While I was away, about twenty or thirty people collected round the boat. Mr. Hague was in the boat. They made a great noise and gave great trouble. They came to make a noise and to threaten.

Mr. Davenport here asked where the prisoners were, there being none in Court?

The question was interpreted to the Magistrates, who gave an order in Chinese, and in a few moments, the man who was wounded was led into Court, seemingly a pitiable object.

In reply to questions, he said, after he was shot he fell down, and although he had received medical advice, he was not now able to work on rainy days.

Prosecutor, in reply to Wong, said—I used about 800 shot in the charge. The man was 60 yards away from me,—considerably further away than the snipe I shot at.

By Chen—Mr. Hague will be able to speak better about the twenty or thirty people congregating. They came on the Saturday evening.

Mr. Davenport directed Heding to inform the Magistrates that he did not wish to interfere with the proceedings of a Chinese Court, but it was usual in other Courts, when evidence was being taken, for the persons accused to be present. The prosecutor was now making his charge, and there were no prisoners to hear it.

A man was here brought into Court, and identified as having taken an active part in the attack.

Prosecutor resuming, said—When I came back to the boat, it was surrounded by Chinese, shouting and yelling. I cannot describe how they were going on,—they were like perfect fiends or madmen.

After a consultation between the Magistrates, Heding interpreted to the effect that the reason they wished the prosecutor to describe the yelling, was because if it were proved there was any reason to apprehend danger from it, the persons would of course be punished.

Prosecutor said there was very good reason indeed, as other people knew.

Fan said he had seen the boat, and if it had been much injured or damaged it could not have been got along.

Prosecutor said others had also seen it, and knew what was done to it; but it did not matter about the boat now. He thought the Court wanted to know what took place otherwise.

Fan consulted with Chen, and several other questions about the boat were put in rapid succession, which were not interpreted, Heding merely saying they were concerning the boat.

Prosecutor repeated that it did not matter about the boat now; it was the assault that was being investigated.

Fan asked for proof of the assault.

Prosecutor—What proof?

Fan—How they beat you and assaulted you—how it took place.

Prosecutor—They beat me with bamboos and other things, until I was black and blue from the blows.

Fan—I have not seen the wounds.

Prosecutor's examination resumed—They brought a boat alongside my boat, with 20 men in her, armed with cutlasses, matchlocks, and knives, and stayed alongside all night. They would not go away, nor let me go. That was on the Saturday night. I did not say they used the arms. They told me I could not go away. At half past five on the Sunday morning they went away. At six o'clock Mr. Overbeck's boat came up, with Mr. Siegfried and Mr. Rodewald also on board. We stopped them and went on board, and told them what had occurred the night before, and asked if they had any dollars. Mr. Overbeck said he was sorry he had no spare dollars. He then went on with his boat, and we were to go and breakfast with them at twelve. We remained until the tepao came, and told him we had no dollars and could not get any. The people then began to collect on the bank, and shouted to the tepao, asking him if he had got the dollars. He told them no. They then began to run up and down the bank, with bamboos, like madmen. They then called to the tepao to bring the boat ashore. I would not allow it to be done. We offered to give the tepao an order on Shanghai, but he refused. It was for $50. We tendered it to the tepao, and he refused it. We also offered to take the wounded man to Quinsan, to Nokobon, or to Shanghai, but the tepao would not allow us. When they found they could not get $50, they put off from both sides the creek in small boats, came to our boat, and beat the lowdah. They next took my boat on shore by force. There was then a regular rush on board by men armed with bamboos, grass knives, ropes, and all sorts of things. They then began to cut the boat to pieces. They cut the ropes and blocks, and dragged the sail ashore. They took everything out of the boat they could, and taking hold of me, put a rope round my neck and tried to drag me out of the boat. They had two other ropes also ready if they could have got them on my neck. They took my gun from a rack, and rushed out with it. All this was going on for 20 minutes or half an hour. The two coolies had gone on to Mr. Overbeck's boat to get them to come back. In the meantime they knocked the lowdah into the creek off the bow of the boat with a bamboo, and also knocked the tepao into the creek. Mr. Overbeck, Mr. Siegfried, Mr. Rodewald, and Mr. Tucker and their coolies then came up. The crowd then made a rush to get away, We captured two and put them on board Mr. Overbeck's boat. One of them was the man who was cutting the rigging of the boat. He was not the only one who did that. I do not know if they cut the sail; they took it ashore. We then went towards Shanghai, and heard gongs sounding all over the country to summon the country people to come and rescue the two men. The people came out, but did not interfere.

Fan—Have you finished yet?

Prosecutor—No, I have not. We went along for two miles. Some Chinese came and said [illegible] the two men, they [illegible] We ceased to do [illegible] began to beat gongs [illegible] after we met [illegible] and when [illegible] we had seven or eight foreigners on the bank of the creek together, they went away. That is my statement.

Chen asked if the paper offered to the tepao was a bank note?

Prosecutor said no, they offered an order for the money.

Mr. Davenport asked if the Court had any other questions to ask.

Fan ordered the tepao to be called.

A man here came into the open space in front of the dock, representing himself as the tepao alluded to.

Prosecutor said this man was not the man who said he was the tepao—that was an old man with a grey beard. (The man in Court was young, with the characteristic coal-black hair.)

Mr. Davenport said, with reference to the non-production of the prisoners in Court, he had nothing to do. If it was the mandarin's practice to investigate a case without the presence of the accused, he (Mr. Davenport) could not help it. He was sitting there merely as British Assessor, to see that the trial was conducted fairly, but he could not interfere with the mode of procedure.

The case was then for some time conducted in Chinese, in a manner utterly incomprehensible to outsiders, nothing being interpreted. At length, another man came forward, and was recognised by Mr. Cooper as being one of those who had taken a chief part in the attack. He gave a long statement in Chinese.

[This man and the other above-mentioned were the two captured by the prosecutor and his friends. No others have been apprehended.]

Fan asked if the lowdah was present, and was answered in the affirmative.

Mr. Davenport suggested that as the trial was likely to be very long, it would be better to take the evidence of the foreign witnesses first, so that they could go away.

The Court acquiesced.

H. Overbeck then deposed—We arrived at the island about six on the Sunday morning. We saw Mr. Cooper and Mr. Hague making signs to us from their boat. They were on deck. There were no Chinese there then. We went alongside Mr. Cooper's boat, and he gave us the whole story of what had happened the day before. He showed us the wounded Chinaman, whom we found lying in a corner of Mr. Cooper's boat, well provided with blankets and a pillow. He was asleep. We examined his face afterwards, and found three pellets just stuck in the skin. We could just see the black marks. We asked Mr. Cooper if he apprehended any immediate danger, as we would remain with him. He told us about the armed boat, which had gone away just before we came, and said he thought there was no danger. We therefore set sail again, and went towards Quinsan, and about four *li* off went ashore shooting. In about twenty minutes or half-an-hour, we heard a fearful shouting and noise. I look round and saw about 400 or 500 Chinamen all making for Mr. Cooper's boat. We immediately went on board our boat, and went towards Mr. Cooper, and on the way met Mr. Tucker. On nearing the place we saw the sail had been taken from Mr. Cooper's boat, and there were several Chinese on the deck. On our arrival, a large number of those on shore went away, leaving about 100 or 120 round the boat. Mr. Cooper pointed out the ringleaders, and I brought one down to the boat. The man now present is one of the ringleaders. We then proceeded on our way back towards Shanghai. There was then a general gong-beating, and people turned out not in hundreds, but in thousands. The whole of the villages around were alarmed, and the people climbed on the graves. They did not come near us, because they saw we were now seven or eight armed foreigners together.

By Mr. Davenport—We did not see the attempt to strangle Mr. Cooper. That was done while we were away. When I saw the wounded Chinaman, he seemed perfectly well, and had not the sickly appearance he now has. The pellets could not have penetrated his skin.

Prosecutor's lowdah next made a lengthy statement in Chinese. In the course of it he said the man who now said he was the tepao, was not the one meant by the prosecutor.

Mr. Davenport again asked where were the prisoners—if there were none, it was of no use going on with the trial.

The following prices have been paid— Exchange, 5/9½. Freight, £3.10 per steamer Against 1874.

Oopacks, etc.	Tls. 19 *a* 28	=	1/1¼ *a* 1/6½	= 1/3½ *a* 1/8 per lb.
Oonahms and Oonfaas	Tls. 19 *a* 31	=	1/1¼ *a* 1/8¼	= 1/1 *a* 1/6⅝ ,,
Hohows and Ningchows	Tls. 16 *a* 40	=	1/1½ *a* 2/1½	= 1/2 *a* 2/2½ ,,

Green.—Musters of 3 chops of Taiping and 12 chops of Pingsuey of the New Season have arrived, but have attracted very little attention, and indeed there appears to be so far no interest whatever taken in the new arrivals. Under the exceedingly adverse reports from the home markets it is difficult to place safe values on Teas here, and buyers have up to the present time held aloof. Teamen seem to be very much at a loss to know what prices to ask or what course the market may probably take, and a reliable scale of quotations cannot at present be given.

The best chops of Pingsuey have not yet come forward, but those shown so far are of inferior make, mixed in leaf and thin in the cup, wanting briskness and character; at the same time the Teas appear to be cleaner if less strong, and it is quite possible that a larger experience of the Crop may modify the opinion formed on these few first arrivals.

Stock 5,000 ½-chests, against 8,900 ½-chests in 1874.

Export to Great Britain is as under:—

	1875-76.	1874-75.	1873-74.
BLACK	28,853,929 lbs.	26,228,095 lbs.	18,703,209 lbs.

Business during the past week is estimated at about 2,000 bales, (exclusive of 500 bales left over from last mail), and has been confined principally to common and market Tsatlees and Taysaams. Prices in some instances show a decline of Tls. 5 *a* 10 per picul, but many settlements have been made at rates showing no change on previous quotations. Prospects are in favor of lower and safer prices, unless the Continental buying (with has sensibly *decreased* this week) is resumed at the absurdly high rates which marked the previous four weeks business. But even the *most sanguine* must halt, when cost goes up to 2s. 6d. per lb. *over last known sales!*—(Gold Lion at Tls. 380, at 5s. 10d. = 18s. 11d.; London quotation 16s. 6d.

The unsold stock has increased to 13,500 bales.

HANKOW.

Messrs. Gordon Bros. write on the 22nd June:—In our Report of 8th inst. we characterised the fortnight as an entire blank so far as sales of goods were concerned, and the period elapsed since then has if possible been worse. Scarcely a day has passed without unusually heavy rain, and dealers have done nothing.—The probability of a flood is freely discussed, and appearances are certainly in favor of one. Natives and Foreigners alike dread the occurrence, with the exception of those interested in the River steamers, to whom visions of large Cotton Freights during the winter more than compensate for the inconveniences of an inundation."

There has been no diminution in the demand for tea during the past fortnight, business reaching a considerable total.

A marked improvement in the quality of the Oanfaas, of which the bulk of arrivals since last mail have consisted, caused fair competition for them, resulting in all supplies being settled promptly—Tls. 20.5 *a* 21.5 for common rather dusty, Tls. 22 *a* 26 fair to good, and Tls. 27 *a* 31.5 for fine kinds. Oopacks from the Yung-Low-Toong, Sun-Yang and Chong-Sow-Kai districts have ruled at Tls. 20 *a* 22.5 for common to fair, and Tls. 23 *a* 29 for good to fine. Ping-Kongs have been taken at Tls. 17 *a* 23.5, Lye-Lings at Tls. 18 *a* 19.5, and Nip-Ka-Sis at Tls. 17 *a* 21 per picul. Seangtams have realised Tls. 13.90 *a* 15.50 per picul.

Prices immediately after last mail left, ruled rather easier for all kinds, but latterly, taking the low quality of the Teas into consideration, any slight decline has been regained. Seangtam kinds can now be bought at Tls. 13.75 *a* 14.50 per picul.

The 1st crop of Hankow Teas to date is 3,430,500 lbs. over last season's entire yield.

Three musters of 2nd crop have been placed on the market to-day, but we defer our opinion regarding them until our next circular. The wet weather is the cause of their late arrival as compared with the 1st crop. The cost of Oopacks laid down here *is said* to be Tls. 24 *a* 27 per picul.

It is reported that offers of Tls. 24.5 and Tls. 20.5 have been made for two of the chops of 2nd crop Tea on the market—one from Yung-laou-toong, the other from Nip-ka-si.

The total export to date is 30,264,000 lbs. against 24,582,000 lbs., exclusive of re-exports, which are also in excess. The departures for London are 20,414,000 lbs. against 20,812,000 last year.

The *Craigforth* and *Cawdor Castle* are on the berth for London at £4, the former being about half full. The *Tchihatchoff* is loading for Odessa at £5.

COMMERCIAL POSTSCRIPT.

June 26, 1875.

Arrivals.—(Not reported above.)—None.

Departures.—(Not reported above.)—June 19th, British ship *Cutty Sark*, for London.

The English mail steamer *Nizam* takes about 2,100 bales of Silk, and about 700 tons of Tea.

Exchange.—On London, Bank Bills, 6 months' sight, 5s. 8⅞d. *a* 5s. 9d. First-class Credits to Bank, 5s. 9½d. *a* 5s. 9⅝d. First-class to Private buyers, 5s. 9¼d. *a* 5s. 9⅜d. Private and Documentary, 5s. 9⅜d. *a* 5s. 10d. On Paris, Bank, Frs. 7.32½. Private, Frs. 7.40. On India—Bombay Bank, demand, Rs. 310 *a* 312. Calcutta Bank, Rs. 310 *a* 312. On Hongkong, Bank Bills, demand, 27½ per cent. discount. Private 15 days' sight, 28. Gold Bars, Tls. 172.50. Bar Silver, Sh. Tls. 111.25. Mexican dollars, Sh. Tls. 72.70 per 100. Carolus dollars, Sh. Tls. 79.80 per 100. Copper cash, 1,600 per tael.

Shares.—Messrs. J. P. Bisset & Co. report, at noon, 26th June :—

Banks.—Business has been done to-day at 24 % dis., at which shares are still obtainable.

S. S. N. Co.—There has been scarcely any demand since our last—the only sale reported being at Tls. 74 cash, at which there are sellers.

Fire Insurance,—Hongkongs have been placed, and are still wanted, at $480. There has been no business reported in *Chinas* and *Victorias*.

Marine Insurance.—Yangtszes have been sold at Tls. 565, and there are still buyers. *China & Japans* have been placed at Tls. 94, at which a few are on offer. *North Chinas* have also been placed at Tls. 725.

Gas Shares—English Gas shares have been sold at Tls. 137, and are still wanted. *French Gas* shares have also been sold at Tls. 72.

The Weather.—It has again rained steadily throughout the week, since Sunday. A thunderstorm occurred on Tuesday, with the heaviest rain we have seen in Shanghai. A meteorological bulletin from the Sikaway Observatory, published in the *Courier*, notes that the total rainfall this month up to the 24th inclusive, is 381.6 millimètres. (*i.e*, roughly, about 15 in.) exceeding by 122.3 m.m. the maximum rainfall at Shanghai in June, for the last ten years.
